Description of *Candidatus* Abagmana inguritrix sp. nov.

Candidatus Abagmana inguritrix (NL. fem. n. *inguritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1435 sp002329385*. The type genome for the species is the GenBank assembly GCA_002329385.1. The GC content of the type genome is 46.66 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Abagmana gen. nov.

Candidatus Abagmana (NL. fem. n. *Abagmana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1435*. The type species for the genus is *Candidatus* Abagmana inguritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Abagmaria advinitio sp. nov.

Candidatus Abagmaria advinitio (NL. fem. n. *advinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6130 sp002428285*. The type genome for the species is the GenBank assembly GCA_002428285.1. The GC content of the type genome is 35.62 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Abagmaria gen. nov.

Candidatus Abagmaria (NL. fem. n. *Abagmaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6130*. The type species for the genus is *Candidatus* Abagmaria advinitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Abagmia affunilenta sp. nov.

Candidatus Abagmia affunilenta (NL. fem. n. *affunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-459 sp003162395*. The type genome for the species is the GenBank assembly GCA_003162395.1. The GC content of the type genome is 68.46 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Abagmia gen. nov.

Candidatus Abagmia (NL. fem. n. *Abagmia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-459*. The type species for the genus is *Candidatus* Abagmia affunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Abagmia atrusago sp. nov.

Candidatus Abagmia atrusago (NL. fem. n. *atrusago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-459 sp003135595*. The type genome for the species is the GenBank assembly GCA_003135595.1. The GC content of the type genome is 69.78 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Abagmida adhoressa sp. nov.

Candidatus Abagmida adhoressa (NL. fem. n. *adhoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIAF01 sp009691905*. The type genome for the species is the GenBank assembly GCA_009691905.1. The GC content of the type genome is 61.2 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Abagmida gen. nov.

Candidatus Abagmida (NL. fem. n. *Abagmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIAF01*. The type species for the genus is *Candidatus* Abagmida adhoressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10511*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicaliaceae.

Description of *Candidatus* Abagmosa adlapugo sp. nov.

Candidatus Abagmosa adlapugo (NL. fem. n. *adlapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-47-10 sp002773135*. The type genome for the species is the GenBank assembly GCA_002773135.1. The GC content of the type genome is 46.68 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Abagmosa gen. nov.

Candidatus Abagmosa (NL. fem. n. *Abagmosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-47-10*. The type species for the genus is *Candidatus* Abagmosa adlapugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Abambana artocitrix sp. nov.

Candidatus Abambana artocitrix (NL. fem. n. *artocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVM01 sp012520095*. The type genome for the species is the GenBank assembly GCA_012520095.1. The GC content of the type genome is 46.51 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Abambana gen. nov.

Candidatus Abambana (NL. fem. n. *Abambana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUVM01*. The type species for the genus is *Candidatus* Abambana artocitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abambana assefitrix sp. nov.

Candidatus Abambana assefitrix (NL. fem. n. *assefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVM01 sp012841045*. The type genome for the species is the GenBank assembly GCA_012841045.1. The GC content of the type genome is 48.52 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Abambaria affuniforma sp. nov.

Candidatus Abambaria affuniforma (NL. fem. n. *affuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701705 sp002701705*. The type genome for the species is the GenBank assembly GCA_002701705.1. The GC content of the type genome is 31.34 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Abambaria gen. nov.

Candidatus Abambaria (NL. fem. n. *Abambaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2701705*. The type species for the genus is *Candidatus* Abambaria affuniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Abambella anasticella sp. nov.

Candidatus Abambella anasticella (NL. fem. n. *anasticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6059 sp002435755*. The type genome for the species is the GenBank assembly GCA_002435755.1. The GC content of the type genome is 43.5 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Abambella gen. nov.

Candidatus Abambella (NL. fem. n. *Abambella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6059*. The type species for the genus is *Candidatus* Abambella anasticella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abambia anteventia sp. nov.

Candidatus Abambia anteventia (NL. fem. n. *anteventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDEQ01 sp013816225*. The type genome for the species is the GenBank assembly GCA_013816225.1. The GC content of the type genome is 58.42 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Abambia gen. nov.

Candidatus Abambia (NL. fem. n. *Abambia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDEQ01*. The type species for the genus is *Candidatus* Abambia anteventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ATM1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimidaceae.

Description of *Candidatus* Abambida agnicitio sp. nov.

Candidatus Abambida agnicitio (NL. fem. n. *agnicitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGH01 sp903970275*. The type genome for the species is the GenBank assembly GCA_903970275.1. The GC content of the type genome is 63.78 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Abambida gen. nov.

Candidatus Abambida (NL. fem. n. *Abambida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGH01*. The type species for the genus is *Candidatus* Abambida agnicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1321*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolulaceae.

Description of *Candidatus* Abambida appacatica sp. nov.

Candidatus Abambida appacatica (NL. fem. n. *appacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGH01 sp013286145*. The type genome for the species is the GenBank assembly GCA_013286145.1. The GC content of the type genome is 53.6 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Abambida divolastra sp. nov.

Candidatus Abambida divolastra (NL. fem. n. *divolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGH01 sp903970335*. The type genome for the species is the GenBank assembly GCA_903970335.1. The GC content of the type genome is 59.72 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Abambida inmoribula sp. nov.

Candidatus Abambida inmoribula (NL. fem. n. *inmoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGH01 sp013285645*. The type genome for the species is the GenBank assembly GCA_013285645.1. The GC content of the type genome is 55.3 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Abambida vaniditura sp. nov.

Candidatus Abambida vaniditura (NL. fem. n. *vaniditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGH01 sp903863295*. The type genome for the species is the GenBank assembly GCA_903863295.1. The GC content of the type genome is 56.48 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Abantana cerofisca sp. nov.

Candidatus Abantana cerofisca (NL. fem. n. *cerofisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1490 sp900548185*. The type genome for the species is the GenBank assembly GCA_900548185.1. The GC content of the type genome is 58.39 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Abantana gen. nov.

Candidatus Abantana (NL. fem. n. *Abantana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1490*. The type species for the genus is *Candidatus* Abantana cerofisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolariaceae.

Description of *Candidatus* Abantana impacugo sp. nov.

Candidatus Abantana impacugo (NL. fem. n. *impacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1490 sp900552245*. The type genome for the species is the GenBank assembly GCA_900552245.1. The GC content of the type genome is 46.01 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Abantana plostedo sp. nov.

Candidatus Abantana plostedo (NL. fem. n. *plostedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1490 sp900547395*. The type genome for the species is the GenBank assembly GCA_900547395.1. The GC content of the type genome is 45.86 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Abantaria serotibra sp. nov.

Candidatus Abantaria serotibra (NL. fem. n. *serotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717465 sp002717465*. The type genome for the species is the GenBank assembly GCA_002717465.1. The GC content of the type genome is 40.23 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Abantaria gen. nov.

Candidatus Abantaria (NL. fem. n. *Abantaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717465*. The type species for the genus is *Candidatus* Abantaria serotibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Abantida evangatica sp. nov.

Candidatus Abantida evangatica (NL. fem. n. *evangatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-400-T64 sp002746135*. The type genome for the species is the GenBank assembly GCA_002746135.1. The GC content of the type genome is 50.15 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Abantida gen. nov.

Candidatus Abantida (NL. fem. n. *Abantida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *50-400-T64*. The type species for the genus is *Candidatus* Abantida evangatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abantida exturago sp. nov.

Candidatus Abantida exturago (NL. fem. n. *exturago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-400-T64 sp002162825*. The type genome for the species is the GenBank assembly GCA_002162825.1. The GC content of the type genome is 53.34 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Abantida insoritio sp. nov.

Candidatus Abantida insoritio (NL. fem. n. *insoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-400-T64 sp002162815*. The type genome for the species is the GenBank assembly GCA_002162815.1. The GC content of the type genome is 53.25 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Abantida loripilenta sp. nov.

Candidatus Abantida loripilenta (NL. fem. n. *loripilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-400-T64 sp002162755*. The type genome for the species is the GenBank assembly GCA_002162755.1. The GC content of the type genome is 49.97 %

and the genome length is 3.05 Mbp.

Description of *Candidatus* Abantida paracimonia sp. nov.

Candidatus Abantida paracimonia (NL. fem. n. *paracimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-400-T64 sp003646355*. The type genome for the species is the GenBank assembly GCA_003646355.1. The GC content of the type genome is 50.93 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Abantosa duponatio sp. nov.

Candidatus Abantosa duponatio (NL. fem. n. *duponatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKH01 sp009778175*. The type genome for the species is the GenBank assembly GCA_009778175.1. The GC content of the type genome is 44.85 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Abantosa gen. nov.

Candidatus Abantosa (NL. fem. n. *Abantosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKH01*. The type species for the genus is *Candidatus* Abantosa duponatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Abantula adsenisca sp. nov.

Candidatus Abantula adsenisca (NL. fem. n. *adsenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSRU01 sp011331465*. The type genome for the species is the GenBank assembly GCA_011331465.1. The GC content of the type genome is 48.76 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Abantula gen. nov.

Candidatus Abantula (NL. fem. n. *Abantula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSRU01*. The type species for the genus is *Candidatus* Abantula adsenisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abascana debucibula sp. nov.

Candidatus Abascana debucibula (NL. fem. n. *debucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA946 sp009777725*. The type genome for the species is the GenBank assembly GCA_009777725.1. The GC content of the type genome is 43.83 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Abascana gen. nov.

Candidatus Abascana (NL. fem. n. *Abascana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA946*. The type species for the genus is *Candidatus* Abascana debucibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abascana exforentia sp. nov.

Candidatus Abascana exforentia (NL. fem. n. *exforentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA946 sp002293295*. The type genome for the species is the GenBank assembly GCA_002293295.1. The GC content of the type genome is 41.83 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Abascaria infatousia sp. nov.

Candidatus Abascaria infatousia (NL. fem. n. *infatousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGEC01 sp009918425*. The type genome for the species is the GenBank assembly GCA_009918425.1. The GC content of the type genome is 44.37 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Abascaria gen. nov.

Candidatus Abascaria (NL. fem. n. *Abascaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGEC01*. The type species for the genus is *Candidatus* Abascaria infatousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Abascia immurimonia sp. nov.

Candidatus Abascia immurimonia (NL. fem. n. *immurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CYSP01 sp001298735*. The type genome for the species is the GenBank assembly RS_GCF_001298735.1. The GC content of the type genome is 45.58 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Biogas slut".

Description of *Candidatus* Abascia gen. nov.

Candidatus Abascia (NL. fem. n. *Abascia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CYSP01*. The type species for the genus is *Candidatus* Abascia immurimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abascida obnoxatio sp. nov.

Candidatus Abascida obnoxatio (NL. fem. n. *obnoxatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPF01 sp011055775*. The type genome for the species is the GenBank assembly GCA_011055775.1. The GC content of the type genome is 59.6 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Abascida gen. nov.

Candidatus Abascida (NL. fem. n. *Abascida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPF01*. The type species for the genus is *Candidatus* Abascida obnoxatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Abascosa admigatio sp. nov.

Candidatus Abascosa admigatio (NL. fem. n. *admigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACBGS01 sp902538855*. The type genome for the species is the GenBank assembly GCA_902538855.1. The GC content of the type genome is 36.82 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Abascosa gen. nov.

Candidatus Abascosa (NL. fem. n. *Abascosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACBGS01*. The type species for the genus is *Candidatus* Abascosa admigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venuniaceae.

Description of *Candidatus* Abditibacterium recorilega sp. nov.

Candidatus Abditibacterium recorilega (NL. fem. n. *recorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Abditibacterium sp004172935*. The type genome for the species is the GenBank assembly GCA_004172935.1. The GC content of the type genome is 55.0 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Abhinana momoratica sp. nov.

Candidatus Abhinana momoratica (NL. fem. n. *momoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1397 sp900761355*. The type genome for the species is the GenBank assembly RS_GCF_900761355.1. The GC content of the type genome is 60.13 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Abhinana gen. nov.

Candidatus Abhinana (NL. fem. n. *Abhinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1397*. The type species for the genus is *Candidatus* Abhinana momoratica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abhinana pluscimonas sp. nov.

Candidatus Abhinana pluscimonas (NL. fem. n. *pluscimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1397 sp900551425*. The type genome for the species is the GenBank assembly GCA_900551425.1. The GC content of the type genome is 57.86 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Abhinaria demulentia sp. nov.

Candidatus Abhinaria demulentia (NL. fem. n. *demulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAT01 sp005884665*. The type genome for the species is the GenBank assembly GCA_005884665.1. The GC content of the type genome is 43.47 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Abhinaria gen. nov.

Candidatus Abhinaria (NL. fem. n. *Abhinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBAT01*. The type species for the genus is *Candidatus* Abhinaria demulentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abhinaria eccilax sp. nov.

Candidatus Abhinaria eccilax (NL. fem. n. *eccilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAT01 sp014379965*. The type genome for the species is the GenBank assembly GCA_014379965.1. The GC content of the type genome is 45.98 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Abhinella invicilega sp. nov.

Candidatus Abhinella invicilega (NL. fem. n. *invicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c57 sp000961745*. The type genome for the species is the GenBank assembly GCA_000961745.1. The GC content of the type genome is 65.4 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Abhinella gen. nov.

Candidatus Abhinella (NL. fem. n. *Abhinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *BRH-c57*. The type species for the genus is *Candidatus* Abhinella invicilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abhinia effulugo sp. nov.

Candidatus Abhinia effulugo (NL. fem. n. *effulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2719315 sp002719315*. The type genome for the species is the GenBank assembly GCA_002719315.1. The GC content of the type genome is 28.01 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Abhinia gen. nov.

Candidatus Abhinia (NL. fem. n. *Abhinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2719315*. The type species for the genus is *Candidatus* Abhinia effulugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abhinia exentitrix sp. nov.

Candidatus Abhinia exentitrix (NL. fem. n. *exentitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2719315 sp902560065*. The type genome for the species is the GenBank assembly GCA_902560065.1. The GC content of the type genome is 28.08 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Abhinida cenacisca sp. nov.

Candidatus Abhinida cenacisca (NL. fem. n. *cenacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRA01 sp013813825*. The type genome for the species is the GenBank assembly GCA_013813825.1. The GC content of the type genome is 59.62 %

and the genome length is 3.96 Mbp.

Description of *Candidatus* Abhinida gen. nov.

Candidatus Abhinida (NL. fem. n. *Abhinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRA01*. The type species for the genus is *Candidatus* Abhinida cenacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abhinosa feficago sp. nov.

Candidatus Abhinosa feficago (NL. fem. n. *feficago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJZ01 sp009885805*. The type genome for the species is the GenBank assembly GCA_009885805.1. The GC content of the type genome is 71.4 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Abhinosa gen. nov.

Candidatus Abhinosa (NL. fem. n. *Abhinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJZ01*. The type species for the genus is *Candidatus* Abhinosa feficago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-60-MAGs149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulanaceae.

Description of *Candidatus* Abhinula induvicula sp. nov.

Candidatus Abhinula induvicula (NL. fem. n. *induvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-85 sp001798885*. The type genome for the species is the GenBank assembly GCA_001798885.1. The GC content of the type genome is 63.48 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Abhinula gen. nov.

Candidatus Abhinula (NL. fem. n. *Abhinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-64-85*. The type species for the genus is *Candidatus* Abhinula induvicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Abindana antimitio sp. nov.

Candidatus Abindana antimitio (NL. fem. n. *antimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J033 sp003696605*. The type genome for the species is the GenBank assembly GCA_003696605.1. The GC content of the type genome is 50.49 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Abindana gen. nov.

Candidatus Abindana (NL. fem. n. *Abindana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J033*. The type species for the genus is *Candidatus* Abindana antimitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abindaria attegiforma sp. nov.

Candidatus Abindaria attegiforma (NL. fem. n. *attegiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCL01 sp013288135*. The type genome for the species is the GenBank assembly GCA_013288135.1. The GC content of the type genome is 37.41 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Abindaria gen. nov.

Candidatus Abindaria (NL. fem. n. *Abindaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCL01*. The type species for the genus is *Candidatus* Abindaria attegiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6186*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laniganaceae.

Description of *Candidatus* Abindella delecilega sp. nov.

Candidatus Abindella delecilega (NL. fem. n. *delecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGR01 sp009787085*. The type genome for the species is the GenBank assembly GCA_009787085.1. The GC content of the type genome is 57.2 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Abindella gen. nov.

Candidatus Abindella (NL. fem. n. *Abindella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGR01*. The type species for the genus is *Candidatus* Abindella delecilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Abindia caravitoga sp. nov.

Candidatus Abindia caravitoga (NL. fem. n. *caravitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6116 sp002423425*. The type genome for the species is the GenBank assembly GCA_002423425.1. The GC content of the type genome is 40.85 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Abindia gen. nov.

Candidatus Abindia (NL. fem. n. *Abindia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6116*. The type species for the genus is *Candidatus* Abindia caravitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abindida oblonago sp. nov.

Candidatus Abindida oblonago (NL. fem. n. *oblonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSY01 sp009379815*. The type genome for the species is the GenBank assembly GCA_009379815.1. The GC content of the type genome is 70.82 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Abindida gen. nov.

Candidatus Abindida (NL. fem. n. *Abindida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSY01*. The type species for the genus is *Candidatus* Abindida oblonago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abindida venefugo sp. nov.

Candidatus Abindida venefugo (NL. fem. n. *venefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSY01 sp009377865*. The type genome for the species is the GenBank assembly GCA_009377865.1. The GC content of the type genome is 70.23 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Abindosa conigitia sp. nov.

Candidatus Abindosa conigitia (NL. fem. n. *conigitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN15 sp002923195*. The type genome for the species is the GenBank assembly GCA_002923195.1. The GC content of the type genome is 37.36 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Abindosa gen. nov.

Candidatus Abindosa (NL. fem. n. *Abindosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN15*. The type species for the genus is *Candidatus* Abindosa conigitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-40-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalidaceae.

Description of *Candidatus* Abindula armipessa sp. nov.

Candidatus Abindula armipessa (NL. fem. n. *armipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTR01 sp009377635*. The type genome for the species is the GenBank assembly GCA_009377635.1. The GC content of the type genome is 65.53 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Abindula gen. nov.

Candidatus Abindula (NL. fem. n. *Abindula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTR01*. The type species for the genus is *Candidatus* Abindula armipessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Perabanaceae.

Description of *Candidatus* Abinvana aneclessa sp. nov.

Candidatus Abinvana aneclessa (NL. fem. n. *aneclessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAF01 sp009783515*. The type genome for the species is the GenBank assembly GCA_009783515.1. The GC content of the type genome is 48.52 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Abinvana gen. nov.

Candidatus Abinvana (NL. fem. n. *Abinvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAF01*. The type species for the genus is *Candidatus* Abinvana aneclessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Abinvana nefaredo sp. nov.

Candidatus Abinvana nefaredo (NL. fem. n. *nefaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAF01 sp009780325*. The type genome for the species is the GenBank assembly GCA_009780325.1. The GC content of the type genome is 34.79 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Abinvaria mirabitas sp. nov.

Candidatus Abinvaria mirabitas (NL. fem. n. *mirabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-G11 sp004356175*. The type genome for the species is the GenBank assembly GCA_004356175.1. The GC content of the type genome is 58.14 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Abinvaria gen. nov.

Candidatus Abinvaria (NL. fem. n. *Abinvaria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-G11*. The type species for the genus is *Candidatus* Abinvaria mirabitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Abinvaria subacisca sp. nov.

Candidatus Abinvaria subacisca (NL. fem. n. *subacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-G11 sp003648875*. The type genome for the species is the GenBank assembly GCA_003648875.1. The GC content of the type genome is 59.87 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Abinvella insepicella sp. nov.

Candidatus Abinvella insepicella (NL. fem. n. *insepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXQD01 sp012974475*. The type genome for the species is the GenBank assembly GCA_012974475.1. The GC content of the type genome is 46.39 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Abinvella gen. nov.

Candidatus Abinvella (NL. fem. n. *Abinvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXQD01*. The type species for the genus is *Candidatus* Abinvella insepicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11574*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momoranaceae.

Description of *Candidatus* Abinvia allacedo sp. nov.

Candidatus Abinvia allacedo (NL. fem. n. *allacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADJD01 sp013150955*. The type genome for the species is the GenBank assembly GCA_013150955.1. The GC content of the type genome is 50.37 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Abinvia gen. nov.

Candidatus Abinvia (NL. fem. n. *Abinvia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADJD01*. The type species for the genus is *Candidatus* Abinvia allacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diluvidaceae.

Description of *Candidatus* Abinvida indeventia sp. nov.

Candidatus Abinvida indeventia (NL. fem. n. *indeventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRX01 sp014534205*. The type genome for the species is the GenBank assembly GCA_014534205.1. The GC content of the type genome is 69.58 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Abinvida gen. nov.

Candidatus Abinvida (NL. fem. n. *Abinvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRX01*. The type species for the genus is *Candidatus* Abinvida indeventia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abinvosa ignosifica sp. nov.

Candidatus Abinvosa ignosifica (NL. fem. n. *ignosifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNLK01 sp014381505*. The type genome for the species is the GenBank assembly GCA_014381505.1. The GC content of the type genome is 51.06 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Abinvosa gen. nov.

Candidatus Abinvosa (NL. fem. n. *Abinvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNLK01*. The type species for the genus is *Candidatus* Abinvosa ignosifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abiotrophia adtenitura sp. nov.

Candidatus Abiotrophia adtenitura (NL. fem. n. *adtenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Abiotrophia sp001815865*. The type genome for the species is the GenBank assembly RS_GCF_001815865.1. The GC content of the type genome is 46.6 % and the genome length is 2.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Respiratory".

Description of *Candidatus* Ablacana exsatatica sp. nov.

Candidatus Ablacana exsatatica (NL. fem. n. *exsatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUQQ01 sp012032745*. The type genome for the species is the GenBank assembly GCA_012032745.1. The GC content of the type genome is 58.49 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Ablacana gen. nov.

Candidatus Ablacana (NL. fem. n. *Ablacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUQQ01*. The type species for the genus is *Candidatus* Ablacana exsatatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablacella eccisousia sp. nov.

Candidatus Ablacella eccisousia (NL. fem. n. *eccisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12783 sp902782535*. The type genome for the species is the GenBank assembly GCA_902782535.1. The GC content of the type genome is 26.72 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Ablacella gen. nov.

Candidatus Ablacella (NL. fem. n. *Ablacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12783*. The type species for the genus is *Candidatus* Ablacella eccisousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ablacella excetentia sp. nov.

Candidatus Ablacella excetentia (NL. fem. n. *excetentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12783 sp902783985*. The type genome for the species is the GenBank assembly GCA_902783985.1. The GC content of the type genome is 25.18 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Ablacella tumefetta sp. nov.

Candidatus Ablacella tumefetta (NL. fem. n. *tumefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12783 sp902801795*. The type genome for the species is the GenBank assembly GCA_902801795.1. The GC content of the type genome is 26.2 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Ablacia citocentia sp. nov.

Candidatus Ablacia citocentia (NL. fem. n. *citocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPV01 sp011055625*. The type genome for the species is the GenBank assembly GCA_011055625.1. The GC content of the type genome is 52.23 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Ablacia gen. nov.

Candidatus Ablacia (NL. fem. n. *Ablacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPV01*. The type species for the genus is *Candidatus* Ablacia citocentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Ablacida indepatio sp. nov.

Candidatus Ablacida indepatio (NL. fem. n. *indepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM05398 sp900767385*. The type genome for the species is the GenBank assembly RS_GCF_900767385.1. The GC content of the type genome is 48.83 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ablacida gen. nov.

Candidatus Ablacida (NL. fem. n. *Ablacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM05398*. The type species for the genus is *Candidatus* Ablacida

indepatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablacosa embamitudo sp. nov.

Candidatus Ablacosa embamitudo (NL. fem. n. *embamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1771 sp002315315*. The type genome for the species is the GenBank assembly GCA_002315315.1. The GC content of the type genome is 48.28 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Ablacosa gen. nov.

Candidatus Ablacosa (NL. fem. n. *Ablacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1771*. The type species for the genus is *Candidatus* Ablacosa embamitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablacula adperousia sp. nov.

Candidatus Ablacula adperousia (NL. fem. n. *adperousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9845 sp902796635*. The type genome for the species is the GenBank assembly GCA_902796635.1. The GC content of the type genome is 31.2 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Ablacula gen. nov.

Candidatus Ablacula (NL. fem. n. *Ablacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9845*. The type species for the genus is *Candidatus* Ablacula adperousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA1242. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Ablacula tirunetta sp. nov.

Candidatus Ablacula tirunetta (NL. fem. n. *tirunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9845 sp003453435*. The type genome for the species is the GenBank assembly GCA_003453435.1. The GC content of the type genome is 31.21 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Ablepana anactedo sp. nov.

Candidatus Ablepana anactedo (NL. fem. n. *anactedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGV01 sp009778875*. The type genome for the species is the GenBank assembly GCA_009778875.1. The GC content of the type genome is 64.16 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Ablepana gen. nov.

Candidatus Ablepana (NL. fem. n. *Ablepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGV01*. The type species for the genus is *Candidatus* Ablepana anactedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablepana indoticella sp. nov.

Candidatus Ablepana indoticella (NL. fem. n. *indoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGV01 sp009781145*. The type genome for the species is the GenBank assembly GCA_009781145.1. The GC content of the type genome is 62.03 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ablepana momorivita sp. nov.

Candidatus Ablepana momorivita (NL. fem. n. *momorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGV01 sp009787035*. The type genome for the species is the GenBank assembly GCA_009787035.1. The GC content of the type genome is 68.33 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Ablepana vivifatica sp. nov.

Candidatus Ablepana vivifatica (NL. fem. n. *vivifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGV01 sp009785885*. The type genome for the species is the GenBank assembly GCA_009785885.1. The GC content of the type genome is 70.49 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Ableparia cimelax sp. nov.

Candidatus Ableparia cimelax (NL. fem. n. *cimelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIR01 sp903970425*. The type genome for the species is the GenBank assembly GCA_903970425.1. The GC content of the type genome is 43.47 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Ableparia gen. nov.

Candidatus Ableparia (NL. fem. n. *Ableparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIR01*. The type species for the genus is *Candidatus* Ableparia cimelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridiaceae.

Description of *Candidatus* Ablepella nugivifica sp. nov.

Candidatus Ablepella nugivifica (NL. fem. n. *nugivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zgenome-0002 sp003854985*. The type genome for the species is the GenBank assembly GCA_003854985.1. The GC content of the type genome is 39.74 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Ablepella gen. nov.

Candidatus Ablepella (NL. fem. n. *Ablepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Zgenome-0002*. The type species for the genus is *Candidatus* Ablepella nugivifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablepia cacopigena sp. nov.

Candidatus Ablepia cacopigena (NL. fem. n. *cacopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QZFT01 sp003600225*. The type genome for the species is the GenBank assembly RS_GCF_003600225.1. The GC content of the type genome is 68.12 % and the genome length is 7.61 Mbp.

Description of *Candidatus* Ablepia gen. nov.

Candidatus Ablepia (NL. fem. n. *Ablepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QZFT01*. The type species for the genus is *Candidatus* Ablepia cacopigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ablepida edulcivita sp. nov.

Candidatus Ablepida edulcivita (NL. fem. n. *edulcivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YG09 sp009650435*. The type genome for the species is the GenBank assembly RS_GCF_009650435.1. The GC content of the type genome is 44.62 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Ablepida gen. nov.

Candidatus Ablepida (NL. fem. n. *Ablepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YG09*. The type species for the genus is *Candidatus* Ablepida edulcivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ableposa homilitica sp. nov.

Candidatus Ableposa homilitica (NL. fem. n. *homilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-908 sp903643085*. The type genome for the species is the GenBank assembly RS_GCF_903643085.1. The GC content of the type genome is 66.96 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Ableposa gen. nov.

Candidatus Ableposa (NL. fem. n. *Ableposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-908*. The type species for the genus is *Candidatus* Ableposa homilitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ableposa peradimonas sp. nov.

Candidatus Ableposa peradimonas (NL. fem. n. *peradimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-908 sp003133065*. The type genome for the species is the

GenBank assembly GCA_003133065.1. The GC content of the type genome is 64.68 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Ablepula ranunifica sp. nov.

Candidatus Ablepula ranunifica (NL. fem. n. *ranunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-000702305 sp000702305*. The type genome for the species is the GenBank assembly RS_GCF_000702305.1. The GC content of the type genome is 68.19 % and the genome length is 4.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Ablepula gen. nov.

Candidatus Ablepula (NL. fem. n. *Ablepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-000702305*. The type species for the genus is *Candidatus* Ablepula ranunifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abligaria irremiforma sp. nov.

Candidatus Abligaria irremiforma (NL. fem. n. *irremiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMNX01 sp013204405*. The type genome for the species is the GenBank assembly GCA_013204405.1. The GC content of the type genome is 39.06 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Abligaria gen. nov.

Candidatus Abligaria (NL. fem. n. *Abligaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMNX01*. The type species for the genus is *Candidatus* Abligaria irremiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Legifariaceae.

Description of *Candidatus* Abligella selecimonia sp. nov.

Candidatus Abligella selecimonia (NL. fem. n. *selecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-501 sp011328735*. The type genome for the species is the GenBank assembly GCA_011328735.1. The GC content of the type genome is 69.18 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Abligella gen. nov.

Candidatus Abligella (NL. fem. n. *Abligella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-501*. The type species for the genus is *Candidatus* Abligella selecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisoridaceae.

Description of *Candidatus* Abligia utilligena sp. nov.

Candidatus Abligia utilligena (NL. fem. n. *utilligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-47-10-A sp001820675*. The type genome for the species is the GenBank assembly GCA_001820675.1. The GC content of the type genome is 46.64 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Abligia gen. nov.

Candidatus Abligia (NL. fem. n. *Abligia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-47-10-A*. The type species for the genus is *Candidatus*

Abligia utilligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conamulaceae.

Description of *Candidatus* Abligida imbeletta sp. nov.

Candidatus Abligida imbeletta (NL. fem. n. *imbeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTCFX2 sp002050125*. The type genome for the species is the GenBank assembly GCA_002050125.1. The GC content of the type genome is 56.95 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Abligida gen. nov.

Candidatus Abligida (NL. fem. n. *Abligida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTCFX2*. The type species for the genus is *Candidatus* Abligida imbeletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Abligula abveritrix sp. nov.

Candidatus Abligula abveritrix (NL. fem. n. *abveritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J051 sp003695835*. The type genome for the species is the GenBank assembly GCA_003695835.1. The GC content of the type genome is 61.29 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Abligula gen. nov.

Candidatus Abligula (NL. fem. n. *Abligula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *J051*. The type species for the genus is *Candidatus* Abligula abveritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ATM1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimidaceae.

Description of *Candidatus* Abligula occucimonia sp. nov.

Candidatus Abligula occucimonia (NL. fem. n. *occucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J051 sp011331565*. The type genome for the species is the GenBank assembly GCA_011331565.1. The GC content of the type genome is 63.61 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Abluvida faticilenta sp. nov.

Candidatus Abluvida faticilenta (NL. fem. n. *faticilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6912 sp002450985*. The type genome for the species is the GenBank assembly GCA_002450985.1. The GC content of the type genome is 69.13 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Abluvida gen. nov.

Candidatus Abluvida (NL. fem. n. *Abluvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6912*. The type species for the genus is *Candidatus* Abluvida faticilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Abluvosa fatifitia sp. nov.

Candidatus Abluvosa fatifitia (NL. fem. n. *fatifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLS01 sp012799185*. The type genome for the species is the GenBank assembly GCA_012799185.1. The GC content of the type genome is 52.97 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Abluvosa gen. nov.

Candidatus Abluvosa (NL. fem. n. *Abluvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLS01*. The type species for the genus is *Candidatus* Abluvosa fatifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Abmatana adnilitudo sp. nov.

Candidatus Abmatana adnilitudo (NL. fem. n. *adnilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJM01 sp007131755*. The type genome for the species is the GenBank assembly GCA_007131755.1. The GC content of the type genome is 60.61 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Abmatana gen. nov.

Candidatus Abmatana (NL. fem. n. *Abmatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLJM01*. The type species for the genus is *Candidatus* Abmatana adnilitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abmatana apercetta sp. nov.

Candidatus Abmatana apercetta (NL. fem. n. *apercetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SLJM01 sp007120915*. The type genome for the species is the GenBank assembly GCA_007120915.1. The GC content of the type genome is 62.09 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Abmatana apsoritia sp. nov.

Candidatus Abmatana apsoritia (NL. fem. n. *apsoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJM01 sp007119175*. The type genome for the species is the GenBank assembly GCA_007119175.1. The GC content of the type genome is 58.9 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Abmatana holisilega sp. nov.

Candidatus Abmatana holisilega (NL. fem. n. *holisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJM01 sp007119595*. The type genome for the species is the GenBank assembly GCA_007119595.1. The GC content of the type genome is 57.99 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Abmatana thessentia sp. nov.

Candidatus Abmatana thessentia (NL. fem. n. *thessentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJM01 sp007135085*. The type genome for the species is the GenBank assembly GCA_007135085.1. The GC content of the type genome is 60.37 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Abmataria maledibula sp. nov.

Candidatus Abmataria maledibula (NL. fem. n. *maledibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUUM01 sp012031565*. The type genome for the species is the GenBank assembly GCA_012031565.1. The GC content of the type genome is 53.55 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Abmataria gen. nov.

Candidatus Abmataria (NL. fem. n. *Abmataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUUM01*. The type species for the genus is *Candidatus* Abmataria maledibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JA-3-3Ab*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolariaceae.

Description of *Candidatus* Abmatida bicodimonia sp. nov.

Candidatus Abmatida bicodimonia (NL. fem. n. *bicodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-A16 sp003280345*. The type genome for the species is the GenBank assembly GCA_003280345.1. The GC content of the type genome is 39.86 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Abmatida gen. nov.

Candidatus Abmatida (NL. fem. n. *Abmatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-A16*. The type species for the genus is *Candidatus* Abmatida bicodimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abmatosa retunessa sp. nov.

Candidatus Abmatosa retunessa (NL. fem. n. *retunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJS01 sp007135015*. The type genome for the species is the GenBank assembly GCA_007135015.1. The GC content of the type genome is 63.98 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Abmatosa gen. nov.

Candidatus Abmatosa (NL. fem. n. *Abmatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLJS01*. The type species for the genus is *Candidatus* Abmatosa retunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abnepana saburousia sp. nov.

Candidatus Abnepana saburousia (NL. fem. n. *saburousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-43-28 sp001801635*. The type genome for the species is the GenBank assembly GCA_001801635.1. The GC content of the type genome is 43.12 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Abnepana gen. nov.

Candidatus Abnepana (NL. fem. n. *Abnepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-43-28*. The type species for the genus is *Candidatus* Abnepana saburousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Abneparia dicimentia sp. nov.

Candidatus Abneparia dicimentia (NL. fem. n. *dicimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *G713 sp011192175*. The type genome for the species is the GenBank assembly GCA_011192175.1. The GC content of the type genome is 55.46 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Abneparia gen. nov.

Candidatus Abneparia (NL. fem. n. *Abneparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *G713*. The type species for the genus is *Candidatus* Abneparia dicimentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Abnepia inmacitrix sp. nov.

Candidatus Abnepia inmacitrix (NL. fem. n. *inmacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFWF01 sp013362405*. The type genome for the species is the GenBank assembly GCA_013362405.1. The GC content of the type genome is 70.47 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Abnepia gen. nov.

Candidatus Abnepia (NL. fem. n. *Abnepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFWF01*. The type species for the genus is *Candidatus* Abnepia inmacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abnepida resuliforma sp. nov.

Candidatus Abnepida resuliforma (NL. fem. n. *resuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJO01 sp012800315*. The type genome for the species is the GenBank assembly GCA_012800315.1. The GC content of the type genome is 34.26 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Abnepida gen. nov.

Candidatus Abnepida (NL. fem. n. *Abnepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZJO01*. The type species for the genus is *Candidatus* Abnepida resuliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Abnepula incorago sp. nov.

Candidatus Abnepula incorago (NL. fem. n. *incorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRV01 sp013202285*. The type genome for the species is the GenBank assembly GCA_013202285.1. The GC content of the type genome is 48.39 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Abnepula gen. nov.

Candidatus Abnepula (NL. fem. n. *Abnepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRV01*. The type species for the genus is *Candidatus* Abnepula incorago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desonellaceae.

Description of *Candidatus* Abnocana abveritia sp. nov.

Candidatus Abnocana abveritia (NL. fem. n. *abveritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS874 sp902766575*. The type genome for the species is the GenBank assembly GCA_902766575.1. The GC content of the type genome is 55.34 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Abnocana gen. nov.

Candidatus Abnocana (NL. fem. n. *Abnocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS874*. The type species for the genus is *Candidatus* Abnocana abveritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Abnocana semimitoga sp. nov.

Candidatus Abnocana semimitoga (NL. fem. n. *semimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS874 sp900546315*. The type genome for the species is the GenBank assembly GCA_900546315.1. The GC content of the type genome is 55.19 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Abnocaria bipinitura sp. nov.

Candidatus Abnocaria bipinitura (NL. fem. n. *bipinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBJ01 sp012730105*. The type genome for the species is the GenBank assembly GCA_012730105.1. The GC content of the type genome is 56.3 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Abnocaria gen. nov.

Candidatus Abnocaria (NL. fem. n. *Abnocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBJ01*. The type species for the genus is *Candidatus* Abnocaria bipinitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Abnocaria expanitio sp. nov.

Candidatus Abnocaria expanitio (NL. fem. n. *expanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBJ01 sp012523015*. The type genome for the species is the GenBank assembly GCA_012523015.1. The GC content of the type genome is 50.06 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Abnocella expecetta sp. nov.

Candidatus Abnocella expecetta (NL. fem. n. *expecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOT01 sp011046905*. The type genome for the species is the GenBank assembly GCA_011046905.1. The GC content of the type genome is 66.04 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Abnocella gen. nov.

Candidatus Abnocella (NL. fem. n. *Abnocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOT01*. The type species for the genus is *Candidatus* Abnocella expecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Abnocia inrevitio sp. nov.

Candidatus Abnocia inrevitio (NL. fem. n. *inrevitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCR01 sp002070095*. The type genome for the species is the GenBank assembly GCA_002070095.1. The GC content of the type genome is 47.09 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Abnocia gen. nov.

Candidatus Abnocia (NL. fem. n. *Abnocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCR01*. The type species for the genus is *Candidatus* Abnocia inrevitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Abnocida armigousia sp. nov.

Candidatus Abnocida armigousia (NL. fem. n. *armigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6489 sp002435385*. The type genome for the species is the GenBank assembly GCA_002435385.1. The GC content of the type genome is 26.75 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Abnocida gen. nov.

Candidatus Abnocida (NL. fem. n. *Abnocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6489*. The type species for the genus is *Candidatus* Abnocida armigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Abnocula offulitura sp. nov.

Candidatus Abnocula offulitura (NL. fem. n. *offulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E29-bin73 sp004375885*. The type genome for the species is the GenBank assembly GCA_004375885.1. The GC content of the type genome is 53.1 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Abnocula gen. nov.

Candidatus Abnocula (NL. fem. n. *Abnocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E29-bin73*. The type species for the genus is *Candidatus* Abnocula offulitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Abnorella buxanilenta sp. nov.

Candidatus Abnorella buxanilenta (NL. fem. n. *buxanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J052 sp003696385*. The type genome for the species is the GenBank assembly GCA_003696385.1. The GC content of the type genome is 65.76 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Abnorella gen. nov.

Candidatus Abnorella (NL. fem. n. *Abnorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J052*. The type species for the genus is *Candidatus* Abnorella buxanilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abnoria depacastra sp. nov.

Candidatus Abnoria depacastra (NL. fem. n. *depacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CHKCI006 sp900018345*. The type genome for the species is the GenBank assembly RS_GCF_900018345.1. The GC content of the type genome is 42.83 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Abnoria gen. nov.

Candidatus Abnoria (NL. fem. n. *Abnoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CHKCI006*. The type species for the genus is *Candidatus* Abnoria depacastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abnorida inbelitio sp. nov.

Candidatus Abnorida inbelitio (NL. fem. n. *inbelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11873 sp003540955*. The type genome for the species is the GenBank assembly GCA_003540955.1. The GC content of the type genome is 49.28 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Abnorida gen. nov.

Candidatus Abnorida (NL. fem. n. *Abnorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11873*. The type species for the genus is *Candidatus* Abnorida inbelitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delebidaceae.

Description of *Candidatus* Abnorosa virecetta sp. nov.

Candidatus Abnorosa virecetta (NL. fem. n. *virecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEZG01 sp002774185*. The type genome for the species is the GenBank assembly GCA_002774185.1. The GC content of the type genome is 41.42 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Abnorosa gen. nov.

Candidatus Abnorosa (NL. fem. n. *Abnorosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PEZG01*. The type species for the genus is *Candidatus* Abnorosa virecetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Abnorula gen. nov.

Candidatus Abnorula (NL. fem. n. *Abnorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-1133*. The type species for the genus is *Candidatus* Abnorula mulderi_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abpatana viragiforma sp. nov.

Candidatus Abpatana viragiforma (NL. fem. n. *viragiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1765 sp002314675*. The type genome for the species is the GenBank assembly GCA_002314675.1. The GC content of the type genome is 45.58 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Abpatana gen. nov.

Candidatus Abpatana (NL. fem. n. *Abpatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1765*. The type species for the genus is *Candidatus* Abpatana viragiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abpatia ecligitoga sp. nov.

Candidatus Abpatia ecligitoga (NL. fem. n. *ecligitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1425 sp009779495*. The type genome for the species is the GenBank assembly GCA_009779495.1. The GC content of the type genome is 54.42 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Abpatia gen. nov.

Candidatus Abpatia (NL. fem. n. *Abpatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1425*. The type species for the genus is *Candidatus* Abpatia ecligitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abpatia fraglago sp. nov.

Candidatus Abpatia fraglago (NL. fem. n. *fraglago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1425 sp002329365*. The type genome for the species is the GenBank assembly GCA_002329365.1. The GC content of the type genome is 50.38 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Abpatia scorbedo sp. nov.

Candidatus Abpatia scorbedo (NL. fem. n. *scorbedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1425 sp012523185*. The type genome for the species is the GenBank assembly GCA_012523185.1. The GC content of the type genome is 49.21 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Abpatosa adobrousia sp. nov.

Candidatus Abpatosa adobrousia (NL. fem. n. *adobrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADEFQ01 sp902826575*. The type genome for the species is the GenBank assembly GCA_902826575.1. The GC content of the type genome is 67.25 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Abpatosa gen. nov.

Candidatus Abpatosa (NL. fem. n. *Abpatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFQ01*. The type species for the genus is *Candidatus* Abpatosa adobrousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abpatosa arcipitio sp. nov.

Candidatus Abpatosa arcipitio (NL. fem. n. *arcipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFQ01 sp902826635*. The type genome for the species is the GenBank assembly GCA_902826635.1. The GC content of the type genome is 67.47 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Abpatula levifitrix sp. nov.

Candidatus Abpatula levifitrix (NL. fem. n. *levifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6181 sp002422135*. The type genome for the species is the GenBank assembly GCA_002422135.1. The GC content of the type genome is 33.5 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Abpatula gen. nov.

Candidatus Abpatula (NL. fem. n. *Abpatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6181*. The type species for the genus is *Candidatus* Abpatula levifitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrelia nidifago sp. nov.

Candidatus Abrelia nidifago (NL. fem. n. *nidifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40-80 sp001899145*. The type genome for the species is the GenBank assembly GCA_001899145.1. The GC content of the type genome is 39.57 % and the genome length is 3.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Abrelia gen. nov.

Candidatus Abrelia (NL. fem. n. *Abrelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40-80*. The type species for the genus is *Candidatus* Abrelia nidifago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrelia ossaritas sp. nov.

Candidatus Abrelia ossaritas (NL. fem. n. *ossaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40-80 sp008017065*. The type genome for the species is the GenBank assembly GCA_008017065.1. The GC content of the type genome is 40.22 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Abrelida benementia sp. nov.

Candidatus Abrelida benementia (NL. fem. n. *benementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXE01 sp013697265*. The type genome for the species is the GenBank assembly GCA_013697265.1. The GC content of the type genome is 66.26 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Abrelida gen. nov.

Candidatus Abrelida (NL. fem. n. *Abrelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXE01*. The type species for the genus is *Candidatus* Abrelida benementia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDEA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifanaceae.

Description of *Candidatus* Abrelosa disidibula sp. nov.

Candidatus Abrelosa disidibula (NL. fem. n. *disidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFGT01 sp010365215*. The type genome for the species is the GenBank assembly GCA_010365215.1. The GC content of the type genome is 59.81 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Abrelosa gen. nov.

Candidatus Abrelosa (NL. fem. n. *Abrelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFGT01*. The type species for the genus is *Candidatus* Abrelosa disidibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Abrelula rorifatio sp. nov.

Candidatus Abrelula rorifatio (NL. fem. n. *rorifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1511 sp002323535*. The type genome for the species is the GenBank assembly GCA_002323535.1. The GC content of the type genome is 36.07 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Abrelula gen. nov.

Candidatus Abrelula (NL. fem. n. *Abrelula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1511*. The type species for the genus is *Candidatus* Abrelula rorifatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrepana capuciforma sp. nov.

Candidatus Abrepana capuciforma (NL. fem. n. *capuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHU01 sp007135995*. The type genome for the species is the GenBank assembly GCA_007135995.1. The GC content of the type genome is 48.11 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Abrepana gen. nov.

Candidatus Abrepana (NL. fem. n. *Abrepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLHU01*. The type species for the genus is *Candidatus* Abrepana capuciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Abrepana exsuressa sp. nov.

Candidatus Abrepana exsuressa (NL. fem. n. *exsuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHU01 sp007133255*. The type genome for the species is the GenBank assembly GCA_007133255.1. The GC content of the type genome is 47.83 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Abrepana gasifimonia sp. nov.

Candidatus Abrepana gasifimonia (NL. fem. n. *gasifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHU01 sp009929975*. The type genome for the species is the GenBank assembly GCA_009929975.1. The GC content of the type genome is 55.66 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Abrepia addubax sp. nov.

Candidatus Abrepia addubax (NL. fem. n. *addubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-20 sp005879255*. The type genome for the species is the GenBank assembly GCA_005879255.1. The GC content of the type genome is 54.72 % and the genome length is 8.79 Mbp.

Description of *Candidatus* Abrepia gen. nov.

Candidatus Abrepia (NL. fem. n. *Abrepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-20*. The type species for the genus is *Candidatus* Abrepia addubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Abrepia apsenitia sp. nov.

Candidatus Abrepia apsenitia (NL. fem. n. *apsenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-20 sp009692615*. The type genome for the species is the GenBank assembly GCA_009692615.1. The GC content of the type genome is 56.67 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Abrepia ceracitia sp. nov.

Candidatus Abrepia ceracitia (NL. fem. n. *ceracitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-20 sp005879435*. The type genome for the species is the GenBank assembly GCA_005879435.1. The GC content of the type genome is 55.63 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Abrepia cosigitura sp. nov.

Candidatus Abrepia cosigitura (NL. fem. n. *cosigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-20 sp011329495*. The type genome for the species is the GenBank assembly GCA_011329495.1. The GC content of the type genome is 58.06 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Abrepida bicinitia sp. nov.

Candidatus Abrepida bicinitia (NL. fem. n. *bicinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAFF01 sp013388455*. The type genome for the species is the GenBank assembly GCA_013388455.1. The GC content of the type genome is 36.11 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Abrepida gen. nov.

Candidatus Abrepida (NL. fem. n. *Abrepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAFF01*. The type species for the genus is *Candidatus* Abrepida bicinitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridulaceae.

Description of *Candidatus* Abreposa depicitoga sp. nov.

Candidatus Abreposa depicitoga (NL. fem. n. *depicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-01-FULL-50-25 sp001822215*. The type genome for the species is the GenBank assembly GCA_001822215.1. The GC content of the type genome is 50.48 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Abreposa gen. nov.

Candidatus Abreposa (NL. fem. n. *Abreposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-50-25*. The type species for the genus is *Candidatus* Abreposa depicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-52-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitellaceae.

Description of *Candidatus* Abrepula nefanitio sp. nov.

Candidatus Abrepula nefanitio (NL. fem. n. *nefanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Root112D2 sp001424905*. The type genome for the species is the GenBank assembly RS_GCF_001424905.1. The GC content of the type genome is 65.58 % and the genome length is 3.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Abrepula gen. nov.

Candidatus Abrepula (NL. fem. n. *Abrepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Root112D2*. The type species for the genus is *Candidatus* Abrepula nefanitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrumana excocilega sp. nov.

Candidatus Abrumana excocilega (NL. fem. n. *excocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDI01 sp012729315*. The type genome for the species is the GenBank assembly GCA_012729315.1. The GC content of the type genome is 64.34 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Abrumana gen. nov.

Candidatus Abrumana (NL. fem. n. *Abrumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDI01*. The type species for the genus is *Candidatus* Abrumana excocilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrumella obmutitio sp. nov.

Candidatus Abrumella obmutitio (NL. fem. n. *obmutitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBM01 sp013360495*. The type genome for the species is the GenBank assembly GCA_013360495.1. The GC content of the type genome is 59.07 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Abrumella gen. nov.

Candidatus Abrumella (NL. fem. n. *Abrumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBM01*. The type species for the genus is *Candidatus* Abrumella obmutitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2392*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pimenidaceae.

Description of *Candidatus* Abrumia amatribra sp. nov.

Candidatus Abrumia amatribra (NL. fem. n. *amatribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-56 sp003599135*. The type genome for the species is the GenBank assembly GCA_003599135.1. The GC content of the type genome is 52.28 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Abrumia gen. nov.

Candidatus Abrumia (NL. fem. n. *Abrumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-56*. The type species for the genus is *Candidatus* Abrumia amatribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Abrumida illunatio sp. nov.

Candidatus Abrumida illunatio (NL. fem. n. *illunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEM01 sp013153405*. The type genome for the species is the GenBank assembly GCA_013153405.1. The GC content of the type genome is 38.49 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Abrumida gen. nov.

Candidatus Abrumida (NL. fem. n. *Abrumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEM01*. The type species for the genus is *Candidatus* Abrumida illunatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abrumosa catafitudo sp. nov.

Candidatus Abrumosa catafitudo (NL. fem. n. *catafitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UM-FILTER-37-10 sp002793075*. The type genome for the species is the GenBank assembly GCA_002793075.1. The GC content of the type genome is 37.0 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Abrumosa gen. nov.

Candidatus Abrumosa (NL. fem. n. *Abrumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-37-10*. The type species for the genus is *Candidatus* Abrumosa catafitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivellaceae.

Description of *Candidatus* Absegana codifigena sp. nov.

Candidatus Absegana codifigena (NL. fem. n. *codifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABHOJ01 sp902168195*. The type genome for the species is the GenBank assembly GCA_902168195.1. The GC content of the type genome is 57.81 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Absegana gen. nov.

Candidatus Absegana (NL. fem. n. *Absegana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABHOJ01*. The type species for the genus is *Candidatus* Absegana codifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absegaria ecnepitrix sp. nov.

Candidatus Absegaria ecnepitrix (NL. fem. n. *ecnepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMIS01 sp900299155*. The type genome for the species is the

GenBank assembly GCA_900299155.1. The GC content of the type genome is 41.13 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Absegaria gen. nov.

Candidatus Absegaria (NL. fem. n. *Absegaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMIS01*. The type species for the genus is *Candidatus* Absegaria ecnepitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Absegella impinastra sp. nov.

Candidatus Absegella impinastra (NL. fem. n. *impinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12587 sp900766915*. The type genome for the species is the GenBank assembly RS_GCF_900766915.1. The GC content of the type genome is 42.28 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Absegella gen. nov.

Candidatus Absegella (NL. fem. n. *Absegella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12587*. The type species for the genus is *Candidatus* Absegella impinastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absegia conamago sp. nov.

Candidatus Absegia conamago (NL. fem. n. *conamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2863085 sp002863085*. The type genome for the species is the GenBank assembly GCA_002863085.1. The GC content of the type genome is 31.17 %

and the genome length is 1.35 Mbp.

Description of *Candidatus* Absegia gen. nov.

Candidatus Absegia (NL. fem. n. *Absegia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2863085*. The type species for the genus is *Candidatus* Absegia conamago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Absegosa inredisca sp. nov.

Candidatus Absegosa inredisca (NL. fem. n. *inredisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6220 sp002421745*. The type genome for the species is the GenBank assembly GCA_002421745.1. The GC content of the type genome is 32.61 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Absegosa gen. nov.

Candidatus Absegosa (NL. fem. n. *Absegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6220*. The type species for the genus is *Candidatus* Absegosa inredisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Absegula subabitoga sp. nov.

Candidatus Absegula subabitoga (NL. fem. n. *subabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABSQ01 sp011390315*. The type genome for the species is the

GenBank assembly GCA_011390315.1. The GC content of the type genome is 56.65 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Absegula gen. nov.

Candidatus Absegula (NL. fem. n. *Absegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABSQ01*. The type species for the genus is *Candidatus* Absegula subabitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absicoccus revulitudo sp. nov.

Candidatus Absicoccus revulitudo (NL. fem. n. *revulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Absicoccus sp000434355*. The type genome for the species is the GenBank assembly RS_GCF_003480165.1. The GC content of the type genome is 37.85 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Absocaria solivigena sp. nov.

Candidatus Absocaria solivigena (NL. fem. n. *solivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNG01 sp012520935*. The type genome for the species is the GenBank assembly GCA_012520935.1. The GC content of the type genome is 36.16 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Absocaria gen. nov.

Candidatus Absocaria (NL. fem. n. *Absocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNG01*. The type species for the genus is *Candidatus* Absocaria solivigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absocella reduvitia sp. nov.

Candidatus Absocella reduvitia (NL. fem. n. *reduvitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACDH01 sp009936995*. The type genome for the species is the GenBank assembly GCA_009936995.1. The GC content of the type genome is 61.75 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Absocella gen. nov.

Candidatus Absocella (NL. fem. n. *Absocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACDH01*. The type species for the genus is *Candidatus* Absocella reduvitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Absocia ambadago sp. nov.

Candidatus Absocia ambadago (NL. fem. n. *ambadago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJY01 sp011524645*. The type genome for the species is the GenBank assembly GCA_011524645.1. The GC content of the type genome is 48.78 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Absocia gen. nov.

Candidatus Absocia (NL. fem. n. *Absocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJY01*. The type species for the genus is *Candidatus* Absocia ambadago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absocida assudiforma sp. nov.

Candidatus Absocida assudiforma (NL. fem. n. *assudiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S5-A14a sp000758905*. The type genome for the species is the GenBank assembly RS_GCF_000758905.1. The GC content of the type genome is 38.86 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Absocida gen. nov.

Candidatus Absocida (NL. fem. n. *Absocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S5-A14a*. The type species for the genus is *Candidatus* Absocida assudiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absocida cataficella sp. nov.

Candidatus Absocida cataficella (NL. fem. n. *cataficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S5-A14a sp900112915*. The type genome for the species is the GenBank assembly RS_GCF_900112915.1. The GC content of the type genome is 39.39 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Absocida sarabifica sp. nov.

Candidatus Absocida sarabifica (NL. fem. n. *sarabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S5-A14a sp900553025*. The type genome for the species is the GenBank assembly GCA_900553025.1. The GC content of the type genome is 38.51 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Absocosa undevisca sp. nov.

Candidatus Absocosa undevisca (NL. fem. n. *undevisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIT01 sp903970405*. The type genome for the species is the GenBank assembly GCA_903970405.1. The GC content of the type genome is 59.57 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Absocosa gen. nov.

Candidatus Absocosa (NL. fem. n. *Absocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIT01*. The type species for the genus is *Candidatus* Absocosa undevisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absocula cimitago sp. nov.

Candidatus Absocula cimitago (NL. fem. n. *cimitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLK01 sp007134115*. The type genome for the species is the GenBank assembly GCA_007134115.1. The GC content of the type genome is 62.72 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Absocula gen. nov.

Candidatus Absocula (NL. fem. n. *Absocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLK01*. The type species for the genus is *Candidatus* Absocula cimitago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verifosaceae.

Description of *Candidatus* Absorana colopigena sp. nov.

Candidatus Absorana colopigena (NL. fem. n. *colopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRJH01 sp011052285*. The type genome for the species is the GenBank assembly GCA_011052285.1. The GC content of the type genome is 51.07 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Absorana gen. nov.

Candidatus Absorana (NL. fem. n. *Absorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRJH01*. The type species for the genus is *Candidatus* Absorana colopigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5680*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decupanaceae.

Description of *Candidatus* Absoraria cosigago sp. nov.

Candidatus Absoraria cosigago (NL. fem. n. *cosigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UASB124 sp001468855*. The type genome for the species is the GenBank assembly GCA_001468855.1. The GC content of the type genome is 36.91 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wastewater sludge from a upflow anaerobic sludge blanket reactor".

Description of *Candidatus* Absoraria gen. nov.

Candidatus Absoraria (NL. fem. n. *Absoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UASB124*. The type species for the genus is *Candidatus* Absoraria cosigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RVW-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpanaceae.

Description of *Candidatus* Absoria selecilenta sp. nov.

Candidatus Absoria selecilenta (NL. fem. n. *selecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCT01 sp009779405*. The type genome for the species is the GenBank assembly GCA_009779405.1. The GC content of the type genome is 55.7 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Absoria gen. nov.

Candidatus Absoria (NL. fem. n. *Absoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCT01*. The type species for the genus is *Candidatus* Absoria selecilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Absoria vinulicella sp. nov.

Candidatus Absoria vinulicella (NL. fem. n. *vinulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCT01 sp009783775*. The type genome for the species is the GenBank assembly GCA_009783775.1. The GC content of the type genome is 57.24 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Absorosa inmacitia sp. nov.

Candidatus Absorosa inmacitia (NL. fem. n. *inmacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-547 sp003250135*. The type genome for the species is the GenBank assembly GCA_003250135.1. The GC content of the type genome is 66.58 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Absorosa gen. nov.

Candidatus Absorosa (NL. fem. n. *Absorosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-547*. The type species for the genus is *Candidatus* Absorosa inmacitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absorula documiforma sp. nov.

Candidatus Absorula documiforma (NL. fem. n. *documiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDI01 sp007693595*. The type genome for the species is the GenBank assembly GCA_007693595.1. The GC content of the type genome is 67.36 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Absorula gen. nov.

Candidatus Absorula (NL. fem. n. *Absorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDI01*. The type species for the genus is *Candidatus* Absorula documiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Absuraria atropitrix sp. nov.

Candidatus Absuraria atropitrix (NL. fem. n. *atropitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-828 sp011370585*. The type genome for the species is the GenBank assembly GCA_011370585.1. The GC content of the type genome is 45.14 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Absuraria gen. nov.

Candidatus Absuraria (NL. fem. n. *Absuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-828*. The type species for the genus is *Candidatus* Absuraria atropitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deneciaceae.

Description of *Candidatus* Absuria fetifitrix sp. nov.

Candidatus Absuria fetifitrix (NL. fem. n. *fetifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-12 sp001779505*. The type genome for the species is the GenBank assembly GCA_001779505.1. The GC content of the type genome is 53.76 % and the genome length is 0.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.1 filter".

Description of *Candidatus* Absuria gen. nov.

Candidatus Absuria (NL. fem. n. *Absuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-54-12*. The type species for the genus is *Candidatus* Absuria fetifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Absurida intecousia sp. nov.

Candidatus Absurida intecousia (NL. fem. n. *intecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *P4200 sp900626095*. The type genome for the species is the GenBank assembly RS_GCF_900626095.1. The GC content of the type genome is 28.13 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Absurida gen. nov.

Candidatus Absurida (NL. fem. n. *Absurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *P4200*. The type species for the genus is *Candidatus* Absurida intecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Absurula rosacitas sp. nov.

Candidatus Absurula rosacitas (NL. fem. n. *rosacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB23 sp001567245*. The type genome for the species is the GenBank assembly GCA_001567245.1. The GC content of the type genome is 41.61 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Absurula gen. nov.

Candidatus Absurula (NL. fem. n. *Absurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB23*. The type species for the genus is *Candidatus* Absurula rosacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Abverana derunimonas sp. nov.

Candidatus Abverana derunimonas (NL. fem. n. *derunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTT01 sp009377495*. The type genome for the species is the GenBank assembly GCA_009377495.1. The GC content of the type genome is 64.38 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Abverana gen. nov.

Candidatus Abverana (NL. fem. n. *Abverana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTT01*. The type species for the genus is *Candidatus* Abverana derunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abverana exheditia sp. nov.

Candidatus Abverana exheditia (NL. fem. n. *exheditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTT01 sp009377605*. The type genome for the species is the GenBank assembly GCA_009377605.1. The GC content of the type genome is 64.52 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Abverella oblonisca sp. nov.

Candidatus Abverella oblonisca (NL. fem. n. *oblonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-48-11 sp002793855*. The type genome for the species is the GenBank assembly GCA_002793855.1. The GC content of the type genome is 47.82 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Abverella gen. nov.

Candidatus Abverella (NL. fem. n. *Abverella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-48-11*. The type species for the genus is *Candidatus* Abverella oblonisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democariaceae.

Description of *Candidatus* Abveria ardifitas sp. nov.

Candidatus Abveria ardifitas (NL. fem. n. *ardifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDYJ01 sp004293145*. The type genome for the species is the GenBank assembly GCA_004293145.1. The GC content of the type genome is 38.54 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Abveria gen. nov.

Candidatus Abveria (NL. fem. n. *Abveria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDYJ01*. The type species for the genus is *Candidatus* Abveria ardifitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abverida inmenicella sp. nov.

Candidatus Abverida inmenicella (NL. fem. n. *inmenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN04 sp002898175*. The type genome for the species is the GenBank assembly GCA_002898175.1. The GC content of the type genome is 33.39 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Abverida gen. nov.

Candidatus Abverida (NL. fem. n. *Abverida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN04*. The type species for the genus is *Candidatus* Abverida inmenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Abverula dilibitudo sp. nov.

Candidatus Abverula dilibitudo (NL. fem. n. *dilibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-115 sp003231035*. The type genome for the species is the GenBank assembly GCA_003231035.1. The GC content of the type genome is 63.43 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Abverula gen. nov.

Candidatus Abverula (NL. fem. n. *Abverula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-115*. The type species for the genus is *Candidatus* Abverula dilibitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Acaryochloris isoscicula sp. nov.

Candidatus Acaryochloris isoscicula (NL. fem. n. *isoscicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acaryochloris sp000238775*. The type genome for the species is the GenBank assembly RS_GCF_000238775.1. The GC content of the type genome is 47.12 % and the genome length is 7.88 Mbp.

Description of *Candidatus* Acaryochloris metucitudo sp. nov.

Candidatus Acaryochloris metucitudo (NL. fem. n. *metucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acaryochloris sp012034865*. The type genome for the species is the GenBank assembly GCA_012033135.1. The GC content of the type genome is 48.07 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Acaryochloris navifentia sp. nov.

Candidatus Acaryochloris navifentia (NL. fem. n. *navifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acaryochloris sp012030735*. The type genome for the species is the GenBank assembly GCA_012030735.1. The GC content of the type genome is 48.98 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Accapana adnepiforma sp. nov.

Candidatus Accapana adnepiforma (NL. fem. n. *adnepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTB01 sp009379735*. The type genome for the species is the GenBank assembly GCA_009379735.1. The GC content of the type genome is 70.35 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Accapana gen. nov.

Candidatus Accapana (NL. fem. n. *Accapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTB01*. The type species for the genus is *Candidatus* Accapana adnepiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accaparia monacisca sp. nov.

Candidatus Accaparia monacisca (NL. fem. n. *monacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QXHL01 sp003584005*. The type genome for the species is the GenBank assembly RS_GCF_003584005.1. The GC content of the type genome is 50.17 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Accaparia gen. nov.

Candidatus Accaparia (NL. fem. n. *Accaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QXHL01*. The type species for the genus is *Candidatus* Accaparia monacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accapella exentitio sp. nov.

Candidatus Accapella exentitio (NL. fem. n. *exentitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDP01 sp007693455*. The type genome for the species is the GenBank assembly GCA_007693455.1. The GC content of the type genome is 55.81 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Accapella gen. nov.

Candidatus Accapella (NL. fem. n. *Accapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDP01*. The type species for the genus is *Candidatus* Accapella exentitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Accapella inturigena sp. nov.

Candidatus Accapella inturigena (NL. fem. n. *inturigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDP01 sp007695355*. The type genome for the species is the GenBank assembly GCA_007695355.1. The GC content of the type genome is 60.25 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Accapia urbicibula sp. nov.

Candidatus Accapia urbicibula (NL. fem. n. *urbicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHEX01 sp002843005*. The type genome for the species is the GenBank assembly GCA_002843005.1. The GC content of the type genome is 57.29 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Accapia gen. nov.

Candidatus Accapia (NL. fem. n. *Accapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHEX01*. The type species for the genus is *Candidatus* Accapia urbicibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Appugulaceae.

Description of *Candidatus* Accapida inpenitio sp. nov.

Candidatus Accapida inpenitio (NL. fem. n. *inpenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *G519 sp011176615*. The type genome for the species is the GenBank assembly GCA_011176615.1. The GC content of the type genome is 41.9 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Accapida gen. nov.

Candidatus Accapida (NL. fem. n. *Accapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *G519*. The type species for the genus is *Candidatus* Accapida inpenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11858*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifellaceae.

Description of *Candidatus* Accenaria manufentia sp. nov.

Candidatus Accenaria manufentia (NL. fem. n. *manufentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cloacimonetes-2 sp002842035*. The type genome for the species is the GenBank assembly GCA_002842035.1. The GC content of the type genome is 48.08 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Accenaria gen. nov.

Candidatus Accenaria (NL. fem. n. *Accenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cloacimonetes-2*. The type species for the genus is *Candidatus* Accenaria manufentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accenia adcelimonia sp. nov.

Candidatus Accenia adcelimonia (NL. fem. n. *adcelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26077 sp005787645*. The type genome for the species is the GenBank assembly GCA_005787645.1. The GC content of the type genome is 49.9 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Accenia gen. nov.

Candidatus Accenia (NL. fem. n. *Accenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC26077*. The type species for the genus is *Candidatus* Accenia adcelimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accenia alticigena sp. nov.

Candidatus Accenia alticigena (NL. fem. n. *alticigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26077 sp002284915*. The type genome for the species is the GenBank assembly RS_GCF_002284915.1. The GC content of the type genome is 51.31 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Accenida resulitura sp. nov.

Candidatus Accenida resulitura (NL. fem. n. *resulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KN286 sp009833495*. The type genome for the species is the GenBank assembly RS_GCF_009833495.1. The GC content of the type genome is 65.02 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Accenida gen. nov.

Candidatus Accenida (NL. fem. n. *Accenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KN286*. The type species for the genus is *Candidatus* Accenida resulitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accenosa cisorago sp. nov.

Candidatus Accenosa cisorago (NL. fem. n. *cisorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDJ01 sp009783495*. The type genome for the species is the GenBank assembly GCA_009783495.1. The GC content of the type genome is 55.73 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Accenosa gen. nov.

Candidatus Accenosa (NL. fem. n. *Accenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDJ01*. The type species for the genus is *Candidatus* Accenosa cisorago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulosaceae.

Description of *Candidatus* Accenula inardimonas sp. nov.

Candidatus Accenula inardimonas (NL. fem. n. *inardimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B120-G9 sp003641415*. The type genome for the species is the GenBank assembly GCA_003641415.1. The GC content of the type genome is 45.27 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Accenula gen. nov.

Candidatus Accenula (NL. fem. n. *Accenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B120-G9*. The type species for the genus is *Candidatus* Accenula inardimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Accerana adlicedo sp. nov.

Candidatus Accerana adlicedo (NL. fem. n. *adlicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *69-11 sp001898425*. The type genome for the species is the GenBank assembly GCA_001898425.1. The GC content of the type genome is 69.21 % and the genome length is 6.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Accerana gen. nov.

Candidatus Accerana (NL. fem. n. *Accerana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *69-11*. The type species for the genus is *Candidatus* Accerana adlicedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acceraria tetenatio sp. nov.

Candidatus Acceraria tetenatio (NL. fem. n. *tetenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CACIRS01 sp902589115*. The type genome for the species is the GenBank assembly GCA_902589115.1. The GC content of the type genome is 37.29 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Acceraria gen. nov.

Candidatus Acceraria (NL. fem. n. *Acceraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIRS01*. The type species for the genus is *Candidatus* Acceraria tetenatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accerella cibaribula sp. nov.

Candidatus Accerella cibaribula (NL. fem. n. *cibaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TC-71 sp010092775*. The type genome for the species is the GenBank assembly GCA_010092775.1. The GC content of the type genome is 56.89 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Accerella gen. nov.

Candidatus Accerella (NL. fem. n. *Accerella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TC-71*. The type species for the genus is *Candidatus* Accerella cibaribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3940*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpidaceae.

Description of *Candidatus* Acceria isoscilega sp. nov.

Candidatus Acceria isoscilega (NL. fem. n. *isoscilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXZ01 sp009693045*. The type genome for the species is the

GenBank assembly GCA_009693045.1. The GC content of the type genome is 64.64 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Acceria gen. nov.

Candidatus Acceria (NL. fem. n. *Acceria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHXZ01*. The type species for the genus is *Candidatus* Acceria isoscilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deniculaceae.

Description of *Candidatus* Accerida semiliforma sp. nov.

Candidatus Accerida semiliforma (NL. fem. n. *semiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFO01 sp012728215*. The type genome for the species is the GenBank assembly GCA_012728215.1. The GC content of the type genome is 46.35 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Accerida gen. nov.

Candidatus Accerida (NL. fem. n. *Accerida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFO01*. The type species for the genus is *Candidatus* Accerida semiliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accerosa catabibula sp. nov.

Candidatus Accerosa catabibula (NL. fem. n. *catabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1754 sp900759475*. The type genome for the species is the GenBank assembly GCA_900759475.1. The GC content of the type genome is 27.73 %

and the genome length is 1.28 Mbp.

Description of *Candidatus* Accerosa gen. nov.

Candidatus Accerosa (NL. fem. n. *Accerosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1754*. The type species for the genus is *Candidatus* Accerosa catabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Accerosa vinulitoga sp. nov.

Candidatus Accerosa vinulitoga (NL. fem. n. *vinulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1754 sp900554815*. The type genome for the species is the GenBank assembly GCA_900554815.1. The GC content of the type genome is 27.09 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Accerula hegumicella sp. nov.

Candidatus Accerula hegumicella (NL. fem. n. *hegumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACEJU01 sp902559885*. The type genome for the species is the GenBank assembly GCA_902559885.1. The GC content of the type genome is 32.64 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Accerula gen. nov.

Candidatus Accerula (NL. fem. n. *Accerula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACEJU01*. The type species for the genus is *Candidatus* Accerula hegumicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Accogana bicinessa sp. nov.

Candidatus Accogana bicinessa (NL. fem. n. *bicinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J054 sp003695765*. The type genome for the species is the GenBank assembly GCA_003695765.1. The GC content of the type genome is 68.25 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Accogana gen. nov.

Candidatus Accogana (NL. fem. n. *Accogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J054*. The type species for the genus is *Candidatus* Accogana bicinessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Accogaria acratilega sp. nov.

Candidatus Accogaria acratilega (NL. fem. n. *acratilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOMT01 sp014623385*. The type genome for the species is the GenBank assembly GCA_014623385.1. The GC content of the type genome is 56.93 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Accogaria gen. nov.

Candidatus Accogaria (NL. fem. n. *Accogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACOMT01*. The type species for the genus is *Candidatus* Accogaria acratilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accogida adgenitrix sp. nov.

Candidatus Accogida adgenitrix (NL. fem. n. *adgenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQSK01 sp009787915*. The type genome for the species is the GenBank assembly GCA_009787915.1. The GC content of the type genome is 43.48 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Accogida gen. nov.

Candidatus Accogida (NL. fem. n. *Accogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQSK01*. The type species for the genus is *Candidatus* Accogida adgenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Accogosa carucitudo sp. nov.

Candidatus Accogosa carucitudo (NL. fem. n. *carucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VCDI01 sp005844085*. The type genome for the species is the GenBank assembly RS_GCF_005844085.1. The GC content of the type genome is 67.81 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Accogosa gen. nov.

Candidatus Accogosa (NL. fem. n. *Accogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VCDI01*. The type species for the genus is *Candidatus* Accogosa carucitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accogula derunedo sp. nov.

Candidatus Accogula derunedo (NL. fem. n. *derunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNM01 sp012798265*. The type genome for the species is the GenBank assembly GCA_012798265.1. The GC content of the type genome is 41.48 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Accogula gen. nov.

Candidatus Accogula (NL. fem. n. *Accogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNM01*. The type species for the genus is *Candidatus* Accogula derunedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Accomana cacopugo sp. nov.

Candidatus Accomana cacopugo (NL. fem. n. *cacopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUI01 sp012728555*. The type genome for the species is the GenBank assembly GCA_012728555.1. The GC content of the type genome is 35.26 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Accomana gen. nov.

Candidatus Accomana (NL. fem. n. *Accomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUI01*. The type species for the genus is *Candidatus* Accomana cacopugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accomana capabago sp. nov.

Candidatus Accomana capabago (NL. fem. n. *capabago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUI01 sp012512495*. The type genome for the species is the GenBank assembly GCA_012512495.1. The GC content of the type genome is 43.07 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Accomana omnimitudo sp. nov.

Candidatus Accomana omnimitudo (NL. fem. n. *omnimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUI01 sp012841625*. The type genome for the species is the GenBank assembly GCA_012841625.1. The GC content of the type genome is 35.2 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Accomana pluscibula sp. nov.

Candidatus Accomana pluscibula (NL. fem. n. *pluscibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUI01 sp012512455*. The type genome for the species is the GenBank assembly GCA_012512455.1. The GC content of the type genome is 35.38 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Accomella utrolax sp. nov.

Candidatus Accomella utrolax (NL. fem. n. *utrolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1344 sp003171235*. The type genome for the species is the GenBank assembly GCA_003171235.1. The GC content of the type genome is 64.16 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Accomella gen. nov.

Candidatus Accomella (NL. fem. n. *Accomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *FEN-1344*. The type species for the genus is *Candidatus* Accomella utrolax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Accomia infelitas sp. nov.

Candidatus Accomia infelitas (NL. fem. n. *infelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMRP01 sp014376325*. The type genome for the species is the GenBank assembly GCA_014376325.1. The GC content of the type genome is 48.02 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Accomia gen. nov.

Candidatus Accomia (NL. fem. n. *Accomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMRP01*. The type species for the genus is *Candidatus* Accomia infelitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accomida melilimonas sp. nov.

Candidatus Accomida melilimonas (NL. fem. n. *melilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SGAir0037 sp005491705*. The type genome for the species is the GenBank assembly RS_GCF_005491705.1. The GC content of the type genome is 45.31 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Accomida gen. nov.

Candidatus Accomida (NL. fem. n. *Accomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SGAir0037*. The type species for the genus is *Candidatus* Accomida

melilimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accomosa dilicigena sp. nov.

Candidatus Accomosa dilicigena (NL. fem. n. *dilicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAE01 sp012719555*. The type genome for the species is the GenBank assembly GCA_012719555.1. The GC content of the type genome is 38.67 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Accomosa gen. nov.

Candidatus Accomosa (NL. fem. n. *Accomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAE01*. The type species for the genus is *Candidatus* Accomosa dilicigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accorana binocitudo sp. nov.

Candidatus Accorana binocitudo (NL. fem. n. *binocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM509 sp002868865*. The type genome for the species is the GenBank assembly GCA_002868865.1. The GC content of the type genome is 55.18 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Accorana gen. nov.

Candidatus Accorana (NL. fem. n. *Accorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM509*. The type species for the genus is *Candidatus* Accorana binocitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accorana cadavastra sp. nov.

Candidatus Accorana cadavastra (NL. fem. n. *cadavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM509 sp002869695*. The type genome for the species is the GenBank assembly GCA_002869695.1. The GC content of the type genome is 54.98 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Accoraria obtoricula sp. nov.

Candidatus Accoraria obtoricula (NL. fem. n. *obtoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ARS1224 sp002688155*. The type genome for the species is the GenBank assembly GCA_002688155.1. The GC content of the type genome is 61.15 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Accoraria gen. nov.

Candidatus Accoraria (NL. fem. n. *Accoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ARS1224*. The type species for the genus is *Candidatus* Accoraria obtoricula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accorella immobax sp. nov.

Candidatus Accorella immobax (NL. fem. n. *immobax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVR01 sp011328705*. The type genome for the species is the GenBank assembly GCA_011328705.1. The GC content of the type genome is 58.49 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Accorella gen. nov.

Candidatus Accorella (NL. fem. n. *Accorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVR01*. The type species for the genus is *Candidatus* Accorella immobax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peropariaceae.

Description of *Candidatus* Accoria enimvilega sp. nov.

Candidatus Accoria enimvilega (NL. fem. n. *enimvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VUMM01 sp009696175*. The type genome for the species is the GenBank assembly RS_GCF_009696175.1. The GC content of the type genome is 33.42 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Accoria gen. nov.

Candidatus Accoria (NL. fem. n. *Accoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VUMM01*. The type species for the genus is *Candidatus* Accoria enimvilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accorosa dececugo sp. nov.

Candidatus Accorosa dececugo (NL. fem. n. *dececugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3084 sp002367335*. The type genome for the species is the GenBank assembly GCA_002367335.1. The GC content of the type genome is 42.36 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Accorosa gen. nov.

Candidatus Accorosa (NL. fem. n. *Accorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3084*. The type species for the genus is *Candidatus* Accorosa dececugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6807*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimosaceae.

Description of *Candidatus* Accorula derelicula sp. nov.

Candidatus Accorula derelicula (NL. fem. n. *derelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-206 sp011041825*. The type genome for the species is the GenBank assembly GCA_011041825.1. The GC content of the type genome is 55.47 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Accorula gen. nov.

Candidatus Accorula (NL. fem. n. *Accorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-206*. The type species for the genus is *Candidatus* Accorula derelicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-600*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citivulaceae.

Description of *Candidatus* Accucana arremax sp. nov.

Candidatus Accucana arremax (NL. fem. n. *arremax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMW01 sp009776955*. The type genome for the species is the GenBank assembly GCA_009776955.1. The GC content of the type genome is 55.39 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Accucana gen. nov.

Candidatus Accucana (NL. fem. n. *Accucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMW01*. The type species for the genus is *Candidatus* Accucana arremax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accucaria infesisca sp. nov.

Candidatus Accucaria infesisca (NL. fem. n. *infesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXN01 sp003222975*. The type genome for the species is the GenBank assembly GCA_003222975.1. The GC content of the type genome is 65.14 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Accucaria gen. nov.

Candidatus Accucaria (NL. fem. n. *Accucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHXN01*. The type species for the genus is *Candidatus* Accucaria infesisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accucella sarabimonia sp. nov.

Candidatus Accucella sarabimonia (NL. fem. n. *sarabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-451 sp011330885*. The type genome for the species is the GenBank assembly GCA_011330885.1. The GC content of the type genome is 69.32 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Accucella gen. nov.

Candidatus Accucella (NL. fem. n. *Accucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-451*. The type species for the genus is *Candidatus* Accucella

sarabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHTK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarellaceae.

Description of *Candidatus* Accucia ammodiforma sp. nov.

Candidatus Accucia ammodiforma (NL. fem. n. *ammodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSUT01 sp011362355*. The type genome for the species is the GenBank assembly GCA_011362355.1. The GC content of the type genome is 63.23 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Accucia gen. nov.

Candidatus Accucia (NL. fem. n. *Accucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSUT01*. The type species for the genus is *Candidatus* Accucia ammodiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Accucula cinefedo sp. nov.

Candidatus Accucula cinefedo (NL. fem. n. *cinefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-12 sp013044295*. The type genome for the species is the GenBank assembly GCA_013044295.1. The GC content of the type genome is 68.4 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Accucula gen. nov.

Candidatus Accucula (NL. fem. n. *Accucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AG-12*. The type species for the genus is *Candidatus* Accucula cinefedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culigosaceae.

Description of *Candidatus* Acculana adpanessa sp. nov.

Candidatus Acculana adpanessa (NL. fem. n. *adpanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZH01 sp012514965*. The type genome for the species is the GenBank assembly GCA_012514965.1. The GC content of the type genome is 53.72 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Acculana gen. nov.

Candidatus Acculana (NL. fem. n. *Acculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZH01*. The type species for the genus is *Candidatus* Acculana adpanessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acculia scombifica sp. nov.

Candidatus Acculia scombifica (NL. fem. n. *scombifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2706465 sp002706465*. The type genome for the species is the GenBank assembly GCA_002706465.1. The GC content of the type genome is 29.23 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Acculia gen. nov.

Candidatus Acculia (NL. fem. n. *Acculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2706465*. The type species for the genus is *Candidatus* Acculia

scombifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAT41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumiaceae.

Description of *Candidatus* Acculosa buxanetta sp. nov.

Candidatus Acculosa buxanetta (NL. fem. n. *buxanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICN01 sp009691405*. The type genome for the species is the GenBank assembly GCA_009691405.1. The GC content of the type genome is 51.7 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Acculosa gen. nov.

Candidatus Acculosa (NL. fem. n. *Acculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICN01*. The type species for the genus is *Candidatus* Acculosa buxanetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acculula indotessa sp. nov.

Candidatus Acculula indotessa (NL. fem. n. *indotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-693 sp003156595*. The type genome for the species is the GenBank assembly GCA_003156595.1. The GC content of the type genome is 66.96 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Acculula gen. nov.

Candidatus Acculula (NL. fem. n. *Acculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-693*. The type species for the genus is *Candidatus* Acculula indotessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-688*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Attubulaceae.

Description of *Candidatus* Accumana depasiforma sp. nov.

Candidatus Accumana depasiforma (NL. fem. n. *depasiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-42-14 sp002772695*. The type genome for the species is the GenBank assembly GCA_002772695.1. The GC content of the type genome is 44.06 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Accumana gen. nov.

Candidatus Accumana (NL. fem. n. *Accumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-42-14*. The type species for the genus is *Candidatus* Accumana depasiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Accumana lapililega sp. nov.

Candidatus Accumana lapililega (NL. fem. n. *lapililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-42-14 sp009991965*. The type genome for the species is the GenBank assembly GCA_009991965.1. The GC content of the type genome is 44.16 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Accumana perexitica sp. nov.

Candidatus Accumana perexitica (NL. fem. n. *perexitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UM-FILTER-42-14 sp002784625*. The type genome for the species is the GenBank assembly GCA_002784625.1. The GC content of the type genome is 42.16 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Accumaria assicatica sp. nov.

Candidatus Accumaria assicatica (NL. fem. n. *assicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1366 sp002306005*. The type genome for the species is the GenBank assembly GCA_002306005.1. The GC content of the type genome is 48.88 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Accumaria gen. nov.

Candidatus Accumaria (NL. fem. n. *Accumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1366*. The type species for the genus is *Candidatus* Accumaria assicatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accumella documedo sp. nov.

Candidatus Accumella documedo (NL. fem. n. *documedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-51 sp003232965*. The type genome for the species is the GenBank assembly GCA_003232965.1. The GC content of the type genome is 45.92 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Accumella gen. nov.

Candidatus Accumella (NL. fem. n. *Accumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-51*. The type species for the genus is *Candidatus* Accumella documedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Accumia salubicella sp. nov.

Candidatus Accumia salubicella (NL. fem. n. *salubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWC01 sp009691045*. The type genome for the species is the GenBank assembly GCA_009691045.1. The GC content of the type genome is 61.99 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Accumia gen. nov.

Candidatus Accumia (NL. fem. n. *Accumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHWC01*. The type species for the genus is *Candidatus* Accumia salubicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Accumida extipilenta sp. nov.

Candidatus Accumida extipilenta (NL. fem. n. *extipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-60 sp003604975*. The type genome for the species is the GenBank assembly GCA_003604975.1. The GC content of the type genome is 55.91 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Accumida gen. nov.

Candidatus Accumida (NL. fem. n. *Accumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-60*. The type species for the genus is *Candidatus* Accumida extipilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Accumosa mirabax sp. nov.

Candidatus Accumosa mirabax (NL. fem. n. *mirabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC3RG10 sp003387805*. The type genome for the species is the GenBank assembly GCA_003387805.1. The GC content of the type genome is 68.79 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Accumosa gen. nov.

Candidatus Accumosa (NL. fem. n. *Accumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC3RG10*. The type species for the genus is *Candidatus* Accumosa mirabax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZCTH02-B6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relecellaceae.

Description of *Candidatus* Accumulibacter cadavatica sp. nov.

Candidatus Accumulibacter cadavatica (NL. fem. n. *cadavatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Accumulibacter sp000584975*. The type genome for the species is the GenBank assembly RS_GCF_005889575.1. The GC content of the type genome is 61.22 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Accumulibacter cilibifica sp. nov.

Candidatus Accumulibacter cilibifica (NL. fem. n. *cilibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Accumulibacter sp000585075*. The type genome for the species is the GenBank assembly GCA_002455435.1. The GC content of the type genome is 64.19 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Accumulibacter cosiditas sp. nov.

Candidatus Accumulibacter cosiditas (NL. fem. n. *cosiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Accumulibacter sp000585015*. The type genome for the species is the GenBank assembly GCA_000585015.1. The GC content of the type genome is 66.32 % and the genome length is 4.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enriched from a lab-scale EBPR bioreactor".

Description of *Candidatus* Accumulibacter famelax sp. nov.

Candidatus Accumulibacter famelax (NL. fem. n. *famelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Accumulibacter sp005524045*. The type genome for the species is the GenBank assembly GCA_013347225.1. The GC content of the type genome is 65.98 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Accumulibacter solivibra sp. nov.

Candidatus Accumulibacter solivibra (NL. fem. n. *solivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Accumulibacter sp000585055*. The type genome for the species is the GenBank assembly GCA_002352265.1. The GC content of the type genome is 63.02 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Acertana immemitura sp. nov.

Candidatus Acertana immemitura (NL. fem. n. *immemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-75000 sp003594885*. The type genome for the species is the GenBank assembly RS_GCF_003594885.1. The GC content of the type genome is 76.97 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Acertana gen. nov.

Candidatus Acertana (NL. fem. n. *Acertana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-75000*. The type species for the genus is *Candidatus* Acertana immemitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acertida epigricella sp. nov.

Candidatus Acertida epigricella (NL. fem. n. *epigricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQW01 sp012837585*. The type genome for the species is the GenBank assembly GCA_012837585.1. The GC content of the type genome is 30.45 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Acertida gen. nov.

Candidatus Acertida (NL. fem. n. *Acertida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUQW01*. The type species for the genus is *Candidatus* Acertida epigricella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acertida inurbitrix sp. nov.

Candidatus Acertida inurbitrix (NL. fem. n. *inurbitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQW01 sp012520715*. The type genome for the species is the GenBank assembly GCA_012520715.1. The GC content of the type genome is 30.44 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Acertida viripastra sp. nov.

Candidatus Acertida viripastra (NL. fem. n. *viripastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUQW01 sp012515785*. The type genome for the species is the GenBank assembly GCA_012515785.1. The GC content of the type genome is 31.65 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Acertosa ensicugo sp. nov.

Candidatus Acertosa ensicugo (NL. fem. n. *ensicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGZ01 sp013286575*. The type genome for the species is the GenBank assembly GCA_013286575.1. The GC content of the type genome is 46.17 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Acertosa gen. nov.

Candidatus Acertosa (NL. fem. n. *Acertosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGZ01*. The type species for the genus is *Candidatus* Acertosa ensicugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002753745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosaculaceae.

Description of *Candidatus* Acertosa refulimonas sp. nov.

Candidatus Acertosa refulimonas (NL. fem. n. *refulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGZ01 sp013287965*. The type genome for the species is the GenBank assembly GCA_013287965.1. The GC content of the type genome is 46.76 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Acertosa subinilega sp. nov.

Candidatus Acertosa subinilega (NL. fem. n. *subinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGZ01 sp013285735*. The type genome for the species is the

GenBank assembly GCA_013285735.1. The GC content of the type genome is 41.82 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Acertula redacentia sp. nov.

Candidatus Acertula redacentia (NL. fem. n. *redacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-17 sp003104935*. The type genome for the species is the GenBank assembly GCA_003104935.1. The GC content of the type genome is 44.06 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Acertula gen. nov.

Candidatus Acertula (NL. fem. n. *Acertula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-17*. The type species for the genus is *Candidatus* Acertula redacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Acetatifactor acustiforma sp. nov.

Candidatus Acetatifactor acustiforma (NL. fem. n. *acustiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp002490995*. The type genome for the species is the GenBank assembly GCA_002490995.1. The GC content of the type genome is 50.17 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Acetatifactor adnumitia sp. nov.

Candidatus Acetatifactor adnumitia (NL. fem. n. *adnumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp902766425*. The type genome for the species is the GenBank assembly GCA_902766425.1. The GC content of the type genome is 49.04 %

and the genome length is 2.78 Mbp.

Description of *Candidatus* Acetatifactor agnomilega sp. nov.

Candidatus Acetatifactor agnomilega (NL. fem. n. *agnomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900766575*. The type genome for the species is the GenBank assembly RS_GCF_900766575.1. The GC content of the type genome is 47.48 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Acetatifactor bimetetta sp. nov.

Candidatus Acetatifactor bimetetta (NL. fem. n. *bimetetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp003612485*. The type genome for the species is the GenBank assembly RS_GCF_003612485.1. The GC content of the type genome is 50.84 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Acetatifactor cerofitica sp. nov.

Candidatus Acetatifactor cerofitica (NL. fem. n. *cerofitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900755865*. The type genome for the species is the GenBank assembly RS_GCF_900755865.1. The GC content of the type genome is 46.5 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Acetatifactor delebitura sp. nov.

Candidatus Acetatifactor delebitura (NL. fem. n. *delebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp002314715*. The type genome for the species is the GenBank assembly GCA_002314715.1. The GC content of the type genome is 43.16 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Acetatifactor depasimonia sp. nov.

Candidatus Acetatifactor depasimonia (NL. fem. n. *depasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp009177215*. The type genome for the species is the GenBank assembly GCA_009177215.1. The GC content of the type genome is 43.15 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Acetatifactor dinupimonia sp. nov.

Candidatus Acetatifactor dinupimonia (NL. fem. n. *dinupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900772845*. The type genome for the species is the GenBank assembly RS_GCF_900772845.1. The GC content of the type genome is 46.66 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Acetatifactor essonedo sp. nov.

Candidatus Acetatifactor essonedo (NL. fem. n. *essonedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp002431915*. The type genome for the species is the GenBank assembly GCA_002431915.1. The GC content of the type genome is 47.69 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Acetatifactor excamousia sp. nov.

Candidatus Acetatifactor excamousia (NL. fem. n. *excamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900771995*. The type genome for the species is the GenBank assembly RS_GCF_900771995.1. The GC content of the type genome is 48.95 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Acetatifactor expalisca sp. nov.

Candidatus Acetatifactor expalisca (NL. fem. n. *expalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp002368865*. The type genome for the species is the GenBank assembly GCA_002368865.1. The GC content of the type genome is 48.85 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Acetatifactor faticugo sp. nov.

Candidatus Acetatifactor faticugo (NL. fem. n. *faticugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900066565*. The type genome for the species is the GenBank assembly RS_GCF_003435925.1. The GC content of the type genome is 46.54 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Acetatifactor funivessa sp. nov.

Candidatus Acetatifactor funivessa (NL. fem. n. *funivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900554205*. The type genome for the species is the GenBank assembly RS_GCF_900771935.1. The GC content of the type genome is 49.95 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Acetatifactor lenimicula sp. nov.

Candidatus Acetatifactor lenimicula (NL. fem. n. *lenimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900760705*. The type genome for the species is the GenBank assembly RS_GCF_900760705.1. The GC content of the type genome is 46.28 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Acetatifactor levififorma sp. nov.

Candidatus Acetatifactor levififorma (NL. fem. n. *levififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp902796105*. The type genome for the species is the GenBank assembly GCA_902796105.1. The GC content of the type genome is 49.06 %

and the genome length is 2.49 Mbp.

Description of *Candidatus* Acetatifactor monacitio sp. nov.

Candidatus Acetatifactor monacitio (NL. fem. n. *monacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900320485*. The type genome for the species is the GenBank assembly GCA_902788525.1. The GC content of the type genome is 49.45 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Acetatifactor recocitio sp. nov.

Candidatus Acetatifactor recocitio (NL. fem. n. *recocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp011959105*. The type genome for the species is the GenBank assembly RS_GCF_011959105.1. The GC content of the type genome is 50.65 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Acetatifactor terebousia sp. nov.

Candidatus Acetatifactor terebousia (NL. fem. n. *terebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp003447295*. The type genome for the species is the GenBank assembly RS_GCF_900768905.1. The GC content of the type genome is 47.08 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Acetatifactor voragilega sp. nov.

Candidatus Acetatifactor voragilega (NL. fem. n. *voragilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetatifactor sp900066365*. The type genome for the species is the GenBank assembly GCA_000434955.1. The GC content of the type genome is 46.62 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Acetitomaculum ranuniforma sp. nov.

Candidatus Acetitomaculum ranuniforma (NL. fem. n. *ranuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetitomaculum sp902797785*. The type genome for the species is the GenBank assembly GCA_902797785.1. The GC content of the type genome is 43.57 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Acetivibrio impolatio sp. nov.

Candidatus Acetivibrio impolatio (NL. fem. n. *impolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetivibrio sp012519925*. The type genome for the species is the GenBank assembly GCA_012519925.1. The GC content of the type genome is 34.28 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Acetivibrio angipibra sp. nov.

Candidatus Acetivibrio angipibra (NL. fem. n. *angipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetivibrio_A sp002419585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002419585.1. The GC content of the type genome is 36.34 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Acetivibrio proslibra sp. nov.

Candidatus Acetivibrio proslibra (NL. fem. n. *proslibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetivibrio_A sp009696045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009696045.1. The GC content of the type genome is 34.88 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Acetobacter anacligena sp. nov.

Candidatus Acetobacter anacligena (NL. fem. n. *anacligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp011516755*. The type genome for the species is the GenBank assembly RS_GCF_011516755.1. The GC content of the type genome is 58.96 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Acetobacter decatibra sp. nov.

Candidatus Acetobacter decatibra (NL. fem. n. *decatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp008365315*. The type genome for the species is the GenBank assembly RS_GCF_008365315.1. The GC content of the type genome is 59.24 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Acetobacter femelitudo sp. nov.

Candidatus Acetobacter femelitudo (NL. fem. n. *femelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp011516735*. The type genome for the species is the GenBank assembly RS_GCF_011516725.1. The GC content of the type genome is 58.33 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Acetobacter infunessa sp. nov.

Candidatus Acetobacter infunessa (NL. fem. n. *infunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp002409645*. The type genome for the species is the GenBank assembly GCA_002409645.1. The GC content of the type genome is 56.76 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Acetobacter insicitica sp. nov.

Candidatus Acetobacter insicitica (NL. fem. n. *insicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp002153745*. The type genome for the species is the GenBank assembly RS_GCF_002153745.1. The GC content of the type genome is 60.08 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Acetobacter semilousia sp. nov.

Candidatus Acetobacter semilousia (NL. fem. n. *semilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacter sp012517935*. The type genome for the species is the GenBank assembly GCA_012517935.1. The GC content of the type genome is 53.26 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Acetobacterium novilago sp. nov.

Candidatus Acetobacterium novilago (NL. fem. n. *novilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacterium sp002841405*. The type genome for the species is the GenBank assembly GCA_002841405.1. The GC content of the type genome is 43.62 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Acetobacterium pomifax sp. nov.

Candidatus Acetobacterium pomifax (NL. fem. n. *pomifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacterium sp003260995*. The type genome for the species is the GenBank assembly RS_GCF_003260995.1. The GC content of the type genome is 42.48 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Acetobacteroides duponousia sp. nov.

Candidatus Acetobacteroides duponousia (NL. fem. n. *duponousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetobacteroides sp000798815*. The type genome for the species is the GenBank assembly RS_GCF_000798815.1. The GC content of the type genome is 43.08

% and the genome length is 4.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "organic material".

Description of *Candidatus* Acetomicrobium advigicula sp. nov.

Candidatus Acetomicrobium advigicula (NL. fem. n. *advigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetomicrobium sp002433005*. The type genome for the species is the GenBank assembly GCA_002433005.1. The GC content of the type genome is 46.2 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Acetomicrobium duricatio sp. nov.

Candidatus Acetomicrobium duricatio (NL. fem. n. *duricatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetomicrobium sp002385485*. The type genome for the species is the GenBank assembly GCA_012843005.1. The GC content of the type genome is 46.81 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Acetomicrobium inmoritio sp. nov.

Candidatus Acetomicrobium inmoritio (NL. fem. n. *inmoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acetomicrobium sp012518015*. The type genome for the species is the GenBank assembly GCA_012518015.1. The GC content of the type genome is 44.75 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Acholeplasma adfamax sp. nov.

Candidatus Acholeplasma adfamax (NL. fem. n. *adfamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acholeplasma sp002399815*. The type genome for the species is the GenBank assembly GCA_002399815.1. The GC content of the type genome is 30.65 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Acholeplasma nocenibula sp. nov.

Candidatus Acholeplasma nocenibula (NL. fem. n. *nocenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acholeplasma_A sp012837395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012837395.1. The GC content of the type genome is 28.02 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Acholeplasma casabitoga sp. nov.

Candidatus Acholeplasma casabitoga (NL. fem. n. *casabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acholeplasma_D sp012519065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012519065.1. The GC content of the type genome is 31.05 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Achromobacter annucimonas sp. nov.

Candidatus Achromobacter annucimonas (NL. fem. n. *annucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp002902905*. The type genome for the species is the GenBank assembly RS_GCF_002902905.1. The GC content of the type genome is 67.43 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Achromobacter cacopibula sp. nov.

Candidatus Achromobacter cacopibula (NL. fem. n. *cacopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp014170335*. The type genome for the species is the GenBank assembly RS_GCF_014170335.1. The GC content of the type genome is 65.82 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Achromobacter celumibula sp. nov.

Candidatus Achromobacter celumibula (NL. fem. n. *celumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp003454835*. The type genome for the species is the GenBank assembly GCA_003454835.1. The GC content of the type genome is 64.96 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Achromobacter esculax sp. nov.

Candidatus Achromobacter esculax (NL. fem. n. *esculax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp002975275*. The type genome for the species is the GenBank assembly RS_GCF_002975275.1. The GC content of the type genome is 65.04 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Achromobacter lenocax sp. nov.

Candidatus Achromobacter lenocax (NL. fem. n. *lenocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp001270295*. The type genome for the species is the GenBank assembly RS_GCF_001270295.1. The GC content of the type genome is 67.41 % and the genome length is 4.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "industrial effluent contaminated site".

Description of *Candidatus* Achromobacter malivitudo sp. nov.

Candidatus Achromobacter malivitudo (NL. fem. n. *malivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp001428845*. The type genome for the species is the GenBank assembly RS_GCF_001428845.1. The GC content of the type genome is 65.85 % and the genome length is 6.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Achromobacter pedepibula sp. nov.

Candidatus Achromobacter pedepibula (NL. fem. n. *pedepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp900156745*. The type genome for the species is the GenBank assembly RS_GCF_900108985.1. The GC content of the type genome is 66.55 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Achromobacter redunitoga sp. nov.

Candidatus Achromobacter redunitoga (NL. fem. n. *redunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp000757485*. The type genome for the species is the GenBank assembly RS_GCF_000757485.1. The GC content of the type genome is 66.62 % and the genome length is 6.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "termite gut and rumen fluid".

Description of *Candidatus* Achromobacter rutabimonas sp. nov.

Candidatus Achromobacter rutabimonas (NL. fem. n. *rutabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp012928505*. The type genome for the species is the GenBank assembly RS_GCF_012928505.1. The GC content of the type genome is 65.4 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Achromobacter viginatio sp. nov.

Candidatus Achromobacter viginatio (NL. fem. n. *viginatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Achromobacter sp014170305*. The type genome for the species is the GenBank assembly RS_GCF_014170305.1. The GC content of the type genome is 66.36 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Acidaminobacter impigitica sp. nov.

Candidatus Acidaminobacter impigitica (NL. fem. n. *impigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminobacter sp009881125*. The type genome for the species is the GenBank assembly GCA_009881125.1. The GC content of the type genome is 48.28 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Acidaminococcus adfunitrix sp. nov.

Candidatus Acidaminococcus adfunitrix (NL. fem. n. *adfunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp902796945*. The type genome for the species is the GenBank assembly GCA_902796945.1. The GC content of the type genome is 52.68 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Acidaminococcus bicipisca sp. nov.

Candidatus Acidaminococcus bicipisca (NL. fem. n. *bicipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp000437815*. The type genome for the species is the GenBank assembly GCA_900542455.1. The GC content of the type genome is 56.58 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Acidaminococcus exindugo sp. nov.

Candidatus Acidaminococcus exindugo (NL. fem. n. *exindugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp900770265*. The type genome for the species is the GenBank assembly GCA_900770265.1. The GC content of the type genome is 57.61 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Acidaminococcus fibicitudo sp. nov.

Candidatus Acidaminococcus fibicitudo (NL. fem. n. *fibicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp900538365*. The type genome for the species is the GenBank assembly GCA_900765765.1. The GC content of the type genome is 50.09 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Acidaminococcus repurivita sp. nov.

Candidatus Acidaminococcus repurivita (NL. fem. n. *repurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp900554515*. The type genome for the species is the GenBank assembly GCA_900554515.1. The GC content of the type genome is 49.09 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Acidaminococcus resupago sp. nov.

Candidatus Acidaminococcus resupago (NL. fem. n. *resupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp900315205*. The type genome for the species is the GenBank assembly GCA_900315205.1. The GC content of the type genome is 55.91 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Acidaminococcus tirocigena sp. nov.

Candidatus Acidaminococcus tirocigena (NL. fem. n. *tirocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidaminococcus sp900314165*. The type genome for the species is the GenBank assembly GCA_900314165.1. The GC content of the type genome is 51.76 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Acidibrevibacterium dibapimonas sp. nov.

Candidatus Acidibrevibacterium dibapimonas (NL. fem. n. *dibapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidibrevibacterium sp011332665*. The type genome for the species is the GenBank assembly GCA_011332665.1. The GC content of the type genome is 66.64 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Acidiferrobacter derecitio sp. nov.

Candidatus Acidiferrobacter derecitio (NL. fem. n. *derecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidiferrobacter sp003184265*. The type genome for the species is the GenBank assembly RS_GCF_003184265.1. The GC content of the type genome is 64.19 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Acidimicrobium expopibula sp. nov.

Candidatus Acidimicrobium expopibula (NL. fem. n. *expopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidimicrobium sp004366215*. The type genome for the species is the GenBank assembly GCA_004366215.1. The GC content of the type genome is 68.47 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Acidiphilium caduritio sp. nov.

Candidatus Acidiphilium caduritio (NL. fem. n. *caduritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidiphilium sp002255515*. The type genome for the species is the GenBank assembly RS_GCF_902712915.1. The GC content of the type genome is 66.12 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Acidiphilium perexiforma sp. nov.

Candidatus Acidiphilium perexiforma (NL. fem. n. *perexiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidiphilium sp002279355*. The type genome for the species is the GenBank assembly GCA_002279355.1. The GC content of the type genome is 59.99 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Acidisoma semivitas sp. nov.

Candidatus Acidisoma semivitas (NL. fem. n. *semivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Acidisoma sp009765865*. The type genome for the species is the GenBank assembly RS_GCF_009765865.1. The GC content of the type genome is 62.48 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Acidithiobacillus dedigatica sp. nov.

Candidatus Acidithiobacillus dedigatica (NL. fem. n. *dedigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidithiobacillus sp002847505*. The type genome for the species is the GenBank assembly RS_GCF_002847505.1. The GC content of the type genome is 54.26 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Acidithiobacillus ammuribra sp. nov.

Candidatus Acidithiobacillus ammuribra (NL. fem. n. *ammuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidithiobacillus_A sp002341825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002341825.1. The GC content of the type genome is 59.57 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Acidobacterium dilibigena sp. nov.

Candidatus Acidobacterium dilibigena (NL. fem. n. *dilibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidobacterium_A sp013285705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013285705.1. The GC content of the type genome is 55.5 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Acidobacterium repepitio sp. nov.

Candidatus Acidobacterium repepitio (NL. fem. n. *repepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Acidobacterium_A sp014274465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014274465.1. The GC content of the type genome is 55.79 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Acidobacterium vavasetta sp. nov.

Candidatus Acidobacterium vavasetta (NL. fem. n. *vavasetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidobacterium_A sp009765985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009765985.1. The GC content of the type genome is 55.52 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Acidocella bicodago sp. nov.

Candidatus Acidocella bicodago (NL. fem. n. *bicodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidocella sp002281005*. The type genome for the species is the GenBank assembly GCA_002255785.1. The GC content of the type genome is 57.62 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Acidocella defalicula sp. nov.

Candidatus Acidocella defalicula (NL. fem. n. *defalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidocella sp002255575*. The type genome for the species is the GenBank assembly GCA_002255715.1. The GC content of the type genome is 57.84 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Acidocella diludimonas sp. nov.

Candidatus Acidocella diludimonas (NL. fem. n. *diludimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidocella sp003137135*. The type genome for the species is the GenBank assembly GCA_003139935.1. The GC content of the type genome is 62.59 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Acidocella documago sp. nov.

Candidatus Acidocella documago (NL. fem. n. *documago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidocella sp003164135*. The type genome for the species is the GenBank assembly GCA_003156215.1. The GC content of the type genome is 61.21 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Acidocella solifousia sp. nov.

Candidatus Acidocella solifousia (NL. fem. n. *solifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidocella sp013044125*. The type genome for the species is the GenBank assembly GCA_013044125.1. The GC content of the type genome is 63.1 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Acidovorax adlubitoga sp. nov.

Candidatus Acidovorax adlubitoga (NL. fem. n. *adlubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003663825*. The type genome for the species is the GenBank assembly RS_GCF_003663825.1. The GC content of the type genome is 63.58 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Acidovorax aneclitrix sp. nov.

Candidatus Acidovorax aneclitrix (NL. fem. n. *aneclitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003060895*. The type genome for the species is the GenBank assembly RS_GCF_003060895.1. The GC content of the type genome is 64.44

% and the genome length is 4.65 Mbp.

Description of *Candidatus* Acidovorax catapastra sp. nov.

Candidatus Acidovorax catapastra (NL. fem. n. *catapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp002176815*. The type genome for the species is the GenBank assembly RS_GCF_002193515.1. The GC content of the type genome is 64.19 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Acidovorax clancentia sp. nov.

Candidatus Acidovorax clancentia (NL. fem. n. *clancentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp006715665*. The type genome for the species is the GenBank assembly RS_GCF_006715665.1. The GC content of the type genome is 65.69 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Acidovorax cotenicula sp. nov.

Candidatus Acidovorax cotenicula (NL. fem. n. *cotenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001428665*. The type genome for the species is the GenBank assembly RS_GCF_001428645.1. The GC content of the type genome is 66.92 % and the genome length is 6.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Acidovorax curotitica sp. nov.

Candidatus Acidovorax curotitica (NL. fem. n. *curotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003852545*. The type genome for the species is the GenBank assembly RS_GCF_003852545.1. The GC content of the type genome is 66.47 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Acidovorax defesitas sp. nov.

Candidatus Acidovorax defesitas (NL. fem. n. *defesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001633105*. The type genome for the species is the GenBank assembly RS_GCF_001633105.1. The GC content of the type genome is 65.65 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ground water".

Description of *Candidatus* Acidovorax depetilenta sp. nov.

Candidatus Acidovorax depetilenta (NL. fem. n. *depetilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp000302535*. The type genome for the species is the GenBank assembly RS_GCF_003231145.1. The GC content of the type genome is 64.92 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Acidovorax divolisca sp. nov.

Candidatus Acidovorax divolisca (NL. fem. n. *divolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001422735*. The type genome for the species is the GenBank assembly RS_GCF_001422735.1. The GC content of the type genome is 66.29 % and the genome length is 5.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Acidovorax feficifica sp. nov.

Candidatus Acidovorax feficifica (NL. fem. n. *feficifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp002754495*. The type genome for the species is the GenBank assembly RS_GCF_002754495.1. The GC content of the type genome is 63.8 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Acidovorax irrecimonas sp. nov.

Candidatus Acidovorax irrecimonas (NL. fem. n. *irrecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003208485*. The type genome for the species is the GenBank assembly GCA_003208485.1. The GC content of the type genome is 66.55 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Acidovorax lenimiforma sp. nov.

Candidatus Acidovorax lenimiforma (NL. fem. n. *lenimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003058055*. The type genome for the species is the GenBank assembly RS_GCF_003058055.1. The GC content of the type genome is 65.04 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Acidovorax lenunatio sp. nov.

Candidatus Acidovorax lenunatio (NL. fem. n. *lenunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp004210805*. The type genome for the species is the GenBank assembly GCA_004210805.1. The GC content of the type genome is 65.88 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Acidovorax murelitio sp. nov.

Candidatus Acidovorax murelitio (NL. fem. n. *murelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp005405905*. The type genome for the species is the GenBank assembly RS_GCF_005405905.1. The GC content of the type genome is 65.32 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Acidovorax nefanago sp. nov.

Candidatus Acidovorax nefanago (NL. fem. n. *nefanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Acidovorax sp001714725*. The type genome for the species is the GenBank assembly RS_GCF_001714725.1. The GC content of the type genome is 65.29 % and the genome length is 4.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Algal phycosphere".

Description of *Candidatus* Acidovorax oblonastra sp. nov.

Candidatus Acidovorax oblonastra (NL. fem. n. *oblonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp011620245*. The type genome for the species is the GenBank assembly GCA_011620245.1. The GC content of the type genome is 64.23 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Acidovorax occenugo sp. nov.

Candidatus Acidovorax occenugo (NL. fem. n. *occenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp002797445*. The type genome for the species is the GenBank assembly RS_GCF_002797445.1. The GC content of the type genome is 63.46 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Acidovorax papavatica sp. nov.

Candidatus Acidovorax papavatica (NL. fem. n. *papavatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001411535*. The type genome for the species is the GenBank assembly GCA_001724055.1. The GC content of the type genome is 64.63 % and the genome length is 5.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Acidovorax procricula sp. nov.

Candidatus Acidovorax procricula (NL. fem. n. *procricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp013408765*. The type genome for the species is the GenBank assembly RS_GCF_013408765.1. The GC content of the type genome is 66.7

% and the genome length is 6.91 Mbp.

Description of *Candidatus* Acidovorax reduvitas sp. nov.

Candidatus Acidovorax reduvitas (NL. fem. n. *reduvitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001464865*. The type genome for the species is the GenBank assembly GCA_001464865.1. The GC content of the type genome is 65.18 % and the genome length is 4.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Acidovorax rudecitio sp. nov.

Candidatus Acidovorax rudecitio (NL. fem. n. *rudecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp003053545*. The type genome for the species is the GenBank assembly RS_GCF_000276605.1. The GC content of the type genome is 67.77 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Acidovorax serotitica sp. nov.

Candidatus Acidovorax serotitica (NL. fem. n. *serotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax sp001424425*. The type genome for the species is the GenBank assembly RS_GCF_001422105.1. The GC content of the type genome is 66.86 % and the genome length is 5.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Acidovorax amnenetta sp. nov.

Candidatus Acidovorax amnenetta (NL. fem. n. *amnenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax_A sp001424265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_001424265.1. The GC content of the type genome is 68.64 % and the genome length is 4.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Acidovorax vocamibula sp. nov.

Candidatus Acidovorax vocamibula (NL. fem. n. *vocamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax_A sp002397315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002397315.1. The GC content of the type genome is 69.38 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Acidovorax dapifigena sp. nov.

Candidatus Acidovorax dapifigena (NL. fem. n. *dapifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax_C sp001725235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001898665.1. The GC content of the type genome is 68.09 % and the genome length is 4.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Acidovorax infiratica sp. nov.

Candidatus Acidovorax infiratica (NL. fem. n. *infiratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidovorax_C sp011303755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011303755.1. The GC content of the type genome is 65.6 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Acidulodesulfobacterium rumifilenta sp. nov.

Candidatus Acidulodesulfobacterium rumifilenta (NL. fem. n. *rumifilenta* a species

epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidulodesulfobacterium sp011358715*. The type genome for the species is the GenBank assembly GCA_011358715.1. The GC content of the type genome is 38.08 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Acidulodesulfobacterium saburessa sp. nov.

Candidatus Acidulodesulfobacterium saburessa (NL. fem. n. *saburessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acidulodesulfobacterium sp003232385*. The type genome for the species is the GenBank assembly GCA_011052455.1. The GC content of the type genome is 37.57 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Acinetobacter adgenifica sp. nov.

Candidatus Acinetobacter adgenifica (NL. fem. n. *adgenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135295*. The type genome for the species is the GenBank assembly RS_GCF_002135295.1. The GC content of the type genome is 40.02 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Acinetobacter adhinago sp. nov.

Candidatus Acinetobacter adhinago (NL. fem. n. *adhinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003611475*. The type genome for the species is the GenBank assembly RS_GCF_003611475.1. The GC content of the type genome is 37.67 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Acinetobacter affulimonas sp. nov.

Candidatus Acinetobacter affulimonas (NL. fem. n. *affulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135415*. The type genome for the species is the GenBank assembly RS_GCF_002135415.1. The GC content of the type genome is 36.99 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Acinetobacter agrapatica sp. nov.

Candidatus Acinetobacter agrapatica (NL. fem. n. *agrapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002165305*. The type genome for the species is the GenBank assembly RS_GCF_002165305.2. The GC content of the type genome is 41.17 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Acinetobacter aplesifica sp. nov.

Candidatus Acinetobacter aplesifica (NL. fem. n. *aplesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002688565*. The type genome for the species is the GenBank assembly RS_GCF_002688565.1. The GC content of the type genome is 42.35 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Acinetobacter arcititas sp. nov.

Candidatus Acinetobacter arcititas (NL. fem. n. *arcititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135315*. The type genome for the species is the GenBank assembly RS_GCF_002135315.1. The GC content of the type genome is 41.62 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Acinetobacter bicubitio sp. nov.

Candidatus Acinetobacter bicubitio (NL. fem. n. *bicubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135345*. The type genome for the species is the GenBank assembly RS_GCF_002135345.1. The GC content of the type genome is 37.58 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Acinetobacter biveribra sp. nov.

Candidatus Acinetobacter biveribra (NL. fem. n. *biveribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331075*. The type genome for the species is the GenBank assembly RS_GCF_004331065.1. The GC content of the type genome is 41.74 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Acinetobacter buxanitio sp. nov.

Candidatus Acinetobacter buxanitio (NL. fem. n. *buxanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp902809855*. The type genome for the species is the GenBank assembly RS_GCF_902809855.1. The GC content of the type genome is 37.48 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Acinetobacter capilitudo sp. nov.

Candidatus Acinetobacter capilitudo (NL. fem. n. *capilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003611515*. The type genome for the species is the GenBank assembly RS_GCF_003611515.1. The GC content of the type genome is 39.95 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Acinetobacter capucitia sp. nov.

Candidatus Acinetobacter capucitia (NL. fem. n. *capucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000400715*. The type genome for the species is the GenBank assembly RS_GCF_000400715.1. The GC content of the type genome is 40.73 % and the genome length is 4.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "skin".

Description of *Candidatus* Acinetobacter caselousia sp. nov.

Candidatus Acinetobacter caselousia (NL. fem. n. *caselousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135245*. The type genome for the species is the GenBank assembly RS_GCF_013420305.1. The GC content of the type genome is 42.01 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Acinetobacter cepuriforma sp. nov.

Candidatus Acinetobacter cepuriforma (NL. fem. n. *cepuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp011578045*. The type genome for the species is the GenBank assembly RS_GCF_011578045.1. The GC content of the type genome is 38.26 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Acinetobacter cibaredo sp. nov.

Candidatus Acinetobacter cibaredo (NL. fem. n. *cibaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004336635*. The type genome for the species is the GenBank assembly RS_GCF_013004315.1. The GC content of the type genome is 40.32 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Acinetobacter culilitas sp. nov.

Candidatus Acinetobacter culilitas (NL. fem. n. *culilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135205*. The type genome for the species is the GenBank assembly RS_GCF_003569905.1. The GC content of the type genome is 40.72 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Acinetobacter debucessa sp. nov.

Candidatus Acinetobacter debucessa (NL. fem. n. *debucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp013072695*. The type genome for the species is the GenBank assembly RS_GCF_013072695.1. The GC content of the type genome is 40.59 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Acinetobacter decucitas sp. nov.

Candidatus Acinetobacter decucitas (NL. fem. n. *decucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp008017255*. The type genome for the species is the GenBank assembly GCA_008017255.1. The GC content of the type genome is 42.77 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Acinetobacter deculessa sp. nov.

Candidatus Acinetobacter deculessa (NL. fem. n. *deculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp012371325*. The type genome for the species is the GenBank assembly RS_GCF_012371355.1. The GC content of the type genome is 41.16 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Acinetobacter defacifica sp. nov.

Candidatus Acinetobacter defacifica (NL. fem. n. *defacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000313935*. The type genome for the species is the GenBank assembly RS_GCF_000313935.1. The GC content of the type genome is 38.85 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Acinetobacter delebitia sp. nov.

Candidatus Acinetobacter delebitia (NL. fem. n. *delebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002367455*. The type genome for the species is the GenBank assembly GCA_002367455.1. The GC content of the type genome is 43.27 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Acinetobacter deniciforma sp. nov.

Candidatus Acinetobacter deniciforma (NL. fem. n. *deniciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp900323515*. The type genome for the species is the GenBank assembly RS_GCF_900323515.1. The GC content of the type genome is 37.73 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Acinetobacter dereledo sp. nov.

Candidatus Acinetobacter dereledo (NL. fem. n. *dereledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331035*. The type genome for the species is the GenBank assembly RS_GCF_004331035.1. The GC content of the type genome is 40.47 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Acinetobacter derunicella sp. nov.

Candidatus Acinetobacter derunicella (NL. fem. n. *derunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001696615*. The type genome for the species is the GenBank assembly RS_GCF_001696615.3. The GC content of the type genome is 48.98 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital sewage".

Description of *Candidatus* Acinetobacter desomitio sp. nov.

Candidatus Acinetobacter desomitio (NL. fem. n. *desomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001647675*. The type genome for the species is the GenBank assembly RS_GCF_001647675.1. The GC content of the type genome is 40.07 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tracheal swab from cat-captured mouse".

Description of *Candidatus* Acinetobacter detotilenta sp. nov.

Candidatus Acinetobacter detotilenta (NL. fem. n. *detotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000773685*. The type genome for the species is the GenBank assembly RS_GCF_000773685.1. The GC content of the type genome is 43.54 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rumen fluid of Korean native cattle (HanWoo)".

Description of *Candidatus* Acinetobacter direpedo sp. nov.

Candidatus Acinetobacter direpedo (NL. fem. n. *direpedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002296655*. The type genome for the species is the GenBank assembly GCA_002296945.1. The GC content of the type genome is 41.24 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Acinetobacter domipiforma sp. nov.

Candidatus Acinetobacter domipiforma (NL. fem. n. *domipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp011578285*. The type genome for the species is the GenBank assembly RS_GCF_011191955.1. The GC content of the type genome is 40.87 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Acinetobacter edulcastra sp. nov.

Candidatus Acinetobacter edulcastra (NL. fem. n. *edulcastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003261585*. The type genome for the species is the GenBank assembly RS_GCF_003261585.1. The GC content of the type genome is 41.38 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Acinetobacter effaressa sp. nov.

Candidatus Acinetobacter effaressa (NL. fem. n. *effaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003024515*. The type genome for the species is the GenBank assembly RS_GCF_003024515.2. The GC content of the type genome is 37.02 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Acinetobacter effositica sp. nov.

Candidatus Acinetobacter effositica (NL. fem. n. *effositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp008017315*. The type genome for the species is the GenBank assembly GCA_008017315.1. The GC content of the type genome is 41.63 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Acinetobacter effulax sp. nov.

Candidatus Acinetobacter effulax (NL. fem. n. *effulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp900766635*. The type genome for the species is the GenBank assembly GCA_900766635.1. The GC content of the type genome is 41.46 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Acinetobacter encenicula sp. nov.

Candidatus Acinetobacter encenicula (NL. fem. n. *encenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001612555*. The type genome for the species is the GenBank assembly RS_GCF_001612555.1. The GC content of the type genome is 39.86 % and the genome length is 3.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "frozen soil".

Description of *Candidatus* Acinetobacter encomitrix sp. nov.

Candidatus Acinetobacter encomitrix (NL. fem. n. *encomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000369805*. The type genome for the species is the GenBank assembly RS_GCF_000369805.1. The GC content of the type genome is 40.88 % and the genome length is 3.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Wound".

Description of *Candidatus* Acinetobacter ermelicula sp. nov.

Candidatus Acinetobacter ermelicula (NL. fem. n. *ermelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135435*. The type genome for the species is the GenBank assembly RS_GCF_002135435.1. The GC content of the type genome is 43.0 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Acinetobacter expenatica sp. nov.

Candidatus Acinetobacter expenatica (NL. fem. n. *expenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp011753255*. The type genome for the species is the GenBank assembly RS_GCF_011753255.1. The GC content of the type genome is 40.57 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Acinetobacter fatifitrix sp. nov.

Candidatus Acinetobacter fatifitrix (NL. fem. n. *fatifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000369525*. The type genome for the species is the GenBank assembly RS_GCF_000302415.1. The GC content of the type genome is 40.77 % and the genome length is 4.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Acinetobacter holoviforma sp. nov.

Candidatus Acinetobacter holoviforma (NL. fem. n. *holoviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003611465*. The type genome for the species is the

GenBank assembly RS_GCF_003611465.1. The GC content of the type genome is 42.29 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Acinetobacter homogitura sp. nov.

Candidatus Acinetobacter homogitura (NL. fem. n. *homogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003105055*. The type genome for the species is the GenBank assembly RS_GCF_003105055.1. The GC content of the type genome is 40.43 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Acinetobacter inabsousia sp. nov.

Candidatus Acinetobacter inabsousia (NL. fem. n. *inabsousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331175*. The type genome for the species is the GenBank assembly RS_GCF_004331175.1. The GC content of the type genome is 40.73 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Acinetobacter inlusugo sp. nov.

Candidatus Acinetobacter inlusugo (NL. fem. n. *inlusugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331285*. The type genome for the species is the GenBank assembly RS_GCF_004331285.1. The GC content of the type genome is 40.27 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Acinetobacter inmemivita sp. nov.

Candidatus Acinetobacter inmemivita (NL. fem. n. *inmemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135335*. The type genome for the species is the GenBank assembly RS_GCF_002135335.1. The GC content of the type genome is 38.87 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Acinetobacter lacinimonas sp. nov.

Candidatus Acinetobacter lacinimonas (NL. fem. n. *lacinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000369645*. The type genome for the species is the GenBank assembly RS_GCF_003227755.1. The GC content of the type genome is 41.01 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Acinetobacter lavabitas sp. nov.

Candidatus Acinetobacter lavabitas (NL. fem. n. *lavabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp013009345*. The type genome for the species is the GenBank assembly RS_GCF_002137095.1. The GC content of the type genome is 38.82 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Acinetobacter licenessa sp. nov.

Candidatus Acinetobacter licenessa (NL. fem. n. *licenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002018365*. The type genome for the species is the GenBank assembly RS_GCF_013417045.1. The GC content of the type genome is 40.3 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Acinetobacter maheletta sp. nov.

Candidatus Acinetobacter maheletta (NL. fem. n. *maheletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001626925*. The type genome for the species is the GenBank assembly GCA_001626975.1. The GC content of the type genome is 41.91 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 169 - depth 25m".

Description of *Candidatus* Acinetobacter mimogax sp. nov.

Candidatus Acinetobacter mimogax (NL. fem. n. *mimogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000805455*. The type genome for the species is the GenBank assembly RS_GCF_000805455.1. The GC content of the type genome is 44.5 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soft tissue samples".

Description of *Candidatus* Acinetobacter necopibula sp. nov.

Candidatus Acinetobacter necopibula (NL. fem. n. *necopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002165255*. The type genome for the species is the GenBank assembly RS_GCF_013391535.1. The GC content of the type genome is 39.01 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Acinetobacter oblivilega sp. nov.

Candidatus Acinetobacter oblivilega (NL. fem. n. *oblivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135355*. The type genome for the species is the GenBank assembly RS_GCF_002135355.1. The GC content of the type genome is 41.53 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Acinetobacter ocissibula sp. nov.

Candidatus Acinetobacter ocissibula (NL. fem. n. *ocissibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135375*. The type genome for the species is the GenBank assembly RS_GCF_002135375.1. The GC content of the type genome is 35.62 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Acinetobacter pavimifica sp. nov.

Candidatus Acinetobacter pavimifica (NL. fem. n. *pavimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000369505*. The type genome for the species is the GenBank assembly RS_GCF_000369505.1. The GC content of the type genome is 40.17 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Wound".

Description of *Candidatus* Acinetobacter pinigimonas sp. nov.

Candidatus Acinetobacter pinigimonas (NL. fem. n. *pinigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp009557235*. The type genome for the species is the GenBank assembly RS_GCF_009601085.1. The GC content of the type genome is 40.38 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Acinetobacter pocilivita sp. nov.

Candidatus Acinetobacter pocilivita (NL. fem. n. *pocilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp900625095*. The type genome for the species is the GenBank assembly RS_GCF_900625095.1. The GC content of the type genome is 40.42 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Acinetobacter procratio sp. nov.

Candidatus Acinetobacter procratio (NL. fem. n. *procratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003268395*. The type genome for the species is the GenBank assembly RS_GCF_003268395.1. The GC content of the type genome is 37.67 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Acinetobacter ratifibra sp. nov.

Candidatus Acinetobacter ratifibra (NL. fem. n. *ratifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002455755*. The type genome for the species is the GenBank assembly GCA_002455755.1. The GC content of the type genome is 42.01 %

and the genome length is 2.96 Mbp.

Description of *Candidatus* Acinetobacter recogibra sp. nov.

Candidatus Acinetobacter recogibra (NL. fem. n. *recogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002365595*. The type genome for the species is the GenBank assembly GCA_004210695.1. The GC content of the type genome is 40.61 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Acinetobacter recoritudo sp. nov.

Candidatus Acinetobacter recoritudo (NL. fem. n. *recoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp008630915*. The type genome for the species is the GenBank assembly RS_GCF_008630915.1. The GC content of the type genome is 39.44 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Acinetobacter sacomilenta sp. nov.

Candidatus Acinetobacter sacomilenta (NL. fem. n. *sacomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000632455*. The type genome for the species is the GenBank assembly RS_GCF_900109815.1. The GC content of the type genome is 38.65 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Acinetobacter sicinatio sp. nov.

Candidatus Acinetobacter sicinatio (NL. fem. n. *sicinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000369405*. The type genome for the species is the GenBank assembly RS_GCF_000369405.1. The GC content of the type genome is 40.35 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Urine".

Description of *Candidatus* Acinetobacter sifunedo sp. nov.

Candidatus Acinetobacter sifunedo (NL. fem. n. *sifunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003711395*. The type genome for the species is the GenBank assembly RS_GCF_003711395.1. The GC content of the type genome is 41.14 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Acinetobacter subacentia sp. nov.

Candidatus Acinetobacter subacentia (NL. fem. n. *subacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135235*. The type genome for the species is the GenBank assembly RS_GCF_002135235.1. The GC content of the type genome is 38.06 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Acinetobacter subodatio sp. nov.

Candidatus Acinetobacter subodatio (NL. fem. n. *subodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001647535*. The type genome for the species is the GenBank assembly RS_GCF_001647535.1. The GC content of the type genome is 43.13 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Acinetobacter tiguressa sp. nov.

Candidatus Acinetobacter tiguressa (NL. fem. n. *tiguressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000368265*. The type genome for the species is the GenBank assembly RS_GCF_004331275.1. The GC content of the type genome is 41.2 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Acinetobacter venefatica sp. nov.

Candidatus Acinetobacter venefatica (NL. fem. n. *venefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp002135195*. The type genome for the species is the GenBank assembly RS_GCF_013004275.1. The GC content of the type genome is 40.21 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Acinetobacter venunessa sp. nov.

Candidatus Acinetobacter venunessa (NL. fem. n. *venunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp000214135*. The type genome for the species is the GenBank assembly RS_GCF_000214135.1. The GC content of the type genome is 37.6 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Acinetobacter verifitrix sp. nov.

Candidatus Acinetobacter verifitrix (NL. fem. n. *verifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp009707625*. The type genome for the species is the GenBank assembly RS_GCF_009707625.1. The GC content of the type genome is 36.48 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Acinetobacter vilitugo sp. nov.

Candidatus Acinetobacter vilitugo (NL. fem. n. *vilitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp900771065*. The type genome for the species is the GenBank assembly GCA_900771065.1. The GC content of the type genome is 36.54 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Acinetobacter viragibula sp. nov.

Candidatus Acinetobacter viragibula (NL. fem. n. *viragibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331255*. The type genome for the species is the GenBank assembly RS_GCF_004331255.1. The GC content of the type genome is 40.53

% and the genome length is 3.84 Mbp.

Description of *Candidatus* Acinetobacter viripatica sp. nov.

Candidatus Acinetobacter viripatica (NL. fem. n. *viripatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp001647545*. The type genome for the species is the GenBank assembly RS_GCF_004331055.1. The GC content of the type genome is 40.34 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Acinetobacter vivifago sp. nov.

Candidatus Acinetobacter vivifago (NL. fem. n. *vivifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp003987695*. The type genome for the species is the GenBank assembly GCA_003987695.1. The GC content of the type genome is 38.8 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Acinetobacter xenopifica sp. nov.

Candidatus Acinetobacter xenopifica (NL. fem. n. *xenopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acinetobacter sp004331115*. The type genome for the species is the GenBank assembly RS_GCF_013004435.1. The GC content of the type genome is 40.99 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Aciscana conipugo sp. nov.

Candidatus Aciscana conipugo (NL. fem. n. *conipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRTC01 sp011372345*. The type genome for the species is the GenBank assembly GCA_011372345.1. The GC content of the type genome is 35.86 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Aciscana gen. nov.

Candidatus Aciscana (NL. fem. n. *Aciscana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRTC01*. The type species for the genus is *Candidatus* Aciscana conipugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Aciscaria inredatica sp. nov.

Candidatus Aciscaria inredatica (NL. fem. n. *inredatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *42-54-T18 sp002162955*. The type genome for the species is the GenBank assembly GCA_002162955.1. The GC content of the type genome is 44.74 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Aciscaria gen. nov.

Candidatus Aciscaria (NL. fem. n. *Aciscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *42-54-T18*. The type species for the genus is *Candidatus* Aciscaria inredatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aciscaria insubugo sp. nov.

Candidatus Aciscaria insubugo (NL. fem. n. *insubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *42-54-T18 sp002163245*. The type genome for the species is the GenBank assembly GCA_002163245.1. The GC content of the type genome is 42.59 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Aciscaria nugacibra sp. nov.

Candidatus Aciscaria nugacibra (NL. fem. n. *nugacibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *42-54-T18 sp002402125*. The type genome for the species is the GenBank assembly GCA_002402125.1. The GC content of the type genome is 43.86 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Aciscella bovicax sp. nov.

Candidatus Aciscella bovicax (NL. fem. n. *bovicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVX01 sp011327765*. The type genome for the species is the GenBank assembly GCA_011327765.1. The GC content of the type genome is 33.92 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Aciscella gen. nov.

Candidatus Aciscella (NL. fem. n. *Aciscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVX01*. The type species for the genus is *Candidatus* Aciscella bovicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSTG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melopellaceae.

Description of *Candidatus* Aciscosa sacopitura sp. nov.

Candidatus Aciscosa sacopitura (NL. fem. n. *sacopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VTOM01 sp009765365*. The type genome for the species is the GenBank assembly RS_GCF_009765365.1. The GC content of the type genome is 69.09 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Aciscosa gen. nov.

Candidatus Aciscosa (NL. fem. n. *Aciscosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VTOM01*. The type species for the genus is *Candidatus* Aciscosa sacopitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aciscula obsatitudo sp. nov.

Candidatus Aciscula obsatitudo (NL. fem. n. *obsatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJV01 sp011333745*. The type genome for the species is the GenBank assembly GCA_011333745.1. The GC content of the type genome is 54.44 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Aciscula gen. nov.

Candidatus Aciscula (NL. fem. n. *Aciscula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJV01*. The type species for the genus is *Candidatus* Aciscula obsatitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabidaceae.

Description of *Candidatus* Acistana obambentia sp. nov.

Candidatus Acistana obambentia (NL. fem. n. *obambentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-000287355 sp000287355*. The type genome for the species is the GenBank assembly RS_GCF_000287355.1. The GC content of the type genome is 28.9 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Acistana gen. nov.

Candidatus Acistana (NL. fem. n. *Acistana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-000287355*. The type species for the genus is *Candidatus* Acistana obambentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acistaria obtenitrix sp. nov.

Candidatus Acistaria obtenitrix (NL. fem. n. *obtenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFJ01 sp013286645*. The type genome for the species is the GenBank assembly GCA_013286645.1. The GC content of the type genome is 44.23 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Acistaria gen. nov.

Candidatus Acistaria (NL. fem. n. *Acistaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFJ01*. The type species for the genus is *Candidatus* Acistaria obtenitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acistella bicipilega sp. nov.

Candidatus Acistella bicipilega (NL. fem. n. *bicipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-49-14 sp001816915*. The type genome for the species is the GenBank assembly GCA_001816915.1. The GC content of the type genome is 49.1 % and the genome length is 1.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Acistella gen. nov.

Candidatus Acistella (NL. fem. n. *Acistella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-01-FULL-49-14*. The type species for the genus is *Candidatus* Acistella bicipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acistia morigessa sp. nov.

Candidatus Acistia morigessa (NL. fem. n. *morigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNM01 sp013824215*. The type genome for the species is the GenBank assembly GCA_013824215.1. The GC content of the type genome is 69.5 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Acistia gen. nov.

Candidatus Acistia (NL. fem. n. *Acistia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNM01*. The type species for the genus is *Candidatus* Acistia morigessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D1FN1-002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinulaceae.

Description of *Candidatus* Acistida depocibula sp. nov.

Candidatus Acistida depocibula (NL. fem. n. *depocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2316 sp002256935*. The type genome for the species is the GenBank assembly GCA_002256935.1. The GC content of the type genome is 41.06 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Acistida gen. nov.

Candidatus Acistida (NL. fem. n. *Acistida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2316*. The type species for the genus is *Candidatus* Acistida

depocibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acistida inrevifica sp. nov.

Candidatus Acistida inrevifica (NL. fem. n. *inrevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2316 sp013359135*. The type genome for the species is the GenBank assembly GCA_013359135.1. The GC content of the type genome is 34.89 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Acistida obtorisca sp. nov.

Candidatus Acistida obtorisca (NL. fem. n. *obtorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2316 sp002345205*. The type genome for the species is the GenBank assembly GCA_002345205.1. The GC content of the type genome is 40.71 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Acistida sicarilenta sp. nov.

Candidatus Acistida sicarilenta (NL. fem. n. *sicarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2316 sp002344565*. The type genome for the species is the GenBank assembly GCA_002344565.1. The GC content of the type genome is 41.03 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Acistosa idciribra sp. nov.

Candidatus Acistosa idciribra (NL. fem. n. *idciribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SB15 sp008933735*. The type genome for the species is the GenBank assembly GCA_008933735.1. The GC content of the type genome is 52.31 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Acistosa gen. nov.

Candidatus Acistosa (NL. fem. n. *Acistosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SB15*. The type species for the genus is *Candidatus* Acistosa idciribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J027*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemellaceae.

Description of *Candidatus* Acistula admutisca sp. nov.

Candidatus Acistula admutisca (NL. fem. n. *admutisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEJ01 sp012728835*. The type genome for the species is the GenBank assembly GCA_012728835.1. The GC content of the type genome is 70.15 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Acistula gen. nov.

Candidatus Acistula (NL. fem. n. *Acistula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEJ01*. The type species for the genus is *Candidatus* Acistula admutisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefulaceae.

Description of *Candidatus* Aclasaria armifibula sp. nov.

Candidatus Aclasaria armifibula (NL. fem. n. *armifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2723275 sp002723275*. The type genome for the species is the GenBank assembly GCA_002723275.1. The GC content of the type genome is 52.79 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Aclasaria gen. nov.

Candidatus Aclasaria (NL. fem. n. *Aclasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2723275*. The type species for the genus is *Candidatus* Aclasaria armifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aclasella diludentia sp. nov.

Candidatus Aclasella diludentia (NL. fem. n. *diludentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFT01 sp012519355*. The type genome for the species is the GenBank assembly GCA_012519355.1. The GC content of the type genome is 33.3 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Aclasella gen. nov.

Candidatus Aclasella (NL. fem. n. *Aclasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFT01*. The type species for the genus is *Candidatus* Aclasella diludentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aclasella foricilenta sp. nov.

Candidatus Aclasella foricilenta (NL. fem. n. *foricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFT01 sp012735245*. The type genome for the species is the GenBank assembly GCA_012735245.1. The GC content of the type genome is 34.28 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Aclasella satacimonas sp. nov.

Candidatus Aclasella satacimonas (NL. fem. n. *satacimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFT01 sp012728125*. The type genome for the species is the GenBank assembly GCA_012728125.1. The GC content of the type genome is 33.78 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Aclasida voragimonia sp. nov.

Candidatus Aclasida voragimonia (NL. fem. n. *voragimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LB1R16 sp007097155*. The type genome for the species is the GenBank assembly RS_GCF_007097155.1. The GC content of the type genome is 68.84 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Aclasida gen. nov.

Candidatus Aclasida (NL. fem. n. *Aclasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LB1R16*. The type species for the genus is *Candidatus* Aclasida voragimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aclasosa conigitas sp. nov.

Candidatus Aclasosa conigitas (NL. fem. n. *conigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-3 sp003232185*. The type genome for the species is the GenBank assembly GCA_003232185.1. The GC content of the type genome is 40.89 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Aclasosa gen. nov.

Candidatus Aclasosa (NL. fem. n. *Aclasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SZUA-3*. The type species for the genus is *Candidatus* Aclasosa conigitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aclasosa elastimonia sp. nov.

Candidatus Aclasosa elastimonia (NL. fem. n. *elastimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-3 sp003229495*. The type genome for the species is the GenBank assembly GCA_003229495.1. The GC content of the type genome is 42.55 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Aclasula advorugo sp. nov.

Candidatus Aclasula advorugo (NL. fem. n. *advorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFL01 sp011065065*. The type genome for the species is the GenBank assembly GCA_011065065.1. The GC content of the type genome is 41.7 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Aclasula gen. nov.

Candidatus Aclasula (NL. fem. n. *Aclasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFL01*. The type species for the genus is *Candidatus* Aclasula advorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLFE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinidaceae.

Description of *Candidatus* Acontana culilitica sp. nov.

Candidatus Acontana culilitica (NL. fem. n. *culilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUPJ01 sp012838355*. The type genome for the species is the GenBank assembly GCA_012838355.1. The GC content of the type genome is 55.49 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Acontana gen. nov.

Candidatus Acontana (NL. fem. n. *Acontana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPJ01*. The type species for the genus is *Candidatus* Acontana culilitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Acontana expasiforma sp. nov.

Candidatus Acontana expasiforma (NL. fem. n. *expasiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPJ01 sp012837885*. The type genome for the species is the GenBank assembly GCA_012837885.1. The GC content of the type genome is 53.31 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Acontida ecastitica sp. nov.

Candidatus Acontida ecastitica (NL. fem. n. *ecastitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-O23 sp003215355*. The type genome for the species is the GenBank assembly GCA_003215355.1. The GC content of the type genome is 42.05 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Acontida gen. nov.

Candidatus Acontida (NL. fem. n. *Acontida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-O23*. The type species for the genus is *Candidatus* Acontida ecastitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acontosa infunitudo sp. nov.

Candidatus Acontosa infunitudo (NL. fem. n. *infunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDH01 sp013287705*. The type genome for the species is the GenBank assembly GCA_013287705.1. The GC content of the type genome is 44.24 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Acontosa gen. nov.

Candidatus Acontosa (NL. fem. n. *Acontosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDH01*. The type species for the genus is *Candidatus* Acontosa infunitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acratana attubitia sp. nov.

Candidatus Acratana attubitia (NL. fem. n. *attubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-55-24 sp002772745*. The type genome for the species is the GenBank assembly GCA_002772745.1. The GC content of the type genome is 55.19 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Acratana gen. nov.

Candidatus Acratana (NL. fem. n. *Acratana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-55-24*. The type species for the genus is *Candidatus* Acratana attubitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrataria anaclifica sp. nov.

Candidatus Acrataria anaclifica (NL. fem. n. *anaclifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJQ01 sp011370505*. The type genome for the species is the GenBank assembly GCA_011370505.1. The GC content of the type genome is 38.23 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Acrataria gen. nov.

Candidatus Acrataria (NL. fem. n. *Acrataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJQ01*. The type species for the genus is *Candidatus* Acrataria anaclifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucidaceae.

Description of *Candidatus* Acricana proscibra sp. nov.

Candidatus Acricana proscibra (NL. fem. n. *proscibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *N075bin62 sp004356265*. The type genome for the species is the GenBank assembly GCA_004356265.1. The GC content of the type genome is 50.66 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Acricana gen. nov.

Candidatus Acricana (NL. fem. n. *Acricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *N075bin62*. The type species for the genus is *Candidatus* Acricana proscibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Acricia aspilitica sp. nov.

Candidatus Acricia aspilitica (NL. fem. n. *aspilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTHY01 sp011522945*. The type genome for the species is the GenBank assembly GCA_011522945.1. The GC content of the type genome is 46.35 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Acricia gen. nov.

Candidatus Acricia (NL. fem. n. *Acricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTHY01*. The type species for the genus is *Candidatus* Acricia aspilitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acricida ephemilenta sp. nov.

Candidatus Acricida ephemilenta (NL. fem. n. *ephemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJT01 sp013298955*. The type genome for the species is the GenBank assembly GCA_013298955.1. The GC content of the type genome is 39.53 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Acricida gen. nov.

Candidatus Acricida (NL. fem. n. *Acricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJT01*. The type species for the genus is *Candidatus* Acricida ephemilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acricosa inculilega sp. nov.

Candidatus Acricosa inculilega (NL. fem. n. *inculilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NCED01 sp002280485*. The type genome for the species is the GenBank assembly GCA_002280485.1. The GC content of the type genome is 69.05 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Acricosa gen. nov.

Candidatus Acricosa (NL. fem. n. *Acricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NCED01*. The type species for the genus is *Candidatus* Acricosa inculilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acricula sonipilega sp. nov.

Candidatus Acricula sonipilega (NL. fem. n. *sonipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AN110305 sp008386585*. The type genome for the species is the GenBank assembly RS_GCF_008386585.1. The GC content of the type genome is 70.7 % and the genome length is 9.3 Mbp.

Description of *Candidatus* Acricula gen. nov.

Candidatus Acricula (NL. fem. n. *Acricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AN110305*. The type species for the genus is *Candidatus* Acricula sonipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrifana cicaritrix sp. nov.

Candidatus Acrifana cicaritrix (NL. fem. n. *cicaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11367 sp900767835*. The type genome for the species is the GenBank assembly RS_GCF_900767835.1. The GC content of the type genome is 29.86 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Acrifana gen. nov.

Candidatus Acrifana (NL. fem. n. *Acrifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11367*. The type species for the genus is *Candidatus* Acrifana cicaritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Acrifana inornitoga sp. nov.

Candidatus Acrifana inornitoga (NL. fem. n. *inornitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11367 sp900768425*. The type genome for the species is the GenBank assembly RS_GCF_900768425.1. The GC content of the type genome is 30.78 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Acrifella incorisca sp. nov.

Candidatus Acrifella incorisca (NL. fem. n. *incorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJXF01 sp903644065*. The type genome for the species is the GenBank assembly RS_GCF_903644065.1. The GC content of the type genome is 68.89 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Acrifella gen. nov.

Candidatus Acrifella (NL. fem. n. *Acrifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAHJXF01*. The type species for the genus is *Candidatus* Acrifella incorisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrifida decapatio sp. nov.

Candidatus Acrifida decapatio (NL. fem. n. *decapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFMI01 sp002785165*. The type genome for the species is the GenBank assembly GCA_002785165.1. The GC content of the type genome is 32.94 % and the genome length is 0.33 Mbp.

Description of *Candidatus* Acrifida gen. nov.

Candidatus Acrifida (NL. fem. n. *Acrifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PFMI01*. The type species for the genus is *Candidatus* Acrifida decapatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Acrifula alcibicella sp. nov.

Candidatus Acrifula alcibicella (NL. fem. n. *alcibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-335 sp003154055*. The type genome for the species is the GenBank assembly GCA_003154055.1. The GC content of the type genome is 59.72 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Acrifula gen. nov.

Candidatus Acrifula (NL. fem. n. *Acrifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-335*. The type species for the genus is *Candidatus* Acrifula

alcibicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrimana plusciforma sp. nov.

Candidatus Acrimana plusciforma (NL. fem. n. *plusciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-20 sp001818675*. The type genome for the species is the GenBank assembly GCA_001818675.1. The GC content of the type genome is 40.17 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Acrimana gen. nov.

Candidatus Acrimana (NL. fem. n. *Acrimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-40-20*. The type species for the genus is *Candidatus* Acrimana plusciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WO2-44-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinacellaceae.

Description of *Candidatus* Acrimaria citipax sp. nov.

Candidatus Acrimaria citipax (NL. fem. n. *citipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIG01 sp012523595*. The type genome for the species is the GenBank assembly GCA_012523595.1. The GC content of the type genome is 44.87 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Acrimaria gen. nov.

Candidatus Acrimaria (NL. fem. n. *Acrimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAYIG01*. The type species for the genus is *Candidatus* Acrimaria citipax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrimaria deparatica sp. nov.

Candidatus Acrimaria deparatica (NL. fem. n. *deparatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIG01 sp012515615*. The type genome for the species is the GenBank assembly GCA_012515615.1. The GC content of the type genome is 44.95 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Acrimia adfunugo sp. nov.

Candidatus Acrimia adfunugo (NL. fem. n. *adfunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-113R1 sp007117695*. The type genome for the species is the GenBank assembly GCA_007117695.1. The GC content of the type genome is 29.54 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Acrimia gen. nov.

Candidatus Acrimia (NL. fem. n. *Acrimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-113R1*. The type species for the genus is *Candidatus* Acrimia adfunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Acrimia epogdimonas sp. nov.

Candidatus Acrimia epogdimonas (NL. fem. n. *epogdimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CSBR16-113R1 sp007116525*. The type genome for the species is the GenBank assembly GCA_007116525.1. The GC content of the type genome is 29.31 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Acrimida eviscilega sp. nov.

Candidatus Acrimida eviscilega (NL. fem. n. *eviscilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPK01 sp012838345*. The type genome for the species is the GenBank assembly GCA_012838345.1. The GC content of the type genome is 51.63 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Acrimida gen. nov.

Candidatus Acrimida (NL. fem. n. *Acrimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPK01*. The type species for the genus is *Candidatus* Acrimida eviscilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrimida gabinetta sp. nov.

Candidatus Acrimida gabinetta (NL. fem. n. *gabinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPK01 sp012520395*. The type genome for the species is the GenBank assembly GCA_012520395.1. The GC content of the type genome is 50.3 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Acrimosa exsolentia sp. nov.

Candidatus Acrimosa exsolentia (NL. fem. n. *exsolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1370 sp003165355*. The type genome for the species is the GenBank assembly GCA_003165355.1. The GC content of the type genome is 40.42 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Acrimosa gen. nov.

Candidatus Acrimosa (NL. fem. n. *Acrimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1370*. The type species for the genus is *Candidatus* Acrimosa exsolentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrobana almitastra sp. nov.

Candidatus Acrobana almitastra (NL. fem. n. *almitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-309 sp003228415*. The type genome for the species is the GenBank assembly GCA_003228415.1. The GC content of the type genome is 57.91 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Acrobana gen. nov.

Candidatus Acrobana (NL. fem. n. *Acrobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-309*. The type species for the genus is *Candidatus* Acrobana almitastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Acrobana devecugo sp. nov.

Candidatus Acrobana devecugo (NL. fem. n. *devecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-309 sp003247835*. The type genome for the species is the GenBank assembly GCA_003247835.1. The GC content of the type genome is 64.44 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Acrobaria deparitrix sp. nov.

Candidatus Acrobaria deparitrix (NL. fem. n. *deparitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRNA01 sp011322365*. The type genome for the species is the GenBank assembly GCA_011322365.1. The GC content of the type genome is 40.64 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Acrobaria gen. nov.

Candidatus Acrobaria (NL. fem. n. *Acrobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRNA01*. The type species for the genus is *Candidatus* Acrobaria deparitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002770795*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conoposaceae.

Description of *Candidatus* Acrobella abhinatio sp. nov.

Candidatus Acrobella abhinatio (NL. fem. n. *abhinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWT01 sp903642255*. The type genome for the species is the GenBank assembly RS_GCF_903642255.1. The GC content of the type genome is 68.55 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Acrobella gen. nov.

Candidatus Acrobella (NL. fem. n. *Acrobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAHJWT01*. The type species for the genus is *Candidatus* Acrobella abhinatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrobella intecilenta sp. nov.

Candidatus Acrobella intecilenta (NL. fem. n. *intecilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWT01 sp903643075*. The type genome for the species is the GenBank assembly RS_GCF_903643075.1. The GC content of the type genome is 69.58 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Acrobia xeramitura sp. nov.

Candidatus Acrobia xeramitura (NL. fem. n. *xeramitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA947 sp002293275*. The type genome for the species is the GenBank assembly GCA_002293275.1. The GC content of the type genome is 46.78 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Acrobia gen. nov.

Candidatus Acrobia (NL. fem. n. *Acrobia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA947*. The type species for the genus is *Candidatus* Acrobia xeramitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrobida malagibra sp. nov.

Candidatus Acrobida malagibra (NL. fem. n. *malagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM05376 sp900769785*. The type genome for the species is the GenBank assembly RS_GCF_900769785.1. The GC content of the type genome is 39.32 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Acrobida gen. nov.

Candidatus Acrobida (NL. fem. n. *Acrobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HGM05376*. The type species for the genus is *Candidatus* Acrobida malagibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Acrobosa utillessa sp. nov.

Candidatus Acrobosa utillessa (NL. fem. n. *utillessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTNO01 sp011358525*. The type genome for the species is the GenBank assembly GCA_011358525.1. The GC content of the type genome is 64.44 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Acrobosa gen. nov.

Candidatus Acrobosa (NL. fem. n. *Acrobosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTNO01*. The type species for the genus is *Candidatus* Acrobosa utillessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Acrobula enharimonas sp. nov.

Candidatus Acrobula enharimonas (NL. fem. n. *enharimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQW01 sp013203115*. The type genome for the species is the GenBank assembly GCA_013203115.1. The GC content of the type genome is 43.8 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Acrobula gen. nov.

Candidatus Acrobula (NL. fem. n. *Acrobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQW01*. The type species for the genus is *Candidatus* Acrobula enharimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS56*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turiciaceae.

Description of *Candidatus* Acrocana exhorax sp. nov.

Candidatus Acrocana exhorax (NL. fem. n. *exhorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1388 sp002772705*. The type genome for the species is the GenBank assembly GCA_002772705.1. The GC content of the type genome is 43.7 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Acrocana gen. nov.

Candidatus Acrocana (NL. fem. n. *Acrocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1388*. The type species for the genus is *Candidatus* Acrocana exhorax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Acrocana vocamitio sp. nov.

Candidatus Acrocana vocamitio (NL. fem. n. *vocamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1388 sp002305355*. The type genome for the species is the GenBank assembly GCA_002305355.1. The GC content of the type genome is 40.73 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Acrocella apsenigena sp. nov.

Candidatus Acrocella apsenigena (NL. fem. n. *apsenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED170 sp902604695*. The type genome for the species is the GenBank assembly GCA_902604695.1. The GC content of the type genome is 29.26 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Acrocella gen. nov.

Candidatus Acrocella (NL. fem. n. *Acrocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED170*. The type species for the genus is *Candidatus* Acrocella apsenigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrocella asbesifica sp. nov.

Candidatus Acrocella asbesifica (NL. fem. n. *asbesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED170 sp002170875*. The type genome for the species is the GenBank assembly GCA_002170875.2. The GC content of the type genome is 28.17 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Acrocia monumitrix sp. nov.

Candidatus Acrocia monumitrix (NL. fem. n. *monumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB22 sp001567515*. The type genome for the species is the GenBank assembly GCA_001567515.1. The GC content of the type genome is 44.47 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Acrocia gen. nov.

Candidatus Acrocia (NL. fem. n. *Acrocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB22*. The type species for the genus is *Candidatus* Acrocia monumitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Acrocida vigeniforma sp. nov.

Candidatus Acrocida vigeniforma (NL. fem. n. *vigeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-50 sp013214845*. The type genome for the species is the GenBank assembly GCA_013214845.1. The GC content of the type genome is 28.38 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Acrocida gen. nov.

Candidatus Acrocida (NL. fem. n. *Acrocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-50*. The type species for the genus is *Candidatus* Acrocida vigeniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrocosa dehisitoga sp. nov.

Candidatus Acrocosa dehisitoga (NL. fem. n. *dehisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699335 sp002699335*. The type genome for the species is the GenBank assembly GCA_002699335.1. The GC content of the type genome is 46.95 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Acrocosa gen. nov.

Candidatus Acrocosa (NL. fem. n. *Acrocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699335*. The type species for the genus is *Candidatus* Acrocosa dehisitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumulaceae.

Description of *Candidatus* Acrocula adlapatica sp. nov.

Candidatus Acrocula adlapatica (NL. fem. n. *adlapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J097 sp003694975*. The type genome for the species is the GenBank assembly GCA_003694975.1. The GC content of the type genome is 60.89 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Acrocula gen. nov.

Candidatus Acrocula (NL. fem. n. *Acrocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J097*. The type species for the genus is *Candidatus* Acrocula adlapatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Acrolana buceligena sp. nov.

Candidatus Acrolana buceligena (NL. fem. n. *buceligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009780915*. The type genome for the species is the GenBank assembly GCA_009780915.1. The GC content of the type genome is 65.14 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Acrolana gen. nov.

Candidatus Acrolana (NL. fem. n. *Acrolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQYJ01*. The type species for the genus is *Candidatus* Acrolana buceligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrolana cohoritudo sp. nov.

Candidatus Acrolana cohoritudo (NL. fem. n. *cohoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009782785*. The type genome for the species is the GenBank assembly GCA_009782785.1. The GC content of the type genome is 53.68 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Acrolana cohuribra sp. nov.

Candidatus Acrolana cohuribra (NL. fem. n. *cohuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009778725*. The type genome for the species is the GenBank assembly GCA_009778725.1. The GC content of the type genome is 61.36 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Acrolana errabitica sp. nov.

Candidatus Acrolana errabitica (NL. fem. n. *errabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009779115*. The type genome for the species is the GenBank assembly GCA_009779115.1. The GC content of the type genome is 60.82 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Acrolana inpenentia sp. nov.

Candidatus Acrolana inpenentia (NL. fem. n. *inpenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009781325*. The type genome for the species is the

GenBank assembly GCA_009781325.1. The GC content of the type genome is 55.8 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Acrolana ludimax sp. nov.

Candidatus Acrolana ludimax (NL. fem. n. *ludimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYJ01 sp009782915*. The type genome for the species is the GenBank assembly GCA_009782915.1. The GC content of the type genome is 55.01 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Acrolaria errabitoga sp. nov.

Candidatus Acrolaria errabitoga (NL. fem. n. *errabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSRJ01 sp011331615*. The type genome for the species is the GenBank assembly GCA_011331615.1. The GC content of the type genome is 59.4 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Acrolaria gen. nov.

Candidatus Acrolaria (NL. fem. n. *Acrolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSRJ01*. The type species for the genus is *Candidatus* Acrolaria errabitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrolella expasatio sp. nov.

Candidatus Acrolella expasatio (NL. fem. n. *expasatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J055 sp003695795*. The type genome for the species is the GenBank assembly GCA_003695795.1. The GC content of the type genome is 50.96 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Acrolella gen. nov.

Candidatus Acrolella (NL. fem. n. *Acrolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J055*. The type species for the genus is *Candidatus* Acrolella expasatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrolida admutigena sp. nov.

Candidatus Acrolida admutigena (NL. fem. n. *admutigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3753 sp002372375*. The type genome for the species is the GenBank assembly GCA_002372375.1. The GC content of the type genome is 34.53 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Acrolida gen. nov.

Candidatus Acrolida (NL. fem. n. *Acrolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3753*. The type species for the genus is *Candidatus* Acrolida admutigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrolula adnilessa sp. nov.

Candidatus Acrolula adnilessa (NL. fem. n. *adnilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN40 sp002898275*. The type genome for the species is the GenBank assembly GCA_002898275.1. The GC content of the type genome is 68.58 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Acrolula gen. nov.

Candidatus Acrolula (NL. fem. n. *Acrolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN40*. The type species for the genus is *Candidatus* Acrolula adnilessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acropana scombivita sp. nov.

Candidatus Acropana scombivita (NL. fem. n. *scombivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4292 sp002395865*. The type genome for the species is the GenBank assembly GCA_002395865.1. The GC content of the type genome is 51.34 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Acropana gen. nov.

Candidatus Acropana (NL. fem. n. *Acropana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4292*. The type species for the genus is *Candidatus* Acropana scombivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acropana totidibula sp. nov.

Candidatus Acropana totidibula (NL. fem. n. *totidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4292 sp902790095*. The type genome for the species is the GenBank assembly GCA_902790095.1. The GC content of the type genome is 45.89 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Acroparia devecedo sp. nov.

Candidatus Acroparia devecedo (NL. fem. n. *devecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UWMA-0117 sp012963895*. The type genome for the species is the GenBank assembly GCA_012963895.1. The GC content of the type genome is 36.65 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Acroparia gen. nov.

Candidatus Acroparia (NL. fem. n. *Acroparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UWMA-0117*. The type species for the genus is *Candidatus* Acroparia devecedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acropia sicarugo sp. nov.

Candidatus Acropia sicarugo (NL. fem. n. *sicarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1753 sp002317595*. The type genome for the species is the GenBank assembly GCA_002317595.1. The GC content of the type genome is 45.67 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Acropia gen. nov.

Candidatus Acropia (NL. fem. n. *Acropia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1753*. The type species for the genus is *Candidatus* Acropia sicarugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acroposa catocilega sp. nov.

Candidatus Acroposa catocilega (NL. fem. n. *catocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM304 sp002868905*. The type genome for the species is the GenBank assembly GCA_002868905.1. The GC content of the type genome is 56.69 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Acroposa gen. nov.

Candidatus Acroposa (NL. fem. n. *Acroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM304*. The type species for the genus is *Candidatus* Acroposa catocilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrotana inrepitrix sp. nov.

Candidatus Acrotana inrepitrix (NL. fem. n. *inrepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1088 sp003161835*. The type genome for the species is the GenBank assembly GCA_003161835.1. The GC content of the type genome is 65.93 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Acrotana gen. nov.

Candidatus Acrotana (NL. fem. n. *Acrotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1088*. The type species for the genus is *Candidatus* Acrotana inrepitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Acrotanaceae.

Description of *Candidatus* Acrotanaceae fam. nov.

Candidatus Acrotanaceae (NL. fem. n. *Acrotanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1088.* The type genus for the taxon is *Candidatus* Acrotana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Effigidales.

Description of *Candidatus* Acrotella irregitas sp. nov.

Candidatus Acrotella irregitas (NL. fem. n. *irregitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ID1734 sp007489285*. The type genome for the species is the GenBank assembly RS_GCF_007489285.1. The GC content of the type genome is 65.29 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Acrotella gen. nov.

Candidatus Acrotella (NL. fem. n. *Acrotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ID1734*. The type species for the genus is *Candidatus* Acrotella irregitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrotia cosidicella sp. nov.

Candidatus Acrotia cosidicella (NL. fem. n. *cosidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DB1 sp001914235*. The type genome for the species is the GenBank assembly GCA_001914235.1. The GC content of the type genome is 53.78 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "anode biofilm in microbial fuel cells".

Description of *Candidatus* Acrotia gen. nov.

Candidatus Acrotia (NL. fem. n. *Acrotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DB1*. The type species for the genus is *Candidatus* Acrotia cosidicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrotida ciminicella sp. nov.

Candidatus Acrotida ciminicella (NL. fem. n. *ciminicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXNM01 sp005777155*. The type genome for the species is the GenBank assembly GCA_005777155.1. The GC content of the type genome is 70.53 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Acrotida gen. nov.

Candidatus Acrotida (NL. fem. n. *Acrotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXNM01*. The type species for the genus is *Candidatus* Acrotida ciminicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Acrotosa armiditoga sp. nov.

Candidatus Acrotosa armiditoga (NL. fem. n. *armiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCP01 sp013360215*. The type genome for the species is the GenBank assembly GCA_013360215.1. The GC content of the type genome is 44.79 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Acrotosa gen. nov.

Candidatus Acrotosa (NL. fem. n. *Acrotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCP01*. The type species for the genus is *Candidatus* Acrotosa armiditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SB21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifiaceae.

Description of *Candidatus* Acrufana incoribula sp. nov.

Candidatus Acrufana incoribula (NL. fem. n. *incoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINEW01 sp903847915*. The type genome for the species is the GenBank assembly GCA_903847915.1. The GC content of the type genome is 40.2 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Acrufana gen. nov.

Candidatus Acrufana (NL. fem. n. *Acrufana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINEW01*. The type species for the genus is *Candidatus* Acrufana incoribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Acrufaria adrumilega sp. nov.

Candidatus Acrufaria adrumilega (NL. fem. n. *adrumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIAQ01 sp009697105*. The type genome for the species is the GenBank assembly GCA_009697105.1. The GC content of the type genome is 58.06 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Acrufaria gen. nov.

Candidatus Acrufaria (NL. fem. n. *Acrufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIAQ01*. The type species for the genus is *Candidatus* Acrufaria adrumilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrufella intesitura sp. nov.

Candidatus Acrufella intesitura (NL. fem. n. *intesitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6129 sp002422465*. The type genome for the species is the GenBank assembly GCA_002422465.1. The GC content of the type genome is 44.98 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Acrufella gen. nov.

Candidatus Acrufella (NL. fem. n. *Acrufella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6129*. The type species for the genus is *Candidatus* Acrufella intesitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRI-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Latibellaceae.

Description of *Candidatus* Acrufia peracicula sp. nov.

Candidatus Acrufia peracicula (NL. fem. n. *peracicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN33 sp002923375*. The type genome for the species is the GenBank assembly GCA_002923375.1. The GC content of the type genome is 63.45 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Acrufia gen. nov.

Candidatus Acrufia (NL. fem. n. *Acrufia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN33*. The type species for the genus is *Candidatus* Acrufia peracicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Acrufida embamatio sp. nov.

Candidatus Acrufida embamatio (NL. fem. n. *embamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVF01 sp012841165*. The type genome for the species is the GenBank assembly GCA_012841165.1. The GC content of the type genome is 50.97 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Acrufida gen. nov.

Candidatus Acrufida (NL. fem. n. *Acrufida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUVF01*. The type species for the genus is *Candidatus* Acrufida embamatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrufosa alcalousia sp. nov.

Candidatus Acrufosa alcalousia (NL. fem. n. *alcalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R267 sp001768075*. The type genome for the species is the GenBank assembly GCA_001768075.1. The GC content of the type genome is 69.41 % and the genome length is 5.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Acrufosa gen. nov.

Candidatus Acrufosa (NL. fem. n. *Acrufosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R267*. The type species for the genus is *Candidatus* Acrufosa alcalousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acrufosa infacitia sp. nov.

Candidatus Acrufosa infacitia (NL. fem. n. *infacitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R267 sp013340205*. The type genome for the species is the GenBank assembly RS_GCF_013340205.1. The GC content of the type genome is 74.49 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Acrufula tomacilenta sp. nov.

Candidatus Acrufula tomacilenta (NL. fem. n. *tomacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZXH01 sp014240275*. The type genome for the species is the GenBank assembly GCA_014240275.1. The GC content of the type genome is 35.46 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Acrufula gen. nov.

Candidatus Acrufula (NL. fem. n. *Acrufula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZXH01*. The type species for the genus is *Candidatus* Acrufula tomacilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2718715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Roruliaceae.

Description of *Candidatus* Actararia adpagedo sp. nov.

Candidatus Actararia adpagedo (NL. fem. n. *adpagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUF01 sp903837365*. The type genome for the species is the GenBank assembly GCA_903837365.1. The GC content of the type genome is 31.31 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Actararia gen. nov.

Candidatus Actararia (NL. fem. n. *Actararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILUF01*. The type species for the genus is *Candidatus* Actararia adpagedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Actararia annifousia sp. nov.

Candidatus Actararia annifousia (NL. fem. n. *annifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUF01 sp014190355*. The type genome for the species is the GenBank assembly GCA_014190355.1. The GC content of the type genome is 29.87 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Actarella perabilega sp. nov.

Candidatus Actarella perabilega (NL. fem. n. *perabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFH-S0501 sp011059135*. The type genome for the species is the GenBank assembly RS_GCF_011059135.1. The GC content of the type genome is 55.77 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Actarella gen. nov.

Candidatus Actarella (NL. fem. n. *Actarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFH-S0501*. The type species for the genus is *Candidatus* Actarella perabilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Actarella peradilega sp. nov.

Candidatus Actarella peradilega (NL. fem. n. *peradilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFH-S0501 sp004521915*. The type genome for the species is the GenBank assembly RS_GCF_004521915.1. The GC content of the type genome is 49.72 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Actaria desulax sp. nov.

Candidatus Actaria desulax (NL. fem. n. *desulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6161 sp002422315*. The type genome for the species is the GenBank assembly GCA_002422315.1. The GC content of the type genome is 34.84 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Actaria gen. nov.

Candidatus Actaria (NL. fem. n. *Actaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6161*. The type species for the genus is *Candidatus* Actaria desulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Actarida diminax sp. nov.

Candidatus Actarida diminax (NL. fem. n. *diminax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-10-47-8-A sp002793885*. The type genome for the species is the GenBank assembly GCA_002793885.1. The GC content of the type genome is 46.73 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Actarida gen. nov.

Candidatus Actarida (NL. fem. n. *Actarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *21-14-0-10-47-8-A*. The type species for the genus is *Candidatus* Actarida diminax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categiaceae.

Description of *Candidatus* Actarosa remedicula sp. nov.

Candidatus Actarosa remedicula (NL. fem. n. *remedicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW021-bin43 sp004299665*. The type genome for the species is the GenBank assembly GCA_004299665.1. The GC content of the type genome is 72.81 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Actarosa gen. nov.

Candidatus Actarosa (NL. fem. n. *Actarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW021-bin43*. The type species for the genus is *Candidatus* Actarosa remedicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Actarula televimonia sp. nov.

Candidatus Actarula televimonia (NL. fem. n. *televimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-35-14 sp002796205*. The type genome for the species is the GenBank assembly GCA_002796205.1. The GC content of the type genome is 34.46 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Actarula gen. nov.

Candidatus Actarula (NL. fem. n. *Actarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-35-14*. The type species for the genus is *Candidatus* Actarula

televimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB1-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defulosaceae.

Description of *Candidatus* Actibacterium ontolago sp. nov.

Candidatus Actibacterium ontolago (NL. fem. n. *ontolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actibacterium sp000744955*. The type genome for the species is the GenBank assembly RS_GCF_000744955.1. The GC content of the type genome is 62.74 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Actibacterium decamitrix sp. nov.

Candidatus Actibacterium decamitrix (NL. fem. n. *decamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actibacterium_A sp002706605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002298325.1. The GC content of the type genome is 61.23 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Actinokineospora almitousia sp. nov.

Candidatus Actinokineospora almitousia (NL. fem. n. *almitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinokineospora sp009745975*. The type genome for the species is the GenBank assembly RS_GCF_009745975.1. The GC content of the type genome is 72.59 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Actinokineospora baropitio sp. nov.

Candidatus Actinokineospora baropitio (NL. fem. n. *baropitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinokineospora sp014323725*. The type genome for the species is the GenBank assembly RS_GCF_014323725.1. The GC content of the type genome is 69.63 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Actinokineospora venabitudo sp. nov.

Candidatus Actinokineospora venabitudo (NL. fem. n. *venabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinokineospora sp900070365*. The type genome for the species is the GenBank assembly RS_GCF_900070365.1. The GC content of the type genome is 69.59 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Actinomadura ininniforma sp. nov.

Candidatus Actinomadura ininniforma (NL. fem. n. *ininniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomadura_C sp014323665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014323665.1. The GC content of the type genome is 69.71 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Actinomarina admorigena sp. nov.

Candidatus Actinomarina admorigena (NL. fem. n. *admorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902521955*. The type genome for the species is the GenBank assembly GCA_902521955.1. The GC content of the type genome is 32.61 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Actinomarina afranatica sp. nov.

Candidatus Actinomarina afranatica (NL. fem. n. *afranatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902615855*. The type genome for the species is the

GenBank assembly GCA_902615855.1. The GC content of the type genome is 32.29 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Actinomarina alceditudo sp. nov.

Candidatus Actinomarina alceditudo (NL. fem. n. *alceditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp002308095*. The type genome for the species is the GenBank assembly GCA_002308095.1. The GC content of the type genome is 34.39 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Actinomarina ambusax sp. nov.

Candidatus Actinomarina ambusax (NL. fem. n. *ambusax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902628045*. The type genome for the species is the GenBank assembly GCA_902628045.1. The GC content of the type genome is 32.51 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Actinomarina bacifimonas sp. nov.

Candidatus Actinomarina bacifimonas (NL. fem. n. *bacifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902626065*. The type genome for the species is the GenBank assembly GCA_902630965.1. The GC content of the type genome is 32.27 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Actinomarina bicinicella sp. nov.

Candidatus Actinomarina bicinicella (NL. fem. n. *bicinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902619825*. The type genome for the species is the GenBank assembly GCA_902619825.1. The GC content of the type genome is 32.35 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Actinomarina casabatica sp. nov.

Candidatus Actinomarina casabatica (NL. fem. n. *casabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp003282445*. The type genome for the species is the GenBank assembly GCA_902560935.1. The GC content of the type genome is 31.83 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Actinomarina catabigena sp. nov.

Candidatus Actinomarina catabigena (NL. fem. n. *catabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902533795*. The type genome for the species is the GenBank assembly GCA_902536255.1. The GC content of the type genome is 32.25 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Actinomarina catabilenta sp. nov.

Candidatus Actinomarina catabilenta (NL. fem. n. *catabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp000384495*. The type genome for the species is the GenBank assembly GCA_902539685.1. The GC content of the type genome is 32.27 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Actinomarina cenacicella sp. nov.

Candidatus Actinomarina cenacicella (NL. fem. n. *cenacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp002683085*. The type genome for the species is the GenBank assembly GCA_902509835.1. The GC content of the type genome is 33.87 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Actinomarina cibicitura sp. nov.

Candidatus Actinomarina cibicitura (NL. fem. n. *cibicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902510995*. The type genome for the species is the GenBank assembly GCA_902510995.1. The GC content of the type genome is 31.75 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Actinomarina cicaritia sp. nov.

Candidatus Actinomarina cicaritia (NL. fem. n. *cicaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902519215*. The type genome for the species is the GenBank assembly GCA_902519215.1. The GC content of the type genome is 32.56 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Actinomarina colubitoga sp. nov.

Candidatus Actinomarina colubitoga (NL. fem. n. *colubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902596545*. The type genome for the species is the GenBank assembly GCA_902596545.1. The GC content of the type genome is 32.49 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Actinomarina conamitoga sp. nov.

Candidatus Actinomarina conamitoga (NL. fem. n. *conamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902555055*. The type genome for the species is the GenBank assembly GCA_902555055.1. The GC content of the type genome is 32.61 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Actinomarina cunabugo sp. nov.

Candidatus Actinomarina cunabugo (NL. fem. n. *cunabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902555985*. The type genome for the species is the GenBank assembly GCA_902595365.1. The GC content of the type genome is 32.32 %

and the genome length is 0.92 Mbp.

Description of *Candidatus* Actinomarina curotastra sp. nov.

Candidatus Actinomarina curotastra (NL. fem. n. *curotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902593795*. The type genome for the species is the GenBank assembly GCA_902595965.1. The GC content of the type genome is 32.13 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Actinomarina detosibra sp. nov.

Candidatus Actinomarina detosibra (NL. fem. n. *detosibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp003213165*. The type genome for the species is the GenBank assembly GCA_003212995.1. The GC content of the type genome is 32.92 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Actinomarina devecivita sp. nov.

Candidatus Actinomarina devecivita (NL. fem. n. *devecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp014239265*. The type genome for the species is the GenBank assembly GCA_014239265.1. The GC content of the type genome is 34.32 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Actinomarina divorimonia sp. nov.

Candidatus Actinomarina divorimonia (NL. fem. n. *divorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902576605*. The type genome for the species is the GenBank assembly GCA_902576605.1. The GC content of the type genome is 33.4 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Actinomarina domiciforma sp. nov.

Candidatus Actinomarina domiciforma (NL. fem. n. *domiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp003281085*. The type genome for the species is the GenBank assembly GCA_902535815.1. The GC content of the type genome is 32.63 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Actinomarina duciledo sp. nov.

Candidatus Actinomarina duciledo (NL. fem. n. *duciledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp002169845*. The type genome for the species is the GenBank assembly GCA_002169845.1. The GC content of the type genome is 34.3 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Actinomarina fecunousia sp. nov.

Candidatus Actinomarina fecunousia (NL. fem. n. *fecunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902519845*. The type genome for the species is the GenBank assembly GCA_902519845.1. The GC content of the type genome is 32.09 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Actinomarina femelibula sp. nov.

Candidatus Actinomarina femelibula (NL. fem. n. *femelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902625455*. The type genome for the species is the GenBank assembly GCA_902629095.1. The GC content of the type genome is 32.31 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Actinomarina fetutitoga sp. nov.

Candidatus Actinomarina fetutitoga (NL. fem. n. *fetutitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp002724835*. The type genome for the species is the GenBank assembly GCA_902564375.1. The GC content of the type genome is 32.11 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Actinomarina homicitas sp. nov.

Candidatus Actinomarina homicitas (NL. fem. n. *homicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902609285*. The type genome for the species is the GenBank assembly GCA_902609285.1. The GC content of the type genome is 32.16 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Actinomarina indecax sp. nov.

Candidatus Actinomarina indecax (NL. fem. n. *indecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902627635*. The type genome for the species is the GenBank assembly GCA_902627635.1. The GC content of the type genome is 32.91 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Actinomarina ludimastra sp. nov.

Candidatus Actinomarina ludimastra (NL. fem. n. *ludimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902604835*. The type genome for the species is the GenBank assembly GCA_902604835.1. The GC content of the type genome is 32.08 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Actinomarina luticentia sp. nov.

Candidatus Actinomarina luticentia (NL. fem. n. *luticentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902599555*. The type genome for the species is the GenBank assembly GCA_902599555.1. The GC content of the type genome is 32.87 %

and the genome length is 1.02 Mbp.

Description of *Candidatus* Actinomarina malogisca sp. nov.

Candidatus Actinomarina malogisca (NL. fem. n. *malogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902571385*. The type genome for the species is the GenBank assembly GCA_902551065.1. The GC content of the type genome is 32.52 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Actinomarina manufatio sp. nov.

Candidatus Actinomarina manufatio (NL. fem. n. *manufatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902565645*. The type genome for the species is the GenBank assembly GCA_902565645.1. The GC content of the type genome is 32.04 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Actinomarina monodetta sp. nov.

Candidatus Actinomarina monodetta (NL. fem. n. *monodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp003213625*. The type genome for the species is the GenBank assembly GCA_003213435.1. The GC content of the type genome is 32.35 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Actinomarina nubecicula sp. nov.

Candidatus Actinomarina nubecicula (NL. fem. n. *nubecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902593435*. The type genome for the species is the GenBank assembly GCA_902593435.1. The GC content of the type genome is 32.24 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Actinomarina pacificula sp. nov.

Candidatus Actinomarina pacificula (NL. fem. n. *pacificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902587025*. The type genome for the species is the GenBank assembly GCA_902587025.1. The GC content of the type genome is 32.13 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Actinomarina papavugo sp. nov.

Candidatus Actinomarina papavugo (NL. fem. n. *papavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902610815*. The type genome for the species is the GenBank assembly GCA_902610815.1. The GC content of the type genome is 32.59 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Actinomarina procressa sp. nov.

Candidatus Actinomarina procressa (NL. fem. n. *procressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp004214055*. The type genome for the species is the GenBank assembly GCA_004214055.1. The GC content of the type genome is 31.82 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Actinomarina semodedo sp. nov.

Candidatus Actinomarina semodedo (NL. fem. n. *semodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp002169115*. The type genome for the species is the GenBank assembly GCA_002169115.2. The GC content of the type genome is 32.86 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Actinomarina solacastra sp. nov.

Candidatus Actinomarina solacastra (NL. fem. n. *solacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902526825*. The type genome for the species is the GenBank assembly GCA_902526825.1. The GC content of the type genome is 32.01 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Actinomarina solipicella sp. nov.

Candidatus Actinomarina solipicella (NL. fem. n. *solipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp004213405*. The type genome for the species is the GenBank assembly GCA_004213405.1. The GC content of the type genome is 33.14 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Actinomarina subodicula sp. nov.

Candidatus Actinomarina subodicula (NL. fem. n. *subodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902593475*. The type genome for the species is the GenBank assembly GCA_902593475.1. The GC content of the type genome is 32.84 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Actinomarina tegumibula sp. nov.

Candidatus Actinomarina tegumibula (NL. fem. n. *tegumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp014384285*. The type genome for the species is the GenBank assembly GCA_014384285.1. The GC content of the type genome is 34.16 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Actinomarina televatio sp. nov.

Candidatus Actinomarina televatio (NL. fem. n. *televatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902595195*. The type genome for the species is the GenBank assembly GCA_902600955.1. The GC content of the type genome is 32.42 %

and the genome length is 0.87 Mbp.

Description of *Candidatus* Actinomarina turililenta sp. nov.

Candidatus Actinomarina turililenta (NL. fem. n. *turililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902622665*. The type genome for the species is the GenBank assembly GCA_902622665.1. The GC content of the type genome is 32.46 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Actinomarina venucicula sp. nov.

Candidatus Actinomarina venucicula (NL. fem. n. *venucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomarina sp902580215*. The type genome for the species is the GenBank assembly GCA_902580215.1. The GC content of the type genome is 32.87 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Actinomyces actariforma sp. nov.

Candidatus Actinomyces actariforma (NL. fem. n. *actariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp002154335*. The type genome for the species is the GenBank assembly RS_GCF_002154335.2. The GC content of the type genome is 68.05 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Actinomyces debucisca sp. nov.

Candidatus Actinomyces debucisca (NL. fem. n. *debucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp013177295*. The type genome for the species is the GenBank assembly RS_GCF_009829645.1. The GC content of the type genome is 71.7 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Actinomyces desacifica sp. nov.

Candidatus Actinomyces desacifica (NL. fem. n. *desacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp011751985*. The type genome for the species is the GenBank assembly RS_GCF_011751985.1. The GC content of the type genome is 70.11 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Actinomyces dicanisca sp. nov.

Candidatus Actinomyces dicanisca (NL. fem. n. *dicanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp900323545*. The type genome for the species is the GenBank assembly RS_GCF_902363285.1. The GC content of the type genome is 68.4 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Actinomyces dilogugo sp. nov.

Candidatus Actinomyces dilogugo (NL. fem. n. *dilogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp004010955*. The type genome for the species is the GenBank assembly RS_GCF_006333825.1. The GC content of the type genome is 69.39 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Actinomyces exentitica sp. nov.

Candidatus Actinomyces exentitica (NL. fem. n. *exentitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp011752065*. The type genome for the species is the GenBank assembly RS_GCF_011752065.1. The GC content of the type genome is 69.23 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Actinomyces exsuficella sp. nov.

Candidatus Actinomyces exsuficella (NL. fem. n. *exsuficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp001278845*. The type genome for the species is the GenBank assembly RS_GCF_001278845.1. The GC content of the type genome is 71.94 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Actinomyces feficitudo sp. nov.

Candidatus Actinomyces feficitudo (NL. fem. n. *feficitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp009930875*. The type genome for the species is the GenBank assembly RS_GCF_009930875.1. The GC content of the type genome is 68.89 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Actinomyces futaticella sp. nov.

Candidatus Actinomyces futaticella (NL. fem. n. *futaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp002999235*. The type genome for the species is the GenBank assembly RS_GCF_002999235.1. The GC content of the type genome is 71.63 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Actinomyces innabitudo sp. nov.

Candidatus Actinomyces innabitudo (NL. fem. n. *innabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp000195595*. The type genome for the species is the GenBank assembly RS_GCF_000195595.1. The GC content of the type genome is 67.75 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral".

Description of *Candidatus* Actinomyces nicomitas sp. nov.

Candidatus Actinomyces nicomitas (NL. fem. n. *nicomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Actinomyces sp003606385*. The type genome for the species is the GenBank assembly RS_GCF_003606385.1. The GC content of the type genome is 69.02 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Actinomyces optumibula sp. nov.

Candidatus Actinomyces optumibula (NL. fem. n. *optumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp000220835*. The type genome for the species is the GenBank assembly RS_GCF_000220835.1. The GC content of the type genome is 69.68 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Actinomyces vanidatica sp. nov.

Candidatus Actinomyces vanidatica (NL. fem. n. *vanidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp013185035*. The type genome for the species is the GenBank assembly RS_GCF_013184985.1. The GC content of the type genome is 68.67 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Actinomyces vepalitoga sp. nov.

Candidatus Actinomyces vepalitoga (NL. fem. n. *vepalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces sp004798665*. The type genome for the species is the GenBank assembly RS_GCF_008033505.1. The GC content of the type genome is 69.27 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Actinomyces cnestitura sp. nov.

Candidatus Actinomyces cnestitura (NL. fem. n. *cnestitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces_I sp009696615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_009696615.1. The GC content of the type genome is 53.53 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Actinomyces vagabatica sp. nov.

Candidatus Actinomyces vagabatica (NL. fem. n. *vagabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomyces_I sp014069575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014525425.1. The GC content of the type genome is 59.14 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Actinomycetospora cnestivita sp. nov.

Candidatus Actinomycetospora cnestivita (NL. fem. n. *cnestivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomycetospora sp902805495*. The type genome for the species is the GenBank assembly GCA_902805495.1. The GC content of the type genome is 74.62 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Actinomycetospora emortentia sp. nov.

Candidatus Actinomycetospora emortentia (NL. fem. n. *emortentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinomycetospora sp012933465*. The type genome for the species is the GenBank assembly RS_GCF_012933465.1. The GC content of the type genome is 74.55 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Actinophytocola adverifica sp. nov.

Candidatus Actinophytocola adverifica (NL. fem. n. *adverifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinophytocola sp009379765*. The type genome for the species is the GenBank assembly GCA_009379765.1. The GC content of the type genome is 70.94 % and the genome length is 8.36 Mbp.

Description of *Candidatus* Actinoplanes anaplitrix sp. nov.

Candidatus Actinoplanes anaplitrix (NL. fem. n. *anaplitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp003999975*. The type genome for the species is the GenBank assembly RS_GCF_003999975.1. The GC content of the type genome is 70.01 % and the genome length is 10.12 Mbp.

Description of *Candidatus* Actinoplanes dapifimonas sp. nov.

Candidatus Actinoplanes dapifimonas (NL. fem. n. *dapifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp000389965*. The type genome for the species is the GenBank assembly RS_GCF_000389965.1. The GC content of the type genome is 71.31 % and the genome length is 9.23 Mbp.

Description of *Candidatus* Actinoplanes expaniforma sp. nov.

Candidatus Actinoplanes expaniforma (NL. fem. n. *expaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp012933445*. The type genome for the species is the GenBank assembly RS_GCF_012933445.1. The GC content of the type genome is 69.55 % and the genome length is 9.66 Mbp.

Description of *Candidatus* Actinoplanes ficedibula sp. nov.

Candidatus Actinoplanes ficedibula (NL. fem. n. *ficedibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp900119315*. The type genome for the species is the GenBank assembly RS_GCF_900119315.1. The GC content of the type genome is 71.32 % and the genome length is 9.24 Mbp.

Description of *Candidatus* Actinoplanes lavacitura sp. nov.

Candidatus Actinoplanes lavacitura (NL. fem. n. *lavacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp004001265*. The type genome for the species is the GenBank assembly RS_GCF_004001265.1. The GC content of the type genome is 70.34 % and the genome length is 9.29 Mbp.

Description of *Candidatus* Actinoplanes smegmilega sp. nov.

Candidatus Actinoplanes smegmilega (NL. fem. n. *smegmilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinoplanes sp001553785*. The type genome for the species is the GenBank assembly RS_GCF_001553785.1. The GC content of the type genome is 69.06 % and the genome length is 7.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sterile plastic container".

Description of *Candidatus* Actinopolyspora desomugo sp. nov.

Candidatus Actinopolyspora desomugo (NL. fem. n. *desomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinopolyspora sp006716775*. The type genome for the species is the GenBank assembly RS_GCF_006716775.1. The GC content of the type genome is 68.91 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Actinosynnema expisitia sp. nov.

Candidatus Actinosynnema expisitia (NL. fem. n. *expisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinosynnema sp001984175*. The type genome for the species is the GenBank assembly RS_GCF_001984175.1. The GC content of the type genome is 70.14 % and the genome length is 10.3 Mbp.

Description of *Candidatus* Actinosynnema noninitrix sp. nov.

Candidatus Actinosynnema noninitrix (NL. fem. n. *noninitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinosynnema sp000716595*. The type genome for the species is the GenBank assembly RS_GCF_000716595.1. The GC content of the type genome is 71.1 % and the genome length is 8.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "evergreen rhizosphere soil".

Description of *Candidatus* Actinosynnema umbilicula sp. nov.

Candidatus Actinosynnema umbilicula (NL. fem. n. *umbilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinosynnema sp001280085*. The type genome for the species is the GenBank assembly RS_GCF_001280085.1. The GC content of the type genome is 71.37 % and the genome length is 10.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wheat field soil".

Description of *Candidatus* Actinotalea arillicula sp. nov.

Candidatus Actinotalea arillicula (NL. fem. n. *arillicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp000526515*. The type genome for the species is the GenBank assembly RS_GCF_000526515.1. The GC content of the type genome is 71.73 % and the genome length is 4.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Actinotalea cilibugo sp. nov.

Candidatus Actinotalea cilibugo (NL. fem. n. *cilibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp009996735*. The type genome for the species is the GenBank assembly RS_GCF_009996735.1. The GC content of the type genome is 73.46 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Actinotalea decunivita sp. nov.

Candidatus Actinotalea decunivita (NL. fem. n. *decunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp014042015*. The type genome for the species is the GenBank assembly RS_GCF_014042015.1. The GC content of the type genome is 74.49 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Actinotalea epicredo sp. nov.

Candidatus Actinotalea epicredo (NL. fem. n. *epicredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp014360395*. The type genome for the species is the GenBank assembly GCA_014360395.1. The GC content of the type genome is 74.84 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Actinotalea intenentia sp. nov.

Candidatus Actinotalea intenentia (NL. fem. n. *intenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp012514545*. The type genome for the species is the GenBank assembly GCA_012514545.1. The GC content of the type genome is 75.92 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Actinotalea mahelax sp. nov.

Candidatus Actinotalea mahelax (NL. fem. n. *mahelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Actinotalea sp008364845*. The type genome for the species is the GenBank assembly RS_GCF_008364845.1. The GC content of the type genome is 73.45 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Actutella acrocifica sp. nov.

Candidatus Actutella acrocifica (NL. fem. n. *acrocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1739 sp002315385*. The type genome for the species is the GenBank assembly GCA_002315385.1. The GC content of the type genome is 41.87 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Actutella gen. nov.

Candidatus Actutella (NL. fem. n. *Actutella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1739*. The type species for the genus is *Candidatus* Actutella acrocifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Actutida innulousia sp. nov.

Candidatus Actutida innulousia (NL. fem. n. *innulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14130 sp902796025*. The type genome for the species is the GenBank assembly GCA_902796025.1. The GC content of the type genome is 58.28 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Actutida gen. nov.

Candidatus Actutida (NL. fem. n. *Actutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14130*. The type species for the genus is *Candidatus* Actutida innulousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Acustana holisitudo sp. nov.

Candidatus Acustana holisitudo (NL. fem. n. *holisitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOTC01 sp903861205*. The type genome for the species is the GenBank assembly GCA_903861205.1. The GC content of the type genome is 43.08 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Acustana gen. nov.

Candidatus Acustana (NL. fem. n. *Acustana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOTC01*. The type species for the genus is *Candidatus* Acustana holisitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acustaria illapatio sp. nov.

Candidatus Acustaria illapatio (NL. fem. n. *illapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4787 sp002402995*. The type genome for the species is the GenBank assembly GCA_002402995.1. The GC content of the type genome is 38.08 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Acustaria gen. nov.

Candidatus Acustaria (NL. fem. n. *Acustaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4787*. The type species for the genus is *Candidatus* Acustaria illapatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4787*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerifanaceae.

Description of *Candidatus* Acustella tiguribula sp. nov.

Candidatus Acustella tiguribula (NL. fem. n. *tiguribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHG01 sp012735455*. The type genome for the species is the GenBank assembly GCA_012735455.1. The GC content of the type genome is 54.01 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Acustella gen. nov.

Candidatus Acustella (NL. fem. n. *Acustella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHG01*. The type species for the genus is *Candidatus* Acustella tiguribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vaciliaceae.

Description of *Candidatus* Acustida octipedo sp. nov.

Candidatus Acustida octipedo (NL. fem. n. *octipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTQ01 sp009786175*. The type genome for the species is the GenBank assembly GCA_009786175.1. The GC content of the type genome is 45.15 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Acustida gen. nov.

Candidatus Acustida (NL. fem. n. *Acustida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQTQ01*. The type species for the genus is *Candidatus* Acustida octipedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Acustosa effulessa sp. nov.

Candidatus Acustosa effulessa (NL. fem. n. *effulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699585 sp002699585*. The type genome for the species is the GenBank assembly GCA_002699585.1. The GC content of the type genome is 52.95 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Acustosa gen. nov.

Candidatus Acustosa (NL. fem. n. *Acustosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699585*. The type species for the genus is *Candidatus* Acustosa effulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Acustula vilitisca sp. nov.

Candidatus Acustula vilitisca (NL. fem. n. *vilitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6079 sp002428705*. The type genome for the species is the GenBank assembly GCA_002428705.1. The GC content of the type genome is 67.33 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Acustula gen. nov.

Candidatus Acustula (NL. fem. n. *Acustula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6079*. The type species for the genus is *Candidatus* Acustula vilitisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Acutalibacter buxanitrix sp. nov.

Candidatus Acutalibacter buxanitrix (NL. fem. n. *buxanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp900759575*. The type genome for the species is the GenBank assembly RS_GCF_900759575.1. The GC content of the type genome is 53.12 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Acutalibacter catobedo sp. nov.

Candidatus Acutalibacter catobedo (NL. fem. n. *catobedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp009936055*. The type genome for the species is the GenBank assembly RS_GCF_009917445.1. The GC content of the type genome is 54.9 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Acutalibacter conifitio sp. nov.

Candidatus Acutalibacter conifitio (NL. fem. n. *conifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp900543555*. The type genome for the species is the GenBank assembly RS_GCF_900771745.1. The GC content of the type genome is 59.91 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Acutalibacter diluvicula sp. nov.

Candidatus Acutalibacter diluvicula (NL. fem. n. *diluvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp000435395*. The type genome for the species is the GenBank assembly GCA_000435395.1. The GC content of the type genome is 60.5 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Acutalibacter irregimonas sp. nov.

Candidatus Acutalibacter irregimonas (NL. fem. n. *irregimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp900543305*. The type genome for the species is the GenBank assembly GCA_900543305.1. The GC content of the type genome is 53.38 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Acutalibacter maligivita sp. nov.

Candidatus Acutalibacter maligivita (NL. fem. n. *maligivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp009917525*. The type genome for the species is the GenBank assembly RS_GCF_009917525.1. The GC content of the type genome is 54.21 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Acutalibacter relecicula sp. nov.

Candidatus Acutalibacter relecicula (NL. fem. n. *relecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp003612555*. The type genome for the species is the GenBank assembly RS_GCF_003612555.1. The GC content of the type genome is 55.44 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Acutalibacter solacitas sp. nov.

Candidatus Acutalibacter solacitas (NL. fem. n. *solacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp000432995*. The type genome for the species is the GenBank assembly GCA_900549515.1. The GC content of the type genome is 54.28 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Acutalibacter solifibula sp. nov.

Candidatus Acutalibacter solifibula (NL. fem. n. *solifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp900548545*. The type genome for the species is the GenBank assembly GCA_900548545.1. The GC content of the type genome is 57.18 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Acutalibacter tibicitrix sp. nov.

Candidatus Acutalibacter tibicitrix (NL. fem. n. *tibicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp009936035*. The type genome for the species is the GenBank assembly RS_GCF_009911675.1. The GC content of the type genome is 53.69 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Acutalibacter volubilenta sp. nov.

Candidatus Acutalibacter volubilenta (NL. fem. n. *volubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Acutalibacter sp900755895*. The type genome for the species is the GenBank assembly RS_GCF_900755895.1. The GC content of the type genome is 54.4 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Adaggana immemigena sp. nov.

Candidatus Adaggana immemigena (NL. fem. n. *immemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LMUX01 sp009765705*. The type genome for the species is the GenBank assembly RS_GCF_009765705.1. The GC content of the type genome is 59.63 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Adaggana gen. nov.

Candidatus Adaggana (NL. fem. n. *Adaggana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LMUX01*. The type species for the genus is *Candidatus* Adaggana immemigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adaggaria desepimonas sp. nov.

Candidatus Adaggaria desepimonas (NL. fem. n. *desepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4457 sp902557415*. The type genome for the species is the GenBank assembly GCA_902557415.1. The GC content of the type genome is 43.64 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Adaggaria gen. nov.

Candidatus Adaggaria (NL. fem. n. *Adaggaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4457*. The type species for the genus is *Candidatus* Adaggaria desepimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delebidaceae.

Description of *Candidatus* Adaggaria impinatica sp. nov.

Candidatus Adaggaria impinatica (NL. fem. n. *impinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4457 sp002390205*. The type genome for the species is the GenBank assembly GCA_002390205.1. The GC content of the type genome is 43.68 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Adaggella tranvicula sp. nov.

Candidatus Adaggella tranvicula (NL. fem. n. *tranvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUQA01 sp012032855*. The type genome for the species is the GenBank assembly GCA_012032855.1. The GC content of the type genome is 53.72 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Adaggella gen. nov.

Candidatus Adaggella (NL. fem. n. *Adaggella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUQA01*. The type species for the genus is *Candidatus* Adaggella tranvicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adaggia argitibra sp. nov.

Candidatus Adaggia argitibra (NL. fem. n. *argitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWZ01 sp012103315*. The type genome for the species is the GenBank assembly GCA_012103315.1. The GC content of the type genome is 51.98 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Adaggia gen. nov.

Candidatus Adaggia (NL. fem. n. *Adaggia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWZ01*. The type species for the genus is *Candidatus* Adaggia argitibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Adaggida entomitrix sp. nov.

Candidatus Adaggida entomitrix (NL. fem. n. *entomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHBS01 sp003243885*. The type genome for the species is the GenBank assembly GCA_003243885.1. The GC content of the type genome is 68.25 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Adaggida gen. nov.

Candidatus Adaggida (NL. fem. n. *Adaggida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHBS01*. The type species for the genus is *Candidatus* Adaggida entomitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adaggosa alticisca sp. nov.

Candidatus Adaggosa alticisca (NL. fem. n. *alticisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIV01 sp011330685*. The type genome for the species is the GenBank assembly GCA_011330685.1. The GC content of the type genome is 50.9 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Adaggosa gen. nov.

Candidatus Adaggosa (NL. fem. n. *Adaggosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIV01*. The type species for the genus is *Candidatus* Adaggosa alticisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adaggosa peropimonia sp. nov.

Candidatus Adaggosa peropimonia (NL. fem. n. *peropimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIV01 sp013151175*. The type genome for the species is the GenBank assembly GCA_013151175.1. The GC content of the type genome is 49.82 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Adaggula acrotiforma sp. nov.

Candidatus Adaggula acrotiforma (NL. fem. n. *acrotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWIP01 sp003560355*. The type genome for the species is the GenBank assembly GCA_003560355.1. The GC content of the type genome is 32.69 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Adaggula gen. nov.

Candidatus Adaggula (NL. fem. n. *Adaggula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWIP01*. The type species for the genus is *Candidatus* Adaggula acrotiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family

T1SED10-24. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conibiaceae.

Description of *Candidatus* Adaggula domicilenta sp. nov.

Candidatus Adaggula domicilenta (NL. fem. n. *domicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWIP01 sp007130415*. The type genome for the species is the GenBank assembly GCA_007130415.1. The GC content of the type genome is 33.52 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Adaggula giganitoga sp. nov.

Candidatus Adaggula giganitoga (NL. fem. n. *giganitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWIP01 sp007136035*. The type genome for the species is the GenBank assembly GCA_007136035.1. The GC content of the type genome is 33.26 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Adalgella adsenitio sp. nov.

Candidatus Adalgella adsenitio (NL. fem. n. *adsenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VULY01 sp009696485*. The type genome for the species is the GenBank assembly RS_GCF_009696485.1. The GC content of the type genome is 47.66 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Adalgella gen. nov.

Candidatus Adalgella (NL. fem. n. *Adalgella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VULY01*. The type species for the genus is *Candidatus* Adalgella adsenitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adalgia infacatio sp. nov.

Candidatus Adalgia infacatio (NL. fem. n. *infacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAL01 sp013695465*. The type genome for the species is the GenBank assembly GCA_013695465.1. The GC content of the type genome is 64.67 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Adalgia gen. nov.

Candidatus Adalgia (NL. fem. n. *Adalgia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAL01*. The type species for the genus is *Candidatus* Adalgia infacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Adambella exherilenta sp. nov.

Candidatus Adambella exherilenta (NL. fem. n. *exherilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6144 sp002435705*. The type genome for the species is the GenBank assembly GCA_002435705.1. The GC content of the type genome is 45.03 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Adambella gen. nov.

Candidatus Adambella (NL. fem. n. *Adambella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6144*. The type species for the genus is *Candidatus* Adambella exherilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adambia artufousia sp. nov.

Candidatus Adambia artufousia (NL. fem. n. *artufousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-187 sp003551485*. The type genome for the species is the GenBank assembly GCA_003551485.1. The GC content of the type genome is 68.47 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Adambia gen. nov.

Candidatus Adambia (NL. fem. n. *Adambia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1Sed10-187*. The type species for the genus is *Candidatus* Adambia artufousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adambia metucetta sp. nov.

Candidatus Adambia metucetta (NL. fem. n. *metucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-187 sp003552605*. The type genome for the species is the GenBank assembly GCA_003552605.1. The GC content of the type genome is 64.36 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Adambida dicabetta sp. nov.

Candidatus Adambida dicabetta (NL. fem. n. *dicabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFH01 sp007375925*. The type genome for the species is the GenBank assembly GCA_007375925.1. The GC content of the type genome is 53.95 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Adambida gen. nov.

Candidatus Adambida (NL. fem. n. *Adambida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFH01*. The type species for the genus is *Candidatus* Adambida dicabetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Adambosa spastitura sp. nov.

Candidatus Adambosa spastitura (NL. fem. n. *spastitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1312 sp002307135*. The type genome for the species is the GenBank assembly GCA_002307135.1. The GC content of the type genome is 37.67 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Adambosa gen. nov.

Candidatus Adambosa (NL. fem. n. *Adambosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1312*. The type species for the genus is *Candidatus* Adambosa spastitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adambosa xenodigena sp. nov.

Candidatus Adambosa xenodigena (NL. fem. n. *xenodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1312 sp002482815*. The type genome for the species is the GenBank assembly GCA_002482815.1. The GC content of the type genome is 39.82 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Adbelaria inordentia sp. nov.

Candidatus Adbelaria inordentia (NL. fem. n. *inordentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-42-22 sp002773725*. The type genome for the species is the GenBank assembly GCA_002773725.1. The GC content of the type genome is 42.03 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Adbelaria gen. nov.

Candidatus Adbelaria (NL. fem. n. *Adbelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-42-22*. The type species for the genus is *Candidatus* Adbelaria inordentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adbelella emancitica sp. nov.

Candidatus Adbelella emancitica (NL. fem. n. *emancitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHYP01 sp003224195*. The type genome for the species is the GenBank assembly GCA_003224195.1. The GC content of the type genome is 60.36 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Adbelella gen. nov.

Candidatus Adbelella (NL. fem. n. *Adbelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHYP01*. The type species for the genus is *Candidatus* Adbelella emancitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Adbelosa fumifimonas sp. nov.

Candidatus Adbelosa fumifimonas (NL. fem. n. *fumifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *OXYB2-FULL-48-7 sp001800495*. The type genome for the species is the GenBank assembly GCA_001800495.1. The GC content of the type genome is 47.55 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Adbelosa gen. nov.

Candidatus Adbelosa (NL. fem. n. *Adbelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYB2-FULL-48-7*. The type species for the genus is *Candidatus* Adbelosa fumifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA2-FULL-39-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delucariaceae.

Description of *Candidatus* Adbelula inperatio sp. nov.

Candidatus Adbelula inperatio (NL. fem. n. *inperatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MM2 sp001645185*. The type genome for the species is the GenBank assembly RS_GCF_001645185.1. The GC content of the type genome is 57.57 % and the genome length is 2.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "grassland soil".

Description of *Candidatus* Adbelula gen. nov.

Candidatus Adbelula (NL. fem. n. *Adbelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MM2*. The type species for the genus is *Candidatus* Adbelula inperatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcelana corocentia sp. nov.

Candidatus Adcelana corocentia (NL. fem. n. *corocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SY095 sp008152325*. The type genome for the species is the GenBank assembly RS_GCF_008152325.1. The GC content of the type genome is 30.81 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Adcelana gen. nov.

Candidatus Adcelana (NL. fem. n. *Adcelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SY095*. The type species for the genus is *Candidatus* Adcelana corocentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcelosa adhinibula sp. nov.

Candidatus Adcelosa adhinibula (NL. fem. n. *adhinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1338 sp003164595*. The type genome for the species is the GenBank assembly GCA_003164595.1. The GC content of the type genome is 42.74 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Adcelosa gen. nov.

Candidatus Adcelosa (NL. fem. n. *Adcelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1338*. The type species for the genus is *Candidatus* Adcelosa adhinibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Adcesana affamugo sp. nov.

Candidatus Adcesana affamugo (NL. fem. n. *affamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *12844 sp902783115*. The type genome for the species is the GenBank assembly GCA_902783115.1. The GC content of the type genome is 44.6 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Adcesana gen. nov.

Candidatus Adcesana (NL. fem. n. *Adcesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *12844*. The type species for the genus is *Candidatus* Adcesana affamugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Adcesana assucentia sp. nov.

Candidatus Adcesana assucentia (NL. fem. n. *assucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12844 sp902796445*. The type genome for the species is the GenBank assembly GCA_902796445.1. The GC content of the type genome is 38.93 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Adcesella detunetta sp. nov.

Candidatus Adcesella detunetta (NL. fem. n. *detunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2227 sp003510215*. The type genome for the species is the GenBank assembly GCA_003510215.1. The GC content of the type genome is 40.26 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Adcesella gen. nov.

Candidatus Adcesella (NL. fem. n. *Adcesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2227*. The type species for the genus is *Candidatus* Adcesella detunetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcesella innulimonia sp. nov.

Candidatus Adcesella innulimonia (NL. fem. n. *innulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2227 sp002841515*. The type genome for the species is the GenBank assembly GCA_002841515.1. The GC content of the type genome is 41.72 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Adcesella obtecifica sp. nov.

Candidatus Adcesella obtecifica (NL. fem. n. *obtecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2227 sp002841605*. The type genome for the species is the GenBank assembly GCA_002841605.1. The GC content of the type genome is 41.52 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Adcesella vatilago sp. nov.

Candidatus Adcesella vatilago (NL. fem. n. *vatilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2227 sp002348095*. The type genome for the species is the GenBank assembly GCA_002348095.1. The GC content of the type genome is 44.49 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Adcesia decitugo sp. nov.

Candidatus Adcesia decitugo (NL. fem. n. *decitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAYN01 sp013821475*. The type genome for the species is the GenBank assembly GCA_013821475.1. The GC content of the type genome is 69.07 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Adcesia gen. nov.

Candidatus Adcesia (NL. fem. n. *Adcesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VAYN01*. The type species for the genus is *Candidatus* Adcesia decitugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Adcesia obsatiforma sp. nov.

Candidatus Adcesia obsatiforma (NL. fem. n. *obsatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAYN01 sp005885405*. The type genome for the species is the GenBank assembly GCA_005885405.1. The GC content of the type genome is 68.07 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adcesida acratilenta sp. nov.

Candidatus Adcesida acratilenta (NL. fem. n. *acratilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZND01 sp012798485*. The type genome for the species is the GenBank assembly GCA_012798485.1. The GC content of the type genome is 32.03 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Adcesida gen. nov.

Candidatus Adcesida (NL. fem. n. *Adcesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZND01*. The type species for the genus is *Candidatus* Adcesida acratilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1449*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagariaceae.

Description of *Candidatus* Adcesosa bipalifica sp. nov.

Candidatus Adcesosa bipalifica (NL. fem. n. *bipalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c32 sp001516025*. The type genome for the species is the GenBank assembly GCA_001516025.1. The GC content of the type genome is 34.18 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Adcesosa gen. nov.

Candidatus Adcesosa (NL. fem. n. *Adcesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRH-c32*. The type species for the genus is *Candidatus* Adcesosa bipalifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcogana rosaritrix sp. nov.

Candidatus Adcogana rosaritrix (NL. fem. n. *rosaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M08DMB sp009362815*. The type genome for the species is the GenBank assembly RS_GCF_009362815.1. The GC content of the type genome is 32.26 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Adcogana gen. nov.

Candidatus Adcogana (NL. fem. n. *Adcogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M08DMB*. The type species for the genus is *Candidatus* Adcogana rosaritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcogaria senacilega sp. nov.

Candidatus Adcogaria senacilega (NL. fem. n. *senacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-45-15b sp001822655*. The type genome for the species is the GenBank assembly GCA_001822655.1. The GC content of the type genome is 45.02 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Adcogaria gen. nov.

Candidatus Adcogaria (NL. fem. n. *Adcogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-45-15b*. The type species for the genus is *Candidatus* Adcogaria senacilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_C*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorellaceae.

Description of *Candidatus* Adcogella assififica sp. nov.

Candidatus Adcogella assififica (NL. fem. n. *assififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBK01 sp012513855*. The type genome for the species is the GenBank assembly GCA_012513855.1. The GC content of the type genome is 69.93 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Adcogella gen. nov.

Candidatus Adcogella (NL. fem. n. *Adcogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBK01*. The type species for the genus is *Candidatus* Adcogella assififica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYBP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumulaceae.

Description of *Candidatus* Adcogia ascelitudo sp. nov.

Candidatus Adcogia ascelitudo (NL. fem. n. *ascelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYS01 sp902810715*. The type genome for the species is the GenBank assembly RS_GCF_902810715.1. The GC content of the type genome is 47.67 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Adcogia gen. nov.

Candidatus Adcogia (NL. fem. n. *Adcogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYS01*. The type species for the genus is *Candidatus* Adcogia ascelitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifidaceae.

Description of *Candidatus* Adcogida bisacitoga sp. nov.

Candidatus Adcogida bisacitoga (NL. fem. n. *bisacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-011290485 sp011290485*. The type genome for the species is the GenBank assembly RS_GCF_011290485.1. The GC content of the type genome is 61.15 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Adcogida gen. nov.

Candidatus Adcogida (NL. fem. n. *Adcogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-011290485*. The type species for the genus is *Candidatus* Adcogida bisacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcogula monumatio sp. nov.

Candidatus Adcogula monumatio (NL. fem. n. *monumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOO01 sp011334425*. The type genome for the species is the GenBank assembly GCA_011334425.1. The GC content of the type genome is 56.18 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Adcogula gen. nov.

Candidatus Adcogula (NL. fem. n. *Adcogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOO01*. The type species for the genus is *Candidatus* Adcogula monumatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-43-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefanaceae.

Description of *Candidatus* Adcomana allibugo sp. nov.

Candidatus Adcomana allibugo (NL. fem. n. *allibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EW11 sp003054665*. The type genome for the species is the GenBank assembly RS_GCF_003054665.1. The GC content of the type genome is 63.63 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Adcomana gen. nov.

Candidatus Adcomana (NL. fem. n. *Adcomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *EW11*. The type species for the genus is *Candidatus* Adcomana allibugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcomella depubilega sp. nov.

Candidatus Adcomella depubilega (NL. fem. n. *depubilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPHQ01 sp903864895*. The type genome for the species is the GenBank assembly GCA_903864895.1. The GC content of the type genome is 67.1 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Adcomella gen. nov.

Candidatus Adcomella (NL. fem. n. *Adcomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPHQ01*. The type species for the genus is *Candidatus* Adcomella depubilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcomida aggenitudo sp. nov.

Candidatus Adcomida aggenitudo (NL. fem. n. *aggenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-013693735 sp013693735*. The type genome for the species is the GenBank assembly GCA_013693735.1. The GC content of the type genome is 68.37 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Adcomida gen. nov.

Candidatus Adcomida (NL. fem. n. *Adcomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-013693735*. The type species for the genus is *Candidatus* Adcomida aggenitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcomosa inlumitrix sp. nov.

Candidatus Adcomosa inlumitrix (NL. fem. n. *inlumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RICK02 sp004210275*. The type genome for the species is the GenBank assembly RS_GCF_004210275.1. The GC content of the type genome is 40.84 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Adcomosa gen. nov.

Candidatus Adcomosa (NL. fem. n. *Adcomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RICK02*. The type species for the genus is *Candidatus* Adcomosa inlumitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcomula pulegitica sp. nov.

Candidatus Adcomula pulegitica (NL. fem. n. *pulegitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTAW01 sp013139435*. The type genome for the species is the GenBank assembly GCA_013139435.1. The GC content of the type genome is 46.46 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adcomula gen. nov.

Candidatus Adcomula (NL. fem. n. *Adcomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTAW01*. The type species for the genus is *Candidatus* Adcomula pulegitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcubaria ammulitoga sp. nov.

Candidatus Adcubaria ammulitoga (NL. fem. n. *ammulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VATK01 sp006546985*. The type genome for the species is the

GenBank assembly RS_GCF_006546985.1. The GC content of the type genome is 36.09 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Adcubaria gen. nov.

Candidatus Adcubaria (NL. fem. n. *Adcubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VATK01*. The type species for the genus is *Candidatus* Adcubaria ammulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-18226*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Robigidaceae.

Description of *Candidatus* Adcubida curabessa sp. nov.

Candidatus Adcubida curabessa (NL. fem. n. *curabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2391 sp002343825*. The type genome for the species is the GenBank assembly GCA_002343825.1. The GC content of the type genome is 59.63 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Adcubida gen. nov.

Candidatus Adcubida (NL. fem. n. *Adcubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2391*. The type species for the genus is *Candidatus* Adcubida curabessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcubosa impolax sp. nov.

Candidatus Adcubosa impolax (NL. fem. n. *impolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYZT01 sp903930735*. The type genome for the species is the GenBank assembly GCA_903930735.1. The GC content of the type genome is 61.81 %

and the genome length is 3.65 Mbp.

Description of *Candidatus* Adcubosa gen. nov.

Candidatus Adcubosa (NL. fem. n. *Adcubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYZT01*. The type species for the genus is *Candidatus* Adcubosa impolax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcubula adsudibra sp. nov.

Candidatus Adcubula adsudibra (NL. fem. n. *adsudibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRER01 sp011051015*. The type genome for the species is the GenBank assembly GCA_011051015.1. The GC content of the type genome is 38.22 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Adcubula gen. nov.

Candidatus Adcubula (NL. fem. n. *Adcubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRER01*. The type species for the genus is *Candidatus* Adcubula adsudibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-42-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimelellaceae.

Description of *Candidatus* Adcucana hecatilenta sp. nov.

Candidatus Adcucana hecatilenta (NL. fem. n. *hecatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-43 sp005885555*. The type genome for the species is the GenBank assembly GCA_005885555.1. The GC content of the type genome is 71.78 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Adcucana gen. nov.

Candidatus Adcucana (NL. fem. n. *Adcucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-43*. The type species for the genus is *Candidatus* Adcucana hecatilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcucana velivitura sp. nov.

Candidatus Adcucana velivitura (NL. fem. n. *velivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-43 sp005885115*. The type genome for the species is the GenBank assembly GCA_005885115.1. The GC content of the type genome is 71.69 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Adcucaria nimiratica sp. nov.

Candidatus Adcucaria nimiratica (NL. fem. n. *nimiratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYQJ01 sp903928275*. The type genome for the species is the GenBank assembly GCA_903928275.1. The GC content of the type genome is 72.63 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Adcucaria gen. nov.

Candidatus Adcucaria (NL. fem. n. *Adcucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYQJ01*. The type species for the genus is *Candidatus* Adcucaria nimiratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Adcucella insinitura sp. nov.

Candidatus Adcucella insinitura (NL. fem. n. *insinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-53-11 sp001770165*. The type genome for the species is the GenBank assembly GCA_001770165.1. The GC content of the type genome is 53.48 % and the genome length is 3.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Adcucella gen. nov.

Candidatus Adcucella (NL. fem. n. *Adcucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-53-11*. The type species for the genus is *Candidatus* Adcucella insinitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Adcucida deniximonas sp. nov.

Candidatus Adcucida deniximonas (NL. fem. n. *deniximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2970 sp002348345*. The type genome for the species is the GenBank assembly GCA_002348345.1. The GC content of the type genome is 57.17 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Adcucida gen. nov.

Candidatus Adcucida (NL. fem. n. *Adcucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2970*. The type species for the genus is *Candidatus* Adcucida deniximonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA164-E04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomosaceae.

Description of *Candidatus* Adcucula murelatica sp. nov.

Candidatus Adcucula murelatica (NL. fem. n. *murelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683315 sp002683315*. The type genome for the species is the GenBank assembly GCA_002683315.1. The GC content of the type genome is 41.83 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Adcucula gen. nov.

Candidatus Adcucula (NL. fem. n. *Adcucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2683315*. The type species for the genus is *Candidatus* Adcucula murelatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilanaceae.

Description of *Candidatus* Adculana istinessa sp. nov.

Candidatus Adculana istinessa (NL. fem. n. *istinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGUW01 sp010027605*. The type genome for the species is the GenBank assembly GCA_010027605.1. The GC content of the type genome is 65.49 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Adculana gen. nov.

Candidatus Adculana (NL. fem. n. *Adculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGUW01*. The type species for the genus is *Candidatus* Adculana istinessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adcularia devecitoga sp. nov.

Candidatus Adcularia devecitoga (NL. fem. n. *devecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GLR69 sp013138865*. The type genome for the species is the GenBank assembly GCA_013138865.1. The GC content of the type genome is 32.52 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Adcularia gen. nov.

Candidatus Adcularia (NL. fem. n. *Adcularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GLR69*. The type species for the genus is *Candidatus* Adcularia devecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adculella inaspatica sp. nov.

Candidatus Adculella inaspatica (NL. fem. n. *inaspatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Site-B15 sp013042715*. The type genome for the species is the GenBank assembly GCA_013042715.1. The GC content of the type genome is 31.0 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Adculella gen. nov.

Candidatus Adculella (NL. fem. n. *Adculella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Site-B15*. The type species for the genus is *Candidatus* Adculella inaspatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adculida effunitudo sp. nov.

Candidatus Adculida effunitudo (NL. fem. n. *effunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXM01 sp012515925*. The type genome for the species is the GenBank assembly GCA_012515925.1. The GC content of the type genome is 50.04 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Adculida gen. nov.

Candidatus Adculida (NL. fem. n. *Adculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXM01*. The type species for the genus is *Candidatus* Adculida effunitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adculosa obsoliforma sp. nov.

Candidatus Adculosa obsoliforma (NL. fem. n. *obsoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDFN01 sp013815775*. The type genome for the species is the GenBank assembly GCA_013815775.1. The GC content of the type genome is 44.57 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Adculosa gen. nov.

Candidatus Adculosa (NL. fem. n. *Adculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDFN01*. The type species for the genus is *Candidatus* Adculosa obsoliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categiaceae.

Description of *Candidatus* Adculula deculugo sp. nov.

Candidatus Adculula deculugo (NL. fem. n. *deculugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCH01 sp013359215*. The type genome for the species is the GenBank assembly GCA_013359215.1. The GC content of the type genome is 38.8 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Adculula gen. nov.

Candidatus Adculula (NL. fem. n. *Adculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCH01*. The type species for the genus is *Candidatus* Adculula deculugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SRT547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sarabosaceae.

Description of *Candidatus* Adcumaria adpelitrix sp. nov.

Candidatus Adcumaria adpelitrix (NL. fem. n. *adpelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2685815 sp002685815*. The type genome for the species is the GenBank assembly GCA_002685815.1. The GC content of the type genome is 51.88 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Adcumaria gen. nov.

Candidatus Adcumaria (NL. fem. n. *Adcumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2685815*. The type species for the genus is *Candidatus* Adcumaria adpelitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2162*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifosaceae.

Description of *Candidatus* Adcumida adsigibra sp. nov.

Candidatus Adcumida adsigibra (NL. fem. n. *adsigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVNC01 sp903907165*. The type genome for the species is the GenBank assembly GCA_903907165.1. The GC content of the type genome is 39.68 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Adcumida gen. nov.

Candidatus Adcumida (NL. fem. n. *Adcumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVNC01*. The type species for the genus is *Candidatus* Adcumida adsigibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapiaceae.

Description of *Candidatus* Adcumosa regigicella sp. nov.

Candidatus Adcumosa regigicella (NL. fem. n. *regigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11521 sp900751885*. The type genome for the species is the GenBank assembly RS_GCF_900751885.1. The GC content of the type genome is 45.17 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adcumosa gen. nov.

Candidatus Adcumosa (NL. fem. n. *Adcumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11521*. The type species for the genus is *Candidatus* Adcumosa regigicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Addivana insemiforma sp. nov.

Candidatus Addivana insemiforma (NL. fem. n. *insemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-10 sp004552515*. The type genome for the species is the GenBank assembly GCA_004552515.1. The GC content of the type genome is 62.04 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Addivana gen. nov.

Candidatus Addivana (NL. fem. n. *Addivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-10*. The type species for the genus is *Candidatus* Addivana insemiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Addivana malifitudo sp. nov.

Candidatus Addivana malifitudo (NL. fem. n. *malifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-10 sp902790345*. The type genome for the species is the GenBank assembly GCA_902790345.1. The GC content of the type genome is 62.68 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Addivana rorulivita sp. nov.

Candidatus Addivana rorulivita (NL. fem. n. *rorulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-10 sp001603025*. The type genome for the species is the GenBank assembly GCA_001603025.1. The GC content of the type genome is 62.45 % and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Addivaria milifilenta sp. nov.

Candidatus Addivaria milifilenta (NL. fem. n. *milifilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHAE01 sp002840285*. The type genome for the species is the GenBank assembly GCA_002840285.1. The GC content of the type genome is 49.57 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Addivaria gen. nov.

Candidatus Addivaria (NL. fem. n. *Addivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHAE01*. The type species for the genus is *Candidatus* Addivaria milifilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addivella capabiforma sp. nov.

Candidatus Addivella capabiforma (NL. fem. n. *capabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEYC01 sp002774555*. The type genome for the species is the GenBank assembly GCA_002774555.1. The GC content of the type genome is 35.5 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Addivella gen. nov.

Candidatus Addivella (NL. fem. n. *Addivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PEYC01*. The type species for the genus is *Candidatus* Addivella capabiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiviaceae.

Description of *Candidatus* Addivia advicilega sp. nov.

Candidatus Addivia advicilega (NL. fem. n. *advicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PZPK01 sp006212045*. The type genome for the species is the GenBank assembly GCA_006212045.1. The GC content of the type genome is 50.42 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Addivia gen. nov.

Candidatus Addivia (NL. fem. n. *Addivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PZPK01*. The type species for the genus is *Candidatus* Addivia advicilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addivida insusitura sp. nov.

Candidatus Addivida insusitura (NL. fem. n. *insusitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSN01 sp004322205*. The type genome for the species is the GenBank assembly GCA_004322205.1. The GC content of the type genome is 48.83 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Addivida gen. nov.

Candidatus Addivida (NL. fem. n. *Addivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSN01*. The type species for the genus is *Candidatus* Addivida insusitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addivosa inhumigena sp. nov.

Candidatus Addivosa inhumigena (NL. fem. n. *inhumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R2A62 sp000161835*. The type genome for the species is the GenBank assembly RS_GCF_000161835.1. The GC content of the type genome is 55.25 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Subsurface water samples were collected at 10 m in Niskinbottles at a station located 8 km west of the mouth of Yaquina Bay; OR".

Description of *Candidatus* Addivosa gen. nov.

Candidatus Addivosa (NL. fem. n. *Addivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *R2A62*. The type species for the genus is *Candidatus* Addivosa inhumigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addubana vicatigena sp. nov.

Candidatus Addubana vicatigena (NL. fem. n. *vicatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11155 sp003511945*. The type genome for the species is the GenBank assembly GCA_003511945.1. The GC content of the type genome is 70.23 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Addubana gen. nov.

Candidatus Addubana (NL. fem. n. *Addubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11155*. The type species for the genus is *Candidatus* Addubana vicatigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Addubia agraticula sp. nov.

Candidatus Addubia agraticula (NL. fem. n. *agraticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-83 sp003556525*. The type genome for the species is the GenBank assembly GCA_003556525.1. The GC content of the type genome is 34.75 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Addubia gen. nov.

Candidatus Addubia (NL. fem. n. *Addubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED10-83*. The type species for the genus is *Candidatus* Addubia agraticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-42-11_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirunidaceae.

Description of *Candidatus* Addubida avuncigena sp. nov.

Candidatus Addubida avuncigena (NL. fem. n. *avuncigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-181 sp003228735*. The type genome for the species is the GenBank assembly GCA_003228735.1. The GC content of the type genome is 55.29 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Addubida gen. nov.

Candidatus Addubida (NL. fem. n. *Addubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-181*. The type species for the genus is *Candidatus* Addubida avuncigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addubosa enuntitura sp. nov.

Candidatus Addubosa enuntitura (NL. fem. n. *enuntitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NaphS2 sp000179315*. The type genome for the species is the GenBank assembly RS_GCF_000179315.1. The GC content of the type genome is 49.83 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Addubosa gen. nov.

Candidatus Addubosa (NL. fem. n. *Addubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NaphS2*. The type species for the genus is *Candidatus* Addubosa enuntitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Addubula utputitoga sp. nov.

Candidatus Addubula utputitoga (NL. fem. n. *utputitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1XD8-76 sp003611955*. The type genome for the species is the GenBank assembly RS_GCF_003611955.1. The GC content of the type genome is 48.9 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Addubula gen. nov.

Candidatus Addubula (NL. fem. n. *Addubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1XD8-76*. The type species for the genus is *Candidatus* Addubula utputitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adessaria vocifousia sp. nov.

Candidatus Adessaria vocifousia (NL. fem. n. *vocifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACETI01 sp013911415*. The type genome for the species is the GenBank assembly GCA_013911415.1. The GC content of the type genome is 40.19 %

and the genome length is 2.51 Mbp.

Description of *Candidatus* Adessaria gen. nov.

Candidatus Adessaria (NL. fem. n. *Adessaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACETI01*. The type species for the genus is *Candidatus* Adessaria vocifousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adessella antecilenta sp. nov.

Candidatus Adessella antecilenta (NL. fem. n. *antecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWKK01 sp009911695*. The type genome for the species is the GenBank assembly RS_GCF_009911695.1. The GC content of the type genome is 67.72 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Adessella gen. nov.

Candidatus Adessella (NL. fem. n. *Adessella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QWKK01*. The type species for the genus is *Candidatus* Adessella antecilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adessida adtolousia sp. nov.

Candidatus Adessida adtolousia (NL. fem. n. *adtolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718395 sp002710905*. The type genome for the species is the GenBank assembly GCA_002710905.1. The GC content of the type genome is 33.83 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Adessida gen. nov.

Candidatus Adessida (NL. fem. n. *Adessida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002718395*. The type species for the genus is *Candidatus* Adessida adtolousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Adessida inornousia sp. nov.

Candidatus Adessida inornousia (NL. fem. n. *inornousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718395 sp003228125*. The type genome for the species is the GenBank assembly GCA_003228125.1. The GC content of the type genome is 31.5 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Adessida odollitia sp. nov.

Candidatus Adessida odollitia (NL. fem. n. *odollitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718395 sp002718395*. The type genome for the species is the GenBank assembly GCA_002718395.1. The GC content of the type genome is 32.99 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Adessosa cisoritoga sp. nov.

Candidatus Adessosa cisoritoga (NL. fem. n. *cisoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPI01 sp012521575*. The type genome for the species is the GenBank assembly GCA_012521575.1. The GC content of the type genome is 27.69 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Adessosa gen. nov.

Candidatus Adessosa (NL. fem. n. *Adessosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPI01*. The type species for the genus is *Candidatus* Adessosa cisoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Adessosa effosax sp. nov.

Candidatus Adessosa effosax (NL. fem. n. *effosax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPI01 sp012838395*. The type genome for the species is the GenBank assembly GCA_012838395.1. The GC content of the type genome is 28.22 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Adessula aprugax sp. nov.

Candidatus Adessula aprugax (NL. fem. n. *aprugax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5150 sp002413795*. The type genome for the species is the GenBank assembly GCA_002413795.1. The GC content of the type genome is 54.71 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Adessula gen. nov.

Candidatus Adessula (NL. fem. n. *Adessula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5150*. The type species for the genus is *Candidatus* Adessula aprugax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Adessula detumatica sp. nov.

Candidatus Adessula detumatica (NL. fem. n. *detumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5150 sp003133385*. The type genome for the species is the GenBank assembly GCA_003133385.1. The GC content of the type genome is 48.31 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Adessula fibicigena sp. nov.

Candidatus Adessula fibicigena (NL. fem. n. *fibicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5150 sp003153395*. The type genome for the species is the GenBank assembly GCA_003153395.1. The GC content of the type genome is 40.12 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Adessula pimenugo sp. nov.

Candidatus Adessula pimenugo (NL. fem. n. *pimenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5150 sp002792275*. The type genome for the species is the GenBank assembly GCA_002792275.1. The GC content of the type genome is 52.43 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Adfabana conabousia sp. nov.

Candidatus Adfabana conabousia (NL. fem. n. *conabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZX01 sp013813185*. The type genome for the species is the GenBank assembly GCA_013813185.1. The GC content of the type genome is 62.32 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Adfabana gen. nov.

Candidatus Adfabana (NL. fem. n. *Adfabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZX01*. The type species for the genus is *Candidatus* Adfabana conabousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfabana inmacatica sp. nov.

Candidatus Adfabana inmacatica (NL. fem. n. *inmacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZX01 sp013695705*. The type genome for the species is the GenBank assembly GCA_013695705.1. The GC content of the type genome is 60.67 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Adfabana vitabousia sp. nov.

Candidatus Adfabana vitabousia (NL. fem. n. *vitabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZX01 sp013696665*. The type genome for the species is the GenBank assembly GCA_013696665.1. The GC content of the type genome is 60.22 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Adfabella relenimonia sp. nov.

Candidatus Adfabella relenimonia (NL. fem. n. *relenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14319 sp902797845*. The type genome for the species is the GenBank assembly GCA_902797845.1. The GC content of the type genome is 44.06 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Adfabella gen. nov.

Candidatus Adfabella (NL. fem. n. *Adfabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14319*. The type species for the genus is *Candidatus* Adfabella relenimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfabia bicubetta sp. nov.

Candidatus Adfabia bicubetta (NL. fem. n. *bicubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2696965 sp002171975*. The type genome for the species is the GenBank assembly GCA_002171975.2. The GC content of the type genome is 30.62 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Adfabia gen. nov.

Candidatus Adfabia (NL. fem. n. *Adfabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2696965*. The type species for the genus is *Candidatus* Adfabia bicubetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Adfabia capililenta sp. nov.

Candidatus Adfabia capililenta (NL. fem. n. *capililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2696965 sp002696965*. The type genome for the species is the GenBank assembly GCA_002696965.1. The GC content of the type genome is 30.23 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Adfabosa panifitica sp. nov.

Candidatus Adfabosa panifitica (NL. fem. n. *panifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11034 sp003514205*. The type genome for the species is the GenBank assembly GCA_003514205.1. The GC content of the type genome is 59.81 %

and the genome length is 3.42 Mbp.

Description of *Candidatus* Adfabosa gen. nov.

Candidatus Adfabosa (NL. fem. n. *Adfabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11034*. The type species for the genus is *Candidatus* Adfabosa panifitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfabula embamessa sp. nov.

Candidatus Adfabula embamessa (NL. fem. n. *embamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-40-9 sp002791215*. The type genome for the species is the GenBank assembly GCA_002791215.1. The GC content of the type genome is 38.21 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Adfabula gen. nov.

Candidatus Adfabula (NL. fem. n. *Adfabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-40-9*. The type species for the genus is *Candidatus* Adfabula embamessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Adfamana expisibula sp. nov.

Candidatus Adfamana expisibula (NL. fem. n. *expisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-110 sp007117775*. The type genome for the species is the GenBank assembly GCA_007117775.1. The GC content of the type genome is 65.58 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Adfamana gen. nov.

Candidatus Adfamana (NL. fem. n. *Adfamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBr16-110*. The type species for the genus is *Candidatus* Adfamana expisibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfamaria obsigilega sp. nov.

Candidatus Adfamaria obsigilega (NL. fem. n. *obsigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RQJ05 sp003286125*. The type genome for the species is the GenBank assembly RS_GCF_003286125.1. The GC content of the type genome is 38.95 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Adfamaria gen. nov.

Candidatus Adfamaria (NL. fem. n. *Adfamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RQJ05*. The type species for the genus is *Candidatus* Adfamaria obsigilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfamaria prospastra sp. nov.

Candidatus Adfamaria prospastra (NL. fem. n. *prospastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RQJ05 sp003063625*. The type genome for the species is the GenBank assembly RS_GCF_003063625.1. The GC content of the type genome is 41.27 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Adfamella innoxugo sp. nov.

Candidatus Adfamella innoxugo (NL. fem. n. *innoxugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMRS01 sp014376345*. The type genome for the species is the GenBank assembly GCA_014376345.1. The GC content of the type genome is 35.84 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Adfamella gen. nov.

Candidatus Adfamella (NL. fem. n. *Adfamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMRS01*. The type species for the genus is *Candidatus* Adfamella innoxugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Adfamida lavacilenta sp. nov.

Candidatus Adfamida lavacilenta (NL. fem. n. *lavacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-O06 sp003280085*. The type genome for the species is the GenBank assembly GCA_003280085.1. The GC content of the type genome is 39.65 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Adfamida gen. nov.

Candidatus Adfamida (NL. fem. n. *Adfamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-O06*. The type species for the genus is *Candidatus* Adfamida lavacilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfamosa epicritio sp. nov.

Candidatus Adfamosa epicritio (NL. fem. n. *epicritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-493 sp003251535*. The type genome for the species is the GenBank assembly GCA_003251535.1. The GC content of the type genome is 64.24 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Adfamosa gen. nov.

Candidatus Adfamosa (NL. fem. n. *Adfamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-493*. The type species for the genus is *Candidatus* Adfamosa epicritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfamula abagmousia sp. nov.

Candidatus Adfamula abagmousia (NL. fem. n. *abagmousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSF01 sp013214485*. The type genome for the species is the GenBank assembly GCA_013214485.1. The GC content of the type genome is 30.06 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Adfamula gen. nov.

Candidatus Adfamula (NL. fem. n. *Adfamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSF01*. The type species for the genus is *Candidatus* Adfamula abagmousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfanana decinivita sp. nov.

Candidatus Adfanana decinivita (NL. fem. n. *decinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-613 sp011371135*. The type genome for the species is the GenBank assembly GCA_011371135.1. The GC content of the type genome is 41.57 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Adfanana gen. nov.

Candidatus Adfanana (NL. fem. n. *Adfanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-613*. The type species for the genus is *Candidatus* Adfanana decinivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfanaria ingigicula sp. nov.

Candidatus Adfanaria ingigicula (NL. fem. n. *ingigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RACS-045 sp013316135*. The type genome for the species is the GenBank assembly GCA_013316135.1. The GC content of the type genome is 42.07 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Adfanaria gen. nov.

Candidatus Adfanaria (NL. fem. n. *Adfanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RACS-045*. The type species for the genus is *Candidatus* Adfanaria ingigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3700*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarellaceae.

Description of *Candidatus* Adfania bipalax sp. nov.

Candidatus Adfania bipalax (NL. fem. n. *bipalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1219 sp002309295*. The type genome for the species is the GenBank assembly GCA_002309295.1. The GC content of the type genome is 48.48 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adfania gen. nov.

Candidatus Adfania (NL. fem. n. *Adfania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1219*. The type species for the genus is *Candidatus* Adfania bipalax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Adfanida galacatio sp. nov.

Candidatus Adfanida galacatio (NL. fem. n. *galacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLJX01 sp902607435*. The type genome for the species is the GenBank assembly GCA_902607435.1. The GC content of the type genome is 29.22 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Adfanida gen. nov.

Candidatus Adfanida (NL. fem. n. *Adfanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACLJX01*. The type species for the genus is *Candidatus* Adfanida galacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Adfanosa sicariforma sp. nov.

Candidatus Adfanosa sicariforma (NL. fem. n. *sicariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11604 sp900769875*. The type genome for the species is the GenBank assembly RS_GCF_900769875.1. The GC content of the type genome is 60.23 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Adfanosa gen. nov.

Candidatus Adfanosa (NL. fem. n. *Adfanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11604*. The type species for the genus is *Candidatus* Adfanosa sicariforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Adfanula camilugo sp. nov.

Candidatus Adfanula camilugo (NL. fem. n. *camilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6182 sp002422065*. The type genome for the species is the GenBank assembly GCA_002422065.1. The GC content of the type genome is 35.22 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Adfanula gen. nov.

Candidatus Adfanula (NL. fem. n. *Adfanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6182*. The type species for the genus is *Candidatus* Adfanula camilugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfanula inurbessa sp. nov.

Candidatus Adfanula inurbessa (NL. fem. n. *inurbessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6182 sp012511085*. The type genome for the species is the GenBank assembly GCA_012511085.1. The GC content of the type genome is 40.6 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Adfirana amercifica sp. nov.

Candidatus Adfirana amercifica (NL. fem. n. *amercifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5623 sp900258555*. The type genome for the species is the GenBank assembly GCA_900258555.1. The GC content of the type genome is 47.01 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Adfirana gen. nov.

Candidatus Adfirana (NL. fem. n. *Adfirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5623*. The type species for the genus is *Candidatus* Adfirana amercifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfirana bisacax sp. nov.

Candidatus Adfirana bisacax (NL. fem. n. *bisacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5623 sp002424495*. The type genome for the species is the GenBank assembly GCA_002424495.1. The GC content of the type genome is 47.46 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Adfiraria adordatio sp. nov.

Candidatus Adfiraria adordatio (NL. fem. n. *adordatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W265 sp011170325*. The type genome for the species is the GenBank assembly GCA_011170325.1. The GC content of the type genome is 46.96 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Adfiraria gen. nov.

Candidatus Adfiraria (NL. fem. n. *Adfiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W265*. The type species for the genus is *Candidatus* Adfiraria adordatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Adfirella nubecisca sp. nov.

Candidatus Adfirella nubecisca (NL. fem. n. *nubecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNIV01 sp014382915*. The type genome for the species is the GenBank assembly GCA_014382915.1. The GC content of the type genome is 37.22 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adfirella gen. nov.

Candidatus Adfirella (NL. fem. n. *Adfirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNIV01*. The type species for the genus is *Candidatus* Adfirella nubecisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Adfiria reforivita sp. nov.

Candidatus Adfiria reforivita (NL. fem. n. *reforivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UNRQ01 sp900498245*. The type genome for the species is the GenBank assembly RS_GCF_900498245.1. The GC content of the type genome is 49.72 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Adfiria gen. nov.

Candidatus Adfiria (NL. fem. n. *Adfiria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UNRQ01*. The type species for the genus is *Candidatus* Adfiria reforivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PGXB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimidaceae.

Description of *Candidatus* Adfirida incesilega sp. nov.

Candidatus Adfirida incesilega (NL. fem. n. *incesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1379 sp002305475*. The type genome for the species is the GenBank assembly GCA_002305475.1. The GC content of the type genome is 37.37 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Adfirida gen. nov.

Candidatus Adfirida (NL. fem. n. *Adfirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1379*. The type species for the genus is *Candidatus* Adfirida incesilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Adfirosa nicomago sp. nov.

Candidatus Adfirosa nicomago (NL. fem. n. *nicomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-43-11b sp001780985*. The type genome for the species is the GenBank assembly GCA_001780985.1. The GC content of the type genome is 42.92 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Adfirosa gen. nov.

Candidatus Adfirosa (NL. fem. n. *Adfirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-43-11b*. The type species for the genus is *Candidatus* Adfirosa nicomago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Adfulana amatrentia sp. nov.

Candidatus Adfulana amatrentia (NL. fem. n. *amatrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MYbin3 sp002753335*. The type genome for the species is the GenBank assembly GCA_002753335.1. The GC content of the type genome is 44.36 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Adfulana gen. nov.

Candidatus Adfulana (NL. fem. n. *Adfulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MYbin3*. The type species for the genus is *Candidatus* Adfulana amatrentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Adfulana stercibra sp. nov.

Candidatus Adfulana stercibra (NL. fem. n. *stercibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MYbin3 sp004321915*. The type genome for the species is the GenBank assembly GCA_004321915.1. The GC content of the type genome is 48.51 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Adfularia ficulisca sp. nov.

Candidatus Adfularia ficulisca (NL. fem. n. *ficulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDF01 sp012729395*. The type genome for the species is the GenBank assembly GCA_012729395.1. The GC content of the type genome is 63.45 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Adfularia gen. nov.

Candidatus Adfularia (NL. fem. n. *Adfularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDF01*. The type species for the genus is *Candidatus* Adfularia ficulisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifidaceae.

Description of *Candidatus* Adfulia nehalitura sp. nov.

Candidatus Adfulia nehalitura (NL. fem. n. *nehalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMA01 sp012799055*. The type genome for the species is the GenBank assembly GCA_012799055.1. The GC content of the type genome is 29.67 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Adfulia gen. nov.

Candidatus Adfulia (NL. fem. n. *Adfulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMA01*. The type species for the genus is *Candidatus* Adfulia nehalitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfulosa desacax sp. nov.

Candidatus Adfulosa desacax (NL. fem. n. *desacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-47-8 sp001805375*. The type genome for the species is the GenBank assembly GCA_001805375.1. The GC content of the type genome is 46.95 % and the genome length is 2.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Adfulosa gen. nov.

Candidatus Adfulosa (NL. fem. n. *Adfulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-47-8*. The type species for the genus is *Candidatus* Adfulosa desacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Adfulula attolimonia sp. nov.

Candidatus Adfulula attolimonia (NL. fem. n. *attolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNEW01 sp002922725*. The type genome for the species is the GenBank assembly GCA_002922725.1. The GC content of the type genome is 38.97 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Adfulula gen. nov.

Candidatus Adfulula (NL. fem. n. *Adfulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNEW01*. The type species for the genus is *Candidatus* Adfulula

attolimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2987*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lutulariaceae.

Description of *Candidatus* Adfunella admulessa sp. nov.

Candidatus Adfunella admulessa (NL. fem. n. *admulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZ26 sp003232155*. The type genome for the species is the GenBank assembly GCA_003232155.1. The GC content of the type genome is 35.57 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Adfunella gen. nov.

Candidatus Adfunella (NL. fem. n. *Adfunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZ26*. The type species for the genus is *Candidatus* Adfunella admulessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfunella rudecastra sp. nov.

Candidatus Adfunella rudecastra (NL. fem. n. *rudecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZ26 sp005885635*. The type genome for the species is the GenBank assembly RS_GCF_005885635.1. The GC content of the type genome is 37.97 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Adfunia exsisimonia sp. nov.

Candidatus Adfunia exsisimonia (NL. fem. n. *exsisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14121 sp902795845*. The type genome for the species is the

GenBank assembly GCA_902795845.1. The GC content of the type genome is 24.55 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Adfunia gen. nov.

Candidatus Adfunia (NL. fem. n. *Adfunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14121*. The type species for the genus is *Candidatus* Adfunia exsisimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Adfunida almucatica sp. nov.

Candidatus Adfunida almucatica (NL. fem. n. *almucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUKE01 sp003553565*. The type genome for the species is the GenBank assembly GCA_003553565.1. The GC content of the type genome is 72.74 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Adfunida gen. nov.

Candidatus Adfunida (NL. fem. n. *Adfunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUKE01*. The type species for the genus is *Candidatus* Adfunida almucatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adfunida effunastra sp. nov.

Candidatus Adfunida effunastra (NL. fem. n. *effunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUKE01 sp003550425*. The type genome for the species is the GenBank assembly GCA_003550425.1. The GC content of the type genome is 71.75 %

and the genome length is 2.92 Mbp.

Description of *Candidatus* Adfunosa ornititas sp. nov.

Candidatus Adfunosa ornititas (NL. fem. n. *ornititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDMM01 sp013001465*. The type genome for the species is the GenBank assembly GCA_013001465.1. The GC content of the type genome is 39.25 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Adfunosa gen. nov.

Candidatus Adfunosa (NL. fem. n. *Adfunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDMM01*. The type species for the genus is *Candidatus* Adfunosa ornititas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficidaceae.

Description of *Candidatus* Adgenana offiricula sp. nov.

Candidatus Adgenana offiricula (NL. fem. n. *offiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T33-2 sp002860205*. The type genome for the species is the GenBank assembly RS_GCF_002860205.1. The GC content of the type genome is 43.26 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Adgenana gen. nov.

Candidatus Adgenana (NL. fem. n. *Adgenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T33-2*. The type species for the genus is *Candidatus* Adgenana offiricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-18226*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Robigidaceae.

Description of *Candidatus* Adgenaria peropitudo sp. nov.

Candidatus Adgenaria peropitudo (NL. fem. n. *peropitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAP81b sp001295935*. The type genome for the species is the GenBank assembly RS_GCF_001295935.1. The GC content of the type genome is 68.49 % and the genome length is 3.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Adgenaria gen. nov.

Candidatus Adgenaria (NL. fem. n. *Adgenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAP81b*. The type species for the genus is *Candidatus* Adgenaria peropitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgenia crusmitudo sp. nov.

Candidatus Adgenia crusmitudo (NL. fem. n. *crusmitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *65-79 sp001896885*. The type genome for the species is the GenBank assembly GCA_001896885.1. The GC content of the type genome is 64.61 % and the genome length is 5.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Adgenia gen. nov.

Candidatus Adgenia (NL. fem. n. *Adgenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *65-79*. The type species for the genus is *Candidatus* Adgenia crusmitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgenida apposibra sp. nov.

Candidatus Adgenida apposibra (NL. fem. n. *apposibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GW-Firmicutes-8 sp002840165*. The type genome for the species is the GenBank assembly GCA_002840165.1. The GC content of the type genome is 45.88 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adgenida gen. nov.

Candidatus Adgenida (NL. fem. n. *Adgenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GW-Firmicutes-8*. The type species for the genus is *Candidatus* Adgenida apposibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefanaceae.

Description of *Candidatus* Adgenosa parocibra sp. nov.

Candidatus Adgenosa parocibra (NL. fem. n. *parocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13423 sp902788865*. The type genome for the species is the GenBank assembly GCA_902788865.1. The GC content of the type genome is 48.3 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Adgenosa gen. nov.

Candidatus Adgenosa (NL. fem. n. *Adgenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13423*. The type species for the genus is *Candidatus* Adgenosa parocibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgenula alembilega sp. nov.

Candidatus Adgenula alembilega (NL. fem. n. *alembilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5489 sp002424095*. The type genome for the species is the GenBank assembly GCA_002424095.1. The GC content of the type genome is 30.85 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Adgenula gen. nov.

Candidatus Adgenula (NL. fem. n. *Adgenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5489*. The type species for the genus is *Candidatus* Adgenula alembilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Adgesella navifitica sp. nov.

Candidatus Adgesella navifitica (NL. fem. n. *navifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUX01 sp013044185*. The type genome for the species is the GenBank assembly GCA_013044185.1. The GC content of the type genome is 62.45 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Adgesella gen. nov.

Candidatus Adgesella (NL. fem. n. *Adgesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEUX01*. The type species for the genus is *Candidatus* Adgesella navifitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgesella semibousia sp. nov.

Candidatus Adgesella semibousia (NL. fem. n. *semibousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUX01 sp013043945*. The type genome for the species is the GenBank assembly GCA_013043945.1. The GC content of the type genome is 62.54 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adgesula inpuditas sp. nov.

Candidatus Adgesula inpuditas (NL. fem. n. *inpuditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-230 sp002085085*. The type genome for the species is the GenBank assembly GCA_002085085.1. The GC content of the type genome is 44.23 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Adgesula gen. nov.

Candidatus Adgesula (NL. fem. n. *Adgesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-230*. The type species for the genus is *Candidatus* Adgesula inpuditas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgubana catagatica sp. nov.

Candidatus Adgubana catagatica (NL. fem. n. *catagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2283 sp002345725*. The type genome for the species is the GenBank assembly GCA_002345725.1. The GC content of the type genome is 38.97 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Adgubana gen. nov.

Candidatus Adgubana (NL. fem. n. *Adgubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA2283*. The type species for the genus is *Candidatus* Adgubana catagatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Adgubana indivitica sp. nov.

Candidatus Adgubana indivitica (NL. fem. n. *indivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2283 sp903825325*. The type genome for the species is the GenBank assembly GCA_903825325.1. The GC content of the type genome is 39.3 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Adgubaria exceretta sp. nov.

Candidatus Adgubaria exceretta (NL. fem. n. *exceretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60014 sp003576685*. The type genome for the species is the GenBank assembly RS_GCF_003576685.1. The GC content of the type genome is 65.08 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Adgubaria gen. nov.

Candidatus Adgubaria (NL. fem. n. *Adgubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYSU-D60014*. The type species for the genus is *Candidatus* Adgubaria exceretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgubella adfanax sp. nov.

Candidatus Adgubella adfanax (NL. fem. n. *adfanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RHKK01 sp008363075*. The type genome for the species is the GenBank assembly GCA_008363075.1. The GC content of the type genome is 59.96 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Adgubella gen. nov.

Candidatus Adgubella (NL. fem. n. *Adgubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHKK01*. The type species for the genus is *Candidatus* Adgubella adfanax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Adgubida abligicula sp. nov.

Candidatus Adgubida abligicula (NL. fem. n. *abligicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPL01 sp012838385*. The type genome for the species is the GenBank assembly GCA_012838385.1. The GC content of the type genome is 40.09 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Adgubida gen. nov.

Candidatus Adgubida (NL. fem. n. *Adgubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPL01*. The type species for the genus is *Candidatus* Adgubida abligicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifulaceae.

Description of *Candidatus* Adgubida bisulivita sp. nov.

Candidatus Adgubida bisulivita (NL. fem. n. *bisulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPL01 sp012522035*. The type genome for the species is the GenBank assembly GCA_012522035.1. The GC content of the type genome is 40.61 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Adgubula armipedo sp. nov.

Candidatus Adgubula armipedo (NL. fem. n. *armipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1447 sp002329225*. The type genome for the species is the GenBank assembly GCA_002329225.1. The GC content of the type genome is 46.42 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Adgubula gen. nov.

Candidatus Adgubula (NL. fem. n. *Adgubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1447*. The type species for the genus is *Candidatus* Adgubula armipedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adgubula homogatica sp. nov.

Candidatus Adgubula homogatica (NL. fem. n. *homogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1447 sp012524025*. The type genome for the species is the GenBank assembly GCA_012524025.1. The GC content of the type genome is 45.01 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Adgubula monocigena sp. nov.

Candidatus Adgubula monocigena (NL. fem. n. *monocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1447 sp012728445*. The type genome for the species is the GenBank assembly GCA_012728445.1. The GC content of the type genome is 46.09 %

and the genome length is 2.41 Mbp.

Description of *Candidatus* Adgubula vicecax sp. nov.

Candidatus Adgubula vicecax (NL. fem. n. *vicecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1447 sp002069695*. The type genome for the species is the GenBank assembly GCA_002069695.1. The GC content of the type genome is 57.29 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adhaeribacter assudicella sp. nov.

Candidatus Adhaeribacter assudicella (NL. fem. n. *assudicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Adhaeribacter sp014075995*. The type genome for the species is the GenBank assembly RS_GCF_014075995.1. The GC content of the type genome is 40.78 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Adhaeribacter ineffibra sp. nov.

Candidatus Adhaeribacter ineffibra (NL. fem. n. *ineffibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Adhaeribacter sp003340495*. The type genome for the species is the GenBank assembly RS_GCF_003340495.1. The GC content of the type genome is 42.8 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Adhaeribacter nosocitas sp. nov.

Candidatus Adhaeribacter nosocitas (NL. fem. n. *nosocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Adhaeribacter sp008629685*. The type genome for the species is the GenBank assembly RS_GCF_008629685.1. The GC content of the type genome is 43.35 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Adhaeribacter turifivita sp. nov.

Candidatus Adhaeribacter turifivita (NL. fem. n. *turifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Adhaeribacter sp003023845*. The type genome for the species is the GenBank assembly RS_GCF_003023845.1. The GC content of the type genome is 41.99 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Adhinana patibitura sp. nov.

Candidatus Adhinana patibitura (NL. fem. n. *patibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FMMP01 sp900095725*. The type genome for the species is the GenBank assembly RS_GCF_900095725.1. The GC content of the type genome is 35.23 % and the genome length is 4.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Coal seam gas water treatment pond".

Description of *Candidatus* Adhinana gen. nov.

Candidatus Adhinana (NL. fem. n. *Adhinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FMMP01*. The type species for the genus is *Candidatus* Adhinana patibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhinaria depacitura sp. nov.

Candidatus Adhinaria depacitura (NL. fem. n. *depacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWPP01 sp003558625*. The type genome for the species is the GenBank assembly GCA_003558625.1. The GC content of the type genome is 48.16 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Adhinaria gen. nov.

Candidatus Adhinaria (NL. fem. n. *Adhinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWPP01*. The type species for the genus is *Candidatus* Adhinaria depacitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhinia fefelicella sp. nov.

Candidatus Adhinia fefelicella (NL. fem. n. *fefelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCUS01 sp013811715*. The type genome for the species is the GenBank assembly GCA_013811715.1. The GC content of the type genome is 68.84 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Adhinia gen. nov.

Candidatus Adhinia (NL. fem. n. *Adhinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCUS01*. The type species for the genus is *Candidatus* Adhinia fefelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhinida artopentia sp. nov.

Candidatus Adhinida artopentia (NL. fem. n. *artopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B46-G9 sp003646815*. The type genome for the species is the GenBank assembly GCA_003646815.1. The GC content of the type genome is 51.5 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Adhinida gen. nov.

Candidatus Adhinida (NL. fem. n. *Adhinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B46-G9*. The type species for the genus is *Candidatus* Adhinida

artopentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhinosa acistedo sp. nov.

Candidatus Adhinosa acistedo (NL. fem. n. *acistedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGX01 sp011047885*. The type genome for the species is the GenBank assembly GCA_011047885.1. The GC content of the type genome is 45.16 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Adhinosa gen. nov.

Candidatus Adhinosa (NL. fem. n. *Adhinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGX01*. The type species for the genus is *Candidatus* Adhinosa acistedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponidaceae.

Description of *Candidatus* Adhinosa immacatica sp. nov.

Candidatus Adhinosa immacatica (NL. fem. n. *immacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGX01 sp011334825*. The type genome for the species is the GenBank assembly GCA_011334825.1. The GC content of the type genome is 45.69 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Adhorana insinugo sp. nov.

Candidatus Adhorana insinugo (NL. fem. n. *insinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMI01 sp012798895*. The type genome for the species is the

GenBank assembly GCA_012798895.1. The GC content of the type genome is 49.09 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Adhorana gen. nov.

Candidatus Adhorana (NL. fem. n. *Adhorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMI01*. The type species for the genus is *Candidatus* Adhorana insinugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Adhorana munifitrix sp. nov.

Candidatus Adhorana munifitrix (NL. fem. n. *munifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMI01 sp012518675*. The type genome for the species is the GenBank assembly GCA_012518675.1. The GC content of the type genome is 47.85 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Adhoraria dimacivita sp. nov.

Candidatus Adhoraria dimacivita (NL. fem. n. *dimacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXL01 sp004356385*. The type genome for the species is the GenBank assembly GCA_004356385.1. The GC content of the type genome is 51.58 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Adhoraria gen. nov.

Candidatus Adhoraria (NL. fem. n. *Adhoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXL01*. The type species for the genus is *Candidatus* Adhoraria dimacivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA10348. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Adhorella adrotilega sp. nov.

Candidatus Adhorella adrotilega (NL. fem. n. *adrotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA685 sp011524995*. The type genome for the species is the GenBank assembly GCA_011524995.1. The GC content of the type genome is 49.45 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Adhorella gen. nov.

Candidatus Adhorella (NL. fem. n. *Adhorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA685*. The type species for the genus is *Candidatus* Adhorella adrotilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhorella cululibra sp. nov.

Candidatus Adhorella cululibra (NL. fem. n. *cululibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA685 sp011525265*. The type genome for the species is the GenBank assembly GCA_011525265.1. The GC content of the type genome is 47.0 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Adhorella daducilega sp. nov.

Candidatus Adhorella daducilega (NL. fem. n. *daducilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA685 sp002299005*. The type genome for the species is the GenBank assembly GCA_002299005.1. The GC content of the type genome is 49.64 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Adhorella obtecicella sp. nov.

Candidatus Adhorella obtecicella (NL. fem. n. *obtecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA685 sp011526395*. The type genome for the species is the GenBank assembly GCA_011526395.1. The GC content of the type genome is 45.78 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Adhoria adsulitica sp. nov.

Candidatus Adhoria adsulitica (NL. fem. n. *adsulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRI01 sp003175935*. The type genome for the species is the GenBank assembly GCA_003175935.1. The GC content of the type genome is 39.62 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Adhoria gen. nov.

Candidatus Adhoria (NL. fem. n. *Adhoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRI01*. The type species for the genus is *Candidatus* Adhoria adsulitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhorida odontimonas sp. nov.

Candidatus Adhorida odontimonas (NL. fem. n. *odontimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-19 sp003599855*. The type genome for the species is the GenBank assembly GCA_003599855.1. The GC content of the type genome is 62.85 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Adhorida gen. nov.

Candidatus Adhorida (NL. fem. n. *Adhorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-19*. The type species for the genus is *Candidatus* Adhorida odontimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3ABIN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negidariaceae.

Description of *Candidatus* Adhorosa enharitio sp. nov.

Candidatus Adhorosa enharitio (NL. fem. n. *enharitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFE01 sp012735405*. The type genome for the species is the GenBank assembly GCA_012735405.1. The GC content of the type genome is 33.67 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Adhorosa gen. nov.

Candidatus Adhorosa (NL. fem. n. *Adhorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFE01*. The type species for the genus is *Candidatus* Adhorosa enharitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adhorosa hecatifica sp. nov.

Candidatus Adhorosa hecatifica (NL. fem. n. *hecatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFE01 sp012728365*. The type genome for the species is the GenBank assembly GCA_012728365.1. The GC content of the type genome is 33.92 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Adhorula benepilenta sp. nov.

Candidatus Adhorula benepilenta (NL. fem. n. *benepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACORA01 sp902629495*. The type genome for the species is the GenBank assembly RS_GCF_902629495.1. The GC content of the type genome is 48.2 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Adhorula gen. nov.

Candidatus Adhorula (NL. fem. n. *Adhorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACORA01*. The type species for the genus is *Candidatus* Adhorula benepilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Adhosana amfitessa sp. nov.

Candidatus Adhosana amfitessa (NL. fem. n. *amfitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKU01 sp009885415*. The type genome for the species is the GenBank assembly GCA_009885415.1. The GC content of the type genome is 62.91 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Adhosana gen. nov.

Candidatus Adhosana (NL. fem. n. *Adhosana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKU01*. The type species for the genus is *Candidatus* Adhosana amfitessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepulaceae.

Description of *Candidatus* Adhosaria ineffisca sp. nov.

Candidatus Adhosaria ineffisca (NL. fem. n. *ineffisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1994 sp900553945*. The type genome for the species is the GenBank assembly GCA_900553945.1. The GC content of the type genome is 28.66 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Adhosaria gen. nov.

Candidatus Adhosaria (NL. fem. n. *Adhosaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1994*. The type species for the genus is *Candidatus* Adhosaria ineffisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Adhosaria peribifica sp. nov.

Candidatus Adhosaria peribifica (NL. fem. n. *peribifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1994 sp900556975*. The type genome for the species is the GenBank assembly GCA_900556975.1. The GC content of the type genome is 28.8 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Adhosella edulcedo sp. nov.

Candidatus Adhosella edulcedo (NL. fem. n. *edulcedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732015 sp002732015*. The type genome for the species is the GenBank assembly GCA_002732015.1. The GC content of the type genome is 29.25 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Adhosella gen. nov.

Candidatus Adhosella (NL. fem. n. *Adhosella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2732015*. The type species for the genus is *Candidatus* Adhosella edulcedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Adhosella immigisca sp. nov.

Candidatus Adhosella immigisca (NL. fem. n. *immigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732015 sp902557845*. The type genome for the species is the GenBank assembly RS_GCF_902557845.1. The GC content of the type genome is 29.07 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Adhosella resacibra sp. nov.

Candidatus Adhosella resacibra (NL. fem. n. *resacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732015 sp002171495*. The type genome for the species is the GenBank assembly GCA_002171495.2. The GC content of the type genome is 29.26 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Adhosida benevitica sp. nov.

Candidatus Adhosida benevitica (NL. fem. n. *benevitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11130 sp902766115*. The type genome for the species is the GenBank assembly GCA_902766115.1. The GC content of the type genome is 56.61 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Adhosida gen. nov.

Candidatus Adhosida (NL. fem. n. *Adhosida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RUG11130*. The type species for the genus is *Candidatus* Adhosida benevitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Adhososa adlapastra sp. nov.

Candidatus Adhososa adlapastra (NL. fem. n. *adlapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACXEY01 sp902766695*. The type genome for the species is the GenBank assembly GCA_902766695.1. The GC content of the type genome is 67.53 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Adhososa gen. nov.

Candidatus Adhososa (NL. fem. n. *Adhososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACXEY01*. The type species for the genus is *Candidatus* Adhososa adlapastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Lenti-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacariaceae.

Description of *Candidatus* Adinvella nicotitura sp. nov.

Candidatus Adinvella nicotitura (NL. fem. n. *nicotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBN01 sp013288625*. The type genome for the species is the GenBank assembly GCA_013288625.1. The GC content of the type genome is 40.91 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Adinvella gen. nov.

Candidatus Adinvella (NL. fem. n. *Adinvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBN01*. The type species for the genus is *Candidatus* Adinvella nicotitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adinvida inrefifica sp. nov.

Candidatus Adinvida inrefifica (NL. fem. n. *inrefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9296 sp003518125*. The type genome for the species is the GenBank assembly GCA_003518125.1. The GC content of the type genome is 33.62 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Adinvida gen. nov.

Candidatus Adinvida (NL. fem. n. *Adinvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9296*. The type species for the genus is *Candidatus* Adinvida inrefifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Adinvula colopiforma sp. nov.

Candidatus Adinvula colopiforma (NL. fem. n. *colopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBG01 sp012513915*. The type genome for the species is the GenBank assembly GCA_012513915.1. The GC content of the type genome is 40.33 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Adinvula gen. nov.

Candidatus Adinvula (NL. fem. n. *Adinvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAZBG01*. The type species for the genus is *Candidatus* Adinvula colopiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlacana insenimonas sp. nov.

Candidatus Adlacana insenimonas (NL. fem. n. *insenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQH01 sp007131555*. The type genome for the species is the GenBank assembly GCA_007131555.1. The GC content of the type genome is 63.92 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Adlacana gen. nov.

Candidatus Adlacana (NL. fem. n. *Adlacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLQH01*. The type species for the genus is *Candidatus* Adlacana insenimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Adlacella hirudifica sp. nov.

Candidatus Adlacella hirudifica (NL. fem. n. *hirudifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUUD01 sp012031655*. The type genome for the species is the GenBank assembly GCA_012031655.1. The GC content of the type genome is 61.23 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Adlacella gen. nov.

Candidatus Adlacella (NL. fem. n. *Adlacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUUD01*. The type species for the genus is *Candidatus* Adlacella

hirudifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J027*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemellaceae.

Description of *Candidatus* Adlacia intabitio sp. nov.

Candidatus Adlacia intabitio (NL. fem. n. *intabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGJ01 sp012727745*. The type genome for the species is the GenBank assembly GCA_012727745.1. The GC content of the type genome is 49.49 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Adlacia gen. nov.

Candidatus Adlacia (NL. fem. n. *Adlacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGJ01*. The type species for the genus is *Candidatus* Adlacia intabitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlacida subabilega sp. nov.

Candidatus Adlacida subabilega (NL. fem. n. *subabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWJF01 sp009391835*. The type genome for the species is the GenBank assembly GCA_009391835.1. The GC content of the type genome is 56.56 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Adlacida gen. nov.

Candidatus Adlacida (NL. fem. n. *Adlacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QWJF01*. The type species for the genus is *Candidatus* Adlacida subabilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabosaceae.

Description of *Candidatus* Adlacula smegmetta sp. nov.

Candidatus Adlacula smegmetta (NL. fem. n. *smegmetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002731945 sp002731945*. The type genome for the species is the GenBank assembly GCA_002731945.1. The GC content of the type genome is 35.06 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Adlacula gen. nov.

Candidatus Adlacula (NL. fem. n. *Adlacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002731945*. The type species for the genus is *Candidatus* Adlacula smegmetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipiaceae.

Description of *Candidatus* Adlapana mahelitio sp. nov.

Candidatus Adlapana mahelitio (NL. fem. n. *mahelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3871 sp002392265*. The type genome for the species is the GenBank assembly GCA_002392265.1. The GC content of the type genome is 47.74 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Adlapana gen. nov.

Candidatus Adlapana (NL. fem. n. *Adlapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3871*. The type species for the genus is *Candidatus* Adlapana

mahelitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlapella regifibra sp. nov.

Candidatus Adlapella regifibra (NL. fem. n. *regifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFJ01 sp012728295*. The type genome for the species is the GenBank assembly GCA_012728295.1. The GC content of the type genome is 36.31 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Adlapella gen. nov.

Candidatus Adlapella (NL. fem. n. *Adlapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFJ01*. The type species for the genus is *Candidatus* Adlapella regifibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlapia insubitas sp. nov.

Candidatus Adlapia insubitas (NL. fem. n. *insubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch10 sp013178295*. The type genome for the species is the GenBank assembly GCA_013178295.1. The GC content of the type genome is 52.95 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Adlapia gen. nov.

Candidatus Adlapia (NL. fem. n. *Adlapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch10*. The type species for the genus is *Candidatus* Adlapia insubitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlapida adtacimonia sp. nov.

Candidatus Adlapida adtacimonia (NL. fem. n. *adtacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686595 sp002686595*. The type genome for the species is the GenBank assembly GCA_002686595.1. The GC content of the type genome is 65.58 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Adlapida gen. nov.

Candidatus Adlapida (NL. fem. n. *Adlapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686595*. The type species for the genus is *Candidatus* Adlapida adtacimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Adlaposa resupitudo sp. nov.

Candidatus Adlaposa resupitudo (NL. fem. n. *resupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZR01 sp013695855*. The type genome for the species is the GenBank assembly GCA_013695855.1. The GC content of the type genome is 70.84 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Adlaposa gen. nov.

Candidatus Adlaposa (NL. fem. n. *Adlaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZR01*. The type species for the genus is *Candidatus* Adlaposa resupitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlapula omnivastra sp. nov.

Candidatus Adlapula omnivastra (NL. fem. n. *omnivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXM01 sp013697005*. The type genome for the species is the GenBank assembly GCA_013697005.1. The GC content of the type genome is 64.38 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Adlapula gen. nov.

Candidatus Adlapula (NL. fem. n. *Adlapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXM01*. The type species for the genus is *Candidatus* Adlapula omnivastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Adlecaria ampenilenta sp. nov.

Candidatus Adlecaria ampenilenta (NL. fem. n. *ampenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA935 sp009777715*. The type genome for the species is the GenBank assembly GCA_009777715.1. The GC content of the type genome is 42.85 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Adlecaria gen. nov.

Candidatus Adlecaria (NL. fem. n. *Adlecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA935*. The type species for the genus is *Candidatus* Adlecaria ampenilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlecaria attolastra sp. nov.

Candidatus Adlecaria attolastra (NL. fem. n. *attolastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA935 sp009787745*. The type genome for the species is the GenBank assembly GCA_009787745.1. The GC content of the type genome is 40.87 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Adlecaria benevedo sp. nov.

Candidatus Adlecaria benevedo (NL. fem. n. *benevedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA935 sp002293525*. The type genome for the species is the GenBank assembly GCA_002293525.1. The GC content of the type genome is 46.29 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Adlecaria colepitas sp. nov.

Candidatus Adlecaria colepitas (NL. fem. n. *colepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA935 sp009780115*. The type genome for the species is the GenBank assembly GCA_009780115.1. The GC content of the type genome is 40.39 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Adlecaria ecligentia sp. nov.

Candidatus Adlecaria ecligentia (NL. fem. n. *ecligentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA935 sp002293475*. The type genome for the species is the GenBank assembly GCA_002293475.1. The GC content of the type genome is 47.04 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Adlecella cotenitura sp. nov.

Candidatus Adlecella cotenitura (NL. fem. n. *cotenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPBQ01 sp004525875*. The type genome for the species is the GenBank assembly GCA_004525875.1. The GC content of the type genome is 66.2 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Adlecella gen. nov.

Candidatus Adlecella (NL. fem. n. *Adlecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPBQ01*. The type species for the genus is *Candidatus* Adlecella cotenitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuculaceae.

Description of *Candidatus* Adlecia denupiforma sp. nov.

Candidatus Adlecia denupiforma (NL. fem. n. *denupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14300 sp902797685*. The type genome for the species is the GenBank assembly GCA_902797685.1. The GC content of the type genome is 54.09 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Adlecia gen. nov.

Candidatus Adlecia (NL. fem. n. *Adlecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14300*. The type species for the genus is *Candidatus* Adlecia denupiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-1252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenunulaceae.

Description of *Candidatus* Adlecida genufitoga sp. nov.

Candidatus Adlecida genufitoga (NL. fem. n. *genufitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDC01 sp002070355*. The type genome for the species is the GenBank assembly GCA_002070355.1. The GC content of the type genome is 32.79 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Adlecida gen. nov.

Candidatus Adlecida (NL. fem. n. *Adlecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDC01*. The type species for the genus is *Candidatus* Adlecida genufitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6264*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotulaceae.

Description of *Candidatus* Adlecosa lubenibra sp. nov.

Candidatus Adlecosa lubenibra (NL. fem. n. *lubenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA647 sp002299555*. The type genome for the species is the GenBank assembly GCA_002299555.1. The GC content of the type genome is 37.77 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adlecosa gen. nov.

Candidatus Adlecosa (NL. fem. n. *Adlecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA647*. The type species for the genus is *Candidatus* Adlecosa lubenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucosaceae.

Description of *Candidatus* Adlecula telefastra sp. nov.

Candidatus Adlecula telefastra (NL. fem. n. *telefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUML01 sp012839895*. The type genome for the species is the GenBank assembly GCA_012839895.1. The GC content of the type genome is 42.22 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Adlecula gen. nov.

Candidatus Adlecula (NL. fem. n. *Adlecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUML01*. The type species for the genus is *Candidatus* Adlecula telefastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlenana allubicula sp. nov.

Candidatus Adlenana allubicula (NL. fem. n. *allubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5796 sp002418215*. The type genome for the species is the GenBank assembly GCA_002418215.1. The GC content of the type genome is 59.22 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Adlenana gen. nov.

Candidatus Adlenana (NL. fem. n. *Adlenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5796*. The type species for the genus is *Candidatus* Adlenana allubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Adlenaria affabessa sp. nov.

Candidatus Adlenaria affabessa (NL. fem. n. *affabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFYP01 sp011526365*. The type genome for the species is the GenBank assembly GCA_011526365.1. The GC content of the type genome is 42.86 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Adlenaria gen. nov.

Candidatus Adlenaria (NL. fem. n. *Adlenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFYP01*. The type species for the genus is *Candidatus* Adlenaria affabessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlenaria melilousia sp. nov.

Candidatus Adlenaria melilousia (NL. fem. n. *melilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFYP01 sp009921175*. The type genome for the species is the GenBank assembly GCA_009921175.1. The GC content of the type genome is 45.36 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Adlenosa repudibula sp. nov.

Candidatus Adlenosa repudibula (NL. fem. n. *repudibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-243 sp003135055*. The type genome for the species is the GenBank assembly GCA_003135055.1. The GC content of the type genome is 60.94 % and the genome length is 10.71 Mbp.

Description of *Candidatus* Adlenosa gen. nov.

Candidatus Adlenosa (NL. fem. n. *Adlenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-243*. The type species for the genus is *Candidatus* Adlenosa repudibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlenula colapilenta sp. nov.

Candidatus Adlenula colapilenta (NL. fem. n. *colapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPG01 sp012838425*. The type genome for the species is the GenBank assembly GCA_012838425.1. The GC content of the type genome is 44.67 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Adlenula gen. nov.

Candidatus Adlenula (NL. fem. n. *Adlenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPG01*. The type species for the genus is *Candidatus* Adlenula colapilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Adlenula pinigatica sp. nov.

Candidatus Adlenula pinigatica (NL. fem. n. *pinigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPG01 sp012511925*. The type genome for the species is the GenBank assembly GCA_012511925.1. The GC content of the type genome is 41.13 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Adlicana vilitigena sp. nov.

Candidatus Adlicana vilitigena (NL. fem. n. *vilitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMDH01 sp008080945*. The type genome for the species is the GenBank assembly GCA_008080945.1. The GC content of the type genome is 37.43 %

and the genome length is 0.89 Mbp.

Description of *Candidatus* Adlicana gen. nov.

Candidatus Adlicana (NL. fem. n. *Adlicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMDH01*. The type species for the genus is *Candidatus* Adlicana vilitigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Adlicaria rosacatio sp. nov.

Candidatus Adlicaria rosacatio (NL. fem. n. *rosacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKSR01 sp007122885*. The type genome for the species is the GenBank assembly GCA_007122885.1. The GC content of the type genome is 67.23 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Adlicaria gen. nov.

Candidatus Adlicaria (NL. fem. n. *Adlicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKSR01*. The type species for the genus is *Candidatus* Adlicaria rosacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Adlicella innupugo sp. nov.

Candidatus Adlicella innupugo (NL. fem. n. *innupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGO01 sp012727685*. The type genome for the species is the

GenBank assembly GCA_012727685.1. The GC content of the type genome is 54.85 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Adlicella gen. nov.

Candidatus Adlicella (NL. fem. n. *Adlicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGO01*. The type species for the genus is *Candidatus* Adlicella innupugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Adlicia artifago sp. nov.

Candidatus Adlicia artifago (NL. fem. n. *artifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5356 sp002407935*. The type genome for the species is the GenBank assembly GCA_002407935.1. The GC content of the type genome is 41.32 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Adlicia gen. nov.

Candidatus Adlicia (NL. fem. n. *Adlicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5356*. The type species for the genus is *Candidatus* Adlicia artifago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taraxidaceae.

Description of *Candidatus* Adlicida apsocisca sp. nov.

Candidatus Adlicida apsocisca (NL. fem. n. *apsocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYNV01 sp012520645*. The type genome for the species is the GenBank assembly GCA_012520645.1. The GC content of the type genome is 44.07 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Adlicida gen. nov.

Candidatus Adlicida (NL. fem. n. *Adlicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNV01*. The type species for the genus is *Candidatus* Adlicida apsocisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlicosa refinatio sp. nov.

Candidatus Adlicosa refinatio (NL. fem. n. *refinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707205 sp002707205*. The type genome for the species is the GenBank assembly GCA_002707205.1. The GC content of the type genome is 35.19 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Adlicosa gen. nov.

Candidatus Adlicosa (NL. fem. n. *Adlicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707205*. The type species for the genus is *Candidatus* Adlicosa refinatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenellaceae.

Description of *Candidatus* Adlocaria prospitudo sp. nov.

Candidatus Adlocaria prospitudo (NL. fem. n. *prospitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCD01 sp013359265*. The type genome for the species is the

GenBank assembly GCA_013359265.1. The GC content of the type genome is 60.13 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Adlocaria gen. nov.

Candidatus Adlocaria (NL. fem. n. *Adlocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCD01*. The type species for the genus is *Candidatus* Adlocaria prospitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Adlocella retunatio sp. nov.

Candidatus Adlocella retunatio (NL. fem. n. *retunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWL01 sp902806405*. The type genome for the species is the GenBank assembly GCA_902806405.1. The GC content of the type genome is 71.85 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Adlocella gen. nov.

Candidatus Adlocella (NL. fem. n. *Adlocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWL01*. The type species for the genus is *Candidatus* Adlocella retunatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Adlocida adfabimonas sp. nov.

Candidatus Adlocida adfabimonas (NL. fem. n. *adfabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Spiro-01 sp001604265*. The type genome for the species is the GenBank assembly GCA_001604265.1. The GC content of the type genome is 50.94 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Adlocida gen. nov.

Candidatus Adlocida (NL. fem. n. *Adlocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Spiro-01*. The type species for the genus is *Candidatus* Adlocida adfabimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlocida adtorisca sp. nov.

Candidatus Adlocida adtorisca (NL. fem. n. *adtorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-01 sp900769955*. The type genome for the species is the GenBank assembly RS_GCF_900769955.1. The GC content of the type genome is 48.94 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Adlocida sicubatica sp. nov.

Candidatus Adlocida sicubatica (NL. fem. n. *sicubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-01 sp009695635*. The type genome for the species is the GenBank assembly RS_GCF_009695635.1. The GC content of the type genome is 35.8 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Adlocosa adpinitoga sp. nov.

Candidatus Adlocosa adpinitoga (NL. fem. n. *adpinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41T-STBD-0c-01a sp002009425*. The type genome for the species is

the GenBank assembly RS_GCF_002009425.1. The GC content of the type genome is 60.08 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Adlocosa gen. nov.

Candidatus Adlocosa (NL. fem. n. *Adlocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *41T-STBD-0c-01a*. The type species for the genus is *Candidatus* Adlocosa adpinitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlocula sugiligena sp. nov.

Candidatus Adlocula sugiligena (NL. fem. n. *sugiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA993 sp002292015*. The type genome for the species is the GenBank assembly GCA_002292015.1. The GC content of the type genome is 49.74 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Adlocula gen. nov.

Candidatus Adlocula (NL. fem. n. *Adlocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA993*. The type species for the genus is *Candidatus* Adlocula sugiligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Adlubana effaritas sp. nov.

Candidatus Adlubana effaritas (NL. fem. n. *effaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-J16 sp003215655*. The type genome for the species is the GenBank assembly GCA_003215655.1. The GC content of the type genome is 40.2 %

and the genome length is 1.84 Mbp.

Description of *Candidatus* Adlubana gen. nov.

Candidatus Adlubana (NL. fem. n. *Adlubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-J16*. The type species for the genus is *Candidatus* Adlubana effaritas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlubella antevedo sp. nov.

Candidatus Adlubella antevedo (NL. fem. n. *antevedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-188 sp003169715*. The type genome for the species is the GenBank assembly GCA_003169715.1. The GC content of the type genome is 53.83 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Adlubella gen. nov.

Candidatus Adlubella (NL. fem. n. *Adlubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-188*. The type species for the genus is *Candidatus* Adlubella antevedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adlubia monoditudo sp. nov.

Candidatus Adlubia monoditudo (NL. fem. n. *monoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CCA-013414725 sp013414725*. The type genome for the species is the GenBank assembly GCA_013414725.1. The GC content of the type genome is 40.56 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adlubia gen. nov.

Candidatus Adlubia (NL. fem. n. *Adlubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CCA-013414725*. The type species for the genus is *Candidatus* Adlubia monoditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solipanaceae.

Description of *Candidatus* Adlubida adtesessa sp. nov.

Candidatus Adlubida adtesessa (NL. fem. n. *adtesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCHM01 sp903970255*. The type genome for the species is the GenBank assembly GCA_903970255.1. The GC content of the type genome is 43.05 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Adlubida gen. nov.

Candidatus Adlubida (NL. fem. n. *Adlubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCHM01*. The type species for the genus is *Candidatus* Adlubida adtesessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adluvana conipigena sp. nov.

Candidatus Adluvana conipigena (NL. fem. n. *conipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-62-58 sp001772005*. The type genome for the species is the GenBank assembly GCA_001772005.1. The GC content of the type genome is 61.83 % and the genome length is 5.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Adluvana gen. nov.

Candidatus Adluvana (NL. fem. n. *Adluvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-62-58*. The type species for the genus is *Candidatus* Adluvana conipigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Adluvana pomifibra sp. nov.

Candidatus Adluvana pomifibra (NL. fem. n. *pomifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-62-58 sp001771985*. The type genome for the species is the GenBank assembly GCA_001771985.1. The GC content of the type genome is 61.74 % and the genome length is 5.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Adluvaria impugibula sp. nov.

Candidatus Adluvaria impugibula (NL. fem. n. *impugibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOS01 sp011055765*. The type genome for the species is the GenBank assembly GCA_011055765.1. The GC content of the type genome is 58.34 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Adluvaria gen. nov.

Candidatus Adluvaria (NL. fem. n. *Adluvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOS01*. The type species for the genus is *Candidatus* Adluvaria impugibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Habacidaceae.

Description of *Candidatus* Adluvella lucelitio sp. nov.

Candidatus Adluvella lucelitio (NL. fem. n. *lucelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ANT-B6 sp001683905*. The type genome for the species is the GenBank assembly GCA_001683905.1. The GC content of the type genome is 41.56 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Antarctic Hypolithon".

Description of *Candidatus* Adluvella gen. nov.

Candidatus Adluvella (NL. fem. n. *Adluvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ANT-B6*. The type species for the genus is *Candidatus* Adluvella lucelitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adluvida hexagilenta sp. nov.

Candidatus Adluvida hexagilenta (NL. fem. n. *hexagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRHE01 sp011049745*. The type genome for the species is the GenBank assembly GCA_011049745.1. The GC content of the type genome is 46.41 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Adluvida gen. nov.

Candidatus Adluvida (NL. fem. n. *Adluvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRHE01*. The type species for the genus is *Candidatus* Adluvida hexagilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Volucanaceae.

Description of *Candidatus* Adluvosa appicitrix sp. nov.

Candidatus Adluvosa appicitrix (NL. fem. n. *appicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA1 sp002919305*. The type genome for the species is the GenBank assembly GCA_002919305.1. The GC content of the type genome is 66.14 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Adluvosa gen. nov.

Candidatus Adluvosa (NL. fem. n. *Adluvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA1*. The type species for the genus is *Candidatus* Adluvosa appicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admigana maledifica sp. nov.

Candidatus Admigana maledifica (NL. fem. n. *maledifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-109 sp003563385*. The type genome for the species is the GenBank assembly GCA_003563385.1. The GC content of the type genome is 52.65 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Admigana gen. nov.

Candidatus Admigana (NL. fem. n. *Admigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED11-109*. The type species for the genus is *Candidatus* Admigana maledifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Admigaria apsuricula sp. nov.

Candidatus Admigaria apsuricula (NL. fem. n. *apsuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUPU01 sp012032975*. The type genome for the species is the GenBank assembly GCA_012032975.1. The GC content of the type genome is 59.63 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Admigaria gen. nov.

Candidatus Admigaria (NL. fem. n. *Admigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUPU01*. The type species for the genus is *Candidatus* Admigaria apsuricula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admigella ablepetta sp. nov.

Candidatus Admigella ablepetta (NL. fem. n. *ablepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCE01 sp013359235*. The type genome for the species is the GenBank assembly GCA_013359235.1. The GC content of the type genome is 31.63 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Admigella gen. nov.

Candidatus Admigella (NL. fem. n. *Admigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCE01*. The type species for the genus is *Candidatus* Admigella ablepetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Admigia allobedo sp. nov.

Candidatus Admigia allobedo (NL. fem. n. *allobedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1901 sp900556135*. The type genome for the species is the GenBank assembly GCA_900556135.1. The GC content of the type genome is 29.3 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Admigia gen. nov.

Candidatus Admigia (NL. fem. n. *Admigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1901*. The type species for the genus is *Candidatus* Admigia allobedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Admigia inconivita sp. nov.

Candidatus Admigia inconivita (NL. fem. n. *inconivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1901 sp900553755*. The type genome for the species is the GenBank assembly GCA_900553755.1. The GC content of the type genome is 28.83 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Admigida pulegax sp. nov.

Candidatus Admigida pulegax (NL. fem. n. *pulegax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWE01 sp902806325*. The type genome for the species is the GenBank assembly GCA_902806325.1. The GC content of the type genome is 70.84 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Admigida gen. nov.

Candidatus Admigida (NL. fem. n. *Admigida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWE01*. The type species for the genus is *Candidatus* Admigida pulegax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Admodana resaledo sp. nov.

Candidatus Admodana resaledo (NL. fem. n. *resaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVE01 sp011368475*. The type genome for the species is the GenBank assembly GCA_011368475.1. The GC content of the type genome is 63.21 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Admodana gen. nov.

Candidatus Admodana (NL. fem. n. *Admodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVE01*. The type species for the genus is *Candidatus* Admodana resaledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAK82*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagidaceae.

Description of *Candidatus* Admodaria indepitio sp. nov.

Candidatus Admodaria indepitio (NL. fem. n. *indepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA918 sp002293845*. The type genome for the species is the GenBank assembly GCA_002293845.1. The GC content of the type genome is 52.4 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Admodaria gen. nov.

Candidatus Admodaria (NL. fem. n. *Admodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA918*. The type species for the genus is *Candidatus* Admodaria indepitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Admodaria lenunibula sp. nov.

Candidatus Admodaria lenunibula (NL. fem. n. *lenunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA918 sp002422025*. The type genome for the species is the GenBank assembly GCA_002422025.1. The GC content of the type genome is 43.76 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Admodaria lubenitudo sp. nov.

Candidatus Admodaria lubenitudo (NL. fem. n. *lubenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA918 sp001779595*. The type genome for the species is the GenBank assembly GCA_001779595.1. The GC content of the type genome is 45.95 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Admodaria nitelentia sp. nov.

Candidatus Admodaria nitelentia (NL. fem. n. *nitelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA918 sp001783525*. The type genome for the species is the GenBank assembly GCA_001783525.1. The GC content of the type genome is 46.6 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Admodella ammoditas sp. nov.

Candidatus Admodella ammoditas (NL. fem. n. *ammoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-78 sp003553505*. The type genome for the species is the GenBank assembly GCA_003553505.1. The GC content of the type genome is 41.86 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Admodella gen. nov.

Candidatus Admodella (NL. fem. n. *Admodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-78*. The type species for the genus is *Candidatus* Admodella ammoditas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinidaceae.

Description of *Candidatus* Admodida pinifugo sp. nov.

Candidatus Admodida pinifugo (NL. fem. n. *pinifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICG01 sp009691525*. The type genome for the species is the GenBank assembly GCA_009691525.1. The GC content of the type genome is 64.05 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Admodida gen. nov.

Candidatus Admodida (NL. fem. n. *Admodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICG01*. The type species for the genus is *Candidatus* Admodida pinifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Admodosa denecitoga sp. nov.

Candidatus Admodosa denecitoga (NL. fem. n. *denecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTG01 sp012031785*. The type genome for the species is the GenBank assembly GCA_012031785.1. The GC content of the type genome is 39.17 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Admodosa gen. nov.

Candidatus Admodosa (NL. fem. n. *Admodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTG01*. The type species for the genus is *Candidatus* Admodosa denecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admorana famelousia sp. nov.

Candidatus Admorana famelousia (NL. fem. n. *famelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG24 sp003242685*. The type genome for the species is the GenBank assembly GCA_003242685.1. The GC content of the type genome is 67.82 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Admorana gen. nov.

Candidatus Admorana (NL. fem. n. *Admorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG24*. The type species for the genus is *Candidatus* Admorana famelousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admorella armigilenta sp. nov.

Candidatus Admorella armigilenta (NL. fem. n. *armigilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHZ01 sp012270625*. The type genome for the species is the GenBank assembly GCA_012270625.1. The GC content of the type genome is 59.14 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Admorella gen. nov.

Candidatus Admorella (NL. fem. n. *Admorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHZ01*. The type species for the genus is *Candidatus* Admorella armigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Admorida demigisca sp. nov.

Candidatus Admorida demigisca (NL. fem. n. *demigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7708 sp002482415*. The type genome for the species is the GenBank assembly GCA_002482415.1. The GC content of the type genome is 51.72 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Admorida gen. nov.

Candidatus Admorida (NL. fem. n. *Admorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7708*. The type species for the genus is *Candidatus* Admorida demigisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admulana cacomitas sp. nov.

Candidatus Admulana cacomitas (NL. fem. n. *cacomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNH01 sp007133195*. The type genome for the species is the GenBank assembly GCA_007133195.1. The GC content of the type genome is 68.73 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Admulana gen. nov.

Candidatus Admulana (NL. fem. n. *Admulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNH01*. The type species for the genus is *Candidatus* Admulana cacomitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admularia direcastra sp. nov.

Candidatus Admularia direcastra (NL. fem. n. *direcastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF1-45-5 sp001001795*. The type genome for the species is the GenBank assembly GCA_001001795.1. The GC content of the type genome is 45.59 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Admularia gen. nov.

Candidatus Admularia (NL. fem. n. *Admularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF1-45-5*. The type species for the genus is *Candidatus* Admularia direcastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admulella arrugimonas sp. nov.

Candidatus Admulella arrugimonas (NL. fem. n. *arrugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-539 sp011369955*. The type genome for the species is the GenBank assembly GCA_011369955.1. The GC content of the type genome is 67.0 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Admulella gen. nov.

Candidatus Admulella (NL. fem. n. *Admulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-539*. The type species for the genus is *Candidatus* Admulella arrugimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPLA1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumidaceae.

Description of *Candidatus* Admulia arnogigena sp. nov.

Candidatus Admulia arnogigena (NL. fem. n. *arnogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BH258 sp005870085*. The type genome for the species is the GenBank assembly RS_GCF_005870085.1. The GC content of the type genome is 37.35 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Admulia gen. nov.

Candidatus Admulia (NL. fem. n. *Admulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BH258*. The type species for the genus is *Candidatus* Admulia arnogigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admulida altiviforma sp. nov.

Candidatus Admulida altiviforma (NL. fem. n. *altiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXX01 sp012515695*. The type genome for the species is the GenBank assembly GCA_012515695.1. The GC content of the type genome is 61.51 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Admulida gen. nov.

Candidatus Admulida (NL. fem. n. *Admulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXX01*. The type species for the genus is *Candidatus* Admulida altiviforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Admulosa vocamitura sp. nov.

Candidatus Admulosa vocamitura (NL. fem. n. *vocamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10611 sp900770645*. The type genome for the species is the GenBank assembly RS_GCF_900770645.1. The GC content of the type genome is 28.84 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Admulosa gen. nov.

Candidatus Admulosa (NL. fem. n. *Admulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10611*. The type species for the genus is *Candidatus* Admulosa vocamitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Admulula uxorcitas sp. nov.

Candidatus Admulula uxorcitas (NL. fem. n. *uxorcitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYYM01 sp012515365*. The type genome for the species is the GenBank assembly GCA_012515365.1. The GC content of the type genome is 39.17 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Admulula gen. nov.

Candidatus Admulula (NL. fem. n. *Admulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYYM01*. The type species for the genus is *Candidatus* Admulula uxorcitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admurana naviciforma sp. nov.

Candidatus Admurana naviciforma (NL. fem. n. *naviciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718895 sp002718895*. The type genome for the species is the GenBank assembly GCA_002718895.1. The GC content of the type genome is 29.08 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Admurana gen. nov.

Candidatus Admurana (NL. fem. n. *Admurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718895*. The type species for the genus is *Candidatus* Admurana naviciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Admuraria adrumifica sp. nov.

Candidatus Admuraria adrumifica (NL. fem. n. *adrumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-18 sp003598025*. The type genome for the species is the GenBank assembly GCA_003598025.1. The GC content of the type genome is 41.02 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Admuraria gen. nov.

Candidatus Admuraria (NL. fem. n. *Admuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-18*. The type species for the genus is *Candidatus* Admuraria adrumifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Admurida oblanigena sp. nov.

Candidatus Admurida oblanigena (NL. fem. n. *oblanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKWY01 sp007128675*. The type genome for the species is the GenBank assembly GCA_007128675.1. The GC content of the type genome is 59.5 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Admurida gen. nov.

Candidatus Admurida (NL. fem. n. *Admurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKWY01*. The type species for the genus is *Candidatus* Admurida oblanigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLRQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufiaceae.

Description of *Candidatus* Admurosa abambitas sp. nov.

Candidatus Admurosa abambitas (NL. fem. n. *abambitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-1 sp005879605*. The type genome for the species is the GenBank assembly GCA_005879605.1. The GC content of the type genome is 54.86 % and the genome length is 6.59 Mbp.

Description of *Candidatus* Admurosa gen. nov.

Candidatus Admurosa (NL. fem. n. *Admurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-1*. The type species for the genus is *Candidatus* Admurosa abambitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Admurula inreticella sp. nov.

Candidatus Admurula inreticella (NL. fem. n. *inreticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-36-10b sp001785725*. The type genome for the species is the GenBank assembly GCA_001785725.1. The GC content of the type genome is 36.59 % and the genome length is 0.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Admurula gen. nov.

Candidatus Admurula (NL. fem. n. *Admurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-36-10b*. The type species for the genus is *Candidatus* Admurula inreticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalulaceae.

Description of *Candidatus* Admutana ambecitura sp. nov.

Candidatus Admutana ambecitura (NL. fem. n. *ambecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNYL01 sp003973375*. The type genome for the species is the GenBank assembly GCA_003973375.1. The GC content of the type genome is 36.74 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Admutana gen. nov.

Candidatus Admutana (NL. fem. n. *Admutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNYL01*. The type species for the genus is *Candidatus* Admutana ambecitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admutella argumifica sp. nov.

Candidatus Admutella argumifica (NL. fem. n. *argumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6224 sp002441585*. The type genome for the species is the GenBank assembly GCA_002441585.1. The GC content of the type genome is 52.75 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Admutella gen. nov.

Candidatus Admutella (NL. fem. n. *Admutella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6224*. The type species for the genus is *Candidatus* Admutella argumifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Admutia exaggitrix sp. nov.

Candidatus Admutia exaggitrix (NL. fem. n. *exaggitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOC01 sp012839065*. The type genome for the species is the GenBank assembly GCA_012839065.1. The GC content of the type genome is 35.61 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Admutia gen. nov.

Candidatus Admutia (NL. fem. n. *Admutia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOC01*. The type species for the genus is *Candidatus* Admutia exaggitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilariaceae.

Description of *Candidatus* Admutida clancatica sp. nov.

Candidatus Admutida clancatica (NL. fem. n. *clancatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZS01 sp009692105*. The type genome for the species is the GenBank assembly GCA_009692105.1. The GC content of the type genome is 66.38 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Admutida gen. nov.

Candidatus Admutida (NL. fem. n. *Admutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZS01*. The type species for the genus is *Candidatus* Admutida clancatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Admutosa inresitica sp. nov.

Candidatus Admutosa inresitica (NL. fem. n. *inresitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQM01 sp004298555*. The type genome for the species is the GenBank assembly GCA_004298555.1. The GC content of the type genome is 52.51 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Admutosa gen. nov.

Candidatus Admutosa (NL. fem. n. *Admutosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCQM01*. The type species for the genus is *Candidatus* Admutosa inresitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Admutosa semipugo sp. nov.

Candidatus Admutosa semipugo (NL. fem. n. *semipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQM01 sp013044365*. The type genome for the species is the GenBank assembly GCA_013044365.1. The GC content of the type genome is 50.68 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Adnararia tresvigena sp. nov.

Candidatus Adnararia tresvigena (NL. fem. n. *tresvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An181 sp002160325*. The type genome for the species is the GenBank assembly RS_GCF_002160325.1. The GC content of the type genome is 43.17 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Adnararia gen. nov.

Candidatus Adnararia (NL. fem. n. *Adnararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An181*. The type species for the genus is *Candidatus* Adnararia tresvigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnarida colepiforma sp. nov.

Candidatus Adnarida colepiforma (NL. fem. n. *colepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFB93 sp001887775*. The type genome for the species is the GenBank assembly RS_GCF_001887775.1. The GC content of the type genome is 53.41 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "intertidal sediment".

Description of *Candidatus* Adnarida gen. nov.

Candidatus Adnarida (NL. fem. n. *Adnarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFB93*. The type species for the genus is *Candidatus* Adnarida colepiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnarida direpilenta sp. nov.

Candidatus Adnarida direpilenta (NL. fem. n. *direpilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFB93 sp013619105*. The type genome for the species is the GenBank assembly GCA_013619105.1. The GC content of the type genome is 53.72 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Adnarida domabousia sp. nov.

Candidatus Adnarida domabousia (NL. fem. n. *domabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SFB93 sp001751225*. The type genome for the species is the GenBank assembly GCA_001751225.1. The GC content of the type genome is 52.74 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sample #5579; elevator 3A push core 41 containing 12 cm of sediment; collected at Hydrate Ridge North during Jason II dive J2-593 from an area of active seepage marked by bubble ebullition and surface expression of white microbial mat".

Description of *Candidatus* Adnarosa armipax sp. nov.

Candidatus Adnarosa armipax (NL. fem. n. *armipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIY01 sp013297985*. The type genome for the species is the GenBank assembly GCA_013297985.1. The GC content of the type genome is 63.82 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Adnarosa gen. nov.

Candidatus Adnarosa (NL. fem. n. *Adnarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIY01*. The type species for the genus is *Candidatus* Adnarosa armipax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnarula albogitudo sp. nov.

Candidatus Adnarula albogitudo (NL. fem. n. *albogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14219 sp902796925*. The type genome for the species is the GenBank assembly GCA_902796925.1. The GC content of the type genome is 33.91 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Adnarula gen. nov.

Candidatus Adnarula (NL. fem. n. *Adnarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RUG14219*. The type species for the genus is *Candidatus* Adnarula albogitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecana exsufastra sp. nov.

Candidatus Adnecana exsufastra (NL. fem. n. *exsufastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAU-1509 sp005047655*. The type genome for the species is the GenBank assembly RS_GCF_005047655.1. The GC content of the type genome is 63.17 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Adnecana gen. nov.

Candidatus Adnecana (NL. fem. n. *Adnecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAU-1509*. The type species for the genus is *Candidatus* Adnecana exsufastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecaria ininnibula sp. nov.

Candidatus Adnecaria ininnibula (NL. fem. n. *ininnibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8156 sp003456125*. The type genome for the species is the GenBank assembly GCA_003456125.1. The GC content of the type genome is 59.36 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Adnecaria gen. nov.

Candidatus Adnecaria (NL. fem. n. *Adnecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8156*. The type species for the genus is *Candidatus* Adnecaria ininnibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecaria pedepisca sp. nov.

Candidatus Adnecaria pedepisca (NL. fem. n. *pedepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8156 sp012031195*. The type genome for the species is the GenBank assembly GCA_012031195.1. The GC content of the type genome is 59.39 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Adnecella recogentia sp. nov.

Candidatus Adnecella recogentia (NL. fem. n. *recogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGA01 sp007376345*. The type genome for the species is the GenBank assembly GCA_007376345.1. The GC content of the type genome is 45.92 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Adnecella gen. nov.

Candidatus Adnecella (NL. fem. n. *Adnecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGA01*. The type species for the genus is *Candidatus* Adnecella recogentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecida adtemimonia sp. nov.

Candidatus Adnecida adtemimonia (NL. fem. n. *adtemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOHZ01 sp903858165*. The type genome for the species is the GenBank assembly GCA_903858165.1. The GC content of the type genome is 62.97 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Adnecida gen. nov.

Candidatus Adnecida (NL. fem. n. *Adnecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOHZ01*. The type species for the genus is *Candidatus* Adnecida adtemimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecosa accomibula sp. nov.

Candidatus Adnecosa accomibula (NL. fem. n. *accomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSOI01 sp013216005*. The type genome for the species is the GenBank assembly GCA_013216005.1. The GC content of the type genome is 37.25 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Adnecosa gen. nov.

Candidatus Adnecosa (NL. fem. n. *Adnecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSOI01*. The type species for the genus is *Candidatus* Adnecosa accomibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnecosa ephipedo sp. nov.

Candidatus Adnecosa ephipedo (NL. fem. n. *ephipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSOI01 sp013216015*. The type genome for the species is the GenBank assembly GCA_013216015.1. The GC content of the type genome is 37.17 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Adneparia vitabibula sp. nov.

Candidatus Adneparia vitabibula (NL. fem. n. *vitabibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKA01 sp009885795*. The type genome for the species is the GenBank assembly GCA_009885795.1. The GC content of the type genome is 65.71 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Adneparia gen. nov.

Candidatus Adneparia (NL. fem. n. *Adneparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKA01*. The type species for the genus is *Candidatus* Adneparia vitabibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnepella hemidigena sp. nov.

Candidatus Adnepella hemidigena (NL. fem. n. *hemidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUD01 sp012517855*. The type genome for the species is the GenBank assembly GCA_012517855.1. The GC content of the type genome is 39.04 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Adnepella gen. nov.

Candidatus Adnepella (NL. fem. n. *Adnepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUD01*. The type species for the genus is *Candidatus* Adnepella hemidigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnepia advoritudo sp. nov.

Candidatus Adnepia advoritudo (NL. fem. n. *advoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVM01 sp013041585*. The type genome for the species is the GenBank assembly GCA_013041585.1. The GC content of the type genome is 39.27 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Adnepia gen. nov.

Candidatus Adnepia (NL. fem. n. *Adnepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVM01*. The type species for the genus is *Candidatus* Adnepia advoritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnicana annucetta sp. nov.

Candidatus Adnicana annucetta (NL. fem. n. *annucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNB01 sp012798515*. The type genome for the species is the GenBank assembly GCA_012798515.1. The GC content of the type genome is 61.02 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Adnicana gen. nov.

Candidatus Adnicana (NL. fem. n. *Adnicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNB01*. The type species for the genus is *Candidatus* Adnicana annucetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnicaria accomugo sp. nov.

Candidatus Adnicaria accomugo (NL. fem. n. *accomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXUA01 sp013335665*. The type genome for the species is the

GenBank assembly GCA_013335665.1. The GC content of the type genome is 44.45 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Adnicaria gen. nov.

Candidatus Adnicaria (NL. fem. n. *Adnicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXUA01*. The type species for the genus is *Candidatus* Adnicaria accomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-39-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifulaceae.

Description of *Candidatus* Adnicaria arcipigena sp. nov.

Candidatus Adnicaria arcipigena (NL. fem. n. *arcipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXUA01 sp013336275*. The type genome for the species is the GenBank assembly GCA_013336275.1. The GC content of the type genome is 50.55 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Adnicida undevilega sp. nov.

Candidatus Adnicida undevilega (NL. fem. n. *undevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001602625 sp001602625*. The type genome for the species is the GenBank assembly RS_GCF_001602625.1. The GC content of the type genome is 49.75 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Adnicida gen. nov.

Candidatus Adnicida (NL. fem. n. *Adnicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-001602625*. The type species for the genus is *Candidatus* Adnicida undevilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnicosa insubicella sp. nov.

Candidatus Adnicosa insubicella (NL. fem. n. *insubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PDTW01 sp002749055*. The type genome for the species is the GenBank assembly GCA_002749055.1. The GC content of the type genome is 23.67 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Adnicosa gen. nov.

Candidatus Adnicosa (NL. fem. n. *Adnicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PDTW01*. The type species for the genus is *Candidatus* Adnicosa insubicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Adnicula notabitica sp. nov.

Candidatus Adnicula notabitica (NL. fem. n. *notabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMNZ01 sp013204395*. The type genome for the species is the GenBank assembly GCA_013204395.1. The GC content of the type genome is 47.12 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Adnicula gen. nov.

Candidatus Adnicula (NL. fem. n. *Adnicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMNZ01*. The type species for the genus is *Candidatus* Adnicula notabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Adnilaria inherentia sp. nov.

Candidatus Adnilaria inherentia (NL. fem. n. *inherentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11200 sp902766825*. The type genome for the species is the GenBank assembly GCA_902766825.1. The GC content of the type genome is 36.97 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Adnilaria gen. nov.

Candidatus Adnilaria (NL. fem. n. *Adnilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11200*. The type species for the genus is *Candidatus* Adnilaria inherentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnilaria xenopivita sp. nov.

Candidatus Adnilaria xenopivita (NL. fem. n. *xenopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11200 sp902783965*. The type genome for the species is the GenBank assembly GCA_902783965.1. The GC content of the type genome is 42.7 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Adnilida manubitia sp. nov.

Candidatus Adnilida manubitia (NL. fem. n. *manubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748265 sp002748265*. The type genome for the species is the GenBank assembly GCA_002748265.1. The GC content of the type genome is 64.18 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Adnilida gen. nov.

Candidatus Adnilida (NL. fem. n. *Adnilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748265*. The type species for the genus is *Candidatus* Adnilida manubitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnilula intecitio sp. nov.

Candidatus Adnilula intecitio (NL. fem. n. *intecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-002776555 sp002776555*. The type genome for the species is the GenBank assembly RS_GCF_002776555.1. The GC content of the type genome is 23.03 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Adnilula gen. nov.

Candidatus Adnilula (NL. fem. n. *Adnilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-002776555*. The type species for the genus is *Candidatus* Adnilula intecitio .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Adnubana desonitas sp. nov.

Candidatus Adnubana desonitas (NL. fem. n. *desonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-43 sp003599735*. The type genome for the species is the GenBank assembly GCA_003599735.1. The GC content of the type genome is 66.98 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Adnubana gen. nov.

Candidatus Adnubana (NL. fem. n. *Adnubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-43*. The type species for the genus is *Candidatus* Adnubana

desonitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Adnubana homunitura sp. nov.

Candidatus Adnubana homunitura (NL. fem. n. *homunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-43 sp004297315*. The type genome for the species is the GenBank assembly GCA_004297315.1. The GC content of the type genome is 69.15 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Adnubana utputitura sp. nov.

Candidatus Adnubana utputitura (NL. fem. n. *utputitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-43 sp004296805*. The type genome for the species is the GenBank assembly GCA_004296805.1. The GC content of the type genome is 67.7 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Adnubaria apsegimonas sp. nov.

Candidatus Adnubaria apsegimonas (NL. fem. n. *apsegimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZZIT01 sp012800685*. The type genome for the species is the GenBank assembly GCA_012800685.1. The GC content of the type genome is 34.22 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Adnubaria gen. nov.

Candidatus Adnubaria (NL. fem. n. *Adnubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZZIT01*. The type species for the genus is *Candidatus* Adnubaria apsegimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnubella lapicentia sp. nov.

Candidatus Adnubella lapicentia (NL. fem. n. *lapicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNKV01 sp014381855*. The type genome for the species is the GenBank assembly GCA_014381855.1. The GC content of the type genome is 41.06 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Adnubella gen. nov.

Candidatus Adnubella (NL. fem. n. *Adnubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNKV01*. The type species for the genus is *Candidatus* Adnubella lapicentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilellaceae.

Description of *Candidatus* Adnubida evangimonas sp. nov.

Candidatus Adnubida evangimonas (NL. fem. n. *evangimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJM01 sp012522895*. The type genome for the species is the GenBank assembly GCA_012522895.1. The GC content of the type genome is 35.85 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adnubida gen. nov.

Candidatus Adnubida (NL. fem. n. *Adnubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJM01*. The type species for the genus is *Candidatus* Adnubida evangimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA2268. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Adnubosa desonicella sp. nov.

Candidatus Adnubosa desonicella (NL. fem. n. *desonicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QKMZ01 sp013823055*. The type genome for the species is the GenBank assembly GCA_013823055.1. The GC content of the type genome is 49.74 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Adnubosa gen. nov.

Candidatus Adnubosa (NL. fem. n. *Adnubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QKMZ01*. The type species for the genus is *Candidatus* Adnubosa desonicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnubosa innecedo sp. nov.

Candidatus Adnubosa innecedo (NL. fem. n. *innecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QKMZ01 sp014380105*. The type genome for the species is the GenBank assembly GCA_014380105.1. The GC content of the type genome is 47.37 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Adnubosa petulisca sp. nov.

Candidatus Adnubosa petulisca (NL. fem. n. *petulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QKMZ01 sp012965515*. The type genome for the species is the GenBank assembly GCA_012965515.1. The GC content of the type genome is 49.63 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Adnubosa tetenetta sp. nov.

Candidatus Adnubosa tetenetta (NL. fem. n. *tetenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QKMZ01 sp013997645*. The type genome for the species is the GenBank assembly GCA_013997645.1. The GC content of the type genome is 50.33 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Adnubosa videlitica sp. nov.

Candidatus Adnubosa videlitica (NL. fem. n. *videlitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QKMZ01 sp003242885*. The type genome for the species is the GenBank assembly GCA_003242885.1. The GC content of the type genome is 49.26 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Adnulella delapicula sp. nov.

Candidatus Adnulella delapicula (NL. fem. n. *delapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CHB1 sp011525875*. The type genome for the species is the GenBank assembly GCA_011525875.1. The GC content of the type genome is 37.82 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Adnulella gen. nov.

Candidatus Adnulella (NL. fem. n. *Adnulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CHB1*. The type species for the genus is *Candidatus* Adnulella delapicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnulia fedititica sp. nov.

Candidatus Adnulia fedititica (NL. fem. n. *fedititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GSPS2-BC2016 sp002904345*. The type genome for the species is the GenBank assembly RS_GCF_002904345.1. The GC content of the type genome is 37.03 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Adnulia gen. nov.

Candidatus Adnulia (NL. fem. n. *Adnulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GSPS2-BC2016*. The type species for the genus is *Candidatus* Adnulia fedititica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnulosa delucisca sp. nov.

Candidatus Adnulosa delucisca (NL. fem. n. *delucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HdN1 sp000198515*. The type genome for the species is the GenBank assembly RS_GCF_000198515.1. The GC content of the type genome is 53.26 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Adnulosa gen. nov.

Candidatus Adnulosa (NL. fem. n. *Adnulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HdN1*. The type species for the genus is *Candidatus* Adnulosa delucisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnumaria tolutetta sp. nov.

Candidatus Adnumaria tolutetta (NL. fem. n. *tolutetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2725955 sp002725955*. The type genome for the species is the GenBank assembly GCA_002725955.1. The GC content of the type genome is 40.65 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Adnumaria gen. nov.

Candidatus Adnumaria (NL. fem. n. *Adnumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2725955*. The type species for the genus is *Candidatus* Adnumaria tolutetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnumella bicapitas sp. nov.

Candidatus Adnumella bicapitas (NL. fem. n. *bicapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-44-16 sp001803225*. The type genome for the species is the GenBank assembly GCA_001803225.1. The GC content of the type genome is 44.02 % and the genome length is 5.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Adnumella gen. nov.

Candidatus Adnumella (NL. fem. n. *Adnumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-44-16*. The type species for the genus is *Candidatus* Adnumella bicapitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-45-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilariaceae.

Description of *Candidatus* Adnumia cosidivita sp. nov.

Candidatus Adnumia cosidivita (NL. fem. n. *cosidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1786 sp902785075*. The type genome for the species is the GenBank assembly GCA_902785075.1. The GC content of the type genome is 44.88 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Adnumia gen. nov.

Candidatus Adnumia (NL. fem. n. *Adnumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1786*. The type species for the genus is *Candidatus* Adnumia cosidivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnumia detecatio sp. nov.

Candidatus Adnumia detecatio (NL. fem. n. *detecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1786 sp902797255*. The type genome for the species is the GenBank assembly GCA_902797255.1. The GC content of the type genome is 45.12 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Adnumia oblanilega sp. nov.

Candidatus Adnumia oblanilega (NL. fem. n. *oblanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1786 sp002314525*. The type genome for the species is the GenBank assembly GCA_002314525.1. The GC content of the type genome is 46.72 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Adnumia optumimonia sp. nov.

Candidatus Adnumia optumimonia (NL. fem. n. *optumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1786 sp900771425*. The type genome for the species is the

GenBank assembly RS_GCF_900771425.1. The GC content of the type genome is 48.69 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Adnumia subacitio sp. nov.

Candidatus Adnumia subacitio (NL. fem. n. *subacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1786 sp902787555*. The type genome for the species is the GenBank assembly GCA_902787555.1. The GC content of the type genome is 46.01 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Adnumida inlocitudo sp. nov.

Candidatus Adnumida inlocitudo (NL. fem. n. *inlocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUCM01 sp012959785*. The type genome for the species is the GenBank assembly GCA_012959785.1. The GC content of the type genome is 64.38 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Adnumida gen. nov.

Candidatus Adnumida (NL. fem. n. *Adnumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUCM01*. The type species for the genus is *Candidatus* Adnumida inlocitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Adnumosa cibicitas sp. nov.

Candidatus Adnumosa cibicitas (NL. fem. n. *cibicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEN01 sp013153335*. The type genome for the species is the GenBank assembly GCA_013153335.1. The GC content of the type genome is 63.51 %

and the genome length is 1.58 Mbp.

Description of *Candidatus* Adnumosa gen. nov.

Candidatus Adnumosa (NL. fem. n. *Adnumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEN01*. The type species for the genus is *Candidatus* Adnumosa cibicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacanaceae.

Description of *Candidatus* Adnumosa decacastra sp. nov.

Candidatus Adnumosa decacastra (NL. fem. n. *decacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEN01 sp013153375*. The type genome for the species is the GenBank assembly GCA_013153375.1. The GC content of the type genome is 68.0 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Adnumosa fusifimonia sp. nov.

Candidatus Adnumosa fusifimonia (NL. fem. n. *fusifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEN01 sp013153135*. The type genome for the species is the GenBank assembly GCA_013153135.1. The GC content of the type genome is 61.43 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Adnumula sonivetta sp. nov.

Candidatus Adnumula sonivetta (NL. fem. n. *sonivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1380 sp002305445*. The type genome for the species is the GenBank assembly GCA_002305445.1. The GC content of the type genome is 57.73 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Adnumula gen. nov.

Candidatus Adnumula (NL. fem. n. *Adnumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1380*. The type species for the genus is *Candidatus* Adnumula sonivetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Adnunana ignigetta sp. nov.

Candidatus Adnunana ignigetta (NL. fem. n. *ignigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJK01 sp012522955*. The type genome for the species is the GenBank assembly GCA_012522955.1. The GC content of the type genome is 44.18 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Adnunana gen. nov.

Candidatus Adnunana (NL. fem. n. *Adnunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJK01*. The type species for the genus is *Candidatus* Adnunana ignigetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnunana inhonibula sp. nov.

Candidatus Adnunana inhonibula (NL. fem. n. *inhonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJK01 sp012520725*. The type genome for the species is the GenBank assembly GCA_012520725.1. The GC content of the type genome is 44.74 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Adnunaria fiducicella sp. nov.

Candidatus Adnunaria fiducicella (NL. fem. n. *fiducicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAC01 sp012719535*. The type genome for the species is the GenBank assembly GCA_012719535.1. The GC content of the type genome is 53.28 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Adnunaria gen. nov.

Candidatus Adnunaria (NL. fem. n. *Adnunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAC01*. The type species for the genus is *Candidatus* Adnunaria fiducicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adnunia infunibula sp. nov.

Candidatus Adnunia infunibula (NL. fem. n. *infunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14670 sp902801525*. The type genome for the species is the GenBank assembly GCA_902801525.1. The GC content of the type genome is 25.41 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Adnunia gen. nov.

Candidatus Adnunia (NL. fem. n. *Adnunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14670*. The type species for the genus is *Candidatus* Adnunia infunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Adnunida buxanugo sp. nov.

Candidatus Adnunida buxanugo (NL. fem. n. *buxanugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJU01 sp011370455*. The type genome for the species is the GenBank assembly GCA_011370455.1. The GC content of the type genome is 43.64 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Adnunida gen. nov.

Candidatus Adnunida (NL. fem. n. *Adnunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJU01*. The type species for the genus is *Candidatus* Adnunida buxanugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B13-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifiaceae.

Description of *Candidatus* Adnunida sacopicula sp. nov.

Candidatus Adnunida sacopicula (NL. fem. n. *sacopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJU01 sp011361925*. The type genome for the species is the GenBank assembly GCA_011361925.1. The GC content of the type genome is 43.75 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Adnunosa paralatica sp. nov.

Candidatus Adnunosa paralatica (NL. fem. n. *paralatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGC01 sp013286215*. The type genome for the species is the GenBank assembly GCA_013286215.1. The GC content of the type genome is 48.4 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Adnunosa gen. nov.

Candidatus Adnunosa (NL. fem. n. *Adnunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGC01*. The type species for the genus is *Candidatus* Adnunosa paralatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Adobrana ambacicella sp. nov.

Candidatus Adobrana ambacicella (NL. fem. n. *ambacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2729515 sp002729515*. The type genome for the species is the GenBank assembly GCA_002729515.1. The GC content of the type genome is 66.19 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Adobrana gen. nov.

Candidatus Adobrana (NL. fem. n. *Adobrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2729515*. The type species for the genus is *Candidatus* Adobrana ambacicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penicellaceae.

Description of *Candidatus* Adobraria effigitudo sp. nov.

Candidatus Adobraria effigitudo (NL. fem. n. *effigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEM01 sp012728725*. The type genome for the species is the GenBank assembly GCA_012728725.1. The GC content of the type genome is 35.75 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Adobraria gen. nov.

Candidatus Adobraria (NL. fem. n. *Adobraria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEM01*. The type species for the genus is *Candidatus* Adobraria effigitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adobrella ignipitio sp. nov.

Candidatus Adobrella ignipitio (NL. fem. n. *ignipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002726655 sp002726655*. The type genome for the species is the GenBank assembly GCA_002726655.1. The GC content of the type genome is 50.28 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Adobrella gen. nov.

Candidatus Adobrella (NL. fem. n. *Adobrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002726655*. The type species for the genus is *Candidatus* Adobrella ignipitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Adobrella lapicitas sp. nov.

Candidatus Adobrella lapicitas (NL. fem. n. *lapicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002726655 sp002725995*. The type genome for the species is the GenBank assembly GCA_002725995.1. The GC content of the type genome is 50.27 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Adobrida cilotentia sp. nov.

Candidatus Adobrida cilotentia (NL. fem. n. *cilotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1196 sp003140135*. The type genome for the species is the GenBank assembly GCA_003140135.1. The GC content of the type genome is 62.98 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Adobrida gen. nov.

Candidatus Adobrida (NL. fem. n. *Adobrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1196*. The type species for the genus is *Candidatus* Adobrida cilotentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adobrosa expopitica sp. nov.

Candidatus Adobrosa expopitica (NL. fem. n. *expopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B60-G16 sp003647275*. The type genome for the species is the GenBank assembly GCA_003647275.1. The GC content of the type genome is 48.45 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Adobrosa gen. nov.

Candidatus Adobrosa (NL. fem. n. *Adobrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B60-G16*. The type species for the genus is *Candidatus* Adobrosa expopitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Adobrula bicapentia sp. nov.

Candidatus Adobrula bicapentia (NL. fem. n. *bicapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J028 sp003695865*. The type genome for the species is the GenBank assembly GCA_003695865.1. The GC content of the type genome is 71.35 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Adobrula gen. nov.

Candidatus Adobrula (NL. fem. n. *Adobrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J028*. The type species for the genus is *Candidatus* Adobrula bicapentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Adordaria turibitura sp. nov.

Candidatus Adordaria turibitura (NL. fem. n. *turibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CCP5 sp003017785*. The type genome for the species is the GenBank assembly RS_GCF_003017785.1. The GC content of the type genome is 55.63 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Adordaria gen. nov.

Candidatus Adordaria (NL. fem. n. *Adordaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CCP5*. The type species for the genus is *Candidatus* Adordaria turibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adordella diluvitio sp. nov.

Candidatus Adordella diluvitio (NL. fem. n. *diluvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCVQ01 sp004296865*. The type genome for the species is the GenBank assembly GCA_004296865.1. The GC content of the type genome is 61.63 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Adordella gen. nov.

Candidatus Adordella (NL. fem. n. *Adordella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCVQ01*. The type species for the genus is *Candidatus* Adordella diluvitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adordia altifitrix sp. nov.

Candidatus Adordia altifitrix (NL. fem. n. *altifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-70-22 sp001724275*. The type genome for the species is the GenBank assembly GCA_001724275.1. The GC content of the type genome is 70.18 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Adordia gen. nov.

Candidatus Adordia (NL. fem. n. *Adordia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-70-22*. The type species for the genus is *Candidatus* Adordia altifitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adordia apsurastra sp. nov.

Candidatus Adordia apsurastra (NL. fem. n. *apsurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-70-22 sp902826615*. The type genome for the species is the

GenBank assembly GCA_902826615.1. The GC content of the type genome is 64.66 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Adordia depetisca sp. nov.

Candidatus Adordia depetisca (NL. fem. n. *depetisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-70-22 sp014379705*. The type genome for the species is the GenBank assembly GCA_014379705.1. The GC content of the type genome is 67.51 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Adordida irremisca sp. nov.

Candidatus Adordida irremisca (NL. fem. n. *irremisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840985 sp002840985*. The type genome for the species is the GenBank assembly GCA_002840985.1. The GC content of the type genome is 35.9 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Adordida gen. nov.

Candidatus Adordida (NL. fem. n. *Adordida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002840985*. The type species for the genus is *Candidatus* Adordida irremisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2711565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacidaceae.

Description of *Candidatus* Adordosa inordousia sp. nov.

Candidatus Adordosa inordousia (NL. fem. n. *inordousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG42 sp003242425*. The type genome for the species is the GenBank assembly GCA_003242425.1. The GC content of the type genome is 66.54 %

and the genome length is 2.43 Mbp.

Description of *Candidatus* Adordosa gen. nov.

Candidatus Adordosa (NL. fem. n. *Adordosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG42*. The type species for the genus is *Candidatus* Adordosa inordousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Adordula defesimonas sp. nov.

Candidatus Adordula defesimonas (NL. fem. n. *defesimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722775 sp002722775*. The type genome for the species is the GenBank assembly GCA_002722775.1. The GC content of the type genome is 53.9 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Adordula gen. nov.

Candidatus Adordula (NL. fem. n. *Adordula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722775*. The type species for the genus is *Candidatus* Adordula defesimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adoscana irraditica sp. nov.

Candidatus Adoscana irraditica (NL. fem. n. *irraditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMN01 sp012798795*. The type genome for the species is the GenBank assembly GCA_012798795.1. The GC content of the type genome is 38.74 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Adoscana gen. nov.

Candidatus Adoscana (NL. fem. n. *Adoscana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMN01*. The type species for the genus is *Candidatus* Adoscana irraditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU012*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolellaceae.

Description of *Candidatus* Adoscella mahelousia sp. nov.

Candidatus Adoscella mahelousia (NL. fem. n. *mahelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B2-G16 sp003650505*. The type genome for the species is the GenBank assembly GCA_003650505.1. The GC content of the type genome is 62.95 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Adoscella gen. nov.

Candidatus Adoscella (NL. fem. n. *Adoscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B2-G16*. The type species for the genus is *Candidatus* Adoscella mahelousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodosaceae.

Description of *Candidatus* Adoscia encomilega sp. nov.

Candidatus Adoscia encomilega (NL. fem. n. *encomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1350 sp003152975*. The type genome for the species is the GenBank assembly GCA_003152975.1. The GC content of the type genome is 59.19 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Adoscia gen. nov.

Candidatus Adoscia (NL. fem. n. *Adoscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1350*. The type species for the genus is *Candidatus* Adoscia encomilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adoscia inlapitica sp. nov.

Candidatus Adoscia inlapitica (NL. fem. n. *inlapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1350 sp012517095*. The type genome for the species is the GenBank assembly GCA_012517095.1. The GC content of the type genome is 55.28 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Adoscida adlicigena sp. nov.

Candidatus Adoscida adlicigena (NL. fem. n. *adlicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0108 sp009928645*. The type genome for the species is the GenBank assembly GCA_009928645.1. The GC content of the type genome is 65.32 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Adoscida gen. nov.

Candidatus Adoscida (NL. fem. n. *Adoscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0108*. The type species for the genus is *Candidatus* Adoscida adlicigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adoscida ensicifica sp. nov.

Candidatus Adoscida ensicifica (NL. fem. n. *ensicifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0108 sp006227775*. The type genome for the species is the GenBank assembly GCA_006227775.1. The GC content of the type genome is 65.63 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Adpacana delucimonia sp. nov.

Candidatus Adpacana delucimonia (NL. fem. n. *delucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691085 sp902575965*. The type genome for the species is the GenBank assembly GCA_902575965.1. The GC content of the type genome is 34.21 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Adpacana gen. nov.

Candidatus Adpacana (NL. fem. n. *Adpacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2691085*. The type species for the genus is *Candidatus* Adpacana delucimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpacana vepalitas sp. nov.

Candidatus Adpacana vepalitas (NL. fem. n. *vepalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691085 sp002691085*. The type genome for the species is the GenBank assembly GCA_002691085.1. The GC content of the type genome is 34.21 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Adpacaria artilivita sp. nov.

Candidatus Adpacaria artilivita (NL. fem. n. *artilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRKS01 sp011051655*. The type genome for the species is the GenBank assembly GCA_011051655.1. The GC content of the type genome is 61.65 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Adpacaria gen. nov.

Candidatus Adpacaria (NL. fem. n. *Adpacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRKS01*. The type species for the genus is *Candidatus* Adpacaria artilivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpacella adcomimonia sp. nov.

Candidatus Adpacella adcomimonia (NL. fem. n. *adcomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAY01 sp014238225*. The type genome for the species is the GenBank assembly GCA_014238225.1. The GC content of the type genome is 32.92 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Adpacella gen. nov.

Candidatus Adpacella (NL. fem. n. *Adpacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAY01*. The type species for the genus is *Candidatus* Adpacella adcomimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCF-1484045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notacosaceae.

Description of *Candidatus* Adpacella xeramibra sp. nov.

Candidatus Adpacella xeramibra (NL. fem. n. *xeramibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABAAY01 sp014238525*. The type genome for the species is the GenBank assembly GCA_014238525.1. The GC content of the type genome is 31.93 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Adpacosa disidago sp. nov.

Candidatus Adpacosa disidago (NL. fem. n. *disidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZU01 sp013349285*. The type genome for the species is the GenBank assembly GCA_013349285.1. The GC content of the type genome is 52.74 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Adpacosa gen. nov.

Candidatus Adpacosa (NL. fem. n. *Adpacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUZU01*. The type species for the genus is *Candidatus* Adpacosa disidago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpagana mahemitura sp. nov.

Candidatus Adpagana mahemitura (NL. fem. n. *mahemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-36-19 sp002772535*. The type genome for the species is the GenBank assembly GCA_002772535.1. The GC content of the type genome is 35.81 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Adpagana gen. nov.

Candidatus Adpagana (NL. fem. n. *Adpagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-36-19*. The type species for the genus is *Candidatus* Adpagana mahemitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Adpagaria tubicitrix sp. nov.

Candidatus Adpagaria tubicitrix (NL. fem. n. *tubicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Site-B1 sp013043005*. The type genome for the species is the GenBank assembly GCA_013043005.1. The GC content of the type genome is 33.92 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Adpagaria gen. nov.

Candidatus Adpagaria (NL. fem. n. *Adpagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Site-B1*. The type species for the genus is *Candidatus* Adpagaria tubicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpagida adsuciforma sp. nov.

Candidatus Adpagida adsuciforma (NL. fem. n. *adsuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYXB01 sp903930015*. The type genome for the species is the GenBank assembly GCA_903930015.1. The GC content of the type genome is 34.24 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Adpagida gen. nov.

Candidatus Adpagida (NL. fem. n. *Adpagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYXB01*. The type species for the genus is *Candidatus* Adpagida adsuciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LMEP-6097*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumiaceae.

Description of *Candidatus* Adpanaria obveribula sp. nov.

Candidatus Adpanaria obveribula (NL. fem. n. *obveribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTG01 sp004298335*. The type genome for the species is the GenBank assembly GCA_004298335.1. The GC content of the type genome is 63.01 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adpanaria gen. nov.

Candidatus Adpanaria (NL. fem. n. *Adpanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTG01*. The type species for the genus is *Candidatus* Adpanaria obveribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NS-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavulaceae.

Description of *Candidatus* Adpanella alsidiforma sp. nov.

Candidatus Adpanella alsidiforma (NL. fem. n. *alsidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686065 sp002686065*. The type genome for the species is the GenBank assembly GCA_002686065.1. The GC content of the type genome is 47.99 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Adpanella gen. nov.

Candidatus Adpanella (NL. fem. n. *Adpanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686065*. The type species for the genus is *Candidatus* Adpanella alsidiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Adpania detenitrix sp. nov.

Candidatus Adpania detenitrix (NL. fem. n. *detenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTY01 sp012523605*. The type genome for the species is the GenBank assembly GCA_012523605.1. The GC content of the type genome is 64.79 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Adpania gen. nov.

Candidatus Adpania (NL. fem. n. *Adpania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTY01*. The type species for the genus is *Candidatus* Adpania detenitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpanida sceptigena sp. nov.

Candidatus Adpanida sceptigena (NL. fem. n. *sceptigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8612 sp003505905*. The type genome for the species is the GenBank assembly GCA_003505905.1. The GC content of the type genome is 49.11 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Adpanida gen. nov.

Candidatus Adpanida (NL. fem. n. *Adpanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8612*. The type species for the genus is *Candidatus* Adpanida sceptigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpanula edissimonia sp. nov.

Candidatus Adpanula edissimonia (NL. fem. n. *edissimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-82 sp013152035*. The type genome for the species is the GenBank assembly GCA_013152035.1. The GC content of the type genome is 47.15 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Adpanula gen. nov.

Candidatus Adpanula (NL. fem. n. *Adpanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-82*. The type species for the genus is *Candidatus* Adpanula edissimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifosaceae.

Description of *Candidatus* Adpanula expasicella sp. nov.

Candidatus Adpanula expasicella (NL. fem. n. *expasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-82 sp003231675*. The type genome for the species is the GenBank assembly GCA_003231675.1. The GC content of the type genome is 42.58 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Adpecana abligentia sp. nov.

Candidatus Adpecana abligentia (NL. fem. n. *abligentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-12-T18 sp002163085*. The type genome for the species is the GenBank assembly GCA_002163085.1. The GC content of the type genome is 41.91 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Adpecana gen. nov.

Candidatus Adpecana (NL. fem. n. *Adpecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *41-12-T18*. The type species for the genus is *Candidatus* Adpecana abligentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpecana aggubastra sp. nov.

Candidatus Adpecana aggubastra (NL. fem. n. *aggubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-12-T18 sp002400805*. The type genome for the species is the GenBank assembly GCA_002400805.1. The GC content of the type genome is 42.32 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Adpecana culigentia sp. nov.

Candidatus Adpecana culigentia (NL. fem. n. *culigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-12-T18 sp002163115*. The type genome for the species is the GenBank assembly GCA_002163115.1. The GC content of the type genome is 41.25 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Adpecana frigdisca sp. nov.

Candidatus Adpecana frigdisca (NL. fem. n. *frigdisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-12-T18 sp013215805*. The type genome for the species is the GenBank assembly GCA_013215805.1. The GC content of the type genome is 34.55 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Adpecella epicritoga sp. nov.

Candidatus Adpecella epicritoga (NL. fem. n. *epicritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NSJ-40 sp014384705*. The type genome for the species is the GenBank assembly GCA_014384705.1. The GC content of the type genome is 51.12 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Adpecella gen. nov.

Candidatus Adpecella (NL. fem. n. *Adpecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-40*. The type species for the genus is *Candidatus* Adpecella epicritoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpecia panopilenta sp. nov.

Candidatus Adpecia panopilenta (NL. fem. n. *panopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMOQ01 sp013204045*. The type genome for the species is the GenBank assembly GCA_013204045.1. The GC content of the type genome is 57.03 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Adpecia gen. nov.

Candidatus Adpecia (NL. fem. n. *Adpecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMOQ01*. The type species for the genus is *Candidatus* Adpecia panopilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-58-16_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bulapanaceae.

Description of *Candidatus* Adpecida maligastra sp. nov.

Candidatus Adpecida maligastra (NL. fem. n. *maligastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBI01 sp012513875*. The type genome for the species is the

GenBank assembly GCA_012513875.1. The GC content of the type genome is 28.63 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Adpecida gen. nov.

Candidatus Adpecida (NL. fem. n. *Adpecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBI01*. The type species for the genus is *Candidatus* Adpecida maligastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Adpecula velifitas sp. nov.

Candidatus Adpecula velifitas (NL. fem. n. *velifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4M-Z18 sp003400305*. The type genome for the species is the GenBank assembly RS_GCF_003400305.1. The GC content of the type genome is 61.08 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Adpecula gen. nov.

Candidatus Adpecula (NL. fem. n. *Adpecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4M-Z18*. The type species for the genus is *Candidatus* Adpecula velifitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpelana dimidessa sp. nov.

Candidatus Adpelana dimidessa (NL. fem. n. *dimidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401345 sp002401345*. The type genome for the species is the GenBank assembly GCA_002401345.1. The GC content of the type genome is 36.98 %

and the genome length is 0.9 Mbp.

Description of *Candidatus* Adpelana gen. nov.

Candidatus Adpelana (NL. fem. n. *Adpelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401345*. The type species for the genus is *Candidatus* Adpelana dimidessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilanaceae.

Description of *Candidatus* Adpelaria lavacitio sp. nov.

Candidatus Adpelaria lavacitio (NL. fem. n. *lavacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIX01 sp014380935*. The type genome for the species is the GenBank assembly GCA_014380935.1. The GC content of the type genome is 57.47 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Adpelaria gen. nov.

Candidatus Adpelaria (NL. fem. n. *Adpelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMIX01*. The type species for the genus is *Candidatus* Adpelaria lavacitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpelella cibarugo sp. nov.

Candidatus Adpelella cibarugo (NL. fem. n. *cibarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZH01 sp009692385*. The type genome for the species is the GenBank assembly GCA_009692385.1. The GC content of the type genome is 41.58 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Adpelella gen. nov.

Candidatus Adpelella (NL. fem. n. *Adpelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZH01*. The type species for the genus is *Candidatus* Adpelella cibarugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Modifosaceae.

Description of *Candidatus* Adpelia affunitura sp. nov.

Candidatus Adpelia affunitura (NL. fem. n. *affunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-161 sp005880175*. The type genome for the species is the GenBank assembly GCA_005880175.1. The GC content of the type genome is 73.02 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Adpelia gen. nov.

Candidatus Adpelia (NL. fem. n. *Adpelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-161*. The type species for the genus is *Candidatus* Adpelia affunitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpelida altificella sp. nov.

Candidatus Adpelida altificella (NL. fem. n. *altificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH2-MAG17b sp902812415*. The type genome for the species is the GenBank assembly RS_GCF_902812415.1. The GC content of the type genome is 56.43 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Adpelida gen. nov.

Candidatus Adpelida (NL. fem. n. *Adpelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RH2-MAG17b*. The type species for the genus is *Candidatus* Adpelida altificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Adpelida fatifitura sp. nov.

Candidatus Adpelida fatifitura (NL. fem. n. *fatifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH2-MAG17b sp002197525*. The type genome for the species is the GenBank assembly GCA_002197525.1. The GC content of the type genome is 58.52 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Adpelosa expalitia sp. nov.

Candidatus Adpelosa expalitia (NL. fem. n. *expalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVK01 sp009784025*. The type genome for the species is the GenBank assembly GCA_009784025.1. The GC content of the type genome is 47.59 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Adpelosa gen. nov.

Candidatus Adpelosa (NL. fem. n. *Adpelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVK01*. The type species for the genus is *Candidatus* Adpelosa expalitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Adpenana denavicella sp. nov.

Candidatus Adpenana denavicella (NL. fem. n. *denavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACADZ01 sp013389105*. The type genome for the species is the GenBank assembly GCA_013389105.1. The GC content of the type genome is 65.63 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Adpenana gen. nov.

Candidatus Adpenana (NL. fem. n. *Adpenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACADZ01*. The type species for the genus is *Candidatus* Adpenana denavicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpenaria adpicigena sp. nov.

Candidatus Adpenaria adpicigena (NL. fem. n. *adpicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZH01 sp902812455*. The type genome for the species is the GenBank assembly RS_GCF_902812455.1. The GC content of the type genome is 54.84 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Adpenaria gen. nov.

Candidatus Adpenaria (NL. fem. n. *Adpenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZH01*. The type species for the genus is *Candidatus* Adpenaria adpicigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpenella obtenilenta sp. nov.

Candidatus Adpenella obtenilenta (NL. fem. n. *obtenilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-2 sp005893185*. The type genome for the species is the GenBank assembly GCA_005893185.1. The GC content of the type genome is 70.06 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Adpenella gen. nov.

Candidatus Adpenella (NL. fem. n. *Adpenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-2*. The type species for the genus is *Candidatus* Adpenella obtenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Adpenia catobugo sp. nov.

Candidatus Adpenia catobugo (NL. fem. n. *catobugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCH01 sp009784115*. The type genome for the species is the GenBank assembly GCA_009784115.1. The GC content of the type genome is 45.66 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Adpenia gen. nov.

Candidatus Adpenia (NL. fem. n. *Adpenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCH01*. The type species for the genus is *Candidatus* Adpenia catobugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpenosa cicilimonas sp. nov.

Candidatus Adpenosa cicilimonas (NL. fem. n. *cicilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAHEQ01 sp900772625*. The type genome for the species is the GenBank assembly RS_GCF_900772625.1. The GC content of the type genome is 44.33 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Adpenosa gen. nov.

Candidatus Adpenosa (NL. fem. n. *Adpenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAAHEQ01*. The type species for the genus is *Candidatus* Adpenosa cicilimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3637*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracellaceae.

Description of *Candidatus* Adpenula adgenisca sp. nov.

Candidatus Adpenula adgenisca (NL. fem. n. *adgenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KOR34 sp007859765*. The type genome for the species is the GenBank assembly RS_GCF_007859765.1. The GC content of the type genome is 66.67 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Adpenula gen. nov.

Candidatus Adpenula (NL. fem. n. *Adpenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KOR34*. The type species for the genus is *Candidatus* Adpenula adgenisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Adpenula everbitudo sp. nov.

Candidatus Adpenula everbitudo (NL. fem. n. *everbitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KOR34 sp007859935*. The type genome for the species is the GenBank assembly RS_GCF_007859935.1. The GC content of the type genome is 66.5 % and the genome length is 6.26 Mbp.

Description of *Candidatus* Adperana cruppivita sp. nov.

Candidatus Adperana cruppivita (NL. fem. n. *cruppivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZYF759 sp012911015*. The type genome for the species is the GenBank assembly RS_GCF_012911015.1. The GC content of the type genome is 64.38 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Adperana gen. nov.

Candidatus Adperana (NL. fem. n. *Adperana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZYF759*. The type species for the genus is *Candidatus* Adperana cruppivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adperaria meridastra sp. nov.

Candidatus Adperaria meridastra (NL. fem. n. *meridastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJS01 sp012522805*. The type genome for the species is the GenBank assembly GCA_012522805.1. The GC content of the type genome is 42.54 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Adperaria gen. nov.

Candidatus Adperaria (NL. fem. n. *Adperaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAYJS01*. The type species for the genus is *Candidatus* Adperaria meridastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adperia abrumitio sp. nov.

Candidatus Adperia abrumitio (NL. fem. n. *abrumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9636 sp003451585*. The type genome for the species is the GenBank assembly GCA_003451585.1. The GC content of the type genome is 47.57 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Adperia gen. nov.

Candidatus Adperia (NL. fem. n. *Adperia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9636*. The type species for the genus is *Candidatus* Adperia abrumitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1572*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumanaceae.

Description of *Candidatus* Adperida obtemitrix sp. nov.

Candidatus Adperida obtemitrix (NL. fem. n. *obtemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-9 sp005893305*. The type genome for the species is the GenBank assembly GCA_005893305.1. The GC content of the type genome is 66.98 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Adperida gen. nov.

Candidatus Adperida (NL. fem. n. *Adperida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-9*. The type species for the genus is *Candidatus* Adperida obtemitrix

.

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamanaceae.

Description of *Candidatus* Adperosa exaspitrix sp. nov.

Candidatus Adperosa exaspitrix (NL. fem. n. *exaspitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYED01 sp012719135*. The type genome for the species is the GenBank assembly GCA_012719135.1. The GC content of the type genome is 63.64 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Adperosa gen. nov.

Candidatus Adperosa (NL. fem. n. *Adperosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYED01*. The type species for the genus is *Candidatus* Adperosa exaspitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Adperosa pecunimonas sp. nov.

Candidatus Adperosa pecunimonas (NL. fem. n. *pecunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYED01 sp012728955*. The type genome for the species is the GenBank assembly GCA_012728955.1. The GC content of the type genome is 64.57 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Adperula advigatica sp. nov.

Candidatus Adperula advigatica (NL. fem. n. *advigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIV01 sp009782495*. The type genome for the species is the GenBank assembly GCA_009782495.1. The GC content of the type genome is 45.13 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Adperula gen. nov.

Candidatus Adperula (NL. fem. n. *Adperula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRIV01*. The type species for the genus is *Candidatus* Adperula advigatica .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Adperula ambifitoga sp. nov.

Candidatus Adperula ambifitoga (NL. fem. n. *ambifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIV01 sp009782555*. The type genome for the species is the GenBank assembly GCA_009782555.1. The GC content of the type genome is 48.72 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Adperula attemibra sp. nov.

Candidatus Adperula attemibra (NL. fem. n. *attemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIV01 sp009782955*. The type genome for the species is the GenBank assembly GCA_009782955.1. The GC content of the type genome is 43.73 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Adpicana inlibimonas sp. nov.

Candidatus Adpicana inlibimonas (NL. fem. n. *inlibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LUC14-002-19-P2 sp002084115*. The type genome for the species is the GenBank assembly GCA_002084115.1. The GC content of the type genome is 52.1

% and the genome length is 3.3 Mbp.

Description of *Candidatus* Adpicana gen. nov.

Candidatus Adpicana (NL. fem. n. *Adpicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LUC14-002-19-P2*. The type species for the genus is *Candidatus* Adpicana inlibimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpicaria ludibitia sp. nov.

Candidatus Adpicaria ludibitia (NL. fem. n. *ludibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAER01 sp013388745*. The type genome for the species is the GenBank assembly GCA_013388745.1. The GC content of the type genome is 60.08 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Adpicaria gen. nov.

Candidatus Adpicaria (NL. fem. n. *Adpicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAER01*. The type species for the genus is *Candidatus* Adpicaria ludibitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Adpicia adselimonas sp. nov.

Candidatus Adpicia adselimonas (NL. fem. n. *adselimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077545 sp003347645*. The type genome for the species is the GenBank assembly RS_GCF_003347645.1. The GC content of the type genome is 63.81 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Adpicia gen. nov.

Candidatus Adpicia (NL. fem. n. *Adpicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077545*. The type species for the genus is *Candidatus* Adpicia adselimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpicia cetarimonia sp. nov.

Candidatus Adpicia cetarimonia (NL. fem. n. *cetarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077545 sp014191545*. The type genome for the species is the GenBank assembly GCA_014191545.1. The GC content of the type genome is 62.23 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Adpicia extinentia sp. nov.

Candidatus Adpicia extinentia (NL. fem. n. *extinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077545 sp001464335*. The type genome for the species is the GenBank assembly GCA_001464335.1. The GC content of the type genome is 62.98 % and the genome length is 3.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Adpicosa amfititoga sp. nov.

Candidatus Adpicosa amfititoga (NL. fem. n. *amfititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCA01 sp013817065*. The type genome for the species is the GenBank assembly GCA_013817065.1. The GC content of the type genome is 64.78 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Adpicosa gen. nov.

Candidatus Adpicosa (NL. fem. n. *Adpicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCA01*. The type species for the genus is *Candidatus* Adpicosa amfititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Adpicosa duciligena sp. nov.

Candidatus Adpicosa duciligena (NL. fem. n. *duciligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCA01 sp013694845*. The type genome for the species is the GenBank assembly GCA_013694845.1. The GC content of the type genome is 65.28 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Adpicosa utrinedo sp. nov.

Candidatus Adpicosa utrinedo (NL. fem. n. *utrinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCA01 sp013694635*. The type genome for the species is the GenBank assembly GCA_013694635.1. The GC content of the type genome is 65.15 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Adpicula minuritio sp. nov.

Candidatus Adpicula minuritio (NL. fem. n. *minuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-130 sp002084425*. The type genome for the species is the GenBank assembly GCA_002084425.1. The GC content of the type genome is 29.47 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Adpicula gen. nov.

Candidatus Adpicula (NL. fem. n. *Adpicula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-130*. The type species for the genus is *Candidatus* Adpicula minuritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpinana octobitrix sp. nov.

Candidatus Adpinana octobitrix (NL. fem. n. *octobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-42-24 sp001792115*. The type genome for the species is the GenBank assembly GCA_001792115.1. The GC content of the type genome is 42.21 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Adpinana gen. nov.

Candidatus Adpinana (NL. fem. n. *Adpinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-42-24*. The type species for the genus is *Candidatus* Adpinana octobitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Adpinella artocilega sp. nov.

Candidatus Adpinella artocilega (NL. fem. n. *artocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5559 sp002425705*. The type genome for the species is the GenBank assembly GCA_002425705.1. The GC content of the type genome is 49.02 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Adpinella gen. nov.

Candidatus Adpinella (NL. fem. n. *Adpinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5559*. The type species for the genus is *Candidatus* Adpinella artocilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpinia bicapimonia sp. nov.

Candidatus Adpinia bicapimonia (NL. fem. n. *bicapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PMP191F sp001302245*. The type genome for the species is the GenBank assembly RS_GCF_001302245.1. The GC content of the type genome is 43.44 % and the genome length is 6.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "peritoneal pseudomyxoma peritonei tumor".

Description of *Candidatus* Adpinia gen. nov.

Candidatus Adpinia (NL. fem. n. *Adpinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PMP191F*. The type species for the genus is *Candidatus* Adpinia bicapimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpinosa modifitura sp. nov.

Candidatus Adpinosa modifitura (NL. fem. n. *modifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REBR01 sp007692645*. The type genome for the species is the GenBank assembly GCA_007692645.1. The GC content of the type genome is 58.23 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Adpinosa gen. nov.

Candidatus Adpinosa (NL. fem. n. *Adpinosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REBR01*. The type species for the genus is *Candidatus* Adpinosa modifitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpinula expugiforma sp. nov.

Candidatus Adpinula expugiforma (NL. fem. n. *expugiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11865 sp003519205*. The type genome for the species is the GenBank assembly GCA_003519205.1. The GC content of the type genome is 50.05 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Adpinula gen. nov.

Candidatus Adpinula (NL. fem. n. *Adpinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11865*. The type species for the genus is *Candidatus* Adpinula expugiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adporana resalitrix sp. nov.

Candidatus Adporana resalitrix (NL. fem. n. *resalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M5B4 sp002861535*. The type genome for the species is the GenBank assembly GCA_002861535.1. The GC content of the type genome is 47.51 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Adporana gen. nov.

Candidatus Adporana (NL. fem. n. *Adporana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M5B4*. The type species for the genus is *Candidatus* Adporana resalitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adporella bicodax sp. nov.

Candidatus Adporella bicodax (NL. fem. n. *bicodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABH01 sp014238325*. The type genome for the species is the GenBank assembly GCA_014238325.1. The GC content of the type genome is 42.82 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Adporella gen. nov.

Candidatus Adporella (NL. fem. n. *Adporella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABH01*. The type species for the genus is *Candidatus* Adporella bicodax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adporida invesugo sp. nov.

Candidatus Adporida invesugo (NL. fem. n. *invesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2982 sp009692205*. The type genome for the species is the GenBank assembly GCA_009692205.1. The GC content of the type genome is 68.16 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Adporida gen. nov.

Candidatus Adporida (NL. fem. n. *Adporida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2982*. The type species for the genus is *Candidatus* Adporida invesugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Adporida munimibula sp. nov.

Candidatus Adporida munimibula (NL. fem. n. *munimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2982 sp002347035*. The type genome for the species is the GenBank assembly GCA_002347035.1. The GC content of the type genome is 53.97 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Adporula ranunetta sp. nov.

Candidatus Adporula ranunetta (NL. fem. n. *ranunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTSJ01 sp012965445*. The type genome for the species is the GenBank assembly GCA_012965445.1. The GC content of the type genome is 52.46 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Adporula gen. nov.

Candidatus Adporula (NL. fem. n. *Adporula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTSJ01*. The type species for the genus is *Candidatus* Adporula ranunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepulaceae.

Description of *Candidatus* Adposana adpanago sp. nov.

Candidatus Adposana adpanago (NL. fem. n. *adpanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *HYN0046 sp003351745*. The type genome for the species is the GenBank assembly RS_GCF_003351745.1. The GC content of the type genome is 46.01 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Adposana gen. nov.

Candidatus Adposana (NL. fem. n. *Adposana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HYN0046*. The type species for the genus is *Candidatus* Adposana adpanago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adposana artifessa sp. nov.

Candidatus Adposana artifessa (NL. fem. n. *artifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HYN0046 sp014378805*. The type genome for the species is the GenBank assembly GCA_014378805.1. The GC content of the type genome is 43.28 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Adposaria acculibra sp. nov.

Candidatus Adposaria acculibra (NL. fem. n. *acculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-926 sp003153235*. The type genome for the species is the GenBank assembly GCA_003153235.1. The GC content of the type genome is 51.63 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adposaria gen. nov.

Candidatus Adposaria (NL. fem. n. *Adposaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-926*. The type species for the genus is *Candidatus* Adposaria acculibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2020*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Lucubiaceae.

Description of *Candidatus* Adposella vinacousia sp. nov.

Candidatus Adposella vinacousia (NL. fem. n. *vinacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-42-13 sp001772625*. The type genome for the species is the GenBank assembly GCA_001772625.1. The GC content of the type genome is 41.93 % and the genome length is 0.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Adposella gen. nov.

Candidatus Adposella (NL. fem. n. *Adposella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-42-13*. The type species for the genus is *Candidatus* Adposella vinacousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Adposida assicimonia sp. nov.

Candidatus Adposida assicimonia (NL. fem. n. *assicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14133 sp902796085*. The type genome for the species is the GenBank assembly RS_GCF_902796085.1. The GC content of the type genome is 34.61 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Adposida gen. nov.

Candidatus Adposida (NL. fem. n. *Adposida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14133*. The type species for the genus is *Candidatus* Adposida

assicimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adposida lanifibula sp. nov.

Candidatus Adposida lanifibula (NL. fem. n. *lanifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14133 sp009996845*. The type genome for the species is the GenBank assembly RS_GCF_009996845.1. The GC content of the type genome is 34.83 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Adposula exsisitia sp. nov.

Candidatus Adposula exsisitia (NL. fem. n. *exsisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2031 sp002333145*. The type genome for the species is the GenBank assembly GCA_002333145.1. The GC content of the type genome is 53.29 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Adposula gen. nov.

Candidatus Adposula (NL. fem. n. *Adposula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2031*. The type species for the genus is *Candidatus* Adposula exsisitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adposula monumicula sp. nov.

Candidatus Adposula monumicula (NL. fem. n. *monumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2031 sp003543245*. The type genome for the species is the GenBank assembly GCA_003543245.1. The GC content of the type genome is 57.97 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Adpugana incocitica sp. nov.

Candidatus Adpugana incocitica (NL. fem. n. *incocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKIL01 sp007116425*. The type genome for the species is the GenBank assembly GCA_007116425.1. The GC content of the type genome is 39.32 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Adpugana gen. nov.

Candidatus Adpugana (NL. fem. n. *Adpugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKIL01*. The type species for the genus is *Candidatus* Adpugana incocitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adpugella desulago sp. nov.

Candidatus Adpugella desulago (NL. fem. n. *desulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1933 sp900772235*. The type genome for the species is the GenBank assembly RS_GCF_900772235.1. The GC content of the type genome is 28.07 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Adpugella gen. nov.

Candidatus Adpugella (NL. fem. n. *Adpugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1933*. The type species for the genus is *Candidatus* Adpugella desulago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Adpugella duriciforma sp. nov.

Candidatus Adpugella duriciforma (NL. fem. n. *duriciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1933 sp900556455*. The type genome for the species is the GenBank assembly GCA_900556455.1. The GC content of the type genome is 28.68 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Adpugia bicorentia sp. nov.

Candidatus Adpugia bicorentia (NL. fem. n. *bicorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHVS01 sp003223635*. The type genome for the species is the GenBank assembly GCA_003223635.1. The GC content of the type genome is 62.4 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Adpugia gen. nov.

Candidatus Adpugia (NL. fem. n. *Adpugia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHVS01*. The type species for the genus is *Candidatus* Adpugia bicorentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp7-AA8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viburanaceae.

Description of *Candidatus* Adpugula cerimitio sp. nov.

Candidatus Adpugula cerimitio (NL. fem. n. *cerimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRK01 sp013813565*. The type genome for the species is the GenBank assembly GCA_013813565.1. The GC content of the type genome is 61.42 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Adpugula gen. nov.

Candidatus Adpugula (NL. fem. n. *Adpugula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRK01*. The type species for the genus is *Candidatus* Adpugula cerimitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrecana humecugo sp. nov.

Candidatus Adrecana humecugo (NL. fem. n. *humecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2674 sp002693605*. The type genome for the species is the GenBank assembly GCA_002693605.1. The GC content of the type genome is 47.13 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Adrecana gen. nov.

Candidatus Adrecana (NL. fem. n. *Adrecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2674*. The type species for the genus is *Candidatus* Adrecana humecugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrecaria verecedo sp. nov.

Candidatus Adrecaria verecedo (NL. fem. n. *verecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6019 sp002427995*. The type genome for the species is the GenBank assembly GCA_002427995.1. The GC content of the type genome is 69.72 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Adrecaria gen. nov.

Candidatus Adrecaria (NL. fem. n. *Adrecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6019*. The type species for the genus is *Candidatus* Adrecaria verecedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrecella peropatica sp. nov.

Candidatus Adrecella peropatica (NL. fem. n. *peropatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-37-15 sp001784565*. The type genome for the species is the GenBank assembly GCA_001784565.1. The GC content of the type genome is 36.92 % and the genome length is 2.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Adrecella gen. nov.

Candidatus Adrecella (NL. fem. n. *Adrecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-37-15*. The type species for the genus is *Candidatus* Adrecella peropatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibariaceae.

Description of *Candidatus* Adrecia ignobicella sp. nov.

Candidatus Adrecia ignobicella (NL. fem. n. *ignobicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACESU01 sp013911655*. The type genome for the species is the GenBank assembly GCA_013911655.1. The GC content of the type genome is 47.9 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Adrecia gen. nov.

Candidatus Adrecia (NL. fem. n. *Adrecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACESU01*. The type species for the genus is *Candidatus* Adrecia ignobicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1908*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolellaceae.

Description of *Candidatus* Adrecia ornititudo sp. nov.

Candidatus Adrecia ornititudo (NL. fem. n. *ornititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACESU01 sp013822015*. The type genome for the species is the GenBank assembly GCA_013822015.1. The GC content of the type genome is 52.65 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adrecosa desupilega sp. nov.

Candidatus Adrecosa desupilega (NL. fem. n. *desupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRD01 sp004298155*. The type genome for the species is the GenBank assembly GCA_004298155.1. The GC content of the type genome is 56.74 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Adrecosa gen. nov.

Candidatus Adrecosa (NL. fem. n. *Adrecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCRD01*. The type species for the genus is *Candidatus* Adrecosa desupilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Adrecosa legifatica sp. nov.

Candidatus Adrecosa legifatica (NL. fem. n. *legifatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRD01 sp011388475*. The type genome for the species is the GenBank assembly GCA_011388475.1. The GC content of the type genome is 57.09 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Adrecula bovicisca sp. nov.

Candidatus Adrecula bovicisca (NL. fem. n. *bovicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHZ01 sp007135895*. The type genome for the species is the GenBank assembly GCA_007135895.1. The GC content of the type genome is 52.13 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Adrecula gen. nov.

Candidatus Adrecula (NL. fem. n. *Adrecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLHZ01*. The type species for the genus is *Candidatus* Adrecula bovicisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Adremaria panopentia sp. nov.

Candidatus Adremaria panopentia (NL. fem. n. *panopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11194 sp902766725*. The type genome for the species is the GenBank assembly GCA_902766725.1. The GC content of the type genome is 24.94 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Adremaria gen. nov.

Candidatus Adremaria (NL. fem. n. *Adremaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11194*. The type species for the genus is *Candidatus* Adremaria panopentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adremaria salubitio sp. nov.

Candidatus Adremaria salubitio (NL. fem. n. *salubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11194 sp902789825*. The type genome for the species is the GenBank assembly GCA_902789825.1. The GC content of the type genome is 26.45 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Adremella rareficella sp. nov.

Candidatus Adremella rareficella (NL. fem. n. *rareficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRQ01 sp012518685*. The type genome for the species is the GenBank assembly GCA_012518685.1. The GC content of the type genome is 35.46 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Adremella gen. nov.

Candidatus Adremella (NL. fem. n. *Adremella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRQ01*. The type species for the genus is *Candidatus* Adremella rareficella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adremosa appecitura sp. nov.

Candidatus Adremosa appecitura (NL. fem. n. *appecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *20-60-12 sp002255495*. The type genome for the species is the GenBank assembly GCA_002255495.1. The GC content of the type genome is 59.86 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Adremosa gen. nov.

Candidatus Adremosa (NL. fem. n. *Adremosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20-60-12*. The type species for the genus is *Candidatus* Adremosa appecitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adremula illuventia sp. nov.

Candidatus Adremula illuventia (NL. fem. n. *illuventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAP01 sp009780135*. The type genome for the species is the GenBank assembly GCA_009780135.1. The GC content of the type genome is 35.84 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Adremula gen. nov.

Candidatus Adremula (NL. fem. n. *Adremula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAP01*. The type species for the genus is *Candidatus* Adremula illuventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Adremula immemastra sp. nov.

Candidatus Adremula immemastra (NL. fem. n. *immemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAP01 sp009781235*. The type genome for the species is the

GenBank assembly GCA_009781235.1. The GC content of the type genome is 50.88 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Adremula inoccessa sp. nov.

Candidatus Adremula inoccessa (NL. fem. n. *inoccessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAP01 sp009777485*. The type genome for the species is the GenBank assembly GCA_009777485.1. The GC content of the type genome is 45.74 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adrenana conibitoga sp. nov.

Candidatus Adrenana conibitoga (NL. fem. n. *conibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3470 sp002378125*. The type genome for the species is the GenBank assembly GCA_002378125.1. The GC content of the type genome is 56.56 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Adrenana gen. nov.

Candidatus Adrenana (NL. fem. n. *Adrenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3470*. The type species for the genus is *Candidatus* Adrenana conibitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Adrenana conopedo sp. nov.

Candidatus Adrenana conopedo (NL. fem. n. *conopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3470 sp002709525*. The type genome for the species is the GenBank assembly GCA_002709525.1. The GC content of the type genome is 52.69 %

and the genome length is 3.18 Mbp.

Description of *Candidatus* Adrenaria exhilatica sp. nov.

Candidatus Adrenaria exhilatica (NL. fem. n. *exhilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F202Z8 sp005943945*. The type genome for the species is the GenBank assembly RS_GCF_005943945.1. The GC content of the type genome is 43.26 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Adrenaria gen. nov.

Candidatus Adrenaria (NL. fem. n. *Adrenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F202Z8*. The type species for the genus is *Candidatus* Adrenaria exhilatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrenella denecitio sp. nov.

Candidatus Adrenella denecitio (NL. fem. n. *denecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRJW01 sp011052055*. The type genome for the species is the GenBank assembly GCA_011052055.1. The GC content of the type genome is 49.74 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Adrenella gen. nov.

Candidatus Adrenella (NL. fem. n. *Adrenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRJW01*. The type species for the genus is *Candidatus* Adrenella denecitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimellaceae.

Description of *Candidatus* Adrenida manupisca sp. nov.

Candidatus Adrenida manupisca (NL. fem. n. *manupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWQ01 sp011370105*. The type genome for the species is the GenBank assembly GCA_011370105.1. The GC content of the type genome is 50.91 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Adrenida gen. nov.

Candidatus Adrenida (NL. fem. n. *Adrenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWQ01*. The type species for the genus is *Candidatus* Adrenida manupisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Adrenula conopitrix sp. nov.

Candidatus Adrenula conopitrix (NL. fem. n. *conopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7868 sp002501285*. The type genome for the species is the GenBank assembly GCA_002501285.1. The GC content of the type genome is 28.67 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Adrenula gen. nov.

Candidatus Adrenula (NL. fem. n. *Adrenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7868*. The type species for the genus is *Candidatus* Adrenula conopitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Adrotana tametessa sp. nov.

Candidatus Adrotana tametessa (NL. fem. n. *tametessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNO01 sp012798275*. The type genome for the species is the GenBank assembly GCA_012798275.1. The GC content of the type genome is 62.95 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Adrotana gen. nov.

Candidatus Adrotana (NL. fem. n. *Adrotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNO01*. The type species for the genus is *Candidatus* Adrotana tametessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Adrotella catobilega sp. nov.

Candidatus Adrotella catobilega (NL. fem. n. *catobilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-O15 sp003278255*. The type genome for the species is the GenBank assembly GCA_003278255.1. The GC content of the type genome is 38.64 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Adrotella gen. nov.

Candidatus Adrotella (NL. fem. n. *Adrotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-O15*. The type species for the genus is *Candidatus* Adrotella catobilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrotia armicugo sp. nov.

Candidatus Adrotia armicugo (NL. fem. n. *armicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-002259525 sp002259525*. The type genome for the species is the GenBank assembly RS_GCF_002259525.1. The GC content of the type genome is 33.05 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Adrotia gen. nov.

Candidatus Adrotia (NL. fem. n. *Adrotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-002259525*. The type species for the genus is *Candidatus* Adrotia armicugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrotosa adalgicella sp. nov.

Candidatus Adrotosa adalgicella (NL. fem. n. *adalgicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HT-58-2 sp002163975*. The type genome for the species is the GenBank assembly RS_GCF_002163975.1. The GC content of the type genome is 42.57 % and the genome length is 7.9 Mbp.

Description of *Candidatus* Adrotosa gen. nov.

Candidatus Adrotosa (NL. fem. n. *Adrotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HT-58-2*. The type species for the genus is *Candidatus* Adrotosa adalgicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrotula chancatio sp. nov.

Candidatus Adrotula chancatio (NL. fem. n. *chancatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NCCP-1664 sp008580665*. The type genome for the species is the GenBank assembly RS_GCF_008580665.1. The GC content of the type genome is 70.03 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Adrotula gen. nov.

Candidatus Adrotula (NL. fem. n. *Adrotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NCCP-1664*. The type species for the genus is *Candidatus* Adrotula chancatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrumana inredimonas sp. nov.

Candidatus Adrumana inredimonas (NL. fem. n. *inredimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFQD01 sp009925875*. The type genome for the species is the GenBank assembly GCA_009925875.1. The GC content of the type genome is 59.89 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Adrumana gen. nov.

Candidatus Adrumana (NL. fem. n. *Adrumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFQD01*. The type species for the genus is *Candidatus* Adrumana inredimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adrumana obfeniforma sp. nov.

Candidatus Adrumana obfeniforma (NL. fem. n. *obfeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFQD01 sp009704705*. The type genome for the species is the

GenBank assembly GCA_009704705.1. The GC content of the type genome is 59.73 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Adrumaria lavacessa sp. nov.

Candidatus Adrumaria lavacessa (NL. fem. n. *lavacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJZ01 sp013298205*. The type genome for the species is the GenBank assembly GCA_013298205.1. The GC content of the type genome is 31.84 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Adrumaria gen. nov.

Candidatus Adrumaria (NL. fem. n. *Adrumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJZ01*. The type species for the genus is *Candidatus* Adrumaria lavacessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gemebiaceae.

Description of *Candidatus* Adrumida decititudo sp. nov.

Candidatus Adrumida decititudo (NL. fem. n. *decititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNG01 sp013824115*. The type genome for the species is the GenBank assembly GCA_013824115.1. The GC content of the type genome is 49.08 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Adrumida gen. nov.

Candidatus Adrumida (NL. fem. n. *Adrumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNG01*. The type species for the genus is *Candidatus* Adrumida decititudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA7662. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubanaceae.

Description of *Candidatus* Adrumosa infucitica sp. nov.

Candidatus Adrumosa infucitica (NL. fem. n. *infucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QFOX01 sp003241645*. The type genome for the species is the GenBank assembly GCA_003241645.1. The GC content of the type genome is 61.08 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Adrumosa gen. nov.

Candidatus Adrumosa (NL. fem. n. *Adrumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QFOX01*. The type species for the genus is *Candidatus* Adrumosa infucitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipariaceae.

Description of *Candidatus* Adrumula benivifica sp. nov.

Candidatus Adrumula benivifica (NL. fem. n. *benivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSN01 sp902825985*. The type genome for the species is the GenBank assembly GCA_902825985.1. The GC content of the type genome is 68.72 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Adrumula gen. nov.

Candidatus Adrumula (NL. fem. n. *Adrumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSN01*. The type species for the genus is *Candidatus* Adrumula benivifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Adrumula homagitoga sp. nov.

Candidatus Adrumula homagitoga (NL. fem. n. *homagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSN01 sp009380045*. The type genome for the species is the GenBank assembly GCA_009380045.1. The GC content of the type genome is 66.09 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Adrumula illunitica sp. nov.

Candidatus Adrumula illunitica (NL. fem. n. *illunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSN01 sp902826465*. The type genome for the species is the GenBank assembly GCA_902826465.1. The GC content of the type genome is 65.02 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Adsecaria horomitas sp. nov.

Candidatus Adsecaria horomitas (NL. fem. n. *horomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-167 sp005879775*. The type genome for the species is the GenBank assembly GCA_005879775.1. The GC content of the type genome is 69.36 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Adsecaria gen. nov.

Candidatus Adsecaria (NL. fem. n. *Adsecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-167*. The type species for the genus is *Candidatus* Adsecaria horomitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

QHBO01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefariaceae.

Description of *Candidatus* Adsecaria irrevilega sp. nov.

Candidatus Adsecaria irrevilega (NL. fem. n. *irrevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-167 sp013816405*. The type genome for the species is the GenBank assembly GCA_013816405.1. The GC content of the type genome is 67.95 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Adsecella semibigena sp. nov.

Candidatus Adsecella semibigena (NL. fem. n. *semibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-849 sp011333685*. The type genome for the species is the GenBank assembly GCA_011333685.1. The GC content of the type genome is 42.31 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Adsecella gen. nov.

Candidatus Adsecella (NL. fem. n. *Adsecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-849*. The type species for the genus is *Candidatus* Adsecella semibigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-48-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogiaceae.

Description of *Candidatus* Adsecia subadessa sp. nov.

Candidatus Adsecia subadessa (NL. fem. n. *subadessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPGG5 sp001643555*. The type genome for the species is the GenBank

assembly GCA_001643555.1. The GC content of the type genome is 50.52 % and the genome length is 1.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment sample collected at the water-sediment interface from the South Pacific gyre; IODP site U1369".

Description of *Candidatus* Adsecia gen. nov.

Candidatus Adsecia (NL. fem. n. *Adsecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPGG5*. The type species for the genus is *Candidatus* Adsecia subadessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Adsecida scammivita sp. nov.

Candidatus Adsecida scammivita (NL. fem. n. *scammivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAPF01 sp009908425*. The type genome for the species is the GenBank assembly GCA_009908425.1. The GC content of the type genome is 72.04 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Adsecida gen. nov.

Candidatus Adsecida (NL. fem. n. *Adsecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAPF01*. The type species for the genus is *Candidatus* Adsecida scammivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adselana adroticula sp. nov.

Candidatus Adselana adroticula (NL. fem. n. *adroticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WRKJ01 sp009780245*. The type genome for the species is the GenBank assembly GCA_009780245.1. The GC content of the type genome is 43.97 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Adselana gen. nov.

Candidatus Adselana (NL. fem. n. *Adselana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKJ01*. The type species for the genus is *Candidatus* Adselana adroticula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adselana crusmicella sp. nov.

Candidatus Adselana crusmicella (NL. fem. n. *crusmicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKJ01 sp009778135*. The type genome for the species is the GenBank assembly GCA_009778135.1. The GC content of the type genome is 38.97 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Adselaria conopastra sp. nov.

Candidatus Adselaria conopastra (NL. fem. n. *conopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDM01 sp009783465*. The type genome for the species is the GenBank assembly GCA_009783465.1. The GC content of the type genome is 62.38 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Adselaria gen. nov.

Candidatus Adselaria (NL. fem. n. *Adselaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDM01*. The type species for the genus is *Candidatus* Adselaria conopastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Megalanaceae.

Description of *Candidatus* Adselella assifitia sp. nov.

Candidatus Adselella assifitia (NL. fem. n. *assifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B16-G9 sp003650425*. The type genome for the species is the GenBank assembly GCA_003650425.1. The GC content of the type genome is 40.22 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Adselella gen. nov.

Candidatus Adselella (NL. fem. n. *Adselella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B16-G9*. The type species for the genus is *Candidatus* Adselella assifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Adselia delubedo sp. nov.

Candidatus Adselia delubedo (NL. fem. n. *delubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002401295 sp002401295*. The type genome for the species is the GenBank assembly GCA_002401295.1. The GC content of the type genome is 41.73 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Adselia gen. nov.

Candidatus Adselia (NL. fem. n. *Adselia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002401295*. The type species for the genus is *Candidatus* Adselia delubedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

XYD2-FULL-50-16. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicomellaceae.

Description of *Candidatus* Adselida refinousia sp. nov.

Candidatus Adselida refinousia (NL. fem. n. *refinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYR01 sp009692705*. The type genome for the species is the GenBank assembly GCA_009692705.1. The GC content of the type genome is 72.72 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Adselida gen. nov.

Candidatus Adselida (NL. fem. n. *Adselida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYR01*. The type species for the genus is *Candidatus* Adselida refinousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Adselosa cohonago sp. nov.

Candidatus Adselosa cohonago (NL. fem. n. *cohonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *K23-9 sp007741555*. The type genome for the species is the GenBank assembly RS_GCF_007741555.1. The GC content of the type genome is 54.65 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Adselosa gen. nov.

Candidatus Adselosa (NL. fem. n. *Adselosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *K23-9*. The type species for the genus is *Candidatus* Adselosa cohonago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsenana divulitica sp. nov.

Candidatus Adsenana divulitica (NL. fem. n. *divulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6491 sp002436505*. The type genome for the species is the GenBank assembly GCA_002436505.1. The GC content of the type genome is 42.39 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Adsenana gen. nov.

Candidatus Adsenana (NL. fem. n. *Adsenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6491*. The type species for the genus is *Candidatus* Adsenana divulitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Adsenaria acertitoga sp. nov.

Candidatus Adsenaria acertitoga (NL. fem. n. *acertitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHG01 sp013698435*. The type genome for the species is the GenBank assembly GCA_013698435.1. The GC content of the type genome is 68.41 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Adsenaria gen. nov.

Candidatus Adsenaria (NL. fem. n. *Adsenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHG01*. The type species for the genus is *Candidatus* Adsenaria acertitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsenaria calipatio sp. nov.

Candidatus Adsenaria calipatio (NL. fem. n. *calipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHG01 sp013821195*. The type genome for the species is the GenBank assembly GCA_013821195.1. The GC content of the type genome is 68.19 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Adsenaria refinitio sp. nov.

Candidatus Adsenaria refinitio (NL. fem. n. *refinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHG01 sp013697905*. The type genome for the species is the GenBank assembly GCA_013697905.1. The GC content of the type genome is 67.84 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Adsenella decaticella sp. nov.

Candidatus Adsenella decaticella (NL. fem. n. *decaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLM01 sp003564975*. The type genome for the species is the GenBank assembly GCA_003564975.1. The GC content of the type genome is 63.01 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Adsenella gen. nov.

Candidatus Adsenella (NL. fem. n. *Adsenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLM01*. The type species for the genus is *Candidatus* Adsenella decaticella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsenella lapicastra sp. nov.

Candidatus Adsenella lapicastra (NL. fem. n. *lapicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLM01 sp007134055*. The type genome for the species is the GenBank assembly GCA_007134055.1. The GC content of the type genome is 65.31 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Adsenia colubitia sp. nov.

Candidatus Adsenia colubitia (NL. fem. n. *colubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCYV01 sp013290025*. The type genome for the species is the GenBank assembly GCA_013290025.1. The GC content of the type genome is 56.4 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Adsenia gen. nov.

Candidatus Adsenia (NL. fem. n. *Adsenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCYV01*. The type species for the genus is *Candidatus* Adsenia colubitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsenida optumibra sp. nov.

Candidatus Adsenida optumibra (NL. fem. n. *optumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQWN01 sp009785325*. The type genome for the species is the GenBank assembly GCA_009785325.1. The GC content of the type genome is 48.29 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Adsenida gen. nov.

Candidatus Adsenida (NL. fem. n. *Adsenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQWN01*. The type species for the genus is *Candidatus* Adsenida

optumibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsenosa incenivita sp. nov.

Candidatus Adsenosa incenivita (NL. fem. n. *incenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECY01 sp007693785*. The type genome for the species is the GenBank assembly GCA_007693785.1. The GC content of the type genome is 69.36 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Adsenosa gen. nov.

Candidatus Adsenosa (NL. fem. n. *Adsenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECY01*. The type species for the genus is *Candidatus* Adsenosa incenivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Adsenula arrabimonas sp. nov.

Candidatus Adsenula arrabimonas (NL. fem. n. *arrabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7951 sp003511785*. The type genome for the species is the GenBank assembly GCA_003511785.1. The GC content of the type genome is 67.6 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Adsenula gen. nov.

Candidatus Adsenula (NL. fem. n. *Adsenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7951*. The type species for the genus is *Candidatus* Adsenula arrabimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsesana exforitio sp. nov.

Candidatus Adsesana exforitio (NL. fem. n. *exforitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11403 sp002423125*. The type genome for the species is the GenBank assembly GCA_002423125.1. The GC content of the type genome is 41.79 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Adsesana gen. nov.

Candidatus Adsesana (NL. fem. n. *Adsesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11403*. The type species for the genus is *Candidatus* Adsesana exforitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsesella armiciforma sp. nov.

Candidatus Adsesella armiciforma (NL. fem. n. *armiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-51-16 sp001796785*. The type genome for the species is the GenBank assembly GCA_001796785.1. The GC content of the type genome is 51.17 % and the genome length is 2.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Adsesella gen. nov.

Candidatus Adsesella (NL. fem. n. *Adsesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-51-16*. The type species for the genus is *Candidatus* Adsesella armiciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family

EnvOPS12. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Adsesosa diminitudo sp. nov.

Candidatus Adsesosa diminitudo (NL. fem. n. *diminitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUBZ01 sp012960035*. The type genome for the species is the GenBank assembly GCA_012960035.1. The GC content of the type genome is 59.27 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Adsesosa gen. nov.

Candidatus Adsesosa (NL. fem. n. *Adsesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUBZ01*. The type species for the genus is *Candidatus* Adsesosa diminitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4427*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapiaceae.

Description of *Candidatus* Adsesula monopitica sp. nov.

Candidatus Adsesula monopitica (NL. fem. n. *monopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACXFF01 sp902766805*. The type genome for the species is the GenBank assembly GCA_902766805.1. The GC content of the type genome is 66.27 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Adsesula gen. nov.

Candidatus Adsesula (NL. fem. n. *Adsesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACXFF01*. The type species for the genus is *Candidatus* Adsesula monopitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsibana ambacastra sp. nov.

Candidatus Adsibana ambacastra (NL. fem. n. *ambacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG12 sp003222235*. The type genome for the species is the GenBank assembly GCA_003222235.1. The GC content of the type genome is 68.81 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Adsibana gen. nov.

Candidatus Adsibana (NL. fem. n. *Adsibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG12*. The type species for the genus is *Candidatus* Adsibana ambacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Adsibaria ossicetta sp. nov.

Candidatus Adsibaria ossicetta (NL. fem. n. *ossicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G105 sp004213235*. The type genome for the species is the GenBank assembly GCA_004213235.1. The GC content of the type genome is 54.44 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Adsibaria gen. nov.

Candidatus Adsibaria (NL. fem. n. *Adsibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G105*. The type species for the genus is *Candidatus* Adsibaria ossicetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsibella arrabilega sp. nov.

Candidatus Adsibella arrabilega (NL. fem. n. *arrabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-26 sp003233235*. The type genome for the species is the GenBank assembly GCA_003233235.1. The GC content of the type genome is 50.99 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Adsibella gen. nov.

Candidatus Adsibella (NL. fem. n. *Adsibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-26*. The type species for the genus is *Candidatus* Adsibella arrabilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsibia rinocibula sp. nov.

Candidatus Adsibia rinocibula (NL. fem. n. *rinocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDAE01 sp013695595*. The type genome for the species is the GenBank assembly GCA_013695595.1. The GC content of the type genome is 49.82 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Adsibia gen. nov.

Candidatus Adsibia (NL. fem. n. *Adsibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDAE01*. The type species for the genus is *Candidatus* Adsibia rinocibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsibida butubisca sp. nov.

Candidatus Adsibida butubisca (NL. fem. n. *butubisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXRN01 sp012270665*. The type genome for the species is the GenBank assembly GCA_012270665.1. The GC content of the type genome is 58.29 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Adsibida gen. nov.

Candidatus Adsibida (NL. fem. n. *Adsibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXRN01*. The type species for the genus is *Candidatus* Adsibida butubisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Adsibida dicanitica sp. nov.

Candidatus Adsibida dicanitica (NL. fem. n. *dicanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXRN01 sp009838465*. The type genome for the species is the GenBank assembly GCA_009838465.1. The GC content of the type genome is 58.33 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Adsicana solifessa sp. nov.

Candidatus Adsicana solifessa (NL. fem. n. *solifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RR4-56 sp011044155*. The type genome for the species is the GenBank assembly RS_GCF_011044155.1. The GC content of the type genome is 65.87 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Adsicana gen. nov.

Candidatus Adsicana (NL. fem. n. *Adsicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RR4-56*. The type species for the genus is *Candidatus* Adsicana solifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsicaria detepitia sp. nov.

Candidatus Adsicaria detepitia (NL. fem. n. *detepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1405 sp002305685*. The type genome for the species is the GenBank assembly GCA_002305685.1. The GC content of the type genome is 52.03 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Adsicaria gen. nov.

Candidatus Adsicaria (NL. fem. n. *Adsicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1405*. The type species for the genus is *Candidatus* Adsicaria detepitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsicella affuledo sp. nov.

Candidatus Adsicella affuledo (NL. fem. n. *affuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *L227-S17 sp013390565*. The type genome for the species is the GenBank assembly GCA_013390565.1. The GC content of the type genome is 46.78 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Adsicella gen. nov.

Candidatus Adsicella (NL. fem. n. *Adsicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *L227-S17*. The type species for the genus is *Candidatus* Adsicella

affuledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *54-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacidaceae.

Description of *Candidatus* Adsicia adpenilega sp. nov.

Candidatus Adsicia adpenilega (NL. fem. n. *adpenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077550 sp902826865*. The type genome for the species is the GenBank assembly GCA_902826865.1. The GC content of the type genome is 67.21 % and the genome length is 8.53 Mbp.

Description of *Candidatus* Adsicia gen. nov.

Candidatus Adsicia (NL. fem. n. *Adsicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077550*. The type species for the genus is *Candidatus* Adsicia adpenilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsicia octopatio sp. nov.

Candidatus Adsicia octopatio (NL. fem. n. *octopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077550 sp001464385*. The type genome for the species is the GenBank assembly GCA_001464385.1. The GC content of the type genome is 72.2 % and the genome length is 10.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Adsicida solifitrix sp. nov.

Candidatus Adsicida solifitrix (NL. fem. n. *solifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Plut-88870 sp012271205*. The type genome for the species is the GenBank assembly GCA_012271205.1. The GC content of the type genome is 56.03 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Adsicida gen. nov.

Candidatus Adsicida (NL. fem. n. *Adsicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Plut-88870*. The type species for the genus is *Candidatus* Adsicida solifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecanaceae.

Description of *Candidatus* Adsicosa deparedo sp. nov.

Candidatus Adsicosa deparedo (NL. fem. n. *deparedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFG01 sp012728335*. The type genome for the species is the GenBank assembly GCA_012728335.1. The GC content of the type genome is 32.24 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Adsicosa gen. nov.

Candidatus Adsicosa (NL. fem. n. *Adsicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFG01*. The type species for the genus is *Candidatus* Adsicosa deparedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsicula cicatentia sp. nov.

Candidatus Adsicula cicatentia (NL. fem. n. *cicatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABDDS01 sp013287465*. The type genome for the species is the GenBank assembly GCA_013287465.1. The GC content of the type genome is 41.17 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Adsicula gen. nov.

Candidatus Adsicula (NL. fem. n. *Adsicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDS01*. The type species for the genus is *Candidatus* Adsicula cicatentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsifana genufetta sp. nov.

Candidatus Adsifana genufetta (NL. fem. n. *genufetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RQZE01 sp003858585*. The type genome for the species is the GenBank assembly RS_GCF_003858585.1. The GC content of the type genome is 32.26 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Adsifana gen. nov.

Candidatus Adsifana (NL. fem. n. *Adsifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RQZE01*. The type species for the genus is *Candidatus* Adsifana genufetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsifaria filifitudo sp. nov.

Candidatus Adsifaria filifitudo (NL. fem. n. *filifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9220 sp003519965*. The type genome for the species is the GenBank assembly GCA_003519965.1. The GC content of the type genome is 58.7 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Adsifaria gen. nov.

Candidatus Adsifaria (NL. fem. n. *Adsifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9220*. The type species for the genus is *Candidatus* Adsifaria filifitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsifia almitibula sp. nov.

Candidatus Adsifia almitibula (NL. fem. n. *almitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-107 sp007117835*. The type genome for the species is the GenBank assembly GCA_007117835.1. The GC content of the type genome is 37.56 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Adsifia gen. nov.

Candidatus Adsifia (NL. fem. n. *Adsifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-107*. The type species for the genus is *Candidatus* Adsifia almitibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsifida apperax sp. nov.

Candidatus Adsifida apperax (NL. fem. n. *apperax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746235 sp002746235*. The type genome for the species is the GenBank assembly GCA_002746235.1. The GC content of the type genome is 54.26 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Adsifida gen. nov.

Candidatus Adsifida (NL. fem. n. *Adsifida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746235*. The type species for the genus is *Candidatus* Adsifida apperax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Adsifula aspililega sp. nov.

Candidatus Adsifula aspililega (NL. fem. n. *aspililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFW01 sp013152655*. The type genome for the species is the GenBank assembly GCA_013152655.1. The GC content of the type genome is 30.63 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Adsifula gen. nov.

Candidatus Adsifula (NL. fem. n. *Adsifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFW01*. The type species for the genus is *Candidatus* Adsifula aspililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B39-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decatidaceae.

Description of *Candidatus* Adsigana vitupitia sp. nov.

Candidatus Adsigana vitupitia (NL. fem. n. *vitupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-16 sp001818695*. The type genome for the species is the GenBank assembly GCA_001818695.1. The GC content of the type genome is 41.03 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Adsigana gen. nov.

Candidatus Adsigana (NL. fem. n. *Adsigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-42-16*. The type species for the genus is *Candidatus* Adsigana vitupitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *02-FULL-45-10c*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delubariaceae.

Description of *Candidatus* Adsigaria adsudastra sp. nov.

Candidatus Adsigaria adsudastra (NL. fem. n. *adsudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGDT01 sp009918525*. The type genome for the species is the GenBank assembly GCA_009918525.1. The GC content of the type genome is 55.14 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Adsigaria gen. nov.

Candidatus Adsigaria (NL. fem. n. *Adsigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGDT01*. The type species for the genus is *Candidatus* Adsigaria adsudastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsigella cinipentia sp. nov.

Candidatus Adsigella cinipentia (NL. fem. n. *cinipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTW01 sp012517955*. The type genome for the species is the GenBank assembly GCA_012517955.1. The GC content of the type genome is 46.13 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Adsigella gen. nov.

Candidatus Adsigella (NL. fem. n. *Adsigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTW01*. The type species for the genus is *Candidatus* Adsigella cinipentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-95*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponidaceae.

Description of *Candidatus* Adsigia adnecibra sp. nov.

Candidatus Adsigia adnecibra (NL. fem. n. *adnecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11257 sp902773305*. The type genome for the species is the GenBank assembly GCA_902773305.1. The GC content of the type genome is 54.12 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Adsigia gen. nov.

Candidatus Adsigia (NL. fem. n. *Adsigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11257*. The type species for the genus is *Candidatus* Adsigia adnecibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Adsigia colubugo sp. nov.

Candidatus Adsigia colubugo (NL. fem. n. *colubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11257 sp902767355*. The type genome for the species is the GenBank assembly GCA_902767355.1. The GC content of the type genome is 56.21 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Adsigia inergago sp. nov.

Candidatus Adsigia inergago (NL. fem. n. *inergago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11257 sp012513425*. The type genome for the species is the GenBank assembly GCA_012513425.1. The GC content of the type genome is 40.02 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Adsigida linigago sp. nov.

Candidatus Adsigida linigago (NL. fem. n. *linigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DROE01 sp011322005*. The type genome for the species is the GenBank assembly GCA_011322005.1. The GC content of the type genome is 57.15 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Adsigida gen. nov.

Candidatus Adsigida (NL. fem. n. *Adsigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DROE01*. The type species for the genus is *Candidatus* Adsigida linigago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsigosa penurifica sp. nov.

Candidatus Adsigosa penurifica (NL. fem. n. *penurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLX01 sp005808505*. The type genome for the species is the GenBank assembly GCA_005808505.1. The GC content of the type genome is 52.81 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Adsigosa gen. nov.

Candidatus Adsigosa (NL. fem. n. *Adsigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYLX01*. The type species for the genus is *Candidatus* Adsigosa penurifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsigula repudastra sp. nov.

Candidatus Adsigula repudastra (NL. fem. n. *repudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLMZ01 sp009726095*. The type genome for the species is the GenBank assembly GCA_009726095.1. The GC content of the type genome is 65.69 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Adsigula gen. nov.

Candidatus Adsigula (NL. fem. n. *Adsigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLMZ01*. The type species for the genus is *Candidatus* Adsigula repudastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsocana tibicitia sp. nov.

Candidatus Adsocana tibicitia (NL. fem. n. *tibicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPG01 sp011046725*. The type genome for the species is the GenBank assembly GCA_011046725.1. The GC content of the type genome is 71.58 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Adsocana gen. nov.

Candidatus Adsocana (NL. fem. n. *Adsocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPG01*. The type species for the genus is *Candidatus* Adsocana

tibicitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsocaria delapilenta sp. nov.

Candidatus Adsocaria delapilenta (NL. fem. n. *delapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O-77 sp013177315*. The type genome for the species is the GenBank assembly RS_GCF_013177315.1. The GC content of the type genome is 56.38 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Adsocaria gen. nov.

Candidatus Adsocaria (NL. fem. n. *Adsocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O-77*. The type species for the genus is *Candidatus* Adsocaria delapilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsocaria omniniforma sp. nov.

Candidatus Adsocaria omniniforma (NL. fem. n. *omniniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O-77 sp003695655*. The type genome for the species is the GenBank assembly GCA_003695655.1. The GC content of the type genome is 55.78 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Adsocaria thessetta sp. nov.

Candidatus Adsocaria thessetta (NL. fem. n. *thessetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O-77 sp001548395*. The type genome for the species is the GenBank assembly RS_GCF_001548395.1. The GC content of the type genome is 55.93 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Adsocella gabinugo sp. nov.

Candidatus Adsocella gabinugo (NL. fem. n. *gabinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBE01 sp013695075*. The type genome for the species is the GenBank assembly GCA_013695075.1. The GC content of the type genome is 69.16 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Adsocella gen. nov.

Candidatus Adsocella (NL. fem. n. *Adsocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBE01*. The type species for the genus is *Candidatus* Adsocella gabinugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Adsocida cilotibra sp. nov.

Candidatus Adsocida cilotibra (NL. fem. n. *cilotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *45385 sp002156385*. The type genome for the species is the GenBank assembly RS_GCF_002156385.1. The GC content of the type genome is 38.13 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Adsocida gen. nov.

Candidatus Adsocida (NL. fem. n. *Adsocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *45385*. The type species for the genus is *Candidatus* Adsocida cilotibra .

According to GTDB R06-RS202, this genus belongs to the family _D.

Description of *Candidatus* Adsocida tomogitrix sp. nov.

Candidatus Adsocida tomogitrix (NL. fem. n. *tomogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *45385 sp002797395*. The type genome for the species is the GenBank assembly RS_GCF_002797395.1. The GC content of the type genome is 37.82 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Adsocosa optumentia sp. nov.

Candidatus Adsocosa optumentia (NL. fem. n. *optumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722955 sp002722955*. The type genome for the species is the GenBank assembly GCA_002722955.1. The GC content of the type genome is 53.47 % and the genome length is 7.1 Mbp.

Description of *Candidatus* Adsocosa gen. nov.

Candidatus Adsocosa (NL. fem. n. *Adsocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722955*. The type species for the genus is *Candidatus* Adsocosa optumentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsocula conamilenta sp. nov.

Candidatus Adsocula conamilenta (NL. fem. n. *conamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSM01 sp009692115*. The type genome for the species is the GenBank assembly GCA_009692115.1. The GC content of the type genome is 65.65 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Adsocula gen. nov.

Candidatus Adsocula (NL. fem. n. *Adsocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSM01*. The type species for the genus is *Candidatus* Adsocula conamilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Adsocula fatifimonas sp. nov.

Candidatus Adsocula fatifimonas (NL. fem. n. *fatifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSM01 sp902826755*. The type genome for the species is the GenBank assembly GCA_902826755.1. The GC content of the type genome is 68.4 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Adsocula homulessa sp. nov.

Candidatus Adsocula homulessa (NL. fem. n. *homulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSM01 sp013140635*. The type genome for the species is the GenBank assembly GCA_013140635.1. The GC content of the type genome is 66.39 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Adsucana panopitrix sp. nov.

Candidatus Adsucana panopitrix (NL. fem. n. *panopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSY01 sp011330955*. The type genome for the species is the GenBank assembly GCA_011330955.1. The GC content of the type genome is 66.13 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Adsucana gen. nov.

Candidatus Adsucana (NL. fem. n. *Adsucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DSSY01*. The type species for the genus is *Candidatus* Adsucana panopitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsucaria citipatica sp. nov.

Candidatus Adsucaria citipatica (NL. fem. n. *citipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECQ01 sp007693965*. The type genome for the species is the GenBank assembly GCA_007693965.1. The GC content of the type genome is 65.8 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Adsucaria gen. nov.

Candidatus Adsucaria (NL. fem. n. *Adsucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECQ01*. The type species for the genus is *Candidatus* Adsucaria citipatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Adsucida melilugo sp. nov.

Candidatus Adsucida melilugo (NL. fem. n. *melilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEXC01 sp009391225*. The type genome for the species is the GenBank assembly GCA_009391225.1. The GC content of the type genome is 52.42 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Adsucida gen. nov.

Candidatus Adsucida (NL. fem. n. *Adsucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEXC01*. The type species for the genus is *Candidatus* Adsucida

melilugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Terebanaceae.

Description of *Candidatus* Adsucosa grallitia sp. nov.

Candidatus Adsucosa grallitia (NL. fem. n. *grallitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSOQ01 sp013216195*. The type genome for the species is the GenBank assembly GCA_013216195.1. The GC content of the type genome is 46.31 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Adsucosa gen. nov.

Candidatus Adsucosa (NL. fem. n. *Adsucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSOQ01*. The type species for the genus is *Candidatus* Adsucosa grallitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1609*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifanaceae.

Description of *Candidatus* Adsucula adsibago sp. nov.

Candidatus Adsucula adsibago (NL. fem. n. *adsibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-38-10 sp000992305*. The type genome for the species is the GenBank assembly GCA_000992305.1. The GC content of the type genome is 38.28 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Adsucula gen. nov.

Candidatus Adsucula (NL. fem. n. *Adsucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-38-10*. The type species for the genus is *Candidatus* Adsucula adsibago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RVW-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpanaceae.

Description of *Candidatus* Adsudana abindicula sp. nov.

Candidatus Adsudana abindicula (NL. fem. n. *abindicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFZ01 sp009778655*. The type genome for the species is the GenBank assembly GCA_009778655.1. The GC content of the type genome is 40.51 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Adsudana gen. nov.

Candidatus Adsudana (NL. fem. n. *Adsudana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFZ01*. The type species for the genus is *Candidatus* Adsudana abindicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsudia acrolicula sp. nov.

Candidatus Adsudia acrolicula (NL. fem. n. *acrolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1141 sp002816455*. The type genome for the species is the GenBank assembly GCA_002816455.1. The GC content of the type genome is 55.72 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Adsudia gen. nov.

Candidatus Adsudia (NL. fem. n. *Adsudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1141*. The type species for the genus is *Candidatus* Adsudia acrolicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Adsudia adcomago sp. nov.

Candidatus Adsudia adcomago (NL. fem. n. *adcomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1141 sp002311385*. The type genome for the species is the GenBank assembly GCA_002311385.1. The GC content of the type genome is 54.74 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Adsudia nehalugo sp. nov.

Candidatus Adsudia nehalugo (NL. fem. n. *nehalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1141 sp002817055*. The type genome for the species is the GenBank assembly GCA_002817055.1. The GC content of the type genome is 54.84 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Adsudida decunitoga sp. nov.

Candidatus Adsudida decunitoga (NL. fem. n. *decunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHX01 sp013151655*. The type genome for the species is the GenBank assembly GCA_013151655.1. The GC content of the type genome is 60.12 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Adsudida gen. nov.

Candidatus Adsudida (NL. fem. n. *Adsudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHX01*. The type species for the genus is *Candidatus* Adsudida

decunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Adsulana invinessa sp. nov.

Candidatus Adsulana invinessa (NL. fem. n. *invinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLX01 sp014377535*. The type genome for the species is the GenBank assembly GCA_014377535.1. The GC content of the type genome is 65.74 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Adsulana gen. nov.

Candidatus Adsulana (NL. fem. n. *Adsulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMLX01*. The type species for the genus is *Candidatus* Adsulana invinessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsulana lenimedo sp. nov.

Candidatus Adsulana lenimedo (NL. fem. n. *lenimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLX01 sp014379355*. The type genome for the species is the GenBank assembly GCA_014379355.1. The GC content of the type genome is 65.35 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Adsularia inhumedo sp. nov.

Candidatus Adsularia inhumedo (NL. fem. n. *inhumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1359 sp002306385*. The type genome for the species is the

GenBank assembly GCA_002306385.1. The GC content of the type genome is 38.67 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Adsularia gen. nov.

Candidatus Adsularia (NL. fem. n. *Adsularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1359*. The type species for the genus is *Candidatus* Adsularia inhumedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuriaceae.

Description of *Candidatus* Adsulella scintitica sp. nov.

Candidatus Adsulella scintitica (NL. fem. n. *scintitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-Chloro-G3 sp002816715*. The type genome for the species is the GenBank assembly GCA_002816715.1. The GC content of the type genome is 56.13 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Adsulella gen. nov.

Candidatus Adsulella (NL. fem. n. *Adsulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Casp-Chloro-G3*. The type species for the genus is *Candidatus* Adsulella scintitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Adsulosa carunago sp. nov.

Candidatus Adsulosa carunago (NL. fem. n. *carunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5774 sp002418625*. The type genome for the species is the GenBank assembly GCA_002418625.1. The GC content of the type genome is 49.13 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Adsulosa gen. nov.

Candidatus Adsulosa (NL. fem. n. *Adsulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5774*. The type species for the genus is *Candidatus* Adsulosa carunago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsulula lupanicula sp. nov.

Candidatus Adsulula lupanicula (NL. fem. n. *lupanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-3 sp005893225*. The type genome for the species is the GenBank assembly GCA_005893225.1. The GC content of the type genome is 69.79 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Adsulula gen. nov.

Candidatus Adsulula (NL. fem. n. *Adsulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-3*. The type species for the genus is *Candidatus* Adsulula lupanicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Adsusaria diminedo sp. nov.

Candidatus Adsusaria diminedo (NL. fem. n. *diminedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1112 sp003136475*. The type genome for the species is the

GenBank assembly GCA_003136475.1. The GC content of the type genome is 46.03 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Adsusaria gen. nov.

Candidatus Adsusaria (NL. fem. n. *Adsusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1112*. The type species for the genus is *Candidatus* Adsusaria diminedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-1112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Adsusariaceae.

Description of *Candidatus* Adsusariaceae fam. nov.

Candidatus Adsusariaceae (NL. fem. n. *Adsusariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bog-1112.* The type genus for the taxon is *Candidatus* Adsusaria .

According to GTDB R06-RS202, this family belongs to the order *Oligoflexales*.

Description of *Candidatus* Adsusella ascenibra sp. nov.

Candidatus Adsusella ascenibra (NL. fem. n. *ascenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B79-G16 sp003647645*. The type genome for the species is the GenBank assembly GCA_003647645.1. The GC content of the type genome is 43.04 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Adsusella gen. nov.

Candidatus Adsusella (NL. fem. n. *Adsusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B79-G16*. The type species for the genus is *Candidatus* Adsusella ascenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

Kazan-3B-28. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decitellaceae.

Description of *Candidatus* Adsusia artifibula sp. nov.

Candidatus Adsusia artifibula (NL. fem. n. *artifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pan189 sp007744515*. The type genome for the species is the GenBank assembly RS_GCF_007744515.1. The GC content of the type genome is 58.58 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Adsusia gen. nov.

Candidatus Adsusia (NL. fem. n. *Adsusia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pan189*. The type species for the genus is *Candidatus* Adsusia artifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsusia desonitudo sp. nov.

Candidatus Adsusia desonitudo (NL. fem. n. *desonitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pan189 sp007745435*. The type genome for the species is the GenBank assembly RS_GCF_007745435.1. The GC content of the type genome is 53.9 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Adsusosa afranicella sp. nov.

Candidatus Adsusosa afranicella (NL. fem. n. *afranicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-213 sp007121565*. The type genome for the species is the GenBank assembly GCA_007121565.1. The GC content of the type genome is 57.33 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Adsusosa gen. nov.

Candidatus Adsusosa (NL. fem. n. *Adsusosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-213*. The type species for the genus is *Candidatus* Adsusosa afranicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adsusosa agrimisca sp. nov.

Candidatus Adsusosa agrimisca (NL. fem. n. *agrimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-213 sp012519365*. The type genome for the species is the GenBank assembly GCA_012519365.1. The GC content of the type genome is 53.59 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Adsusosa annicatica sp. nov.

Candidatus Adsusosa annicatica (NL. fem. n. *annicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-213 sp012729675*. The type genome for the species is the GenBank assembly GCA_012729675.1. The GC content of the type genome is 54.88 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Adsusosa bicipifica sp. nov.

Candidatus Adsusosa bicipifica (NL. fem. n. *bicipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-213 sp003567095*. The type genome for the species is the GenBank assembly GCA_003567095.1. The GC content of the type genome is 56.33 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Adsusosa thapsilega sp. nov.

Candidatus Adsusosa thapsilega (NL. fem. n. *thapsilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-213 sp011048645*. The type genome for the species is the GenBank assembly GCA_011048645.1. The GC content of the type genome is 55.27 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Adsusula vilitilega sp. nov.

Candidatus Adsusula vilitilega (NL. fem. n. *vilitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1460 sp003159675*. The type genome for the species is the GenBank assembly GCA_003159675.1. The GC content of the type genome is 59.76 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Adsusula gen. nov.

Candidatus Adsusula (NL. fem. n. *Adsusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1460*. The type species for the genus is *Candidatus* Adsusula vilitilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3939*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceromidaceae.

Description of *Candidatus* Adtacana ancepifica sp. nov.

Candidatus Adtacana ancepifica (NL. fem. n. *ancepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1183 sp002309885*. The type genome for the species is the GenBank assembly GCA_002309885.1. The GC content of the type genome is 41.58 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Adtacana gen. nov.

Candidatus Adtacana (NL. fem. n. *Adtacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1183*. The type species for the genus is *Candidatus* Adtacana ancepifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9783*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisanaceae.

Description of *Candidatus* Adtacella favilitas sp. nov.

Candidatus Adtacella favilitas (NL. fem. n. *favilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVB01 sp013044165*. The type genome for the species is the GenBank assembly GCA_013044165.1. The GC content of the type genome is 56.23 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Adtacella gen. nov.

Candidatus Adtacella (NL. fem. n. *Adtacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVB01*. The type species for the genus is *Candidatus* Adtacella favilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludidaceae.

Description of *Candidatus* Adtacia absuratica sp. nov.

Candidatus Adtacia absuratica (NL. fem. n. *absuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUN01 sp009782085*. The type genome for the species is the GenBank assembly GCA_009782085.1. The GC content of the type genome is 59.44 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Adtacia gen. nov.

Candidatus Adtacia (NL. fem. n. *Adtacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQUN01*. The type species for the genus is *Candidatus* Adtacia absuratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Adtacosa adsibitio sp. nov.

Candidatus Adtacosa adsibitio (NL. fem. n. *adsibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVZ01 sp012516935*. The type genome for the species is the GenBank assembly GCA_012516935.1. The GC content of the type genome is 68.38 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Adtacosa gen. nov.

Candidatus Adtacosa (NL. fem. n. *Adtacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVZ01*. The type species for the genus is *Candidatus* Adtacosa adsibitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtagana optabitrix sp. nov.

Candidatus Adtagana optabitrix (NL. fem. n. *optabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5069 sp002415895*. The type genome for the species is the GenBank assembly GCA_002415895.1. The GC content of the type genome is 62.1 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Adtagana gen. nov.

Candidatus Adtagana (NL. fem. n. *Adtagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5069*. The type species for the genus is *Candidatus* Adtagana optabitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtagaria irrefitudo sp. nov.

Candidatus Adtagaria irrefitudo (NL. fem. n. *irrefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748155 sp002748155*. The type genome for the species is the GenBank assembly GCA_002748155.1. The GC content of the type genome is 66.77 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Adtagaria gen. nov.

Candidatus Adtagaria (NL. fem. n. *Adtagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748155*. The type species for the genus is *Candidatus* Adtagaria irrefitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtagella casabetta sp. nov.

Candidatus Adtagella casabetta (NL. fem. n. *casabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWG01 sp902806335*. The type genome for the species is the GenBank assembly GCA_902806335.1. The GC content of the type genome is 73.35 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Adtagella gen. nov.

Candidatus Adtagella (NL. fem. n. *Adtagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWG01*. The type species for the genus is *Candidatus* Adtagella casabetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Adtagida badititica sp. nov.

Candidatus Adtagida badititica (NL. fem. n. *badititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WOFB19 sp011620375*. The type genome for the species is the GenBank assembly GCA_011620375.1. The GC content of the type genome is 36.57 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Adtagida gen. nov.

Candidatus Adtagida (NL. fem. n. *Adtagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WOFB19*. The type species for the genus is *Candidatus* Adtagida badititica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtagosa expalitica sp. nov.

Candidatus Adtagosa expalitica (NL. fem. n. *expalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2729595 sp002729595*. The type genome for the species is the GenBank assembly GCA_002729595.1. The GC content of the type genome is 35.24 % and the genome length is 7.99 Mbp.

Description of *Candidatus* Adtagosa gen. nov.

Candidatus Adtagosa (NL. fem. n. *Adtagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2729595*. The type species for the genus is *Candidatus* Adtagosa expalitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtagula adtumilenta sp. nov.

Candidatus Adtagula adtumilenta (NL. fem. n. *adtumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1428 sp002329335*. The type genome for the species is the GenBank assembly GCA_002329335.1. The GC content of the type genome is 56.11 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Adtagula gen. nov.

Candidatus Adtagula (NL. fem. n. *Adtagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1428*. The type species for the genus is *Candidatus* Adtagula adtumilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1750*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabulaceae.

Description of *Candidatus* Adtemana triscitica sp. nov.

Candidatus Adtemana triscitica (NL. fem. n. *triscitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BBFE01 sp001313085*. The type genome for the species is the GenBank assembly GCA_001313085.1. The GC content of the type genome is 49.88 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Adtemana gen. nov.

Candidatus Adtemana (NL. fem. n. *Adtemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BBFE01*. The type species for the genus is *Candidatus* Adtemana triscitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtemella arvecigena sp. nov.

Candidatus Adtemella arvecigena (NL. fem. n. *arvecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED220 sp902514625*. The type genome for the species is the GenBank assembly GCA_902514625.1. The GC content of the type genome is 28.32 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Adtemella gen. nov.

Candidatus Adtemella (NL. fem. n. *Adtemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED220*. The type species for the genus is *Candidatus* Adtemella arvecigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtemella metucitura sp. nov.

Candidatus Adtemella metucitura (NL. fem. n. *metucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED220 sp002169155*. The type genome for the species is the GenBank assembly GCA_002169155.2. The GC content of the type genome is 28.68 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Adtemella taraxitica sp. nov.

Candidatus Adtemella taraxitica (NL. fem. n. *taraxitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED220 sp002702875*. The type genome for the species is the GenBank assembly GCA_002702875.1. The GC content of the type genome is 28.65 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Adtemia ardififica sp. nov.

Candidatus Adtemia ardififica (NL. fem. n. *ardififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711925 sp002711925*. The type genome for the species is the GenBank assembly GCA_002711925.1. The GC content of the type genome is 33.74 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Adtemia gen. nov.

Candidatus Adtemia (NL. fem. n. *Adtemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711925*. The type species for the genus is *Candidatus* Adtemia ardififica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-1112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Adsusariaceae.

Description of *Candidatus* Adtemida ignomilenta sp. nov.

Candidatus Adtemida ignomilenta (NL. fem. n. *ignomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-54-12 sp001795535*. The type genome for the species is the GenBank assembly GCA_001795535.1. The GC content of the type genome is 54.24 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Adtemida gen. nov.

Candidatus Adtemida (NL. fem. n. *Adtemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-54-12*. The type species for the genus is *Candidatus* Adtemida ignomilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifellaceae.

Description of *Candidatus* Adtemosa cinipatio sp. nov.

Candidatus Adtemosa cinipatio (NL. fem. n. *cinipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1247 sp003136975*. The type genome for the species is the GenBank assembly GCA_003136975.1. The GC content of the type genome is 59.99 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Adtemosa gen. nov.

Candidatus Adtemosa (NL. fem. n. *Adtemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1247*. The type species for the genus is *Candidatus* Adtemosa cinipatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtemosa cosigitica sp. nov.

Candidatus Adtemosa cosigitica (NL. fem. n. *cosigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1247 sp003155795*. The type genome for the species is the GenBank assembly GCA_003155795.1. The GC content of the type genome is 59.14 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Adtemula ammuritica sp. nov.

Candidatus Adtemula ammuritica (NL. fem. n. *ammuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVZ01 sp011327785*. The type genome for the species is the GenBank assembly GCA_011327785.1. The GC content of the type genome is 66.46 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Adtemula gen. nov.

Candidatus Adtemula (NL. fem. n. *Adtemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVZ01*. The type species for the genus is *Candidatus* Adtemula ammuritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J093*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelosaceae.

Description of *Candidatus* Adtenella insinitrix sp. nov.

Candidatus Adtenella insinitrix (NL. fem. n. *insinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIUL01 sp902589825*. The type genome for the species is the GenBank assembly GCA_902589825.1. The GC content of the type genome is 53.64 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Adtenella gen. nov.

Candidatus Adtenella (NL. fem. n. *Adtenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIUL01*. The type species for the genus is *Candidatus* Adtenella insinitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Adtenia giganibra sp. nov.

Candidatus Adtenia giganibra (NL. fem. n. *giganibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJL01 sp013002505*. The type genome for the species is the GenBank assembly GCA_013002505.1. The GC content of the type genome is 58.25 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Adtenia gen. nov.

Candidatus Adtenia (NL. fem. n. *Adtenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJL01*. The type species for the genus is *Candidatus* Adtenia giganibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Adtenula arcifitia sp. nov.

Candidatus Adtenula arcifitia (NL. fem. n. *arcifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1185 sp003165595*. The type genome for the species is the GenBank assembly GCA_003165595.1. The GC content of the type genome is 55.09 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Adtenula gen. nov.

Candidatus Adtenula (NL. fem. n. *Adtenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1185*. The type species for the genus is *Candidatus* Adtenula arcifitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtesana cepuratio sp. nov.

Candidatus Adtesana cepuratio (NL. fem. n. *cepuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTV01 sp004298345*. The type genome for the species is the GenBank assembly GCA_004298345.1. The GC content of the type genome is 44.68 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Adtesana gen. nov.

Candidatus Adtesana (NL. fem. n. *Adtesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTV01*. The type species for the genus is *Candidatus* Adtesana cepuratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colutulaceae.

Description of *Candidatus* Adtesaria ficedilenta sp. nov.

Candidatus Adtesaria ficedilenta (NL. fem. n. *ficedilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZU01 sp013695835*. The type genome for the species is the GenBank assembly GCA_013695835.1. The GC content of the type genome is 65.64 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Adtesaria gen. nov.

Candidatus Adtesaria (NL. fem. n. *Adtesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZU01*. The type species for the genus is *Candidatus* Adtesaria ficedilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Adtesella aminnicula sp. nov.

Candidatus Adtesella aminnicula (NL. fem. n. *aminnicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSE01 sp012031925*. The type genome for the species is the GenBank assembly GCA_012031925.1. The GC content of the type genome is 33.28 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Adtesella gen. nov.

Candidatus Adtesella (NL. fem. n. *Adtesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSE01*. The type species for the genus is *Candidatus* Adtesella aminnicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficedosaceae.

Description of *Candidatus* Adtesia adpositia sp. nov.

Candidatus Adtesia adpositia (NL. fem. n. *adpositia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-39-10 sp000993205*. The type genome for the species is the GenBank assembly GCA_000993205.1. The GC content of the type genome is 39.31 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Adtesia gen. nov.

Candidatus Adtesia (NL. fem. n. *Adtesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-39-10*. The type species for the genus is *Candidatus* Adtesia adpositia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Adtesida capabitas sp. nov.

Candidatus Adtesida capabitas (NL. fem. n. *capabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJW01 sp012519835*. The type genome for the species is the GenBank assembly GCA_012519835.1. The GC content of the type genome is 38.8 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Adtesida gen. nov.

Candidatus Adtesida (NL. fem. n. *Adtesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZJW01*. The type species for the genus is *Candidatus* Adtesida capabitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtesida lanigisca sp. nov.

Candidatus Adtesida lanigisca (NL. fem. n. *lanigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJW01 sp012800145*. The type genome for the species is the GenBank assembly GCA_012800145.1. The GC content of the type genome is 37.97 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Adtilaria assubatio sp. nov.

Candidatus Adtilaria assubatio (NL. fem. n. *assubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-366 sp003165315*. The type genome for the species is the GenBank assembly GCA_003165315.1. The GC content of the type genome is 56.45 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Adtilaria gen. nov.

Candidatus Adtilaria (NL. fem. n. *Adtilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-366*. The type species for the genus is *Candidatus* Adtilaria assubatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Adtilaria vicecitura sp. nov.

Candidatus Adtilaria vicecitura (NL. fem. n. *vicecitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-366 sp003165615*. The type genome for the species is the GenBank assembly GCA_003165615.1. The GC content of the type genome is 58.14 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Adtilella abagmitrix sp. nov.

Candidatus Adtilella abagmitrix (NL. fem. n. *abagmitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGE01 sp007376395*. The type genome for the species is the GenBank assembly GCA_007376395.1. The GC content of the type genome is 41.37 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Adtilella gen. nov.

Candidatus Adtilella (NL. fem. n. *Adtilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGE01*. The type species for the genus is *Candidatus* Adtilella abagmitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulanaceae.

Description of *Candidatus* Adtilia munimitrix sp. nov.

Candidatus Adtilia munimitrix (NL. fem. n. *munimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMSV01 sp013791935*. The type genome for the species is the GenBank assembly GCA_013791935.1. The GC content of the type genome is 48.62 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Adtilia gen. nov.

Candidatus Adtilia (NL. fem. n. *Adtilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMSV01*. The type species for the genus is *Candidatus* Adtilia munimitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5616*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasomellaceae.

Description of *Candidatus* Adtilida prospitio sp. nov.

Candidatus Adtilida prospitio (NL. fem. n. *prospitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKZ01 sp007123455*. The type genome for the species is the GenBank assembly GCA_007123455.1. The GC content of the type genome is 64.55 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Adtilida gen. nov.

Candidatus Adtilida (NL. fem. n. *Adtilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKZ01*. The type species for the genus is *Candidatus* Adtilida prospitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLCP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depasariaceae.

Description of *Candidatus* Adtilosa denixilega sp. nov.

Candidatus Adtilosa denixilega (NL. fem. n. *denixilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WC007 sp009762775*. The type genome for the species is the GenBank assembly RS_GCF_009762775.1. The GC content of the type genome is 38.38 % and the genome length is 7.81 Mbp.

Description of *Candidatus* Adtilosa gen. nov.

Candidatus Adtilosa (NL. fem. n. *Adtilosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WC007*. The type species for the genus is *Candidatus* Adtilosa denixilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtilula pinifibra sp. nov.

Candidatus Adtilula pinifibra (NL. fem. n. *pinifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTH01 sp011389985*. The type genome for the species is the GenBank assembly GCA_011389985.1. The GC content of the type genome is 43.77 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Adtilula gen. nov.

Candidatus Adtilula (NL. fem. n. *Adtilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTH01*. The type species for the genus is *Candidatus* Adtilula pinifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Adtolana affulugo sp. nov.

Candidatus Adtolana affulugo (NL. fem. n. *affulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1368 sp012511795*. The type genome for the species is the GenBank assembly GCA_012511795.1. The GC content of the type genome is 42.05 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Adtolana gen. nov.

Candidatus Adtolana (NL. fem. n. *Adtolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1368*. The type species for the genus is *Candidatus* Adtolana affulugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtolana expalibra sp. nov.

Candidatus Adtolana expalibra (NL. fem. n. *expalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1368 sp002305965*. The type genome for the species is the GenBank assembly GCA_002305965.1. The GC content of the type genome is 44.74 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Adtolana semivatio sp. nov.

Candidatus Adtolana semivatio (NL. fem. n. *semivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1368 sp012515055*. The type genome for the species is the GenBank assembly GCA_012515055.1. The GC content of the type genome is 45.69 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Adtolella ectenifica sp. nov.

Candidatus Adtolella ectenifica (NL. fem. n. *ectenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAFZY01 sp900767645*. The type genome for the species is the GenBank assembly RS_GCF_900767645.1. The GC content of the type genome is 41.22 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Adtolella gen. nov.

Candidatus Adtolella (NL. fem. n. *Adtolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAAFZY01*. The type species for the genus is *Candidatus* Adtolella

ectenifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Adtolida carecitio sp. nov.

Candidatus Adtolida carecitio (NL. fem. n. *carecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVR01 sp009785775*. The type genome for the species is the GenBank assembly GCA_009785775.1. The GC content of the type genome is 41.22 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Adtolida gen. nov.

Candidatus Adtolida (NL. fem. n. *Adtolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVR01*. The type species for the genus is *Candidatus* Adtolida carecitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtolula lorarivita sp. nov.

Candidatus Adtolula lorarivita (NL. fem. n. *lorarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMU01 sp009776965*. The type genome for the species is the GenBank assembly GCA_009776965.1. The GC content of the type genome is 46.39 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Adtolula gen. nov.

Candidatus Adtolula (NL. fem. n. *Adtolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMU01*. The type species for the genus is *Candidatus* Adtolula lorarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Adtorella ancipugo sp. nov.

Candidatus Adtorella ancipugo (NL. fem. n. *ancipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6131 sp002435875*. The type genome for the species is the GenBank assembly GCA_002435875.1. The GC content of the type genome is 59.68 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Adtorella gen. nov.

Candidatus Adtorella (NL. fem. n. *Adtorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6131*. The type species for the genus is *Candidatus* Adtorella ancipugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homunulaceae.

Description of *Candidatus* Adtorida lenunousia sp. nov.

Candidatus Adtorida lenunousia (NL. fem. n. *lenunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11864 sp902773415*. The type genome for the species is the GenBank assembly GCA_902773415.1. The GC content of the type genome is 65.77 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Adtorida gen. nov.

Candidatus Adtorida (NL. fem. n. *Adtorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11864*. The type species for the genus is *Candidatus* Adtorida

lenunousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtorosa antacentia sp. nov.

Candidatus Adtorosa antacentia (NL. fem. n. *antacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6147 sp002423185*. The type genome for the species is the GenBank assembly GCA_002423185.1. The GC content of the type genome is 53.45 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Adtorosa gen. nov.

Candidatus Adtorosa (NL. fem. n. *Adtorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6147*. The type species for the genus is *Candidatus* Adtorosa antacentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtorula addubastra sp. nov.

Candidatus Adtorula addubastra (NL. fem. n. *addubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-52 sp003599195*. The type genome for the species is the GenBank assembly GCA_003599195.1. The GC content of the type genome is 57.38 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Adtorula gen. nov.

Candidatus Adtorula (NL. fem. n. *Adtorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-52*. The type species for the genus is *Candidatus* Adtorula addubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

0-14-0-80-60-11. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubanaceae.

Description of *Candidatus* Adtubana nugigitica sp. nov.

Candidatus Adtubana nugigitica (NL. fem. n. *nugigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SDRK01 sp007845205*. The type genome for the species is the GenBank assembly RS_GCF_007845205.1. The GC content of the type genome is 34.0 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Adtubana gen. nov.

Candidatus Adtubana (NL. fem. n. *Adtubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SDRK01*. The type species for the genus is *Candidatus* Adtubana nugigitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtubaria irrefimonia sp. nov.

Candidatus Adtubaria irrefimonia (NL. fem. n. *irrefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNOF01 sp013824645*. The type genome for the species is the GenBank assembly GCA_013824645.1. The GC content of the type genome is 45.36 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Adtubaria gen. nov.

Candidatus Adtubaria (NL. fem. n. *Adtubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNOF01*. The type species for the genus is *Candidatus* Adtubaria irrefimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtubella adpecatica sp. nov.

Candidatus Adtubella adpecatica (NL. fem. n. *adpecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHT01 sp012523915*. The type genome for the species is the GenBank assembly GCA_012523915.1. The GC content of the type genome is 37.52 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adtubella gen. nov.

Candidatus Adtubella (NL. fem. n. *Adtubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHT01*. The type species for the genus is *Candidatus* Adtubella adpecatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtubella homicilega sp. nov.

Candidatus Adtubella homicilega (NL. fem. n. *homicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHT01 sp012735285*. The type genome for the species is the GenBank assembly GCA_012735285.1. The GC content of the type genome is 37.99 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Adtubia inadfatio sp. nov.

Candidatus Adtubia inadfatio (NL. fem. n. *inadfatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-65-8 sp002278985*. The type genome for the species is the GenBank assembly GCA_002278985.1. The GC content of the type genome is 65.4 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Adtubia gen. nov.

Candidatus Adtubia (NL. fem. n. *Adtubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *34-65-8*. The type species for the genus is *Candidatus* Adtubia inadfatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtubida accogousia sp. nov.

Candidatus Adtubida accogousia (NL. fem. n. *accogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3BBIN02 sp013151445*. The type genome for the species is the GenBank assembly GCA_013151445.1. The GC content of the type genome is 60.39 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Adtubida gen. nov.

Candidatus Adtubida (NL. fem. n. *Adtubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3BBIN02*. The type species for the genus is *Candidatus* Adtubida accogousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Adtubida exturousia sp. nov.

Candidatus Adtubida exturousia (NL. fem. n. *exturousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3BBIN02 sp002898115*. The type genome for the species is the GenBank assembly GCA_002898115.1. The GC content of the type genome is 60.34 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Adtubosa conarimonas sp. nov.

Candidatus Adtubosa conarimonas (NL. fem. n. *conarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA940 sp900768115*. The type genome for the species is the GenBank assembly GCA_900768115.1. The GC content of the type genome is 53.49 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Adtubosa gen. nov.

Candidatus Adtubosa (NL. fem. n. *Adtubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA940*. The type species for the genus is *Candidatus* Adtubosa conarimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtubosa irradago sp. nov.

Candidatus Adtubosa irradago (NL. fem. n. *irradago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA940 sp002293535*. The type genome for the species is the GenBank assembly GCA_002293535.1. The GC content of the type genome is 51.72 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Adtubosa legifastra sp. nov.

Candidatus Adtubosa legifastra (NL. fem. n. *legifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA940 sp002293505*. The type genome for the species is the GenBank assembly GCA_002293505.1. The GC content of the type genome is 55.85 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Adtubosa nubifitia sp. nov.

Candidatus Adtubosa nubifitia (NL. fem. n. *nubifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA940 sp002293665*. The type genome for the species is the

GenBank assembly GCA_002293665.1. The GC content of the type genome is 57.77 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Adtubosa vigenitio sp. nov.

Candidatus Adtubosa vigenitio (NL. fem. n. *vigenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA940 sp002293425*. The type genome for the species is the GenBank assembly GCA_002293425.1. The GC content of the type genome is 54.4 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Adtubula illunibula sp. nov.

Candidatus Adtubula illunibula (NL. fem. n. *illunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11139 sp902766265*. The type genome for the species is the GenBank assembly GCA_902766265.1. The GC content of the type genome is 52.26 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Adtubula gen. nov.

Candidatus Adtubula (NL. fem. n. *Adtubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11139*. The type species for the genus is *Candidatus* Adtubula illunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Adtumana telefisca sp. nov.

Candidatus Adtumana telefisca (NL. fem. n. *telefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10426 sp003499525*. The type genome for the species is the GenBank assembly GCA_003499525.1. The GC content of the type genome is 41.69 %

and the genome length is 3.26 Mbp.

Description of *Candidatus* Adtumana gen. nov.

Candidatus Adtumana (NL. fem. n. *Adtumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10426*. The type species for the genus is *Candidatus* Adtumana telefisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtumaria papilago sp. nov.

Candidatus Adtumaria papilago (NL. fem. n. *papilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIL31 sp001468865*. The type genome for the species is the GenBank assembly GCA_001468865.1. The GC content of the type genome is 37.82 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "agricultural soil".

Description of *Candidatus* Adtumaria gen. nov.

Candidatus Adtumaria (NL. fem. n. *Adtumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOIL31*. The type species for the genus is *Candidatus* Adtumaria papilago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtumia susicitio sp. nov.

Candidatus Adtumia susicitio (NL. fem. n. *susicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABXKX01 sp013619035*. The type genome for the species is the GenBank assembly GCA_013619035.1. The GC content of the type genome is 33.41 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Adtumia gen. nov.

Candidatus Adtumia (NL. fem. n. *Adtumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABXKX01*. The type species for the genus is *Candidatus* Adtumia susicitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtumida utricicula sp. nov.

Candidatus Adtumida utricicula (NL. fem. n. *utricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRF01 sp003175865*. The type genome for the species is the GenBank assembly GCA_003175865.1. The GC content of the type genome is 50.85 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Adtumida gen. nov.

Candidatus Adtumida (NL. fem. n. *Adtumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRF01*. The type species for the genus is *Candidatus* Adtumida utricicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adtumosa adessigena sp. nov.

Candidatus Adtumosa adessigena (NL. fem. n. *adessigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISTG01 sp903888345*. The type genome for the species is the GenBank assembly GCA_903888345.1. The GC content of the type genome is 41.46 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Adtumosa gen. nov.

Candidatus Adtumosa (NL. fem. n. *Adtumosa* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISTG01*. The type species for the genus is *Candidatus* Adtumosa adessigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapiaceae.

Description of *Candidatus* Adtumosa bipatitio sp. nov.

Candidatus Adtumosa bipatitio (NL. fem. n. *bipatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISTG01 sp002068915*. The type genome for the species is the GenBank assembly GCA_002068915.1. The GC content of the type genome is 41.4 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Adtumula fideniforma sp. nov.

Candidatus Adtumula fideniforma (NL. fem. n. *fideniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBA01 sp013288885*. The type genome for the species is the GenBank assembly GCA_013288885.1. The GC content of the type genome is 40.53 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Adtumula gen. nov.

Candidatus Adtumula (NL. fem. n. *Adtumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBA01*. The type species for the genus is *Candidatus* Adtumula fideniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advecana adremousia sp. nov.

Candidatus Advecana adremousia (NL. fem. n. *adremousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8202 sp011367685*. The type genome for the species is the GenBank assembly GCA_011367685.1. The GC content of the type genome is 43.28 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Advecana gen. nov.

Candidatus Advecana (NL. fem. n. *Advecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8202*. The type species for the genus is *Candidatus* Advecana adremousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Advecana halucicula sp. nov.

Candidatus Advecana halucicula (NL. fem. n. *halucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8202 sp003521565*. The type genome for the species is the GenBank assembly GCA_003521565.1. The GC content of the type genome is 37.82 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Advecella terebetta sp. nov.

Candidatus Advecella terebetta (NL. fem. n. *terebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPZ01 sp013203565*. The type genome for the species is the GenBank assembly GCA_013203565.1. The GC content of the type genome is 34.82 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Advecella gen. nov.

Candidatus Advecella (NL. fem. n. *Advecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPZ01*. The type species for the genus is *Candidatus* Advecella terebetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Advecia geruniforma sp. nov.

Candidatus Advecia geruniforma (NL. fem. n. *geruniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISSD01 sp903887975*. The type genome for the species is the GenBank assembly GCA_903887975.1. The GC content of the type genome is 41.94 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Advecia gen. nov.

Candidatus Advecia (NL. fem. n. *Advecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISSD01*. The type species for the genus is *Candidatus* Advecia geruniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advecida incucimonas sp. nov.

Candidatus Advecida incucimonas (NL. fem. n. *incucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLZL01 sp003152145*. The type genome for the species is the GenBank assembly GCA_003152145.1. The GC content of the type genome is 56.6 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Advecida gen. nov.

Candidatus Advecida (NL. fem. n. *Advecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PLZL01*. The type species for the genus is *Candidatus* Advecida incucimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11358*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loceliaceae.

Description of *Candidatus* Advecosa ammatatio sp. nov.

Candidatus Advecosa ammatatio (NL. fem. n. *ammatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTON01 sp011389025*. The type genome for the species is the GenBank assembly GCA_011389025.1. The GC content of the type genome is 62.33 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Advecosa gen. nov.

Candidatus Advecosa (NL. fem. n. *Advecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTON01*. The type species for the genus is *Candidatus* Advecosa ammatatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JADDFT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipanaceae.

Description of *Candidatus* Advenella bicalibula sp. nov.

Candidatus Advenella bicalibula (NL. fem. n. *bicalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Advenella sp003533245*. The type genome for the species is the GenBank assembly GCA_003533245.1. The GC content of the type genome is 54.77 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Advenella impigousia sp. nov.

Candidatus Advenella impigousia (NL. fem. n. *impigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Advenella sp012735395*. The type genome for the species is the GenBank assembly GCA_012735395.1. The GC content of the type genome is 49.4 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Advenella lugubedo sp. nov.

Candidatus Advenella lugubedo (NL. fem. n. *lugubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Advenella sp002810445*. The type genome for the species is the GenBank assembly RS_GCF_002810445.1. The GC content of the type genome is 54.3 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Advenella milifitas sp. nov.

Candidatus Advenella milifitas (NL. fem. n. *milifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Advenella sp012923605*. The type genome for the species is the GenBank assembly RS_GCF_012923605.1. The GC content of the type genome is 49.83 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Adveraria abascitudo sp. nov.

Candidatus Adveraria abascitudo (NL. fem. n. *abascitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-19 sp005879405*. The type genome for the species is the GenBank assembly GCA_005879405.1. The GC content of the type genome is 69.34 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Adveraria gen. nov.

Candidatus Adveraria (NL. fem. n. *Adveraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-19*. The type species for the genus is *Candidatus* Adveraria abascitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPRO1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetulidaceae.

Description of *Candidatus* Adverella arcubibra sp. nov.

Candidatus Adverella arcubibra (NL. fem. n. *arcubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHUM01 sp009691245*. The type genome for the species is the GenBank assembly GCA_009691245.1. The GC content of the type genome is 59.11 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Adverella gen. nov.

Candidatus Adverella (NL. fem. n. *Adverella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHUM01*. The type species for the genus is *Candidatus* Adverella arcubibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-54-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacosaceae.

Description of *Candidatus* Adveria desulitas sp. nov.

Candidatus Adveria desulitas (NL. fem. n. *desulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3738 sp002372505*. The type genome for the species is the GenBank assembly GCA_002372505.1. The GC content of the type genome is 45.71 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Adveria gen. nov.

Candidatus Adveria (NL. fem. n. *Adveria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3738*. The type species for the genus is *Candidatus* Adveria

desulitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adveria oblonilenta sp. nov.

Candidatus Adveria oblonilenta (NL. fem. n. *oblonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3738 sp902803725*. The type genome for the species is the GenBank assembly GCA_902803725.1. The GC content of the type genome is 44.94 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Adverida nosocastra sp. nov.

Candidatus Adverida nosocastra (NL. fem. n. *nosocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIC01 sp903970185*. The type genome for the species is the GenBank assembly GCA_903970185.1. The GC content of the type genome is 61.32 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Adverida gen. nov.

Candidatus Adverida (NL. fem. n. *Adverida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIC01*. The type species for the genus is *Candidatus* Adverida nosocastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Adverosa absorigena sp. nov.

Candidatus Adverosa absorigena (NL. fem. n. *absorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11591 sp003487525*. The type genome for the species is the GenBank assembly GCA_003487525.1. The GC content of the type genome is 42.79 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Adverosa gen. nov.

Candidatus Adverosa (NL. fem. n. *Adverosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11591*. The type species for the genus is *Candidatus* Adverosa absorigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advicana incivitura sp. nov.

Candidatus Advicana incivitura (NL. fem. n. *incivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-463-P14 sp003209275*. The type genome for the species is the GenBank assembly GCA_003209275.1. The GC content of the type genome is 40.41 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Advicana gen. nov.

Candidatus Advicana (NL. fem. n. *Advicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-463-P14*. The type species for the genus is *Candidatus* Advicana incivitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advicaria inpinitudo sp. nov.

Candidatus Advicaria inpinitudo (NL. fem. n. *inpinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-272 sp003235325*. The type genome for the species is the GenBank assembly GCA_003235325.1. The GC content of the type genome is 57.32 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Advicaria gen. nov.

Candidatus Advicaria (NL. fem. n. *Advicaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-272*. The type species for the genus is *Candidatus* Advicaria inpinitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advicella rinocisca sp. nov.

Candidatus Advicella rinocisca (NL. fem. n. *rinocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXZ01 sp003223165*. The type genome for the species is the GenBank assembly GCA_003223165.1. The GC content of the type genome is 70.68 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Advicella gen. nov.

Candidatus Advicella (NL. fem. n. *Advicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHXZ01*. The type species for the genus is *Candidatus* Advicella rinocisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp22-AA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilibosaceae.

Description of *Candidatus* Advicida notabicula sp. nov.

Candidatus Advicida notabicula (NL. fem. n. *notabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6233 sp002440965*. The type genome for the species is the GenBank assembly GCA_002440965.1. The GC content of the type genome is 41.88 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Advicida gen. nov.

Candidatus Advicida (NL. fem. n. *Advicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6233*. The type species for the genus is *Candidatus* Advicida notabicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Advicosa cocibitio sp. nov.

Candidatus Advicosa cocibitio (NL. fem. n. *cocibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFR01 sp007376135*. The type genome for the species is the GenBank assembly GCA_007376135.1. The GC content of the type genome is 60.55 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Advicosa gen. nov.

Candidatus Advicosa (NL. fem. n. *Advicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFR01*. The type species for the genus is *Candidatus* Advicosa cocibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decinosaceae.

Description of *Candidatus* Advicula inguritia sp. nov.

Candidatus Advicula inguritia (NL. fem. n. *inguritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPK01 sp013203725*. The type genome for the species is the GenBank assembly GCA_013203725.1. The GC content of the type genome is 47.36 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Advicula gen. nov.

Candidatus Advicula (NL. fem. n. *Advicula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPK01*. The type species for the genus is *Candidatus* Advicula inguritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11717*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomanaceae.

Description of *Candidatus* Advigella diritatica sp. nov.

Candidatus Advigella diritatica (NL. fem. n. *diritatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-50-24 sp001804225*. The type genome for the species is the GenBank assembly GCA_001804225.1. The GC content of the type genome is 49.74 % and the genome length is 1.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Advigella gen. nov.

Candidatus Advigella (NL. fem. n. *Advigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-50-24*. The type species for the genus is *Candidatus* Advigella diritatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *01-FULL-45-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipidaceae.

Description of *Candidatus* Advigia nehalousia sp. nov.

Candidatus Advigia nehalousia (NL. fem. n. *nehalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDES01 sp013816265*. The type genome for the species is the GenBank assembly GCA_013816265.1. The GC content of the type genome is 35.63 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Advigia gen. nov.

Candidatus Advigia (NL. fem. n. *Advigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDES01*. The type species for the genus is *Candidatus* Advigia nehalousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advigida thessibra sp. nov.

Candidatus Advigida thessibra (NL. fem. n. *thessibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MGJZ01 sp001794525*. The type genome for the species is the GenBank assembly GCA_001794525.1. The GC content of the type genome is 49.44 % and the genome length is 0.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Advigida gen. nov.

Candidatus Advigida (NL. fem. n. *Advigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MGJZ01*. The type species for the genus is *Candidatus* Advigida thessibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Advinana gasifimonas sp. nov.

Candidatus Advinana gasifimonas (NL. fem. n. *gasifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRC01 sp011391115*. The type genome for the species is the GenBank assembly GCA_011391115.1. The GC content of the type genome is 58.82 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Advinana gen. nov.

Candidatus Advinana (NL. fem. n. *Advinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRC01*. The type species for the genus is *Candidatus* Advinana gasifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advinaria conigatio sp. nov.

Candidatus Advinaria conigatio (NL. fem. n. *conigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRF01 sp012518905*. The type genome for the species is the GenBank assembly GCA_012518905.1. The GC content of the type genome is 50.58 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Advinaria gen. nov.

Candidatus Advinaria (NL. fem. n. *Advinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRF01*. The type species for the genus is *Candidatus* Advinaria conigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Advinella ablepiforma sp. nov.

Candidatus Advinella ablepiforma (NL. fem. n. *ablepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11198 sp902766815*. The type genome for the species is the GenBank assembly GCA_902766815.1. The GC content of the type genome is 28.06 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Advinella gen. nov.

Candidatus Advinella (NL. fem. n. *Advinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11198*. The type species for the genus is *Candidatus* Advinella ablepiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Advinia bicodatica sp. nov.

Candidatus Advinia bicodatica (NL. fem. n. *bicodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA997 sp002291945*. The type genome for the species is the GenBank assembly GCA_002291945.1. The GC content of the type genome is 63.28 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Advinia gen. nov.

Candidatus Advinia (NL. fem. n. *Advinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA997*. The type species for the genus is *Candidatus* Advinia bicodatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advinida minagimonas sp. nov.

Candidatus Advinida minagimonas (NL. fem. n. *minagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TC-195 sp010092885*. The type genome for the species is the GenBank assembly GCA_010092885.1. The GC content of the type genome is 61.48 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Advinida gen. nov.

Candidatus Advinida (NL. fem. n. *Advinida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TC-195*. The type species for the genus is *Candidatus* Advinida minagimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3940*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpidaceae.

Description of *Candidatus* Advinula intenifica sp. nov.

Candidatus Advinula intenifica (NL. fem. n. *intenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGP01 sp012727625*. The type genome for the species is the GenBank assembly GCA_012727625.1. The GC content of the type genome is 39.86 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Advinula gen. nov.

Candidatus Advinula (NL. fem. n. *Advinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGP01*. The type species for the genus is *Candidatus* Advinula intenifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-8532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabidaceae.

Description of *Candidatus* Advoraria cocodedo sp. nov.

Candidatus Advoraria cocodedo (NL. fem. n. *cocodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM05232 sp900759955*. The type genome for the species is the GenBank assembly RS_GCF_900759955.1. The GC content of the type genome is 39.64 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Advoraria gen. nov.

Candidatus Advoraria (NL. fem. n. *Advoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM05232*. The type species for the genus is *Candidatus* Advoraria cocodedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advorella scellago sp. nov.

Candidatus Advorella scellago (NL. fem. n. *scellago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXOO01 sp005776725*. The type genome for the species is the GenBank assembly GCA_005776725.1. The GC content of the type genome is 69.92 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Advorella gen. nov.

Candidatus Advorella (NL. fem. n. *Advorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXOO01*. The type species for the genus is *Candidatus* Advorella scellago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2863065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitosaceae.

Description of *Candidatus* Advoria omnivitas sp. nov.

Candidatus Advoria omnivitas (NL. fem. n. *omnivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *L227-5C sp013390945*. The type genome for the species is the GenBank assembly GCA_013390945.1. The GC content of the type genome is 47.74 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Advoria gen. nov.

Candidatus Advoria (NL. fem. n. *Advoria* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *L227-5C*. The type species for the genus is *Candidatus* Advoria omnivitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *54-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacidaceae.

Description of *Candidatus* Advorida obtematica sp. nov.

Candidatus Advorida obtematica (NL. fem. n. *obtematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD12-FULL-50-9 sp001799225*. The type genome for the species is the GenBank assembly GCA_001799225.1. The GC content of the type genome is 50.16 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Advorida gen. nov.

Candidatus Advorida (NL. fem. n. *Advorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD12-FULL-50-9*. The type species for the genus is *Candidatus* Advorida obtematica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Advorosa terebilenta sp. nov.

Candidatus Advorosa terebilenta (NL. fem. n. *terebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHBP01 sp003244175*. The type genome for the species is the GenBank assembly GCA_003244175.1. The GC content of the type genome is 61.65 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Advorosa gen. nov.

Candidatus Advorosa (NL. fem. n. *Advorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHBP01*. The type species for the genus is *Candidatus* Advorosa terebilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolellaceae.

Description of *Candidatus* Advorula effinitudo sp. nov.

Candidatus Advorula effinitudo (NL. fem. n. *effinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6165 sp002422285*. The type genome for the species is the GenBank assembly GCA_002422285.1. The GC content of the type genome is 39.77 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Advorula gen. nov.

Candidatus Advorula (NL. fem. n. *Advorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6165*. The type species for the genus is *Candidatus* Advorula effinitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aegiribacteria adpelivita sp. nov.

Candidatus Aegiribacteria adpelivita (NL. fem. n. *adpelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aegiribacteria sp013138965*. The type genome for the species is the GenBank assembly GCA_013138965.1. The GC content of the type genome is 48.2 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Aegiribacteria semilibra sp. nov.

Candidatus Aegiribacteria semilibra (NL. fem. n. *semilibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aegiribacteria sp002030045*. The type genome for the species is the GenBank assembly GCA_002030045.1. The GC content of the type genome is 59.59 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Aegiribacteria verecitia sp. nov.

Candidatus Aegiribacteria verecitia (NL. fem. n. *verecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aegiribacteria sp003644925*. The type genome for the species is the GenBank assembly GCA_003644925.1. The GC content of the type genome is 48.37 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Aequorivita alismivita sp. nov.

Candidatus Aequorivita alismivita (NL. fem. n. *alismivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp900489465*. The type genome for the species is the GenBank assembly RS_GCF_900489465.1. The GC content of the type genome is 36.39 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Aequorivita categitoga sp. nov.

Candidatus Aequorivita categitoga (NL. fem. n. *categitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp002375695*. The type genome for the species is the GenBank assembly GCA_002697085.1. The GC content of the type genome is 36.07 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Aequorivita dehonitura sp. nov.

Candidatus Aequorivita dehonitura (NL. fem. n. *dehonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp002733915*. The type genome for the species is the GenBank assembly GCA_002733915.1. The GC content of the type genome is 38.38 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Aequorivita depasifica sp. nov.

Candidatus Aequorivita depasifica (NL. fem. n. *depasifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp002364215*. The type genome for the species is the GenBank assembly GCA_002364215.1. The GC content of the type genome is 38.71 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Aequorivita ducilitio sp. nov.

Candidatus Aequorivita ducilitio (NL. fem. n. *ducilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp004022485*. The type genome for the species is the GenBank assembly RS_GCF_004022485.1. The GC content of the type genome is 38.25 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Aequorivita loripibra sp. nov.

Candidatus Aequorivita loripibra (NL. fem. n. *loripibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp002715485*. The type genome for the species is the GenBank assembly GCA_002453015.1. The GC content of the type genome is 37.9 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Aequorivita modifisca sp. nov.

Candidatus Aequorivita modifisca (NL. fem. n. *modifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aequorivita sp012522045*. The type genome for the species is the GenBank assembly GCA_012522045.1. The GC content of the type genome is 37.33 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Aeriscardovia extinicella sp. nov.

Candidatus Aeriscardovia extinicella (NL. fem. n. *extinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeriscardovia sp903789535*. The type genome for the species is the GenBank assembly GCA_903789535.1. The GC content of the type genome is 64.05 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Aeriscardovia taraxousia sp. nov.

Candidatus Aeriscardovia taraxousia (NL. fem. n. *taraxousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeriscardovia sp903789525*. The type genome for the species is the GenBank assembly GCA_903789525.1. The GC content of the type genome is 52.88 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Aerococcus citocugo sp. nov.

Candidatus Aerococcus citocugo (NL. fem. n. *citocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aerococcus sp002440555*. The type genome for the species is the GenBank assembly GCA_002440555.1. The GC content of the type genome is 39.76 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Aerococcus desupago sp. nov.

Candidatus Aerococcus desupago (NL. fem. n. *desupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aerococcus sp001809535*. The type genome for the species is the GenBank assembly RS_GCF_001836025.1. The GC content of the type genome is 47.45 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Aerococcus detoritica sp. nov.

Candidatus Aerococcus detoritica (NL. fem. n. *detoritica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aerococcus sp001813115*. The type genome for the species is the GenBank assembly RS_GCF_008726925.1. The GC content of the type genome is 47.45 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Aerococcus illepibula sp. nov.

Candidatus Aerococcus illepibula (NL. fem. n. *illepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aerococcus sp002252085*. The type genome for the species is the GenBank assembly RS_GCF_002252085.1. The GC content of the type genome is 38.5 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Aerococcus susicimonas sp. nov.

Candidatus Aerococcus susicimonas (NL. fem. n. *susicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aerococcus sp003797145*. The type genome for the species is the GenBank assembly RS_GCF_003797145.1. The GC content of the type genome is 39.0 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Aeromicrobium adsocimonia sp. nov.

Candidatus Aeromicrobium adsocimonia (NL. fem. n. *adsocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp014377785*. The type genome for the species is the GenBank assembly GCA_014377785.1. The GC content of the type genome is 61.76 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Aeromicrobium adsucastra sp. nov.

Candidatus Aeromicrobium adsucastra (NL. fem. n. *adsucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp013283745*. The type genome for the species is the GenBank assembly RS_GCF_013283745.1. The GC content of the type genome is 69.87 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Aeromicrobium adveritio sp. nov.

Candidatus Aeromicrobium adveritio (NL. fem. n. *adveritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp012513165*. The type genome for the species is the GenBank assembly GCA_012513165.1. The GC content of the type genome is 59.32 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Aeromicrobium appecimonas sp. nov.

Candidatus Aeromicrobium appecimonas (NL. fem. n. *appecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp003443875*. The type genome for the species is the GenBank assembly RS_GCF_003443875.1. The GC content of the type genome is 67.61 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Aeromicrobium armigicula sp. nov.

Candidatus Aeromicrobium armigicula (NL. fem. n. *armigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp007421815*. The type genome for the species is the GenBank assembly RS_GCF_007421815.1. The GC content of the type genome is 68.35 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Aeromicrobium artopatio sp. nov.

Candidatus Aeromicrobium artopatio (NL. fem. n. *artopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp014378035*. The type genome for the species is the GenBank assembly GCA_014378035.1. The GC content of the type genome is 66.89 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Aeromicrobium aruspitudo sp. nov.

Candidatus Aeromicrobium aruspitudo (NL. fem. n. *aruspitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp902506105*. The type genome for the species is the GenBank assembly RS_GCF_902506105.1. The GC content of the type genome is 68.31 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Aeromicrobium bifisugo sp. nov.

Candidatus Aeromicrobium bifisugo (NL. fem. n. *bifisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp002174305*. The type genome for the species is the GenBank assembly RS_GCF_002174305.1. The GC content of the type genome is 67.52 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Aeromicrobium capucimonas sp. nov.

Candidatus Aeromicrobium capucimonas (NL. fem. n. *capucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp001426485*. The type genome for the species is the GenBank assembly RS_GCF_001426485.1. The GC content of the type genome is 71.34 % and the genome length is 3.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Aeromicrobium delapibula sp. nov.

Candidatus Aeromicrobium delapibula (NL. fem. n. *delapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp001425755*. The type genome for the species is the GenBank assembly RS_GCF_001425755.1. The GC content of the type genome is 68.76 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Aeromicrobium devecibra sp. nov.

Candidatus Aeromicrobium devecibra (NL. fem. n. *devecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp001428805*. The type genome for the species is the GenBank assembly RS_GCF_001428805.1. The GC content of the type genome is 69.01 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Aeromicrobium dicimitas sp. nov.

Candidatus Aeromicrobium dicimitas (NL. fem. n. *dicimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp002476985*. The type genome for the species is the GenBank assembly GCA_002476985.1. The GC content of the type genome is 70.8 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Aeromicrobium dilecatica sp. nov.

Candidatus Aeromicrobium dilecatica (NL. fem. n. *dilecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp001426755*. The type genome for the species is the GenBank assembly RS_GCF_001426755.1. The GC content of the type genome is 70.43 % and the genome length is 3.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Aeromicrobium excinitica sp. nov.

Candidatus Aeromicrobium excinitica (NL. fem. n. *excinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp008017265*. The type genome for the species is the GenBank assembly GCA_008017265.1. The GC content of the type genome is 58.07 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Aeromicrobium fidenitoga sp. nov.

Candidatus Aeromicrobium fidenitoga (NL. fem. n. *fidenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp001423335*. The type genome for the species is the GenBank assembly RS_GCF_001422865.1. The GC content of the type genome is 71.73 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Aeromicrobium holisitas sp. nov.

Candidatus Aeromicrobium holisitas (NL. fem. n. *holisitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp004336805*. The type genome for the species is the GenBank assembly RS_GCF_004336805.1. The GC content of the type genome is 72.75 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Aeromicrobium inbecimonia sp. nov.

Candidatus Aeromicrobium inbecimonia (NL. fem. n. *inbecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp003586285*. The type genome for the species is the GenBank assembly RS_GCF_003586285.1. The GC content of the type genome is 70.56 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Aeromicrobium loripilega sp. nov.

Candidatus Aeromicrobium loripilega (NL. fem. n. *loripilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp005788575*. The type genome for the species is the GenBank assembly GCA_005788575.1. The GC content of the type genome is 72.58 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Aeromicrobium nivomentia sp. nov.

Candidatus Aeromicrobium nivomentia (NL. fem. n. *nivomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp003065605*. The type genome for the species is the GenBank assembly RS_GCF_003065605.1. The GC content of the type genome is 70.33 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Aeromicrobium recoricella sp. nov.

Candidatus Aeromicrobium recoricella (NL. fem. n. *recoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp008039565*. The type genome for the species is the GenBank assembly RS_GCF_008039565.1. The GC content of the type genome is 70.64 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Aeromicrobium regigousia sp. nov.

Candidatus Aeromicrobium regigousia (NL. fem. n. *regigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp000471045*. The type genome for the species is the GenBank assembly RS_GCF_000471045.1. The GC content of the type genome is 70.62 % and the genome length is 3.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Little Long Lake".

Description of *Candidatus* Aeromicrobium videlivita sp. nov.

Candidatus Aeromicrobium videlivita (NL. fem. n. *videlivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp009649075*. The type genome for the species is the GenBank assembly RS_GCF_009661045.1. The GC content of the type genome is 69.93 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Aeromicrobium vocamedo sp. nov.

Candidatus Aeromicrobium vocamedo (NL. fem. n. *vocamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromicrobium sp014334735*. The type genome for the species is the GenBank assembly RS_GCF_014490085.1. The GC content of the type genome is 70.28

% and the genome length is 3.14 Mbp.

Description of *Candidatus* Aeromonas adrotitudo sp. nov.

Candidatus Aeromonas adrotitudo (NL. fem. n. *adrotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aeromonas sp900156095*. The type genome for the species is the GenBank assembly RS_GCF_900156095.1. The GC content of the type genome is 57.89 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Aestuariibaculum excorimonas sp. nov.

Candidatus Aestuariibaculum excorimonas (NL. fem. n. *excorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariibaculum sp014596945*. The type genome for the species is the GenBank assembly RS_GCF_014596945.1. The GC content of the type genome is 34.22 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Aestuariivirga adpugiforma sp. nov.

Candidatus Aestuariivirga adpugiforma (NL. fem. n. *adpugiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp900298995*. The type genome for the species is the GenBank assembly GCA_900298995.1. The GC content of the type genome is 63.28 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Aestuariivirga adsifitura sp. nov.

Candidatus Aestuariivirga adsifitura (NL. fem. n. *adsifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp009885825*. The type genome for the species is the GenBank assembly GCA_009885825.1. The GC content of the type genome is 56.48 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Aestuariivirga cenodugo sp. nov.

Candidatus Aestuariivirga cenodugo (NL. fem. n. *cenodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp902826365*. The type genome for the species is the GenBank assembly GCA_902826365.1. The GC content of the type genome is 58.75 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Aestuariivirga inergessa sp. nov.

Candidatus Aestuariivirga inergessa (NL. fem. n. *inergessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp012032065*. The type genome for the species is the GenBank assembly GCA_012032065.1. The GC content of the type genome is 61.14 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Aestuariivirga inmutitica sp. nov.

Candidatus Aestuariivirga inmutitica (NL. fem. n. *inmutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp014380505*. The type genome for the species is the GenBank assembly GCA_014380505.1. The GC content of the type genome is 60.38 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Aestuariivirga prognimonia sp. nov.

Candidatus Aestuariivirga prognimonia (NL. fem. n. *prognimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp003151375*. The type genome for the species is the GenBank assembly GCA_003151375.1. The GC content of the type genome is 51.67 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Aestuariivirga solipousia sp. nov.

Candidatus Aestuariivirga solipousia (NL. fem. n. *solipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivirga sp903930095*. The type genome for the species is the GenBank assembly GCA_903930095.1. The GC content of the type genome is 63.65 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Aestuariivita pinigicella sp. nov.

Candidatus Aestuariivita pinigicella (NL. fem. n. *pinigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aestuariivita sp006227805*. The type genome for the species is the GenBank assembly GCA_006227805.1. The GC content of the type genome is 67.81 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Affabana bisacitura sp. nov.

Candidatus Affabana bisacitura (NL. fem. n. *bisacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *02-FULL-45-17b sp005239605*. The type genome for the species is the GenBank assembly GCA_005239605.1. The GC content of the type genome is 46.32 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Affabana gen. nov.

Candidatus Affabana (NL. fem. n. *Affabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *02-FULL-45-17b*. The type species for the genus is *Candidatus* Affabana bisacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-48-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifariaceae.

Description of *Candidatus* Affabana pinifentia sp. nov.

Candidatus Affabana pinifentia (NL. fem. n. *pinifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *02-FULL-45-17b sp001819815*. The type genome for the species is the GenBank assembly GCA_001819815.1. The GC content of the type genome is 44.58 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Affabella tolutessa sp. nov.

Candidatus Affabella tolutessa (NL. fem. n. *tolutessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPI01 sp012519885*. The type genome for the species is the GenBank assembly GCA_012519885.1. The GC content of the type genome is 35.05 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Affabella gen. nov.

Candidatus Affabella (NL. fem. n. *Affabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPI01*. The type species for the genus is *Candidatus* Affabella tolutessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affabida absocivita sp. nov.

Candidatus Affabida absocivita (NL. fem. n. *absocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1737 sp002315915*. The type genome for the species is the GenBank assembly GCA_002315915.1. The GC content of the type genome is 25.76 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Affabida gen. nov.

Candidatus Affabida (NL. fem. n. *Affabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1737*. The type species for the genus is *Candidatus* Affabida

absocivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Affabosa exindigena sp. nov.

Candidatus Affabosa exindigena (NL. fem. n. *exindigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-42-15 sp001797285*. The type genome for the species is the GenBank assembly GCA_001797285.1. The GC content of the type genome is 42.08 % and the genome length is 1.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Affabosa gen. nov.

Candidatus Affabosa (NL. fem. n. *Affabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-42-15*. The type species for the genus is *Candidatus* Affabosa exindigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affamella cerifitrix sp. nov.

Candidatus Affamella cerifitrix (NL. fem. n. *cerifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOM01 sp009908855*. The type genome for the species is the GenBank assembly GCA_009908855.1. The GC content of the type genome is 39.16 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Affamella gen. nov.

Candidatus Affamella (NL. fem. n. *Affamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAAOM01*. The type species for the genus is *Candidatus* Affamella cerifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifellaceae.

Description of *Candidatus* Affamia abagmivita sp. nov.

Candidatus Affamia abagmivita (NL. fem. n. *abagmivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cfx2-01 sp013377115*. The type genome for the species is the GenBank assembly GCA_013377115.1. The GC content of the type genome is 32.32 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Affamia gen. nov.

Candidatus Affamia (NL. fem. n. *Affamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cfx2-01*. The type species for the genus is *Candidatus* Affamia abagmivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-32-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadosaceae.

Description of *Candidatus* Affamosa octinitio sp. nov.

Candidatus Affamosa octinitio (NL. fem. n. *octinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJHQ01 sp014193115*. The type genome for the species is the GenBank assembly GCA_014193115.1. The GC content of the type genome is 65.38 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Affamosa gen. nov.

Candidatus Affamosa (NL. fem. n. *Affamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJHQ01*. The type species for the genus is *Candidatus* Affamosa octinitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Affamula immusimonia sp. nov.

Candidatus Affamula immusimonia (NL. fem. n. *immusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDI01 sp012512295*. The type genome for the species is the GenBank assembly GCA_012512295.1. The GC content of the type genome is 46.01 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Affamula gen. nov.

Candidatus Affamula (NL. fem. n. *Affamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDI01*. The type species for the genus is *Candidatus* Affamula immusimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosiganaceae.

Description of *Candidatus* Affanaria grallimonas sp. nov.

Candidatus Affanaria grallimonas (NL. fem. n. *grallimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3583 sp002375815*. The type genome for the species is the GenBank assembly GCA_002375815.1. The GC content of the type genome is 32.08 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Affanaria gen. nov.

Candidatus Affanaria (NL. fem. n. *Affanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3583*. The type species for the genus is *Candidatus* Affanaria grallimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affanaria incomago sp. nov.

Candidatus Affanaria incomago (NL. fem. n. *incomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3583 sp012520755*. The type genome for the species is the GenBank assembly GCA_012520755.1. The GC content of the type genome is 32.21 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Affanella adtorousia sp. nov.

Candidatus Affanella adtorousia (NL. fem. n. *adtorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp13-AA74 sp003224695*. The type genome for the species is the GenBank assembly GCA_003224695.1. The GC content of the type genome is 60.19 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Affanella gen. nov.

Candidatus Affanella (NL. fem. n. *Affanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp13-AA74*. The type species for the genus is *Candidatus* Affanella adtorousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Affanella cohorentia sp. nov.

Candidatus Affanella cohorentia (NL. fem. n. *cohorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp13-AA74 sp003225365*. The type genome for the species is the GenBank assembly GCA_003225365.1. The GC content of the type genome is 60.23 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Affanida cenacitoga sp. nov.

Candidatus Affanida cenacitoga (NL. fem. n. *cenacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXP01 sp013696905*. The type genome for the species is the GenBank assembly GCA_013696905.1. The GC content of the type genome is 71.44 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Affanida gen. nov.

Candidatus Affanida (NL. fem. n. *Affanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXP01*. The type species for the genus is *Candidatus* Affanida cenacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affirana divolitia sp. nov.

Candidatus Affirana divolitia (NL. fem. n. *divolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMLW01 sp014379385*. The type genome for the species is the GenBank assembly GCA_014379385.1. The GC content of the type genome is 66.27 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Affirana gen. nov.

Candidatus Affirana (NL. fem. n. *Affirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMLW01*. The type species for the genus is *Candidatus* Affirana divolitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Affiraria bisulitoga sp. nov.

Candidatus Affiraria bisulitoga (NL. fem. n. *bisulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACADY01 sp013389115*. The type genome for the species is the GenBank assembly GCA_013389115.1. The GC content of the type genome is 63.1 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Affiraria gen. nov.

Candidatus Affiraria (NL. fem. n. *Affiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACADY01*. The type species for the genus is *Candidatus* Affiraria bisulitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affirella acustivita sp. nov.

Candidatus Affirella acustivita (NL. fem. n. *acustivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4045 sp002383695*. The type genome for the species is the GenBank assembly GCA_002383695.1. The GC content of the type genome is 42.77 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Affirella gen. nov.

Candidatus Affirella (NL. fem. n. *Affirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4045*. The type species for the genus is *Candidatus* Affirella acustivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affirella eccisastra sp. nov.

Candidatus Affirella eccisastra (NL. fem. n. *eccisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4045 sp002383285*. The type genome for the species is the GenBank assembly GCA_002383285.1. The GC content of the type genome is 43.11 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Affirella lutulibula sp. nov.

Candidatus Affirella lutulibula (NL. fem. n. *lutulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4045 sp011053775*. The type genome for the species is the GenBank assembly GCA_011053775.1. The GC content of the type genome is 42.66 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Affiria demadilega sp. nov.

Candidatus Affiria demadilega (NL. fem. n. *demadilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AkT22 sp011398155*. The type genome for the species is the GenBank assembly RS_GCF_011398155.1. The GC content of the type genome is 43.22 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Affiria gen. nov.

Candidatus Affiria (NL. fem. n. *Affiria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AkT22*. The type species for the genus is *Candidatus* Affiria demadilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affirida odontago sp. nov.

Candidatus Affirida odontago (NL. fem. n. *odontago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-505 sp003168255*. The type genome for the species is the GenBank assembly GCA_003168255.1. The GC content of the type genome is 68.61 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Affirida gen. nov.

Candidatus Affirida (NL. fem. n. *Affirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-505*. The type species for the genus is *Candidatus* Affirida odontago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affirosa inergilenta sp. nov.

Candidatus Affirosa inergilenta (NL. fem. n. *inergilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWBX01 sp002069755*. The type genome for the species is the GenBank assembly GCA_002069755.1. The GC content of the type genome is 32.42 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Affirosa gen. nov.

Candidatus Affirosa (NL. fem. n. *Affirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWBX01*. The type species for the genus is *Candidatus* Affirosa inergilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSED10-335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regifellaceae.

Description of *Candidatus* Affirula camilimonia sp. nov.

Candidatus Affirula camilimonia (NL. fem. n. *camilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCSC01 sp013813215*. The type genome for the species is the GenBank assembly GCA_013813215.1. The GC content of the type genome is 71.23 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Affirula gen. nov.

Candidatus Affirula (NL. fem. n. *Affirula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCSC01*. The type species for the genus is *Candidatus* Affirula camilimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affulana adluvitura sp. nov.

Candidatus Affulana adluvitura (NL. fem. n. *adluvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0040 sp012974435*. The type genome for the species is the GenBank assembly GCA_012974435.1. The GC content of the type genome is 50.85 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Affulana gen. nov.

Candidatus Affulana (NL. fem. n. *Affulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0040*. The type species for the genus is *Candidatus* Affulana adluvitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetellaceae.

Description of *Candidatus* Affulana rutabilenta sp. nov.

Candidatus Affulana rutabilenta (NL. fem. n. *rutabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0040 sp006226895*. The type genome for the species is the GenBank assembly GCA_006226895.1. The GC content of the type genome is 53.0 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Affularia rinocatio sp. nov.

Candidatus Affularia rinocatio (NL. fem. n. *rinocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0074140 sp001464115*. The type genome for the species is the GenBank assembly GCA_001464115.1. The GC content of the type genome is 47.82 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Affularia gen. nov.

Candidatus Affularia (NL. fem. n. *Affularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0074140*. The type species for the genus is *Candidatus* Affularia rinocatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affulosa apercatica sp. nov.

Candidatus Affulosa apercatica (NL. fem. n. *apercatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECZ01 sp007693765*. The type genome for the species is the GenBank assembly GCA_007693765.1. The GC content of the type genome is 69.69 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Affulosa gen. nov.

Candidatus Affulosa (NL. fem. n. *Affulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECZ01*. The type species for the genus is *Candidatus* Affulosa

apercatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Affunana carunastra sp. nov.

Candidatus Affunana carunastra (NL. fem. n. *carunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWT01 sp011370065*. The type genome for the species is the GenBank assembly GCA_011370065.1. The GC content of the type genome is 59.28 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Affunana gen. nov.

Candidatus Affunana (NL. fem. n. *Affunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWT01*. The type species for the genus is *Candidatus* Affunana carunastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Affunaria odollugo sp. nov.

Candidatus Affunaria odollugo (NL. fem. n. *odollugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOG01 sp012838945*. The type genome for the species is the GenBank assembly GCA_012838945.1. The GC content of the type genome is 33.51 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Affunaria gen. nov.

Candidatus Affunaria (NL. fem. n. *Affunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DUOG01*. The type species for the genus is *Candidatus* Affunaria odollugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Affunella inmodicella sp. nov.

Candidatus Affunella inmodicella (NL. fem. n. *inmodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGW-1 sp002841625*. The type genome for the species is the GenBank assembly GCA_002841625.1. The GC content of the type genome is 33.75 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Affunella gen. nov.

Candidatus Affunella (NL. fem. n. *Affunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGW-1*. The type species for the genus is *Candidatus* Affunella inmodicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Affunella obsatilega sp. nov.

Candidatus Affunella obsatilega (NL. fem. n. *obsatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGW-1 sp002841375*. The type genome for the species is the GenBank assembly GCA_002841375.1. The GC content of the type genome is 33.78 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Affunosa expasitas sp. nov.

Candidatus Affunosa expasitas (NL. fem. n. *expasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2728355 sp002728355*. The type genome for the species is the GenBank assembly GCA_002728355.1. The GC content of the type genome is 32.21 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Affunosa gen. nov.

Candidatus Affunosa (NL. fem. n. *Affunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2728355*. The type species for the genus is *Candidatus* Affunosa expasitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Afipia adperimonia sp. nov.

Candidatus Afipia adperimonia (NL. fem. n. *adperimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Afipia sp001897905*. The type genome for the species is the GenBank assembly GCA_001897905.1. The GC content of the type genome is 62.3 % and the genome length is 3.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Afipia incucastra sp. nov.

Candidatus Afipia incucastra (NL. fem. n. *incucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Afipia sp003963145*. The type genome for the species is the GenBank assembly GCA_003963145.1. The GC content of the type genome is 60.8 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Afipia loraratio sp. nov.

Candidatus Afipia loraratio (NL. fem. n. *loraratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Afipia sp000497575*. The type genome for the species is the GenBank assembly RS_GCF_000497655.1. The GC content of the type genome is 61.13 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "blood".

Description of *Candidatus* Afipia molecimonia sp. nov.

Candidatus Afipia molecimonia (NL. fem. n. *molecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Afipia sp001897755*. The type genome for the species is the GenBank assembly GCA_001897755.1. The GC content of the type genome is 63.65 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Afipia omninedo sp. nov.

Candidatus Afipia omninedo (NL. fem. n. *omninedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Afipia sp001425835*. The type genome for the species is the GenBank assembly RS_GCF_001425835.1. The GC content of the type genome is 61.45 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Afipia soniventia sp. nov.

Candidatus Afipia soniventia (NL. fem. n. *soniventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Afipia sp000178995*. The type genome for the species is the GenBank assembly RS_GCF_001051035.1. The GC content of the type genome is 61.28 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Afranaria induvugo sp. nov.

Candidatus Afranaria induvugo (NL. fem. n. *induvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP110 sp002732955*. The type genome for the species is the

GenBank assembly GCA_002732955.1. The GC content of the type genome is 53.94 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Afranaria gen. nov.

Candidatus Afranaria (NL. fem. n. *Afranaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NORP110*. The type species for the genus is *Candidatus* Afranaria induvugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Afranella perexatica sp. nov.

Candidatus Afranella perexatica (NL. fem. n. *perexatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADHD01 sp900696575*. The type genome for the species is the GenBank assembly GCA_900696575.1. The GC content of the type genome is 42.09 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Afranella gen. nov.

Candidatus Afranella (NL. fem. n. *Afranella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADHD01*. The type species for the genus is *Candidatus* Afranella perexatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehiciaceae.

Description of *Candidatus* Afranida exsusitoga sp. nov.

Candidatus Afranida exsusitoga (NL. fem. n. *exsusitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BX21 sp014385195*. The type genome for the species is the GenBank assembly GCA_014385195.1. The GC content of the type genome is 33.31 % and the

genome length is 3.03 Mbp.

Description of *Candidatus* Afranida gen. nov.

Candidatus Afranida (NL. fem. n. *Afranida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BX21*. The type species for the genus is *Candidatus* Afranida exsusitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Afranosa defanitoga sp. nov.

Candidatus Afranosa defanitoga (NL. fem. n. *defanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHB01 sp012271125*. The type genome for the species is the GenBank assembly GCA_012271125.1. The GC content of the type genome is 56.06 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Afranosa gen. nov.

Candidatus Afranosa (NL. fem. n. *Afranosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHB01*. The type species for the genus is *Candidatus* Afranosa defanitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Afranula curotedo sp. nov.

Candidatus Afranula curotedo (NL. fem. n. *curotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTD01 sp011390065*. The type genome for the species is the GenBank assembly GCA_011390065.1. The GC content of the type genome is 59.12 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Afranula gen. nov.

Candidatus Afranula (NL. fem. n. *Afranula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTD01*. The type species for the genus is *Candidatus* Afranula curotedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Afranula inardifica sp. nov.

Candidatus Afranula inardifica (NL. fem. n. *inardifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTD01 sp011389855*. The type genome for the species is the GenBank assembly GCA_011389855.1. The GC content of the type genome is 59.92 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Agaribacterium inhumatica sp. nov.

Candidatus Agaribacterium inhumatica (NL. fem. n. *inhumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agaribacterium sp003265435*. The type genome for the species is the GenBank assembly RS_GCF_003265435.1. The GC content of the type genome is 53.86 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Agarivorans bicoritrix sp. nov.

Candidatus Agarivorans bicoritrix (NL. fem. n. *bicoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agarivorans sp005405585*. The type genome for the species is the GenBank assembly RS_GCF_005405585.1. The GC content of the type genome is 44.23 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Agarivorans decamitia sp. nov.

Candidatus Agarivorans decamitia (NL. fem. n. *decamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agarivorans sp900537085*. The type genome for the species is the GenBank assembly RS_GCF_900537085.1. The GC content of the type genome is 44.68 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Agathobacter bifisiforma sp. nov.

Candidatus Agathobacter bifisiforma (NL. fem. n. *bifisiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900546625*. The type genome for the species is the GenBank assembly GCA_900546625.1. The GC content of the type genome is 41.6 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Agathobacter cimelitoga sp. nov.

Candidatus Agathobacter cimelitoga (NL. fem. n. *cimelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900316805*. The type genome for the species is the GenBank assembly GCA_002351275.1. The GC content of the type genome is 47.64 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Agathobacter conubivita sp. nov.

Candidatus Agathobacter conubivita (NL. fem. n. *conubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900550845*. The type genome for the species is the GenBank assembly GCA_900550845.1. The GC content of the type genome is 38.44 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Agathobacter dedigimonia sp. nov.

Candidatus Agathobacter dedigimonia (NL. fem. n. *dedigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Agathobacter sp900550545*. The type genome for the species is the GenBank assembly GCA_900550545.1. The GC content of the type genome is 41.71 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Agathobacter dilicicula sp. nov.

Candidatus Agathobacter dilicicula (NL. fem. n. *dilicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900557055*. The type genome for the species is the GenBank assembly GCA_900557055.1. The GC content of the type genome is 42.57 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Agathobacter documousia sp. nov.

Candidatus Agathobacter documousia (NL. fem. n. *documousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900543445*. The type genome for the species is the GenBank assembly GCA_900757015.1. The GC content of the type genome is 45.26 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Agathobacter genocimonas sp. nov.

Candidatus Agathobacter genocimonas (NL. fem. n. *genocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900549895*. The type genome for the species is the GenBank assembly GCA_900549895.1. The GC content of the type genome is 45.18 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Agathobacter gerunilega sp. nov.

Candidatus Agathobacter gerunilega (NL. fem. n. *gerunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900552085*. The type genome for the species is the GenBank assembly GCA_902762165.1. The GC content of the type genome is 41.05 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Agathobacter inargitoga sp. nov.

Candidatus Agathobacter inargitoga (NL. fem. n. *inargitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900547695*. The type genome for the species is the GenBank assembly GCA_900547695.1. The GC content of the type genome is 38.51 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Agathobacter nocumitudo sp. nov.

Candidatus Agathobacter nocumitudo (NL. fem. n. *nocumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900317585*. The type genome for the species is the GenBank assembly GCA_002349805.1. The GC content of the type genome is 41.63 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Agathobacter scombicella sp. nov.

Candidatus Agathobacter scombicella (NL. fem. n. *scombicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp002474415*. The type genome for the species is the GenBank assembly GCA_002474415.1. The GC content of the type genome is 43.79 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Agathobacter tabifax sp. nov.

Candidatus Agathobacter tabifax (NL. fem. n. *tabifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp900548765*. The type genome for the species is the GenBank assembly GCA_900762195.1. The GC content of the type genome is 41.67 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Agathobacter venabitas sp. nov.

Candidatus Agathobacter venabitas (NL. fem. n. *venabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobacter sp000434275*. The type genome for the species is the GenBank assembly GCA_001916895.1. The GC content of the type genome is 41.54 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Agathobaculum advicax sp. nov.

Candidatus Agathobaculum advicax (NL. fem. n. *advicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp900555465*. The type genome for the species is the GenBank assembly GCA_900555465.1. The GC content of the type genome is 60.42 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Agathobaculum arundax sp. nov.

Candidatus Agathobaculum arundax (NL. fem. n. *arundax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp900625105*. The type genome for the species is the GenBank assembly RS_GCF_900625105.1. The GC content of the type genome is 57.12 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Agathobaculum binocilega sp. nov.

Candidatus Agathobaculum binocilega (NL. fem. n. *binocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp900544475*. The type genome for the species is the GenBank assembly GCA_900544475.1. The GC content of the type genome is 59.02 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Agathobaculum clancugo sp. nov.

Candidatus Agathobaculum clancugo (NL. fem. n. *clancugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp900557315*. The type genome for the species is the GenBank assembly GCA_900557315.1. The GC content of the type genome is 59.17 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Agathobaculum furibatica sp. nov.

Candidatus Agathobaculum furibatica (NL. fem. n. *furibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp900291975*. The type genome for the species is the GenBank assembly RS_GCF_900291975.1. The GC content of the type genome is 56.4 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Agathobaculum murilibra sp. nov.

Candidatus Agathobaculum murilibra (NL. fem. n. *murilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agathobaculum sp003481705*. The type genome for the species is the GenBank assembly GCA_900541385.1. The GC content of the type genome is 59.08 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Aggenana adtumax sp. nov.

Candidatus Aggenana adtumax (NL. fem. n. *adtumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HHTR118 sp003572205*. The type genome for the species is the GenBank assembly RS_GCF_003572205.1. The GC content of the type genome is 64.92 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Aggenana gen. nov.

Candidatus Aggenana (NL. fem. n. *Aggenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HHTR118*. The type species for the genus is *Candidatus* Aggenana adtumax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggenana inaspitudo sp. nov.

Candidatus Aggenana inaspitudo (NL. fem. n. *inaspitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HHTR118 sp006969625*. The type genome for the species is the GenBank assembly GCA_006969625.1. The GC content of the type genome is 69.8 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Aggenaria adfabatica sp. nov.

Candidatus Aggenaria adfabatica (NL. fem. n. *adfabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXL01 sp013697015*. The type genome for the species is the GenBank assembly GCA_013697015.1. The GC content of the type genome is 58.98 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Aggenaria gen. nov.

Candidatus Aggenaria (NL. fem. n. *Aggenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXL01*. The type species for the genus is *Candidatus* Aggenaria adfabatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Aggenella immigicella sp. nov.

Candidatus Aggenella immigicella (NL. fem. n. *immigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cfx3-02 sp013376995*. The type genome for the species is the GenBank assembly GCA_013376995.1. The GC content of the type genome is 42.01 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Aggenella gen. nov.

Candidatus Aggenella (NL. fem. n. *Aggenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cfx3-02*. The type species for the genus is *Candidatus* Aggenella immigicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggenia adluvicella sp. nov.

Candidatus Aggenia adluvicella (NL. fem. n. *adluvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNB01 sp012521085*. The type genome for the species is the GenBank assembly GCA_012521085.1. The GC content of the type genome is 30.16 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Aggenia gen. nov.

Candidatus Aggenia (NL. fem. n. *Aggenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNB01*. The type species for the genus is *Candidatus* Aggenia adluvicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggenida vehicitio sp. nov.

Candidatus Aggenida vehicitio (NL. fem. n. *vehicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQSD01 sp009788105*. The type genome for the species is the GenBank assembly GCA_009788105.1. The GC content of the type genome is 47.62 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Aggenida gen. nov.

Candidatus Aggenida (NL. fem. n. *Aggenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQSD01*. The type species for the genus is *Candidatus* Aggenida vehicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Aggenosa indomitia sp. nov.

Candidatus Aggenosa indomitia (NL. fem. n. *indomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRTT01 sp011372105*. The type genome for the species is the GenBank assembly GCA_011372105.1. The GC content of the type genome is 38.66 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Aggenosa gen. nov.

Candidatus Aggenosa (NL. fem. n. *Aggenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRTT01*. The type species for the genus is *Candidatus* Aggenosa indomitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monumariaceae.

Description of *Candidatus* Aggenula antevibula sp. nov.

Candidatus Aggenula antevibula (NL. fem. n. *antevibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIM01 sp013151345*. The type genome for the species is the GenBank assembly GCA_013151345.1. The GC content of the type genome is 42.6 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Aggenula gen. nov.

Candidatus Aggenula (NL. fem. n. *Aggenula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIM01*. The type species for the genus is *Candidatus* Aggenula antevibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicotariaceae.

Description of *Candidatus* Aggesaria inpinimonia sp. nov.

Candidatus Aggesaria inpinimonia (NL. fem. n. *inpinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXL01 sp013178125*. The type genome for the species is the GenBank assembly GCA_013178125.1. The GC content of the type genome is 54.51 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Aggesaria gen. nov.

Candidatus Aggesaria (NL. fem. n. *Aggesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXL01*. The type species for the genus is *Candidatus* Aggesaria inpinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABLXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Filifulaceae.

Description of *Candidatus* Aggesaria vitupetta sp. nov.

Candidatus Aggesaria vitupetta (NL. fem. n. *vitupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXL01 sp012839815*. The type genome for the species is the GenBank assembly GCA_012839815.1. The GC content of the type genome is 55.09 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Aggesella irrotedo sp. nov.

Candidatus Aggesella irrotedo (NL. fem. n. *irrotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM04593 sp900770655*. The type genome for the species is the GenBank assembly RS_GCF_900770655.1. The GC content of the type genome is 46.09 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Aggesella gen. nov.

Candidatus Aggesella (NL. fem. n. *Aggesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM04593*. The type species for the genus is *Candidatus* Aggesella irrotedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggesella locupisca sp. nov.

Candidatus Aggesella locupisca (NL. fem. n. *locupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM04593 sp900769765*. The type genome for the species is the GenBank assembly RS_GCF_900769765.1. The GC content of the type genome is 45.28 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Aggesella rinocitrix sp. nov.

Candidatus Aggesella rinocitrix (NL. fem. n. *rinocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM04593 sp900770665*. The type genome for the species is the GenBank assembly RS_GCF_900770665.1. The GC content of the type genome is 46.82 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Aggesella vocififica sp. nov.

Candidatus Aggesella vocififica (NL. fem. n. *vocififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM04593 sp900769465*. The type genome for the species is the GenBank assembly RS_GCF_900769465.1. The GC content of the type genome is 46.75 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Aggesia ammatugo sp. nov.

Candidatus Aggesia ammatugo (NL. fem. n. *ammatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMX01 sp003552485*. The type genome for the species is the GenBank assembly GCA_003552485.1. The GC content of the type genome is 59.44 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Aggesia gen. nov.

Candidatus Aggesia (NL. fem. n. *Aggesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUMX01*. The type species for the genus is *Candidatus* Aggesia ammatugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Aggesosa ininnax sp. nov.

Candidatus Aggesosa ininnax (NL. fem. n. *ininnax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-105 sp011049175*. The type genome for the species is the GenBank assembly GCA_011049175.1. The GC content of the type genome is 49.73 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Aggesosa gen. nov.

Candidatus Aggesosa (NL. fem. n. *Aggesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HyVt-105*. The type species for the genus is *Candidatus* Aggesosa ininnax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Aggesosa tenemousia sp. nov.

Candidatus Aggesosa tenemousia (NL. fem. n. *tenemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-105 sp011042635*. The type genome for the species is the GenBank assembly GCA_011042635.1. The GC content of the type genome is 50.15 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Aggregatibacter cepulitas sp. nov.

Candidatus Aggregatibacter cepulitas (NL. fem. n. *cepulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aggregatibacter sp000466335*. The type genome for the species is the GenBank assembly RS_GCF_000466335.1. The GC content of the type genome is 42.98 % and the genome length is 2.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity - mouth".

Description of *Candidatus* Aggregicoccus regigisca sp. nov.

Candidatus Aggregicoccus regigisca (NL. fem. n. *regigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aggregicoccus sp009659535*. The type genome for the species is the GenBank assembly RS_GCF_009659535.1. The GC content of the type genome is 72.98 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Aggubaria depubicula sp. nov.

Candidatus Aggubaria depubicula (NL. fem. n. *depubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRI01 sp007131045*. The type genome for the species is the GenBank assembly GCA_007131045.1. The GC content of the type genome is 68.41 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Aggubaria gen. nov.

Candidatus Aggubaria (NL. fem. n. *Aggubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLRI01*. The type species for the genus is *Candidatus* Aggubaria depubicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggubaria vecorax sp. nov.

Candidatus Aggubaria vecorax (NL. fem. n. *vecorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRI01 sp011390475*. The type genome for the species is the GenBank assembly GCA_011390475.1. The GC content of the type genome is 67.64 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Aggubella effositudo sp. nov.

Candidatus Aggubella effositudo (NL. fem. n. *effositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-013348725 sp013348725*. The type genome for the species is the GenBank assembly RS_GCF_013348725.1. The GC content of the type genome is 67.8 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Aggubella gen. nov.

Candidatus Aggubella (NL. fem. n. *Aggubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-013348725*. The type species for the genus is *Candidatus* Aggubella effositudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggubia aneclibula sp. nov.

Candidatus Aggubia aneclibula (NL. fem. n. *aneclibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-60-19 sp001798595*. The type genome for the species is the GenBank assembly GCA_001798595.1. The GC content of the type genome is 59.68 % and the genome length is 4.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Aggubia gen. nov.

Candidatus Aggubia (NL. fem. n. *Aggubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-60-19*. The type species for the genus is *Candidatus* Aggubia aneclibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Aggubida allacibula sp. nov.

Candidatus Aggubida allacibula (NL. fem. n. *allacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAVLZ01 sp012034405*. The type genome for the species is the GenBank assembly RS_GCF_012034405.1. The GC content of the type genome is 53.25 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Aggubida gen. nov.

Candidatus Aggubida (NL. fem. n. *Aggubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAVLZ01*. The type species for the genus is *Candidatus* Aggubida allacibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aggubosa inmutimonas sp. nov.

Candidatus Aggubosa inmutimonas (NL. fem. n. *inmutimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFOF01 sp009926845*. The type genome for the species is the GenBank assembly GCA_009926845.1. The GC content of the type genome is 51.56 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Aggubosa gen. nov.

Candidatus Aggubosa (NL. fem. n. *Aggubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFOF01*. The type species for the genus is *Candidatus* Aggubosa inmutimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXRF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatariaceae.

Description of *Candidatus* Agitococcus cadurifica sp. nov.

Candidatus Agitococcus cadurifica (NL. fem. n. *cadurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agitococcus sp006546595*. The type genome for the species is the GenBank assembly RS_GCF_006546595.1. The GC content of the type genome is 43.58 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Agitococcus repepisca sp. nov.

Candidatus Agitococcus repepisca (NL. fem. n. *repepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agitococcus sp002333125*. The type genome for the species is the GenBank assembly GCA_002333125.1. The GC content of the type genome is 41.49 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Aglasana agratilenta sp. nov.

Candidatus Aglasana agratilenta (NL. fem. n. *agratilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-23 sp003599425*. The type genome for the species is the GenBank assembly GCA_003599425.1. The GC content of the type genome is 45.82 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Aglasana gen. nov.

Candidatus Aglasana (NL. fem. n. *Aglasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-23*. The type species for the genus is *Candidatus* Aglasana agratilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Aglasaria inperisca sp. nov.

Candidatus Aglasaria inperisca (NL. fem. n. *inperisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNC21 sp013112555*. The type genome for the species is the GenBank assembly GCA_013112555.1. The GC content of the type genome is 59.94 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Aglasaria gen. nov.

Candidatus Aglasaria (NL. fem. n. *Aglasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNC21*. The type species for the genus is *Candidatus* Aglasaria inperisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Aglasella lanifax sp. nov.

Candidatus Aglasella lanifax (NL. fem. n. *lanifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNI01 sp007120615*. The type genome for the species is the GenBank assembly GCA_007120615.1. The GC content of the type genome is 57.66 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Aglasella gen. nov.

Candidatus Aglasella (NL. fem. n. *Aglasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKNI01*. The type species for the genus is *Candidatus* Aglasella lanifax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aglasia attelousia sp. nov.

Candidatus Aglasia attelousia (NL. fem. n. *attelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-609 sp003249255*. The type genome for the species is the GenBank assembly GCA_003249255.1. The GC content of the type genome is 35.93 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Aglasia gen. nov.

Candidatus Aglasia (NL. fem. n. *Aglasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-609*. The type species for the genus is *Candidatus* Aglasia attelousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aglasosa adsocago sp. nov.

Candidatus Aglasosa adsocago (NL. fem. n. *adsocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711515 sp002711515*. The type genome for the species is the GenBank assembly GCA_002711515.1. The GC content of the type genome is 30.11 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Aglasosa gen. nov.

Candidatus Aglasosa (NL. fem. n. *Aglasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711515*. The type species for the genus is *Candidatus* Aglasosa adsocago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Aglasosa dececimonas sp. nov.

Candidatus Aglasosa dececimonas (NL. fem. n. *dececimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711515 sp902563505*. The type genome for the species is the GenBank assembly GCA_902563505.1. The GC content of the type genome is 29.68 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Aglasula adcumatica sp. nov.

Candidatus Aglasula adcumatica (NL. fem. n. *adcumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJGN01 sp014190515*. The type genome for the species is the GenBank assembly GCA_014190515.1. The GC content of the type genome is 37.34 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Aglasula gen. nov.

Candidatus Aglasula (NL. fem. n. *Aglasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJGN01*. The type species for the genus is *Candidatus* Aglasula adcumatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agnicana ignigatica sp. nov.

Candidatus Agnicana ignigatica (NL. fem. n. *ignigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bg2 sp001641205*. The type genome for the species is the GenBank assembly GCA_001641205.1. The GC content of the type genome is 26.54 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "midgut".

Description of *Candidatus* Agnicana gen. nov.

Candidatus Agnicana (NL. fem. n. *Agnicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bg2*. The type species for the genus is *Candidatus* Agnicana ignigatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agnicana incomatica sp. nov.

Candidatus Agnicana incomatica (NL. fem. n. *incomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bg2 sp001641225*. The type genome for the species is the GenBank assembly GCA_001641225.1. The GC content of the type genome is 28.34 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "midgut".

Description of *Candidatus* Agnicana odontibra sp. nov.

Candidatus Agnicana odontibra (NL. fem. n. *odontibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bg2 sp013139135*. The type genome for the species is the GenBank assembly GCA_013139135.1. The GC content of the type genome is 28.46 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Agnicana vanidilenta sp. nov.

Candidatus Agnicana vanidilenta (NL. fem. n. *vanidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bg2 sp013214765*. The type genome for the species is the GenBank assembly GCA_013214765.1. The GC content of the type genome is 24.94 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Agnicia intabitrix sp. nov.

Candidatus Agnicia intabitrix (NL. fem. n. *intabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11241 sp902767245*. The type genome for the species is the GenBank assembly GCA_902767245.1. The GC content of the type genome is 26.76 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Agnicia gen. nov.

Candidatus Agnicia (NL. fem. n. *Agnicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11241*. The type species for the genus is *Candidatus* Agnicia intabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Agnicida ludifugo sp. nov.

Candidatus Agnicida ludifugo (NL. fem. n. *ludifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5194 sp010119095*. The type genome for the species is the

GenBank assembly GCA_010119095.1. The GC content of the type genome is 26.18 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Agnicida gen. nov.

Candidatus Agnicida (NL. fem. n. *Agnicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5194*. The type species for the genus is *Candidatus* Agnicida ludifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Agnicida refunastra sp. nov.

Candidatus Agnicida refunastra (NL. fem. n. *refunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5194 sp002412935*. The type genome for the species is the GenBank assembly GCA_002412935.1. The GC content of the type genome is 23.9 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Agnicosa affunago sp. nov.

Candidatus Agnicosa affunago (NL. fem. n. *affunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSU01 sp004299275*. The type genome for the species is the GenBank assembly GCA_004299275.1. The GC content of the type genome is 56.7 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Agnicosa gen. nov.

Candidatus Agnicosa (NL. fem. n. *Agnicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSU01*. The type species for the genus is *Candidatus* Agnicosa affunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family

2-12-FULL-57-11. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacomanaceae.

Description of *Candidatus* Agnicula adrecigena sp. nov.

Candidatus Agnicula adrecigena (NL. fem. n. *adrecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MA-N2 sp004354015*. The type genome for the species is the GenBank assembly RS_GCF_004354015.1. The GC content of the type genome is 63.63 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Agnicula gen. nov.

Candidatus Agnicula (NL. fem. n. *Agnicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MA-N2*. The type species for the genus is *Candidatus* Agnicula adrecigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agnicula epitrilenta sp. nov.

Candidatus Agnicula epitrilenta (NL. fem. n. *epitrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MA-N2 sp002009585*. The type genome for the species is the GenBank assembly RS_GCF_002009585.1. The GC content of the type genome is 64.08 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Agnicula luxuressa sp. nov.

Candidatus Agnicula luxuressa (NL. fem. n. *luxuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MA-N2 sp014207375*. The type genome for the species is the GenBank assembly RS_GCF_014207375.1. The GC content of the type genome is 63.33 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Agnicula megalitas sp. nov.

Candidatus Agnicula megalitas (NL. fem. n. *megalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MA-N2 sp001549895*. The type genome for the species is the GenBank assembly GCA_001549895.1. The GC content of the type genome is 63.76 % and the genome length is 5.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Tsunami-affected soil".

Description of *Candidatus* Agnicula semidilega sp. nov.

Candidatus Agnicula semidilega (NL. fem. n. *semidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MA-N2 sp000517125*. The type genome for the species is the GenBank assembly RS_GCF_000517125.1. The GC content of the type genome is 62.99 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Agnomana delapentia sp. nov.

Candidatus Agnomana delapentia (NL. fem. n. *delapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-13 sp902826255*. The type genome for the species is the GenBank assembly GCA_902826255.1. The GC content of the type genome is 64.97 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Agnomana gen. nov.

Candidatus Agnomana (NL. fem. n. *Agnomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-13*. The type species for the genus is *Candidatus* Agnomana delapentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agnomana diponilega sp. nov.

Candidatus Agnomana diponilega (NL. fem. n. *diponilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-13 sp003963125*. The type genome for the species is the GenBank assembly GCA_003963125.1. The GC content of the type genome is 65.73 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Agnomana enuntivita sp. nov.

Candidatus Agnomana enuntivita (NL. fem. n. *enuntivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-13 sp011046675*. The type genome for the species is the GenBank assembly GCA_011046675.1. The GC content of the type genome is 70.9 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Agnomana impacivita sp. nov.

Candidatus Agnomana impacivita (NL. fem. n. *impacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-13 sp008933705*. The type genome for the species is the GenBank assembly GCA_008933705.1. The GC content of the type genome is 65.53 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Agnomella troclicella sp. nov.

Candidatus Agnomella troclicella (NL. fem. n. *troclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1307 sp900550505*. The type genome for the species is the GenBank assembly GCA_900550505.1. The GC content of the type genome is 52.04 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Agnomella gen. nov.

Candidatus Agnomella (NL. fem. n. *Agnomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1307*. The type species for the genus is *Candidatus* Agnomella troclicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Agnomosa arcebisca sp. nov.

Candidatus Agnomosa arcebisca (NL. fem. n. *arcebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXVE01 sp005790265*. The type genome for the species is the GenBank assembly GCA_005790265.1. The GC content of the type genome is 49.31 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Agnomosa gen. nov.

Candidatus Agnomosa (NL. fem. n. *Agnomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXVE01*. The type species for the genus is *Candidatus* Agnomosa arcebisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agnomula necubimonia sp. nov.

Candidatus Agnomula necubimonia (NL. fem. n. *necubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MESE01 sp001770855*. The type genome for the species is the GenBank assembly GCA_001770855.1. The GC content of the type genome is 55.9 % and the genome length is 5.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Agnomula gen. nov.

Candidatus Agnomula (NL. fem. n. *Agnomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MESE01*. The type species for the genus is *Candidatus* Agnomula necubimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agraparia agravivita sp. nov.

Candidatus Agraparia agravivita (NL. fem. n. *agravivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RQCD01 sp008668455*. The type genome for the species is the GenBank assembly GCA_008668455.1. The GC content of the type genome is 46.13 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Agraparia gen. nov.

Candidatus Agraparia (NL. fem. n. *Agraparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RQCD01*. The type species for the genus is *Candidatus* Agraparia agravivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Agrapella ancepilenta sp. nov.

Candidatus Agrapella ancepilenta (NL. fem. n. *ancepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCG-010 sp900754535*. The type genome for the species is the GenBank assembly RS_GCF_900754535.1. The GC content of the type genome is 53.19 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Agrapella gen. nov.

Candidatus Agrapella (NL. fem. n. *Agrapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UCG-010*. The type species for the genus is *Candidatus* Agrapella ancepilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Agrapella bigemicella sp. nov.

Candidatus Agrapella bigemicella (NL. fem. n. *bigemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCG-010 sp003150115*. The type genome for the species is the GenBank assembly GCA_003150115.1. The GC content of the type genome is 50.59 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Agrapella semivastra sp. nov.

Candidatus Agrapella semivastra (NL. fem. n. *semivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCG-010 sp900760275*. The type genome for the species is the GenBank assembly RS_GCF_900760275.1. The GC content of the type genome is 60.82 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Agrapella tumefitia sp. nov.

Candidatus Agrapella tumefitia (NL. fem. n. *tumefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCG-010 sp003150215*. The type genome for the species is the GenBank assembly GCA_003150215.1. The GC content of the type genome is 59.9 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Agrapia adlapitica sp. nov.

Candidatus Agrapia adlapitica (NL. fem. n. *adlapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHT01 sp011389255*. The type genome for the species is the GenBank assembly GCA_011389255.1. The GC content of the type genome is 62.39 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Agrapia gen. nov.

Candidatus Agrapia (NL. fem. n. *Agrapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHT01*. The type species for the genus is *Candidatus* Agrapia adlapitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrapida cocolago sp. nov.

Candidatus Agrapida cocolago (NL. fem. n. *cocolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA690 sp002298225*. The type genome for the species is the GenBank assembly GCA_002298225.1. The GC content of the type genome is 62.4 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Agrapida gen. nov.

Candidatus Agrapida (NL. fem. n. *Agrapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA690*. The type species for the genus is *Candidatus* Agrapida cocolago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrapida detoratica sp. nov.

Candidatus Agrapida detoratica (NL. fem. n. *detoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA690 sp013388415*. The type genome for the species is the GenBank assembly GCA_013388415.1. The GC content of the type genome is 63.72 %

and the genome length is 4.35 Mbp.

Description of *Candidatus* Agraposa parocicella sp. nov.

Candidatus Agraposa parocicella (NL. fem. n. *parocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2772 sp002352545*. The type genome for the species is the GenBank assembly GCA_002352545.1. The GC content of the type genome is 33.61 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Agraposa gen. nov.

Candidatus Agraposa (NL. fem. n. *Agraposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2772*. The type species for the genus is *Candidatus* Agraposa parocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUUL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinupellaceae.

Description of *Candidatus* Agrapula innecastra sp. nov.

Candidatus Agrapula innecastra (NL. fem. n. *innecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOG01 sp009909005*. The type genome for the species is the GenBank assembly GCA_009909005.1. The GC content of the type genome is 66.72 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Agrapula gen. nov.

Candidatus Agrapula (NL. fem. n. *Agrapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAOG01*. The type species for the genus is *Candidatus* Agrapula innecastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agratana annubifica sp. nov.

Candidatus Agratana annubifica (NL. fem. n. *annubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-50-9 sp002791295*. The type genome for the species is the GenBank assembly GCA_002791295.1. The GC content of the type genome is 49.82 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Agratana gen. nov.

Candidatus Agratana (NL. fem. n. *Agratana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-50-9*. The type species for the genus is *Candidatus* Agratana annubifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Agrataria categitio sp. nov.

Candidatus Agrataria categitio (NL. fem. n. *categitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMDJ01 sp008080925*. The type genome for the species is the GenBank assembly GCA_008080925.1. The GC content of the type genome is 48.33 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Agrataria gen. nov.

Candidatus Agrataria (NL. fem. n. *Agrataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMDJ01*. The type species for the genus is *Candidatus* Agrataria categitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agratella umbilitudo sp. nov.

Candidatus Agratella umbilitudo (NL. fem. n. *umbilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZH01 sp013289795*. The type genome for the species is the GenBank assembly GCA_013289795.1. The GC content of the type genome is 57.76 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Agratella gen. nov.

Candidatus Agratella (NL. fem. n. *Agratella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCZH01*. The type species for the genus is *Candidatus* Agratella umbilitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agratida amfitilega sp. nov.

Candidatus Agratida amfitilega (NL. fem. n. *amfitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5868 sp014336955*. The type genome for the species is the GenBank assembly RS_GCF_014336955.1. The GC content of the type genome is 51.27 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Agratida gen. nov.

Candidatus Agratida (NL. fem. n. *Agratida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5868*. The type species for the genus is *Candidatus* Agratida amfitilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agratida redunousia sp. nov.

Candidatus Agratida redunousia (NL. fem. n. *redunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5868 sp002432555*. The type genome for the species is the GenBank assembly GCA_002432555.1. The GC content of the type genome is 56.96 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Agratida saxopitoga sp. nov.

Candidatus Agratida saxopitoga (NL. fem. n. *saxopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5868 sp002432095*. The type genome for the species is the GenBank assembly GCA_002432095.1. The GC content of the type genome is 52.53 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Agratosa biparimonia sp. nov.

Candidatus Agratosa biparimonia (NL. fem. n. *biparimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEL01 sp012728755*. The type genome for the species is the GenBank assembly GCA_012728755.1. The GC content of the type genome is 33.22 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Agratosa gen. nov.

Candidatus Agratosa (NL. fem. n. *Agratosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEL01*. The type species for the genus is *Candidatus* Agratosa biparimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agratula homicatio sp. nov.

Candidatus Agratula homicatio (NL. fem. n. *homicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-45-12 sp001801665*. The type genome for the species is

the GenBank assembly GCA_001801665.1. The GC content of the type genome is 45.27 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Agratula gen. nov.

Candidatus Agratula (NL. fem. n. *Agratula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-45-12*. The type species for the genus is *Candidatus* Agratula homicatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Agravana hexagetta sp. nov.

Candidatus Agravana hexagetta (NL. fem. n. *hexagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-370 sp003247225*. The type genome for the species is the GenBank assembly GCA_003247225.1. The GC content of the type genome is 67.8 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Agravana gen. nov.

Candidatus Agravana (NL. fem. n. *Agravana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-370*. The type species for the genus is *Candidatus* Agravana hexagetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12059*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubicanaceae.

Description of *Candidatus* Agravana paracitas sp. nov.

Candidatus Agravana paracitas (NL. fem. n. *paracitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-370 sp002839245*. The type genome for the species is the GenBank assembly GCA_002839245.1. The GC content of the type genome is 61.73 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Agravana vinolitura sp. nov.

Candidatus Agravana vinolitura (NL. fem. n. *vinolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-370 sp002839315*. The type genome for the species is the GenBank assembly GCA_002839315.1. The GC content of the type genome is 62.33 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Agravella adluvessa sp. nov.

Candidatus Agravella adluvessa (NL. fem. n. *adluvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRG01 sp012518885*. The type genome for the species is the GenBank assembly GCA_012518885.1. The GC content of the type genome is 33.97 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Agravella gen. nov.

Candidatus Agravella (NL. fem. n. *Agravella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRG01*. The type species for the genus is *Candidatus* Agravella adluvessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agravida irrelicula sp. nov.

Candidatus Agravida irrelicula (NL. fem. n. *irrelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZGG01 sp012511355*. The type genome for the species is the

GenBank assembly GCA_012511355.1. The GC content of the type genome is 37.61 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Agravida gen. nov.

Candidatus Agravida (NL. fem. n. *Agravida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZGG01*. The type species for the genus is *Candidatus* Agravida irrelicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1709*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifanaceae.

Description of *Candidatus* Agravosa adoscitura sp. nov.

Candidatus Agravosa adoscitura (NL. fem. n. *adoscitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWZK01 sp003567495*. The type genome for the species is the GenBank assembly GCA_003567495.1. The GC content of the type genome is 52.31 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Agravosa gen. nov.

Candidatus Agravosa (NL. fem. n. *Agravosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWZK01*. The type species for the genus is *Candidatus* Agravosa adoscitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefulaceae.

Description of *Candidatus* Agravula buxanessa sp. nov.

Candidatus Agravula buxanessa (NL. fem. n. *buxanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MA-ANB-1 sp003388545*. The type genome for the species is the GenBank assembly GCA_003388545.1. The GC content of the type genome is 62.16 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Agravula gen. nov.

Candidatus Agravula (NL. fem. n. *Agravula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MA-ANB-1*. The type species for the genus is *Candidatus* Agravula buxanessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidosaceae.

Description of *Candidatus* Agreia denixitio sp. nov.

Candidatus Agreia denixitio (NL. fem. n. *denixitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agreia sp001421485*. The type genome for the species is the GenBank assembly RS_GCF_001421485.1. The GC content of the type genome is 66.29 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Agreia epicressa sp. nov.

Candidatus Agreia epicressa (NL. fem. n. *epicressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agreia sp900177765*. The type genome for the species is the GenBank assembly RS_GCF_900177765.1. The GC content of the type genome is 65.85 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Agreia murilicula sp. nov.

Candidatus Agreia murilicula (NL. fem. n. *murilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Agreia sp001422485*. The type genome for the species is the GenBank assembly RS_GCF_001422485.1. The GC content of the type genome is 67.59 % and the genome length is 3.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Agricana altivisca sp. nov.

Candidatus Agricana altivisca (NL. fem. n. *altivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGJ01 sp011523615*. The type genome for the species is the GenBank assembly GCA_011523615.1. The GC content of the type genome is 58.5 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Agricana gen. nov.

Candidatus Agricana (NL. fem. n. *Agricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTGJ01*. The type species for the genus is *Candidatus* Agricana altivisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Agricaria cohonitura sp. nov.

Candidatus Agricaria cohonitura (NL. fem. n. *cohonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIH01 sp012523545*. The type genome for the species is the GenBank assembly GCA_012523545.1. The GC content of the type genome is 58.36 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Agricaria gen. nov.

Candidatus Agricaria (NL. fem. n. *Agricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYIH01*. The type species for the genus is *Candidatus* Agricaria

cohonitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxopellaceae.

Description of *Candidatus* Agricella acropatica sp. nov.

Candidatus Agricella acropatica (NL. fem. n. *acropatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTC01 sp009379795*. The type genome for the species is the GenBank assembly GCA_009379795.1. The GC content of the type genome is 69.62 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Agricella gen. nov.

Candidatus Agricella (NL. fem. n. *Agricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTC01*. The type species for the genus is *Candidatus* Agricella acropatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agricia optumago sp. nov.

Candidatus Agricia optumago (NL. fem. n. *optumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSO01 sp009380075*. The type genome for the species is the GenBank assembly GCA_009380075.1. The GC content of the type genome is 65.64 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Agricia gen. nov.

Candidatus Agricia (NL. fem. n. *Agricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSO01*. The type species for the genus is *Candidatus* Agricia optumago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momorellaceae.

Description of *Candidatus* Agricosa cacalivita sp. nov.

Candidatus Agricosa cacalivita (NL. fem. n. *cacalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHYU01 sp003224235*. The type genome for the species is the GenBank assembly GCA_003224235.1. The GC content of the type genome is 60.78 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Agricosa gen. nov.

Candidatus Agricosa (NL. fem. n. *Agricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHYU01*. The type species for the genus is *Candidatus* Agricosa cacalivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Agricula diritibula sp. nov.

Candidatus Agricula diritibula (NL. fem. n. *diritibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABUEZ01 sp013314795*. The type genome for the species is the GenBank assembly GCA_013314795.1. The GC content of the type genome is 49.3 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Agricula gen. nov.

Candidatus Agricula (NL. fem. n. *Agricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABUEZ01*. The type species for the genus is *Candidatus* Agricula

diritibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrilactobacillus mavoritoga sp. nov.

Candidatus Agrilactobacillus mavoritoga (NL. fem. n. *mavoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrilactobacillus sp003946725*. The type genome for the species is the GenBank assembly RS_GCF_003946725.1. The GC content of the type genome is 39.96 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Agrimana defunax sp. nov.

Candidatus Agrimana defunax (NL. fem. n. *defunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYXV01 sp903930225*. The type genome for the species is the GenBank assembly GCA_903930225.1. The GC content of the type genome is 51.52 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Agrimana gen. nov.

Candidatus Agrimana (NL. fem. n. *Agrimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYXV01*. The type species for the genus is *Candidatus* Agrimana defunax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WPAF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detecariaceae.

Description of *Candidatus* Agrimella arcelicella sp. nov.

Candidatus Agrimella arcelicella (NL. fem. n. *arcelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTY01 sp013695665*. The type genome for the species is the

GenBank assembly GCA_013695665.1. The GC content of the type genome is 69.07 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Agrimella gen. nov.

Candidatus Agrimella (NL. fem. n. *Agrimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTY01*. The type species for the genus is *Candidatus* Agrimella arcelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrimella depicifica sp. nov.

Candidatus Agrimella depicifica (NL. fem. n. *depicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTY01 sp013695685*. The type genome for the species is the GenBank assembly GCA_013695685.1. The GC content of the type genome is 69.59 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Agrimella indomago sp. nov.

Candidatus Agrimella indomago (NL. fem. n. *indomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTY01 sp013812145*. The type genome for the species is the GenBank assembly GCA_013812145.1. The GC content of the type genome is 69.37 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Agrimella milipivita sp. nov.

Candidatus Agrimella milipivita (NL. fem. n. *milipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTY01 sp013696785*. The type genome for the species is the GenBank assembly GCA_013696785.1. The GC content of the type genome is 69.15 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Agrimia palifigena sp. nov.

Candidatus Agrimia palifigena (NL. fem. n. *palifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BS3 sp008274585*. The type genome for the species is the GenBank assembly RS_GCF_008274585.1. The GC content of the type genome is 43.42 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Agrimia gen. nov.

Candidatus Agrimia (NL. fem. n. *Agrimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BS3*. The type species for the genus is *Candidatus* Agrimia palifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrimida admodicella sp. nov.

Candidatus Agrimida admodicella (NL. fem. n. *admodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM515 sp002869635*. The type genome for the species is the GenBank assembly GCA_002869635.1. The GC content of the type genome is 56.23 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Agrimida gen. nov.

Candidatus Agrimida (NL. fem. n. *Agrimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM515*. The type species for the genus is *Candidatus* Agrimida admodicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agrimula oppugibula sp. nov.

Candidatus Agrimula oppugibula (NL. fem. n. *oppugibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W1P20-047 sp004555335*. The type genome for the species is the GenBank assembly GCA_004555335.1. The GC content of the type genome is 59.64 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Agrimula gen. nov.

Candidatus Agrimula (NL. fem. n. *Agrimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W1P20-047*. The type species for the genus is *Candidatus* Agrimula oppugibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agriparia culilisca sp. nov.

Candidatus Agriparia culilisca (NL. fem. n. *culilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTMR01 sp011358865*. The type genome for the species is the GenBank assembly GCA_011358865.1. The GC content of the type genome is 50.39 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Agriparia gen. nov.

Candidatus Agriparia (NL. fem. n. *Agriparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTMR01*. The type species for the genus is *Candidatus* Agriparia culilisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Agripella occalugo sp. nov.

Candidatus Agripella occalugo (NL. fem. n. *occalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXQ01 sp003223935*. The type genome for the species is the GenBank assembly GCA_003223935.1. The GC content of the type genome is 59.56 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Agripella gen. nov.

Candidatus Agripella (NL. fem. n. *Agripella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHXQ01*. The type species for the genus is *Candidatus* Agripella occalugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agripia manubetta sp. nov.

Candidatus Agripia manubetta (NL. fem. n. *manubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG-bin9 sp002083525*. The type genome for the species is the GenBank assembly GCA_002083525.1. The GC content of the type genome is 63.05 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Agripia gen. nov.

Candidatus Agripia (NL. fem. n. *Agripia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG-bin9*. The type species for the genus is *Candidatus* Agripia manubetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agripida resuritrix sp. nov.

Candidatus Agripida resuritrix (NL. fem. n. *resuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJH01 sp011524915*. The type genome for the species is the

GenBank assembly GCA_011524915.1. The GC content of the type genome is 42.66 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Agripida gen. nov.

Candidatus Agripida (NL. fem. n. *Agripida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJH01*. The type species for the genus is *Candidatus* Agripida resuritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Agriposa tenemicella sp. nov.

Candidatus Agriposa tenemicella (NL. fem. n. *tenemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWBF01 sp002068935*. The type genome for the species is the GenBank assembly GCA_002068935.1. The GC content of the type genome is 68.12 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Agriposa gen. nov.

Candidatus Agriposa (NL. fem. n. *Agriposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWBF01*. The type species for the genus is *Candidatus* Agriposa tenemicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-64-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacidaceae.

Description of *Candidatus* Agripula regifisca sp. nov.

Candidatus Agripula regifisca (NL. fem. n. *regifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5318 sp002408285*. The type genome for the species is the GenBank assembly GCA_002408285.1. The GC content of the type genome is 46.85 %

and the genome length is 2.72 Mbp.

Description of *Candidatus* Agripula gen. nov.

Candidatus Agripula (NL. fem. n. *Agripula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5318*. The type species for the genus is *Candidatus* Agripula regifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRI-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Latibellaceae.

Description of *Candidatus* Agrobacterium adaggitoga sp. nov.

Candidatus Agrobacterium adaggitoga (NL. fem. n. *adaggitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp001422245*. The type genome for the species is the GenBank assembly RS_GCF_001422245.1. The GC content of the type genome is 57.3 % and the genome length is 5.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Agrobacterium bifaritio sp. nov.

Candidatus Agrobacterium bifaritio (NL. fem. n. *bifaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp000192635*. The type genome for the species is the GenBank assembly RS_GCF_900465695.1. The GC content of the type genome is 58.53 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Agrobacterium casigitura sp. nov.

Candidatus Agrobacterium casigitura (NL. fem. n. *casigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900472925*. The type genome for the species is the GenBank assembly RS_GCF_900472925.1. The GC content of the type genome is 56.76

% and the genome length is 5.1 Mbp.

Description of *Candidatus* Agrobacterium celumax sp. nov.

Candidatus Agrobacterium celumax (NL. fem. n. *celumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900012615*. The type genome for the species is the GenBank assembly RS_GCF_006757705.1. The GC content of the type genome is 59.47 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Agrobacterium decomiforma sp. nov.

Candidatus Agrobacterium decomiforma (NL. fem. n. *decomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900012625*. The type genome for the species is the GenBank assembly RS_GCF_900012625.1. The GC content of the type genome is 59.05 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Agrobacterium hirunousia sp. nov.

Candidatus Agrobacterium hirunousia (NL. fem. n. *hirunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900473305*. The type genome for the species is the GenBank assembly RS_GCF_900467875.1. The GC content of the type genome is 58.2 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Agrobacterium melilivita sp. nov.

Candidatus Agrobacterium melilivita (NL. fem. n. *melilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp005938205*. The type genome for the species is the GenBank assembly GCA_005938205.1. The GC content of the type genome is 57.12 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Agrobacterium metabitrix sp. nov.

Candidatus Agrobacterium metabitrix (NL. fem. n. *metabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900013535*. The type genome for the species is the GenBank assembly RS_GCF_900013535.1. The GC content of the type genome is 59.2 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Agrobacterium notabessa sp. nov.

Candidatus Agrobacterium notabessa (NL. fem. n. *notabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900468285*. The type genome for the species is the GenBank assembly RS_GCF_900471905.1. The GC content of the type genome is 57.14 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Agrobacterium venunatio sp. nov.

Candidatus Agrobacterium venunatio (NL. fem. n. *venunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900473205*. The type genome for the species is the GenBank assembly RS_GCF_900470045.1. The GC content of the type genome is 57.3 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Agrobacterium viginatica sp. nov.

Candidatus Agrobacterium viginatica (NL. fem. n. *viginatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrobacterium sp900468015*. The type genome for the species is the GenBank assembly RS_GCF_900468085.1. The GC content of the type genome is 57.3 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Agrococcus ambacilega sp. nov.

Candidatus Agrococcus ambacilega (NL. fem. n. *ambacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrococcus sp005484985*. The type genome for the species is the GenBank assembly RS_GCF_005484985.1. The GC content of the type genome is 72.99 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Agrococcus omnipifica sp. nov.

Candidatus Agrococcus omnipifica (NL. fem. n. *omnipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agrococcus sp900117395*. The type genome for the species is the GenBank assembly RS_GCF_900117395.1. The GC content of the type genome is 71.82 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Agromyces cilibitrix sp. nov.

Candidatus Agromyces cilibitrix (NL. fem. n. *cilibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp900113185*. The type genome for the species is the GenBank assembly RS_GCF_900113185.1. The GC content of the type genome is 70.84 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Agromyces cohoritrix sp. nov.

Candidatus Agromyces cohoritrix (NL. fem. n. *cohoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp003710805*. The type genome for the species is the GenBank assembly RS_GCF_003710805.1. The GC content of the type genome is 71.84 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Agromyces deforigena sp. nov.

Candidatus Agromyces deforigena (NL. fem. n. *deforigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp902809835*. The type genome for the species is the GenBank assembly RS_GCF_902809835.1. The GC content of the type genome is 69.63

% and the genome length is 3.56 Mbp.

Description of *Candidatus* Agromyces defosousia sp. nov.

Candidatus Agromyces defosousia (NL. fem. n. *defosousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp006337065*. The type genome for the species is the GenBank assembly RS_GCF_006337065.1. The GC content of the type genome is 69.01 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Agromyces derecitas sp. nov.

Candidatus Agromyces derecitas (NL. fem. n. *derecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp008122505*. The type genome for the species is the GenBank assembly RS_GCF_008122505.1. The GC content of the type genome is 71.51 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Agromyces ecastimonas sp. nov.

Candidatus Agromyces ecastimonas (NL. fem. n. *ecastimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp008365295*. The type genome for the species is the GenBank assembly RS_GCF_008365295.1. The GC content of the type genome is 71.07 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Agromyces enuclitrix sp. nov.

Candidatus Agromyces enuclitrix (NL. fem. n. *enuclitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp006715355*. The type genome for the species is the GenBank assembly RS_GCF_006715355.1. The GC content of the type genome is 70.43 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Agromyces incomitia sp. nov.

Candidatus Agromyces incomitia (NL. fem. n. *incomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp004959775*. The type genome for the species is the GenBank assembly RS_GCF_004959775.1. The GC content of the type genome is 70.81 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Agromyces infacetta sp. nov.

Candidatus Agromyces infacetta (NL. fem. n. *infacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp003384855*. The type genome for the species is the GenBank assembly RS_GCF_003384855.1. The GC content of the type genome is 70.9 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Agromyces inobritrix sp. nov.

Candidatus Agromyces inobritrix (NL. fem. n. *inobritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp003634985*. The type genome for the species is the GenBank assembly RS_GCF_003634985.1. The GC content of the type genome is 71.45 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Agromyces inpelitura sp. nov.

Candidatus Agromyces inpelitura (NL. fem. n. *inpelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp009647605*. The type genome for the species is the GenBank assembly RS_GCF_009647605.1. The GC content of the type genome is 71.51 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Agromyces insusilega sp. nov.

Candidatus Agromyces insusilega (NL. fem. n. *insusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp009720255*. The type genome for the species is the GenBank assembly RS_GCF_009720255.1. The GC content of the type genome is 70.16 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Agromyces orniticella sp. nov.

Candidatus Agromyces orniticella (NL. fem. n. *orniticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp004006235*. The type genome for the species is the GenBank assembly RS_GCF_004006235.1. The GC content of the type genome is 71.27 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Agromyces protrastra sp. nov.

Candidatus Agromyces protrastra (NL. fem. n. *protrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp001428255*. The type genome for the species is the GenBank assembly RS_GCF_001428255.1. The GC content of the type genome is 69.97 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Agromyces rubigitio sp. nov.

Candidatus Agromyces rubigitio (NL. fem. n. *rubigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp001620055*. The type genome for the species is the GenBank assembly RS_GCF_001620055.1. The GC content of the type genome is 72.12 % and the genome length is 3.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water from newly drilled coal seam bore well; sample 4".

Description of *Candidatus* Agromyces umbilousia sp. nov.

Candidatus Agromyces umbilousia (NL. fem. n. *umbilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp009674665*. The type genome for the species is the GenBank assembly RS_GCF_009674665.1. The GC content of the type genome is 71.88 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Agromyces viburastra sp. nov.

Candidatus Agromyces viburastra (NL. fem. n. *viburastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp003070885*. The type genome for the species is the GenBank assembly RS_GCF_003113355.1. The GC content of the type genome is 69.72 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Agromyces virecastra sp. nov.

Candidatus Agromyces virecastra (NL. fem. n. *virecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp001429165*. The type genome for the species is the GenBank assembly RS_GCF_001429165.1. The GC content of the type genome is 69.7 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Agromyces visibitura sp. nov.

Candidatus Agromyces visibitura (NL. fem. n. *visibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Agromyces sp001421565*. The type genome for the species is the GenBank assembly RS_GCF_001421565.1. The GC content of the type genome is 70.64 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Akkermansia abascitrix sp. nov.

Candidatus Akkermansia abascitrix (NL. fem. n. *abascitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp002471255*. The type genome for the species is the

GenBank assembly GCA_002471255.1. The GC content of the type genome is 40.59 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Akkermansia caravitrix sp. nov.

Candidatus Akkermansia caravitrix (NL. fem. n. *caravitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp001580195*. The type genome for the species is the GenBank assembly RS_GCF_001647615.1. The GC content of the type genome is 56.95 % and the genome length is 3.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "GI tract".

Description of *Candidatus* Akkermansia desonitica sp. nov.

Candidatus Akkermansia desonitica (NL. fem. n. *desonitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp900545155*. The type genome for the species is the GenBank assembly GCA_900545155.1. The GC content of the type genome is 51.89 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Akkermansia fatilax sp. nov.

Candidatus Akkermansia fatilax (NL. fem. n. *fatilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp900766865*. The type genome for the species is the GenBank assembly GCA_900766865.1. The GC content of the type genome is 55.19 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Akkermansia novilitudo sp. nov.

Candidatus Akkermansia novilitudo (NL. fem. n. *novilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp900548895*. The type genome for the species is the GenBank assembly GCA_900754675.1. The GC content of the type genome is 64.76 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Akkermansia ossiciforma sp. nov.

Candidatus Akkermansia ossiciforma (NL. fem. n. *ossiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp002358905*. The type genome for the species is the GenBank assembly GCA_002358905.1. The GC content of the type genome is 54.02 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Akkermansia resaletta sp. nov.

Candidatus Akkermansia resaletta (NL. fem. n. *resaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Akkermansia sp004167605*. The type genome for the species is the GenBank assembly RS_GCF_008421425.1. The GC content of the type genome is 55.84 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Albidovulum adfabatio sp. nov.

Candidatus Albidovulum adfabatio (NL. fem. n. *adfabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Albidovulum sp002440625*. The type genome for the species is the GenBank assembly GCA_002440625.1. The GC content of the type genome is 65.15 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Albidovulum arcubimonia sp. nov.

Candidatus Albidovulum arcubimonia (NL. fem. n. *arcubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Albidovulum sp002841115*. The type genome for the species is the GenBank assembly GCA_002841115.1. The GC content of the type genome is 68.43 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Albidovulum errabessa sp. nov.

Candidatus Albidovulum errabessa (NL. fem. n. *errabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Albidovulum sp011620265*. The type genome for the species is the GenBank assembly GCA_011620265.1. The GC content of the type genome is 67.5 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Albidovulum exsaniforma sp. nov.

Candidatus Albidovulum exsaniforma (NL. fem. n. *exsaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Albidovulum sp008933605*. The type genome for the species is the GenBank assembly GCA_008933605.1. The GC content of the type genome is 68.06 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Albidovulum utputitrix sp. nov.

Candidatus Albidovulum utputitrix (NL. fem. n. *utputitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Albidovulum sp002280515*. The type genome for the species is the GenBank assembly GCA_002280515.1. The GC content of the type genome is 66.39 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Albogana thapsousia sp. nov.

Candidatus Albogana thapsousia (NL. fem. n. *thapsousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAP99 sp001295775*. The type genome for the species is the GenBank assembly RS_GCF_001295775.1. The GC content of the type genome is 65.41 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Albogana gen. nov.

Candidatus Albogana (NL. fem. n. *Albogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AAP99*. The type species for the genus is *Candidatus* Albogana thapsousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Albogaria buxanigena sp. nov.

Candidatus Albogaria buxanigena (NL. fem. n. *buxanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11224 sp902767005*. The type genome for the species is the GenBank assembly GCA_902767005.1. The GC content of the type genome is 27.16 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Albogaria gen. nov.

Candidatus Albogaria (NL. fem. n. *Albogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11224*. The type species for the genus is *Candidatus* Albogaria buxanigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Albogella desucibula sp. nov.

Candidatus Albogella desucibula (NL. fem. n. *desucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSRN01 sp013214025*. The type genome for the species is the GenBank assembly GCA_013214025.1. The GC content of the type genome is 60.73 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Albogella gen. nov.

Candidatus Albogella (NL. fem. n. *Albogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSRN01*. The type species for the genus is *Candidatus* Albogella

desucibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Albogia adpecentia sp. nov.

Candidatus Albogia adpecentia (NL. fem. n. *adpecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPM01 sp012519815*. The type genome for the species is the GenBank assembly GCA_012519815.1. The GC content of the type genome is 33.03 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Albogia gen. nov.

Candidatus Albogia (NL. fem. n. *Albogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPM01*. The type species for the genus is *Candidatus* Albogia adpecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Veridariaceae.

Description of *Candidatus* Albogida adhoritoga sp. nov.

Candidatus Albogida adhoritoga (NL. fem. n. *adhoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIY01 sp013003535*. The type genome for the species is the GenBank assembly GCA_013003535.1. The GC content of the type genome is 61.08 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Albogida gen. nov.

Candidatus Albogida (NL. fem. n. *Albogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDIY01*. The type species for the genus is *Candidatus* Albogida adhoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatosaceae.

Description of *Candidatus* Albogida adtesitudo sp. nov.

Candidatus Albogida adtesitudo (NL. fem. n. *adtesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIY01 sp013003325*. The type genome for the species is the GenBank assembly GCA_013003325.1. The GC content of the type genome is 64.22 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Albogosa lavabivita sp. nov.

Candidatus Albogosa lavabivita (NL. fem. n. *lavabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNAD01 sp003641345*. The type genome for the species is the GenBank assembly GCA_003641345.1. The GC content of the type genome is 35.26 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Albogosa gen. nov.

Candidatus Albogosa (NL. fem. n. *Albogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNAD01*. The type species for the genus is *Candidatus* Albogosa lavabivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Alcalana lucifilenta sp. nov.

Candidatus Alcalana lucifilenta (NL. fem. n. *lucifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAADIO01 sp013151235*. The type genome for the species is the GenBank assembly GCA_013151235.1. The GC content of the type genome is 54.97 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Alcalana gen. nov.

Candidatus Alcalana (NL. fem. n. *Alcalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIO01*. The type species for the genus is *Candidatus* Alcalana lucifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-53-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibosaceae.

Description of *Candidatus* Alcalaria decapitica sp. nov.

Candidatus Alcalaria decapitica (NL. fem. n. *decapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSW01 sp009379895*. The type genome for the species is the GenBank assembly GCA_009379895.1. The GC content of the type genome is 72.19 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Alcalaria gen. nov.

Candidatus Alcalaria (NL. fem. n. *Alcalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSW01*. The type species for the genus is *Candidatus* Alcalaria decapitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Alcalella inturibra sp. nov.

Candidatus Alcalella inturibra (NL. fem. n. *inturibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLO01 sp009777575*. The type genome for the species is the GenBank assembly GCA_009777575.1. The GC content of the type genome is 34.01 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Alcalella gen. nov.

Candidatus Alcalella (NL. fem. n. *Alcalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLO01*. The type species for the genus is *Candidatus* Alcalella inturibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRIO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracidaceae.

Description of *Candidatus* Alcalia domabax sp. nov.

Candidatus Alcalia domabax (NL. fem. n. *domabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1690 sp900554165*. The type genome for the species is the GenBank assembly GCA_900554165.1. The GC content of the type genome is 43.51 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Alcalia gen. nov.

Candidatus Alcalia (NL. fem. n. *Alcalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1690*. The type species for the genus is *Candidatus* Alcalia domabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alcalida melilisca sp. nov.

Candidatus Alcalida melilisca (NL. fem. n. *melilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NBLS01 sp002084385*. The type genome for the species is the GenBank assembly GCA_002084385.1. The GC content of the type genome is 34.58 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Alcalida gen. nov.

Candidatus Alcalida (NL. fem. n. *Alcalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBLS01*. The type species for the genus is *Candidatus* Alcalida melilisca .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Alcalosa citivitia sp. nov.

Candidatus Alcalosa citivitia (NL. fem. n. *citivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBML01 sp013792075*. The type genome for the species is the GenBank assembly GCA_013792075.1. The GC content of the type genome is 47.33 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Alcalosa gen. nov.

Candidatus Alcalosa (NL. fem. n. *Alcalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBML01*. The type species for the genus is *Candidatus* Alcalosa citivitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alcalosa hecativita sp. nov.

Candidatus Alcalosa hecativita (NL. fem. n. *hecativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBML01 sp002085465*. The type genome for the species is the GenBank assembly GCA_002085465.1. The GC content of the type genome is 43.64 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Alcalula fatilago sp. nov.

Candidatus Alcalula fatilago (NL. fem. n. *fatilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8914 sp003486725*. The type genome for the species is the GenBank assembly GCA_003486725.1. The GC content of the type genome is 54.71 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Alcalula gen. nov.

Candidatus Alcalula (NL. fem. n. *Alcalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8914*. The type species for the genus is *Candidatus* Alcalula fatilago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticidaceae.

Description of *Candidatus* Alcalula obsecitia sp. nov.

Candidatus Alcalula obsecitia (NL. fem. n. *obsecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8914 sp009779135*. The type genome for the species is the GenBank assembly GCA_009779135.1. The GC content of the type genome is 52.79 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Alcanivorax acrufiforma sp. nov.

Candidatus Alcanivorax acrufiforma (NL. fem. n. *acrufiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002726155*. The type genome for the species is the GenBank assembly GCA_002726155.1. The GC content of the type genome is 58.03 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Alcanivorax assudago sp. nov.

Candidatus Alcanivorax assudago (NL. fem. n. *assudago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp009882945*. The type genome for the species is the GenBank assembly RS_GCF_009882945.1. The GC content of the type genome is 57.47 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Alcanivorax cituvimonia sp. nov.

Candidatus Alcanivorax cituvimonia (NL. fem. n. *cituvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002389055*. The type genome for the species is the GenBank assembly GCA_002389055.1. The GC content of the type genome is 64.68 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Alcanivorax colapitio sp. nov.

Candidatus Alcanivorax colapitio (NL. fem. n. *colapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp004360225*. The type genome for the species is the GenBank assembly RS_GCF_004360225.1. The GC content of the type genome is 61.37 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Alcanivorax dilibentia sp. nov.

Candidatus Alcanivorax dilibentia (NL. fem. n. *dilibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002354605*. The type genome for the species is the GenBank assembly GCA_002331785.1. The GC content of the type genome is 65.22 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Alcanivorax divoribula sp. nov.

Candidatus Alcanivorax divoribula (NL. fem. n. *divoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002313655*. The type genome for the species is the GenBank assembly GCA_002696185.1. The GC content of the type genome is 65.72 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Alcanivorax ingigisca sp. nov.

Candidatus Alcanivorax ingigisca (NL. fem. n. *ingigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002733835*. The type genome for the species is the GenBank assembly GCA_002733835.1. The GC content of the type genome is 58.19 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Alcanivorax inpiniforma sp. nov.

Candidatus Alcanivorax inpiniforma (NL. fem. n. *inpiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp009711585*. The type genome for the species is the GenBank assembly GCA_009711585.1. The GC content of the type genome is 64.77 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Alcanivorax manibastra sp. nov.

Candidatus Alcanivorax manibastra (NL. fem. n. *manibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp002706085*. The type genome for the species is the GenBank assembly GCA_002706085.1. The GC content of the type genome is 57.79 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Alcanivorax refulitura sp. nov.

Candidatus Alcanivorax refulitura (NL. fem. n. *refulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp900107995*. The type genome for the species is the GenBank assembly GCA_002709465.1. The GC content of the type genome is 59.41 %

and the genome length is 2.08 Mbp.

Description of *Candidatus* Alcanivorax regigitas sp. nov.

Candidatus Alcanivorax regigitas (NL. fem. n. *regigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp009601165*. The type genome for the species is the GenBank assembly RS_GCF_009601165.1. The GC content of the type genome is 57.15 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Alcanivorax rubigilenta sp. nov.

Candidatus Alcanivorax rubigilenta (NL. fem. n. *rubigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax sp000155615*. The type genome for the species is the GenBank assembly RS_GCF_000155615.1. The GC content of the type genome is 58.23 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Alcanivorax cenobitrix sp. nov.

Candidatus Alcanivorax cenobitrix (NL. fem. n. *cenobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax_A sp013823245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013823245.1. The GC content of the type genome is 62.64 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Alcanivorax funebitas sp. nov.

Candidatus Alcanivorax funebitas (NL. fem. n. *funebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alcanivorax_A sp009846755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009846755.1. The GC

content of the type genome is 62.83 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Alcedana insufatio sp. nov.

Candidatus Alcedana insufatio (NL. fem. n. *insufatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAHJWO01 sp903642295*. The type genome for the species is the GenBank assembly RS_GCF_903642295.1. The GC content of the type genome is 63.22 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Alcedana gen. nov.

Candidatus Alcedana (NL. fem. n. *Alcedana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAHJWO01*. The type species for the genus is *Candidatus* Alcedana insufatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Alcedia insinastra sp. nov.

Candidatus Alcedia insinastra (NL. fem. n. *insinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-931 sp003164375*. The type genome for the species is the GenBank assembly GCA_003164375.1. The GC content of the type genome is 62.48 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Alcedia gen. nov.

Candidatus Alcedia (NL. fem. n. *Alcedia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-931*. The type species for the genus is *Candidatus* Alcedia insinastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alcedosa offulatio sp. nov.

Candidatus Alcedosa offulatio (NL. fem. n. *offulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMF01 sp012798955*. The type genome for the species is the GenBank assembly GCA_012798955.1. The GC content of the type genome is 49.62 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Alcedosa gen. nov.

Candidatus Alcedosa (NL. fem. n. *Alcedosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMF01*. The type species for the genus is *Candidatus* Alcedosa offulatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovosaceae.

Description of *Candidatus* Alcedosa sonipitoga sp. nov.

Candidatus Alcedosa sonipitoga (NL. fem. n. *sonipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMF01 sp012519025*. The type genome for the species is the GenBank assembly GCA_012519025.1. The GC content of the type genome is 47.65 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Alcibana anancatio sp. nov.

Candidatus Alcibana anancatio (NL. fem. n. *anancatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBF01 sp013811765*. The type genome for the species is the GenBank assembly GCA_013811765.1. The GC content of the type genome is 69.69 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Alcibana gen. nov.

Candidatus Alcibana (NL. fem. n. *Alcibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBF01*. The type species for the genus is *Candidatus* Alcibana anancatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alcibana mirifax sp. nov.

Candidatus Alcibana mirifax (NL. fem. n. *mirifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBF01 sp013812005*. The type genome for the species is the GenBank assembly GCA_013812005.1. The GC content of the type genome is 70.44 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Alcibana vavasatio sp. nov.

Candidatus Alcibana vavasatio (NL. fem. n. *vavasatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBF01 sp012718975*. The type genome for the species is the GenBank assembly GCA_012718975.1. The GC content of the type genome is 73.55 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Alcibella adfiribra sp. nov.

Candidatus Alcibella adfiribra (NL. fem. n. *adfiribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5455 sp012518415*. The type genome for the species is the GenBank assembly GCA_012518415.1. The GC content of the type genome is 35.94 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Alcibella gen. nov.

Candidatus Alcibella (NL. fem. n. *Alcibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5455*. The type species for the genus is *Candidatus* Alcibella adfiribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Alcibella perabousia sp. nov.

Candidatus Alcibella perabousia (NL. fem. n. *perabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5455 sp002427365*. The type genome for the species is the GenBank assembly GCA_002427365.1. The GC content of the type genome is 36.05 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Alcibida lametilega sp. nov.

Candidatus Alcibida lametilega (NL. fem. n. *lametilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULU01 sp012840225*. The type genome for the species is the GenBank assembly GCA_012840225.1. The GC content of the type genome is 56.94 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Alcibida gen. nov.

Candidatus Alcibida (NL. fem. n. *Alcibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULU01*. The type species for the genus is *Candidatus* Alcibida lametilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosellaceae.

Description of *Candidatus* Alcibosa depubibula sp. nov.

Candidatus Alcibosa depubibula (NL. fem. n. *depubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFJZ01 sp001781025*. The type genome for the species is the GenBank assembly GCA_001781025.1. The GC content of the type genome is 48.42 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Alcibosa gen. nov.

Candidatus Alcibosa (NL. fem. n. *Alcibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFJZ01*. The type species for the genus is *Candidatus* Alcibosa depubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Alectana affamedo sp. nov.

Candidatus Alectana affamedo (NL. fem. n. *affamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQWG01 sp009785435*. The type genome for the species is the GenBank assembly GCA_009785435.1. The GC content of the type genome is 45.31 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Alectana gen. nov.

Candidatus Alectana (NL. fem. n. *Alectana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQWG01*. The type species for the genus is *Candidatus* Alectana affamedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alectaria detosago sp. nov.

Candidatus Alectaria detosago (NL. fem. n. *detosago* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1440 sp903912925*. The type genome for the species is the GenBank assembly GCA_903912925.1. The GC content of the type genome is 61.06 % and the genome length is 8.8 Mbp.

Description of *Candidatus* Alectaria gen. nov.

Candidatus Alectaria (NL. fem. n. *Alectaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1440*. The type species for the genus is *Candidatus* Alectaria detosago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Alectaria inpudivita sp. nov.

Candidatus Alectaria inpudivita (NL. fem. n. *inpudivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1440 sp003152225*. The type genome for the species is the GenBank assembly GCA_003152225.1. The GC content of the type genome is 60.84 % and the genome length is 8.38 Mbp.

Description of *Candidatus* Alectella inrecitica sp. nov.

Candidatus Alectella inrecitica (NL. fem. n. *inrecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSJ01 sp012518395*. The type genome for the species is the GenBank assembly GCA_012518395.1. The GC content of the type genome is 41.26 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Alectella gen. nov.

Candidatus Alectella (NL. fem. n. *Alectella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSJ01*. The type species for the genus is *Candidatus* Alectella inrecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3941*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabulaceae.

Description of *Candidatus* Alectia abnocitura sp. nov.

Candidatus Alectia abnocitura (NL. fem. n. *abnocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6084 sp002428625*. The type genome for the species is the GenBank assembly GCA_002428625.1. The GC content of the type genome is 51.56 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Alectia gen. nov.

Candidatus Alectia (NL. fem. n. *Alectia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6084*. The type species for the genus is *Candidatus* Alectia abnocitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alectida fibicilenta sp. nov.

Candidatus Alectida fibicilenta (NL. fem. n. *fibicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNC22 sp013285505*. The type genome for the species is the GenBank assembly GCA_013285505.1. The GC content of the type genome is 67.88 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Alectida gen. nov.

Candidatus Alectida (NL. fem. n. *Alectida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNC22*. The type species for the genus is *Candidatus* Alectida fibicilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Alectosa appecentia sp. nov.

Candidatus Alectosa appecentia (NL. fem. n. *appecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2033 sp013297885*. The type genome for the species is the GenBank assembly GCA_013297885.1. The GC content of the type genome is 27.76 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Alectosa gen. nov.

Candidatus Alectosa (NL. fem. n. *Alectosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2033*. The type species for the genus is *Candidatus* Alectosa appecentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alectosa repagetta sp. nov.

Candidatus Alectosa repagetta (NL. fem. n. *repagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2033 sp002333425*. The type genome for the species is the GenBank assembly GCA_002333425.1. The GC content of the type genome is 34.74 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Alectula vigenicella sp. nov.

Candidatus Alectula vigenicella (NL. fem. n. *vigenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDF01 sp007125435*. The type genome for the species is the GenBank assembly GCA_007125435.1. The GC content of the type genome is 40.99 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Alectula gen. nov.

Candidatus Alectula (NL. fem. n. *Alectula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDF01*. The type species for the genus is *Candidatus* Alectula vigenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alembella tegumatio sp. nov.

Candidatus Alembella tegumatio (NL. fem. n. *tegumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IGN16 sp013112585*. The type genome for the species is the GenBank assembly GCA_013112585.1. The GC content of the type genome is 34.77 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Alembella gen. nov.

Candidatus Alembella (NL. fem. n. *Alembella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IGN16*. The type species for the genus is *Candidatus* Alembella tegumatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alembia antepousia sp. nov.

Candidatus Alembia antepousia (NL. fem. n. *antepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CS2-K091 sp013349615*. The type genome for the species is the GenBank assembly GCA_013349615.1. The GC content of the type genome is 48.98 %

and the genome length is 3.77 Mbp.

Description of *Candidatus* Alembia gen. nov.

Candidatus Alembia (NL. fem. n. *Alembia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CS2-K091*. The type species for the genus is *Candidatus* Alembia antepousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Alembia cerimisca sp. nov.

Candidatus Alembia cerimisca (NL. fem. n. *cerimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CS2-K091 sp011776225*. The type genome for the species is the GenBank assembly GCA_011776225.1. The GC content of the type genome is 47.34 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Alembida coturigena sp. nov.

Candidatus Alembida coturigena (NL. fem. n. *coturigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11942 sp902774205*. The type genome for the species is the GenBank assembly GCA_902774205.1. The GC content of the type genome is 44.68 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Alembida gen. nov.

Candidatus Alembida (NL. fem. n. *Alembida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11942*. The type species for the genus is *Candidatus* Alembida coturigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Alembosa cibicibra sp. nov.

Candidatus Alembosa cibicibra (NL. fem. n. *cibicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13634 sp900770385*. The type genome for the species is the GenBank assembly RS_GCF_900770385.1. The GC content of the type genome is 26.41 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Alembosa gen. nov.

Candidatus Alembosa (NL. fem. n. *Alembosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13634*. The type species for the genus is *Candidatus* Alembosa cibicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Alembula annicitura sp. nov.

Candidatus Alembula annicitura (NL. fem. n. *annicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWOA01 sp003564155*. The type genome for the species is the GenBank assembly GCA_003564155.1. The GC content of the type genome is 35.31 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Alembula gen. nov.

Candidatus Alembula (NL. fem. n. *Alembula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWOA01*. The type species for the genus is *Candidatus* Alembula annicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

PWNZ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voluculaceae.

Description of *Candidatus* Algebana inperatica sp. nov.

Candidatus Algebana inperatica (NL. fem. n. *inperatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5182 sp002413185*. The type genome for the species is the GenBank assembly GCA_002413185.1. The GC content of the type genome is 68.59 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Algebana gen. nov.

Candidatus Algebana (NL. fem. n. *Algebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5182*. The type species for the genus is *Candidatus* Algebana inperatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Algebaria lupanitudo sp. nov.

Candidatus Algebaria lupanitudo (NL. fem. n. *lupanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LMUY01 sp009765685*. The type genome for the species is the GenBank assembly RS_GCF_009765685.1. The GC content of the type genome is 64.87 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Algebaria gen. nov.

Candidatus Algebaria (NL. fem. n. *Algebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LMUY01*. The type species for the genus is *Candidatus* Algebaria lupanitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algebella oblonitas sp. nov.

Candidatus Algebella oblonitas (NL. fem. n. *oblonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-01 sp001603845*. The type genome for the species is the GenBank assembly GCA_001603845.1. The GC content of the type genome is 59.72 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Algebella gen. nov.

Candidatus Algebella (NL. fem. n. *Algebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Delta-01*. The type species for the genus is *Candidatus* Algebella oblonitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algebida sonipitudo sp. nov.

Candidatus Algebida sonipitudo (NL. fem. n. *sonipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBA01 sp009779915*. The type genome for the species is the GenBank assembly GCA_009779915.1. The GC content of the type genome is 40.39 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Algebida gen. nov.

Candidatus Algebida (NL. fem. n. *Algebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBA01*. The type species for the genus is *Candidatus* Algebida sonipitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA5962. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Algebosa agricatio sp. nov.

Candidatus Algebosa agricatio (NL. fem. n. *agricatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721975 sp002721975*. The type genome for the species is the GenBank assembly GCA_002721975.1. The GC content of the type genome is 33.72 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Algebosa gen. nov.

Candidatus Algebosa (NL. fem. n. *Algebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721975*. The type species for the genus is *Candidatus* Algebosa agricatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algebula irradisca sp. nov.

Candidatus Algebula irradisca (NL. fem. n. *irradisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WNDY01 sp009914555*. The type genome for the species is the GenBank assembly GCA_009914555.1. The GC content of the type genome is 69.15 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Algebula gen. nov.

Candidatus Algebula (NL. fem. n. *Algebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WNDY01*. The type species for the genus is *Candidatus* Algebula irradisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algibacter ammatilenta sp. nov.

Candidatus Algibacter ammatilenta (NL. fem. n. *ammatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algibacter sp009796825*. The type genome for the species is the GenBank assembly RS_GCF_009796825.1. The GC content of the type genome is 33.33 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Algibacter atropigena sp. nov.

Candidatus Algibacter atropigena (NL. fem. n. *atropigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algibacter sp009796805*. The type genome for the species is the GenBank assembly RS_GCF_009796805.1. The GC content of the type genome is 32.47 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Algibacter nidifimonia sp. nov.

Candidatus Algibacter nidifimonia (NL. fem. n. *nidifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algibacter sp008033385*. The type genome for the species is the GenBank assembly RS_GCF_008033385.1. The GC content of the type genome is 33.22 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Algibacter direcitas sp. nov.

Candidatus Algibacter direcitas (NL. fem. n. *direcitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algibacter_B sp003143755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003143755.1. The GC content of the type genome is 31.86 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Algifana extipatica sp. nov.

Candidatus Algifana extipatica (NL. fem. n. *extipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDIZ01 sp013003465*. The type genome for the species is the GenBank assembly GCA_013003465.1. The GC content of the type genome is 66.43 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Algifana gen. nov.

Candidatus Algifana (NL. fem. n. *Algifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDIZ01*. The type species for the genus is *Candidatus* Algifana extipatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algifaria hegumitia sp. nov.

Candidatus Algifaria hegumitia (NL. fem. n. *hegumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABQT01 sp011391295*. The type genome for the species is the GenBank assembly GCA_011391295.1. The GC content of the type genome is 67.99 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Algifaria gen. nov.

Candidatus Algifaria (NL. fem. n. *Algifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABQT01*. The type species for the genus is *Candidatus* Algifaria hegumitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Algifia catecitoga sp. nov.

Candidatus Algifia catecitoga (NL. fem. n. *catecitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAQ01 sp013289115*. The type genome for the species is the GenBank assembly GCA_013289115.1. The GC content of the type genome is 38.94 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Algifia gen. nov.

Candidatus Algifia (NL. fem. n. *Algifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDAQ01*. The type species for the genus is *Candidatus* Algifia catecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algifida extinatio sp. nov.

Candidatus Algifida extinatio (NL. fem. n. *extinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZAN01 sp012514315*. The type genome for the species is the GenBank assembly GCA_012514315.1. The GC content of the type genome is 59.56 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Algifida gen. nov.

Candidatus Algifida (NL. fem. n. *Algifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZAN01*. The type species for the genus is *Candidatus* Algifida extinatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Algifosa detecitoga sp. nov.

Candidatus Algifosa detecitoga (NL. fem. n. *detecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZME01 sp012798975*. The type genome for the species is the GenBank assembly GCA_012798975.1. The GC content of the type genome is 37.38 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Algifosa gen. nov.

Candidatus Algifosa (NL. fem. n. *Algifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZME01*. The type species for the genus is *Candidatus* Algifosa detecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algifula palifitrix sp. nov.

Candidatus Algifula palifitrix (NL. fem. n. *palifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHJ01 sp013298325*. The type genome for the species is the GenBank assembly GCA_013298325.1. The GC content of the type genome is 65.08 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Algifula gen. nov.

Candidatus Algifula (NL. fem. n. *Algifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHJ01*. The type species for the genus is *Candidatus* Algifula palifitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Algorimicrobium benifitica sp. nov.

Candidatus Algorimicrobium benifitica (NL. fem. n. *benifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algorimicrobium sp002414705*. The type genome for the species is the GenBank assembly GCA_002414705.1. The GC content of the type genome is 33.02 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Algoriphagus aprugitrix sp. nov.

Candidatus Algoriphagus aprugitrix (NL. fem. n. *aprugitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp013373335*. The type genome for the species is the GenBank assembly GCA_013373335.1. The GC content of the type genome is 40.7 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Algoriphagus eclipago sp. nov.

Candidatus Algoriphagus eclipago (NL. fem. n. *eclipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp007655305*. The type genome for the species is the GenBank assembly RS_GCF_007655305.1. The GC content of the type genome is 39.57 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Algoriphagus fibicitoga sp. nov.

Candidatus Algoriphagus fibicitoga (NL. fem. n. *fibicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp903952135*. The type genome for the species is the GenBank assembly GCA_903882755.1. The GC content of the type genome is 45.38 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Algoriphagus hirudimonia sp. nov.

Candidatus Algoriphagus hirudimonia (NL. fem. n. *hirudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp002002735*. The type genome for the species is the GenBank assembly RS_GCF_002002735.1. The GC content of the type genome is 44.12 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Algoriphagus inhabivita sp. nov.

Candidatus Algoriphagus inhabivita (NL. fem. n. *inhabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp009885605*. The type genome for the species is the GenBank assembly GCA_009885605.1. The GC content of the type genome is 42.17 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Algoriphagus inrefitas sp. nov.

Candidatus Algoriphagus inrefitas (NL. fem. n. *inrefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp005788235*. The type genome for the species is the GenBank assembly GCA_005788235.1. The GC content of the type genome is 44.15 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Algoriphagus oblanitio sp. nov.

Candidatus Algoriphagus oblanitio (NL. fem. n. *oblanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp014324365*. The type genome for the species is the GenBank assembly RS_GCF_014324365.1. The GC content of the type genome is 43.62 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Algoriphagus plostetta sp. nov.

Candidatus Algoriphagus plostetta (NL. fem. n. *plostetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Algoriphagus sp013373065*. The type genome for the species is the GenBank assembly GCA_013373065.1. The GC content of the type genome is 40.8 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Aliarcobacter bisulicella sp. nov.

Candidatus Aliarcobacter bisulicella (NL. fem. n. *bisulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliarcobacter sp003063295*. The type genome for the species is the GenBank assembly RS_GCF_003063295.1. The GC content of the type genome is 26.8 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Aliarcobacter vatilimonas sp. nov.

Candidatus Aliarcobacter vatilimonas (NL. fem. n. *vatilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliarcobacter sp003316695*. The type genome for the species is the GenBank assembly RS_GCF_003316685.1. The GC content of the type genome is 27.39 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Aliidiomarina conamessa sp. nov.

Candidatus Aliidiomarina conamessa (NL. fem. n. *conamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliidiomarina sp000218785*. The type genome for the species is the GenBank assembly RS_GCF_000218785.1. The GC content of the type genome is 45.5 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Aliidiomarina dilogitura sp. nov.

Candidatus Aliidiomarina dilogitura (NL. fem. n. *dilogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliidiomarina sp003316875*. The type genome for the species is the GenBank assembly RS_GCF_003316875.1. The GC content of the type genome is 49.58 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Aliidiomarina inmacedo sp. nov.

Candidatus Aliidiomarina inmacedo (NL. fem. n. *inmacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aliidiomarina sp003290085*. The type genome for the species is the GenBank assembly RS_GCF_003290085.1. The GC content of the type genome is 45.48 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Aliidiomarina innulibra sp. nov.

Candidatus Aliidiomarina innulibra (NL. fem. n. *innulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliidiomarina sp007096385*. The type genome for the species is the GenBank assembly RS_GCF_007096385.1. The GC content of the type genome is 49.7 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Aliidiomarina nivomimonas sp. nov.

Candidatus Aliidiomarina nivomimonas (NL. fem. n. *nivomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliidiomarina sp001458075*. The type genome for the species is the GenBank assembly GCA_001314555.1. The GC content of the type genome is 47.49 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Aliiglaciecola vanidiforma sp. nov.

Candidatus Aliiglaciecola vanidiforma (NL. fem. n. *vanidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliiglaciecola sp007197995*. The type genome for the species is the GenBank assembly RS_GCF_007197995.1. The GC content of the type genome is 43.24 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Aliihoeflea ceromitas sp. nov.

Candidatus Aliihoeflea ceromitas (NL. fem. n. *ceromitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliihoeflea sp000497755*. The type genome for the species is the

GenBank assembly RS_GCF_000497755.1. The GC content of the type genome is 64.38 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilter treating arsenic-rich groundwater".

Description of *Candidatus* Aliikangiella infucessa sp. nov.

Candidatus Aliikangiella infucessa (NL. fem. n. *infucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliikangiella sp007004725*. The type genome for the species is the GenBank assembly RS_GCF_007004725.1. The GC content of the type genome is 41.45 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Aliiroseovarius orniticula sp. nov.

Candidatus Aliiroseovarius orniticula (NL. fem. n. *orniticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliiroseovarius sp002340515*. The type genome for the species is the GenBank assembly GCA_002340515.1. The GC content of the type genome is 55.71 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Aliiroseovarius patibigena sp. nov.

Candidatus Aliiroseovarius patibigena (NL. fem. n. *patibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliiroseovarius sp010500215*. The type genome for the species is the GenBank assembly RS_GCF_010500215.1. The GC content of the type genome is 58.94 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Aliiroseovarius siteledo sp. nov.

Candidatus Aliiroseovarius siteledo (NL. fem. n. *siteledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliiroseovarius sp002367285*. The type genome for the species is the GenBank assembly GCA_002367285.1. The GC content of the type genome is 60.91 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Aliivibrio culiligena sp. nov.

Candidatus Aliivibrio culiligena (NL. fem. n. *culiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliivibrio sp001690985*. The type genome for the species is the GenBank assembly RS_GCF_001691025.1. The GC content of the type genome is 38.66 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Filtered Seawater; 1-5 micron fraction".

Description of *Candidatus* Aliivibrio inmoritas sp. nov.

Candidatus Aliivibrio inmoritas (NL. fem. n. *inmoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliivibrio sp900312675*. The type genome for the species is the GenBank assembly RS_GCF_900312675.1. The GC content of the type genome is 39.02 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Alismaria chalbisca sp. nov.

Candidatus Alismaria chalbisca (NL. fem. n. *chalbisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1250 sp013697785*. The type genome for the species is the GenBank assembly GCA_013697785.1. The GC content of the type genome is 65.1 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Alismaria gen. nov.

Candidatus Alismaria (NL. fem. n. *Alismaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1250*. The type species for the genus is *Candidatus* Alismaria chalbisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alismaria dilogitio sp. nov.

Candidatus Alismaria dilogitio (NL. fem. n. *dilogitio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1250 sp003142495*. The type genome for the species is the GenBank assembly GCA_003142495.1. The GC content of the type genome is 65.72 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Alismella adtenatio sp. nov.

Candidatus Alismella adtenatio (NL. fem. n. *adtenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UPXZ01 sp900498215*. The type genome for the species is the GenBank assembly GCA_900498215.1. The GC content of the type genome is 35.02 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Alismella gen. nov.

Candidatus Alismella (NL. fem. n. *Alismella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UPXZ01*. The type species for the genus is *Candidatus* Alismella adtenatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alismella alluvigena sp. nov.

Candidatus Alismella alluvigena (NL. fem. n. *alluvigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UPXZ01 sp012837935*. The type genome for the species is the GenBank assembly GCA_012837935.1. The GC content of the type genome is 37.78 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Alismella muriligena sp. nov.

Candidatus Alismella muriligena (NL. fem. n. *muriligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UPXZ01 sp012518275*. The type genome for the species is the GenBank assembly GCA_012518275.1. The GC content of the type genome is 38.58 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Alismella papavetta sp. nov.

Candidatus Alismella papavetta (NL. fem. n. *papavetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UPXZ01 sp009929445*. The type genome for the species is the GenBank assembly GCA_009929445.1. The GC content of the type genome is 41.84 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Alismella virecago sp. nov.

Candidatus Alismella virecago (NL. fem. n. *virecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UPXZ01 sp012523295*. The type genome for the species is the GenBank assembly GCA_012523295.1. The GC content of the type genome is 38.55 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Alismia tomacitio sp. nov.

Candidatus Alismia tomacitio (NL. fem. n. *tomacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUN01 sp004297655*. The type genome for the species is the GenBank assembly GCA_004297655.1. The GC content of the type genome is 66.62 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Alismia gen. nov.

Candidatus Alismia (NL. fem. n. *Alismia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUN01*. The type species for the genus is *Candidatus* Alismia tomacitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SCN-69-37. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democulaceae.

Description of *Candidatus* Alismida ciminugo sp. nov.

Candidatus Alismida ciminugo (NL. fem. n. *ciminugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11368 sp900772745*. The type genome for the species is the GenBank assembly RS_GCF_900772745.1. The GC content of the type genome is 42.19 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Alismida gen. nov.

Candidatus Alismida (NL. fem. n. *Alismida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11368*. The type species for the genus is *Candidatus* Alismida ciminugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3700*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarellaceae.

Description of *Candidatus* Alismosa adsucilega sp. nov.

Candidatus Alismosa adsucilega (NL. fem. n. *adsucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-48-10 sp001817755*. The type genome for the species is the GenBank assembly GCA_001817755.1. The GC content of the type genome is 48.44 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Alismosa gen. nov.

Candidatus Alismosa (NL. fem. n. *Alismosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-01-FULL-48-10*. The type species for the genus is *Candidatus* Alismosa adsucilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alistipes adhosax sp. nov.

Candidatus Alistipes adhosax (NL. fem. n. *adhosax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900766655*. The type genome for the species is the GenBank assembly GCA_900766655.1. The GC content of the type genome is 50.52 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Alistipes adnumivita sp. nov.

Candidatus Alistipes adnumivita (NL. fem. n. *adnumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900553175*. The type genome for the species is the GenBank assembly GCA_900553175.1. The GC content of the type genome is 63.79 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Alistipes aruspitio sp. nov.

Candidatus Alistipes aruspitio (NL. fem. n. *aruspitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900761235*. The type genome for the species is the GenBank assembly GCA_900761235.1. The GC content of the type genome is 53.54 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Alistipes bacifetta sp. nov.

Candidatus Alistipes bacifetta (NL. fem. n. *bacifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900768015*. The type genome for the species is the GenBank assembly GCA_900768015.1. The GC content of the type genome is 51.36 %

and the genome length is 1.89 Mbp.

Description of *Candidatus* Alistipes casabitia sp. nov.

Candidatus Alistipes casabitia (NL. fem. n. *casabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900769525*. The type genome for the species is the GenBank assembly GCA_900769525.1. The GC content of the type genome is 48.8 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Alistipes decamago sp. nov.

Candidatus Alistipes decamago (NL. fem. n. *decamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900768045*. The type genome for the species is the GenBank assembly GCA_900768045.1. The GC content of the type genome is 47.57 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Alistipes defunimonia sp. nov.

Candidatus Alistipes defunimonia (NL. fem. n. *defunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900548155*. The type genome for the species is the GenBank assembly GCA_900548155.1. The GC content of the type genome is 54.27 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Alistipes demadatio sp. nov.

Candidatus Alistipes demadatio (NL. fem. n. *demadatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900769445*. The type genome for the species is the GenBank assembly GCA_900769445.1. The GC content of the type genome is 46.89 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Alistipes denomibula sp. nov.

Candidatus Alistipes denomibula (NL. fem. n. *denomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900290115*. The type genome for the species is the GenBank assembly RS_GCF_900290115.1. The GC content of the type genome is 61.65 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Alistipes denunitia sp. nov.

Candidatus Alistipes denunitia (NL. fem. n. *denunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp002293345*. The type genome for the species is the GenBank assembly GCA_002293345.1. The GC content of the type genome is 54.58 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Alistipes depopivita sp. nov.

Candidatus Alistipes depopivita (NL. fem. n. *depopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp009774895*. The type genome for the species is the GenBank assembly GCA_009774895.1. The GC content of the type genome is 64.38 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Alistipes dicanilenta sp. nov.

Candidatus Alistipes dicanilenta (NL. fem. n. *dicanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900552955*. The type genome for the species is the GenBank assembly GCA_900552955.1. The GC content of the type genome is 62.61 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Alistipes dilacastra sp. nov.

Candidatus Alistipes dilacastra (NL. fem. n. *dilacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900549305*. The type genome for the species is the GenBank assembly GCA_900765655.1. The GC content of the type genome is 56.72 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Alistipes docibiforma sp. nov.

Candidatus Alistipes docibiforma (NL. fem. n. *docibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900542505*. The type genome for the species is the GenBank assembly GCA_900542505.1. The GC content of the type genome is 61.97 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Alistipes extoribula sp. nov.

Candidatus Alistipes extoribula (NL. fem. n. *extoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900760675*. The type genome for the species is the GenBank assembly GCA_900760675.1. The GC content of the type genome is 54.2 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Alistipes fetifitio sp. nov.

Candidatus Alistipes fetifitio (NL. fem. n. *fetifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900541585*. The type genome for the species is the GenBank assembly GCA_900762385.1. The GC content of the type genome is 59.55 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Alistipes gabiniforma sp. nov.

Candidatus Alistipes gabiniforma (NL. fem. n. *gabiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900546065*. The type genome for the species is the GenBank assembly GCA_900546065.1. The GC content of the type genome is 56.88 %

and the genome length is 2.56 Mbp.

Description of *Candidatus* Alistipes hirudilega sp. nov.

Candidatus Alistipes hirudilega (NL. fem. n. *hirudilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp001941065*. The type genome for the species is the GenBank assembly GCA_001941065.1. The GC content of the type genome is 58.77 % and the genome length is 3.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Alistipes humecetta sp. nov.

Candidatus Alistipes humecetta (NL. fem. n. *humecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp902363575*. The type genome for the species is the GenBank assembly RS_GCF_902363575.1. The GC content of the type genome is 58.46 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Alistipes impirago sp. nov.

Candidatus Alistipes impirago (NL. fem. n. *impirago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900770585*. The type genome for the species is the GenBank assembly GCA_900770585.1. The GC content of the type genome is 52.69 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Alistipes lametentia sp. nov.

Candidatus Alistipes lametentia (NL. fem. n. *lametentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp000434235*. The type genome for the species is the GenBank assembly GCA_003514405.1. The GC content of the type genome is 61.98 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Alistipes monoditura sp. nov.

Candidatus Alistipes monoditura (NL. fem. n. *monoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp902388705*. The type genome for the species is the GenBank assembly GCA_902388705.1. The GC content of the type genome is 58.74 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Alistipes nicotousia sp. nov.

Candidatus Alistipes nicotousia (NL. fem. n. *nicotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900769405*. The type genome for the species is the GenBank assembly GCA_900769405.1. The GC content of the type genome is 53.04 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Alistipes notabilenta sp. nov.

Candidatus Alistipes notabilenta (NL. fem. n. *notabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp002358415*. The type genome for the species is the GenBank assembly GCA_003513905.1. The GC content of the type genome is 65.85 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Alistipes obnupibula sp. nov.

Candidatus Alistipes obnupibula (NL. fem. n. *obnupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900770635*. The type genome for the species is the GenBank assembly GCA_900770635.1. The GC content of the type genome is 48.92 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Alistipes obtecitia sp. nov.

Candidatus Alistipes obtecitia (NL. fem. n. *obtecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900769745*. The type genome for the species is the GenBank assembly GCA_900769745.1. The GC content of the type genome is 48.54 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Alistipes pacifigena sp. nov.

Candidatus Alistipes pacifigena (NL. fem. n. *pacifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp002362235*. The type genome for the species is the GenBank assembly GCA_009774865.1. The GC content of the type genome is 56.76 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Alistipes panifastra sp. nov.

Candidatus Alistipes panifastra (NL. fem. n. *panifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900544265*. The type genome for the species is the GenBank assembly GCA_900752765.1. The GC content of the type genome is 63.49 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Alistipes robigitas sp. nov.

Candidatus Alistipes robigitas (NL. fem. n. *robigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp002428825*. The type genome for the species is the GenBank assembly GCA_002428825.1. The GC content of the type genome is 59.11 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Alistipes telefilenta sp. nov.

Candidatus Alistipes telefilenta (NL. fem. n. *telefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp003979135*. The type genome for the species is the GenBank assembly GCA_013316905.1. The GC content of the type genome is 54.96 %

and the genome length is 1.78 Mbp.

Description of *Candidatus* Alistipes tirocitia sp. nov.

Candidatus Alistipes tirocitia (NL. fem. n. *tirocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900021155*. The type genome for the species is the GenBank assembly GCA_900543355.1. The GC content of the type genome is 60.86 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Alistipes turifousia sp. nov.

Candidatus Alistipes turifousia (NL. fem. n. *turifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900550925*. The type genome for the species is the GenBank assembly GCA_900550925.1. The GC content of the type genome is 55.33 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Alistipes vilipiforma sp. nov.

Candidatus Alistipes vilipiforma (NL. fem. n. *vilipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp002161445*. The type genome for the species is the GenBank assembly RS_GCF_002161445.1. The GC content of the type genome is 59.4 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Alistipes volucibula sp. nov.

Candidatus Alistipes volucibula (NL. fem. n. *volucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes sp900550375*. The type genome for the species is the GenBank assembly GCA_900550375.1. The GC content of the type genome is 57.89 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Alistipes brasmicula sp. nov.

Candidatus Alistipes brasmicula (NL. fem. n. *brasmicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes_A sp900549685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900549685.1. The GC content of the type genome is 57.97 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Alistipes nugivitoga sp. nov.

Candidatus Alistipes nugivitoga (NL. fem. n. *nugivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes_A sp900240235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900240235.1. The GC content of the type genome is 54.3 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Alistipes pinigivita sp. nov.

Candidatus Alistipes pinigivita (NL. fem. n. *pinigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes_A sp900546005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900546005.1. The GC content of the type genome is 51.23 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Alistipes repagibra sp. nov.

Candidatus Alistipes repagibra (NL. fem. n. *repagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes_A sp900545315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_900752635.1. The GC content of the type genome is 49.45 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Alistipes visocax sp. nov.

Candidatus Alistipes visocax (NL. fem. n. *visocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alistipes_A sp900539755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756465.1. The GC content of the type genome is 46.21 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Aliterella diritimonia sp. nov.

Candidatus Aliterella diritimonia (NL. fem. n. *diritimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliterella sp000332075*. The type genome for the species is the GenBank assembly RS_GCF_000332075.2. The GC content of the type genome is 41.67 % and the genome length is 4.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rock scraping".

Description of *Candidatus* Aliterella exadvitudo sp. nov.

Candidatus Aliterella exadvitudo (NL. fem. n. *exadvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliterella sp013698215*. The type genome for the species is the GenBank assembly GCA_013698215.1. The GC content of the type genome is 42.06 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Aliterella lucificella sp. nov.

Candidatus Aliterella lucificella (NL. fem. n. *lucificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aliterella sp003003885*. The type genome for the species is the GenBank assembly RS_GCF_003003885.1. The GC content of the type genome is 41.81

% and the genome length is 5.23 Mbp.

Description of *Candidatus* Alkalibacillus rudecedo sp. nov.

Candidatus Alkalibacillus rudecedo (NL. fem. n. *rudecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacillus sp014595945*. The type genome for the species is the GenBank assembly RS_GCF_014595945.1. The GC content of the type genome is 37.96 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Alkalibacter obtunastra sp. nov.

Candidatus Alkalibacter obtunastra (NL. fem. n. *obtunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacter sp003446375*. The type genome for the species is the GenBank assembly GCA_003446375.1. The GC content of the type genome is 38.4 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Alkalibacterium aggenetta sp. nov.

Candidatus Alkalibacterium aggenetta (NL. fem. n. *aggenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacterium sp000585255*. The type genome for the species is the GenBank assembly RS_GCF_000585255.1. The GC content of the type genome is 44.74 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lonar Lake".

Description of *Candidatus* Alkalibacterium decomitia sp. nov.

Candidatus Alkalibacterium decomitia (NL. fem. n. *decomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacterium sp002500855*. The type genome for the species is the GenBank assembly GCA_002500855.1. The GC content of the type genome is 39.21 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Alkalibacterium delecetta sp. nov.

Candidatus Alkalibacterium delecetta (NL. fem. n. *delecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacterium sp007692455*. The type genome for the species is the GenBank assembly GCA_007692455.1. The GC content of the type genome is 41.78 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Alkalibacterium uxorcitura sp. nov.

Candidatus Alkalibacterium uxorcitura (NL. fem. n. *uxorcitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalibacterium sp001885615*. The type genome for the species is the GenBank assembly RS_GCF_001885615.1. The GC content of the type genome is 38.92 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Alkalicoccus dapifessa sp. nov.

Candidatus Alkalicoccus dapifessa (NL. fem. n. *dapifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalicoccus sp007692495*. The type genome for the species is the GenBank assembly GCA_007692495.1. The GC content of the type genome is 46.47 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Alkalicoccus ossififorma sp. nov.

Candidatus Alkalicoccus ossififorma (NL. fem. n. *ossififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalicoccus sp006965545*. The type genome for the species is the GenBank assembly RS_GCF_006965545.2. The GC content of the type genome is 43.08 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Alkalicoccus rosaritica sp. nov.

Candidatus Alkalicoccus rosaritica (NL. fem. n. *rosaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalicoccus sp003560495*. The type genome for the species is the GenBank assembly GCA_003560495.1. The GC content of the type genome is 45.93 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Alkalilacustris bucolitoga sp. nov.

Candidatus Alkalilacustris bucolitoga (NL. fem. n. *bucolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp007128865*. The type genome for the species is the GenBank assembly GCA_007117935.1. The GC content of the type genome is 67.18 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Alkalilacustris cuticentia sp. nov.

Candidatus Alkalilacustris cuticentia (NL. fem. n. *cuticentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp002967695*. The type genome for the species is the GenBank assembly RS_GCF_002967695.1. The GC content of the type genome is 68.25 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Alkalilacustris dececetta sp. nov.

Candidatus Alkalilacustris dececetta (NL. fem. n. *dececetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp003551745*. The type genome for the species is the GenBank assembly GCA_003551745.1. The GC content of the type genome is 69.03 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Alkalilacustris indilitudo sp. nov.

Candidatus Alkalilacustris indilitudo (NL. fem. n. *indilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp007121055*. The type genome for the species is the GenBank assembly GCA_007121055.1. The GC content of the type genome is 70.6 %

and the genome length is 2.59 Mbp.

Description of *Candidatus* Alkalilacustris innumimonia sp. nov.

Candidatus Alkalilacustris innumimonia (NL. fem. n. *innumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp007129775*. The type genome for the species is the GenBank assembly GCA_007129775.1. The GC content of the type genome is 67.8 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Alkalilacustris insiniforma sp. nov.

Candidatus Alkalilacustris insiniforma (NL. fem. n. *insiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp007126375*. The type genome for the species is the GenBank assembly GCA_007126375.1. The GC content of the type genome is 69.2 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Alkalilacustris istinitia sp. nov.

Candidatus Alkalilacustris istinitia (NL. fem. n. *istinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp003558415*. The type genome for the species is the GenBank assembly GCA_003558415.1. The GC content of the type genome is 66.77 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Alkalilacustris latibiforma sp. nov.

Candidatus Alkalilacustris latibiforma (NL. fem. n. *latibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp003550665*. The type genome for the species is the GenBank assembly GCA_007125815.1. The GC content of the type genome is 68.76 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Alkalilacustris sugilentia sp. nov.

Candidatus Alkalilacustris sugilentia (NL. fem. n. *sugilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalilacustris sp007131685*. The type genome for the species is the GenBank assembly GCA_007124905.1. The GC content of the type genome is 69.47 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Alkalimonas invecousia sp. nov.

Candidatus Alkalimonas invecousia (NL. fem. n. *invecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalimonas sp007117525*. The type genome for the species is the GenBank assembly GCA_007117525.1. The GC content of the type genome is 53.94 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Alkaliphilus inaspax sp. nov.

Candidatus Alkaliphilus inaspax (NL. fem. n. *inaspax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkaliphilus_C sp009017275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009017275.1. The GC content of the type genome is 33.87 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Alkalispirochaeta appicitoga sp. nov.

Candidatus Alkalispirochaeta appicitoga (NL. fem. n. *appicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalispirochaeta sp007117185*. The type genome for the species is the GenBank assembly GCA_007117185.1. The GC content of the type genome is 61.36 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Alkalispirochaeta conipitia sp. nov.

Candidatus Alkalispirochaeta conipitia (NL. fem. n. *conipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalispirochaeta sp007695175*. The type genome for the species is the GenBank assembly GCA_007695175.1. The GC content of the type genome is 61.2 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Alkalispirochaeta ignicibra sp. nov.

Candidatus Alkalispirochaeta ignicibra (NL. fem. n. *ignicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalispirochaeta sp002313505*. The type genome for the species is the GenBank assembly GCA_002313505.1. The GC content of the type genome is 64.54 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Alkalispirochaeta saburitio sp. nov.

Candidatus Alkalispirochaeta saburitio (NL. fem. n. *saburitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkalispirochaeta sp007130865*. The type genome for the species is the GenBank assembly GCA_003557615.1. The GC content of the type genome is 59.91 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Alkanindiges indifax sp. nov.

Candidatus Alkanindiges indifax (NL. fem. n. *indifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alkanindiges sp004173455*. The type genome for the species is the GenBank assembly GCA_004173455.1. The GC content of the type genome is 46.13 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Alkanindiges vicatisca sp. nov.

Candidatus Alkanindiges vicatisca (NL. fem. n. *vicatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Alkanindiges sp001982605*. The type genome for the species is the GenBank assembly RS_GCF_001982605.1. The GC content of the type genome is 46.43 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Allacaria domicitudo sp. nov.

Candidatus Allacaria domicitudo (NL. fem. n. *domicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDV01 sp002070715*. The type genome for the species is the GenBank assembly GCA_002070715.1. The GC content of the type genome is 61.18 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Allacaria gen. nov.

Candidatus Allacaria (NL. fem. n. *Allacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDV01*. The type species for the genus is *Candidatus* Allacaria domicitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NGM72-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubulaceae.

Description of *Candidatus* Allacella hexamago sp. nov.

Candidatus Allacella hexamago (NL. fem. n. *hexamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSM01 sp011331105*. The type genome for the species is the GenBank assembly GCA_011331105.1. The GC content of the type genome is 33.8 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Allacella gen. nov.

Candidatus Allacella (NL. fem. n. *Allacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSSM01*. The type species for the genus is *Candidatus* Allacella hexamago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Allacia triscedo sp. nov.

Candidatus Allacia triscedo (NL. fem. n. *triscedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1257 sp003135995*. The type genome for the species is the GenBank assembly GCA_003135995.1. The GC content of the type genome is 33.05 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Allacia gen. nov.

Candidatus Allacia (NL. fem. n. *Allacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1257*. The type species for the genus is *Candidatus* Allacia triscedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Allacosa biparitrix sp. nov.

Candidatus Allacosa biparitrix (NL. fem. n. *biparitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6154 sp002422375*. The type genome for the species is the GenBank assembly GCA_002422375.1. The GC content of the type genome is 55.17 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Allacosa gen. nov.

Candidatus Allacosa (NL. fem. n. *Allacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6154*. The type species for the genus is *Candidatus* Allacosa

biparitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Allacosa malogilenta sp. nov.

Candidatus Allacosa malogilenta (NL. fem. n. *malogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6154 sp903896585*. The type genome for the species is the GenBank assembly GCA_903896585.1. The GC content of the type genome is 53.8 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Allacula accomigena sp. nov.

Candidatus Allacula accomigena (NL. fem. n. *accomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB9 sp001567255*. The type genome for the species is the GenBank assembly GCA_001567255.1. The GC content of the type genome is 37.72 % and the genome length is 3.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Allacula gen. nov.

Candidatus Allacula (NL. fem. n. *Allacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB9*. The type species for the genus is *Candidatus* Allacula accomigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allacula bimotilenta sp. nov.

Candidatus Allacula bimotilenta (NL. fem. n. *bimotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB9 sp014379665*. The type genome for the species is the GenBank assembly GCA_014379665.1. The GC content of the type genome is 37.75 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Allacula penecessa sp. nov.

Candidatus Allacula penecessa (NL. fem. n. *penecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB9 sp002482845*. The type genome for the species is the GenBank assembly GCA_002482845.1. The GC content of the type genome is 34.92 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Allapana monumicella sp. nov.

Candidatus Allapana monumicella (NL. fem. n. *monumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-62 sp003599595*. The type genome for the species is the GenBank assembly GCA_003599595.1. The GC content of the type genome is 35.01 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Allapana gen. nov.

Candidatus Allapana (NL. fem. n. *Allapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-62*. The type species for the genus is *Candidatus* Allapana monumicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefellaceae.

Description of *Candidatus* Allaparia immigentia sp. nov.

Candidatus Allaparia immigentia (NL. fem. n. *immigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1858 sp900555705*. The type genome for the species is the GenBank assembly GCA_900555705.1. The GC content of the type genome is 58.37 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Allaparia gen. nov.

Candidatus Allaparia (NL. fem. n. *Allaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1858*. The type species for the genus is *Candidatus* Allaparia immigentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allapella cacalessa sp. nov.

Candidatus Allapella cacalessa (NL. fem. n. *cacalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-50-10 sp001824635*. The type genome for the species is the GenBank assembly GCA_001824635.1. The GC content of the type genome is 49.52 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Allapella gen. nov.

Candidatus Allapella (NL. fem. n. *Allapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-50-10*. The type species for the genus is *Candidatus* Allapella cacalessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12454*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucellaceae.

Description of *Candidatus* Allapia inabsitio sp. nov.

Candidatus Allapia inabsitio (NL. fem. n. *inabsitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG36 sp003242205*. The type genome for the species is the GenBank assembly GCA_003242205.1. The GC content of the type genome is 60.96 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Allapia gen. nov.

Candidatus Allapia (NL. fem. n. *Allapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG36*. The type species for the genus is *Candidatus* Allapia inabsitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Allapida locelilega sp. nov.

Candidatus Allapida locelilega (NL. fem. n. *locelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-49-23 sp001798855*. The type genome for the species is the GenBank assembly GCA_001798855.1. The GC content of the type genome is 49.05 % and the genome length is 3.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Allapida gen. nov.

Candidatus Allapida (NL. fem. n. *Allapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-49-23*. The type species for the genus is *Candidatus* Allapida locelilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponidaceae.

Description of *Candidatus* Allaposa agrimitoga sp. nov.

Candidatus Allaposa agrimitoga (NL. fem. n. *agrimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUTS01 sp012841935*. The type genome for the species is the GenBank assembly GCA_012841935.1. The GC content of the type genome is 37.52 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Allaposa gen. nov.

Candidatus Allaposa (NL. fem. n. *Allaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUTS01*. The type species for the genus is *Candidatus* Allaposa agrimitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taraxidaceae.

Description of *Candidatus* Allaposa offuniforma sp. nov.

Candidatus Allaposa offuniforma (NL. fem. n. *offuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUTS01 sp012842035*. The type genome for the species is the GenBank assembly GCA_012842035.1. The GC content of the type genome is 38.39 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Allapula vitabatica sp. nov.

Candidatus Allapula vitabatica (NL. fem. n. *vitabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYH01 sp009692865*. The type genome for the species is the GenBank assembly GCA_009692865.1. The GC content of the type genome is 63.8 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Allapula gen. nov.

Candidatus Allapula (NL. fem. n. *Allapula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYH01*. The type species for the genus is *Candidatus* Allapula vitabatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2717565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conarosaceae.

Description of *Candidatus* Allibana artufitura sp. nov.

Candidatus Allibana artufitura (NL. fem. n. *artufitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1240 sp012519415*. The type genome for the species is the GenBank assembly GCA_012519415.1. The GC content of the type genome is 34.98 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Allibana gen. nov.

Candidatus Allibana (NL. fem. n. *Allibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1240*. The type species for the genus is *Candidatus* Allibana artufitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allibana robigicula sp. nov.

Candidatus Allibana robigicula (NL. fem. n. *robigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1240 sp002308875*. The type genome for the species is the GenBank assembly GCA_002308875.1. The GC content of the type genome is 41.79 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Allibana tegumitas sp. nov.

Candidatus Allibana tegumitas (NL. fem. n. *tegumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1240 sp001603145*. The type genome for the species is the GenBank assembly GCA_001603145.1. The GC content of the type genome is 44.71 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Allibana totiditio sp. nov.

Candidatus Allibana totiditio (NL. fem. n. *totiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1240 sp902797925*. The type genome for the species is the GenBank assembly GCA_902797925.1. The GC content of the type genome is 43.14 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Allibaria ducilitoga sp. nov.

Candidatus Allibaria ducilitoga (NL. fem. n. *ducilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B7-G4 sp003647675*. The type genome for the species is the GenBank assembly GCA_003647675.1. The GC content of the type genome is 38.51 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Allibaria gen. nov.

Candidatus Allibaria (NL. fem. n. *Allibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B7-G4*. The type species for the genus is *Candidatus* Allibaria ducilitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12075*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenociaceae.

Description of *Candidatus* Allibella acrobetta sp. nov.

Candidatus Allibella acrobetta (NL. fem. n. *acrobetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691785 sp002691785*. The type genome for the species is the GenBank assembly GCA_002691785.1. The GC content of the type genome is 31.62 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Allibella gen. nov.

Candidatus Allibella (NL. fem. n. *Allibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2691785*. The type species for the genus is *Candidatus* Allibella acrobetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Allibella homulivita sp. nov.

Candidatus Allibella homulivita (NL. fem. n. *homulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691785 sp902611135*. The type genome for the species is the GenBank assembly GCA_902611135.1. The GC content of the type genome is 31.94 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Allibia arcipivita sp. nov.

Candidatus Allibia arcipivita (NL. fem. n. *arcipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCM01 sp002070055*. The type genome for the species is the GenBank assembly GCA_002070055.1. The GC content of the type genome is 39.45 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Allibia gen. nov.

Candidatus Allibia (NL. fem. n. *Allibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCM01*. The type species for the genus is *Candidatus* Allibia arcipivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA2-FULL-43-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denavulaceae.

Description of *Candidatus* Allibida demogigena sp. nov.

Candidatus Allibida demogigena (NL. fem. n. *demogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JKG1 sp000526415*. The type genome for the species is the GenBank assembly RS_GCF_000526415.1. The GC content of the type genome is 65.77 % and the genome length is 4.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Allibida gen. nov.

Candidatus Allibida (NL. fem. n. *Allibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JKG1*. The type species for the genus is *Candidatus* Allibida demogigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allibosa ammulimonia sp. nov.

Candidatus Allibosa ammulimonia (NL. fem. n. *ammulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JSC-12 sp000309945*. The type genome for the species is the GenBank assembly RS_GCF_000309945.1. The GC content of the type genome is 47.49 % and the genome length is 5.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Allibosa gen. nov.

Candidatus Allibosa (NL. fem. n. *Allibosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JSC-12*. The type species for the genus is *Candidatus* Allibosa ammulimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allibula maligousia sp. nov.

Candidatus Allibula maligousia (NL. fem. n. *maligousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OmCyn01 sp007996965*. The type genome for the species is the GenBank assembly RS_GCF_007996965.1. The GC content of the type genome is 48.49 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Allibula gen. nov.

Candidatus Allibula (NL. fem. n. *Allibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OmCyn01*. The type species for the genus is *Candidatus* Allibula maligousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allobacillus adtolago sp. nov.

Candidatus Allobacillus adtolago (NL. fem. n. *adtolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allobacillus sp007559355*. The type genome for the species is the GenBank assembly RS_GCF_007559355.1. The GC content of the type genome is 39.51 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Allobacillus dilacigena sp. nov.

Candidatus Allobacillus dilacigena (NL. fem. n. *dilacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allobacillus sp007559425*. The type genome for the species is the GenBank assembly RS_GCF_007559425.1. The GC content of the type genome is 38.78 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Allobana infunentia sp. nov.

Candidatus Allobana infunentia (NL. fem. n. *infunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WMS2 sp001276605*. The type genome for the species is the GenBank assembly GCA_001276605.1. The GC content of the type genome is 43.27 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single cell amplified by MDA; Sediments of Warm Mineral Spring".

Description of *Candidatus* Allobana gen. nov.

Candidatus Allobana (NL. fem. n. *Allobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WMS2*. The type species for the genus is *Candidatus* Allobana infunentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allobaria nutabitio sp. nov.

Candidatus Allobaria nutabitio (NL. fem. n. *nutabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LMEP-10873 sp005110395*. The type genome for the species is the GenBank assembly GCA_005110395.1. The GC content of the type genome is 34.95 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Allobaria gen. nov.

Candidatus Allobaria (NL. fem. n. *Allobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *LMEP-10873*. The type species for the genus is *Candidatus* Allobaria nutabitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allobella repurago sp. nov.

Candidatus Allobella repurago (NL. fem. n. *repurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733545 sp002733545*. The type genome for the species is the GenBank assembly GCA_002733545.1. The GC content of the type genome is 33.73 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Allobella gen. nov.

Candidatus Allobella (NL. fem. n. *Allobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2733545*. The type species for the genus is *Candidatus* Allobella repurago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allobida exorcicella sp. nov.

Candidatus Allobida exorcicella (NL. fem. n. *exorcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYE01 sp002839505*. The type genome for the species is the GenBank assembly GCA_002839505.1. The GC content of the type genome is 43.35 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Allobida gen. nov.

Candidatus Allobida (NL. fem. n. *Allobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYE01*. The type species for the genus is *Candidatus* Allobida exorcicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Allobosa effaritica sp. nov.

Candidatus Allobosa effaritica (NL. fem. n. *effaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLNJ01 sp009699865*. The type genome for the species is the GenBank assembly GCA_009699865.1. The GC content of the type genome is 60.48 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Allobosa gen. nov.

Candidatus Allobosa (NL. fem. n. *Allobosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLNJ01*. The type species for the genus is *Candidatus* Allobosa effaritica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allobula ignifica sp. nov.

Candidatus Allobula ignifica (NL. fem. n. *ignifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFT01 sp011064935*. The type genome for the species is the GenBank assembly GCA_011064935.1. The GC content of the type genome is 47.37 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Allobula gen. nov.

Candidatus Allobula (NL. fem. n. *Allobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFT01*. The type species for the genus is *Candidatus* Allobula ignifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JAAKFR01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucanaceae.

Description of *Candidatus* Allokutzneria denavigena sp. nov.

Candidatus Allokutzneria denavigena (NL. fem. n. *denavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allokutzneria sp002155965*. The type genome for the species is the GenBank assembly RS_GCF_002155965.1. The GC content of the type genome is 70.07 % and the genome length is 8.19 Mbp.

Description of *Candidatus* Alloprevotella bisacitudo sp. nov.

Candidatus Alloprevotella bisacitudo (NL. fem. n. *bisacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alloprevotella sp900317635*. The type genome for the species is the GenBank assembly GCA_900317635.1. The GC content of the type genome is 54.78 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Alloprevotella laxititudo sp. nov.

Candidatus Alloprevotella laxititudo (NL. fem. n. *laxititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alloprevotella sp900321445*. The type genome for the species is the GenBank assembly GCA_902794575.1. The GC content of the type genome is 52.24 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Allopseudarcicella catobousia sp. nov.

Candidatus Allopseudarcicella catobousia (NL. fem. n. *catobousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allopseudarcicella sp004118285*. The type genome for the species is the GenBank assembly RS_GCF_004118285.1. The GC content of the type genome is 38.79 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Allopseudarcicella retunicula sp. nov.

Candidatus Allopseudarcicella retunicula (NL. fem. n. *retunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allopseudarcicella sp011250515*. The type genome for the species is the GenBank assembly RS_GCF_011250515.1. The GC content of the type genome is 38.42 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Allopseudarcicella viragigena sp. nov.

Candidatus Allopseudarcicella viragigena (NL. fem. n. *viragigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allopseudarcicella sp011090385*. The type genome for the species is the GenBank assembly RS_GCF_011090385.1. The GC content of the type genome is 38.49 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Allorhizobium adfulitica sp. nov.

Candidatus Allorhizobium adfulitica (NL. fem. n. *adfulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900176345*. The type genome for the species is the GenBank assembly RS_GCF_900176345.1. The GC content of the type genome is 61.38 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Allorhizobium aggenitas sp. nov.

Candidatus Allorhizobium aggenitas (NL. fem. n. *aggenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp003527225*. The type genome for the species is the GenBank assembly GCA_003527225.1. The GC content of the type genome is 61.41 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Allorhizobium arnogessa sp. nov.

Candidatus Allorhizobium arnogessa (NL. fem. n. *arnogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp005860795*. The type genome for the species is the GenBank assembly RS_GCF_005860795.2. The GC content of the type genome is 58.62 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Allorhizobium benepimonia sp. nov.

Candidatus Allorhizobium benepimonia (NL. fem. n. *benepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp002796995*. The type genome for the species is the GenBank assembly GCA_013791895.1. The GC content of the type genome is 63.66 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Allorhizobium capucilega sp. nov.

Candidatus Allorhizobium capucilega (NL. fem. n. *capucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp001429245*. The type genome for the species is the GenBank assembly RS_GCF_001425145.1. The GC content of the type genome is 61.15 % and the genome length is 4.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Allorhizobium carucigena sp. nov.

Candidatus Allorhizobium carucigena (NL. fem. n. *carucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900465755*. The type genome for the species is the GenBank assembly RS_GCF_900465755.1. The GC content of the type genome is 62.06 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Allorhizobium catagago sp. nov.

Candidatus Allorhizobium catagago (NL. fem. n. *catagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp002307905*. The type genome for the species is the GenBank assembly GCA_002307905.1. The GC content of the type genome is 62.05 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Allorhizobium cemenibula sp. nov.

Candidatus Allorhizobium cemenibula (NL. fem. n. *cemenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900465605*. The type genome for the species is the GenBank assembly GCA_900465605.1. The GC content of the type genome is 63.47 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Allorhizobium cenotifica sp. nov.

Candidatus Allorhizobium cenotifica (NL. fem. n. *cenotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp001713475*. The type genome for the species is the GenBank assembly RS_GCF_001713475.1. The GC content of the type genome is 61.11 % and the genome length is 4.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Algal phycosphere".

Description of *Candidatus* Allorhizobium codifilenta sp. nov.

Candidatus Allorhizobium codifilenta (NL. fem. n. *codifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900473805*. The type genome for the species is the GenBank assembly RS_GCF_900470435.1. The GC content of the type genome is 61.31 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Allorhizobium decomitio sp. nov.

Candidatus Allorhizobium decomitio (NL. fem. n. *decomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900466005*. The type genome for the species is the GenBank assembly RS_GCF_900467305.1. The GC content of the type genome is 63.24

% and the genome length is 5.13 Mbp.

Description of *Candidatus* Allorhizobium defenitura sp. nov.

Candidatus Allorhizobium defenitura (NL. fem. n. *defenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900470155*. The type genome for the species is the GenBank assembly RS_GCF_900470155.1. The GC content of the type genome is 60.18 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Allorhizobium democicella sp. nov.

Candidatus Allorhizobium democicella (NL. fem. n. *democicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp002855515*. The type genome for the species is the GenBank assembly RS_GCF_002855515.1. The GC content of the type genome is 61.38 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Allorhizobium denecilenta sp. nov.

Candidatus Allorhizobium denecilenta (NL. fem. n. *denecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp902706095*. The type genome for the species is the GenBank assembly RS_GCF_902706095.1. The GC content of the type genome is 60.35 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Allorhizobium feculibra sp. nov.

Candidatus Allorhizobium feculibra (NL. fem. n. *feculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp004912145*. The type genome for the species is the GenBank assembly RS_GCF_008000915.1. The GC content of the type genome is 61.12 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Allorhizobium fefelitoga sp. nov.

Candidatus Allorhizobium fefelitoga (NL. fem. n. *fefelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900473745*. The type genome for the species is the GenBank assembly GCA_900473745.1. The GC content of the type genome is 61.1 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Allorhizobium inpinatio sp. nov.

Candidatus Allorhizobium inpinatio (NL. fem. n. *inpinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp003248775*. The type genome for the species is the GenBank assembly GCA_003248775.1. The GC content of the type genome is 60.85 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Allorhizobium insicitia sp. nov.

Candidatus Allorhizobium insicitia (NL. fem. n. *insicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp000247475*. The type genome for the species is the GenBank assembly RS_GCF_000247475.1. The GC content of the type genome is 60.25 % and the genome length is 5.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Allorhizobium obtemibula sp. nov.

Candidatus Allorhizobium obtemibula (NL. fem. n. *obtemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp001296045*. The type genome for the species is the GenBank assembly RS_GCF_001296045.1. The GC content of the type genome is 60.36 % and the genome length is 4.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Allorhizobium prodrifica sp. nov.

Candidatus Allorhizobium prodrifica (NL. fem. n. *prodrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp002600635*. The type genome for the species is the GenBank assembly RS_GCF_002600635.1. The GC content of the type genome is 61.18 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Allorhizobium rubigugo sp. nov.

Candidatus Allorhizobium rubigugo (NL. fem. n. *rubigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900473245*. The type genome for the species is the GenBank assembly RS_GCF_900465645.1. The GC content of the type genome is 61.88 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Allorhizobium senacessa sp. nov.

Candidatus Allorhizobium senacessa (NL. fem. n. *senacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900156055*. The type genome for the species is the GenBank assembly RS_GCF_900156055.1. The GC content of the type genome is 61.04 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Allorhizobium vavasitas sp. nov.

Candidatus Allorhizobium vavasitas (NL. fem. n. *vavasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp001724035*. The type genome for the species is the GenBank assembly GCA_001724035.1. The GC content of the type genome is 61.39 % and the genome length is 4.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Allorhizobium vehicedo sp. nov.

Candidatus Allorhizobium vehicedo (NL. fem. n. *vehicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp012276985*. The type genome for the species is the GenBank assembly RS_GCF_012276985.1. The GC content of the type genome is 61.74 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Allorhizobium vilipilenta sp. nov.

Candidatus Allorhizobium vilipilenta (NL. fem. n. *vilipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp003501385*. The type genome for the species is the GenBank assembly GCA_003501385.1. The GC content of the type genome is 54.93 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Allorhizobium vinacatica sp. nov.

Candidatus Allorhizobium vinacatica (NL. fem. n. *vinacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp014237835*. The type genome for the species is the GenBank assembly RS_GCF_014237835.1. The GC content of the type genome is 61.15 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Allorhizobium vinuliforma sp. nov.

Candidatus Allorhizobium vinuliforma (NL. fem. n. *vinuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp012927355*. The type genome for the species is the GenBank assembly RS_GCF_012927355.1. The GC content of the type genome is 63.11 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Allorhizobium visibugo sp. nov.

Candidatus Allorhizobium visibugo (NL. fem. n. *visibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allorhizobium sp900466945*. The type genome for the species is the GenBank assembly GCA_900472325.1. The GC content of the type genome is 61.16 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Allosphingosinicella allacitrix sp. nov.

Candidatus Allosphingosinicella allacitrix (NL. fem. n. *allacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp011320075*. The type genome for the species is the GenBank assembly RS_GCF_011320075.1. The GC content of the type genome is 68.24 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Allosphingosinicella apsociforma sp. nov.

Candidatus Allosphingosinicella apsociforma (NL. fem. n. *apsociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp004564275*. The type genome for the species is the GenBank assembly RS_GCF_004564275.1. The GC content of the type genome is 68.4 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Allosphingosinicella armipilega sp. nov.

Candidatus Allosphingosinicella armipilega (NL. fem. n. *armipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp005883305*. The type genome for the species is the GenBank assembly GCA_005883305.1. The GC content of the type genome is 67.55 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Allosphingosinicella catagilenta sp. nov.

Candidatus Allosphingosinicella catagilenta (NL. fem. n. *catagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp002344055*. The type genome for the species is the GenBank assembly GCA_002344055.1. The GC content of the type genome is 66.67 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Allosphingosinicella homicibula sp. nov.

Candidatus Allosphingosinicella homicibula (NL. fem. n. *homicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp003347635*. The type genome for the species is the GenBank assembly RS_GCF_003347635.1. The GC content of the type genome is 68.2 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Allosphingosinicella nitelatio sp. nov.

Candidatus Allosphingosinicella nitelatio (NL. fem. n. *nitelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp004135585*. The type genome for the species is the GenBank assembly RS_GCF_004135585.1. The GC content of the type genome is 66.0 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Allosphingosinicella obsolax sp. nov.

Candidatus Allosphingosinicella obsolax (NL. fem. n. *obsolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp003012735*. The type genome for the species is the GenBank assembly RS_GCF_003012735.1. The GC content of the type genome is 65.99 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Allosphingosinicella problago sp. nov.

Candidatus Allosphingosinicella problago (NL. fem. n. *problago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp005882415*. The type genome for the species is the GenBank assembly GCA_005882415.1. The GC content of the type genome is 67.28 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Allosphingosinicella regifilega sp. nov.

Candidatus Allosphingosinicella regifilega (NL. fem. n. *regifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Allosphingosinicella sp902806315*. The type genome for the species is the GenBank assembly GCA_902806315.1. The GC content of the type genome is 66.06 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Allosphingosinicella remedivita sp. nov.

Candidatus Allosphingosinicella remedivita (NL. fem. n. *remedivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp013816585*. The type genome for the species is the GenBank assembly GCA_013816585.1. The GC content of the type genome is 61.37 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Allosphingosinicella remulitica sp. nov.

Candidatus Allosphingosinicella remulitica (NL. fem. n. *remulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Allosphingosinicella sp004151485*. The type genome for the species is the GenBank assembly RS_GCF_004151485.1. The GC content of the type genome is 66.78 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Allubana foricimonia sp. nov.

Candidatus Allubana foricimonia (NL. fem. n. *foricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZF01 sp902812445*. The type genome for the species is the GenBank assembly RS_GCF_902812445.1. The GC content of the type genome is 58.23 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Allubana gen. nov.

Candidatus Allubana (NL. fem. n. *Allubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZF01*. The type species for the genus is *Candidatus* Allubana foricimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allubella cepulitoga sp. nov.

Candidatus Allubella cepulitoga (NL. fem. n. *cepulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUES01 sp011192055*. The type genome for the species is the GenBank assembly GCA_011192055.1. The GC content of the type genome is 51.8 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Allubella gen. nov.

Candidatus Allubella (NL. fem. n. *Allubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUES01*. The type species for the genus is *Candidatus* Allubella cepulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1064*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifidaceae.

Description of *Candidatus* Allubida ectenilenta sp. nov.

Candidatus Allubida ectenilenta (NL. fem. n. *ectenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5507 sp002426195*. The type genome for the species is the GenBank assembly GCA_002426195.1. The GC content of the type genome is 37.74 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Allubida gen. nov.

Candidatus Allubida (NL. fem. n. *Allubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5507*. The type species for the genus is *Candidatus* Allubida ectenilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Allubosa exsomitas sp. nov.

Candidatus Allubosa exsomitas (NL. fem. n. *exsomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-36-7 sp002791255*. The type genome for the species is the GenBank assembly GCA_002791255.1. The GC content of the type genome is 36.04 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Allubosa gen. nov.

Candidatus Allubosa (NL. fem. n. *Allubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-36-7*. The type species for the genus is *Candidatus* Allubosa exsomitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Allubula baropivita sp. nov.

Candidatus Allubula baropivita (NL. fem. n. *baropivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABACC01 sp014237915*. The type genome for the species is the GenBank assembly GCA_014237915.1. The GC content of the type genome is 28.38 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Allubula gen. nov.

Candidatus Allubula (NL. fem. n. *Allubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABACC01*. The type species for the genus is *Candidatus* Allubula baropivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2747955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homaganaceae.

Description of *Candidatus* Alluvida gemebisca sp. nov.

Candidatus Alluvida gemebisca (NL. fem. n. *gemebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJGO01 sp014190535*. The type genome for the species is the GenBank assembly GCA_014190535.1. The GC content of the type genome is 41.45 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Alluvida gen. nov.

Candidatus Alluvida (NL. fem. n. *Alluvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJGO01*. The type species for the genus is *Candidatus* Alluvida gemebisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vereciaceae.

Description of *Candidatus* Alluvosa repuribra sp. nov.

Candidatus Alluvosa repuribra (NL. fem. n. *repuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F-3ap sp010179735*. The type genome for the species is the GenBank assembly RS_GCF_010179735.1. The GC content of the type genome is 56.78 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Alluvosa gen. nov.

Candidatus Alluvosa (NL. fem. n. *Alluvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F-3ap*. The type species for the genus is *Candidatus* Alluvosa repuribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alluvula exforugo sp. nov.

Candidatus Alluvula exforugo (NL. fem. n. *exforugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTF01 sp012031775*. The type genome for the species is the GenBank assembly GCA_012031775.1. The GC content of the type genome is 59.95 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Alluvula gen. nov.

Candidatus Alluvula (NL. fem. n. *Alluvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTF01*. The type species for the genus is *Candidatus* Alluvula exforugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Almitaria adporibra sp. nov.

Candidatus Almitaria adporibra (NL. fem. n. *adporibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAY01 sp009787685*. The type genome for the species is the GenBank assembly GCA_009787685.1. The GC content of the type genome is 38.23 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Almitaria gen. nov.

Candidatus Almitaria (NL. fem. n. *Almitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAY01*. The type species for the genus is *Candidatus* Almitaria adporibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Almitaria bicubivita sp. nov.

Candidatus Almitaria bicubivita (NL. fem. n. *bicubivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAY01 sp009779975*. The type genome for the species is the GenBank assembly GCA_009779975.1. The GC content of the type genome is 37.77 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Almitaria prospilenta sp. nov.

Candidatus Almitaria prospilenta (NL. fem. n. *prospilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAY01 sp009787875*. The type genome for the species is the GenBank assembly GCA_009787875.1. The GC content of the type genome is 37.73 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Almitella repecugo sp. nov.

Candidatus Almitella repecugo (NL. fem. n. *repecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686445 sp002686445*. The type genome for the species is the GenBank assembly GCA_002686445.1. The GC content of the type genome is 52.3 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Almitella gen. nov.

Candidatus Almitella (NL. fem. n. *Almitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686445*. The type species for the genus is *Candidatus* Almitella repecugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolidaceae.

Description of *Candidatus* Almitosa abverousia sp. nov.

Candidatus Almitosa abverousia (NL. fem. n. *abverousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-002002485 sp002002485*. The type genome for the species is the GenBank assembly RS_GCF_002002485.1. The GC content of the type genome is 38.82 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Almitosa gen. nov.

Candidatus Almitosa (NL. fem. n. *Almitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-002002485*. The type species for the genus is *Candidatus* Almitosa abverousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Almitula maxumitas sp. nov.

Candidatus Almitula maxumitas (NL. fem. n. *maxumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1005 sp003153335*. The type genome for the species is the GenBank assembly GCA_003153335.1. The GC content of the type genome is 62.18 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Almitula gen. nov.

Candidatus Almitula (NL. fem. n. *Almitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1005*. The type species for the genus is *Candidatus* Almitula maxumitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Almucaria duricilega sp. nov.

Candidatus Almucaria duricilega (NL. fem. n. *duricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MES10 sp009711805*. The type genome for the species is the GenBank assembly GCA_009711805.1. The GC content of the type genome is 42.41 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Almucaria gen. nov.

Candidatus Almucaria (NL. fem. n. *Almucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MES10*. The type species for the genus is *Candidatus* Almucaria duricilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Almucella maledax sp. nov.

Candidatus Almucella maledax (NL. fem. n. *maledax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-354 sp003564915*. The type genome for the species is the GenBank assembly GCA_003564915.1. The GC content of the type genome is 43.05 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Almucella gen. nov.

Candidatus Almucella (NL. fem. n. *Almucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3SED10-354*. The type species for the genus is *Candidatus* Almucella maledax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Almucia argimedo sp. nov.

Candidatus Almucia argimedo (NL. fem. n. *argimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1936 sp013821585*. The type genome for the species is the GenBank assembly GCA_013821585.1. The GC content of the type genome is 65.7 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Almucia gen. nov.

Candidatus Almucia (NL. fem. n. *Almucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1936*. The type species for the genus is *Candidatus* Almucia argimedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Almucia labecessa sp. nov.

Candidatus Almucia labecessa (NL. fem. n. *labecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1936 sp002336985*. The type genome for the species is the GenBank assembly GCA_002336985.1. The GC content of the type genome is 63.46 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Almucia obsorugo sp. nov.

Candidatus Almucia obsorugo (NL. fem. n. *obsorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1936 sp003660165*. The type genome for the species is the GenBank assembly RS_GCF_003660165.1. The GC content of the type genome is 58.86 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Almucida abluvitas sp. nov.

Candidatus Almucida abluvitas (NL. fem. n. *abluvitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEV01 sp012728565*. The type genome for the species is the GenBank assembly GCA_012728565.1. The GC content of the type genome is 49.4 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Almucida gen. nov.

Candidatus Almucida (NL. fem. n. *Almucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEV01*. The type species for the genus is *Candidatus* Almucida abluvitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Niteliaceae.

Description of *Candidatus* Almucida almitugo sp. nov.

Candidatus Almucida almitugo (NL. fem. n. *almitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEV01 sp012523075*. The type genome for the species is the GenBank assembly GCA_012523075.1. The GC content of the type genome is 48.2 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Almucosa almucifica sp. nov.

Candidatus Almucosa almucifica (NL. fem. n. *almucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQZR01 sp009780625*. The type genome for the species is the GenBank assembly GCA_009780625.1. The GC content of the type genome is 37.8 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Almucosa gen. nov.

Candidatus Almucosa (NL. fem. n. *Almucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQZR01*. The type species for the genus is *Candidatus* Almucosa almucifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Alsidana sacomibula sp. nov.

Candidatus Alsidana sacomibula (NL. fem. n. *sacomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KH17 sp900199505*. The type genome for the species is the GenBank assembly RS_GCF_900199505.1. The GC content of the type genome is 64.89 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Alsidana gen. nov.

Candidatus Alsidana (NL. fem. n. *Alsidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KH17*. The type species for the genus is *Candidatus* Alsidana sacomibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsidaria funebigena sp. nov.

Candidatus Alsidaria funebigena (NL. fem. n. *funebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV17 sp003219225*. The type genome for the species is the GenBank assembly GCA_003219225.1. The GC content of the type genome is 58.35 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Alsidaria gen. nov.

Candidatus Alsidaria (NL. fem. n. *Alsidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV17*. The type species for the genus is *Candidatus* Alsidaria funebigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Alsidida metapedo sp. nov.

Candidatus Alsidida metapedo (NL. fem. n. *metapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHM01 sp013151855*. The type genome for the species is the GenBank assembly GCA_013151855.1. The GC content of the type genome is 39.42 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Alsidida gen. nov.

Candidatus Alsidida (NL. fem. n. *Alsidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHM01*. The type species for the genus is *Candidatus* Alsidida metapedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Alsidosa ascelicella sp. nov.

Candidatus Alsidosa ascelicella (NL. fem. n. *ascelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401865 sp002401865*. The type genome for the species is the GenBank assembly GCA_002401865.1. The GC content of the type genome is 38.78 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Alsidosa gen. nov.

Candidatus Alsidosa (NL. fem. n. *Alsidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401865*. The type species for the genus is *Candidatus* Alsidosa ascelicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsidula cisalicella sp. nov.

Candidatus Alsidula cisalicella (NL. fem. n. *cisalicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSDU01 sp011056835*. The type genome for the species is the GenBank assembly GCA_011056835.1. The GC content of the type genome is 48.27 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Alsidula gen. nov.

Candidatus Alsidula (NL. fem. n. *Alsidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSDU01*. The type species for the genus is *Candidatus* Alsidula cisalicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6807*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimosaceae.

Description of *Candidatus* Alsisana crastax sp. nov.

Candidatus Alsisana crastax (NL. fem. n. *crastax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AVCC01 sp012927625*. The type genome for the species is the GenBank assembly GCA_012927625.1. The GC content of the type genome is 53.91 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Alsisana gen. nov.

Candidatus Alsisana (NL. fem. n. *Alsisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AVCC01*. The type species for the genus is *Candidatus* Alsisana crastax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsisana effulatio sp. nov.

Candidatus Alsisana effulatio (NL. fem. n. *effulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AVCC01 sp012927585*. The type genome for the species is the GenBank assembly GCA_012927585.1. The GC content of the type genome is 54.34 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Alsisana innuligena sp. nov.

Candidatus Alsisana innuligena (NL. fem. n. *innuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AVCC01 sp000622895*. The type genome for the species is the GenBank assembly RS_GCF_000622895.1. The GC content of the type genome is 58.91 % and the genome length is 3.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coal-tar contaminated soil".

Description of *Candidatus* Alsisaria renavifica sp. nov.

Candidatus Alsisaria renavifica (NL. fem. n. *renavifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G21 sp002457305*. The type genome for the species is the GenBank assembly GCA_002457305.1. The GC content of the type genome is 34.27 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Alsisaria gen. nov.

Candidatus Alsisaria (NL. fem. n. *Alsisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G21*. The type species for the genus is *Candidatus* Alsisaria renavifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7430*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desaciaceae.

Description of *Candidatus* Alsisella lutulitio sp. nov.

Candidatus Alsisella lutulitio (NL. fem. n. *lutulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHR01 sp013820915*. The type genome for the species is the GenBank assembly GCA_013820915.1. The GC content of the type genome is 66.55 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Alsisella gen. nov.

Candidatus Alsisella (NL. fem. n. *Alsisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHR01*. The type species for the genus is *Candidatus* Alsisella lutulitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsisia insinimonia sp. nov.

Candidatus Alsisia insinimonia (NL. fem. n. *insinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWD01 sp004357495*. The type genome for the species is the GenBank assembly GCA_004357495.1. The GC content of the type genome is 61.17 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Alsisia gen. nov.

Candidatus Alsisia (NL. fem. n. *Alsisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWD01*. The type species for the genus is *Candidatus* Alsisia insinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Alsisida soliviforma sp. nov.

Candidatus Alsisida soliviforma (NL. fem. n. *soliviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-318 sp003248075*. The type genome for the species is the GenBank assembly GCA_003248075.1. The GC content of the type genome is 69.07 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Alsisida gen. nov.

Candidatus Alsisida (NL. fem. n. *Alsisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-318*. The type species for the genus is *Candidatus* Alsisida soliviforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Alsisosa anaclastra sp. nov.

Candidatus Alsisosa anaclastra (NL. fem. n. *anaclastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGI01 sp007694145*. The type genome for the species is the GenBank assembly GCA_007694145.1. The GC content of the type genome is 48.97 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Alsisosa gen. nov.

Candidatus Alsisosa (NL. fem. n. *Alsisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKGI01*. The type species for the genus is *Candidatus* Alsisosa anaclastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsisosa thessitura sp. nov.

Candidatus Alsisosa thessitura (NL. fem. n. *thessitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGI01 sp007117555*. The type genome for the species is the GenBank assembly GCA_007117555.1. The GC content of the type genome is 43.24 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Alsobacter catilago sp. nov.

Candidatus Alsobacter catilago (NL. fem. n. *catilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alsobacter sp003004785*. The type genome for the species is the GenBank assembly RS_GCF_003004785.1. The GC content of the type genome is 68.52 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Alsulella innupitas sp. nov.

Candidatus Alsulella innupitas (NL. fem. n. *innupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQF01 sp011357805*. The type genome for the species is the GenBank assembly GCA_011357805.1. The GC content of the type genome is 74.53 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Alsulella gen. nov.

Candidatus Alsulella (NL. fem. n. *Alsulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSQF01*. The type species for the genus is *Candidatus* Alsulella innupitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Alsulia bacifitas sp. nov.

Candidatus Alsulia bacifitas (NL. fem. n. *bacifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1440 sp002329565*. The type genome for the species is the GenBank assembly GCA_002329565.1. The GC content of the type genome is 47.47 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Alsulia gen. nov.

Candidatus Alsulia (NL. fem. n. *Alsulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1440*. The type species for the genus is *Candidatus* Alsulia bacifitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsulida assudimonas sp. nov.

Candidatus Alsulida assudimonas (NL. fem. n. *assudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-1457 sp003164155*. The type genome for the species is the GenBank assembly GCA_003164155.1. The GC content of the type genome is 45.63 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Alsulida gen. nov.

Candidatus Alsulida (NL. fem. n. *Alsulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-1457*. The type species for the genus is *Candidatus* Alsulida assudimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alsulosa edulcitio sp. nov.

Candidatus Alsulosa edulcitio (NL. fem. n. *edulcitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP287 sp002721285*. The type genome for the species is the GenBank assembly GCA_002721285.1. The GC content of the type genome is 30.52 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Alsulosa gen. nov.

Candidatus Alsulosa (NL. fem. n. *Alsulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP287*. The type species for the genus is *Candidatus* Alsulosa edulcitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Alsulula divoritura sp. nov.

Candidatus Alsulula divoritura (NL. fem. n. *divoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDNZ01 sp013043565*. The type genome for the species is the GenBank assembly GCA_013043565.1. The GC content of the type genome is 61.6 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Alsulula gen. nov.

Candidatus Alsulula (NL. fem. n. *Alsulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDNZ01*. The type species for the genus is *Candidatus* Alsulula divoritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Alteraurantiacibacter expopetta sp. nov.

Candidatus Alteraurantiacibacter expopetta (NL. fem. n. *expopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteraurantiacibacter sp009807005*. The type genome for the species is the GenBank assembly RS_GCF_009807005.1. The GC content of the type genome is 61.31 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Alteraurantiacibacter insorigena sp. nov.

Candidatus Alteraurantiacibacter insorigena (NL. fem. n. *insorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteraurantiacibacter sp002367375*. The type genome for the species is the GenBank assembly GCA_002367375.1. The GC content of the type genome is 60.36 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Alteraurantiacibacter morigibra sp. nov.

Candidatus Alteraurantiacibacter morigibra (NL. fem. n. *morigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteraurantiacibacter sp002341345*. The type genome for the species is the GenBank assembly GCA_002341345.1. The GC content of the type genome is 62.33 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Alteraurantiacibacter pocilax sp. nov.

Candidatus Alteraurantiacibacter pocilax (NL. fem. n. *pocilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteraurantiacibacter sp002337385*. The type genome for the species is the GenBank assembly GCA_002337385.1. The GC content of the type genome is 63.57 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Alteraurantiacibacter semipedo sp. nov.

Candidatus Alteraurantiacibacter semipedo (NL. fem. n. *semipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteraurantiacibacter sp902498745*. The type genome for the species is the GenBank assembly RS_GCF_902498745.1. The GC content of the type genome is 62.8 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Altererythrobacter addivax sp. nov.

Candidatus Altererythrobacter addivax (NL. fem. n. *addivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp011524425*. The type genome for the species is the GenBank assembly GCA_011524425.1. The GC content of the type genome is 55.51 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Altererythrobacter adrumatica sp. nov.

Candidatus Altererythrobacter adrumatica (NL. fem. n. *adrumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp003483125*. The type genome for the species is the GenBank assembly GCA_003483125.1. The GC content of the type genome is 56.5 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Altererythrobacter attolitoga sp. nov.

Candidatus Altererythrobacter attolitoga (NL. fem. n. *attolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp006226465*. The type genome for the species is the GenBank assembly GCA_006226465.1. The GC content of the type genome is 60.42 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Altererythrobacter cilibago sp. nov.

Candidatus Altererythrobacter cilibago (NL. fem. n. *cilibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp003149575*. The type genome for the species is the GenBank assembly GCA_009922725.1. The GC content of the type genome is 57.35 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Altererythrobacter decacentia sp. nov.

Candidatus Altererythrobacter decacentia (NL. fem. n. *decacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Altererythrobacter sp013002295*. The type genome for the species is the GenBank assembly GCA_013003785.1. The GC content of the type genome is 57.54 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Altererythrobacter hirunago sp. nov.

Candidatus Altererythrobacter hirunago (NL. fem. n. *hirunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp013371495*. The type genome for the species is the GenBank assembly RS_GCF_013371495.1. The GC content of the type genome is 57.75 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Altererythrobacter inexsitoga sp. nov.

Candidatus Altererythrobacter inexsitoga (NL. fem. n. *inexsitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp001516125*. The type genome for the species is the GenBank assembly GCA_001516125.1. The GC content of the type genome is 62.94 % and the genome length is 2.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Altererythrobacter nutamivita sp. nov.

Candidatus Altererythrobacter nutamivita (NL. fem. n. *nutamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp001515985*. The type genome for the species is the GenBank assembly GCA_001515985.1. The GC content of the type genome is 60.69 % and the genome length is 2.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Altererythrobacter recocicula sp. nov.

Candidatus Altererythrobacter recocicula (NL. fem. n. *recocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Altererythrobacter sp011047315*. The type genome for the species is the GenBank assembly RS_GCF_011047315.1. The GC content of the type genome is 62.21 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Altererythrobacter rutabedo sp. nov.

Candidatus Altererythrobacter rutabedo (NL. fem. n. *rutabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter sp013822125*. The type genome for the species is the GenBank assembly GCA_013822125.1. The GC content of the type genome is 62.78 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Altererythrobacter murilatio sp. nov.

Candidatus Altererythrobacter murilatio (NL. fem. n. *murilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altererythrobacter_D sp004282995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013001185.1. The GC content of the type genome is 61.4 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Alteribacillus cinefentia sp. nov.

Candidatus Alteribacillus cinefentia (NL. fem. n. *cinefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteribacillus sp009765375*. The type genome for the species is the GenBank assembly RS_GCF_009765375.1. The GC content of the type genome is 39.02 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Altericroceibacterium cenotilega sp. nov.

Candidatus Altericroceibacterium cenotilega (NL. fem. n. *cenotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altericroceibacterium sp003610805*. The type genome for the species is the GenBank assembly RS_GCF_003610805.1. The GC content of the type genome is

57.6 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Alteriqipengyuania citivibra sp. nov.

Candidatus Alteriqipengyuania citivibra (NL. fem. n. *citivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteriqipengyuania sp002729695*. The type genome for the species is the GenBank assembly GCA_002703435.1. The GC content of the type genome is 64.17 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Alteriqipengyuania dilemitudo sp. nov.

Candidatus Alteriqipengyuania dilemitudo (NL. fem. n. *dilemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteriqipengyuania sp002712945*. The type genome for the species is the GenBank assembly GCA_002712945.1. The GC content of the type genome is 65.71 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Alteriqipengyuania milipitio sp. nov.

Candidatus Alteriqipengyuania milipitio (NL. fem. n. *milipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteriqipengyuania sp009993635*. The type genome for the species is the GenBank assembly GCA_009993635.1. The GC content of the type genome is 64.66 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Alteriqipengyuania minagousia sp. nov.

Candidatus Alteriqipengyuania minagousia (NL. fem. n. *minagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteriqipengyuania sp002377695*. The type genome for the species is the GenBank assembly GCA_002377695.1. The GC content of the type genome is 64.86 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Alteriqipengyuania sugilugo sp. nov.

Candidatus Alteriqipengyuania sugilugo (NL. fem. n. *sugilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteriqipengyuania sp000186705*. The type genome for the species is the GenBank assembly RS_GCF_000186705.1. The GC content of the type genome is 64.91 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "upper water in South China Sea".

Description of *Candidatus* Alteromonas colapedo sp. nov.

Candidatus Alteromonas colapedo (NL. fem. n. *colapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp000597705*. The type genome for the species is the GenBank assembly RS_GCF_000597705.1. The GC content of the type genome is 43.67 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Alteromonas curotitas sp. nov.

Candidatus Alteromonas curotitas (NL. fem. n. *curotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp003443615*. The type genome for the species is the GenBank assembly RS_GCF_003443615.1. The GC content of the type genome is 44.07 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Alteromonas decunax sp. nov.

Candidatus Alteromonas decunax (NL. fem. n. *decunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp009811415*. The type genome for the species is the GenBank assembly RS_GCF_009811415.1. The GC content of the type genome is 44.52 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Alteromonas fusifitoga sp. nov.

Candidatus Alteromonas fusifitoga (NL. fem. n. *fusifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp000753865*. The type genome for the species is the GenBank assembly RS_GCF_000753915.1. The GC content of the type genome is 44.17 % and the genome length is 4.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Alteromonas hemitastra sp. nov.

Candidatus Alteromonas hemitastra (NL. fem. n. *hemitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp009811495*. The type genome for the species is the GenBank assembly RS_GCF_009811495.1. The GC content of the type genome is 43.82 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Alteromonas humecitrix sp. nov.

Candidatus Alteromonas humecitrix (NL. fem. n. *humecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp006538325*. The type genome for the species is the GenBank assembly RS_GCF_006538325.1. The GC content of the type genome is 42.88 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Alteromonas pomifatica sp. nov.

Candidatus Alteromonas pomifatica (NL. fem. n. *pomifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp010500865*. The type genome for the species is the GenBank assembly RS_GCF_010500865.1. The GC content of the type genome is 44.36 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Alteromonas senacatio sp. nov.

Candidatus Alteromonas senacatio (NL. fem. n. *senacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp006538345*. The type genome for the species is the GenBank assembly RS_GCF_006538345.1. The GC content of the type genome is 44.42 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Alteromonas tibicitas sp. nov.

Candidatus Alteromonas tibicitas (NL. fem. n. *tibicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp902506055*. The type genome for the species is the GenBank assembly RS_GCF_902506055.1. The GC content of the type genome is 43.73 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Alteromonas verififorma sp. nov.

Candidatus Alteromonas verififorma (NL. fem. n. *verififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas sp001885075*. The type genome for the species is the GenBank assembly RS_GCF_001885075.1. The GC content of the type genome is 44.01 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Alteromonas conifimonas sp. nov.

Candidatus Alteromonas conifimonas (NL. fem. n. *conifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas_A sp002691625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002691625.1. The GC content of the type genome is 48.93 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Alteromonas exhonatio sp. nov.

Candidatus Alteromonas exhonatio (NL. fem. n. *exhonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas_A sp013373625*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013373625.1. The GC content of the type genome is 47.45 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Alteromonas solivousia sp. nov.

Candidatus Alteromonas solivousia (NL. fem. n. *solivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas_A sp002335925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003535135.1. The GC content of the type genome is 49.65 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Alteromonas benemitrix sp. nov.

Candidatus Alteromonas benemitrix (NL. fem. n. *benemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Alteromonas_B sp002729795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003584565.2. The GC content of the type genome is 48.71 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Altibacter conarago sp. nov.

Candidatus Altibacter conarago (NL. fem. n. *conarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altibacter sp014295415*. The type genome for the species is the GenBank assembly RS_GCF_014295415.1. The GC content of the type genome is 40.38 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Altibacter lapicugo sp. nov.

Candidatus Altibacter lapicugo (NL. fem. n. *lapicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altibacter sp002696485*. The type genome for the species is the GenBank assembly GCA_002376315.1. The GC content of the type genome is 42.3 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Altibacter sceptibula sp. nov.

Candidatus Altibacter sceptibula (NL. fem. n. *sceptibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Altibacter sp002813135*. The type genome for the species is the GenBank assembly RS_GCF_002813135.1. The GC content of the type genome is 39.37 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Alticaria taraxisca sp. nov.

Candidatus Alticaria taraxisca (NL. fem. n. *taraxisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEW01 sp013153205*. The type genome for the species is the GenBank assembly GCA_013153205.1. The GC content of the type genome is 49.07 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Alticaria gen. nov.

Candidatus Alticaria (NL. fem. n. *Alticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEW01*. The type species for the genus is *Candidatus* Alticaria taraxisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alticella argumatica sp. nov.

Candidatus Alticella argumatica (NL. fem. n. *argumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3961 sp002385265*. The type genome for the species is the GenBank assembly GCA_002385265.1. The GC content of the type genome is 40.8 %

and the genome length is 4.12 Mbp.

Description of *Candidatus* Alticella gen. nov.

Candidatus Alticella (NL. fem. n. *Alticella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3961*. The type species for the genus is *Candidatus* Alticella argumatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alticella imbecitrix sp. nov.

Candidatus Alticella imbecitrix (NL. fem. n. *imbecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3961 sp014379515*. The type genome for the species is the GenBank assembly GCA_014379515.1. The GC content of the type genome is 42.56 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Alticella procricella sp. nov.

Candidatus Alticella procricella (NL. fem. n. *procricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3961 sp011357845*. The type genome for the species is the GenBank assembly GCA_011357845.1. The GC content of the type genome is 44.17 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Alticia accucicella sp. nov.

Candidatus Alticia accucicella (NL. fem. n. *accucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEUV01 sp001772575*. The type genome for the species is the GenBank assembly GCA_001772575.1. The GC content of the type genome is 33.53 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Alticia gen. nov.

Candidatus Alticia (NL. fem. n. *Alticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEUV01*. The type species for the genus is *Candidatus* Alticia accucicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Alticosa rorifatica sp. nov.

Candidatus Alticosa rorifatica (NL. fem. n. *rorifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VLJP01 sp007829525*. The type genome for the species is the GenBank assembly RS_GCF_007829525.1. The GC content of the type genome is 61.2 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Alticosa gen. nov.

Candidatus Alticosa (NL. fem. n. *Alticosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VLJP01*. The type species for the genus is *Candidatus* Alticosa rorifatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Alticula acropimonas sp. nov.

Candidatus Alticula acropimonas (NL. fem. n. *acropimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-57 sp005884305*. The type genome for the species is the GenBank assembly GCA_005884305.1. The GC content of the type genome is 68.93 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Alticula gen. nov.

Candidatus Alticula (NL. fem. n. *Alticula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-57*. The type species for the genus is *Candidatus* Alticula acropimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Altifana bicipivita sp. nov.

Candidatus Altifana bicipivita (NL. fem. n. *bicipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790365 sp011052365*. The type genome for the species is the GenBank assembly GCA_011052365.1. The GC content of the type genome is 32.97 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Altifana gen. nov.

Candidatus Altifana (NL. fem. n. *Altifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002790365*. The type species for the genus is *Candidatus* Altifana bicipivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altifana encomitia sp. nov.

Candidatus Altifana encomitia (NL. fem. n. *encomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790365 sp002783525*. The type genome for the species is the GenBank assembly GCA_002783525.1. The GC content of the type genome is 30.09 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Altifana remedisca sp. nov.

Candidatus Altifana remedisca (NL. fem. n. *remedisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002790365 sp002790365*. The type genome for the species is the GenBank assembly GCA_002790365.1. The GC content of the type genome is 30.12 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Altifella adnicitura sp. nov.

Candidatus Altifella adnicitura (NL. fem. n. *adnicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *H2GEO sp003574885*. The type genome for the species is the GenBank assembly GCA_003574885.1. The GC content of the type genome is 56.12 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Altifella gen. nov.

Candidatus Altifella (NL. fem. n. *Altifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *H2GEO*. The type species for the genus is *Candidatus* Altifella adnicitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altifida obtunicella sp. nov.

Candidatus Altifida obtunicella (NL. fem. n. *obtunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOT01 sp012838705*. The type genome for the species is the GenBank assembly GCA_012838705.1. The GC content of the type genome is 29.25 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Altifida gen. nov.

Candidatus Altifida (NL. fem. n. *Altifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DUOT01*. The type species for the genus is *Candidatus* Altifida obtunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Altifosa depasitia sp. nov.

Candidatus Altifosa depasitia (NL. fem. n. *depasitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAGVW01 sp010681825*. The type genome for the species is the GenBank assembly RS_GCF_010681825.1. The GC content of the type genome is 58.5 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Altifosa gen. nov.

Candidatus Altifosa (NL. fem. n. *Altifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAGVW01*. The type species for the genus is *Candidatus* Altifosa depasitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLCJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifellaceae.

Description of *Candidatus* Altipella expugitio sp. nov.

Candidatus Altipella expugitio (NL. fem. n. *expugitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDMH01 sp013001805*. The type genome for the species is the GenBank assembly GCA_013001805.1. The GC content of the type genome is 43.19 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Altipella gen. nov.

Candidatus Altipella (NL. fem. n. *Altipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDMH01*. The type species for the genus is *Candidatus* Altipella expugitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altipella fibicitura sp. nov.

Candidatus Altipella fibicitura (NL. fem. n. *fibicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDMH01 sp013001595*. The type genome for the species is the GenBank assembly GCA_013001595.1. The GC content of the type genome is 43.63 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Altipia adnubitura sp. nov.

Candidatus Altipia adnubitura (NL. fem. n. *adnubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HU2P27 sp014280935*. The type genome for the species is the GenBank assembly RS_GCF_014280935.1. The GC content of the type genome is 36.01 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Altipia gen. nov.

Candidatus Altipia (NL. fem. n. *Altipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HU2P27*. The type species for the genus is *Candidatus* Altipia adnubitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altiposa exsatitas sp. nov.

Candidatus Altiposa exsatitas (NL. fem. n. *exsatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABUE01 sp011389535*. The type genome for the species is the

GenBank assembly GCA_011389535.1. The GC content of the type genome is 55.31 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Altiposa gen. nov.

Candidatus Altiposa (NL. fem. n. *Altiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABUE01*. The type species for the genus is *Candidatus* Altiposa exsatitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Altipula xenodessa sp. nov.

Candidatus Altipula xenodessa (NL. fem. n. *xenodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPE01 sp013203845*. The type genome for the species is the GenBank assembly GCA_013203845.1. The GC content of the type genome is 56.57 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Altipula gen. nov.

Candidatus Altipula (NL. fem. n. *Altipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPE01*. The type species for the genus is *Candidatus* Altipula xenodessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altivana adpanimonia sp. nov.

Candidatus Altivana adpanimonia (NL. fem. n. *adpanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAKS01 sp003343685*. The type genome for the species is the GenBank assembly GCA_003343685.1. The GC content of the type genome is 51.36 %

and the genome length is 1.08 Mbp.

Description of *Candidatus* Altivana gen. nov.

Candidatus Altivana (NL. fem. n. *Altivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAKS01*. The type species for the genus is *Candidatus* Altivana adpanimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altivaria nutabatica sp. nov.

Candidatus Altivaria nutabatica (NL. fem. n. *nutabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LB-PLM-3 sp003389325*. The type genome for the species is the GenBank assembly GCA_003389325.1. The GC content of the type genome is 64.65 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Altivaria gen. nov.

Candidatus Altivaria (NL. fem. n. *Altivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LB-PLM-3*. The type species for the genus is *Candidatus* Altivaria nutabatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopulaceae.

Description of *Candidatus* Altivella viragago sp. nov.

Candidatus Altivella viragago (NL. fem. n. *viragago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABKMX01 sp902373595*. The type genome for the species is the GenBank assembly GCA_902373595.1. The GC content of the type genome is 57.34 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Altivella gen. nov.

Candidatus Altivella (NL. fem. n. *Altivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABKMX01*. The type species for the genus is *Candidatus* Altivella viragago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3700*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarellaceae.

Description of *Candidatus* Altivia endivitio sp. nov.

Candidatus Altivia endivitio (NL. fem. n. *endivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQH01 sp003820375*. The type genome for the species is the GenBank assembly GCA_003820375.1. The GC content of the type genome is 34.8 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Altivia gen. nov.

Candidatus Altivia (NL. fem. n. *Altivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPQH01*. The type species for the genus is *Candidatus* Altivia endivitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Virecidaceae.

Description of *Candidatus* Altivida appagicella sp. nov.

Candidatus Altivida appagicella (NL. fem. n. *appagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWI01 sp014361055*. The type genome for the species is the GenBank assembly GCA_014361055.1. The GC content of the type genome is 67.5 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Altivida gen. nov.

Candidatus Altivida (NL. fem. n. *Altivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIWI01*. The type species for the genus is *Candidatus* Altivida appagicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altivosa vitupisca sp. nov.

Candidatus Altivosa vitupisca (NL. fem. n. *vitupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-359 sp003246575*. The type genome for the species is the GenBank assembly GCA_003246575.1. The GC content of the type genome is 50.77 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Altivosa gen. nov.

Candidatus Altivosa (NL. fem. n. *Altivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-359*. The type species for the genus is *Candidatus* Altivosa vitupisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Altivula locupicella sp. nov.

Candidatus Altivula locupicella (NL. fem. n. *locupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHG01 sp011370805*. The type genome for the species is the GenBank assembly GCA_011370805.1. The GC content of the type genome is 32.77 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Altivula gen. nov.

Candidatus Altivula (NL. fem. n. *Altivula* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHG01*. The type species for the genus is *Candidatus* Altivula locupicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B12-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapidaceae.

Description of *Candidatus* Amantichitinum anagnitura sp. nov.

Candidatus Amantichitinum anagnitura (NL. fem. n. *anagnitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amantichitinum sp001313065*. The type genome for the species is the GenBank assembly GCA_001313065.1. The GC content of the type genome is 59.6 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Amaricoccus adrenivita sp. nov.

Candidatus Amaricoccus adrenivita (NL. fem. n. *adrenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amaricoccus sp006385685*. The type genome for the species is the GenBank assembly RS_GCF_006385685.1. The GC content of the type genome is 69.62 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Amaricoccus colubicula sp. nov.

Candidatus Amaricoccus colubicula (NL. fem. n. *colubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amaricoccus sp003241785*. The type genome for the species is the GenBank assembly GCA_003241785.1. The GC content of the type genome is 69.86 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Amaricoccus funebimonas sp. nov.

Candidatus Amaricoccus funebimonas (NL. fem. n. *funebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amaricoccus sp003258405*. The type genome for the species is the GenBank assembly RS_GCF_003258405.1. The GC content of the type genome is 66.5 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Amatrana vinolimonas sp. nov.

Candidatus Amatrana vinolimonas (NL. fem. n. *vinolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-56-11 sp001796865*. The type genome for the species is the GenBank assembly GCA_001796865.1. The GC content of the type genome is 56.36 % and the genome length is 2.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Amatrana gen. nov.

Candidatus Amatrana (NL. fem. n. *Amatrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-56-11*. The type species for the genus is *Candidatus* Amatrana vinolimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Amatraria milipugo sp. nov.

Candidatus Amatraria milipugo (NL. fem. n. *milipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM05190 sp900759815*. The type genome for the species is the GenBank assembly RS_GCF_900759815.1. The GC content of the type genome is 55.34 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Amatraria gen. nov.

Candidatus Amatraria (NL. fem. n. *Amatraria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM05190*. The type species for the genus is *Candidatus* Amatraria milipugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amatria abinvedo sp. nov.

Candidatus Amatria abinvedo (NL. fem. n. *abinvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720865 sp002720865*. The type genome for the species is the GenBank assembly GCA_002720865.1. The GC content of the type genome is 38.32 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Amatria gen. nov.

Candidatus Amatria (NL. fem. n. *Amatria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720865*. The type species for the genus is *Candidatus* Amatria abinvedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amatrula effacitas sp. nov.

Candidatus Amatrula effacitas (NL. fem. n. *effacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1246 sp002308315*. The type genome for the species is the GenBank assembly GCA_002308315.1. The GC content of the type genome is 58.28 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Amatrula gen. nov.

Candidatus Amatrula (NL. fem. n. *Amatrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1246*. The type species for the genus is *Candidatus* Amatrula effacitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambacana inaccugo sp. nov.

Candidatus Ambacana inaccugo (NL. fem. n. *inaccugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWAJ01 sp013361075*. The type genome for the species is the GenBank assembly GCA_013361075.1. The GC content of the type genome is 48.47 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Ambacana gen. nov.

Candidatus Ambacana (NL. fem. n. *Ambacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWAJ01*. The type species for the genus is *Candidatus* Ambacana inaccugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambacaria beniviforma sp. nov.

Candidatus Ambacaria beniviforma (NL. fem. n. *beniviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZHK01 sp012510745*. The type genome for the species is the GenBank assembly GCA_012510745.1. The GC content of the type genome is 25.73 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Ambacaria gen. nov.

Candidatus Ambacaria (NL. fem. n. *Ambacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZHK01*. The type species for the genus is *Candidatus* Ambacaria beniviforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ambacella sceptitia sp. nov.

Candidatus Ambacella sceptitia (NL. fem. n. *sceptitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6259 sp002441135*. The type genome for the species is the GenBank assembly GCA_002441135.1. The GC content of the type genome is 35.02 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Ambacella gen. nov.

Candidatus Ambacella (NL. fem. n. *Ambacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6259*. The type species for the genus is *Candidatus* Ambacella sceptitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambacula diluvitica sp. nov.

Candidatus Ambacula diluvitica (NL. fem. n. *diluvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM1970 sp013328345*. The type genome for the species is the GenBank assembly RS_GCF_013328345.1. The GC content of the type genome is 40.15 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Ambacula gen. nov.

Candidatus Ambacula (NL. fem. n. *Ambacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM1970*. The type species for the genus is *Candidatus* Ambacula diluvitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadana chernago sp. nov.

Candidatus Ambadana chernago (NL. fem. n. *chernago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QFOI01 sp004337365*. The type genome for the species is the GenBank assembly RS_GCF_004337365.2. The GC content of the type genome is 34.18 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Ambadana gen. nov.

Candidatus Ambadana (NL. fem. n. *Ambadana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QFOI01*. The type species for the genus is *Candidatus* Ambadana chernago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadana defeticula sp. nov.

Candidatus Ambadana defeticula (NL. fem. n. *defeticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QFOI01 sp003241175*. The type genome for the species is the GenBank assembly GCA_003241175.1. The GC content of the type genome is 37.45 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Ambadaria acculifica sp. nov.

Candidatus Ambadaria acculifica (NL. fem. n. *acculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1139 sp003154095*. The type genome for the species is the GenBank assembly GCA_003154095.1. The GC content of the type genome is 56.99 % and the genome length is 8.66 Mbp.

Description of *Candidatus* Ambadaria gen. nov.

Candidatus Ambadaria (NL. fem. n. *Ambadaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1139*. The type species for the genus is *Candidatus* Ambadaria acculifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadella impiritia sp. nov.

Candidatus Ambadella impiritia (NL. fem. n. *impiritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEX01 sp013388635*. The type genome for the species is the GenBank assembly GCA_013388635.1. The GC content of the type genome is 50.52 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Ambadella gen. nov.

Candidatus Ambadella (NL. fem. n. *Ambadella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEX01*. The type species for the genus is *Candidatus* Ambadella impiritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponidaceae.

Description of *Candidatus* Ambadia apharibra sp. nov.

Candidatus Ambadia apharibra (NL. fem. n. *apharibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An23 sp900544635*. The type genome for the species is the GenBank assembly GCA_900544635.1. The GC content of the type genome is 60.75 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Ambadia gen. nov.

Candidatus Ambadia (NL. fem. n. *Ambadia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An23*. The type species for the genus is *Candidatus* Ambadia apharibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadia inrefessa sp. nov.

Candidatus Ambadia inrefessa (NL. fem. n. *inrefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An23 sp002159945*. The type genome for the species is the GenBank assembly RS_GCF_002159945.1. The GC content of the type genome is 57.91 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Ambadia insalitia sp. nov.

Candidatus Ambadia insalitia (NL. fem. n. *insalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An23 sp900545755*. The type genome for the species is the GenBank assembly GCA_900545755.1. The GC content of the type genome is 57.38 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Ambadida assicibra sp. nov.

Candidatus Ambadida assicibra (NL. fem. n. *assicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JC017 sp004296775*. The type genome for the species is the GenBank assembly RS_GCF_004296775.1. The GC content of the type genome is 40.23 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Ambadida gen. nov.

Candidatus Ambadida (NL. fem. n. *Ambadida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JC017*. The type species for the genus is *Candidatus* Ambadida assicibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadosa assibugo sp. nov.

Candidatus Ambadosa assibugo (NL. fem. n. *assibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRU01 sp014534295*. The type genome for the species is the GenBank assembly GCA_014534295.1. The GC content of the type genome is 72.61 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Ambadosa gen. nov.

Candidatus Ambadosa (NL. fem. n. *Ambadosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRU01*. The type species for the genus is *Candidatus* Ambadosa assibugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambadula homagilega sp. nov.

Candidatus Ambadula homagilega (NL. fem. n. *homagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSV01 sp012032525*. The type genome for the species is the GenBank assembly GCA_012032525.1. The GC content of the type genome is 52.11 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Ambadula gen. nov.

Candidatus Ambadula (NL. fem. n. *Ambadula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSV01*. The type species for the genus is *Candidatus* Ambadula homagilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambecaria voragibula sp. nov.

Candidatus Ambecaria voragibula (NL. fem. n. *voragibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFS01 sp009778695*. The type genome for the species is the GenBank assembly GCA_009778695.1. The GC content of the type genome is 30.29 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ambecaria gen. nov.

Candidatus Ambecaria (NL. fem. n. *Ambecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFS01*. The type species for the genus is *Candidatus* Ambecaria voragibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Ambecella inlibimonia sp. nov.

Candidatus Ambecella inlibimonia (NL. fem. n. *inlibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHS01 sp013298485*. The type genome for the species is the GenBank assembly GCA_013298485.1. The GC content of the type genome is 63.04 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Ambecella gen. nov.

Candidatus Ambecella (NL. fem. n. *Ambecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHS01*. The type species for the genus is *Candidatus* Ambecella inlibimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambecia senacitoga sp. nov.

Candidatus Ambecia senacitoga (NL. fem. n. *senacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSI01 sp012524045*. The type genome for the species is the GenBank assembly GCA_012524045.1. The GC content of the type genome is 40.23 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Ambecia gen. nov.

Candidatus Ambecia (NL. fem. n. *Ambecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSI01*. The type species for the genus is *Candidatus* Ambecia senacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambecida democessa sp. nov.

Candidatus Ambecida democessa (NL. fem. n. *democessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHKX01 sp008363375*. The type genome for the species is the GenBank assembly GCA_008363375.1. The GC content of the type genome is 72.62 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Ambecida gen. nov.

Candidatus Ambecida (NL. fem. n. *Ambecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHKX01*. The type species for the genus is *Candidatus* Ambecida democessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Ambecosa menapugo sp. nov.

Candidatus Ambecosa menapugo (NL. fem. n. *menapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKQW01 sp007118805*. The type genome for the species is the GenBank assembly GCA_007118805.1. The GC content of the type genome is 65.65 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Ambecosa gen. nov.

Candidatus Ambecosa (NL. fem. n. *Ambecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKQW01*. The type species for the genus is *Candidatus* Ambecosa menapugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambecula filifitura sp. nov.

Candidatus Ambecula filifitura (NL. fem. n. *filifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJW01 sp013002375*. The type genome for the species is the GenBank assembly GCA_013002375.1. The GC content of the type genome is 66.99 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Ambecula gen. nov.

Candidatus Ambecula (NL. fem. n. *Ambecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJW01*. The type species for the genus is *Candidatus* Ambecula filifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHLQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorulaceae.

Description of *Candidatus* Ambidana tigurifica sp. nov.

Candidatus Ambidana tigurifica (NL. fem. n. *tigurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711625 sp002711625*. The type genome for the species is the GenBank assembly GCA_002711625.1. The GC content of the type genome is 30.47 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Ambidana gen. nov.

Candidatus Ambidana (NL. fem. n. *Ambidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711625*. The type species for the genus is *Candidatus* Ambidana tigurifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Ambidaria expecitoga sp. nov.

Candidatus Ambidaria expecitoga (NL. fem. n. *expecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVRN01 sp002067965*. The type genome for the species is the GenBank assembly GCA_002067965.1. The GC content of the type genome is 47.21 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Ambidaria gen. nov.

Candidatus Ambidaria (NL. fem. n. *Ambidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVRN01*. The type species for the genus is *Candidatus* Ambidaria expecitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambidella immusastra sp. nov.

Candidatus Ambidella immusastra (NL. fem. n. *immusastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RDXD01 sp004292575*. The type genome for the species is the GenBank assembly GCA_004292575.1. The GC content of the type genome is 47.69 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Ambidella gen. nov.

Candidatus Ambidella (NL. fem. n. *Ambidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXD01*. The type species for the genus is *Candidatus* Ambidella immusastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambidella semivibula sp. nov.

Candidatus Ambidella semivibula (NL. fem. n. *semivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXD01 sp009740285*. The type genome for the species is the GenBank assembly RS_GCF_009740285.1. The GC content of the type genome is 46.68 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Ambidida conipitura sp. nov.

Candidatus Ambidida conipitura (NL. fem. n. *conipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHZ01 sp013297675*. The type genome for the species is the GenBank assembly GCA_013297675.1. The GC content of the type genome is 45.28 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Ambidida gen. nov.

Candidatus Ambidida (NL. fem. n. *Ambidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHZ01*. The type species for the genus is *Candidatus* Ambidida conipitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambidosa monumitia sp. nov.

Candidatus Ambidosa monumitia (NL. fem. n. *monumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTPO01 sp011357885*. The type genome for the species is the GenBank assembly GCA_011357885.1. The GC content of the type genome is 59.15 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Ambidosa gen. nov.

Candidatus Ambidosa (NL. fem. n. *Ambidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPO01*. The type species for the genus is *Candidatus* Ambidosa monumitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambifaria debucastra sp. nov.

Candidatus Ambifaria debucastra (NL. fem. n. *debucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-87 sp003231645*. The type genome for the species is the GenBank assembly GCA_003231645.1. The GC content of the type genome is 65.87 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Ambifaria gen. nov.

Candidatus Ambifaria (NL. fem. n. *Ambifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-87*. The type species for the genus is *Candidatus* Ambifaria debucastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Ambifia infanimonia sp. nov.

Candidatus Ambifia infanimonia (NL. fem. n. *infanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZA01 sp903862655*. The type genome for the species is the GenBank assembly GCA_903862655.1. The GC content of the type genome is 35.52 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Ambifia gen. nov.

Candidatus Ambifia (NL. fem. n. *Ambifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOZA01*. The type species for the genus is *Candidatus* Ambifia infanimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Ambifida abmatugo sp. nov.

Candidatus Ambifida abmatugo (NL. fem. n. *abmatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKF01 sp009778165*. The type genome for the species is the GenBank assembly GCA_009778165.1. The GC content of the type genome is 39.96 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Ambifida gen. nov.

Candidatus Ambifida (NL. fem. n. *Ambifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKF01*. The type species for the genus is *Candidatus* Ambifida abmatugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenoculaceae.

Description of *Candidatus* Ambifosa vocifitas sp. nov.

Candidatus Ambifosa vocifitas (NL. fem. n. *vocifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGF01 sp013152545*. The type genome for the species is the GenBank assembly GCA_013152545.1. The GC content of the type genome is 44.27 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Ambifosa gen. nov.

Candidatus Ambifosa (NL. fem. n. *Ambifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGF01*. The type species for the genus is *Candidatus* Ambifosa vocifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-152*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibulaceae.

Description of *Candidatus* Ambifula demadigena sp. nov.

Candidatus Ambifula demadigena (NL. fem. n. *demadigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14215 sp902796915*. The type genome for the species is the GenBank assembly GCA_902796915.1. The GC content of the type genome is 31.0 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Ambifula gen. nov.

Candidatus Ambifula (NL. fem. n. *Ambifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14215*. The type species for the genus is *Candidatus* Ambifula demadigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambusana conubicella sp. nov.

Candidatus Ambusana conubicella (NL. fem. n. *conubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-D09 sp003215935*. The type genome for the species is the GenBank assembly GCA_003215935.1. The GC content of the type genome is 34.14 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Ambusana gen. nov.

Candidatus Ambusana (NL. fem. n. *Ambusana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-D09*. The type species for the genus is *Candidatus* Ambusana conubicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambusaria idipsitia sp. nov.

Candidatus Ambusaria idipsitia (NL. fem. n. *idipsitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-47-11 sp001779455*. The type genome for the species is the GenBank assembly GCA_001779455.1. The GC content of the type genome is 47.32 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Ambusaria gen. nov.

Candidatus Ambusaria (NL. fem. n. *Ambusaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-FULL-47-11*. The type species for the genus is *Candidatus* Ambusaria idipsitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Ambusella afranilega sp. nov.

Candidatus Ambusella afranilega (NL. fem. n. *afranilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJQ01 sp009885995*. The type genome for the species is the GenBank assembly GCA_009885995.1. The GC content of the type genome is 65.17 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Ambusella gen. nov.

Candidatus Ambusella (NL. fem. n. *Ambusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJQ01*. The type species for the genus is *Candidatus* Ambusella afranilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambusia occucitica sp. nov.

Candidatus Ambusia occucitica (NL. fem. n. *occucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EB88 sp003858395*. The type genome for the species is the GenBank assembly RS_GCF_003858395.1. The GC content of the type genome is 62.55 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Ambusia gen. nov.

Candidatus Ambusia (NL. fem. n. *Ambusia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *EB88*. The type species for the genus is *Candidatus* Ambusia occucitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ambusida ignifitrix sp. nov.

Candidatus Ambusida ignifitrix (NL. fem. n. *ignifitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJC01 sp011333895*. The type genome for the species is the GenBank assembly GCA_011333895.1. The GC content of the type genome is 56.47 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ambusida gen. nov.

Candidatus Ambusida (NL. fem. n. *Ambusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJC01*. The type species for the genus is *Candidatus* Ambusida ignifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viburellaceae.

Description of *Candidatus* Ambusula manubivita sp. nov.

Candidatus Ambusula manubivita (NL. fem. n. *manubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-N20 sp003280105*. The type genome for the species is the GenBank assembly GCA_003280105.1. The GC content of the type genome is 40.05 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Ambusula gen. nov.

Candidatus Ambusula (NL. fem. n. *Ambusula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-N20*. The type species for the genus is *Candidatus* Ambusula manubivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amercana delubessa sp. nov.

Candidatus Amercana delubessa (NL. fem. n. *delubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *L13 sp012955605*. The type genome for the species is the GenBank assembly RS_GCF_012955605.1. The GC content of the type genome is 43.68 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Amercana gen. nov.

Candidatus Amercana (NL. fem. n. *Amercana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *L13*. The type species for the genus is *Candidatus* Amercana delubessa .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Amercaria acusticella sp. nov.

Candidatus Amercaria acusticella (NL. fem. n. *acusticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2702655 sp002702655*. The type genome for the species is the GenBank assembly GCA_002702655.1. The GC content of the type genome is 64.36 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Amercaria gen. nov.

Candidatus Amercaria (NL. fem. n. *Amercaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2702655*. The type species for the genus is *Candidatus* Amercaria acusticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Amercella dilacitoga sp. nov.

Candidatus Amercella dilacitoga (NL. fem. n. *dilacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZNT01 sp902782635*. The type genome for the species is the GenBank assembly GCA_902782635.1. The GC content of the type genome is 65.6 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Amercella gen. nov.

Candidatus Amercella (NL. fem. n. *Amercella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZNT01*. The type species for the genus is *Candidatus* Amercella dilacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amercida repudedo sp. nov.

Candidatus Amercida repudedo (NL. fem. n. *repudedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWGF01 sp003554375*. The type genome for the species is the GenBank assembly GCA_003554375.1. The GC content of the type genome is 61.03 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Amercida gen. nov.

Candidatus Amercida (NL. fem. n. *Amercida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWGF01*. The type species for the genus is *Candidatus* Amercida repudedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papavosaceae.

Description of *Candidatus* Amercosa desucilenta sp. nov.

Candidatus Amercosa desucilenta (NL. fem. n. *desucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-45-25b sp001781035*. The type genome for the species is the GenBank assembly GCA_001781035.1. The GC content of the type genome is 45.25 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Amercosa gen. nov.

Candidatus Amercosa (NL. fem. n. *Amercosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-45-25b*. The type species for the genus is *Candidatus* Amercosa desucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Amfitana cocibousia sp. nov.

Candidatus Amfitana cocibousia (NL. fem. n. *cocibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZP01 sp013695885*. The type genome for the species is the GenBank assembly GCA_013695885.1. The GC content of the type genome is 72.23 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Amfitana gen. nov.

Candidatus Amfitana (NL. fem. n. *Amfitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZP01*. The type species for the genus is *Candidatus* Amfitana cocibousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amfitia insenentia sp. nov.

Candidatus Amfitia insenentia (NL. fem. n. *insenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPCO01 sp013698385*. The type genome for the species is the GenBank assembly GCA_013698385.1. The GC content of the type genome is 69.44 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Amfitia gen. nov.

Candidatus Amfitia (NL. fem. n. *Amfitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPCO01*. The type species for the genus is *Candidatus* Amfitia insenentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Amfitia orgetifica sp. nov.

Candidatus Amfitia orgetifica (NL. fem. n. *orgetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPCO01 sp004525275*. The type genome for the species is the GenBank assembly GCA_004525275.1. The GC content of the type genome is 67.2 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Amfitida nimiritudo sp. nov.

Candidatus Amfitida nimiritudo (NL. fem. n. *nimiritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABUFE01 sp013315265*. The type genome for the species is the GenBank assembly RS_GCF_013315265.1. The GC content of the type genome is 51.79 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Amfitida gen. nov.

Candidatus Amfitida (NL. fem. n. *Amfitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABUFE01*. The type species for the genus is *Candidatus* Amfitida nimiritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amfitosa telefago sp. nov.

Candidatus Amfitosa telefago (NL. fem. n. *telefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPMV01 sp002238685*. The type genome for the species is the GenBank assembly GCA_002238685.1. The GC content of the type genome is 63.69 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Amfitosa gen. nov.

Candidatus Amfitosa (NL. fem. n. *Amfitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MPMV01*. The type species for the genus is *Candidatus* Amfitosa telefago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SP197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagulaceae.

Description of *Candidatus* Amfitula conopibra sp. nov.

Candidatus Amfitula conopibra (NL. fem. n. *conopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14282 sp902797565*. The type genome for the species is the GenBank assembly GCA_902797565.1. The GC content of the type genome is 52.64 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Amfitula gen. nov.

Candidatus Amfitula (NL. fem. n. *Amfitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14282*. The type species for the genus is *Candidatus* Amfitula

conopibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aminidesulfovibrio bucelessa sp. nov.

Candidatus Aminidesulfovibrio bucelessa (NL. fem. n. *bucelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminidesulfovibrio sp002382645*. The type genome for the species is the GenBank assembly GCA_003500825.1. The GC content of the type genome is 67.34 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Aminiphilus biverimonia sp. nov.

Candidatus Aminiphilus biverimonia (NL. fem. n. *biverimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminiphilus sp002425685*. The type genome for the species is the GenBank assembly GCA_002425845.1. The GC content of the type genome is 61.22 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Aminipila astapibra sp. nov.

Candidatus Aminipila astapibra (NL. fem. n. *astapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminipila sp010120715*. The type genome for the species is the GenBank assembly RS_GCF_010120715.1. The GC content of the type genome is 36.98 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Aminipila caduribula sp. nov.

Candidatus Aminipila caduribula (NL. fem. n. *caduribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminipila sp002455605*. The type genome for the species is the GenBank assembly GCA_002455605.1. The GC content of the type genome is 38.61 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Aminipila cnestousia sp. nov.

Candidatus Aminipila cnestousia (NL. fem. n. *cnestousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminipila sp004103735*. The type genome for the species is the GenBank assembly RS_GCF_004103735.1. The GC content of the type genome is 42.59 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Aminivibrio annecimonas sp. nov.

Candidatus Aminivibrio annecimonas (NL. fem. n. *annecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp001604435*. The type genome for the species is the GenBank assembly GCA_001604435.1. The GC content of the type genome is 58.87 % and the genome length is 3.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Aminivibrio coninibula sp. nov.

Candidatus Aminivibrio coninibula (NL. fem. n. *coninibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp002068355*. The type genome for the species is the GenBank assembly GCA_002068355.1. The GC content of the type genome is 63.47 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Aminivibrio estovugo sp. nov.

Candidatus Aminivibrio estovugo (NL. fem. n. *estovugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp012521675*. The type genome for the species is the GenBank assembly GCA_012521675.1. The GC content of the type genome is 60.61 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Aminivibrio indevitudo sp. nov.

Candidatus Aminivibrio indevitudo (NL. fem. n. *indevitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp012519165*. The type genome for the species is the GenBank assembly GCA_012519165.1. The GC content of the type genome is 58.63 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Aminivibrio menapitoga sp. nov.

Candidatus Aminivibrio menapitoga (NL. fem. n. *menapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp009929115*. The type genome for the species is the GenBank assembly GCA_009929115.1. The GC content of the type genome is 59.84 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Aminivibrio pocilugo sp. nov.

Candidatus Aminivibrio pocilugo (NL. fem. n. *pocilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp012523155*. The type genome for the species is the GenBank assembly GCA_012523155.1. The GC content of the type genome is 54.55 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Aminivibrio xeramitia sp. nov.

Candidatus Aminivibrio xeramitia (NL. fem. n. *xeramitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminivibrio sp002417725*. The type genome for the species is the GenBank assembly GCA_002417725.1. The GC content of the type genome is 54.62 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Aminnana inguritio sp. nov.

Candidatus Aminnana inguritio (NL. fem. n. *inguritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSAP01 sp011046415*. The type genome for the species is the GenBank assembly GCA_011046415.1. The GC content of the type genome is 57.17 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Aminnana gen. nov.

Candidatus Aminnana (NL. fem. n. *Aminnana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSAP01*. The type species for the genus is *Candidatus* Aminnana inguritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delaculaceae.

Description of *Candidatus* Aminnaria acropimonia sp. nov.

Candidatus Aminnaria acropimonia (NL. fem. n. *acropimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRME01 sp009777275*. The type genome for the species is the GenBank assembly GCA_009777275.1. The GC content of the type genome is 46.79 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Aminnaria gen. nov.

Candidatus Aminnaria (NL. fem. n. *Aminnaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRME01*. The type species for the genus is *Candidatus* Aminnaria acropimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aminnaria ineffifica sp. nov.

Candidatus Aminnaria ineffifica (NL. fem. n. *ineffifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRME01 sp009778115*. The type genome for the species is the GenBank assembly GCA_009778115.1. The GC content of the type genome is 43.83 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Aminnella bicubago sp. nov.

Candidatus Aminnella bicubago (NL. fem. n. *bicubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOU01 sp007132385*. The type genome for the species is the GenBank assembly GCA_007132385.1. The GC content of the type genome is 44.37 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Aminnella gen. nov.

Candidatus Aminnella (NL. fem. n. *Aminnella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOU01*. The type species for the genus is *Candidatus* Aminnella bicubago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aminnia acistitura sp. nov.

Candidatus Aminnia acistitura (NL. fem. n. *acistitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFBN01 sp001776425*. The type genome for the species is the GenBank assembly GCA_001776425.1. The GC content of the type genome is 36.68 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Aminnia gen. nov.

Candidatus Aminnia (NL. fem. n. *Aminnia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFBN01*. The type species for the genus is *Candidatus* Aminnia

acistitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Aminnosa rumifisca sp. nov.

Candidatus Aminnosa rumifisca (NL. fem. n. *rumifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1850 sp002338525*. The type genome for the species is the GenBank assembly GCA_002338525.1. The GC content of the type genome is 42.99 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Aminnosa gen. nov.

Candidatus Aminnosa (NL. fem. n. *Aminnosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1850*. The type species for the genus is *Candidatus* Aminnosa rumifisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aminnula adpecilenta sp. nov.

Candidatus Aminnula adpecilenta (NL. fem. n. *adpecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10908 sp012729355*. The type genome for the species is the GenBank assembly GCA_012729355.1. The GC content of the type genome is 53.8 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Aminnula gen. nov.

Candidatus Aminnula (NL. fem. n. *Aminnula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10908*. The type species for the genus is *Candidatus* Aminnula adpecilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aminnula mavoritrix sp. nov.

Candidatus Aminnula mavoritrix (NL. fem. n. *mavoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10908 sp003542355*. The type genome for the species is the GenBank assembly GCA_003542355.1. The GC content of the type genome is 52.92 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Aminnula offirastra sp. nov.

Candidatus Aminnula offirastra (NL. fem. n. *offirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10908 sp012841925*. The type genome for the species is the GenBank assembly GCA_012841925.1. The GC content of the type genome is 56.28 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Aminobacter abnoratio sp. nov.

Candidatus Aminobacter abnoratio (NL. fem. n. *abnoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminobacter sp003148805*. The type genome for the species is the GenBank assembly RS_GCF_003148805.1. The GC content of the type genome is 62.06 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Aminobacter bimoticella sp. nov.

Candidatus Aminobacter bimoticella (NL. fem. n. *bimoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminobacter sp001724355*. The type genome for the species is the GenBank assembly GCA_001724355.1. The GC content of the type genome is 64.63 % and the genome length is 3.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Aminobacter excalentia sp. nov.

Candidatus Aminobacter excalentia (NL. fem. n. *excalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminobacter sp000372965*. The type genome for the species is the GenBank assembly RS_GCF_000372965.1. The GC content of the type genome is 63.37 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Aminobacterium antefugo sp. nov.

Candidatus Aminobacterium antefugo (NL. fem. n. *antefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aminobacterium sp002432275*. The type genome for the species is the GenBank assembly GCA_002432275.1. The GC content of the type genome is 41.07 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Ammatana adperetta sp. nov.

Candidatus Ammatana adperetta (NL. fem. n. *adperetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1603 sp900759005*. The type genome for the species is the GenBank assembly RS_GCF_900759005.1. The GC content of the type genome is 56.41 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Ammatana gen. nov.

Candidatus Ammatana (NL. fem. n. *Ammatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1603*. The type species for the genus is *Candidatus* Ammatana adperetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Ammatana occuciforma sp. nov.

Candidatus Ammatana occuciforma (NL. fem. n. *occuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1603 sp004555155*. The type genome for the species is the GenBank assembly GCA_004555155.1. The GC content of the type genome is 62.5 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Ammatana pragmilega sp. nov.

Candidatus Ammatana pragmilega (NL. fem. n. *pragmilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1603 sp900553265*. The type genome for the species is the GenBank assembly GCA_900553265.1. The GC content of the type genome is 62.77 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Ammatella ludimilega sp. nov.

Candidatus Ammatella ludimilega (NL. fem. n. *ludimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-680 sp003157385*. The type genome for the species is the GenBank assembly GCA_003157385.1. The GC content of the type genome is 63.99 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Ammatella gen. nov.

Candidatus Ammatella (NL. fem. n. *Ammatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-680*. The type species for the genus is *Candidatus* Ammatella ludimilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Appugulaceae.

Description of *Candidatus* Ammatia acrocedo sp. nov.

Candidatus Ammatia acrocedo (NL. fem. n. *acrocedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTU01 sp009786125*. The type genome for the species is the GenBank assembly GCA_009786125.1. The GC content of the type genome is 39.15 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Ammatia gen. nov.

Candidatus Ammatia (NL. fem. n. *Ammatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQTU01*. The type species for the genus is *Candidatus* Ammatia acrocedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADAEX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibosaceae.

Description of *Candidatus* Ammatia desepitudo sp. nov.

Candidatus Ammatia desepitudo (NL. fem. n. *desepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTU01 sp009780675*. The type genome for the species is the GenBank assembly GCA_009780675.1. The GC content of the type genome is 36.96 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Ammatia insubigena sp. nov.

Candidatus Ammatia insubigena (NL. fem. n. *insubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTU01 sp009783755*. The type genome for the species is the GenBank assembly GCA_009783755.1. The GC content of the type genome is 34.48 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Ammatia rutabastra sp. nov.

Candidatus Ammatia rutabastra (NL. fem. n. *rutabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTU01 sp009778835*. The type genome for the species is the GenBank assembly GCA_009778835.1. The GC content of the type genome is 36.15 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Ammatida alticetta sp. nov.

Candidatus Ammatida alticetta (NL. fem. n. *alticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-51-16 sp002774795*. The type genome for the species is the GenBank assembly GCA_002774795.1. The GC content of the type genome is 51.46 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Ammatida gen. nov.

Candidatus Ammatida (NL. fem. n. *Ammatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-51-16*. The type species for the genus is *Candidatus* Ammatida alticetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodariaceae.

Description of *Candidatus* Ammatosa arremifica sp. nov.

Candidatus Ammatosa arremifica (NL. fem. n. *arremifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-227 sp011053935*. The type genome for the species is the GenBank assembly GCA_011053935.1. The GC content of the type genome is 36.44 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Ammatosa gen. nov.

Candidatus Ammatosa (NL. fem. n. *Ammatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-227*. The type species for the genus is *Candidatus* Ammatosa arremifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammatula obnupilega sp. nov.

Candidatus Ammatula obnupilega (NL. fem. n. *obnupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSRV01 sp011331415*. The type genome for the species is the GenBank assembly GCA_011331415.1. The GC content of the type genome is 73.45 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Ammatula gen. nov.

Candidatus Ammatula (NL. fem. n. *Ammatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSRV01*. The type species for the genus is *Candidatus* Ammatula obnupilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Ammigana vatilitas sp. nov.

Candidatus Ammigana vatilitas (NL. fem. n. *vatilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNH01 sp012520945*. The type genome for the species is the GenBank assembly GCA_012520945.1. The GC content of the type genome is 32.42 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Ammigana gen. nov.

Candidatus Ammigana (NL. fem. n. *Ammigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAAYNH01*. The type species for the genus is *Candidatus* Ammigana vatilitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammigaria nefaritia sp. nov.

Candidatus Ammigaria nefaritia (NL. fem. n. *nefaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIS01 sp011338085*. The type genome for the species is the GenBank assembly GCA_011338085.1. The GC content of the type genome is 34.09 % and the genome length is 0.36 Mbp.

Description of *Candidatus* Ammigaria gen. nov.

Candidatus Ammigaria (NL. fem. n. *Ammigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIS01*. The type species for the genus is *Candidatus* Ammigaria nefaritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucidaceae.

Description of *Candidatus* Ammigella procrisca sp. nov.

Candidatus Ammigella procrisca (NL. fem. n. *procrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6920 sp002448875*. The type genome for the species is the GenBank assembly GCA_002448875.1. The GC content of the type genome is 59.64 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Ammigella gen. nov.

Candidatus Ammigella (NL. fem. n. *Ammigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6920*. The type species for the genus is *Candidatus* Ammigella

procrisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nicotariaceae.

Description of *Candidatus* Ammigida sitelitio sp. nov.

Candidatus Ammigida sitelitio (NL. fem. n. *sitelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFPI01 sp009926205*. The type genome for the species is the GenBank assembly GCA_009926205.1. The GC content of the type genome is 45.48 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Ammigida gen. nov.

Candidatus Ammigida (NL. fem. n. *Ammigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFPI01*. The type species for the genus is *Candidatus* Ammigida sitelitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammigosa necubibra sp. nov.

Candidatus Ammigosa necubibra (NL. fem. n. *necubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYSU-D60015 sp003576705*. The type genome for the species is the GenBank assembly RS_GCF_003576705.1. The GC content of the type genome is 68.23 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Ammigosa gen. nov.

Candidatus Ammigosa (NL. fem. n. *Ammigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYSU-D60015*. The type species for the genus is *Candidatus* Ammigosa necubibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammigula indupousia sp. nov.

Candidatus Ammigula indupousia (NL. fem. n. *indupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5536 sp002426795*. The type genome for the species is the GenBank assembly GCA_002426795.1. The GC content of the type genome is 43.33 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Ammigula gen. nov.

Candidatus Ammigula (NL. fem. n. *Ammigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5536*. The type species for the genus is *Candidatus* Ammigula indupousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Ammigula infenetta sp. nov.

Candidatus Ammigula infenetta (NL. fem. n. *infenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5536 sp002440975*. The type genome for the species is the GenBank assembly GCA_002440975.1. The GC content of the type genome is 41.61 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Ammixella defacatica sp. nov.

Candidatus Ammixella defacatica (NL. fem. n. *defacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXF01 sp011367945*. The type genome for the species is the GenBank assembly GCA_011367945.1. The GC content of the type genome is 54.66 %

and the genome length is 3.17 Mbp.

Description of *Candidatus* Ammixella gen. nov.

Candidatus Ammixella (NL. fem. n. *Ammixella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXF01*. The type species for the genus is *Candidatus* Ammixella defacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Ammixia agnicitoga sp. nov.

Candidatus Ammixia agnicitoga (NL. fem. n. *agnicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-36-13 sp001777015*. The type genome for the species is the GenBank assembly GCA_001777015.1. The GC content of the type genome is 35.68 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ammixia gen. nov.

Candidatus Ammixia (NL. fem. n. *Ammixia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-36-13*. The type species for the genus is *Candidatus* Ammixia agnicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Ammixida colapentia sp. nov.

Candidatus Ammixida colapentia (NL. fem. n. *colapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXF01 sp013697295*. The type genome for the species is the GenBank assembly GCA_013697295.1. The GC content of the type genome is 64.28 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Ammixida gen. nov.

Candidatus Ammixida (NL. fem. n. *Ammixida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXF01*. The type species for the genus is *Candidatus* Ammixida colapentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Ammixosa pabilicula sp. nov.

Candidatus Ammixosa pabilicula (NL. fem. n. *pabilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-265 sp003235365*. The type genome for the species is the GenBank assembly GCA_003235365.1. The GC content of the type genome is 63.64 % and the genome length is 10.42 Mbp.

Description of *Candidatus* Ammixosa gen. nov.

Candidatus Ammixosa (NL. fem. n. *Ammixosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-265*. The type species for the genus is *Candidatus* Ammixosa pabilicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammixula bipariforma sp. nov.

Candidatus Ammixula bipariforma (NL. fem. n. *bipariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYHS01 sp012728785*. The type genome for the species is the GenBank assembly GCA_012728785.1. The GC content of the type genome is 41.72 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Ammixula gen. nov.

Candidatus Ammixula (NL. fem. n. *Ammixula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHS01*. The type species for the genus is *Candidatus* Ammixula bipariforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenosaceae.

Description of *Candidatus* Ammixula lucelessa sp. nov.

Candidatus Ammixula lucelessa (NL. fem. n. *lucelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHS01 sp012735315*. The type genome for the species is the GenBank assembly GCA_012735315.1. The GC content of the type genome is 46.31 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Ammodana adnubilenta sp. nov.

Candidatus Ammodana adnubilenta (NL. fem. n. *adnubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKP01 sp009885495*. The type genome for the species is the GenBank assembly GCA_009885495.1. The GC content of the type genome is 42.06 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Ammodana gen. nov.

Candidatus Ammodana (NL. fem. n. *Ammodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKP01*. The type species for the genus is *Candidatus* Ammodana adnubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenellaceae.

Description of *Candidatus* Ammodana encenifica sp. nov.

Candidatus Ammodana encenifica (NL. fem. n. *encenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKP01 sp009885895*. The type genome for the species is the GenBank assembly GCA_009885895.1. The GC content of the type genome is 42.86 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Ammodana illibifica sp. nov.

Candidatus Ammodana illibifica (NL. fem. n. *illibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKP01 sp009885935*. The type genome for the species is the GenBank assembly GCA_009885935.1. The GC content of the type genome is 42.35 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Ammodaria gasifitudo sp. nov.

Candidatus Ammodaria gasifitudo (NL. fem. n. *gasifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-13 sp001779235*. The type genome for the species is the GenBank assembly GCA_001779235.1. The GC content of the type genome is 39.65 % and the genome length is 1.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Ammodaria gen. nov.

Candidatus Ammodaria (NL. fem. n. *Ammodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-40-13*. The type species for the genus is *Candidatus* Ammodaria gasifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Ammodella oscilentia sp. nov.

Candidatus Ammodella oscilentia (NL. fem. n. *oscilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZZ01 sp009692005*. The type genome for the species is the GenBank assembly GCA_009692005.1. The GC content of the type genome is 55.32 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Ammodella gen. nov.

Candidatus Ammodella (NL. fem. n. *Ammodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZZ01*. The type species for the genus is *Candidatus* Ammodella oscilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammodida resuriforma sp. nov.

Candidatus Ammodida resuriforma (NL. fem. n. *resuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-56-14 sp001803705*. The type genome for the species is the GenBank assembly GCA_001803705.1. The GC content of the type genome is 56.44 % and the genome length is 3.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Ammodida gen. nov.

Candidatus Ammodida (NL. fem. n. *Ammodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-56-14*. The type species for the genus is *Candidatus* Ammodida

resuriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volucosaceae.

Description of *Candidatus* Ammodosa nubifigena sp. nov.

Candidatus Ammodosa nubifigena (NL. fem. n. *nubifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBJ01 sp009784355*. The type genome for the species is the GenBank assembly GCA_009784355.1. The GC content of the type genome is 41.94 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Ammodosa gen. nov.

Candidatus Ammodosa (NL. fem. n. *Ammodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBJ01*. The type species for the genus is *Candidatus* Ammodosa nubifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Ammodosa vinacibula sp. nov.

Candidatus Ammodosa vinacibula (NL. fem. n. *vinacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBJ01 sp009784615*. The type genome for the species is the GenBank assembly GCA_009784615.1. The GC content of the type genome is 40.72 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Ammodula oppanicula sp. nov.

Candidatus Ammodula oppanicula (NL. fem. n. *oppanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYOC01 sp005804965*. The type genome for the species is the GenBank assembly GCA_005804965.1. The GC content of the type genome is 56.79 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Ammodula gen. nov.

Candidatus Ammodula (NL. fem. n. *Ammodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYOC01*. The type species for the genus is *Candidatus* Ammodula oppanicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beneposaceae.

Description of *Candidatus* Ammulana adsibilenta sp. nov.

Candidatus Ammulana adsibilenta (NL. fem. n. *adsibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFF01 sp011065165*. The type genome for the species is the GenBank assembly GCA_011065165.1. The GC content of the type genome is 46.89 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Ammulana gen. nov.

Candidatus Ammulana (NL. fem. n. *Ammulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFF01*. The type species for the genus is *Candidatus* Ammulana adsibilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammularia lanififica sp. nov.

Candidatus Ammularia lanififica (NL. fem. n. *lanififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2722105 sp002722105*. The type genome for the species is the GenBank assembly GCA_002722105.1. The GC content of the type genome is 35.01 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Ammularia gen. nov.

Candidatus Ammularia (NL. fem. n. *Ammularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722105*. The type species for the genus is *Candidatus* Ammularia lanifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Ammulella desuliforma sp. nov.

Candidatus Ammulella desuliforma (NL. fem. n. *desuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRBL01 sp903876815*. The type genome for the species is the GenBank assembly GCA_903876815.1. The GC content of the type genome is 34.86 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Ammulella gen. nov.

Candidatus Ammulella (NL. fem. n. *Ammulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRBL01*. The type species for the genus is *Candidatus* Ammulella desuliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Ammulia casigetta sp. nov.

Candidatus Ammulia casigetta (NL. fem. n. *casigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-996 sp011332765*. The type genome for the species is the GenBank assembly GCA_011332765.1. The GC content of the type genome is 59.29 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Ammulia gen. nov.

Candidatus Ammulia (NL. fem. n. *Ammulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-996*. The type species for the genus is *Candidatus* Ammulia casigetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Ammulida democigena sp. nov.

Candidatus Ammulida democigena (NL. fem. n. *democigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-967 sp003151745*. The type genome for the species is the GenBank assembly GCA_003151745.1. The GC content of the type genome is 40.09 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Ammulida gen. nov.

Candidatus Ammulida (NL. fem. n. *Ammulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-967*. The type species for the genus is *Candidatus* Ammulida democigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2013-40CM-41-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocifellaceae.

Description of *Candidatus* Ammurana avoncitudo sp. nov.

Candidatus Ammurana avoncitudo (NL. fem. n. *avoncitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002728855 sp002702405*. The type genome for the species is the GenBank assembly GCA_002702405.1. The GC content of the type genome is 31.15 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Ammurana gen. nov.

Candidatus Ammurana (NL. fem. n. *Ammurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002728855*. The type species for the genus is *Candidatus* Ammurana avoncitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammurana defacentia sp. nov.

Candidatus Ammurana defacentia (NL. fem. n. *defacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002728855 sp002728855*. The type genome for the species is the GenBank assembly GCA_002728855.1. The GC content of the type genome is 30.57 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Ammurella denoratio sp. nov.

Candidatus Ammurella denoratio (NL. fem. n. *denoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRWO01 sp903882345*. The type genome for the species is the GenBank assembly GCA_903882345.1. The GC content of the type genome is 45.96 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Ammurella gen. nov.

Candidatus Ammurella (NL. fem. n. *Ammurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRWO01*. The type species for the genus is *Candidatus* Ammurella denoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Ammurida visocitrix sp. nov.

Candidatus Ammurida visocitrix (NL. fem. n. *visocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPC01 sp012519985*. The type genome for the species is the GenBank assembly GCA_012519985.1. The GC content of the type genome is 40.94 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Ammurida gen. nov.

Candidatus Ammurida (NL. fem. n. *Ammurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPC01*. The type species for the genus is *Candidatus* Ammurida visocitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ammurosa femelicula sp. nov.

Candidatus Ammurosa femelicula (NL. fem. n. *femelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1-G9 sp003644335*. The type genome for the species is the GenBank assembly GCA_003644335.1. The GC content of the type genome is 55.01 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Ammurosa gen. nov.

Candidatus Ammurosa (NL. fem. n. *Ammurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1-G9*. The type species for the genus is *Candidatus* Ammurosa femelicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SM23-33. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Amnenana camilago sp. nov.

Candidatus Amnenana camilago (NL. fem. n. *camilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-117 sp003229095*. The type genome for the species is the GenBank assembly GCA_003229095.1. The GC content of the type genome is 54.12 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Amnenana gen. nov.

Candidatus Amnenana (NL. fem. n. *Amnenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-117*. The type species for the genus is *Candidatus* Amnenana camilago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnenana redunessa sp. nov.

Candidatus Amnenana redunessa (NL. fem. n. *redunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-117 sp003645495*. The type genome for the species is the GenBank assembly GCA_003645495.1. The GC content of the type genome is 53.54 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Amnenana satacitrix sp. nov.

Candidatus Amnenana satacitrix (NL. fem. n. *satacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-117 sp004357475*. The type genome for the species is the GenBank assembly GCA_004357475.1. The GC content of the type genome is 55.96 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Amnenaria protribula sp. nov.

Candidatus Amnenaria protribula (NL. fem. n. *protribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1754 sp002315615*. The type genome for the species is the GenBank assembly GCA_002315615.1. The GC content of the type genome is 38.07 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Amnenaria gen. nov.

Candidatus Amnenaria (NL. fem. n. *Amnenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1754*. The type species for the genus is *Candidatus* Amnenaria protribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnenia atlanitia sp. nov.

Candidatus Amnenia atlanitia (NL. fem. n. *atlanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tener-01 sp001940985*. The type genome for the species is the GenBank assembly GCA_001940985.1. The GC content of the type genome is 28.48 % and the genome length is 1.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Amnenia gen. nov.

Candidatus Amnenia (NL. fem. n. *Amnenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Tener-01*. The type species for the genus is *Candidatus* Amnenia atlanitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Amnenia tribrilega sp. nov.

Candidatus Amnenia tribrilega (NL. fem. n. *tribrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tener-01 sp001604495*. The type genome for the species is the GenBank assembly GCA_001604495.1. The GC content of the type genome is 31.83 % and the genome length is 0.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Amnenida detenugo sp. nov.

Candidatus Amnenida detenugo (NL. fem. n. *detenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYO01 sp009930325*. The type genome for the species is the GenBank assembly GCA_009930325.1. The GC content of the type genome is 27.67 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Amnenida gen. nov.

Candidatus Amnenida (NL. fem. n. *Amnenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZYO01*. The type species for the genus is *Candidatus* Amnenida detenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnenosa idciratio sp. nov.

Candidatus Amnenosa idciratio (NL. fem. n. *idciratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8133 sp003509805*. The type genome for the species is the GenBank assembly GCA_003509805.1. The GC content of the type genome is 56.59 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Amnenosa gen. nov.

Candidatus Amnenosa (NL. fem. n. *Amnenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8133*. The type species for the genus is *Candidatus* Amnenosa idciratio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnenula irrecentia sp. nov.

Candidatus Amnenula irrecentia (NL. fem. n. *irrecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBC038 sp009692685*. The type genome for the species is the GenBank assembly GCA_009692685.1. The GC content of the type genome is 67.4 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Amnenula gen. nov.

Candidatus Amnenula (NL. fem. n. *Amnenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBC038*. The type species for the genus is *Candidatus* Amnenula irrecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Amnenula palifitura sp. nov.

Candidatus Amnenula palifitura (NL. fem. n. *palifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBC038 sp902827055*. The type genome for the species is the GenBank assembly GCA_902827055.1. The GC content of the type genome is 70.32 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Amnigana adinvitudo sp. nov.

Candidatus Amnigana adinvitudo (NL. fem. n. *adinvitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGZD01 sp002843155*. The type genome for the species is the GenBank assembly GCA_002843155.1. The GC content of the type genome is 50.69 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Amnigana gen. nov.

Candidatus Amnigana (NL. fem. n. *Amnigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGZD01*. The type species for the genus is *Candidatus* Amnigana adinvitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnigaria desomentia sp. nov.

Candidatus Amnigaria desomentia (NL. fem. n. *desomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRKI01 sp011051875*. The type genome for the species is the GenBank assembly GCA_011051875.1. The GC content of the type genome is 62.5 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Amnigaria gen. nov.

Candidatus Amnigaria (NL. fem. n. *Amnigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRKI01*. The type species for the genus is *Candidatus* Amnigaria desomentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnigella murilago sp. nov.

Candidatus Amnigella murilago (NL. fem. n. *murilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWK01 sp004356895*. The type genome for the species is the GenBank assembly GCA_004356895.1. The GC content of the type genome is 55.1 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Amnigella gen. nov.

Candidatus Amnigella (NL. fem. n. *Amnigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWK01*. The type species for the genus is *Candidatus* Amnigella murilago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Amnigia bicipentia sp. nov.

Candidatus Amnigia bicipentia (NL. fem. n. *bicipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXSU01 sp005793345*. The type genome for the species is the GenBank assembly GCA_005793345.1. The GC content of the type genome is 31.36 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Amnigia gen. nov.

Candidatus Amnigia (NL. fem. n. *Amnigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXSU01*. The type species for the genus is *Candidatus* Amnigia bicipentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnigida siminifica sp. nov.

Candidatus Amnigida siminifica (NL. fem. n. *siminifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFXV01 sp009921445*. The type genome for the species is the GenBank assembly GCA_009921445.1. The GC content of the type genome is 53.21 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Amnigida gen. nov.

Candidatus Amnigida (NL. fem. n. *Amnigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFXV01*. The type species for the genus is *Candidatus* Amnigida siminifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amnigosa celumiforma sp. nov.

Candidatus Amnigosa celumiforma (NL. fem. n. *celumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GW-Nitrospira-1 sp002839535*. The type genome for the species is the GenBank assembly GCA_002839535.1. The GC content of the type genome is 46.15 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Amnigosa gen. nov.

Candidatus Amnigosa (NL. fem. n. *Amnigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GW-Nitrospira-1*. The type species for the genus is *Candidatus* Amnigosa celumiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6898*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunellaceae.

Description of *Candidatus* Amnigula aprugessa sp. nov.

Candidatus Amnigula aprugessa (NL. fem. n. *aprugessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SLOZ01 sp007132255*. The type genome for the species is the GenBank assembly GCA_007132255.1. The GC content of the type genome is 52.94 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Amnigula gen. nov.

Candidatus Amnigula (NL. fem. n. *Amnigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOZ01*. The type species for the genus is *Candidatus* Amnigula aprugessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B1SED10-159*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilellaceae.

Description of *Candidatus* Amnigula tirocitudo sp. nov.

Candidatus Amnigula tirocitudo (NL. fem. n. *tirocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOZ01 sp003559095*. The type genome for the species is the GenBank assembly GCA_003559095.1. The GC content of the type genome is 54.68 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Amoebophilus inornimonia sp. nov.

Candidatus Amoebophilus inornimonia (NL. fem. n. *inornimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amoebophilus sp001897825*. The type genome for the species is the GenBank assembly GCA_001897825.1. The GC content of the type genome is 36.17 % and the genome length is 1.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Ampenana delucicula sp. nov.

Candidatus Ampenana delucicula (NL. fem. n. *delucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABDHB01 sp013288895*. The type genome for the species is the GenBank assembly GCA_013288895.1. The GC content of the type genome is 42.78 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Ampenana gen. nov.

Candidatus Ampenana (NL. fem. n. *Ampenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDHB01*. The type species for the genus is *Candidatus* Ampenana delucicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ampenana revulentia sp. nov.

Candidatus Ampenana revulentia (NL. fem. n. *revulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDHB01 sp013285775*. The type genome for the species is the GenBank assembly GCA_013285775.1. The GC content of the type genome is 40.52 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Ampenaria divolicella sp. nov.

Candidatus Ampenaria divolicella (NL. fem. n. *divolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4657 sp002405475*. The type genome for the species is the GenBank assembly GCA_002405475.1. The GC content of the type genome is 53.61 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Ampenaria gen. nov.

Candidatus Ampenaria (NL. fem. n. *Ampenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4657*. The type species for the genus is *Candidatus* Ampenaria divolicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ampenella betacimonia sp. nov.

Candidatus Ampenella betacimonia (NL. fem. n. *betacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11363 sp002862265*. The type genome for the species is the GenBank assembly GCA_002862265.1. The GC content of the type genome is 52.36 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Ampenella gen. nov.

Candidatus Ampenella (NL. fem. n. *Ampenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11363*. The type species for the genus is *Candidatus* Ampenella betacimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ampenella boniticella sp. nov.

Candidatus Ampenella boniticella (NL. fem. n. *boniticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11363 sp007752135*. The type genome for the species is the GenBank assembly RS_GCF_007752135.1. The GC content of the type genome is 55.28 % and the genome length is 8.44 Mbp.

Description of *Candidatus* Ampenella sacopousia sp. nov.

Candidatus Ampenella sacopousia (NL. fem. n. *sacopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11363 sp005798335*. The type genome for the species is the GenBank assembly GCA_005798335.1. The GC content of the type genome is 52.92 % and the genome length is 8.46 Mbp.

Description of *Candidatus* Ampenella scaccitas sp. nov.

Candidatus Ampenella scaccitas (NL. fem. n. *scaccitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11363 sp003695565*. The type genome for the species is the GenBank assembly GCA_003695565.1. The GC content of the type genome is 60.41 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Ampenia appacax sp. nov.

Candidatus Ampenia appacax (NL. fem. n. *appacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGZ01 sp013152045*. The type genome for the species is the GenBank assembly GCA_013152045.1. The GC content of the type genome is 49.25 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Ampenia gen. nov.

Candidatus Ampenia (NL. fem. n. *Ampenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGZ01*. The type species for the genus is *Candidatus* Ampenia appacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubosaceae.

Description of *Candidatus* Ampenia expecicella sp. nov.

Candidatus Ampenia expecicella (NL. fem. n. *expecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGZ01 sp011052165*. The type genome for the species is the GenBank assembly GCA_011052165.1. The GC content of the type genome is 52.12 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Ampenida defalimonia sp. nov.

Candidatus Ampenida defalimonia (NL. fem. n. *defalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHCI01 sp002842205*. The type genome for the species is the GenBank assembly GCA_002842205.1. The GC content of the type genome is 65.14 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Ampenida gen. nov.

Candidatus Ampenida (NL. fem. n. *Ampenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHCI01*. The type species for the genus is *Candidatus* Ampenida defalimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ampenosa protriforma sp. nov.

Candidatus Ampenosa protriforma (NL. fem. n. *protriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7367 sp000317065*. The type genome for the species is the GenBank assembly RS_GCF_000317065.1. The GC content of the type genome is 46.22 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Ampenosa gen. nov.

Candidatus Ampenosa (NL. fem. n. *Ampenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7367*. The type species for the genus is *Candidatus* Ampenosa protriforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Amphibacillus halucitas sp. nov.

Candidatus Amphibacillus halucitas (NL. fem. n. *halucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amphibacillus sp012838505*. The type genome for the species is the GenBank assembly GCA_012838505.1. The GC content of the type genome is 36.96 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Amulumruptor armigastra sp. nov.

Candidatus Amulumruptor armigastra (NL. fem. n. *armigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amulumruptor sp900539915*. The type genome for the species is the GenBank assembly GCA_900539915.1. The GC content of the type genome is 52.51 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Amulumruptor deforitoga sp. nov.

Candidatus Amulumruptor deforitoga (NL. fem. n. *deforitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amulumruptor sp001689515*. The type genome for the species is the GenBank assembly GCA_009775505.1. The GC content of the type genome is 50.97 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Amulumruptor ficeditura sp. nov.

Candidatus Amulumruptor ficeditura (NL. fem. n. *ficeditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amulumruptor sp900547825*. The type genome for the species is the GenBank assembly GCA_902406015.1. The GC content of the type genome is 50.83 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Amycolatopsis ambusitrix sp. nov.

Candidatus Amycolatopsis ambusitrix (NL. fem. n. *ambusitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp000231075*. The type genome for the species is the GenBank assembly RS_GCF_000231075.2. The GC content of the type genome is 71.86 % and the genome length is 8.39 Mbp.

Description of *Candidatus* Amycolatopsis anarrimonia sp. nov.

Candidatus Amycolatopsis anarrimonia (NL. fem. n. *anarrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp003977855*. The type genome for the species is the GenBank assembly RS_GCF_003977855.1. The GC content of the type genome is 69.13 % and the genome length is 8.73 Mbp.

Description of *Candidatus* Amycolatopsis attelessa sp. nov.

Candidatus Amycolatopsis attelessa (NL. fem. n. *attelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp013364075*. The type genome for the species is the GenBank assembly RS_GCF_013364075.1. The GC content of the type genome is 71.7 % and the genome length is 10.97 Mbp.

Description of *Candidatus* Amycolatopsis bimetago sp. nov.

Candidatus Amycolatopsis bimetago (NL. fem. n. *bimetago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp002904335*. The type genome for the species is the GenBank assembly RS_GCF_002904335.1. The GC content of the type genome is 71.39 % and the genome length is 10.49 Mbp.

Description of *Candidatus* Amycolatopsis bisacetta sp. nov.

Candidatus Amycolatopsis bisacetta (NL. fem. n. *bisacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp003947415*. The type genome for the species is the GenBank assembly RS_GCF_003947415.1. The GC content of the type genome is 68.65 % and the genome length is 9.07 Mbp.

Description of *Candidatus* Amycolatopsis cadaventia sp. nov.

Candidatus Amycolatopsis cadaventia (NL. fem. n. *cadaventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp009429145*. The type genome for the species is the GenBank assembly RS_GCF_009429145.1. The GC content of the type genome is 70.28 % and the genome length is 10.35 Mbp.

Description of *Candidatus* Amycolatopsis catafugo sp. nov.

Candidatus Amycolatopsis catafugo (NL. fem. n. *catafugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp014145675*. The type genome for the species is the GenBank assembly RS_GCF_014145675.1. The GC content of the type genome is 69.6 % and the genome length is 9.69 Mbp.

Description of *Candidatus* Amycolatopsis decinatica sp. nov.

Candidatus Amycolatopsis decinatica (NL. fem. n. *decinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp002849735*. The type genome for the species is the GenBank assembly RS_GCF_002890695.1. The GC content of the type genome is 68.86 % and the genome length is 9.44 Mbp.

Description of *Candidatus* Amycolatopsis divolatica sp. nov.

Candidatus Amycolatopsis divolatica (NL. fem. n. *divolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp902497555*. The type genome for the species is the GenBank assembly RS_GCF_902497555.1. The GC content of the type genome is 71.17 % and the genome length is 10.56 Mbp.

Description of *Candidatus* Amycolatopsis exsomentia sp. nov.

Candidatus Amycolatopsis exsomentia (NL. fem. n. *exsomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Amycolatopsis sp003937945*. The type genome for the species is the GenBank assembly RS_GCF_003937945.1. The GC content of the type genome is 71.84 % and the genome length is 10.23 Mbp.

Description of *Candidatus* Amycolatopsis funebax sp. nov.

Candidatus Amycolatopsis funebax (NL. fem. n. *funebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp002904295*. The type genome for the species is the GenBank assembly RS_GCF_002904295.1. The GC content of the type genome is 71.83 % and the genome length is 10.16 Mbp.

Description of *Candidatus* Amycolatopsis infaciforma sp. nov.

Candidatus Amycolatopsis infaciforma (NL. fem. n. *infaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp012328925*. The type genome for the species is the GenBank assembly RS_GCF_012328925.1. The GC content of the type genome is 69.48 % and the genome length is 8.5 Mbp.

Description of *Candidatus* Amycolatopsis saxopessa sp. nov.

Candidatus Amycolatopsis saxopessa (NL. fem. n. *saxopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp002796545*. The type genome for the species is the GenBank assembly RS_GCF_000158875.1. The GC content of the type genome is 69.78 % and the genome length is 9.18 Mbp.

Description of *Candidatus* Amycolatopsis visocicula sp. nov.

Candidatus Amycolatopsis visocicula (NL. fem. n. *visocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis sp013870525*. The type genome for the species is the GenBank assembly RS_GCF_013870525.1. The GC content of the type genome is 68.67 % and the genome length is 8.42 Mbp.

Description of *Candidatus* Amycolatopsis citipibra sp. nov.

Candidatus Amycolatopsis citipibra (NL. fem. n. *citipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis_C sp009377395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009377395.1. The GC content of the type genome is 70.14 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Amycolatopsis delapimonas sp. nov.

Candidatus Amycolatopsis delapimonas (NL. fem. n. *delapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis_C sp009377385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009377385.1. The GC content of the type genome is 68.96 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Amycolatopsis indevicula sp. nov.

Candidatus Amycolatopsis indevicula (NL. fem. n. *indevicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis_C sp009377475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009377475.1. The GC content of the type genome is 69.01 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Amycolatopsis vocamessa sp. nov.

Candidatus Amycolatopsis vocamessa (NL. fem. n. *vocamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amycolatopsis_C sp009379975*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009379975.1. The GC content of the type genome is 68.22 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Amylibacter arvecivita sp. nov.

Candidatus Amylibacter arvecivita (NL. fem. n. *arvecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp002469545*. The type genome for the species is the GenBank assembly GCA_002469545.1. The GC content of the type genome is 48.2 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Amylibacter baropessa sp. nov.

Candidatus Amylibacter baropessa (NL. fem. n. *baropessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp000153745*. The type genome for the species is the GenBank assembly GCA_000383155.1. The GC content of the type genome is 36.69 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Amylibacter dapifivita sp. nov.

Candidatus Amylibacter dapifivita (NL. fem. n. *dapifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp002387535*. The type genome for the species is the GenBank assembly GCA_002387535.1. The GC content of the type genome is 52.88 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Amylibacter defasetta sp. nov.

Candidatus Amylibacter defasetta (NL. fem. n. *defasetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp014323795*. The type genome for the species is the GenBank assembly GCA_014323795.1. The GC content of the type genome is 59.36 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Amylibacter detepicula sp. nov.

Candidatus Amylibacter detepicula (NL. fem. n. *detepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp009184395*. The type genome for the species is the GenBank assembly RS_GCF_009184395.1. The GC content of the type genome is 45.11 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Amylibacter lacinitia sp. nov.

Candidatus Amylibacter lacinitia (NL. fem. n. *lacinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp003447515*. The type genome for the species is the GenBank assembly GCA_003447515.1. The GC content of the type genome is 48.11 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Amylibacter manupicella sp. nov.

Candidatus Amylibacter manupicella (NL. fem. n. *manupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp900197625*. The type genome for the species is the GenBank assembly GCA_004212715.1. The GC content of the type genome is 36.35 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Amylibacter patibousia sp. nov.

Candidatus Amylibacter patibousia (NL. fem. n. *patibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Amylibacter sp002401045*. The type genome for the species is the GenBank assembly GCA_002401045.1. The GC content of the type genome is 48.78 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Anabaenopsis daducugo sp. nov.

Candidatus Anabaenopsis daducugo (NL. fem. n. *daducugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anabaenopsis sp003990705*. The type genome for the species is the GenBank assembly GCA_003990705.1. The GC content of the type genome is 40.43 % and the genome length is 7.53 Mbp.

Description of *Candidatus* Anabaenopsis octinilenta sp. nov.

Candidatus Anabaenopsis octinilenta (NL. fem. n. *octinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anabaenopsis sp000316625*. The type genome for the species is the GenBank assembly RS_GCF_000316625.1. The GC content of the type genome is 40.36 % and the genome length is 6.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "shallow pond".

Description of *Candidatus* Anaclana diponitrix sp. nov.

Candidatus Anaclana diponitrix (NL. fem. n. *diponitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXZ01 sp012515635*. The type genome for the species is the GenBank assembly GCA_012515635.1. The GC content of the type genome is 40.58 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Anaclana gen. nov.

Candidatus Anaclana (NL. fem. n. *Anaclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXZ01*. The type species for the genus is *Candidatus* Anaclana diponitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B48-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamellaceae.

Description of *Candidatus* Anaclaria bisulimonas sp. nov.

Candidatus Anaclaria bisulimonas (NL. fem. n. *bisulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHWT01 sp013362195*. The type genome for the species is the GenBank assembly GCA_013362195.1. The GC content of the type genome is 68.29 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Anaclaria gen. nov.

Candidatus Anaclaria (NL. fem. n. *Anaclaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHWT01*. The type species for the genus is *Candidatus* Anaclaria bisulimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Anaclaria detotitas sp. nov.

Candidatus Anaclaria detotitas (NL. fem. n. *detotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHWT01 sp003222675*. The type genome for the species is the GenBank assembly GCA_003222675.1. The GC content of the type genome is 64.54 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Anaclella extipisca sp. nov.

Candidatus Anaclella extipisca (NL. fem. n. *extipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLC01 sp011053145*. The type genome for the species is the GenBank assembly GCA_011053145.1. The GC content of the type genome is 68.49 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Anaclella gen. nov.

Candidatus Anaclella (NL. fem. n. *Anaclella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRLC01*. The type species for the genus is *Candidatus* Anaclella extipisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Anaclia catocatica sp. nov.

Candidatus Anaclia catocatica (NL. fem. n. *catocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVI01 sp012517235*. The type genome for the species is the GenBank assembly GCA_012517235.1. The GC content of the type genome is 38.01 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Anaclia gen. nov.

Candidatus Anaclia (NL. fem. n. *Anaclia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVI01*. The type species for the genus is *Candidatus* Anaclia catocatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Anaclida cinefigena sp. nov.

Candidatus Anaclida cinefigena (NL. fem. n. *cinefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-30 sp003963225*. The type genome for the species is the GenBank assembly GCA_003963225.1. The GC content of the type genome is 39.09 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Anaclida gen. nov.

Candidatus Anaclida (NL. fem. n. *Anaclida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-30*. The type species for the genus is *Candidatus* Anaclida cinefigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anaclosa gen. nov.

Candidatus Anaclosa (NL. fem. n. *Anaclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-443*. The type species for the genus is *Candidatus* Anaclosa thiotaurini_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anactana myalgilega sp. nov.

Candidatus Anactana myalgilega (NL. fem. n. *myalgilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7709 sp002482405*. The type genome for the species is the GenBank assembly GCA_002482405.1. The GC content of the type genome is 50.65 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Anactana gen. nov.

Candidatus Anactana (NL. fem. n. *Anactana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7709*. The type species for the genus is *Candidatus* Anactana myalgilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anactaria cerifetta sp. nov.

Candidatus Anactaria cerifetta (NL. fem. n. *cerifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAISGS01 sp903884915*. The type genome for the species is the GenBank assembly GCA_903884915.1. The GC content of the type genome is 60.72 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Anactaria gen. nov.

Candidatus Anactaria (NL. fem. n. *Anactaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISGS01*. The type species for the genus is *Candidatus* Anactaria cerifetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anactella adcubivita sp. nov.

Candidatus Anactella adcubivita (NL. fem. n. *adcubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRZ01 sp009691855*. The type genome for the species is the GenBank assembly GCA_009691855.1. The GC content of the type genome is 71.03 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Anactella gen. nov.

Candidatus Anactella (NL. fem. n. *Anactella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRZ01*. The type species for the genus is *Candidatus* Anactella adcubivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Anactella exsupiforma sp. nov.

Candidatus Anactella exsupiforma (NL. fem. n. *exsupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRZ01 sp013140785*. The type genome for the species is the

GenBank assembly GCA_013140785.1. The GC content of the type genome is 69.67 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Anactida conipitio sp. nov.

Candidatus Anactida conipitio (NL. fem. n. *conipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG29 sp003222115*. The type genome for the species is the GenBank assembly GCA_003222115.1. The GC content of the type genome is 69.95 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Anactida gen. nov.

Candidatus Anactida (NL. fem. n. *Anactida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG29*. The type species for the genus is *Candidatus* Anactida conipitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Anactida semifilega sp. nov.

Candidatus Anactida semifilega (NL. fem. n. *semifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG29 sp003221995*. The type genome for the species is the GenBank assembly GCA_003221995.1. The GC content of the type genome is 70.43 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Anaerobacillus ammodibula sp. nov.

Candidatus Anaerobacillus ammodibula (NL. fem. n. *ammodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobacillus sp007118195*. The type genome for the species is the GenBank assembly GCA_007118195.1. The GC content of the type genome is 36.24 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Anaerobacillus inmorigena sp. nov.

Candidatus Anaerobacillus inmorigena (NL. fem. n. *inmorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobacillus sp007120055*. The type genome for the species is the GenBank assembly GCA_007120055.1. The GC content of the type genome is 35.91 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Anaerobacillus sicarivita sp. nov.

Candidatus Anaerobacillus sicarivita (NL. fem. n. *sicarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobacillus sp004116265*. The type genome for the species is the GenBank assembly RS_GCF_004116265.1. The GC content of the type genome is 36.9 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Anaerobacillus allacitura sp. nov.

Candidatus Anaerobacillus allacitura (NL. fem. n. *allacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobacillus_A sp009818105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009818105.1. The GC content of the type genome is 40.48 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Anaerobacillus turibatica sp. nov.

Candidatus Anaerobacillus turibatica (NL. fem. n. *turibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobacillus_A sp002563635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly

RS_GCF_002563635.1. The GC content of the type genome is 40.36 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Anaerobiospirillum cobalisca sp. nov.

Candidatus Anaerobiospirillum cobalisca (NL. fem. n. *cobalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobiospirillum sp900543125*. The type genome for the species is the GenBank assembly GCA_900756455.1. The GC content of the type genome is 39.63 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Anaerobutyricum acrimatica sp. nov.

Candidatus Anaerobutyricum acrimatica (NL. fem. n. *acrimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902782815*. The type genome for the species is the GenBank assembly GCA_902782815.1. The GC content of the type genome is 49.34 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Anaerobutyricum ammigitio sp. nov.

Candidatus Anaerobutyricum ammigitio (NL. fem. n. *ammigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp900554965*. The type genome for the species is the GenBank assembly GCA_900554965.1. The GC content of the type genome is 37.42 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Anaerobutyricum arcificula sp. nov.

Candidatus Anaerobutyricum arcificula (NL. fem. n. *arcificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902795715*. The type genome for the species is the GenBank assembly GCA_902795715.1. The GC content of the type genome is 45.56 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Anaerobutyricum celumilega sp. nov.

Candidatus Anaerobutyricum celumilega (NL. fem. n. *celumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902796415*. The type genome for the species is the GenBank assembly GCA_902796415.1. The GC content of the type genome is 45.02 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Anaerobutyricum effinitia sp. nov.

Candidatus Anaerobutyricum effinitia (NL. fem. n. *effinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902796045*. The type genome for the species is the GenBank assembly GCA_902796045.1. The GC content of the type genome is 49.49 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Anaerobutyricum excerivita sp. nov.

Candidatus Anaerobutyricum excerivita (NL. fem. n. *excerivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp900754855*. The type genome for the species is the GenBank assembly RS_GCF_900754855.1. The GC content of the type genome is 44.93 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Anaerobutyricum exhilentia sp. nov.

Candidatus Anaerobutyricum exhilentia (NL. fem. n. *exhilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902767195*. The type genome for the species is the GenBank assembly GCA_902767195.1. The GC content of the type genome is 47.41 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Anaerobutyricum metucicula sp. nov.

Candidatus Anaerobutyricum metucicula (NL. fem. n. *metucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902782625*. The type genome for the species is the GenBank assembly GCA_902782625.1. The GC content of the type genome is 44.9 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Anaerobutyricum selibifica sp. nov.

Candidatus Anaerobutyricum selibifica (NL. fem. n. *selibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp002161065*. The type genome for the species is the GenBank assembly RS_GCF_002161065.1. The GC content of the type genome is 46.78 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Anaerobutyricum tresvisca sp. nov.

Candidatus Anaerobutyricum tresvisca (NL. fem. n. *tresvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp902783205*. The type genome for the species is the GenBank assembly GCA_902783205.1. The GC content of the type genome is 48.9 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Anaerobutyricum verifitas sp. nov.

Candidatus Anaerobutyricum verifitas (NL. fem. n. *verifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp002494165*. The type genome for the species is the GenBank assembly GCA_902773175.1. The GC content of the type genome is 49.27 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Anaerobutyricum viragentia sp. nov.

Candidatus Anaerobutyricum viragentia (NL. fem. n. *viragentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerobutyricum sp900016875*. The type genome for the species is the GenBank assembly RS_GCF_900016875.1. The GC content of the type genome is 46.49

% and the genome length is 3.99 Mbp.

Description of *Candidatus* Anaerococcus benifitoga sp. nov.

Candidatus Anaerococcus benifitoga (NL. fem. n. *benifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp900541365*. The type genome for the species is the GenBank assembly GCA_900766335.1. The GC content of the type genome is 32.05 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Anaerococcus dilecisca sp. nov.

Candidatus Anaerococcus dilecisca (NL. fem. n. *dilecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp900258475*. The type genome for the species is the GenBank assembly GCA_900766515.1. The GC content of the type genome is 34.86 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Anaerococcus homagatio sp. nov.

Candidatus Anaerococcus homagatio (NL. fem. n. *homagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp900550345*. The type genome for the species is the GenBank assembly GCA_900550345.1. The GC content of the type genome is 29.08 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Anaerococcus nubigitio sp. nov.

Candidatus Anaerococcus nubigitio (NL. fem. n. *nubigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp900232825*. The type genome for the species is the GenBank assembly RS_GCF_900232825.1. The GC content of the type genome is 31.27 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Anaerococcus pedepimonas sp. nov.

Candidatus Anaerococcus pedepimonas (NL. fem. n. *pedepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp009696575*. The type genome for the species is the GenBank assembly RS_GCF_009696575.1. The GC content of the type genome is 29.62 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Anaerococcus selecitoga sp. nov.

Candidatus Anaerococcus selecitoga (NL. fem. n. *selecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerococcus sp900551095*. The type genome for the species is the GenBank assembly GCA_900551095.1. The GC content of the type genome is 32.27 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Anaerocolumna annubitio sp. nov.

Candidatus Anaerocolumna annubitio (NL. fem. n. *annubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerocolumna sp002294045*. The type genome for the species is the GenBank assembly GCA_002294045.1. The GC content of the type genome is 40.73 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Anaerocolumna cimelifica sp. nov.

Candidatus Anaerocolumna cimelifica (NL. fem. n. *cimelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerocolumna sp009931695*. The type genome for the species is the GenBank assembly RS_GCF_009931695.1. The GC content of the type genome is 36.73 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Anaerocolumna fetulessa sp. nov.

Candidatus Anaerocolumna fetulessa (NL. fem. n. *fetulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerocolumna sp002434335*. The type genome for the species is the GenBank assembly GCA_002434335.1. The GC content of the type genome is 38.74 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Anaerocolumna ludifimonas sp. nov.

Candidatus Anaerocolumna ludifimonas (NL. fem. n. *ludifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerocolumna sp014218355*. The type genome for the species is the GenBank assembly RS_GCF_014218355.1. The GC content of the type genome is 38.31 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Anaerocolumna venefago sp. nov.

Candidatus Anaerocolumna venefago (NL. fem. n. *venefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerocolumna sp000702945*. The type genome for the species is the GenBank assembly RS_GCF_000702945.1. The GC content of the type genome is 38.96 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Anaerofilum rosarifica sp. nov.

Candidatus Anaerofilum rosarifica (NL. fem. n. *rosarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerofilum sp002160015*. The type genome for the species is the GenBank assembly RS_GCF_002160015.1. The GC content of the type genome is 60.35 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Anaerofustis cuticastra sp. nov.

Candidatus Anaerofustis cuticastra (NL. fem. n. *cuticastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerofustis sp900549875*. The type genome for the species is the GenBank assembly GCA_900549875.1. The GC content of the type genome is 33.14 %

and the genome length is 2.22 Mbp.

Description of *Candidatus* Anaeroglobus baropiforma sp. nov.

Candidatus Anaeroglobus baropiforma (NL. fem. n. *baropiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroglobus sp900240295*. The type genome for the species is the GenBank assembly RS_GCF_000478965.1. The GC content of the type genome is 49.79 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Anaeromassilibacillus buxifigena sp. nov.

Candidatus Anaeromassilibacillus buxifigena (NL. fem. n. *buxifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeromassilibacillus sp002159845*. The type genome for the species is the GenBank assembly GCA_900538635.1. The GC content of the type genome is 53.83 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Anaeromassilibacillus diluvimonas sp. nov.

Candidatus Anaeromassilibacillus diluvimonas (NL. fem. n. *diluvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeromassilibacillus sp001305115*. The type genome for the species is the GenBank assembly RS_GCF_900169665.1. The GC content of the type genome is 49.12 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Anaeromusa dimidilenta sp. nov.

Candidatus Anaeromusa dimidilenta (NL. fem. n. *dimidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeromusa sp009929485*. The type genome for the species is the GenBank assembly GCA_009929485.1. The GC content of the type genome is 50.17 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Anaeromyxobacter adlicibra sp. nov.

Candidatus Anaeromyxobacter adlicibra (NL. fem. n. *adlicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeromyxobacter sp000017505*. The type genome for the species is the GenBank assembly RS_GCF_000017505.1. The GC content of the type genome is 73.53 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Anaeromyxobacter rorifilega sp. nov.

Candidatus Anaeromyxobacter rorifilega (NL. fem. n. *rorifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeromyxobacter sp000964525*. The type genome for the species is the GenBank assembly RS_GCF_000964525.1. The GC content of the type genome is 74.41 % and the genome length is 4.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Anaeroplasma anancicella sp. nov.

Candidatus Anaeroplasma anancicella (NL. fem. n. *anancicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroplasma sp902783745*. The type genome for the species is the GenBank assembly GCA_902783745.1. The GC content of the type genome is 28.05 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Anaeroplasma conibivita sp. nov.

Candidatus Anaeroplasma conibivita (NL. fem. n. *conibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroplasma sp002449755*. The type genome for the species is the GenBank assembly GCA_002449755.1. The GC content of the type genome is 28.79 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Anaeroplasma curacatica sp. nov.

Candidatus Anaeroplasma curacatica (NL. fem. n. *curacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroplasma sp900770055*. The type genome for the species is the GenBank assembly RS_GCF_900770055.1. The GC content of the type genome is 28.92 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Anaeroplasma inardicula sp. nov.

Candidatus Anaeroplasma inardicula (NL. fem. n. *inardicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroplasma sp902796895*. The type genome for the species is the GenBank assembly GCA_902796895.1. The GC content of the type genome is 26.07 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Anaeroplasma loraritrix sp. nov.

Candidatus Anaeroplasma loraritrix (NL. fem. n. *loraritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaeroplasma sp900767915*. The type genome for the species is the GenBank assembly RS_GCF_900767915.1. The GC content of the type genome is 27.24 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Anaerosacchariphilus allacicella sp. nov.

Candidatus Anaerosacchariphilus allacicella (NL. fem. n. *allacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp002160825*. The type genome for the species is the GenBank assembly RS_GCF_002160825.1. The GC content of the type genome is 50.88 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Anaerosacchariphilus colipitrix sp. nov.

Candidatus Anaerosacchariphilus colipitrix (NL. fem. n. *colipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp900553635*. The type genome for the species is the GenBank assembly RS_GCF_900759545.1. The GC content of the type genome is

50.61 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Anaerosacchariphilus insurilenta sp. nov.

Candidatus Anaerosacchariphilus insurilenta (NL. fem. n. *insurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp002160765*. The type genome for the species is the GenBank assembly RS_GCF_002160765.1. The GC content of the type genome is 50.45 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Anaerosacchariphilus luxuredo sp. nov.

Candidatus Anaerosacchariphilus luxuredo (NL. fem. n. *luxuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp011959465*. The type genome for the species is the GenBank assembly RS_GCF_011959465.1. The GC content of the type genome is 47.05 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Anaerosacchariphilus masocax sp. nov.

Candidatus Anaerosacchariphilus masocax (NL. fem. n. *masocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp014290175*. The type genome for the species is the GenBank assembly RS_GCF_014290175.1. The GC content of the type genome is 50.38 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Anaerosacchariphilus omninicula sp. nov.

Candidatus Anaerosacchariphilus omninicula (NL. fem. n. *omninicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp009917555*. The type genome for the species is the GenBank assembly RS_GCF_009917555.1. The GC content of the type genome is 47.36 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Anaerosacchariphilus pacifatica sp. nov.

Candidatus Anaerosacchariphilus pacifatica (NL. fem. n. *pacifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosacchariphilus sp900066385*. The type genome for the species is the GenBank assembly GCA_900066575.1. The GC content of the type genome is 49.95 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Anaerosalibacter adaggicula sp. nov.

Candidatus Anaerosalibacter adaggicula (NL. fem. n. *adaggicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosalibacter_A sp900155565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900155565.1. The GC content of the type genome is 30.74 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Anaerospora reforugo sp. nov.

Candidatus Anaerospora reforugo (NL. fem. n. *reforugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerospora sp002337925*. The type genome for the species is the GenBank assembly GCA_002429845.1. The GC content of the type genome is 44.47 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Anaerosporobacter excocitoga sp. nov.

Candidatus Anaerosporobacter excocitoga (NL. fem. n. *excocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosporobacter sp012070565*. The type genome for the species is the GenBank assembly RS_GCF_012070565.1. The GC content of the type genome is 36.24 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Anaerosporomusa adfamentia sp. nov.

Candidatus Anaerosporomusa adfamentia (NL. fem. n. *adfamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerosporomusa sp900542835*. The type genome for the species is the GenBank assembly GCA_900542835.1. The GC content of the type genome is 54.58 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Anaerostipes defosiforma sp. nov.

Candidatus Anaerostipes defosiforma (NL. fem. n. *defosiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerostipes sp000508985*. The type genome for the species is the GenBank assembly RS_GCF_000508985.1. The GC content of the type genome is 43.4 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Anaerostipes metucicella sp. nov.

Candidatus Anaerostipes metucicella (NL. fem. n. *metucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerostipes sp900756035*. The type genome for the species is the GenBank assembly GCA_900756035.1. The GC content of the type genome is 39.26 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Anaerostipes rorifastra sp. nov.

Candidatus Anaerostipes rorifastra (NL. fem. n. *rorifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerostipes sp001940315*. The type genome for the species is the GenBank assembly RS_GCF_001940315.1. The GC content of the type genome is 36.69 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Anaerostipes sonivatica sp. nov.

Candidatus Anaerostipes sonivatica (NL. fem. n. *sonivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerostipes sp900066705*. The type genome for the species is the GenBank assembly RS_GCF_902362875.1. The GC content of the type genome is 37.68 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Anaerotignum inmoressa sp. nov.

Candidatus Anaerotignum inmoressa (NL. fem. n. *inmoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp009929735*. The type genome for the species is the GenBank assembly GCA_009929735.1. The GC content of the type genome is 40.92 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Anaerotignum intoribra sp. nov.

Candidatus Anaerotignum intoribra (NL. fem. n. *intoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp004557645*. The type genome for the species is the GenBank assembly GCA_004557645.1. The GC content of the type genome is 47.72 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Anaerotignum ontolousia sp. nov.

Candidatus Anaerotignum ontolousia (NL. fem. n. *ontolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp002299545*. The type genome for the species is the GenBank assembly GCA_002299545.1. The GC content of the type genome is 38.88 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Anaerotignum rudecitudo sp. nov.

Candidatus Anaerotignum rudecitudo (NL. fem. n. *rudecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp002316675*. The type genome for the species is the GenBank assembly GCA_002316675.1. The GC content of the type genome is 43.64 %

and the genome length is 2.55 Mbp.

Description of *Candidatus* Anaerotignum subodax sp. nov.

Candidatus Anaerotignum subodax (NL. fem. n. *subodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp002380805*. The type genome for the species is the GenBank assembly GCA_002380805.1. The GC content of the type genome is 39.3 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Anaerotignum tirocisca sp. nov.

Candidatus Anaerotignum tirocisca (NL. fem. n. *tirocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotignum sp001304995*. The type genome for the species is the GenBank assembly RS_GCF_902362335.1. The GC content of the type genome is 45.3 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Anaerotruncus innabastra sp. nov.

Candidatus Anaerotruncus innabastra (NL. fem. n. *innabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotruncus sp014385085*. The type genome for the species is the GenBank assembly GCA_014385085.1. The GC content of the type genome is 47.65 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Anaerotruncus robigimonas sp. nov.

Candidatus Anaerotruncus robigimonas (NL. fem. n. *robigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotruncus sp003612625*. The type genome for the species is the GenBank assembly RS_GCF_003612625.1. The GC content of the type genome is 44.73 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Anaerotruncus tegimimonia sp. nov.

Candidatus Anaerotruncus tegimimonia (NL. fem. n. *tegimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerotruncus sp000403395*. The type genome for the species is the GenBank assembly RS_GCF_009936075.1. The GC content of the type genome is 53.13 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Anaerovibrio colopicella sp. nov.

Candidatus Anaerovibrio colopicella (NL. fem. n. *colopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp902786545*. The type genome for the species is the GenBank assembly GCA_902786545.1. The GC content of the type genome is 45.21 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Anaerovibrio expasessa sp. nov.

Candidatus Anaerovibrio expasessa (NL. fem. n. *expasessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp000622005*. The type genome for the species is the GenBank assembly RS_GCF_000622005.1. The GC content of the type genome is 44.89 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Anaerovibrio metucimonas sp. nov.

Candidatus Anaerovibrio metucimonas (NL. fem. n. *metucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp900548165*. The type genome for the species is the GenBank assembly GCA_902762895.1. The GC content of the type genome is 44.06 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Anaerovibrio obfiratio sp. nov.

Candidatus Anaerovibrio obfiratio (NL. fem. n. *obfiratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp902785445*. The type genome for the species is the GenBank assembly GCA_902785445.1. The GC content of the type genome is 44.51 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Anaerovibrio peradatio sp. nov.

Candidatus Anaerovibrio peradatio (NL. fem. n. *peradatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp004553105*. The type genome for the species is the GenBank assembly GCA_004553105.1. The GC content of the type genome is 51.43 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Anaerovibrio rubigatio sp. nov.

Candidatus Anaerovibrio rubigatio (NL. fem. n. *rubigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp900768695*. The type genome for the species is the GenBank assembly GCA_900768695.1. The GC content of the type genome is 51.79 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Anaerovibrio televedo sp. nov.

Candidatus Anaerovibrio televedo (NL. fem. n. *televedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anaerovibrio sp002100115*. The type genome for the species is the GenBank assembly RS_GCF_002100115.1. The GC content of the type genome is 45.9 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Anagnana adlenugo sp. nov.

Candidatus Anagnana adlenugo (NL. fem. n. *adlenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIY01 sp012799725*. The type genome for the species is the GenBank assembly GCA_012799725.1. The GC content of the type genome is 49.98 %

and the genome length is 3.25 Mbp.

Description of *Candidatus* Anagnana gen. nov.

Candidatus Anagnana (NL. fem. n. *Anagnana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIY01*. The type species for the genus is *Candidatus* Anagnana adlenugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Anagnana intacitas sp. nov.

Candidatus Anagnana intacitas (NL. fem. n. *intacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIY01 sp012800625*. The type genome for the species is the GenBank assembly GCA_012800625.1. The GC content of the type genome is 55.21 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Anagnaria decupitas sp. nov.

Candidatus Anagnaria decupitas (NL. fem. n. *decupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11530 sp900751685*. The type genome for the species is the GenBank assembly RS_GCF_900751685.1. The GC content of the type genome is 44.78 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Anagnaria gen. nov.

Candidatus Anagnaria (NL. fem. n. *Anagnaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11530*. The type species for the genus is *Candidatus* Anagnaria decupitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Melilosaceae.

Description of *Candidatus* Anagnella dimadifica sp. nov.

Candidatus Anagnella dimadifica (NL. fem. n. *dimadifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1231 sp002308275*. The type genome for the species is the GenBank assembly GCA_002308275.1. The GC content of the type genome is 33.89 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Anagnella gen. nov.

Candidatus Anagnella (NL. fem. n. *Anagnella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1231*. The type species for the genus is *Candidatus* Anagnella dimadifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Anagnella latibitura sp. nov.

Candidatus Anagnella latibitura (NL. fem. n. *latibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1231 sp002309035*. The type genome for the species is the GenBank assembly GCA_002309035.1. The GC content of the type genome is 30.18 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Anagnosa ancepimonas sp. nov.

Candidatus Anagnosa ancepimonas (NL. fem. n. *ancepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
