A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJP01 sp014380545*. The type genome for the species is the GenBank assembly GCA_014380545.1. The GC content of the type genome is 34.13 %

and the genome length is 3.57 Mbp.

Description of *Candidatus* Anagnosa gen. nov.

Candidatus Anagnosa (NL. fem. n. *Anagnosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJP01*. The type species for the genus is *Candidatus* Anagnosa ancepimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecellaceae.

Description of *Candidatus* Anagnula inretilega sp. nov.

Candidatus Anagnula inretilega (NL. fem. n. *inretilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-100 sp003232595*. The type genome for the species is the GenBank assembly GCA_003232595.1. The GC content of the type genome is 50.8 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Anagnula gen. nov.

Candidatus Anagnula (NL. fem. n. *Anagnula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-100*. The type species for the genus is *Candidatus* Anagnula inretilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anammoximicrobium accoriforma sp. nov.

Candidatus Anammoximicrobium accoriforma (NL. fem. n. *accoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anammoximicrobium sp012515235*. The type genome for the species is the GenBank assembly GCA_012515235.1. The GC content of the type genome is 64.4 % and the genome length is 9.67 Mbp.

Description of *Candidatus* Anamnana hexapedo sp. nov.

Candidatus Anamnana hexapedo (NL. fem. n. *hexapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1707 sp900554285*. The type genome for the species is the GenBank assembly GCA_900554285.1. The GC content of the type genome is 46.29 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Anamnana gen. nov.

Candidatus Anamnana (NL. fem. n. *Anamnana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1707*. The type species for the genus is *Candidatus* Anamnana hexapedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Anamnella penecugo sp. nov.

Candidatus Anamnella penecugo (NL. fem. n. *penecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8158 sp003449595*. The type genome for the species is the GenBank assembly GCA_003449595.1. The GC content of the type genome is 44.2 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Anamnella gen. nov.

Candidatus Anamnella (NL. fem. n. *Anamnella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8158*. The type species for the genus is *Candidatus* Anamnella penecugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anamnosa depetitura sp. nov.

Candidatus Anamnosa depetitura (NL. fem. n. *depetitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12713 sp900754175*. The type genome for the species is the GenBank assembly RS_GCF_900754175.1. The GC content of the type genome is 54.41 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Anamnosa gen. nov.

Candidatus Anamnosa (NL. fem. n. *Anamnosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12713*. The type species for the genus is *Candidatus* Anamnosa depetitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Anamnosa regigimonia sp. nov.

Candidatus Anamnosa regigimonia (NL. fem. n. *regigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12713 sp900770605*. The type genome for the species is the GenBank assembly RS_GCF_900770605.1. The GC content of the type genome is 48.21 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Anamnula noviledo sp. nov.

Candidatus Anamnula noviledo (NL. fem. n. *noviledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVT01 sp003562195*. The type genome for the species is the GenBank assembly GCA_003562195.1. The GC content of the type genome is 57.79 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Anamnula gen. nov.

Candidatus Anamnula (NL. fem. n. *Anamnula* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWVT01*. The type species for the genus is *Candidatus* Anamnula noviledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Anancana fetifatio sp. nov.

Candidatus Anancana fetifatio (NL. fem. n. *fetifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP165 sp002400895*. The type genome for the species is the GenBank assembly GCA_002400895.1. The GC content of the type genome is 55.18 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Anancana gen. nov.

Candidatus Anancana (NL. fem. n. *Anancana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NORP165*. The type species for the genus is *Candidatus* Anancana fetifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Anancaria apperatica sp. nov.

Candidatus Anancaria apperatica (NL. fem. n. *apperatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPX01 sp012838085*. The type genome for the species is the GenBank assembly GCA_012838085.1. The GC content of the type genome is 33.14 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Anancaria gen. nov.

Candidatus Anancaria (NL. fem. n. *Anancaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPX01*. The type species for the genus is *Candidatus* Anancaria apperatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anancella artuficula sp. nov.

Candidatus Anancella artuficula (NL. fem. n. *artuficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-36 sp005878685*. The type genome for the species is the GenBank assembly GCA_005878685.1. The GC content of the type genome is 54.95 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Anancella gen. nov.

Candidatus Anancella (NL. fem. n. *Anancella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-36*. The type species for the genus is *Candidatus* Anancella artuficula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Anancia relapitrix sp. nov.

Candidatus Anancia relapitrix (NL. fem. n. *relapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2055 sp900557635*. The type genome for the species is the GenBank assembly GCA_900557635.1. The GC content of the type genome is 57.13 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Anancia gen. nov.

Candidatus Anancia (NL. fem. n. *Anancia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2055*. The type species for the genus is *Candidatus* Anancia relapitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Anancida decupisca sp. nov.

Candidatus Anancida decupisca (NL. fem. n. *decupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-161 sp007117355*. The type genome for the species is the GenBank assembly GCA_007117355.1. The GC content of the type genome is 35.01 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Anancida gen. nov.

Candidatus Anancida (NL. fem. n. *Anancida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBr16-161*. The type species for the genus is *Candidatus* Anancida decupisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anancida demaditia sp. nov.

Candidatus Anancida demaditia (NL. fem. n. *demaditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-161 sp007117055*. The type genome for the species is the GenBank assembly GCA_007117055.1. The GC content of the type genome is 35.91 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Anancula capabimonas sp. nov.

Candidatus Anancula capabimonas (NL. fem. n. *capabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6267 sp002440745*. The type genome for the species is the GenBank assembly GCA_002440745.1. The GC content of the type genome is 37.35 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Anancula gen. nov.

Candidatus Anancula (NL. fem. n. *Anancula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6267*. The type species for the genus is *Candidatus* Anancula capabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1556*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depopellaceae.

Description of *Candidatus* Anaplaria notacicella sp. nov.

Candidatus Anaplaria notacicella (NL. fem. n. *notacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-56-10 sp002772645*. The type genome for the species is the GenBank assembly GCA_002772645.1. The GC content of the type genome is 55.68 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Anaplaria gen. nov.

Candidatus Anaplaria (NL. fem. n. *Anaplaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-56-10*. The type species for the genus is *Candidatus* Anaplaria notacicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Anaplella paralimonas sp. nov.

Candidatus Anaplella paralimonas (NL. fem. n. *paralimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACFBG01 sp902564535*. The type genome for the species is the GenBank assembly GCA_902564535.1. The GC content of the type genome is 35.33 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Anaplella gen. nov.

Candidatus Anaplella (NL. fem. n. *Anaplella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACFBG01*. The type species for the genus is *Candidatus* Anaplella paralimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anaplia adfirimonia sp. nov.

Candidatus Anaplia adfirimonia (NL. fem. n. *adfirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZB01 sp007125255*. The type genome for the species is the GenBank assembly GCA_007125255.1. The GC content of the type genome is 64.32 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Anaplia gen. nov.

Candidatus Anaplia (NL. fem. n. *Anaplia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZB01*. The type species for the genus is *Candidatus* Anaplia adfirimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Anaplia artifitrix sp. nov.

Candidatus Anaplia artifitrix (NL. fem. n. *artifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZB01 sp007127615*. The type genome for the species is the GenBank assembly GCA_007127615.1. The GC content of the type genome is 63.47 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Anaplia dimidifica sp. nov.

Candidatus Anaplia dimidifica (NL. fem. n. *dimidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZB01 sp007693845*. The type genome for the species is the GenBank assembly GCA_007693845.1. The GC content of the type genome is 61.32 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Anaplosa accumax sp. nov.

Candidatus Anaplosa accumax (NL. fem. n. *accumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDY01 sp012729015*. The type genome for the species is the GenBank assembly GCA_012729015.1. The GC content of the type genome is 66.64 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Anaplosa gen. nov.

Candidatus Anaplosa (NL. fem. n. *Anaplosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDY01*. The type species for the genus is *Candidatus* Anaplosa accumax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotiaceae.

Description of *Candidatus* Anaplula artolitica sp. nov.

Candidatus Anaplula artolitica (NL. fem. n. *artolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGV01 sp013285825*. The type genome for the species is the GenBank assembly GCA_013285825.1. The GC content of the type genome is 42.91 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Anaplula gen. nov.

Candidatus Anaplula (NL. fem. n. *Anaplula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGV01*. The type species for the genus is *Candidatus* Anaplula artolitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1388*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabulaceae.

Description of *Candidatus* Anarrana benevifica sp. nov.

Candidatus Anarrana benevifica (NL. fem. n. *benevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDT01 sp002070825*. The type genome for the species is the GenBank assembly GCA_002070825.1. The GC content of the type genome is 64.74 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Anarrana gen. nov.

Candidatus Anarrana (NL. fem. n. *Anarrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDT01*. The type species for the genus is *Candidatus* Anarrana benevifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anarraria mirabitio sp. nov.

Candidatus Anarraria mirabitio (NL. fem. n. *mirabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S7086C20 sp001751075*. The type genome for the species is the GenBank assembly GCA_001751075.1. The GC content of the type genome is 46.55 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sample #7086; 6-9 cm from methane seep sediment push core".

Description of *Candidatus* Anarraria gen. nov.

Candidatus Anarraria (NL. fem. n. *Anarraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S7086C20*. The type species for the genus is *Candidatus* Anarraria mirabitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Anarrella domicatica sp. nov.

Candidatus Anarrella domicatica (NL. fem. n. *domicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJF01 sp011370595*. The type genome for the species is the GenBank assembly GCA_011370595.1. The GC content of the type genome is 59.45 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Anarrella gen. nov.

Candidatus Anarrella (NL. fem. n. *Anarrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJF01*. The type species for the genus is *Candidatus* Anarrella domicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Anarria diritigena sp. nov.

Candidatus Anarria diritigena (NL. fem. n. *diritigena* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFE01 sp009937525*. The type genome for the species is the GenBank assembly GCA_009937525.1. The GC content of the type genome is 62.26 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Anarria gen. nov.

Candidatus Anarria (NL. fem. n. *Anarria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACFE01*. The type species for the genus is *Candidatus* Anarria diritigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anarria semidimonas sp. nov.

Candidatus Anarria semidimonas (NL. fem. n. *semidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFE01 sp009937505*. The type genome for the species is the GenBank assembly GCA_009937505.1. The GC content of the type genome is 61.33 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Anarrida omnimitura sp. nov.

Candidatus Anarrida omnimitura (NL. fem. n. *omnimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12834 sp902783185*. The type genome for the species is the GenBank assembly GCA_902783185.1. The GC content of the type genome is 24.58 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Anarrida gen. nov.

Candidatus Anarrida (NL. fem. n. *Anarrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RUG12834*. The type species for the genus is *Candidatus* Anarrida omnimitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Anarrosa favilicella sp. nov.

Candidatus Anarrosa favilicella (NL. fem. n. *favilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-45-37 sp001873515*. The type genome for the species is the GenBank assembly GCA_001873515.1. The GC content of the type genome is 45.08 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Anarrosa gen. nov.

Candidatus Anarrosa (NL. fem. n. *Anarrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-45-37*. The type species for the genus is *Candidatus* Anarrosa favilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-42-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifanaceae.

Description of *Candidatus* Anarrula meliligena sp. nov.

Candidatus Anarrula meliligena (NL. fem. n. *meliligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDS01 sp012729155*. The type genome for the species is the GenBank assembly GCA_012729155.1. The GC content of the type genome is 63.69 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Anarrula gen. nov.

Candidatus Anarrula (NL. fem. n. *Anarrula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDS01*. The type species for the genus is *Candidatus* Anarrula meliligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Anastaria lugubifica sp. nov.

Candidatus Anastaria lugubifica (NL. fem. n. *lugubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXAA01 sp903917305*. The type genome for the species is the GenBank assembly GCA_903917305.1. The GC content of the type genome is 68.48 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Anastaria gen. nov.

Candidatus Anastaria (NL. fem. n. *Anastaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXAA01*. The type species for the genus is *Candidatus* Anastaria lugubifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Anastida adobrastra sp. nov.

Candidatus Anastida adobrastra (NL. fem. n. *adobrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZJX01 sp012800155*. The type genome for the species is the GenBank assembly GCA_012800155.1. The GC content of the type genome is 29.68 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Anastida gen. nov.

Candidatus Anastida (NL. fem. n. *Anastida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZJX01*. The type species for the genus is *Candidatus* Anastida adobrastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Anastosa annecifica sp. nov.

Candidatus Anastosa annecifica (NL. fem. n. *annecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14871 sp902803495*. The type genome for the species is the GenBank assembly GCA_902803495.1. The GC content of the type genome is 48.33 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Anastosa gen. nov.

Candidatus Anastosa (NL. fem. n. *Anastosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14871*. The type species for the genus is *Candidatus* Anastosa annecifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anastula inmorilenta sp. nov.

Candidatus Anastula inmorilenta (NL. fem. n. *inmorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1211 sp002309585*. The type genome for the species is the GenBank assembly GCA_002309585.1. The GC content of the type genome is 61.02 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Anastula gen. nov.

Candidatus Anastula (NL. fem. n. *Anastula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1211*. The type species for the genus is *Candidatus* Anastula inmorilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Anatrana assudastra sp. nov.

Candidatus Anatrana assudastra (NL. fem. n. *assudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPNL01 sp002239005*. The type genome for the species is the GenBank assembly GCA_002239005.1. The GC content of the type genome is 62.23 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Anatrana gen. nov.

Candidatus Anatrana (NL. fem. n. *Anatrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MPNL01*. The type species for the genus is *Candidatus* Anatrana assudastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anatraria estovitura sp. nov.

Candidatus Anatraria estovitura (NL. fem. n. *estovitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-72 sp009649685*. The type genome for the species is the GenBank assembly RS_GCF_009649685.1. The GC content of the type genome is 33.51 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Anatraria gen. nov.

Candidatus Anatraria (NL. fem. n. *Anatraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-72*. The type species for the genus is *Candidatus* Anatraria estovitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anatraria omninugo sp. nov.

Candidatus Anatraria omninugo (NL. fem. n. *omninugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-72 sp003232435*. The type genome for the species is the GenBank assembly GCA_003232435.1. The GC content of the type genome is 40.94 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Anatria depocifica sp. nov.

Candidatus Anatria depocifica (NL. fem. n. *depocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISOI01 sp903886985*. The type genome for the species is the GenBank assembly GCA_903886985.1. The GC content of the type genome is 47.88 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Anatria gen. nov.

Candidatus Anatria (NL. fem. n. *Anatria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISOI01*. The type species for the genus is *Candidatus* Anatria depocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Anatrula inobsicula sp. nov.

Candidatus Anatrula inobsicula (NL. fem. n. *inobsicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBW01 sp011525685*. The type genome for the species is the GenBank assembly GCA_011525685.1. The GC content of the type genome is 61.46 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Anatrula gen. nov.

Candidatus Anatrula (NL. fem. n. *Anatrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBW01*. The type species for the genus is *Candidatus* Anatrula inobsicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11358*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loceliaceae.

Description of *Candidatus* Ancepana subacitura sp. nov.

Candidatus Ancepana subacitura (NL. fem. n. *subacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SB11 sp008933805*. The type genome for the species is the GenBank assembly GCA_008933805.1. The GC content of the type genome is 41.8 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Ancepana gen. nov.

Candidatus Ancepana (NL. fem. n. *Ancepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SB11*. The type species for the genus is *Candidatus* Ancepana subacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8524*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabanaceae.

Description of *Candidatus* Anceparia aglasago sp. nov.

Candidatus Anceparia aglasago (NL. fem. n. *aglasago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-N21 sp003215415*. The type genome for the species is the GenBank assembly GCA_003215415.1. The GC content of the type genome is 38.96 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Anceparia gen. nov.

Candidatus Anceparia (NL. fem. n. *Anceparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-N21*. The type species for the genus is *Candidatus* Anceparia aglasago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ancepella immadugo sp. nov.

Candidatus Ancepella immadugo (NL. fem. n. *immadugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SB25 sp008933525*. The type genome for the species is the GenBank assembly GCA_008933525.1. The GC content of the type genome is 38.17 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Ancepella gen. nov.

Candidatus Ancepella (NL. fem. n. *Ancepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SB25*. The type species for the genus is *Candidatus* Ancepella immadugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Ancepia musulivita sp. nov.

Candidatus Ancepia musulivita (NL. fem. n. *musulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIK01 sp012523465*. The type genome for the species is the GenBank assembly GCA_012523465.1. The GC content of the type genome is 65.95 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ancepia gen. nov.

Candidatus Ancepia (NL. fem. n. *Ancepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYIK01*. The type species for the genus is *Candidatus* Ancepia musulivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AK92*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifidaceae.

Description of *Candidatus* Ancepida seposetta sp. nov.

Candidatus Ancepida seposetta (NL. fem. n. *seposetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14239 sp902797145*. The type genome for the species is the GenBank assembly GCA_902797145.1. The GC content of the type genome is 37.24 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ancepida gen. nov.

Candidatus Ancepida (NL. fem. n. *Ancepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14239*. The type species for the genus is *Candidatus* Ancepida seposetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Anceposa allapitrix sp. nov.

Candidatus Anceposa allapitrix (NL. fem. n. *allapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-49-9 sp001794935*. The type genome for the species is the GenBank assembly GCA_001794935.1. The GC content of the type genome is 48.59 % and the genome length is 1.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Anceposa gen. nov.

Candidatus Anceposa (NL. fem. n. *Anceposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-49-9*. The type species for the genus is *Candidatus* Anceposa allapitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Ancepula pavicitia sp. nov.

Candidatus Ancepula pavicitia (NL. fem. n. *pavicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEN01 sp013388845*. The type genome for the species is the GenBank assembly GCA_013388845.1. The GC content of the type genome is 48.59 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Ancepula gen. nov.

Candidatus Ancepula (NL. fem. n. *Ancepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEN01*. The type species for the genus is *Candidatus* Ancepula pavicitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Ancipana carunibra sp. nov.

Candidatus Ancipana carunibra (NL. fem. n. *carunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1844 sp002338615*. The type genome for the species is the GenBank assembly GCA_002338615.1. The GC content of the type genome is 57.34 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Ancipana gen. nov.

Candidatus Ancipana (NL. fem. n. *Ancipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1844*. The type species for the genus is *Candidatus* Ancipana carunibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anciparia adlubousia sp. nov.

Candidatus Anciparia adlubousia (NL. fem. n. *adlubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002697625 sp902514225*. The type genome for the species is the GenBank assembly GCA_902514225.1. The GC content of the type genome is 30.86 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Anciparia gen. nov.

Candidatus Anciparia (NL. fem. n. *Anciparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002697625*. The type species for the genus is *Candidatus* Anciparia adlubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Anciparia perexugo sp. nov.

Candidatus Anciparia perexugo (NL. fem. n. *perexugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002697625 sp002696275*. The type genome for the species is the GenBank assembly GCA_002696275.1. The GC content of the type genome is 30.04 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Anciparia sarabibula sp. nov.

Candidatus Anciparia sarabibula (NL. fem. n. *sarabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002697625 sp002710495*. The type genome for the species is the GenBank assembly GCA_002710495.1. The GC content of the type genome is 30.8 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Anciparia subacibra sp. nov.

Candidatus Anciparia subacibra (NL. fem. n. *subacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002697625 sp002697625*. The type genome for the species is the GenBank assembly GCA_002697625.1. The GC content of the type genome is 30.81 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Ancipella detenax sp. nov.

Candidatus Ancipella detenax (NL. fem. n. *detenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-49-21 sp001829455*. The type genome for the species is the GenBank assembly GCA_001829455.1. The GC content of the type genome is 51.35 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Ancipella gen. nov.

Candidatus Ancipella (NL. fem. n. *Ancipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-49-21*. The type species for the genus is *Candidatus* Ancipella detenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Ancipella resuritica sp. nov.

Candidatus Ancipella resuritica (NL. fem. n. *resuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-49-21 sp001829495*. The type genome for the species is the GenBank assembly GCA_001829495.1. The GC content of the type genome is 50.35 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Ancipia munimimonas sp. nov.

Candidatus Ancipia munimimonas (NL. fem. n. *munimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTPU01 sp011332905*. The type genome for the species is the GenBank assembly GCA_011332905.1. The GC content of the type genome is 55.71 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Ancipia gen. nov.

Candidatus Ancipia (NL. fem. n. *Ancipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPU01*. The type species for the genus is *Candidatus* Ancipia munimimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Anciposa acrocatio sp. nov.

Candidatus Anciposa acrocatio (NL. fem. n. *acrocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8079 sp002722515*. The type genome for the species is the GenBank assembly GCA_002722515.1. The GC content of the type genome is 56.56 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Anciposa gen. nov.

Candidatus Anciposa (NL. fem. n. *Anciposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8079*. The type species for the genus is *Candidatus* Anciposa acrocatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Anciposa ectenimonia sp. nov.

Candidatus Anciposa ectenimonia (NL. fem. n. *ectenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8079 sp002724635*. The type genome for the species is the GenBank assembly GCA_002724635.1. The GC content of the type genome is 61.5 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Ancipula negiditas sp. nov.

Candidatus Ancipula negiditas (NL. fem. n. *negiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-423 sp003246895*. The type genome for the species is the GenBank assembly GCA_003246895.1. The GC content of the type genome is 41.12 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Ancipula gen. nov.

Candidatus Ancipula (NL. fem. n. *Ancipula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-423*. The type species for the genus is *Candidatus* Ancipula negiditas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Ancrocorticia semiditura sp. nov.

Candidatus Ancrocorticia semiditura (NL. fem. n. *semiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ancrocorticia sp014041995*. The type genome for the species is the GenBank assembly RS_GCF_014041995.1. The GC content of the type genome is 57.78 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Ancylobacter immusilega sp. nov.

Candidatus Ancylobacter immusilega (NL. fem. n. *immusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ancylobacter sp009223885*. The type genome for the species is the GenBank assembly RS_GCF_009223885.1. The GC content of the type genome is 68.86 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Ancylobacter nicomessa sp. nov.

Candidatus Ancylobacter nicomessa (NL. fem. n. *nicomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ancylobacter sp000378025*. The type genome for the species is the GenBank assembly RS_GCF_000378025.1. The GC content of the type genome is 67.38 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Ancylomarina actutitas sp. nov.

Candidatus Ancylomarina actutitas (NL. fem. n. *actutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ancylomarina sp009669305*. The type genome for the species is the GenBank assembly RS_GCF_009669305.1. The GC content of the type genome is 34.06 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Ancylomarina metucitrix sp. nov.

Candidatus Ancylomarina metucitrix (NL. fem. n. *metucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ancylomarina sp003863355*. The type genome for the species is the GenBank assembly RS_GCF_009735515.1. The GC content of the type genome is 35.75 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Andabana ensifousia sp. nov.

Candidatus Andabana ensifousia (NL. fem. n. *ensifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSR01 sp009379995*. The type genome for the species is the GenBank assembly GCA_009379995.1. The GC content of the type genome is 69.75 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Andabana gen. nov.

Candidatus Andabana (NL. fem. n. *Andabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSR01*. The type species for the genus is *Candidatus* Andabana ensifousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Andabaria agricentia sp. nov.

Candidatus Andabaria agricentia (NL. fem. n. *agricentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYNI01 sp012520995*. The type genome for the species is the GenBank assembly GCA_012520995.1. The GC content of the type genome is 40.54 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Andabaria gen. nov.

Candidatus Andabaria (NL. fem. n. *Andabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNI01*. The type species for the genus is *Candidatus* Andabaria agricentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Andabia attesicella sp. nov.

Candidatus Andabia attesicella (NL. fem. n. *attesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GJ-E10 sp900290295*. The type genome for the species is the GenBank assembly RS_GCF_900290295.1. The GC content of the type genome is 63.14 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Andabia gen. nov.

Candidatus Andabia (NL. fem. n. *Andabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GJ-E10*. The type species for the genus is *Candidatus* Andabia attesicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Andabia cenotentia sp. nov.

Candidatus Andabia cenotentia (NL. fem. n. *cenotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GJ-E10 sp000828975*. The type genome for the species is the GenBank assembly RS_GCF_000828975.1. The GC content of the type genome is 66.3 % and the genome length is 3.28 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "sediment".

Description of *Candidatus* Andabia exhoritas sp. nov.

Candidatus Andabia exhoritas (NL. fem. n. *exhoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GJ-E10 sp900290335*. The type genome for the species is the GenBank assembly RS_GCF_900290335.1. The GC content of the type genome is 66.25 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Andabia oratritio sp. nov.

Candidatus Andabia oratritio (NL. fem. n. *oratritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GJ-E10 sp903871435*. The type genome for the species is the GenBank assembly GCA_903871435.1. The GC content of the type genome is 65.92 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Andabula extinago sp. nov.

Candidatus Andabula extinago (NL. fem. n. *extinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-24 sp003233255*. The type genome for the species is the GenBank assembly GCA_003233255.1. The GC content of the type genome is 44.99 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Andabula gen. nov.

Candidatus Andabula (NL. fem. n. *Andabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-24*. The type species for the genus is *Candidatus* Andabula extinago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubosaceae.

Description of *Candidatus* Anderseniella fuligicella sp. nov.

Candidatus Anderseniella fuligicella (NL. fem. n. *fuligicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anderseniella sp013041995*. The type genome for the species is the GenBank assembly GCA_013041995.1. The GC content of the type genome is 56.76 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Anderseniella gemebitoga sp. nov.

Candidatus Anderseniella gemebitoga (NL. fem. n. *gemebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Anderseniella sp900149695*. The type genome for the species is the GenBank assembly GCA_900149695.1. The GC content of the type genome is 57.87 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Andreprevotia invesetta sp. nov.

Candidatus Andreprevotia invesetta (NL. fem. n. *invesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Andreprevotia sp009848685*. The type genome for the species is the GenBank assembly RS_GCF_009848685.1. The GC content of the type genome is 61.31 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Aneclana furibitica sp. nov.

Candidatus Aneclana furibitica (NL. fem. n. *furibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1672 sp002747015*. The type genome for the species is the GenBank assembly GCA_002747015.1. The GC content of the type genome is 42.27 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Aneclana gen. nov.

Candidatus Aneclana (NL. fem. n. *Aneclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1672*. The type species for the genus is *Candidatus* Aneclana furibitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aneclana odonticula sp. nov.

Candidatus Aneclana odonticula (NL. fem. n. *odonticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1672 sp002320665*. The type genome for the species is the GenBank assembly GCA_002320665.1. The GC content of the type genome is 43.38 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Aneclana papavago sp. nov.

Candidatus Aneclana papavago (NL. fem. n. *papavago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1672 sp002401965*. The type genome for the species is the GenBank assembly GCA_002401965.1. The GC content of the type genome is 43.86 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Aneclana semodago sp. nov.

Candidatus Aneclana semodago (NL. fem. n. *semodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1672 sp002401695*. The type genome for the species is the GenBank assembly GCA_002401695.1. The GC content of the type genome is 44.93 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Aneclaria cerometta sp. nov.

Candidatus Aneclaria cerometta (NL. fem. n. *cerometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAXTT01 sp013336365*. The type genome for the species is the GenBank assembly GCA_013336365.1. The GC content of the type genome is 41.1 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Aneclaria gen. nov.

Candidatus Aneclaria (NL. fem. n. *Aneclaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXTT01*. The type species for the genus is *Candidatus* Aneclaria cerometta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aneclia diritibra sp. nov.

Candidatus Aneclia diritibra (NL. fem. n. *diritibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1152 sp003151595*. The type genome for the species is the GenBank assembly GCA_003151595.1. The GC content of the type genome is 68.64 % and the genome length is 7.56 Mbp.

Description of *Candidatus* Aneclia gen. nov.

Candidatus Aneclia (NL. fem. n. *Aneclia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1152*. The type species for the genus is *Candidatus* Aneclia diritibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aneclida tabifitura sp. nov.

Candidatus Aneclida tabifitura (NL. fem. n. *tabifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAV01 sp012719195*. The type genome for the species is the GenBank assembly GCA_012719195.1. The GC content of the type genome is 66.83 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Aneclida gen. nov.

Candidatus Aneclida (NL. fem. n. *Aneclida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAV01*. The type species for the genus is *Candidatus* Aneclida tabifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRVO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momorariaceae.

Description of *Candidatus* Aneclosa aclasicula sp. nov.

Candidatus Aneclosa aclasicula (NL. fem. n. *aclasicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLL01 sp009777625*. The type genome for the species is the GenBank assembly GCA_009777625.1. The GC content of the type genome is 48.8 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Aneclosa gen. nov.

Candidatus Aneclosa (NL. fem. n. *Aneclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLL01*. The type species for the genus is *Candidatus* Aneclosa aclasicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aneclula lenocisca sp. nov.

Candidatus Aneclula lenocisca (NL. fem. n. *lenocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSC01 sp009692435*. The type genome for the species is the GenBank assembly GCA_009692435.1. The GC content of the type genome is 56.35 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Aneclula gen. nov.

Candidatus Aneclula (NL. fem. n. *Aneclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSC01*. The type species for the genus is *Candidatus* Aneclula lenocisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beneposaceae.

Description of *Candidatus* Aneclula orgeticella sp. nov.

Candidatus Aneclula orgeticella (NL. fem. n. *orgeticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSC01 sp013140885*. The type genome for the species is the GenBank assembly GCA_013140885.1. The GC content of the type genome is 58.13 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Angelakisella amfitivita sp. nov.

Candidatus Angelakisella amfitivita (NL. fem. n. *amfitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp013316495*. The type genome for the species is the GenBank assembly GCA_013316495.1. The GC content of the type genome is 59.69 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Angelakisella catobago sp. nov.

Candidatus Angelakisella catobago (NL. fem. n. *catobago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp004557855*. The type genome for the species is the GenBank assembly RS_GCF_900763765.1. The GC content of the type genome is 59.81 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Angelakisella fecunentia sp. nov.

Candidatus Angelakisella fecunentia (NL. fem. n. *fecunentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp900552845*. The type genome for the species is the GenBank assembly RS_GCF_900753885.1. The GC content of the type genome is 55.5 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Angelakisella procliforma sp. nov.

Candidatus Angelakisella procliforma (NL. fem. n. *procliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp003453215*. The type genome for the species is the GenBank assembly GCA_003453215.1. The GC content of the type genome is 55.35 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Angelakisella refacago sp. nov.

Candidatus Angelakisella refacago (NL. fem. n. *refacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp900547385*. The type genome for the species is the GenBank assembly GCA_900547385.1. The GC content of the type genome is 57.15 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Angelakisella valefitrix sp. nov.

Candidatus Angelakisella valefitrix (NL. fem. n. *valefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angelakisella sp004554485*. The type genome for the species is the GenBank assembly GCA_004554065.1. The GC content of the type genome is 61.37 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Angipana altipatio sp. nov.

Candidatus Angipana altipatio (NL. fem. n. *altipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RICK01 sp003932735*. The type genome for the species is the GenBank assembly RS_GCF_003932735.1. The GC content of the type genome is 33.01 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Angipana gen. nov.

Candidatus Angipana (NL. fem. n. *Angipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RICK01*. The type species for the genus is *Candidatus* Angipana altipatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *33-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Soliposaceae.

Description of *Candidatus* Angiparia allobisca sp. nov.

Candidatus Angiparia allobisca (NL. fem. n. *allobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABSW01 sp011390155*. The type genome for the species is the GenBank assembly GCA_011390155.1. The GC content of the type genome is 44.69 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Angiparia gen. nov.

Candidatus Angiparia (NL. fem. n. *Angiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABSW01*. The type species for the genus is *Candidatus* Angiparia allobisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Angipella peripugo sp. nov.

Candidatus Angipella peripugo (NL. fem. n. *peripugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QAKL01 sp003343815*. The type genome for the species is the GenBank assembly GCA_003343815.1. The GC content of the type genome is 45.62 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Angipella gen. nov.

Candidatus Angipella (NL. fem. n. *Angipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAKL01*. The type species for the genus is *Candidatus* Angipella peripugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Angipia paracivita sp. nov.

Candidatus Angipia paracivita (NL. fem. n. *paracivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEFX01 sp902826715*. The type genome for the species is the GenBank assembly GCA_902826715.1. The GC content of the type genome is 63.48 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Angipia gen. nov.

Candidatus Angipia (NL. fem. n. *Angipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEFX01*. The type species for the genus is *Candidatus* Angipia paracivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Angipida visifastra sp. nov.

Candidatus Angipida visifastra (NL. fem. n. *visifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICJ01 sp009691505*. The type genome for the species is the GenBank assembly GCA_009691505.1. The GC content of the type genome is 39.37 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Angipida gen. nov.

Candidatus Angipida (NL. fem. n. *Angipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICJ01*. The type species for the genus is *Candidatus* Angipida visifastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Angiposa peropago sp. nov.

Candidatus Angiposa peropago (NL. fem. n. *peropago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABXJX01 sp013375375*. The type genome for the species is the GenBank assembly GCA_013375375.1. The GC content of the type genome is 48.24 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Angiposa gen. nov.

Candidatus Angiposa (NL. fem. n. *Angiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABXJX01*. The type species for the genus is *Candidatus* Angiposa peropago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Angipula catecedo sp. nov.

Candidatus Angipula catecedo (NL. fem. n. *catecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WREB01 sp009779525*. The type genome for the species is the GenBank assembly GCA_009779525.1. The GC content of the type genome is 56.37 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Angipula gen. nov.

Candidatus Angipula (NL. fem. n. *Angipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WREB01*. The type species for the genus is *Candidatus* Angipula catecedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Angustibacter petulilenta sp. nov.

Candidatus Angustibacter petulilenta (NL. fem. n. *petulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Angustibacter sp001426435*. The type genome for the species is the GenBank assembly RS_GCF_001426435.1. The GC content of the type genome is 72.53 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Annecana visocitica sp. nov.

Candidatus Annecana visocitica (NL. fem. n. *visocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WOZL01 sp011620305*. The type genome for the species is the GenBank assembly GCA_011620305.1. The GC content of the type genome is 34.17 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Annecana gen. nov.

Candidatus Annecana (NL. fem. n. *Annecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WOZL01*. The type species for the genus is *Candidatus* Annecana visocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Annecaria encolivita sp. nov.

Candidatus Annecaria encolivita (NL. fem. n. *encolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEF01 sp011176555*. The type genome for the species is the GenBank assembly GCA_011176555.1. The GC content of the type genome is 59.06 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Annecaria gen. nov.

Candidatus Annecaria (NL. fem. n. *Annecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEF01*. The type species for the genus is *Candidatus* Annecaria encolivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Annecella nutabilenta sp. nov.

Candidatus Annecella nutabilenta (NL. fem. n. *nutabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIYD01 sp014360105*. The type genome for the species is the GenBank assembly GCA_014360105.1. The GC content of the type genome is 62.51 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Annecella gen. nov.

Candidatus Annecella (NL. fem. n. *Annecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIYD01*. The type species for the genus is *Candidatus* Annecella nutabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLTJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidanaceae.

Description of *Candidatus* Annecia adnubentia sp. nov.

Candidatus Annecia adnubentia (NL. fem. n. *adnubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACEU01 sp011682355*. The type genome for the species is the GenBank assembly GCA_011682355.1. The GC content of the type genome is 40.13 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Annecia gen. nov.

Candidatus Annecia (NL. fem. n. *Annecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACEU01*. The type species for the genus is *Candidatus* Annecia adnubentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Annecida immatessa sp. nov.

Candidatus Annecida immatessa (NL. fem. n. *immatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-134 sp005880985*. The type genome for the species is the GenBank assembly GCA_005880985.1. The GC content of the type genome is 70.24 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Annecida gen. nov.

Candidatus Annecida (NL. fem. n. *Annecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-134*. The type species for the genus is *Candidatus* Annecida immatessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Annecosa totiditura sp. nov.

Candidatus Annecosa totiditura (NL. fem. n. *totiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQR01 sp011371355*. The type genome for the species is the GenBank assembly GCA_011371355.1. The GC content of the type genome is 71.67 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Annecosa gen. nov.

Candidatus Annecosa (NL. fem. n. *Annecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQR01*. The type species for the genus is *Candidatus* Annecosa totiditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Annecula ignositas sp. nov.

Candidatus Annecula ignositas (NL. fem. n. *ignositas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W281 sp011174795*. The type genome for the species is the GenBank assembly GCA_011174795.1. The GC content of the type genome is 54.11 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Annecula gen. nov.

Candidatus Annecula (NL. fem. n. *Annecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W281*. The type species for the genus is *Candidatus* Annecula ignositas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocosaceae.

Description of *Candidatus* Annicella demulatio sp. nov.

Candidatus Annicella demulatio (NL. fem. n. *demulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-87 sp013152715*. The type genome for the species is the GenBank assembly GCA_013152715.1. The GC content of the type genome is 44.57 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Annicella gen. nov.

Candidatus Annicella (NL. fem. n. *Annicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-87*. The type species for the genus is *Candidatus* Annicella demulatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AABM5-25-91*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Filifidaceae.

Description of *Candidatus* Annicella oblivousia sp. nov.

Candidatus Annicella oblivousia (NL. fem. n. *oblivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-87 sp002085355*. The type genome for the species is the GenBank assembly GCA_002085355.1. The GC content of the type genome is 42.87 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Annicia admodivita sp. nov.

Candidatus Annicia admodivita (NL. fem. n. *admodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZAV01 sp012514145*. The type genome for the species is the GenBank assembly GCA_012514145.1. The GC content of the type genome is 53.59 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Annicia gen. nov.

Candidatus Annicia (NL. fem. n. *Annicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZAV01*. The type species for the genus is *Candidatus* Annicia admodivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Annicida smegmimonas sp. nov.

Candidatus Annicida smegmimonas (NL. fem. n. *smegmimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP181 sp002400675*. The type genome for the species is the GenBank assembly GCA_002400675.1. The GC content of the type genome is 59.33 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Annicida gen. nov.

Candidatus Annicida (NL. fem. n. *Annicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NORP181*. The type species for the genus is *Candidatus* Annicida smegmimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annicosa ambacatica sp. nov.

Candidatus Annicosa ambacatica (NL. fem. n. *ambacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10518 sp003508005*. The type genome for the species is the GenBank assembly GCA_003508005.1. The GC content of the type genome is 57.91 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Annicosa gen. nov.

Candidatus Annicosa (NL. fem. n. *Annicosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10518*. The type species for the genus is *Candidatus* Annicosa ambacatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annicosa inadfilenta sp. nov.

Candidatus Annicosa inadfilenta (NL. fem. n. *inadfilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10518 sp011372855*. The type genome for the species is the GenBank assembly GCA_011372855.1. The GC content of the type genome is 59.01 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Annicosa vehemitudo sp. nov.

Candidatus Annicosa vehemitudo (NL. fem. n. *vehemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10518 sp003604995*. The type genome for the species is the GenBank assembly GCA_003604995.1. The GC content of the type genome is 59.65 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Annifana advoressa sp. nov.

Candidatus Annifana advoressa (NL. fem. n. *advoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QANA01 sp900554725*. The type genome for the species is the GenBank assembly GCA_900554725.1. The GC content of the type genome is 52.27 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Annifana gen. nov.

Candidatus Annifana (NL. fem. n. *Annifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *QANA01*. The type species for the genus is *Candidatus* Annifana advoressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annifana armifica sp. nov.

Candidatus Annifana armifica (NL. fem. n. *armifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QANA01 sp902782475*. The type genome for the species is the GenBank assembly GCA_902782475.1. The GC content of the type genome is 43.81 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Annifana diminicella sp. nov.

Candidatus Annifana diminicella (NL. fem. n. *diminicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QANA01 sp003149735*. The type genome for the species is the GenBank assembly GCA_003149735.1. The GC content of the type genome is 46.16 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Annifella altipitrix sp. nov.

Candidatus Annifella altipitrix (NL. fem. n. *altipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYD1-FULL-39-9 sp003599255*. The type genome for the species is the GenBank assembly GCA_003599255.1. The GC content of the type genome is 40.69 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Annifella gen. nov.

Candidatus Annifella (NL. fem. n. *Annifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYD1-FULL-39-9*. The type species for the genus is *Candidatus* Annifella altipitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA10185. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Annifella anastessa sp. nov.

Candidatus Annifella anastessa (NL. fem. n. *anastessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYD1-FULL-39-9 sp001773295*. The type genome for the species is the GenBank assembly GCA_001773295.1. The GC content of the type genome is 39.07 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Annifosa voragifica sp. nov.

Candidatus Annifosa voragifica (NL. fem. n. *voragifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-302 sp003561815*. The type genome for the species is the GenBank assembly GCA_003561815.1. The GC content of the type genome is 58.0 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Annifosa gen. nov.

Candidatus Annifosa (NL. fem. n. *Annifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED11-302*. The type species for the genus is *Candidatus* Annifosa voragifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigariaceae.

Description of *Candidatus* Annifula selecivita sp. nov.

Candidatus Annifula selecivita (NL. fem. n. *selecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *65-9 sp001899525*. The type genome for the species is the GenBank assembly GCA_001899525.1. The GC content of the type genome is 65.49 % and the genome length is 4.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Annifula gen. nov.

Candidatus Annifula (NL. fem. n. *Annifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *65-9*. The type species for the genus is *Candidatus* Annifula selecivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annubaria hirudigena sp. nov.

Candidatus Annubaria hirudigena (NL. fem. n. *hirudigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZZS01 sp009929775*. The type genome for the species is the GenBank assembly GCA_009929775.1. The GC content of the type genome is 58.64 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Annubaria gen. nov.

Candidatus Annubaria (NL. fem. n. *Annubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZZS01*. The type species for the genus is *Candidatus* Annubaria hirudigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annubella cerimilenta sp. nov.

Candidatus Annubella cerimilenta (NL. fem. n. *cerimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVT01 sp011327825*. The type genome for the species is the GenBank assembly GCA_011327825.1. The GC content of the type genome is 55.96 %

and the genome length is 4.05 Mbp.

Description of *Candidatus* Annubella gen. nov.

Candidatus Annubella (NL. fem. n. *Annubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVT01*. The type species for the genus is *Candidatus* Annubella cerimilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-97*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desulidaceae.

Description of *Candidatus* Annubia adhinicella sp. nov.

Candidatus Annubia adhinicella (NL. fem. n. *adhinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRA01 sp013202925*. The type genome for the species is the GenBank assembly GCA_013202925.1. The GC content of the type genome is 46.78 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Annubia gen. nov.

Candidatus Annubia (NL. fem. n. *Annubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRA01*. The type species for the genus is *Candidatus* Annubia adhinicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10183*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domicosaceae.

Description of *Candidatus* Annubida cenobitio sp. nov.

Candidatus Annubida cenobitio (NL. fem. n. *cenobitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2692065 sp002692065*. The type genome for the species is the

GenBank assembly GCA_002692065.1. The GC content of the type genome is 26.89 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Annubida gen. nov.

Candidatus Annubida (NL. fem. n. *Annubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2692065*. The type species for the genus is *Candidatus* Annubida cenobitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7430*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desaciaceae.

Description of *Candidatus* Annubida cibarigena sp. nov.

Candidatus Annubida cibarigena (NL. fem. n. *cibarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2692065 sp902551855*. The type genome for the species is the GenBank assembly GCA_902551855.1. The GC content of the type genome is 27.1 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Annubosa resalatio sp. nov.

Candidatus Annubosa resalatio (NL. fem. n. *resalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-20-46-8 sp002796025*. The type genome for the species is the GenBank assembly GCA_002796025.1. The GC content of the type genome is 45.97 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Annubosa gen. nov.

Candidatus Annubosa (NL. fem. n. *Annubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-20-46-8*. The type species for the genus is *Candidatus* Annubosa resalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UM-FILTER-53-11. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasosaceae.

Description of *Candidatus* Annubula recoredo sp. nov.

Candidatus Annubula recoredo (NL. fem. n. *recoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPX01 sp011331985*. The type genome for the species is the GenBank assembly GCA_011331985.1. The GC content of the type genome is 49.7 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Annubula gen. nov.

Candidatus Annubula (NL. fem. n. *Annubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPX01*. The type species for the genus is *Candidatus* Annubula recoredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annucana attesousia sp. nov.

Candidatus Annucana attesousia (NL. fem. n. *attesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UWMA-0346 sp012959465*. The type genome for the species is the GenBank assembly GCA_012959465.1. The GC content of the type genome is 54.94 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Annucana gen. nov.

Candidatus Annucana (NL. fem. n. *Annucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UWMA-0346*. The type species for the genus is *Candidatus* Annucana attesousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annucaria defulastra sp. nov.

Candidatus Annucaria defulastra (NL. fem. n. *defulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3102 sp002365865*. The type genome for the species is the GenBank assembly GCA_002365865.1. The GC content of the type genome is 49.49 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Annucaria gen. nov.

Candidatus Annucaria (NL. fem. n. *Annucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3102*. The type species for the genus is *Candidatus* Annucaria defulastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annucella desulugo sp. nov.

Candidatus Annucella desulugo (NL. fem. n. *desulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTV01 sp012523655*. The type genome for the species is the GenBank assembly GCA_012523655.1. The GC content of the type genome is 55.3 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Annucella gen. nov.

Candidatus Annucella (NL. fem. n. *Annucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTV01*. The type species for the genus is *Candidatus* Annucella desulugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Renavosaceae.

Description of *Candidatus* Annucia manibentia sp. nov.

Candidatus Annucia manibentia (NL. fem. n. *manibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10766 sp900757295*. The type genome for the species is the GenBank assembly RS_GCF_900757295.1. The GC content of the type genome is 25.21 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Annucia gen. nov.

Candidatus Annucia (NL. fem. n. *Annucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10766*. The type species for the genus is *Candidatus* Annucia manibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Annucida enimvifica sp. nov.

Candidatus Annucida enimvifica (NL. fem. n. *enimvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-111 sp013214355*. The type genome for the species is the GenBank assembly GCA_013214355.1. The GC content of the type genome is 44.12 % and the genome length is 11.19 Mbp.

Description of *Candidatus* Annucida gen. nov.

Candidatus Annucida (NL. fem. n. *Annucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-111*. The type species for the genus is *Candidatus* Annucida enimvifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Annucosa bigemilega sp. nov.

Candidatus Annucosa bigemilega (NL. fem. n. *bigemilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B134-G9 sp003644505*. The type genome for the species is the GenBank assembly GCA_003644505.1. The GC content of the type genome is 48.46 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Annucosa gen. nov.

Candidatus Annucosa (NL. fem. n. *Annucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B134-G9*. The type species for the genus is *Candidatus* Annucosa bigemilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKK-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepellaceae.

Description of *Candidatus* Annucula homilimonia sp. nov.

Candidatus Annucula homilimonia (NL. fem. n. *homilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEED01 sp902826225*. The type genome for the species is the GenBank assembly GCA_902826225.1. The GC content of the type genome is 66.7 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Annucula gen. nov.

Candidatus Annucula (NL. fem. n. *Annucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEED01*. The type species for the genus is *Candidatus* Annucula homilimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antacana vehicisca sp. nov.

Candidatus Antacana vehicisca (NL. fem. n. *vehicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPDF01 sp004525055*. The type genome for the species is the GenBank assembly GCA_004525055.1. The GC content of the type genome is 66.67 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Antacana gen. nov.

Candidatus Antacana (NL. fem. n. *Antacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPDF01*. The type species for the genus is *Candidatus* Antacana vehicisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Antacia antacitoga sp. nov.

Candidatus Antacia antacitoga (NL. fem. n. *antacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2112 sp002331045*. The type genome for the species is the GenBank assembly GCA_002331045.1. The GC content of the type genome is 47.01 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Antacia gen. nov.

Candidatus Antacia (NL. fem. n. *Antacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2112*. The type species for the genus is *Candidatus* Antacia antacitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antacida insusatica sp. nov.

Candidatus Antacida insusatica (NL. fem. n. *insusatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRUT01 sp011370935*. The type genome for the species is the GenBank assembly GCA_011370935.1. The GC content of the type genome is 47.9 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Antacida gen. nov.

Candidatus Antacida (NL. fem. n. *Antacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRUT01*. The type species for the genus is *Candidatus* Antacida insusatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-59-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velifiaceae.

Description of *Candidatus* Antacosa incunitia sp. nov.

Candidatus Antacosa incunitia (NL. fem. n. *incunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUPA01 sp012034615*. The type genome for the species is the GenBank assembly GCA_012034615.1. The GC content of the type genome is 48.9 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Antacosa gen. nov.

Candidatus Antacosa (NL. fem. n. *Antacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUPA01*. The type species for the genus is *Candidatus* Antacosa incunitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antacula cituvetta sp. nov.

Candidatus Antacula cituvetta (NL. fem. n. *cituvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2714055 sp002714055*. The type genome for the species is the GenBank assembly GCA_002714055.1. The GC content of the type genome is 31.13 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Antacula gen. nov.

Candidatus Antacula (NL. fem. n. *Antacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2714055*. The type species for the genus is *Candidatus* Antacula cituvetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifariaceae.

Description of *Candidatus* Antecana inergousia sp. nov.

Candidatus Antecana inergousia (NL. fem. n. *inergousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2733575 sp002733575*. The type genome for the species is the GenBank assembly GCA_002733575.1. The GC content of the type genome is 47.08 % and the genome length is 9.25 Mbp.

Description of *Candidatus* Antecana gen. nov.

Candidatus Antecana (NL. fem. n. *Antecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2733575*. The type species for the genus is *Candidatus* Antecana inergousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antecella indiditrix sp. nov.

Candidatus Antecella indiditrix (NL. fem. n. *indiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2748355 sp002748355*. The type genome for the species is the GenBank assembly GCA_002748355.1. The GC content of the type genome is 62.75 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Antecella gen. nov.

Candidatus Antecella (NL. fem. n. *Antecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748355*. The type species for the genus is *Candidatus* Antecella indiditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002748355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisiaceae.

Description of *Candidatus* Antecida subucago sp. nov.

Candidatus Antecida subucago (NL. fem. n. *subucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VTWT01 sp008727925*. The type genome for the species is the GenBank assembly RS_GCF_008727925.1. The GC content of the type genome is 46.89 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Antecida gen. nov.

Candidatus Antecida (NL. fem. n. *Antecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VTWT01*. The type species for the genus is *Candidatus* Antecida subucago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antecula adrenousia sp. nov.

Candidatus Antecula adrenousia (NL. fem. n. *adrenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin10 sp004377135*. The type genome for the species is the

GenBank assembly GCA_004377135.1. The GC content of the type genome is 47.73 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Antecula gen. nov.

Candidatus Antecula (NL. fem. n. *Antecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin10*. The type species for the genus is *Candidatus* Antecula adrenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Antecula advigitas sp. nov.

Candidatus Antecula advigitas (NL. fem. n. *advigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin10 sp004376545*. The type genome for the species is the GenBank assembly GCA_004376545.1. The GC content of the type genome is 47.33 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Antefaria adsesitica sp. nov.

Candidatus Antefaria adsesitica (NL. fem. n. *adsesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM519 sp002869235*. The type genome for the species is the GenBank assembly GCA_002869235.1. The GC content of the type genome is 37.48 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Antefaria gen. nov.

Candidatus Antefaria (NL. fem. n. *Antefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM519*. The type species for the genus is *Candidatus* Antefaria adsesitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWA2-36-10. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Antefaria bulapimonia sp. nov.

Candidatus Antefaria bulapimonia (NL. fem. n. *bulapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM519 sp003599205*. The type genome for the species is the GenBank assembly GCA_003599205.1. The GC content of the type genome is 37.61 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Antefosa ficededo sp. nov.

Candidatus Antefosa ficededo (NL. fem. n. *ficededo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBW01 sp012513625*. The type genome for the species is the GenBank assembly GCA_012513625.1. The GC content of the type genome is 69.35 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Antefosa gen. nov.

Candidatus Antefosa (NL. fem. n. *Antefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBW01*. The type species for the genus is *Candidatus* Antefosa ficededo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antegana direpicula sp. nov.

Candidatus Antegana direpicula (NL. fem. n. *direpicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-102668 sp003687725*. The type genome for the species is the GenBank assembly RS_GCF_003687725.1. The GC content of the type genome is 30.59 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Antegana gen. nov.

Candidatus Antegana (NL. fem. n. *Antegana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-102668*. The type species for the genus is *Candidatus* Antegana direpicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antegana irregiforma sp. nov.

Candidatus Antegana irregiforma (NL. fem. n. *irregiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-102668 sp900770875*. The type genome for the species is the GenBank assembly RS_GCF_900770875.1. The GC content of the type genome is 31.53 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Antegella atrusitura sp. nov.

Candidatus Antegella atrusitura (NL. fem. n. *atrusitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAS1 sp007859745*. The type genome for the species is the GenBank assembly RS_GCF_007859745.1. The GC content of the type genome is 66.11 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Antegella gen. nov.

Candidatus Antegella (NL. fem. n. *Antegella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RAS1*. The type species for the genus is *Candidatus* Antegella atrusitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibariaceae.

Description of *Candidatus* Antegia ignobitrix sp. nov.

Candidatus Antegia ignobitrix (NL. fem. n. *ignobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1295 sp003151825*. The type genome for the species is the GenBank assembly GCA_003151825.1. The GC content of the type genome is 51.96 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Antegia gen. nov.

Candidatus Antegia (NL. fem. n. *Antegia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1295*. The type species for the genus is *Candidatus* Antegia ignobitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1295*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Antegiaceae.

Description of *Candidatus* Antegiaceae fam. nov.

Candidatus Antegiaceae (NL. fem. n. *Antegiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1295.* The type genus for the taxon is *Candidatus* Antegia .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1295*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Antegiales.

Description of *Candidatus* Antegiales ord. nov.

Candidatus Antegiales (NL. fem. n. *Antegiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1295.* The type genus for the taxon is *Candidatus* Antegia .

According to the GTDB R06-RS202, this order belongs to the class *Kapabacteria*.

Description of *Candidatus* Antegida effulastra sp. nov.

Candidatus Antegida effulastra (NL. fem. n. *effulastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NZ13-RE01 sp002878375*. The type genome for the species is the GenBank assembly GCA_002878375.1. The GC content of the type genome is 33.12 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Antegida gen. nov.

Candidatus Antegida (NL. fem. n. *Antegida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NZ13-RE01*. The type species for the genus is *Candidatus* Antegida effulastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antegosa ruricitura sp. nov.

Candidatus Antegosa ruricitura (NL. fem. n. *ruricitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCEO01 sp013416485*. The type genome for the species is the GenBank assembly RS_GCF_013416485.1. The GC content of the type genome is 50.54 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Antegosa gen. nov.

Candidatus Antegosa (NL. fem. n. *Antegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCEO01*. The type species for the genus is *Candidatus* Antegosa ruricitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antegula eccisimonia sp. nov.

Candidatus Antegula eccisimonia (NL. fem. n. *eccisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN26 sp002898875*. The type genome for the species is the GenBank assembly GCA_002898875.1. The GC content of the type genome is 67.88 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Antegula gen. nov.

Candidatus Antegula (NL. fem. n. *Antegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN26*. The type species for the genus is *Candidatus* Antegula eccisimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anteparia ambusedo sp. nov.

Candidatus Anteparia ambusedo (NL. fem. n. *ambusedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-20-44-26 sp002779055*. The type genome for the species is the GenBank assembly GCA_002779055.1. The GC content of the type genome is 44.23 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Anteparia gen. nov.

Candidatus Anteparia (NL. fem. n. *Anteparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-20-44-26*. The type species for the genus is *Candidatus* Anteparia ambusedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitanaceae.

Description of *Candidatus* Antepida ecastivita sp. nov.

Candidatus Antepida ecastivita (NL. fem. n. *ecastivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-52-23 sp001820655*. The type genome for the species is the GenBank assembly GCA_001820655.1. The GC content of the type genome is 52.37 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Antepida gen. nov.

Candidatus Antepida (NL. fem. n. *Antepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-52-23*. The type species for the genus is *Candidatus* Antepida ecastivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-52-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitellaceae.

Description of *Candidatus* Anteposa chernicula sp. nov.

Candidatus Anteposa chernicula (NL. fem. n. *chernicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XBB1006 sp900115795*. The type genome for the species is the GenBank assembly RS_GCF_900115795.1. The GC content of the type genome is 42.09 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Anteposa gen. nov.

Candidatus Anteposa (NL. fem. n. *Anteposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XBB1006*. The type species for the genus is *Candidatus* Anteposa chernicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antepula didacitas sp. nov.

Candidatus Antepula didacitas (NL. fem. n. *didacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRDT01 sp003173995*. The type genome for the species is the GenBank assembly GCA_003173995.1. The GC content of the type genome is 38.16 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Antepula gen. nov.

Candidatus Antepula (NL. fem. n. *Antepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRDT01*. The type species for the genus is *Candidatus* Antepula didacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Antevana admoditura sp. nov.

Candidatus Antevana admoditura (NL. fem. n. *admoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIV01 sp004377005*. The type genome for the species is the GenBank assembly GCA_004377005.1. The GC content of the type genome is 42.06 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Antevana gen. nov.

Candidatus Antevana (NL. fem. n. *Antevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOIV01*. The type species for the genus is *Candidatus* Antevana admoditura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antevana obtesitio sp. nov.

Candidatus Antevana obtesitio (NL. fem. n. *obtesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIV01 sp011773465*. The type genome for the species is the GenBank assembly GCA_011773465.1. The GC content of the type genome is 41.5 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Antevana semimiforma sp. nov.

Candidatus Antevana semimiforma (NL. fem. n. *semimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIV01 sp011049545*. The type genome for the species is the GenBank assembly GCA_011049545.1. The GC content of the type genome is 41.53 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Antevana tenebitudo sp. nov.

Candidatus Antevana tenebitudo (NL. fem. n. *tenebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOIV01 sp011772475*. The type genome for the species is the GenBank assembly GCA_011772475.1. The GC content of the type genome is 42.26 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Antevaria anaclimonas sp. nov.

Candidatus Antevaria anaclimonas (NL. fem. n. *anaclimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGJ01 sp007376485*. The type genome for the species is the GenBank assembly GCA_007376485.1. The GC content of the type genome is 44.47 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Antevaria gen. nov.

Candidatus Antevaria (NL. fem. n. *Antevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGJ01*. The type species for the genus is *Candidatus* Antevaria anaclimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

IGHO2-01-FULL-4-A. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisulaceae.

Description of *Candidatus* Antevella depelitia sp. nov.

Candidatus Antevella depelitia (NL. fem. n. *depelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LZORAL124-50-18 sp002747395*. The type genome for the species is the GenBank assembly GCA_002747395.1. The GC content of the type genome is 49.68 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Antevella gen. nov.

Candidatus Antevella (NL. fem. n. *Antevella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LZORAL124-50-18*. The type species for the genus is *Candidatus* Antevella depelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antevella innumivita sp. nov.

Candidatus Antevella innumivita (NL. fem. n. *innumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LZORAL124-50-18 sp002747055*. The type genome for the species is the GenBank assembly GCA_002747055.1. The GC content of the type genome is 48.17 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Antevia obfiredo sp. nov.

Candidatus Antevia obfiredo (NL. fem. n. *obfiredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-944 sp003134215*. The type genome for the species is the GenBank assembly GCA_003134215.1. The GC content of the type genome is 53.23 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Antevia gen. nov.

Candidatus Antevia (NL. fem. n. *Antevia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-944*. The type species for the genus is *Candidatus* Antevia obfiredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antevida evangetta sp. nov.

Candidatus Antevida evangetta (NL. fem. n. *evangetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WD6-1 sp003122085*. The type genome for the species is the GenBank assembly RS_GCF_003122085.1. The GC content of the type genome is 69.46 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Antevida gen. nov.

Candidatus Antevida (NL. fem. n. *Antevida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WD6-1*. The type species for the genus is *Candidatus* Antevida evangetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antevosa depelax sp. nov.

Candidatus Antevosa depelax (NL. fem. n. *depelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2690645 sp002690645*. The type genome for the species is the GenBank assembly GCA_002690645.1. The GC content of the type genome is 30.74 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Antevosa gen. nov.

Candidatus Antevosa (NL. fem. n. *Antevosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2690645*. The type species for the genus is *Candidatus* Antevosa depelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002719695*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifosaceae.

Description of *Candidatus* Antevula enigmastra sp. nov.

Candidatus Antevula enigmastra (NL. fem. n. *enigmastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077546 sp001464165*. The type genome for the species is the GenBank assembly GCA_001464165.1. The GC content of the type genome is 47.82 % and the genome length is 6.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Antevula gen. nov.

Candidatus Antevula (NL. fem. n. *Antevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077546*. The type species for the genus is *Candidatus* Antevula enigmastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimana luticitica sp. nov.

Candidatus Antimana luticitica (NL. fem. n. *luticitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACADV01 sp011388795*. The type genome for the species is the GenBank assembly GCA_011388795.1. The GC content of the type genome is 70.49 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Antimana gen. nov.

Candidatus Antimana (NL. fem. n. *Antimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACADV01*. The type species for the genus is *Candidatus* Antimana luticitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimana sonipessa sp. nov.

Candidatus Antimana sonipessa (NL. fem. n. *sonipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACADV01 sp013388425*. The type genome for the species is the GenBank assembly GCA_013388425.1. The GC content of the type genome is 69.38 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Antimaria operciforma sp. nov.

Candidatus Antimaria operciforma (NL. fem. n. *operciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSZY01 sp013139875*. The type genome for the species is the GenBank assembly GCA_013139875.1. The GC content of the type genome is 51.56 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Antimaria gen. nov.

Candidatus Antimaria (NL. fem. n. *Antimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSZY01*. The type species for the genus is *Candidatus* Antimaria operciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimella actarigena sp. nov.

Candidatus Antimella actarigena (NL. fem. n. *actarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNU01 sp009776435*. The type genome for the species is the GenBank assembly GCA_009776435.1. The GC content of the type genome is 58.71 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Antimella gen. nov.

Candidatus Antimella (NL. fem. n. *Antimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRNU01*. The type species for the genus is *Candidatus* Antimella actarigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimella cadavifica sp. nov.

Candidatus Antimella cadavifica (NL. fem. n. *cadavifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNU01 sp009778425*. The type genome for the species is the GenBank assembly GCA_009778425.1. The GC content of the type genome is 58.73 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Antimella gabinax sp. nov.

Candidatus Antimella gabinax (NL. fem. n. *gabinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNU01 sp009779355*. The type genome for the species is the GenBank assembly GCA_009779355.1. The GC content of the type genome is 56.58 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Antimella immeditura sp. nov.

Candidatus Antimella immeditura (NL. fem. n. *immeditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNU01 sp009781085*. The type genome for the species is the

GenBank assembly GCA_009781085.1. The GC content of the type genome is 55.9 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Antimella inoblago sp. nov.

Candidatus Antimella inoblago (NL. fem. n. *inoblago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNU01 sp009782565*. The type genome for the species is the GenBank assembly GCA_009782565.1. The GC content of the type genome is 57.75 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Antimia abindago sp. nov.

Candidatus Antimia abindago (NL. fem. n. *abindago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-002020805 sp002020805*. The type genome for the species is the GenBank assembly RS_GCF_002020805.1. The GC content of the type genome is 55.59 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Antimia gen. nov.

Candidatus Antimia (NL. fem. n. *Antimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-002020805*. The type species for the genus is *Candidatus* Antimia abindago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimida desacentia sp. nov.

Candidatus Antimida desacentia (NL. fem. n. *desacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-54-10 sp001872985*. The type genome for the species is the GenBank assembly GCA_001872985.1. The GC content of the type genome is 53.49 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um

filter".

Description of *Candidatus* Antimida gen. nov.

Candidatus Antimida (NL. fem. n. *Antimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-54-10*. The type species for the genus is *Candidatus* Antimida desacentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antimosa saxopago sp. nov.

Candidatus Antimosa saxopago (NL. fem. n. *saxopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZKA01 sp012800055*. The type genome for the species is the GenBank assembly GCA_012800055.1. The GC content of the type genome is 59.5 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Antimosa gen. nov.

Candidatus Antimosa (NL. fem. n. *Antimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZKA01*. The type species for the genus is *Candidatus* Antimosa saxopago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antipana detorivita sp. nov.

Candidatus Antipana detorivita (NL. fem. n. *detorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSSC01 sp013214635*. The type genome for the species is the GenBank assembly GCA_013214635.1. The GC content of the type genome is 59.14 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Antipana gen. nov.

Candidatus Antipana (NL. fem. n. *Antipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSSC01*. The type species for the genus is *Candidatus* Antipana detorivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antiparia irrecitia sp. nov.

Candidatus Antiparia irrecitia (NL. fem. n. *irrecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRHC01 sp903878275*. The type genome for the species is the GenBank assembly GCA_903878275.1. The GC content of the type genome is 40.03 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Antiparia gen. nov.

Candidatus Antiparia (NL. fem. n. *Antiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRHC01*. The type species for the genus is *Candidatus* Antiparia irrecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Antipida ceracibula sp. nov.

Candidatus Antipida ceracibula (NL. fem. n. *ceracibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOX01 sp012838665*. The type genome for the species is the GenBank assembly GCA_012838665.1. The GC content of the type genome is 50.88 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Antipida gen. nov.

Candidatus Antipida (NL. fem. n. *Antipida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOX01*. The type species for the genus is *Candidatus* Antipida ceracibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antiposa gasifousia sp. nov.

Candidatus Antiposa gasifousia (NL. fem. n. *gasifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-425 sp003245675*. The type genome for the species is the GenBank assembly GCA_003245675.1. The GC content of the type genome is 39.74 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Antiposa gen. nov.

Candidatus Antiposa (NL. fem. n. *Antiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-425*. The type species for the genus is *Candidatus* Antiposa gasifousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antirana emortetta sp. nov.

Candidatus Antirana emortetta (NL. fem. n. *emortetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-21 sp005884945*. The type genome for the species is the GenBank assembly GCA_005884945.1. The GC content of the type genome is 68.97 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Antirana gen. nov.

Candidatus Antirana (NL. fem. n. *Antirana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-21*. The type species for the genus is *Candidatus* Antirana emortetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antirana eviscugo sp. nov.

Candidatus Antirana eviscugo (NL. fem. n. *eviscugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-21 sp005883995*. The type genome for the species is the GenBank assembly GCA_005883995.1. The GC content of the type genome is 69.16 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Antirana salubimonia sp. nov.

Candidatus Antirana salubimonia (NL. fem. n. *salubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-21 sp005885125*. The type genome for the species is the GenBank assembly GCA_005885125.1. The GC content of the type genome is 68.4 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Antiraria annecicella sp. nov.

Candidatus Antiraria annecicella (NL. fem. n. *annecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2725445 sp002725445*. The type genome for the species is the GenBank assembly GCA_002725445.1. The GC content of the type genome is 52.02 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Antiraria gen. nov.

Candidatus Antiraria (NL. fem. n. *Antiraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2725445*. The type species for the genus is *Candidatus* Antiraria annecicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipariaceae.

Description of *Candidatus* Antirella dedigitrix sp. nov.

Candidatus Antirella dedigitrix (NL. fem. n. *dedigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZRG01 sp902783485*. The type genome for the species is the GenBank assembly GCA_902783485.1. The GC content of the type genome is 44.45 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Antirella gen. nov.

Candidatus Antirella (NL. fem. n. *Antirella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZRG01*. The type species for the genus is *Candidatus* Antirella dedigitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Antiria annecetta sp. nov.

Candidatus Antiria annecetta (NL. fem. n. *annecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748505 sp002748505*. The type genome for the species is the GenBank assembly GCA_002748505.1. The GC content of the type genome is 54.62 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Antiria gen. nov.

Candidatus Antiria (NL. fem. n. *Antiria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748505*. The type species for the genus is *Candidatus* Antiria

annecetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antirida semivatica sp. nov.

Candidatus Antirida semivatica (NL. fem. n. *semivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFQB01 sp001784275*. The type genome for the species is the GenBank assembly GCA_001784275.1. The GC content of the type genome is 47.32 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Antirida gen. nov.

Candidatus Antirida (NL. fem. n. *Antirida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFQB01*. The type species for the genus is *Candidatus* Antirida semivatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Antirosa mavorugo sp. nov.

Candidatus Antirosa mavorugo (NL. fem. n. *mavorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1370 sp002306315*. The type genome for the species is the GenBank assembly GCA_002306315.1. The GC content of the type genome is 47.64 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Antirosa gen. nov.

Candidatus Antirosa (NL. fem. n. *Antirosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1370*. The type species for the genus is *Candidatus* Antirosa mavorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Antomana prospatica sp. nov.

Candidatus Antomana prospatica (NL. fem. n. *prospatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAR-2010-188 sp900104375*. The type genome for the species is the GenBank assembly RS_GCF_900104375.1. The GC content of the type genome is 36.89 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Antomana gen. nov.

Candidatus Antomana (NL. fem. n. *Antomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAR-2010-188*. The type species for the genus is *Candidatus* Antomana prospatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antomaria venunivita sp. nov.

Candidatus Antomaria venunivita (NL. fem. n. *venunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKV01 sp011389205*. The type genome for the species is the GenBank assembly GCA_011389205.1. The GC content of the type genome is 51.32 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Antomaria gen. nov.

Candidatus Antomaria (NL. fem. n. *Antomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKV01*. The type species for the genus is *Candidatus* Antomaria

venunivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Antomia siminisca sp. nov.

Candidatus Antomia siminisca (NL. fem. n. *siminisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707185 sp002707185*. The type genome for the species is the GenBank assembly GCA_002707185.1. The GC content of the type genome is 44.03 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Antomia gen. nov.

Candidatus Antomia (NL. fem. n. *Antomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707185*. The type species for the genus is *Candidatus* Antomia siminisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Antomida hexapitio sp. nov.

Candidatus Antomida hexapitio (NL. fem. n. *hexapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXX01 sp013368795*. The type genome for the species is the GenBank assembly GCA_013368795.1. The GC content of the type genome is 68.26 % and the genome length is 9.81 Mbp.

Description of *Candidatus* Antomida gen. nov.

Candidatus Antomida (NL. fem. n. *Antomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABFXX01*. The type species for the genus is *Candidatus* Antomida hexapitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antomida sacometta sp. nov.

Candidatus Antomida sacometta (NL. fem. n. *sacometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXX01 sp013812655*. The type genome for the species is the GenBank assembly GCA_013812655.1. The GC content of the type genome is 68.65 % and the genome length is 8.13 Mbp.

Description of *Candidatus* Antomida vagabicella sp. nov.

Candidatus Antomida vagabicella (NL. fem. n. *vagabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXX01 sp013813765*. The type genome for the species is the GenBank assembly GCA_013813765.1. The GC content of the type genome is 67.79 % and the genome length is 8.11 Mbp.

Description of *Candidatus* Antomosa immusatica sp. nov.

Candidatus Antomosa immusatica (NL. fem. n. *immusatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVIC01 sp009939295*. The type genome for the species is the GenBank assembly RS_GCF_009939295.1. The GC content of the type genome is 52.06 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Antomosa gen. nov.

Candidatus Antomosa (NL. fem. n. *Antomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVIC01*. The type species for the genus is *Candidatus* Antomosa immusatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Antomula megalatio sp. nov.

Candidatus Antomula megalatio (NL. fem. n. *megalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W425 sp011192005*. The type genome for the species is the GenBank assembly GCA_011192005.1. The GC content of the type genome is 50.69 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Antomula gen. nov.

Candidatus Antomula (NL. fem. n. *Antomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W425*. The type species for the genus is *Candidatus* Antomula megalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Anxifana infesatio sp. nov.

Candidatus Anxifana infesatio (NL. fem. n. *infesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCQ01 sp002070105*. The type genome for the species is the GenBank assembly GCA_002070105.1. The GC content of the type genome is 43.95 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Anxifana gen. nov.

Candidatus Anxifana (NL. fem. n. *Anxifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCQ01*. The type species for the genus is *Candidatus* Anxifana infesatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Firm-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resulosaceae.

Description of *Candidatus* Anxifaria adrotibra sp. nov.

Candidatus Anxifaria adrotibra (NL. fem. n. *adrotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0074139 sp001464795*. The type genome for the species is the GenBank assembly GCA_001464795.1. The GC content of the type genome is 39.88 % and the genome length is 2.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Anxifaria gen. nov.

Candidatus Anxifaria (NL. fem. n. *Anxifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0074139*. The type species for the genus is *Candidatus* Anxifaria adrotibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anxifella ignobousia sp. nov.

Candidatus Anxifella ignobousia (NL. fem. n. *ignobousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU15 sp014383605*. The type genome for the species is the GenBank assembly GCA_014383605.1. The GC content of the type genome is 63.55 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Anxifella gen. nov.

Candidatus Anxifella (NL. fem. n. *Anxifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU15*. The type species for the genus is *Candidatus* Anxifella ignobousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3071*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Codifellaceae.

Description of *Candidatus* Anxifia admurivita sp. nov.

Candidatus Anxifia admurivita (NL. fem. n. *admurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW121 sp003259155*. The type genome for the species is the GenBank assembly RS_GCF_003259155.1. The GC content of the type genome is 58.46 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Anxifia gen. nov.

Candidatus Anxifia (NL. fem. n. *Anxifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW121*. The type species for the genus is *Candidatus* Anxifia admurivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anxifida fatifago sp. nov.

Candidatus Anxifida fatifago (NL. fem. n. *fatifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1162T-S-0a-05 sp000964245*. The type genome for the species is the GenBank assembly RS_GCF_000964245.1. The GC content of the type genome is 47.72 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Anxifida gen. nov.

Candidatus Anxifida (NL. fem. n. *Anxifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1162T-S-0a-05*. The type species for the genus is *Candidatus* Anxifida fatifago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Anxifula adculimonas sp. nov.

Candidatus Anxifula adculimonas (NL. fem. n. *adculimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDER01 sp013816275*. The type genome for the species is the GenBank assembly GCA_013816275.1. The GC content of the type genome is 68.63 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Anxifula gen. nov.

Candidatus Anxifula (NL. fem. n. *Anxifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDER01*. The type species for the genus is *Candidatus* Anxifula adculimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apercana refunicella sp. nov.

Candidatus Apercana refunicella (NL. fem. n. *refunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFB01 sp012511915*. The type genome for the species is the GenBank assembly GCA_012511915.1. The GC content of the type genome is 39.56 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Apercana gen. nov.

Candidatus Apercana (NL. fem. n. *Apercana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFB01*. The type species for the genus is *Candidatus* Apercana refunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Firm-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resulosaceae.

Description of *Candidatus* Apercaria depocitio sp. nov.

Candidatus Apercaria depocitio (NL. fem. n. *depocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG714 sp900321665*. The type genome for the species is the GenBank assembly GCA_900321665.1. The GC content of the type genome is 47.74 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Apercaria gen. nov.

Candidatus Apercaria (NL. fem. n. *Apercaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG714*. The type species for the genus is *Candidatus* Apercaria depocitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apercella egritedo sp. nov.

Candidatus Apercella egritedo (NL. fem. n. *egritedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CWB-1 sp006494535*. The type genome for the species is the GenBank assembly RS_GCF_006494535.1. The GC content of the type genome is 36.31 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Apercella gen. nov.

Candidatus Apercella (NL. fem. n. *Apercella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CWB-1*. The type species for the genus is *Candidatus* Apercella egritedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apercia catilentia sp. nov.

Candidatus Apercia catilentia (NL. fem. n. *catilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJG01 sp012522505*. The type genome for the species is the GenBank assembly GCA_012522505.1. The GC content of the type genome is 42.91 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Apercia gen. nov.

Candidatus Apercia (NL. fem. n. *Apercia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJG01*. The type species for the genus is *Candidatus* Apercia catilentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-8532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabidaceae.

Description of *Candidatus* Apercia oscilastra sp. nov.

Candidatus Apercia oscilastra (NL. fem. n. *oscilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJG01 sp012523055*. The type genome for the species is the GenBank assembly GCA_012523055.1. The GC content of the type genome is 45.55 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Apercida apraribula sp. nov.

Candidatus Apercida apraribula (NL. fem. n. *apraribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFS01 sp004557805*. The type genome for the species is the GenBank assembly GCA_004557805.1. The GC content of the type genome is 60.33 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Apercida gen. nov.

Candidatus Apercida (NL. fem. n. *Apercida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFFS01*. The type species for the genus is *Candidatus* Apercida

apraribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Apercula rubigibula sp. nov.

Candidatus Apercula rubigibula (NL. fem. n. *rubigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLH01 sp012799415*. The type genome for the species is the GenBank assembly GCA_012799415.1. The GC content of the type genome is 34.24 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Apercula gen. nov.

Candidatus Apercula (NL. fem. n. *Apercula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLH01*. The type species for the genus is *Candidatus* Apercula rubigibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicapulaceae.

Description of *Candidatus* Apharana accorentia sp. nov.

Candidatus Apharana accorentia (NL. fem. n. *accorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708315 sp014382445*. The type genome for the species is the GenBank assembly GCA_014382445.1. The GC content of the type genome is 35.74 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Apharana gen. nov.

Candidatus Apharana (NL. fem. n. *Apharana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-002708315*. The type species for the genus is *Candidatus* Apharana accorentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Apharana cacomitia sp. nov.

Candidatus Apharana cacomitia (NL. fem. n. *cacomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708315 sp013203805*. The type genome for the species is the GenBank assembly GCA_013203805.1. The GC content of the type genome is 34.31 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Apharana idipsatica sp. nov.

Candidatus Apharana idipsatica (NL. fem. n. *idipsatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708315 sp002708315*. The type genome for the species is the GenBank assembly GCA_002708315.1. The GC content of the type genome is 34.18 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Apharana peropessa sp. nov.

Candidatus Apharana peropessa (NL. fem. n. *peropessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002708315 sp002686705*. The type genome for the species is the GenBank assembly GCA_002686705.1. The GC content of the type genome is 34.54 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Apharella paracago sp. nov.

Candidatus Apharella paracago (NL. fem. n. *paracago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DUNY01 sp012839145*. The type genome for the species is the GenBank assembly GCA_012839145.1. The GC content of the type genome is 38.95 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Apharella gen. nov.

Candidatus Apharella (NL. fem. n. *Apharella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUNY01*. The type species for the genus is *Candidatus* Apharella paracago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apharida velififorma sp. nov.

Candidatus Apharida velififorma (NL. fem. n. *velififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMWS01 sp903845125*. The type genome for the species is the GenBank assembly GCA_903845125.1. The GC content of the type genome is 60.93 % and the genome length is 8.51 Mbp.

Description of *Candidatus* Apharida gen. nov.

Candidatus Apharida (NL. fem. n. *Apharida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMWS01*. The type species for the genus is *Candidatus* Apharida velififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1319*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecululaceae.

Description of *Candidatus* Aphoraria curabimonia sp. nov.

Candidatus Aphoraria curabimonia (NL. fem. n. *curabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLF01 sp003559475*. The type genome for the species is the

GenBank assembly GCA_003559475.1. The GC content of the type genome is 32.06 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Aphoraria gen. nov.

Candidatus Aphoraria (NL. fem. n. *Aphoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWLF01*. The type species for the genus is *Candidatus* Aphoraria curabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Aphorella colutitia sp. nov.

Candidatus Aphorella colutitia (NL. fem. n. *colutitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTB01 sp902805665*. The type genome for the species is the GenBank assembly GCA_902805665.1. The GC content of the type genome is 70.94 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Aphorella gen. nov.

Candidatus Aphorella (NL. fem. n. *Aphorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTB01*. The type species for the genus is *Candidatus* Aphorella colutitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desonosaceae.

Description of *Candidatus* Aphorida locupitudo sp. nov.

Candidatus Aphorida locupitudo (NL. fem. n. *locupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADCWC01 sp902806305*. The type genome for the species is the GenBank assembly GCA_902806305.1. The GC content of the type genome is 73.9 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Aphorida gen. nov.

Candidatus Aphorida (NL. fem. n. *Aphorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWC01*. The type species for the genus is *Candidatus* Aphorida locupitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-60-MAGs149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulanaceae.

Description of *Candidatus* Apibacter dilemimonia sp. nov.

Candidatus Apibacter dilemimonia (NL. fem. n. *dilemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Apibacter sp002964915*. The type genome for the species is the GenBank assembly RS_GCF_009827845.1. The GC content of the type genome is 30.76 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Apilactobacillus remedatio sp. nov.

Candidatus Apilactobacillus remedatio (NL. fem. n. *remedatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Apilactobacillus sp003627035*. The type genome for the species is the GenBank assembly RS_GCF_003627035.1. The GC content of the type genome is 34.1 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Aplesana derunicula sp. nov.

Candidatus Aplesana derunicula (NL. fem. n. *derunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIN01 sp013297825*. The type genome for the species is the

GenBank assembly GCA_013297825.1. The GC content of the type genome is 31.19 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Aplesana gen. nov.

Candidatus Aplesana (NL. fem. n. *Aplesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIN01*. The type species for the genus is *Candidatus* Aplesana derunicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aplesia unetvitrix sp. nov.

Candidatus Aplesia unetvitrix (NL. fem. n. *unetvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-36-32 sp002778465*. The type genome for the species is the GenBank assembly GCA_002778465.1. The GC content of the type genome is 35.73 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Aplesia gen. nov.

Candidatus Aplesia (NL. fem. n. *Aplesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-36-32*. The type species for the genus is *Candidatus* Aplesia unetvitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Aplesida obveritoga sp. nov.

Candidatus Aplesida obveritoga (NL. fem. n. *obveritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO3F2 sp010672165*. The type genome for the species is the GenBank assembly GCA_010672165.1. The GC content of the type genome is 49.19 %

and the genome length is 7.3 Mbp.

Description of *Candidatus* Aplesida gen. nov.

Candidatus Aplesida (NL. fem. n. *Aplesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIO3F2*. The type species for the genus is *Candidatus* Aplesida obveritoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aplesosa inretigena sp. nov.

Candidatus Aplesosa inretigena (NL. fem. n. *inretigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HS-T3 sp000829755*. The type genome for the species is the GenBank assembly RS_GCF_000829755.1. The GC content of the type genome is 38.71 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Aplesosa gen. nov.

Candidatus Aplesosa (NL. fem. n. *Aplesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HS-T3*. The type species for the genus is *Candidatus* Aplesosa inretigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aplesosa nubifousia sp. nov.

Candidatus Aplesosa nubifousia (NL. fem. n. *nubifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HS-T3 sp011125455*. The type genome for the species is the GenBank assembly RS_GCF_011125455.1. The GC content of the type genome is 39.19 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Apograria urbicax sp. nov.

Candidatus Apograria urbicax (NL. fem. n. *urbicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YR4-1 sp011059145*. The type genome for the species is the GenBank assembly RS_GCF_011059145.1. The GC content of the type genome is 44.03 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Apograria gen. nov.

Candidatus Apograria (NL. fem. n. *Apograria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YR4-1*. The type species for the genus is *Candidatus* Apograria urbicax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apogrida navificula sp. nov.

Candidatus Apogrida navificula (NL. fem. n. *navificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-11 sp005893365*. The type genome for the species is the GenBank assembly GCA_005893365.1. The GC content of the type genome is 71.77 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Apogrida gen. nov.

Candidatus Apogrida (NL. fem. n. *Apogrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-11*. The type species for the genus is *Candidatus* Apogrida navificula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Apogrula direcicula sp. nov.

Candidatus Apogrula direcicula (NL. fem. n. *direcicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG29 sp012031955*. The type genome for the species is the GenBank assembly GCA_012031955.1. The GC content of the type genome is 51.85 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Apogrula gen. nov.

Candidatus Apogrula (NL. fem. n. *Apogrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG29*. The type species for the genus is *Candidatus* Apogrula direcicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apogrula duricitio sp. nov.

Candidatus Apogrula duricitio (NL. fem. n. *duricitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG29 sp003242315*. The type genome for the species is the GenBank assembly GCA_003242315.1. The GC content of the type genome is 51.23 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Apoplana infisago sp. nov.

Candidatus Apoplana infisago (NL. fem. n. *infisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSTM01 sp011329365*. The type genome for the species is the GenBank assembly GCA_011329365.1. The GC content of the type genome is 55.93 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Apoplana gen. nov.

Candidatus Apoplana (NL. fem. n. *Apoplana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSTM01*. The type species for the genus is *Candidatus* Apoplana infisago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Apoplaria adobritia sp. nov.

Candidatus Apoplaria adobritia (NL. fem. n. *adobritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VIKH01 sp008080515*. The type genome for the species is the GenBank assembly GCA_008080515.1. The GC content of the type genome is 59.29 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Apoplaria gen. nov.

Candidatus Apoplaria (NL. fem. n. *Apoplaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VIKH01*. The type species for the genus is *Candidatus* Apoplaria adobritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apoplida unetvitoga sp. nov.

Candidatus Apoplida unetvitoga (NL. fem. n. *unetvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEYI01 sp001773975*. The type genome for the species is the GenBank assembly GCA_001773975.1. The GC content of the type genome is 47.61 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Apoplida gen. nov.

Candidatus Apoplida (NL. fem. n. *Apoplida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEYI01*. The type species for the genus is *Candidatus* Apoplida unetvitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *M10-OD1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorifidaceae.

Description of *Candidatus* Apoplosa abverilega sp. nov.

Candidatus Apoplosa abverilega (NL. fem. n. *abverilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRDV01 sp003174035*. The type genome for the species is the GenBank assembly GCA_003174035.1. The GC content of the type genome is 41.06 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Apoplosa gen. nov.

Candidatus Apoplosa (NL. fem. n. *Apoplosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRDV01*. The type species for the genus is *Candidatus* Apoplosa abverilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apoplosa emancatica sp. nov.

Candidatus Apoplosa emancatica (NL. fem. n. *emancatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRDV01 sp013288045*. The type genome for the species is the GenBank assembly GCA_013288045.1. The GC content of the type genome is 42.22 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Apoplosa remedicella sp. nov.

Candidatus Apoplosa remedicella (NL. fem. n. *remedicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRDV01 sp013815795*. The type genome for the species is the GenBank assembly GCA_013815795.1. The GC content of the type genome is 37.07 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Apoplula albogousia sp. nov.

Candidatus Apoplula albogousia (NL. fem. n. *albogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12814 sp900770165*. The type genome for the species is the GenBank assembly RS_GCF_900770165.1. The GC content of the type genome is 31.8 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Apoplula gen. nov.

Candidatus Apoplula (NL. fem. n. *Apoplula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12814*. The type species for the genus is *Candidatus* Apoplula albogousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appacana binocicula sp. nov.

Candidatus Appacana binocicula (NL. fem. n. *binocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHX01 sp003555415*. The type genome for the species is the GenBank assembly GCA_003555415.1. The GC content of the type genome is 39.42 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Appacana gen. nov.

Candidatus Appacana (NL. fem. n. *Appacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWHX01*. The type species for the genus is *Candidatus* Appacana binocicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudiciaceae.

Description of *Candidatus* Appacaria accogessa sp. nov.

Candidatus Appacaria accogessa (NL. fem. n. *accogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGY01 sp012735575*. The type genome for the species is the GenBank assembly GCA_012735575.1. The GC content of the type genome is 37.85 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Appacaria gen. nov.

Candidatus Appacaria (NL. fem. n. *Appacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGY01*. The type species for the genus is *Candidatus* Appacaria accogessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3941*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabulaceae.

Description of *Candidatus* Appacaria demogicula sp. nov.

Candidatus Appacaria demogicula (NL. fem. n. *demogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGY01 sp012522165*. The type genome for the species is the GenBank assembly GCA_012522165.1. The GC content of the type genome is 36.54 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Appacella insopivita sp. nov.

Candidatus Appacella insopivita (NL. fem. n. *insopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAYJH01 sp012523035*. The type genome for the species is the GenBank assembly GCA_012523035.1. The GC content of the type genome is 37.69 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Appacella gen. nov.

Candidatus Appacella (NL. fem. n. *Appacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJH01*. The type species for the genus is *Candidatus* Appacella insopivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appacida prodratica sp. nov.

Candidatus Appacida prodratica (NL. fem. n. *prodratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWAY01 sp013360825*. The type genome for the species is the GenBank assembly GCA_013360825.1. The GC content of the type genome is 69.22 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Appacida gen. nov.

Candidatus Appacida (NL. fem. n. *Appacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWAY01*. The type species for the genus is *Candidatus* Appacida prodratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WSZJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadurosaceae.

Description of *Candidatus* Appacosa assibifica sp. nov.

Candidatus Appacosa assibifica (NL. fem. n. *assibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULI01 sp012840445*. The type genome for the species is the

GenBank assembly GCA_012840445.1. The GC content of the type genome is 44.85 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Appacosa gen. nov.

Candidatus Appacosa (NL. fem. n. *Appacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULI01*. The type species for the genus is *Candidatus* Appacosa assibifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appacula adhinousia sp. nov.

Candidatus Appacula adhinousia (NL. fem. n. *adhinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2402195 sp003963235*. The type genome for the species is the GenBank assembly GCA_003963235.1. The GC content of the type genome is 30.89 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Appacula gen. nov.

Candidatus Appacula (NL. fem. n. *Appacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2402195*. The type species for the genus is *Candidatus* Appacula adhinousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appacula insalitio sp. nov.

Candidatus Appacula insalitio (NL. fem. n. *insalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2402195 sp002402195*. The type genome for the species is the GenBank assembly GCA_002402195.1. The GC content of the type genome is 40.57 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Appacula obtenicella sp. nov.

Candidatus Appacula obtenicella (NL. fem. n. *obtenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2402195 sp013298405*. The type genome for the species is the GenBank assembly GCA_013298405.1. The GC content of the type genome is 34.96 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Appagella catilatio sp. nov.

Candidatus Appagella catilatio (NL. fem. n. *catilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZODW24 sp003340475*. The type genome for the species is the GenBank assembly RS_GCF_003340475.1. The GC content of the type genome is 60.82 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Appagella gen. nov.

Candidatus Appagella (NL. fem. n. *Appagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZODW24*. The type species for the genus is *Candidatus* Appagella catilatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appagia solivitia sp. nov.

Candidatus Appagia solivitia (NL. fem. n. *solivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQC01 sp007131625*. The type genome for the species is the GenBank assembly GCA_007131625.1. The GC content of the type genome is 47.42 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Appagia gen. nov.

Candidatus Appagia (NL. fem. n. *Appagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLQC01*. The type species for the genus is *Candidatus* Appagia solivitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Appagida peropentia sp. nov.

Candidatus Appagida peropentia (NL. fem. n. *peropentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-B00363 sp011421635*. The type genome for the species is the GenBank assembly RS_GCF_011421635.1. The GC content of the type genome is 50.43 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Appagida gen. nov.

Candidatus Appagida (NL. fem. n. *Appagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-B00363*. The type species for the genus is *Candidatus* Appagida peropentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appagosa direciforma sp. nov.

Candidatus Appagosa direciforma (NL. fem. n. *direciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWX01 sp014360755*. The type genome for the species is the GenBank assembly GCA_014360755.1. The GC content of the type genome is 54.8 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Appagosa gen. nov.

Candidatus Appagosa (NL. fem. n. *Appagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIWX01*. The type species for the genus is *Candidatus* Appagosa direciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homunulaceae.

Description of *Candidatus* Appagosa edissatio sp. nov.

Candidatus Appagosa edissatio (NL. fem. n. *edissatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWX01 sp014360905*. The type genome for the species is the GenBank assembly GCA_014360905.1. The GC content of the type genome is 53.8 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Appecana cerariforma sp. nov.

Candidatus Appecana cerariforma (NL. fem. n. *cerariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHF01 sp012271025*. The type genome for the species is the GenBank assembly GCA_012271025.1. The GC content of the type genome is 63.1 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Appecana gen. nov.

Candidatus Appecana (NL. fem. n. *Appecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHF01*. The type species for the genus is *Candidatus* Appecana cerariforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beneposaceae.

Description of *Candidatus* Appecana redunitia sp. nov.

Candidatus Appecana redunitia (NL. fem. n. *redunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHF01 sp011523315*. The type genome for the species is the GenBank assembly GCA_011523315.1. The GC content of the type genome is 62.82 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Appecaria adcesibula sp. nov.

Candidatus Appecaria adcesibula (NL. fem. n. *adcesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-129 sp003167255*. The type genome for the species is the GenBank assembly GCA_003167255.1. The GC content of the type genome is 62.24 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Appecaria gen. nov.

Candidatus Appecaria (NL. fem. n. *Appecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-129*. The type species for the genus is *Candidatus* Appecaria adcesibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appecaria pragmousia sp. nov.

Candidatus Appecaria pragmousia (NL. fem. n. *pragmousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-129 sp003152325*. The type genome for the species is the GenBank assembly GCA_003152325.1. The GC content of the type genome is 62.19 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Appecella modifessa sp. nov.

Candidatus Appecella modifessa (NL. fem. n. *modifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WQVM01 sp009783985*. The type genome for the species is the GenBank assembly GCA_009783985.1. The GC content of the type genome is 40.78 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Appecella gen. nov.

Candidatus Appecella (NL. fem. n. *Appecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVM01*. The type species for the genus is *Candidatus* Appecella modifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Appecia cotenigena sp. nov.

Candidatus Appecia cotenigena (NL. fem. n. *cotenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBB01 sp011526585*. The type genome for the species is the GenBank assembly GCA_011526585.1. The GC content of the type genome is 71.61 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Appecia gen. nov.

Candidatus Appecia (NL. fem. n. *Appecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBB01*. The type species for the genus is *Candidatus* Appecia cotenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepariaceae.

Description of *Candidatus* Appecida cepulivita sp. nov.

Candidatus Appecida cepulivita (NL. fem. n. *cepulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX2 sp903864435*. The type genome for the species is the GenBank assembly GCA_903864435.1. The GC content of the type genome is 58.85 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Appecida gen. nov.

Candidatus Appecida (NL. fem. n. *Appecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFX2*. The type species for the genus is *Candidatus* Appecida cepulivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Appecida detuniforma sp. nov.

Candidatus Appecida detuniforma (NL. fem. n. *detuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX2 sp013388735*. The type genome for the species is the GenBank assembly GCA_013388735.1. The GC content of the type genome is 61.29 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Appecida ecasticella sp. nov.

Candidatus Appecida ecasticella (NL. fem. n. *ecasticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX2 sp014338005*. The type genome for the species is the GenBank assembly GCA_014338005.1. The GC content of the type genome is 60.87 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Appecula notacousia sp. nov.

Candidatus Appecula notacousia (NL. fem. n. *notacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *WTBX01 sp013138855*. The type genome for the species is the GenBank assembly GCA_013138855.1. The GC content of the type genome is 37.91 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Appecula gen. nov.

Candidatus Appecula (NL. fem. n. *Appecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTBX01*. The type species for the genus is *Candidatus* Appecula notacousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apperana didacicula sp. nov.

Candidatus Apperana didacicula (NL. fem. n. *didacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BSW11-IV sp000447755*. The type genome for the species is the GenBank assembly RS_GCF_000447755.1. The GC content of the type genome is 36.93 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Apperana gen. nov.

Candidatus Apperana (NL. fem. n. *Apperana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BSW11-IV*. The type species for the genus is *Candidatus* Apperana didacicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apperella decititas sp. nov.

Candidatus Apperella decititas (NL. fem. n. *decititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-35 sp013214425*. The type genome for the species is the GenBank assembly GCA_013214425.1. The GC content of the type genome is 34.05 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Apperella gen. nov.

Candidatus Apperella (NL. fem. n. *Apperella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-35*. The type species for the genus is *Candidatus* Apperella decititas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apperia adnumiforma sp. nov.

Candidatus Apperia adnumiforma (NL. fem. n. *adnumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-421 sp003245715*. The type genome for the species is the GenBank assembly GCA_003245715.1. The GC content of the type genome is 47.32 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Apperia gen. nov.

Candidatus Apperia (NL. fem. n. *Apperia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-421*. The type species for the genus is *Candidatus* Apperia adnumiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripanaceae.

Description of *Candidatus* Apperida incenitio sp. nov.

Candidatus Apperida incenitio (NL. fem. n. *incenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KOR42 sp007744255*. The type genome for the species is the GenBank assembly RS_GCF_007744255.1. The GC content of the type genome is 50.31 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Apperida gen. nov.

Candidatus Apperida (NL. fem. n. *Apperida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KOR42*. The type species for the genus is *Candidatus* Apperida incenitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apperida indifilenta sp. nov.

Candidatus Apperida indifilenta (NL. fem. n. *indifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KOR42 sp007859735*. The type genome for the species is the GenBank assembly RS_GCF_007859735.1. The GC content of the type genome is 52.76 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Apperula antomatica sp. nov.

Candidatus Apperula antomatica (NL. fem. n. *antomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAL01 sp012719395*. The type genome for the species is the GenBank assembly GCA_012719395.1. The GC content of the type genome is 65.17 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Apperula gen. nov.

Candidatus Apperula (NL. fem. n. *Apperula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAL01*. The type species for the genus is *Candidatus* Apperula antomatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demululaceae.

Description of *Candidatus* Appicana susicitudo sp. nov.

Candidatus Appicana susicitudo (NL. fem. n. *susicitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717385 sp002717385*. The type genome for the species is the GenBank assembly GCA_002717385.1. The GC content of the type genome is 31.56 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Appicana gen. nov.

Candidatus Appicana (NL. fem. n. *Appicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717385*. The type species for the genus is *Candidatus* Appicana susicitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Appicella detoritio sp. nov.

Candidatus Appicella detoritio (NL. fem. n. *detoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-104 sp002084435*. The type genome for the species is the GenBank assembly GCA_002084435.1. The GC content of the type genome is 29.29 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Appicella gen. nov.

Candidatus Appicella (NL. fem. n. *Appicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-104*. The type species for the genus is *Candidatus* Appicella detoritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Appicella regigitrix sp. nov.

Candidatus Appicella regigitrix (NL. fem. n. *regigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-104 sp003245625*. The type genome for the species is the GenBank assembly GCA_003245625.1. The GC content of the type genome is 37.17 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Appicia absoricella sp. nov.

Candidatus Appicia absoricella (NL. fem. n. *absoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRJ01 sp003175985*. The type genome for the species is the GenBank assembly GCA_003175985.1. The GC content of the type genome is 60.09 % and the genome length is 7.44 Mbp.

Description of *Candidatus* Appicia gen. nov.

Candidatus Appicia (NL. fem. n. *Appicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRJ01*. The type species for the genus is *Candidatus* Appicia absoricella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appicida bulapifica sp. nov.

Candidatus Appicida bulapifica (NL. fem. n. *bulapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUF01 sp009785875*. The type genome for the species is the GenBank assembly GCA_009785875.1. The GC content of the type genome is 32.39 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Appicida gen. nov.

Candidatus Appicida (NL. fem. n. *Appicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQUF01*. The type species for the genus is *Candidatus* Appicida bulapifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appicosa affanitica sp. nov.

Candidatus Appicosa affanitica (NL. fem. n. *affanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAKR01 sp003343705*. The type genome for the species is the GenBank assembly GCA_003343705.1. The GC content of the type genome is 36.45 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Appicosa gen. nov.

Candidatus Appicosa (NL. fem. n. *Appicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAKR01*. The type species for the genus is *Candidatus* Appicosa affanitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA644*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisanaceae.

Description of *Candidatus* Appicula inoccimonia sp. nov.

Candidatus Appicula inoccimonia (NL. fem. n. *inoccimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZT01 sp009692185*. The type genome for the species is the GenBank assembly GCA_009692185.1. The GC content of the type genome is 66.42 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Appicula gen. nov.

Candidatus Appicula (NL. fem. n. *Appicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SHZT01*. The type species for the genus is *Candidatus* Appicula inoccimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Apporana decometta sp. nov.

Candidatus Apporana decometta (NL. fem. n. *decometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-57-11 sp001795165*. The type genome for the species is the GenBank assembly GCA_001795165.1. The GC content of the type genome is 56.35 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Apporana gen. nov.

Candidatus Apporana (NL. fem. n. *Apporana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-57-11*. The type species for the genus is *Candidatus* Apporana decometta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Apporella ampenicella sp. nov.

Candidatus Apporella ampenicella (NL. fem. n. *ampenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFLI01 sp009885105*. The type genome for the species is the GenBank assembly GCA_009885105.1. The GC content of the type genome is 49.68 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Apporella gen. nov.

Candidatus Apporella (NL. fem. n. *Apporella* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFLI01*. The type species for the genus is *Candidatus* Apporella ampenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apporida fidenastra sp. nov.

Candidatus Apporida fidenastra (NL. fem. n. *fidenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXZD01 sp005788065*. The type genome for the species is the GenBank assembly GCA_005788065.1. The GC content of the type genome is 58.23 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Apporida gen. nov.

Candidatus Apporida (NL. fem. n. *Apporida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXZD01*. The type species for the genus is *Candidatus* Apporida fidenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apporosa effarisca sp. nov.

Candidatus Apporosa effarisca (NL. fem. n. *effarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGZG01 sp002840115*. The type genome for the species is the GenBank assembly GCA_002840115.1. The GC content of the type genome is 55.02 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Apporosa gen. nov.

Candidatus Apporosa (NL. fem. n. *Apporosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGZG01*. The type species for the genus is *Candidatus* Apporosa effarisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apporula pinifago sp. nov.

Candidatus Apporula pinifago (NL. fem. n. *pinifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MnTg02 sp008974985*. The type genome for the species is the GenBank assembly GCA_008974985.1. The GC content of the type genome is 54.58 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Apporula gen. nov.

Candidatus Apporula (NL. fem. n. *Apporula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MnTg02*. The type species for the genus is *Candidatus* Apporula pinifago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apposana caravibula sp. nov.

Candidatus Apposana caravibula (NL. fem. n. *caravibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNJF01 sp014382695*. The type genome for the species is the GenBank assembly GCA_014382695.1. The GC content of the type genome is 49.69 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Apposana gen. nov.

Candidatus Apposana (NL. fem. n. *Apposana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNJF01*. The type species for the genus is *Candidatus* Apposana caravibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-001735895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siticanaceae.

Description of *Candidatus* Apposaria coturilega sp. nov.

Candidatus Apposaria coturilega (NL. fem. n. *coturilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FKL33 sp005222915*. The type genome for the species is the GenBank assembly RS_GCF_005222915.1. The GC content of the type genome is 62.01 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Apposaria gen. nov.

Candidatus Apposaria (NL. fem. n. *Apposaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FKL33*. The type species for the genus is *Candidatus* Apposaria coturilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apposaria encolentia sp. nov.

Candidatus Apposaria encolentia (NL. fem. n. *encolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FKL33 sp014158035*. The type genome for the species is the GenBank assembly RS_GCF_014158035.1. The GC content of the type genome is 62.54 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Apposella episcitrix sp. nov.

Candidatus Apposella episcitrix (NL. fem. n. *episcitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACXMZ01 sp902768975*. The type genome for the species is the GenBank assembly GCA_902768975.1. The GC content of the type genome is 53.35 %

and the genome length is 1.89 Mbp.

Description of *Candidatus* Apposella gen. nov.

Candidatus Apposella (NL. fem. n. *Apposella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACXMZ01*. The type species for the genus is *Candidatus* Apposella episcitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apposella genocugo sp. nov.

Candidatus Apposella genocugo (NL. fem. n. *genocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACXMZ01 sp902767025*. The type genome for the species is the GenBank assembly GCA_902767025.1. The GC content of the type genome is 63.81 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Apposida adoscago sp. nov.

Candidatus Apposida adoscago (NL. fem. n. *adoscago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHUZ01 sp009694415*. The type genome for the species is the GenBank assembly GCA_009694415.1. The GC content of the type genome is 58.2 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Apposida gen. nov.

Candidatus Apposida (NL. fem. n. *Apposida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHUZ01*. The type species for the genus is *Candidatus* Apposida adoscago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosarellaceae.

Description of *Candidatus* Appososa sicarousia sp. nov.

Candidatus Appososa sicarousia (NL. fem. n. *sicarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHK01 sp013151835*. The type genome for the species is the GenBank assembly GCA_013151835.1. The GC content of the type genome is 49.88 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Appososa gen. nov.

Candidatus Appososa (NL. fem. n. *Appososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHK01*. The type species for the genus is *Candidatus* Appososa sicarousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarulaceae.

Description of *Candidatus* Apposula cacomibula sp. nov.

Candidatus Apposula cacomibula (NL. fem. n. *cacomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTBCD1 sp005883765*. The type genome for the species is the GenBank assembly GCA_005883765.1. The GC content of the type genome is 41.8 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Apposula gen. nov.

Candidatus Apposula (NL. fem. n. *Apposula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTBCD1*. The type species for the genus is *Candidatus* Apposula cacomibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apposula hexamitrix sp. nov.

Candidatus Apposula hexamitrix (NL. fem. n. *hexamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTBCD1 sp002066995*. The type genome for the species is the GenBank assembly GCA_002066995.1. The GC content of the type genome is 40.99 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Appugana cadurisca sp. nov.

Candidatus Appugana cadurisca (NL. fem. n. *cadurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-611 sp003249215*. The type genome for the species is the GenBank assembly GCA_003249215.1. The GC content of the type genome is 66.9 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Appugana gen. nov.

Candidatus Appugana (NL. fem. n. *Appugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-611*. The type species for the genus is *Candidatus* Appugana cadurisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Appugaria abligigena sp. nov.

Candidatus Appugaria abligigena (NL. fem. n. *abligigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCD01 sp013288305*. The type genome for the species is the GenBank assembly GCA_013288305.1. The GC content of the type genome is 56.28 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Appugaria gen. nov.

Candidatus Appugaria (NL. fem. n. *Appugaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCD01*. The type species for the genus is *Candidatus* Appugaria abligigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXRF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatariaceae.

Description of *Candidatus* Appugella redacitio sp. nov.

Candidatus Appugella redacitio (NL. fem. n. *redacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7584 sp002477805*. The type genome for the species is the GenBank assembly GCA_002477805.1. The GC content of the type genome is 32.32 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Appugella gen. nov.

Candidatus Appugella (NL. fem. n. *Appugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7584*. The type species for the genus is *Candidatus* Appugella redacitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Appugia ridibimonia sp. nov.

Candidatus Appugia ridibimonia (NL. fem. n. *ridibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTO01 sp009923375*. The type genome for the species is the GenBank assembly GCA_009923375.1. The GC content of the type genome is 59.49 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Appugia gen. nov.

Candidatus Appugia (NL. fem. n. *Appugia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFTO01*. The type species for the genus is *Candidatus* Appugia ridibimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5976*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulellaceae.

Description of *Candidatus* Appugia tabitivita sp. nov.

Candidatus Appugia tabitivita (NL. fem. n. *tabitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTO01 sp009918865*. The type genome for the species is the GenBank assembly GCA_009918865.1. The GC content of the type genome is 57.61 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Appugida funamessa sp. nov.

Candidatus Appugida funamessa (NL. fem. n. *funamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-99 sp003553225*. The type genome for the species is the GenBank assembly GCA_003553225.1. The GC content of the type genome is 40.04 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Appugida gen. nov.

Candidatus Appugida (NL. fem. n. *Appugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-99*. The type species for the genus is *Candidatus* Appugida funamessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSED10-376*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerevulaceae.

Description of *Candidatus* Appugosa adgubetta sp. nov.

Candidatus Appugosa adgubetta (NL. fem. n. *adgubetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOH01 sp009908925*. The type genome for the species is the GenBank assembly GCA_009908925.1. The GC content of the type genome is 62.85 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Appugosa gen. nov.

Candidatus Appugosa (NL. fem. n. *Appugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAOH01*. The type species for the genus is *Candidatus* Appugosa adgubetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWMO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifosaceae.

Description of *Candidatus* Appugosa cnestitoga sp. nov.

Candidatus Appugosa cnestitoga (NL. fem. n. *cnestitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOH01 sp009908735*. The type genome for the species is the GenBank assembly GCA_009908735.1. The GC content of the type genome is 61.21 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Appugula apsolitio sp. nov.

Candidatus Appugula apsolitio (NL. fem. n. *apsolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-727 sp003154635*. The type genome for the species is the GenBank assembly GCA_003154635.1. The GC content of the type genome is 59.24 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Appugula gen. nov.

Candidatus Appugula (NL. fem. n. *Appugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-727*. The type species for the genus is *Candidatus* Appugula apsolitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Appugulaceae.

Description of *Candidatus* Appugulaceae fam. nov.

Candidatus Appugulaceae (NL. fem. n. *Appugulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-727.* The type genus for the taxon is *Candidatus* Appugula .

According to the original version of GTDB R06-RS202, this family belongs to the order *Fen-727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Appugulales.

Description of *Candidatus* Appugulales ord. nov.

Candidatus Appugulales (NL. fem. n. *Appugulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-727.* The type genus for the taxon is *Candidatus* Appugula .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-13-55-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Salubiae.

Description of *Candidatus* Aprararia infucitudo sp. nov.

Candidatus Aprararia infucitudo (NL. fem. n. *infucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA699 sp002298915*. The type genome for the species is the GenBank assembly GCA_002298915.1. The GC content of the type genome is 49.04 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Aprararia gen. nov.

Candidatus Aprararia (NL. fem. n. *Aprararia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA699*. The type species for the genus is *Candidatus* Aprararia infucitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apraria divulax sp. nov.

Candidatus Apraria divulax (NL. fem. n. *divulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECM01 sp007694035*. The type genome for the species is the GenBank assembly GCA_007694035.1. The GC content of the type genome is 51.02 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Apraria gen. nov.

Candidatus Apraria (NL. fem. n. *Apraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECM01*. The type species for the genus is *Candidatus* Apraria divulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapicellaceae.

Description of *Candidatus* Aprarida obsolibula sp. nov.

Candidatus Aprarida obsolibula (NL. fem. n. *obsolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRI01 sp005793615*. The type genome for the species is the GenBank assembly GCA_005793615.1. The GC content of the type genome is 51.79 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Aprarida gen. nov.

Candidatus Aprarida (NL. fem. n. *Aprarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXRI01*. The type species for the genus is *Candidatus* Aprarida obsolibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprarosa homolilega sp. nov.

Candidatus Aprarosa homolilega (NL. fem. n. *homolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1601 sp900553335*. The type genome for the species is the GenBank assembly GCA_900553335.1. The GC content of the type genome is 39.41 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Aprarosa gen. nov.

Candidatus Aprarosa (NL. fem. n. *Aprarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1601*. The type species for the genus is *Candidatus* Aprarosa homolilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprarosa peridiforma sp. nov.

Candidatus Aprarosa peridiforma (NL. fem. n. *peridiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1601 sp900545345*. The type genome for the species is the GenBank assembly GCA_900545345.1. The GC content of the type genome is 36.06 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Aprarula antipicula sp. nov.

Candidatus Aprarula antipicula (NL. fem. n. *antipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *J013 sp003697125*. The type genome for the species is the GenBank assembly GCA_003697125.1. The GC content of the type genome is 71.39 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Aprarula gen. nov.

Candidatus Aprarula (NL. fem. n. *Aprarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J013*. The type species for the genus is *Candidatus* Aprarula antipicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprarula megalitrix sp. nov.

Candidatus Aprarula megalitrix (NL. fem. n. *megalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J013 sp003695135*. The type genome for the species is the GenBank assembly GCA_003695135.1. The GC content of the type genome is 68.06 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Aprucana homogastra sp. nov.

Candidatus Aprucana homogastra (NL. fem. n. *homogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686365 sp002686365*. The type genome for the species is the GenBank assembly GCA_002686365.1. The GC content of the type genome is 43.24 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Aprucana gen. nov.

Candidatus Aprucana (NL. fem. n. *Aprucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686365*. The type species for the genus is *Candidatus* Aprucana homogastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Aprucaria cilibastra sp. nov.

Candidatus Aprucaria cilibastra (NL. fem. n. *cilibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2016 sp900557185*. The type genome for the species is the GenBank assembly GCA_900557185.1. The GC content of the type genome is 30.71 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Aprucaria gen. nov.

Candidatus Aprucaria (NL. fem. n. *Aprucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2016*. The type species for the genus is *Candidatus* Aprucaria cilibastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Aprucia solivibula sp. nov.

Candidatus Aprucia solivibula (NL. fem. n. *solivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PMMR1 sp000733915*. The type genome for the species is the GenBank assembly RS_GCF_000733915.1. The GC content of the type genome is 71.09 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Aprucia gen. nov.

Candidatus Aprucia (NL. fem. n. *Aprucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PMMR1*. The type species for the genus is *Candidatus* Aprucia solivibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprucida ficulitrix sp. nov.

Candidatus Aprucida ficulitrix (NL. fem. n. *ficulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *URHD0088 sp000518365*. The type genome for the species is the GenBank assembly RS_GCF_000518365.1. The GC content of the type genome is 66.69 % and the genome length is 6.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Aprucida gen. nov.

Candidatus Aprucida (NL. fem. n. *Aprucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *URHD0088*. The type species for the genus is *Candidatus* Aprucida ficulitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprucula arremivita sp. nov.

Candidatus Aprucula arremivita (NL. fem. n. *arremivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX5 sp003577005*. The type genome for the species is the GenBank assembly GCA_003577005.1. The GC content of the type genome is 59.4 % and the genome length is 9.37 Mbp.

Description of *Candidatus* Aprucula gen. nov.

Candidatus Aprucula (NL. fem. n. *Aprucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFX5*. The type species for the genus is *Candidatus* Aprucula arremivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprugaria catobitio sp. nov.

Candidatus Aprugaria catobitio (NL. fem. n. *catobitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2264 sp002347475*. The type genome for the species is the GenBank assembly GCA_002347475.1. The GC content of the type genome is 44.68 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Aprugaria gen. nov.

Candidatus Aprugaria (NL. fem. n. *Aprugaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2264*. The type species for the genus is *Candidatus* Aprugaria catobitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprugella ammixitudo sp. nov.

Candidatus Aprugella ammixitudo (NL. fem. n. *ammixitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2700405 sp014239895*. The type genome for the species is the GenBank assembly GCA_014239895.1. The GC content of the type genome is 29.78 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Aprugella gen. nov.

Candidatus Aprugella (NL. fem. n. *Aprugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2700405*. The type species for the genus is *Candidatus* Aprugella ammixitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprugella catabitrix sp. nov.

Candidatus Aprugella catabitrix (NL. fem. n. *catabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2700405 sp004213965*. The type genome for the species is the GenBank assembly GCA_004213965.1. The GC content of the type genome is 29.72 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Aprugella corocousia sp. nov.

Candidatus Aprugella corocousia (NL. fem. n. *corocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2700405 sp002700405*. The type genome for the species is the GenBank assembly GCA_002700405.1. The GC content of the type genome is 29.97 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Aprugella maxumitura sp. nov.

Candidatus Aprugella maxumitura (NL. fem. n. *maxumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2700405 sp902512065*. The type genome for the species is the GenBank assembly GCA_902512065.1. The GC content of the type genome is 30.1 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Aprugida actaritia sp. nov.

Candidatus Aprugida actaritia (NL. fem. n. *actaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4736 sp002404015*. The type genome for the species is the GenBank assembly GCA_002404015.1. The GC content of the type genome is 69.48 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Aprugida gen. nov.

Candidatus Aprugida (NL. fem. n. *Aprugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4736*. The type species for the genus is *Candidatus* Aprugida actaritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aprugula enigmedo sp. nov.

Candidatus Aprugula enigmedo (NL. fem. n. *enigmedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-9 sp003599535*. The type genome for the species is the GenBank assembly GCA_003599535.1. The GC content of the type genome is 62.97 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Aprugula gen. nov.

Candidatus Aprugula (NL. fem. n. *Aprugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-9*. The type species for the genus is *Candidatus* Aprugula enigmedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-LCP*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacosaceae.

Description of *Candidatus* Apsegana citivousia sp. nov.

Candidatus Apsegana citivousia (NL. fem. n. *citivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720195 sp002720195*. The type genome for the species is the GenBank assembly GCA_002720195.1. The GC content of the type genome is 33.02 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Apsegana gen. nov.

Candidatus Apsegana (NL. fem. n. *Apsegana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720195*. The type species for the genus is *Candidatus* Apsegana citivousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-002716945. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Apsegana monogilenta sp. nov.

Candidatus Apsegana monogilenta (NL. fem. n. *monogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720195 sp902628335*. The type genome for the species is the GenBank assembly GCA_902628335.1. The GC content of the type genome is 33.49 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Apsegana virecimonia sp. nov.

Candidatus Apsegana virecimonia (NL. fem. n. *virecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720195 sp902632305*. The type genome for the species is the GenBank assembly GCA_902632305.1. The GC content of the type genome is 33.06 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Apsegaria fefeledo sp. nov.

Candidatus Apsegaria fefeledo (NL. fem. n. *fefeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKE01 sp003487005*. The type genome for the species is the GenBank assembly GCA_003487005.1. The GC content of the type genome is 64.19 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Apsegaria gen. nov.

Candidatus Apsegaria (NL. fem. n. *Apsegaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNKE01*. The type species for the genus is *Candidatus* Apsegaria fefeledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsegaria inredugo sp. nov.

Candidatus Apsegaria inredugo (NL. fem. n. *inredugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKE01 sp013822245*. The type genome for the species is the GenBank assembly GCA_013822245.1. The GC content of the type genome is 64.46 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Apsegella remedilenta sp. nov.

Candidatus Apsegella remedilenta (NL. fem. n. *remedilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CCP2 sp003003615*. The type genome for the species is the GenBank assembly RS_GCF_003003615.1. The GC content of the type genome is 48.45 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Apsegella gen. nov.

Candidatus Apsegella (NL. fem. n. *Apsegella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CCP2*. The type species for the genus is *Candidatus* Apsegella remedilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsegia divoletta sp. nov.

Candidatus Apsegia divoletta (NL. fem. n. *divoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707495 sp002707495*. The type genome for the species is the GenBank assembly GCA_002707495.1. The GC content of the type genome is 37.46 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Apsegia gen. nov.

Candidatus Apsegia (NL. fem. n. *Apsegia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707495*. The type species for the genus is *Candidatus* Apsegia divoletta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsegida edissitica sp. nov.

Candidatus Apsegida edissitica (NL. fem. n. *edissitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BHEP01 sp003851245*. The type genome for the species is the GenBank assembly GCA_003851245.1. The GC content of the type genome is 39.67 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Apsegida gen. nov.

Candidatus Apsegida (NL. fem. n. *Apsegida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BHEP01*. The type species for the genus is *Candidatus* Apsegida edissitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsegosa denavisca sp. nov.

Candidatus Apsegosa denavisca (NL. fem. n. *denavisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-894 sp005884685*. The type genome for the species is the GenBank assembly GCA_005884685.1. The GC content of the type genome is 65.56 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Apsegosa gen. nov.

Candidatus Apsegosa (NL. fem. n. *Apsegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-894*. The type species for the genus is *Candidatus* Apsegosa

denavisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsegosa hexagastra sp. nov.

Candidatus Apsegosa hexagastra (NL. fem. n. *hexagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-894 sp003140315*. The type genome for the species is the GenBank assembly GCA_003140315.1. The GC content of the type genome is 64.36 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Apsegula monocitura sp. nov.

Candidatus Apsegula monocitura (NL. fem. n. *monocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPA01 sp011046795*. The type genome for the species is the GenBank assembly GCA_011046795.1. The GC content of the type genome is 63.39 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Apsegula gen. nov.

Candidatus Apsegula (NL. fem. n. *Apsegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPA01*. The type species for the genus is *Candidatus* Apsegula monocitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp1-AA112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipanaceae.

Description of *Candidatus* Apsenana semoditudo sp. nov.

Candidatus Apsenana semoditudo (NL. fem. n. *semoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QEYE01 sp003122205*. The type genome for the species is the

GenBank assembly RS_GCF_003122205.1. The GC content of the type genome is 65.99 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Apsenana gen. nov.

Candidatus Apsenana (NL. fem. n. *Apsenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QEYE01*. The type species for the genus is *Candidatus* Apsenana semoditudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsenaria betacatica sp. nov.

Candidatus Apsenaria betacatica (NL. fem. n. *betacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOH01 sp012520375*. The type genome for the species is the GenBank assembly GCA_012520375.1. The GC content of the type genome is 59.59 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Apsenaria gen. nov.

Candidatus Apsenaria (NL. fem. n. *Apsenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYOH01*. The type species for the genus is *Candidatus* Apsenaria betacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Apsenella acrufago sp. nov.

Candidatus Apsenella acrufago (NL. fem. n. *acrufago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUE01 sp012521345*. The type genome for the species is the GenBank assembly GCA_012521345.1. The GC content of the type genome is 52.92 %

and the genome length is 2.06 Mbp.

Description of *Candidatus* Apsenella gen. nov.

Candidatus Apsenella (NL. fem. n. *Apsenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUE01*. The type species for the genus is *Candidatus* Apsenella acrufago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsenella fibicitia sp. nov.

Candidatus Apsenella fibicitia (NL. fem. n. *fibicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUE01 sp012841735*. The type genome for the species is the GenBank assembly GCA_012841735.1. The GC content of the type genome is 52.88 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Apsenella impigastra sp. nov.

Candidatus Apsenella impigastra (NL. fem. n. *impigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUE01 sp012522075*. The type genome for the species is the GenBank assembly GCA_012522075.1. The GC content of the type genome is 51.65 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Apsenia anarrentia sp. nov.

Candidatus Apsenia anarrentia (NL. fem. n. *anarrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWG01 sp013350285*. The type genome for the species is the GenBank assembly GCA_013350285.1. The GC content of the type genome is 26.32 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Apsenia gen. nov.

Candidatus Apsenia (NL. fem. n. *Apsenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWG01*. The type species for the genus is *Candidatus* Apsenia anarrentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6164*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Palifellaceae.

Description of *Candidatus* Apsenida inlusitia sp. nov.

Candidatus Apsenida inlusitia (NL. fem. n. *inlusitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKGP01 sp011043545*. The type genome for the species is the GenBank assembly RS_GCF_011043545.1. The GC content of the type genome is 69.09 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Apsenida gen. nov.

Candidatus Apsenida (NL. fem. n. *Apsenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKGP01*. The type species for the genus is *Candidatus* Apsenida inlusitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsenosa denomitio sp. nov.

Candidatus Apsenosa denomitio (NL. fem. n. *denomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-33-9 sp002785065*. The type genome for the species is the GenBank assembly GCA_002785065.1. The GC content of the type genome is 33.4 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Apsenosa gen. nov.

Candidatus Apsenosa (NL. fem. n. *Apsenosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-33-9*. The type species for the genus is *Candidatus* Apsenosa denomitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Apsenula incucigena sp. nov.

Candidatus Apsenula incucigena (NL. fem. n. *incucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEC069 sp004514475*. The type genome for the species is the GenBank assembly RS_GCF_004514475.1. The GC content of the type genome is 55.69 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Apsenula gen. nov.

Candidatus Apsenula (NL. fem. n. *Apsenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEC069*. The type species for the genus is *Candidatus* Apsenula incucigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsimana supelimonia sp. nov.

Candidatus Apsimana supelimonia (NL. fem. n. *supelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJZ01 sp011524615*. The type genome for the species is the GenBank assembly GCA_011524615.1. The GC content of the type genome is 49.93 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Apsimana gen. nov.

Candidatus Apsimana (NL. fem. n. *Apsimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJZ01*. The type species for the genus is *Candidatus* Apsimana supelimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsimaria cetaretta sp. nov.

Candidatus Apsimaria cetaretta (NL. fem. n. *cetaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-10-B sp001818835*. The type genome for the species is the GenBank assembly GCA_001818835.1. The GC content of the type genome is 45.43 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Apsimaria gen. nov.

Candidatus Apsimaria (NL. fem. n. *Apsimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-10-B*. The type species for the genus is *Candidatus* Apsimaria cetaretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10009*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibellaceae.

Description of *Candidatus* Apsimia abascilenta sp. nov.

Candidatus Apsimia abascilenta (NL. fem. n. *abascilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-968 sp013287545*. The type genome for the species is the GenBank assembly GCA_013287545.1. The GC content of the type genome is 35.16 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Apsimia gen. nov.

Candidatus Apsimia (NL. fem. n. *Apsimia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-968*. The type species for the genus is *Candidatus* Apsimia abascilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-17BO*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogariaceae.

Description of *Candidatus* Apsimia crabratica sp. nov.

Candidatus Apsimia crabratica (NL. fem. n. *crabratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-968 sp903970545*. The type genome for the species is the GenBank assembly GCA_903970545.1. The GC content of the type genome is 36.56 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Apsimia deculisca sp. nov.

Candidatus Apsimia deculisca (NL. fem. n. *deculisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-968 sp003153315*. The type genome for the species is the GenBank assembly GCA_003153315.1. The GC content of the type genome is 36.51 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Apsimia depocitura sp. nov.

Candidatus Apsimia depocitura (NL. fem. n. *depocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-968 sp903923915*. The type genome for the species is the GenBank assembly GCA_903923915.1. The GC content of the type genome is 35.01 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Apsimia horomago sp. nov.

Candidatus Apsimia horomago (NL. fem. n. *horomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-968 sp013288015*. The type genome for the species is the GenBank assembly GCA_013288015.1. The GC content of the type genome is 35.28 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Apsimida colapago sp. nov.

Candidatus Apsimida colapago (NL. fem. n. *colapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10438 sp003488525*. The type genome for the species is the GenBank assembly GCA_003488525.1. The GC content of the type genome is 57.7 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Apsimida gen. nov.

Candidatus Apsimida (NL. fem. n. *Apsimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10438*. The type species for the genus is *Candidatus* Apsimida colapago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsimida eclipetta sp. nov.

Candidatus Apsimida eclipetta (NL. fem. n. *eclipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10438 sp903939735*. The type genome for the species is the GenBank assembly GCA_903939735.1. The GC content of the type genome is 54.27 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Apsimida rubigitia sp. nov.

Candidatus Apsimida rubigitia (NL. fem. n. *rubigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10438 sp002426145*. The type genome for the species is the GenBank assembly GCA_002426145.1. The GC content of the type genome is 53.65 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Apsimosa genufitas sp. nov.

Candidatus Apsimosa genufitas (NL. fem. n. *genufitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LiPW-41 sp007375535*. The type genome for the species is the GenBank assembly GCA_007375535.1. The GC content of the type genome is 37.31 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Apsimosa gen. nov.

Candidatus Apsimosa (NL. fem. n. *Apsimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LiPW-41*. The type species for the genus is *Candidatus* Apsimosa genufitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Apsocana obnunitas sp. nov.

Candidatus Apsocana obnunitas (NL. fem. n. *obnunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RXIW01 sp003989065*. The type genome for the species is the GenBank assembly GCA_003989065.1. The GC content of the type genome is 61.51 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Apsocana gen. nov.

Candidatus Apsocana (NL. fem. n. *Apsocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RXIW01*. The type species for the genus is *Candidatus* Apsocana obnunitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsocaria visifitrix sp. nov.

Candidatus Apsocaria visifitrix (NL. fem. n. *visifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSY01 sp007130145*. The type genome for the species is the GenBank assembly GCA_007130145.1. The GC content of the type genome is 55.82 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Apsocaria gen. nov.

Candidatus Apsocaria (NL. fem. n. *Apsocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSY01*. The type species for the genus is *Candidatus* Apsocaria visifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8153*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detosidaceae.

Description of *Candidatus* Apsocella derunitura sp. nov.

Candidatus Apsocella derunitura (NL. fem. n. *derunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKJI01 sp007115995*. The type genome for the species is the GenBank assembly GCA_007115995.1. The GC content of the type genome is 33.38 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Apsocella gen. nov.

Candidatus Apsocella (NL. fem. n. *Apsocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKJI01*. The type species for the genus is *Candidatus* Apsocella derunitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

X112. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Apsocia abluvousia sp. nov.

Candidatus Apsocia abluvousia (NL. fem. n. *abluvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKD01 sp012522555*. The type genome for the species is the GenBank assembly GCA_012522555.1. The GC content of the type genome is 52.84 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Apsocia gen. nov.

Candidatus Apsocia (NL. fem. n. *Apsocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKD01*. The type species for the genus is *Candidatus* Apsocia abluvousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicellaceae.

Description of *Candidatus* Apsocia antimessa sp. nov.

Candidatus Apsocia antimessa (NL. fem. n. *antimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKD01 sp011371645*. The type genome for the species is the GenBank assembly GCA_011371645.1. The GC content of the type genome is 61.08 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Apsocia antirilega sp. nov.

Candidatus Apsocia antirilega (NL. fem. n. *antirilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKD01 sp011333675*. The type genome for the species is the

GenBank assembly GCA_011333675.1. The GC content of the type genome is 53.24 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Apsocia diluvimonia sp. nov.

Candidatus Apsocia diluvimonia (NL. fem. n. *diluvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKD01 sp012522575*. The type genome for the species is the GenBank assembly GCA_012522575.1. The GC content of the type genome is 52.66 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Apsocida aspiliforma sp. nov.

Candidatus Apsocida aspiliforma (NL. fem. n. *aspiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-10 sp001792465*. The type genome for the species is the GenBank assembly GCA_001792465.1. The GC content of the type genome is 43.61 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Apsocida gen. nov.

Candidatus Apsocida (NL. fem. n. *Apsocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-44-10*. The type species for the genus is *Candidatus* Apsocida aspiliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Apsocosa anastibula sp. nov.

Candidatus Apsocosa anastibula (NL. fem. n. *anastibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Ac37b sp000746585*. The type genome for the species is the GenBank assembly RS_GCF_000746585.1. The GC content of the type genome is 30.77 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Amblyomma Tick".

Description of *Candidatus* Apsocosa gen. nov.

Candidatus Apsocosa (NL. fem. n. *Apsocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ac37b*. The type species for the genus is *Candidatus* Apsocosa anastibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsocula milipousia sp. nov.

Candidatus Apsocula milipousia (NL. fem. n. *milipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKI01 sp009885665*. The type genome for the species is the GenBank assembly GCA_009885665.1. The GC content of the type genome is 46.43 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Apsocula gen. nov.

Candidatus Apsocula (NL. fem. n. *Apsocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKI01*. The type species for the genus is *Candidatus* Apsocula milipousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Apsolana notacetta sp. nov.

Candidatus Apsolana notacetta (NL. fem. n. *notacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DSWF01 sp011368195*. The type genome for the species is the GenBank assembly GCA_011368195.1. The GC content of the type genome is 57.47 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Apsolana gen. nov.

Candidatus Apsolana (NL. fem. n. *Apsolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWF01*. The type species for the genus is *Candidatus* Apsolana notacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Apsolaria ecnepigena sp. nov.

Candidatus Apsolaria ecnepigena (NL. fem. n. *ecnepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBOC01 sp005877655*. The type genome for the species is the GenBank assembly GCA_005877655.1. The GC content of the type genome is 56.56 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Apsolaria gen. nov.

Candidatus Apsolaria (NL. fem. n. *Apsolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBOC01*. The type species for the genus is *Candidatus* Apsolaria ecnepigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarellaceae.

Description of *Candidatus* Apsolella invinitura sp. nov.

Candidatus Apsolella invinitura (NL. fem. n. *invinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA996 sp002291955*. The type genome for the species is the GenBank assembly GCA_002291955.1. The GC content of the type genome is 70.28 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Apsolella gen. nov.

Candidatus Apsolella (NL. fem. n. *Apsolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA996*. The type species for the genus is *Candidatus* Apsolella invinitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsolia diludetta sp. nov.

Candidatus Apsolia diludetta (NL. fem. n. *diludetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRN01 sp014534425*. The type genome for the species is the GenBank assembly GCA_014534425.1. The GC content of the type genome is 56.68 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Apsolia gen. nov.

Candidatus Apsolia (NL. fem. n. *Apsolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRN01*. The type species for the genus is *Candidatus* Apsolia diludetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsolida altivibula sp. nov.

Candidatus Apsolida altivibula (NL. fem. n. *altivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJV01 sp002070275*. The type genome for the species is the GenBank assembly GCA_002070275.1. The GC content of the type genome is 52.48 %

and the genome length is 3.51 Mbp.

Description of *Candidatus* Apsolida gen. nov.

Candidatus Apsolida (NL. fem. n. *Apsolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJV01*. The type species for the genus is *Candidatus* Apsolida altivibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Apsolida inpericella sp. nov.

Candidatus Apsolida inpericella (NL. fem. n. *inpericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJV01 sp012522755*. The type genome for the species is the GenBank assembly GCA_012522755.1. The GC content of the type genome is 51.64 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Apsolosa negidiforma sp. nov.

Candidatus Apsolosa negidiforma (NL. fem. n. *negidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862225 sp002862225*. The type genome for the species is the GenBank assembly GCA_002862225.1. The GC content of the type genome is 53.47 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Apsolosa gen. nov.

Candidatus Apsolosa (NL. fem. n. *Apsolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2862225*. The type species for the genus is *Candidatus* Apsolosa negidiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsolula allobago sp. nov.

Candidatus Apsolula allobago (NL. fem. n. *allobago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-97 sp003553245*. The type genome for the species is the GenBank assembly GCA_003553245.1. The GC content of the type genome is 47.42 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Apsolula gen. nov.

Candidatus Apsolula (NL. fem. n. *Apsolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1Sed10-97*. The type species for the genus is *Candidatus* Apsolula allobago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Apsorana exorbicula sp. nov.

Candidatus Apsorana exorbicula (NL. fem. n. *exorbicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-41-28 sp002773755*. The type genome for the species is the GenBank assembly GCA_002773755.1. The GC content of the type genome is 40.82 % and the genome length is 0.39 Mbp.

Description of *Candidatus* Apsorana gen. nov.

Candidatus Apsorana (NL. fem. n. *Apsorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-41-28*. The type species for the genus is *Candidatus* Apsorana exorbicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsoraria retunedo sp. nov.

Candidatus Apsoraria retunedo (NL. fem. n. *retunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-F23 sp001644445*. The type genome for the species is the GenBank assembly GCA_001644445.1. The GC content of the type genome is 38.46 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Single cell amplified by WGA-X; soil".

Description of *Candidatus* Apsoraria gen. nov.

Candidatus Apsoraria (NL. fem. n. *Apsoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AG-212-F23*. The type species for the genus is *Candidatus* Apsoraria retunedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Apsoria adculilega sp. nov.

Candidatus Apsoria adculilega (NL. fem. n. *adculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013694595*. The type genome for the species is the GenBank assembly GCA_013694595.1. The GC content of the type genome is 61.58 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Apsoria gen. nov.

Candidatus Apsoria (NL. fem. n. *Apsoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCTI01*. The type species for the genus is *Candidatus* Apsoria adculilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Apsoria adfulicula sp. nov.

Candidatus Apsoria adfulicula (NL. fem. n. *adfulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013812515*. The type genome for the species is the GenBank assembly GCA_013812515.1. The GC content of the type genome is 59.57 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Apsoria catafiforma sp. nov.

Candidatus Apsoria catafiforma (NL. fem. n. *catafiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013697365*. The type genome for the species is the GenBank assembly GCA_013697365.1. The GC content of the type genome is 59.8 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Apsoria dupunugo sp. nov.

Candidatus Apsoria dupunugo (NL. fem. n. *dupunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013695905*. The type genome for the species is the GenBank assembly GCA_013695905.1. The GC content of the type genome is 62.85 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Apsoria immuritoga sp. nov.

Candidatus Apsoria immuritoga (NL. fem. n. *immuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013694945*. The type genome for the species is the GenBank assembly GCA_013694945.1. The GC content of the type genome is 59.23 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Apsoria munifatica sp. nov.

Candidatus Apsoria munifatica (NL. fem. n. *munifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp902805675*. The type genome for the species is the GenBank assembly GCA_902805675.1. The GC content of the type genome is 62.99 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Apsoria orgetigena sp. nov.

Candidatus Apsoria orgetigena (NL. fem. n. *orgetigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCTI01 sp013820755*. The type genome for the species is the GenBank assembly GCA_013820755.1. The GC content of the type genome is 58.91 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Apsorida citipitia sp. nov.

Candidatus Apsorida citipitia (NL. fem. n. *citipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS75 sp900752975*. The type genome for the species is the GenBank assembly RS_GCF_900752975.1. The GC content of the type genome is 30.27 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Apsorida gen. nov.

Candidatus Apsorida (NL. fem. n. *Apsorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS75*. The type species for the genus is *Candidatus* Apsorida citipitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Apsorida inmutessa sp. nov.

Candidatus Apsorida inmutessa (NL. fem. n. *inmutessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS75 sp900538885*. The type genome for the species is the GenBank assembly GCA_900538885.1. The GC content of the type genome is 30.02 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Apsorosa admutilega sp. nov.

Candidatus Apsorosa admutilega (NL. fem. n. *admutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2521 sp002341165*. The type genome for the species is the GenBank assembly GCA_002341165.1. The GC content of the type genome is 38.93 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Apsorosa gen. nov.

Candidatus Apsorosa (NL. fem. n. *Apsorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2521*. The type species for the genus is *Candidatus* Apsorosa admutilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsurana catabitoga sp. nov.

Candidatus Apsurana catabitoga (NL. fem. n. *catabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZFE01 sp012511885*. The type genome for the species is the GenBank assembly GCA_012511885.1. The GC content of the type genome is 62.32 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Apsurana gen. nov.

Candidatus Apsurana (NL. fem. n. *Apsurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZFE01*. The type species for the genus is *Candidatus* Apsurana catabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Lenti-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lavacariaceae.

Description of *Candidatus* Apsuraria invesentia sp. nov.

Candidatus Apsuraria invesentia (NL. fem. n. *invesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINXF01 sp903854795*. The type genome for the species is the GenBank assembly GCA_903854795.1. The GC content of the type genome is 56.35 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Apsuraria gen. nov.

Candidatus Apsuraria (NL. fem. n. *Apsuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINXF01*. The type species for the genus is *Candidatus* Apsuraria invesentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pinacellaceae.

Description of *Candidatus* Apsurella aprugifica sp. nov.

Candidatus Apsurella aprugifica (NL. fem. n. *aprugifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQA01 sp012519495*. The type genome for the species is the GenBank assembly GCA_012519495.1. The GC content of the type genome is 51.68 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Apsurella gen. nov.

Candidatus Apsurella (NL. fem. n. *Apsurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQA01*. The type species for the genus is *Candidatus* Apsurella

aprugifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsuria hibisisca sp. nov.

Candidatus Apsuria hibisisca (NL. fem. n. *hibisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTG01 sp012518075*. The type genome for the species is the GenBank assembly GCA_012518075.1. The GC content of the type genome is 39.0 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Apsuria gen. nov.

Candidatus Apsuria (NL. fem. n. *Apsuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTG01*. The type species for the genus is *Candidatus* Apsuria hibisisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3941*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabulaceae.

Description of *Candidatus* Apsurida ignigifica sp. nov.

Candidatus Apsurida ignigifica (NL. fem. n. *ignigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBC01 sp013288825*. The type genome for the species is the GenBank assembly GCA_013288825.1. The GC content of the type genome is 41.8 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Apsurida gen. nov.

Candidatus Apsurida (NL. fem. n. *Apsurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBC01*. The type species for the genus is *Candidatus* Apsurida ignigifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Apsurosa effuligena sp. nov.

Candidatus Apsurosa effuligena (NL. fem. n. *effuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNV01 sp012798115*. The type genome for the species is the GenBank assembly GCA_012798115.1. The GC content of the type genome is 33.65 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Apsurosa gen. nov.

Candidatus Apsurosa (NL. fem. n. *Apsurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNV01*. The type species for the genus is *Candidatus* Apsurosa effuligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Apsurula irrefugo sp. nov.

Candidatus Apsurula irrefugo (NL. fem. n. *irrefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1322 sp003140915*. The type genome for the species is the GenBank assembly GCA_003140915.1. The GC content of the type genome is 48.89 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Apsurula gen. nov.

Candidatus Apsurula (NL. fem. n. *Apsurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1322*. The type species for the genus is *Candidatus* Apsurula irrefugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

2-01-FULL-45-10. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanulaceae.

Description of *Candidatus* Aquabacter fumifentia sp. nov.

Candidatus Aquabacter fumifentia (NL. fem. n. *fumifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacter sp002279855*. The type genome for the species is the GenBank assembly GCA_002281075.1. The GC content of the type genome is 67.64 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Aquabacter turilitio sp. nov.

Candidatus Aquabacter turilitio (NL. fem. n. *turilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacter sp013911975*. The type genome for the species is the GenBank assembly GCA_013911975.1. The GC content of the type genome is 69.04 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Aquabacterium adculatio sp. nov.

Candidatus Aquabacterium adculatio (NL. fem. n. *adculatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp000768065*. The type genome for the species is the GenBank assembly RS_GCF_000768065.1. The GC content of the type genome is 63.76 % and the genome length is 5.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Aquabacterium bipalitica sp. nov.

Candidatus Aquabacterium bipalitica (NL. fem. n. *bipalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp002339015*. The type genome for the species is the GenBank assembly GCA_002339015.1. The GC content of the type genome is 65.92 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Aquabacterium capiledo sp. nov.

Candidatus Aquabacterium capiledo (NL. fem. n. *capiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp903894125*. The type genome for the species is the GenBank assembly GCA_903894125.1. The GC content of the type genome is 66.81 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Aquabacterium dedigilega sp. nov.

Candidatus Aquabacterium dedigilega (NL. fem. n. *dedigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp004322345*. The type genome for the species is the GenBank assembly GCA_004322345.1. The GC content of the type genome is 69.91 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Aquabacterium denupicella sp. nov.

Candidatus Aquabacterium denupicella (NL. fem. n. *denupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp004297345*. The type genome for the species is the GenBank assembly GCA_004297345.1. The GC content of the type genome is 61.26 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Aquabacterium detorousia sp. nov.

Candidatus Aquabacterium detorousia (NL. fem. n. *detorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp005502875*. The type genome for the species is the GenBank assembly RS_GCF_005502875.1. The GC content of the type genome is 66.07 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Aquabacterium filifibula sp. nov.

Candidatus Aquabacterium filifibula (NL. fem. n. *filifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp001770775*. The type genome for the species is the GenBank assembly GCA_001772175.1. The GC content of the type genome is 64.22 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Aquabacterium gerunifica sp. nov.

Candidatus Aquabacterium gerunifica (NL. fem. n. *gerunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp003933735*. The type genome for the species is the GenBank assembly RS_GCF_003933735.1. The GC content of the type genome is 65.75 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Aquabacterium plostousia sp. nov.

Candidatus Aquabacterium plostousia (NL. fem. n. *plostousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp003963115*. The type genome for the species is the GenBank assembly GCA_003963115.1. The GC content of the type genome is 62.93 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Aquabacterium pudibisca sp. nov.

Candidatus Aquabacterium pudibisca (NL. fem. n. *pudibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp903871865*. The type genome for the species is the GenBank assembly GCA_903871865.1. The GC content of the type genome is 67.52 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Aquabacterium rorifigena sp. nov.

Candidatus Aquabacterium rorifigena (NL. fem. n. *rorifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp004310865*. The type genome for the species is the GenBank assembly RS_GCF_004310865.1. The GC content of the type genome is 65.44 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Aquabacterium suboditio sp. nov.

Candidatus Aquabacterium suboditio (NL. fem. n. *suboditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp014378415*. The type genome for the species is the GenBank assembly GCA_014378415.1. The GC content of the type genome is 62.93 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Aquabacterium vacilastra sp. nov.

Candidatus Aquabacterium vacilastra (NL. fem. n. *vacilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp001770725*. The type genome for the species is the GenBank assembly GCA_001770725.1. The GC content of the type genome is 66.69 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Aquabacterium viburilenta sp. nov.

Candidatus Aquabacterium viburilenta (NL. fem. n. *viburilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium sp013822685*. The type genome for the species is the GenBank assembly GCA_013822685.1. The GC content of the type genome is 63.33 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Aquabacterium almitigena sp. nov.

Candidatus Aquabacterium almitigena (NL. fem. n. *almitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aquabacterium_A sp013266755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013266755.1. The GC content of the type genome is 69.44 % and the genome length is 8.04 Mbp.

Description of *Candidatus* Aquabacterium antimitas sp. nov.

Candidatus Aquabacterium antimitas (NL. fem. n. *antimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp001770815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001770815.1. The GC content of the type genome is 69.43 % and the genome length is 5.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Aquabacterium catafitas sp. nov.

Candidatus Aquabacterium catafitas (NL. fem. n. *catafitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp008933545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_008933545.1. The GC content of the type genome is 69.36 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Aquabacterium inhumousia sp. nov.

Candidatus Aquabacterium inhumousia (NL. fem. n. *inhumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp000244995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000244995.1. The GC content of the type genome is 68.76 % and the genome

length is 5.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Aquabacterium optumilenta sp. nov.

Candidatus Aquabacterium optumilenta (NL. fem. n. *optumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp013360485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013360485.1. The GC content of the type genome is 67.68 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Aquabacterium pericibula sp. nov.

Candidatus Aquabacterium pericibula (NL. fem. n. *pericibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp002198735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002198735.1. The GC content of the type genome is 70.11 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Aquabacterium rurigatio sp. nov.

Candidatus Aquabacterium rurigatio (NL. fem. n. *rurigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquabacterium_A sp010030205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_010030205.1. The GC content of the type genome is 64.69 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Aquamicrobium afranivita sp. nov.

Candidatus Aquamicrobium afranivita (NL. fem. n. *afranivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquamicrobium_A sp003577315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003577315.1. The GC content of the type genome is 69.45 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Aquamicrobium bigemiforma sp. nov.

Candidatus Aquamicrobium bigemiforma (NL. fem. n. *bigemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquamicrobium_A sp008180155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008180155.1. The GC content of the type genome is 64.14 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Aquamicrobium enuntatio sp. nov.

Candidatus Aquamicrobium enuntatio (NL. fem. n. *enuntatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquamicrobium_A sp001014615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001014615.2. The GC content of the type genome is 64.06 % and the genome length is 6.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cave surface layer".

Description of *Candidatus* Aquamicrobium lanifentia sp. nov.

Candidatus Aquamicrobium lanifentia (NL. fem. n. *lanifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquamicrobium_A sp000526635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_000526635.1. The GC content of the type genome is 63.34 % and the genome length is 4.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Aquarickettsia cerifimonia sp. nov.

Candidatus Aquarickettsia cerifimonia (NL. fem. n. *cerifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquarickettsia sp903887235*. The type genome for the species is the GenBank assembly GCA_903903795.1. The GC content of the type genome is 30.91 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Aquaticitalea allacessa sp. nov.

Candidatus Aquaticitalea allacessa (NL. fem. n. *allacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquaticitalea sp002426755*. The type genome for the species is the GenBank assembly GCA_002426755.1. The GC content of the type genome is 36.78 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Aquaticitalea obmuritudo sp. nov.

Candidatus Aquaticitalea obmuritudo (NL. fem. n. *obmuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquaticitalea sp002426015*. The type genome for the species is the GenBank assembly GCA_002426015.1. The GC content of the type genome is 35.21 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Aquicella reforatica sp. nov.

Candidatus Aquicella reforatica (NL. fem. n. *reforatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquicella sp004322325*. The type genome for the species is the GenBank assembly GCA_004322325.1. The GC content of the type genome is 41.55 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Aquicella denomitia sp. nov.

Candidatus Aquicella denomitia (NL. fem. n. *denomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquicella_A sp013286525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013286525.1. The GC content of the type genome is 39.92 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Aquicella excamibra sp. nov.

Candidatus Aquicella excamibra (NL. fem. n. *excamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquicella_A sp013286495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013286495.1. The GC content of the type genome is 39.98 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Aquicoccus depocicella sp. nov.

Candidatus Aquicoccus depocicella (NL. fem. n. *depocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquicoccus sp011389685*. The type genome for the species is the GenBank assembly GCA_011389685.1. The GC content of the type genome is 64.71 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Aquicoccus desulilenta sp. nov.

Candidatus Aquicoccus desulilenta (NL. fem. n. *desulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquicoccus sp001314705*. The type genome for the species is the GenBank assembly GCA_001314705.1. The GC content of the type genome is 63.83 % and the genome length is 3.43 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Aquidulcibacter feficilenta sp. nov.

Candidatus Aquidulcibacter feficilenta (NL. fem. n. *feficilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquidulcibacter sp001602435*. The type genome for the species is the GenBank assembly GCA_003525785.1. The GC content of the type genome is 56.1 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Aquifex affunitrix sp. nov.

Candidatus Aquifex affunitrix (NL. fem. n. *affunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquifex sp013154375*. The type genome for the species is the GenBank assembly GCA_013154375.1. The GC content of the type genome is 57.66 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Aquifex obsolitrix sp. nov.

Candidatus Aquifex obsolitrix (NL. fem. n. *obsolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquifex sp013153455*. The type genome for the species is the GenBank assembly GCA_013153455.1. The GC content of the type genome is 51.58 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Aquifex patibentia sp. nov.

Candidatus Aquifex patibentia (NL. fem. n. *patibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquifex sp003978875*. The type genome for the species is the GenBank assembly GCA_003978875.1. The GC content of the type genome is 38.29 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Aquiflexum lanugibra sp. nov.

Candidatus Aquiflexum lanugibra (NL. fem. n. *lanugibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiflexum sp003316845*. The type genome for the species is the GenBank assembly RS_GCF_003316845.1. The GC content of the type genome is 41.19 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Aquiluna astipilega sp. nov.

Candidatus Aquiluna astipilega (NL. fem. n. *astipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp900100865*. The type genome for the species is the GenBank assembly RS_GCF_900100865.1. The GC content of the type genome is 51.86 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Aquiluna cadavatio sp. nov.

Candidatus Aquiluna cadavatio (NL. fem. n. *cadavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp009704945*. The type genome for the species is the GenBank assembly GCA_009704475.1. The GC content of the type genome is 49.46 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Aquiluna celumimonas sp. nov.

Candidatus Aquiluna celumimonas (NL. fem. n. *celumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp009923455*. The type genome for the species is the GenBank assembly GCA_009923455.1. The GC content of the type genome is 52.67 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Aquiluna cunabitia sp. nov.

Candidatus Aquiluna cunabitia (NL. fem. n. *cunabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp002390305*. The type genome for the species is the GenBank assembly GCA_002385055.1. The GC content of the type genome is 51.33 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Aquiluna feficisca sp. nov.

Candidatus Aquiluna feficisca (NL. fem. n. *feficisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp002333405*. The type genome for the species is the GenBank assembly GCA_002333405.1. The GC content of the type genome is 53.5 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Aquiluna invigedo sp. nov.

Candidatus Aquiluna invigedo (NL. fem. n. *invigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp000257665*. The type genome for the species is the GenBank assembly RS_GCF_000257665.1. The GC content of the type genome is 51.66 % and the genome length is 1.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water".

Description of *Candidatus* Aquiluna ludificula sp. nov.

Candidatus Aquiluna ludificula (NL. fem. n. *ludificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp003149555*. The type genome for the species is the GenBank assembly GCA_003149555.1. The GC content of the type genome is 53.98 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Aquiluna malivastra sp. nov.

Candidatus Aquiluna malivastra (NL. fem. n. *malivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp002478545*. The type genome for the species is the GenBank assembly GCA_002478545.1. The GC content of the type genome is 53.63 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Aquiluna semapisca sp. nov.

Candidatus Aquiluna semapisca (NL. fem. n. *semapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp002479805*. The type genome for the species is the GenBank assembly GCA_002479805.1. The GC content of the type genome is 54.32 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Aquiluna utpotibula sp. nov.

Candidatus Aquiluna utpotibula (NL. fem. n. *utpotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquiluna sp013283855*. The type genome for the species is the GenBank assembly RS_GCF_013283855.1. The GC content of the type genome is 54.83 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Aquimarina acrifigena sp. nov.

Candidatus Aquimarina acrifigena (NL. fem. n. *acrifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp900299505*. The type genome for the species is the GenBank assembly RS_GCF_900299505.1. The GC content of the type genome is 31.92 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Aquimarina adhosousia sp. nov.

Candidatus Aquimarina adhosousia (NL. fem. n. *adhosousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp011524575*. The type genome for the species is the GenBank assembly GCA_011524575.1. The GC content of the type genome is 32.27 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Aquimarina binocimonia sp. nov.

Candidatus Aquimarina binocimonia (NL. fem. n. *binocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp008370685*. The type genome for the species is the GenBank assembly RS_GCF_008370685.1. The GC content of the type genome is 32.98 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Aquimarina catilitas sp. nov.

Candidatus Aquimarina catilitas (NL. fem. n. *catilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp900299535*. The type genome for the species is the GenBank assembly RS_GCF_900299535.1. The GC content of the type genome is 32.32 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Aquimarina cenodatio sp. nov.

Candidatus Aquimarina cenodatio (NL. fem. n. *cenodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp003443675*. The type genome for the species is the GenBank assembly RS_GCF_003443675.1. The GC content of the type genome is 32.94 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Aquimarina cerebilega sp. nov.

Candidatus Aquimarina cerebilega (NL. fem. n. *cerebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp900312745*. The type genome for the species is the GenBank assembly RS_GCF_900299485.1. The GC content of the type genome is 32.89 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Aquimarina epicrimonia sp. nov.

Candidatus Aquimarina epicrimonia (NL. fem. n. *epicrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp900312815*. The type genome for the species is the GenBank assembly RS_GCF_900312815.1. The GC content of the type genome is 33.0 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Aquimarina expalifica sp. nov.

Candidatus Aquimarina expalifica (NL. fem. n. *expalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp002697475*. The type genome for the species is the GenBank assembly GCA_002697475.1. The GC content of the type genome is 34.54 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Aquimarina immemilenta sp. nov.

Candidatus Aquimarina immemilenta (NL. fem. n. *immemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp013365535*. The type genome for the species is the GenBank assembly RS_GCF_013365535.1. The GC content of the type genome is 35.07 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Aquimarina minagitio sp. nov.

Candidatus Aquimarina minagitio (NL. fem. n. *minagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp002846555*. The type genome for the species is the GenBank assembly RS_GCF_002846555.1. The GC content of the type genome is 32.81 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Aquimarina mirifivita sp. nov.

Candidatus Aquimarina mirifivita (NL. fem. n. *mirifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aquimarina sp900299525*. The type genome for the species is the GenBank assembly RS_GCF_900299525.1. The GC content of the type genome is 32.89 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Aquimarina sotulax sp. nov.

Candidatus Aquimarina sotulax (NL. fem. n. *sotulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimarina sp006443095*. The type genome for the species is the GenBank assembly RS_GCF_006443095.1. The GC content of the type genome is 32.4 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Aquimonas defetimonia sp. nov.

Candidatus Aquimonas defetimonia (NL. fem. n. *defetimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimonas sp002352135*. The type genome for the species is the GenBank assembly GCA_002352135.1. The GC content of the type genome is 61.79 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Aquimonas murilivita sp. nov.

Candidatus Aquimonas murilivita (NL. fem. n. *murilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquimonas sp002068275*. The type genome for the species is the GenBank assembly GCA_002068275.1. The GC content of the type genome is 60.27 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Aquirufa adsigetta sp. nov.

Candidatus Aquirufa adsigetta (NL. fem. n. *adsigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903837305*. The type genome for the species is the GenBank assembly GCA_903837305.1. The GC content of the type genome is 40.94 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Aquirufa clancedo sp. nov.

Candidatus Aquirufa clancedo (NL. fem. n. *clancedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp013205605*. The type genome for the species is the GenBank assembly GCA_013205605.1. The GC content of the type genome is 38.12 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Aquirufa edulcitura sp. nov.

Candidatus Aquirufa edulcitura (NL. fem. n. *edulcitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp005791165*. The type genome for the species is the GenBank assembly GCA_005791165.1. The GC content of the type genome is 38.23 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Aquirufa incocugo sp. nov.

Candidatus Aquirufa incocugo (NL. fem. n. *incocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903907915*. The type genome for the species is the GenBank assembly GCA_903907915.1. The GC content of the type genome is 41.37 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Aquirufa melilitica sp. nov.

Candidatus Aquirufa melilitica (NL. fem. n. *melilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903898715*. The type genome for the species is the GenBank assembly GCA_903958475.1. The GC content of the type genome is 42.33 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Aquirufa repudousia sp. nov.

Candidatus Aquirufa repudousia (NL. fem. n. *repudousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp002479785*. The type genome for the species is the GenBank assembly GCA_002479785.1. The GC content of the type genome is 42.28 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Aquirufa rutabigena sp. nov.

Candidatus Aquirufa rutabigena (NL. fem. n. *rutabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903933935*. The type genome for the species is the GenBank assembly GCA_903938715.1. The GC content of the type genome is 38.24 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Aquirufa telefifica sp. nov.

Candidatus Aquirufa telefifica (NL. fem. n. *telefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903907745*. The type genome for the species is the GenBank assembly GCA_903890015.1. The GC content of the type genome is 42.06 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Aquirufa velifitrix sp. nov.

Candidatus Aquirufa velifitrix (NL. fem. n. *velifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquirufa sp903960725*. The type genome for the species is the GenBank assembly GCA_903960725.1. The GC content of the type genome is 41.91 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Aquirufa venunimonia sp. nov.

Candidatus Aquirufa venunimonia (NL. fem. n. *venunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aquirufa sp002454335*. The type genome for the species is the GenBank assembly GCA_002454335.1. The GC content of the type genome is 41.58 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Aquisalimonas abluvatica sp. nov.

Candidatus Aquisalimonas abluvatica (NL. fem. n. *abluvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquisalimonas sp007133445*. The type genome for the species is the GenBank assembly GCA_007133445.1. The GC content of the type genome is 66.52 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Aquisalimonas bifaribula sp. nov.

Candidatus Aquisalimonas bifaribula (NL. fem. n. *bifaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquisalimonas sp007127625*. The type genome for the species is the GenBank assembly GCA_007119565.1. The GC content of the type genome is 66.17 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Aquisalimonas salubimonas sp. nov.

Candidatus Aquisalimonas salubimonas (NL. fem. n. *salubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquisalimonas sp007126095*. The type genome for the species is the GenBank assembly GCA_007120405.1. The GC content of the type genome is 66.22 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Aquisalimonas virecatio sp. nov.

Candidatus Aquisalimonas virecatio (NL. fem. n. *virecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquisalimonas sp007120195*. The type genome for the species is the GenBank assembly GCA_007120195.1. The GC content of the type genome is 64.03 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Aquisphaera catapentia sp. nov.

Candidatus Aquisphaera catapentia (NL. fem. n. *catapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquisphaera sp011064615*. The type genome for the species is the GenBank assembly RS_GCF_011064615.1. The GC content of the type genome is 68.5 % and the genome length is 10.04 Mbp.

Description of *Candidatus* Aquitalea loripetta sp. nov.

Candidatus Aquitalea loripetta (NL. fem. n. *loripetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquitalea sp005155025*. The type genome for the species is the GenBank assembly RS_GCF_005155025.1. The GC content of the type genome is 59.72 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Aquitalea negotitudo sp. nov.

Candidatus Aquitalea negotitudo (NL. fem. n. *negotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquitalea sp013391415*. The type genome for the species is the GenBank assembly RS_GCF_013391415.1. The GC content of the type genome is 58.61 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Aquitalea utralifica sp. nov.

Candidatus Aquitalea utralifica (NL. fem. n. *utralifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aquitalea sp003693445*. The type genome for the species is the GenBank assembly RS_GCF_003693445.1. The GC content of the type genome is 60.27 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Arachidicoccus nocumentia sp. nov.

Candidatus Arachidicoccus nocumentia (NL. fem. n. *nocumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachidicoccus sp003600625*. The type genome for the species is the GenBank assembly RS_GCF_003600625.1. The GC content of the type genome is 36.42 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Arachidicoccus tabititas sp. nov.

Candidatus Arachidicoccus tabititas (NL. fem. n. *tabititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachidicoccus sp001659705*. The type genome for the species is the GenBank assembly RS_GCF_001659705.1. The GC content of the type genome is 39.31 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Compost".

Description of *Candidatus* Arachnia adsecitrix sp. nov.

Candidatus Arachnia adsecitrix (NL. fem. n. *adsecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp011174705*. The type genome for the species is the GenBank assembly GCA_011174705.1. The GC content of the type genome is 69.04 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Arachnia agricago sp. nov.

Candidatus Arachnia agricago (NL. fem. n. *agricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp000619965*. The type genome for the species is the GenBank assembly RS_GCF_000619965.1. The GC content of the type genome is 69.33 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Arachnia depubitoga sp. nov.

Candidatus Arachnia depubitoga (NL. fem. n. *depubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp012837465*. The type genome for the species is the GenBank assembly GCA_012837465.1. The GC content of the type genome is 68.67 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Arachnia dimidago sp. nov.

Candidatus Arachnia dimidago (NL. fem. n. *dimidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp013333945*. The type genome for the species is the GenBank assembly GCA_013333945.2. The GC content of the type genome is 63.71 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Arachnia offunitica sp. nov.

Candidatus Arachnia offunitica (NL. fem. n. *offunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp900607225*. The type genome for the species is the GenBank assembly RS_GCF_900607225.1. The GC content of the type genome is 66.08 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Arachnia perabastra sp. nov.

Candidatus Arachnia perabastra (NL. fem. n. *perabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp012514785*. The type genome for the species is the GenBank assembly GCA_012514785.1. The GC content of the type genome is 69.27 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Arachnia rosacax sp. nov.

Candidatus Arachnia rosacax (NL. fem. n. *rosacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp001956895*. The type genome for the species is the GenBank assembly RS_GCF_001956895.1. The GC content of the type genome is 68.39 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Arachnia sanabitura sp. nov.

Candidatus Arachnia sanabitura (NL. fem. n. *sanabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp014164775*. The type genome for the species is the GenBank assembly RS_GCF_014164725.1. The GC content of the type genome is 68.81 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Arachnia tomogibula sp. nov.

Candidatus Arachnia tomogibula (NL. fem. n. *tomogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp013333735*. The type genome for the species is the GenBank assembly GCA_013333895.2. The GC content of the type genome is 64.64 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Arachnia xenodisca sp. nov.

Candidatus Arachnia xenodisca (NL. fem. n. *xenodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arachnia sp003932855*. The type genome for the species is the GenBank assembly RS_GCF_003932855.1. The GC content of the type genome is 65.47 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Arancana repepifica sp. nov.

Candidatus Arancana repepifica (NL. fem. n. *repepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZGA01 sp903932385*. The type genome for the species is the GenBank assembly GCA_903932385.1. The GC content of the type genome is 57.34 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Arancana gen. nov.

Candidatus Arancana (NL. fem. n. *Arancana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZGA01*. The type species for the genus is *Candidatus* Arancana repepifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arancaria venefibra sp. nov.

Candidatus Arancaria venefibra (NL. fem. n. *venefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGP01 sp009787135*. The type genome for the species is the GenBank assembly GCA_009787135.1. The GC content of the type genome is 58.11 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Arancaria gen. nov.

Candidatus Arancaria (NL. fem. n. *Arancaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGP01*. The type species for the genus is *Candidatus* Arancaria venefibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Arancida effigibula sp. nov.

Candidatus Arancida effigibula (NL. fem. n. *effigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NM07-P-09 sp004793665*. The type genome for the species is the GenBank assembly RS_GCF_004793665.1. The GC content of the type genome is 69.12 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Arancida gen. nov.

Candidatus Arancida (NL. fem. n. *Arancida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NM07-P-09*. The type species for the genus is *Candidatus* Arancida effigibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arancida medimitrix sp. nov.

Candidatus Arancida medimitrix (NL. fem. n. *medimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NM07-P-09 sp004793925*. The type genome for the species is the GenBank assembly RS_GCF_004793925.1. The GC content of the type genome is 58.8 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Arancida recocitrix sp. nov.

Candidatus Arancida recocitrix (NL. fem. n. *recocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NM07-P-09 sp012584445*. The type genome for the species is the GenBank assembly RS_GCF_012584445.1. The GC content of the type genome is 59.19 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Arbavana abagmibra sp. nov.

Candidatus Arbavana abagmibra (NL. fem. n. *abagmibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTVJ01 sp012963565*. The type genome for the species is the GenBank assembly GCA_012963565.1. The GC content of the type genome is 38.25 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Arbavana gen. nov.

Candidatus Arbavana (NL. fem. n. *Arbavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTVJ01*. The type species for the genus is *Candidatus* Arbavana abagmibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arbavaria agravilenta sp. nov.

Candidatus Arbavaria agravilenta (NL. fem. n. *agravilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11872 sp902773425*. The type genome for the species is the GenBank assembly GCA_902773425.1. The GC content of the type genome is 47.14 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Arbavaria gen. nov.

Candidatus Arbavaria (NL. fem. n. *Arbavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11872*. The type species for the genus is *Candidatus* Arbavaria agravilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arbavaria inpurousia sp. nov.

Candidatus Arbavaria inpurousia (NL. fem. n. *inpurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11872 sp902782505*. The type genome for the species is the GenBank assembly GCA_902782505.1. The GC content of the type genome is 50.97 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Arbavella antirastra sp. nov.

Candidatus Arbavella antirastra (NL. fem. n. *antirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSX01 sp014377245*. The type genome for the species is the GenBank assembly GCA_014377245.1. The GC content of the type genome is 40.69 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Arbavella gen. nov.

Candidatus Arbavella (NL. fem. n. *Arbavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSX01*. The type species for the genus is *Candidatus* Arbavella antirastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Arbavella assubentia sp. nov.

Candidatus Arbavella assubentia (NL. fem. n. *assubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSX01 sp014377305*. The type genome for the species is the GenBank assembly GCA_014377305.1. The GC content of the type genome is 42.31 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Arbavella vinolitas sp. nov.

Candidatus Arbavella vinolitas (NL. fem. n. *vinolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSX01 sp013268835*. The type genome for the species is the GenBank assembly GCA_013268835.1. The GC content of the type genome is 36.24 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Arbavia decinilenta sp. nov.

Candidatus Arbavia decinilenta (NL. fem. n. *decinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1401 sp002305115*. The type genome for the species is the GenBank assembly GCA_002305115.1. The GC content of the type genome is 40.35 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Arbavia gen. nov.

Candidatus Arbavia (NL. fem. n. *Arbavia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1401*. The type species for the genus is *Candidatus* Arbavia decinilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Arbavida anamnatica sp. nov.

Candidatus Arbavida anamnatica (NL. fem. n. *anamnatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUQL01 sp012033595*. The type genome for the species is the GenBank assembly GCA_012033595.1. The GC content of the type genome is 44.07 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Arbavida gen. nov.

Candidatus Arbavida (NL. fem. n. *Arbavida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUQL01*. The type species for the genus is *Candidatus* Arbavida anamnatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcanobacterium inretimonia sp. nov.

Candidatus Arcanobacterium inretimonia (NL. fem. n. *inretimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcanobacterium sp012563545*. The type genome for the species is the GenBank assembly RS_GCF_012563545.1. The GC content of the type genome is 48.95 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Arcanobacterium melilibula sp. nov.

Candidatus Arcanobacterium melilibula (NL. fem. n. *melilibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcanobacterium sp012516575*. The type genome for the species is the GenBank assembly GCA_012516575.1. The GC content of the type genome is 53.14 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Arcanobacterium afranedo sp. nov.

Candidatus Arcanobacterium afranedo (NL. fem. n. *afranedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcanobacterium_A sp000758825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000758825.1. The GC content of the type genome is 55.77 % and the genome length is 1.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Arcanobacterium buxifatica sp. nov.

Candidatus Arcanobacterium buxifatica (NL. fem. n. *buxifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcanobacterium_A sp004331995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004331995.1. The GC content of the type genome is 51.63 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Arcatana maligitas sp. nov.

Candidatus Arcatana maligitas (NL. fem. n. *maligitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1397 sp002305205*. The type genome for the species is the GenBank assembly GCA_002305205.1. The GC content of the type genome is 34.22 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Arcatana gen. nov.

Candidatus Arcatana (NL. fem. n. *Arcatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1397*. The type species for the genus is *Candidatus* Arcatana maligitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Arcataria timefimonia sp. nov.

Candidatus Arcataria timefimonia (NL. fem. n. *timefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2683825 sp002683825*. The type genome for the species is the GenBank assembly GCA_002683825.1. The GC content of the type genome is 64.12 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Arcataria gen. nov.

Candidatus Arcataria (NL. fem. n. *Arcataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2683825*. The type species for the genus is *Candidatus* Arcataria timefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Arcatosa tegumugo sp. nov.

Candidatus Arcatosa tegumugo (NL. fem. n. *tegumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUT-3 sp014083985*. The type genome for the species is the GenBank assembly RS_GCF_014083985.1. The GC content of the type genome is 73.95 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Arcatosa gen. nov.

Candidatus Arcatosa (NL. fem. n. *Arcatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUT-3*. The type species for the genus is *Candidatus* Arcatosa tegumugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcebana depociforma sp. nov.

Candidatus Arcebana depociforma (NL. fem. n. *depociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFTL01 sp001786825*. The type genome for the species is the GenBank assembly GCA_001786825.1. The GC content of the type genome is 38.84 % and the genome length is 0.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arcebana gen. nov.

Candidatus Arcebana (NL. fem. n. *Arcebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFTL01*. The type species for the genus is *Candidatus* Arcebana depociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Arcebaria carunatica sp. nov.

Candidatus Arcebaria carunatica (NL. fem. n. *carunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1251 sp003141205*. The type genome for the species is the GenBank assembly GCA_003141205.1. The GC content of the type genome is 67.76 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Arcebaria gen. nov.

Candidatus Arcebaria (NL. fem. n. *Arcebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1251*. The type species for the genus is *Candidatus* Arcebaria carunatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcebella aspilentia sp. nov.

Candidatus Arcebella aspilentia (NL. fem. n. *aspilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Iso899 sp000421445*. The type genome for the species is the GenBank assembly RS_GCF_000421445.1. The GC content of the type genome is 63.39 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Arcebella gen. nov.

Candidatus Arcebella (NL. fem. n. *Arcebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Iso899*. The type species for the genus is *Candidatus* Arcebella aspilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcebia pericitica sp. nov.

Candidatus Arcebia pericitica (NL. fem. n. *pericitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B14 sp000307305*. The type genome for the species is the GenBank assembly RS_GCF_000307305.1. The GC content of the type genome is 45.89 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Arcebia gen. nov.

Candidatus Arcebia (NL. fem. n. *Arcebia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B14*. The type species for the genus is *Candidatus* Arcebia pericitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcebida amercitoga sp. nov.

Candidatus Arcebida amercitoga (NL. fem. n. *amercitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E85 sp003149435*. The type genome for the species is the GenBank assembly RS_GCF_003149435.1. The GC content of the type genome is 69.66 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Arcebida gen. nov.

Candidatus Arcebida (NL. fem. n. *Arcebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E85*. The type species for the genus is *Candidatus* Arcebida amercitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcebula faticimonia sp. nov.

Candidatus Arcebula faticimonia (NL. fem. n. *faticimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQX01 sp012520035*. The type genome for the species is the GenBank assembly GCA_012520035.1. The GC content of the type genome is 45.23 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Arcebula gen. nov.

Candidatus Arcebula (NL. fem. n. *Arcebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUQX01*. The type species for the genus is *Candidatus* Arcebula

faticimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Arcebula infiredo sp. nov.

Candidatus Arcebula infiredo (NL. fem. n. *infiredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQX01 sp012837615*. The type genome for the species is the GenBank assembly GCA_012837615.1. The GC content of the type genome is 44.57 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Arcelana bicinimonia sp. nov.

Candidatus Arcelana bicinimonia (NL. fem. n. *bicinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFBO01 sp001774995*. The type genome for the species is the GenBank assembly GCA_001774995.1. The GC content of the type genome is 38.28 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arcelana gen. nov.

Candidatus Arcelana (NL. fem. n. *Arcelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFBO01*. The type species for the genus is *Candidatus* Arcelana bicinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Arcelaria conifugo sp. nov.

Candidatus Arcelaria conifugo (NL. fem. n. *conifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2103 sp002331145*. The type genome for the species is the GenBank assembly GCA_002331145.1. The GC content of the type genome is 43.31 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Arcelaria gen. nov.

Candidatus Arcelaria (NL. fem. n. *Arcelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2103*. The type species for the genus is *Candidatus* Arcelaria conifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Arcelaria rudecetta sp. nov.

Candidatus Arcelaria rudecetta (NL. fem. n. *rudecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2103 sp002376865*. The type genome for the species is the GenBank assembly GCA_002376865.1. The GC content of the type genome is 42.22 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Arcelia rurigibra sp. nov.

Candidatus Arcelia rurigibra (NL. fem. n. *rurigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B8-G4 sp003648285*. The type genome for the species is the GenBank assembly GCA_003648285.1. The GC content of the type genome is 45.16 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Arcelia gen. nov.

Candidatus Arcelia (NL. fem. n. *Arcelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B8-G4*. The type species for the genus is *Candidatus* Arcelia rurigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcelosa cerebastra sp. nov.

Candidatus Arcelosa cerebastra (NL. fem. n. *cerebastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJHL01 sp014192545*. The type genome for the species is the GenBank assembly GCA_014192545.1. The GC content of the type genome is 60.14 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Arcelosa gen. nov.

Candidatus Arcelosa (NL. fem. n. *Arcelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJHL01*. The type species for the genus is *Candidatus* Arcelosa cerebastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Archangium xeropitudo sp. nov.

Candidatus Archangium xeropitudo (NL. fem. n. *xeropitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Archangium_A sp903905455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903861945.1. The GC content of the type genome is 70.08 % and the genome length is 8.68 Mbp.

Description of *Candidatus* Arcicella excocitas sp. nov.

Candidatus Arcicella excocitas (NL. fem. n. *excocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcicella sp013298125*. The type genome for the species is the GenBank assembly GCA_013298125.1. The GC content of the type genome is 37.0 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Arcicella impavitura sp. nov.

Candidatus Arcicella impavitura (NL. fem. n. *impavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcicella sp013298805*. The type genome for the species is the GenBank assembly GCA_013298805.1. The GC content of the type genome is 35.9 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Arcicella suboficella sp. nov.

Candidatus Arcicella suboficella (NL. fem. n. *suboficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcicella sp014376355*. The type genome for the species is the GenBank assembly GCA_014376355.1. The GC content of the type genome is 34.72 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Arcifana extinimonia sp. nov.

Candidatus Arcifana extinimonia (NL. fem. n. *extinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-6802 sp000332175*. The type genome for the species is the GenBank assembly RS_GCF_000332175.1. The GC content of the type genome is 47.83 % and the genome length is 5.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Arcifana gen. nov.

Candidatus Arcifana (NL. fem. n. *Arcifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-6802*. The type species for the genus is *Candidatus* Arcifana

extinimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcifaria inoffimonia sp. nov.

Candidatus Arcifaria inoffimonia (NL. fem. n. *inoffimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-36-15 sp001782015*. The type genome for the species is the GenBank assembly GCA_001782015.1. The GC content of the type genome is 35.37 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arcifaria gen. nov.

Candidatus Arcifaria (NL. fem. n. *Arcifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-36-15*. The type species for the genus is *Candidatus* Arcifaria inoffimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefellaceae.

Description of *Candidatus* Arcifia decenibula sp. nov.

Candidatus Arcifia decenibula (NL. fem. n. *decenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1738 sp003453455*. The type genome for the species is the GenBank assembly GCA_003453455.1. The GC content of the type genome is 39.88 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Arcifia gen. nov.

Candidatus Arcifia (NL. fem. n. *Arcifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1738*. The type species for the genus is *Candidatus* Arcifia decenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Arcifia detenessa sp. nov.

Candidatus Arcifia detenessa (NL. fem. n. *detenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1738 sp002315735*. The type genome for the species is the GenBank assembly GCA_002315735.1. The GC content of the type genome is 35.17 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Arcifida horomessa sp. nov.

Candidatus Arcifida horomessa (NL. fem. n. *horomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1729 sp002315945*. The type genome for the species is the GenBank assembly GCA_002315945.1. The GC content of the type genome is 40.65 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Arcifida gen. nov.

Candidatus Arcifida (NL. fem. n. *Arcifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1729*. The type species for the genus is *Candidatus* Arcifida horomessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcifosa apsenousia sp. nov.

Candidatus Arcifosa apsenousia (NL. fem. n. *apsenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *HGW-BRC1-1 sp002842095*. The type genome for the species is the GenBank assembly GCA_002842095.1. The GC content of the type genome is 58.42 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Arcifosa gen. nov.

Candidatus Arcifosa (NL. fem. n. *Arcifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGW-BRC1-1*. The type species for the genus is *Candidatus* Arcifosa apsenousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcipana adtubentia sp. nov.

Candidatus Arcipana adtubentia (NL. fem. n. *adtubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSRY01 sp011331385*. The type genome for the species is the GenBank assembly GCA_011331385.1. The GC content of the type genome is 72.35 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Arcipana gen. nov.

Candidatus Arcipana (NL. fem. n. *Arcipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSRY01*. The type species for the genus is *Candidatus* Arcipana adtubentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifellaceae.

Description of *Candidatus* Arciparia tegimitio sp. nov.

Candidatus Arciparia tegimitio (NL. fem. n. *tegimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-67-18 sp001724715*. The type genome for the species is the

GenBank assembly GCA_001724715.1. The GC content of the type genome is 66.77 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Arciparia gen. nov.

Candidatus Arciparia (NL. fem. n. *Arciparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-67-18*. The type species for the genus is *Candidatus* Arciparia tegimitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcipella apopliforma sp. nov.

Candidatus Arcipella apopliforma (NL. fem. n. *apopliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-11 sp001817345*. The type genome for the species is the GenBank assembly GCA_001817345.1. The GC content of the type genome is 44.12 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arcipella gen. nov.

Candidatus Arcipella (NL. fem. n. *Arcipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-44-11*. The type species for the genus is *Candidatus* Arcipella apopliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Arcipia adsusibra sp. nov.

Candidatus Arcipia adsusibra (NL. fem. n. *adsusibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MADRE1 sp004796465*. The type genome for the species is the GenBank assembly GCA_004796465.1. The GC content of the type genome is 59.76 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Arcipia gen. nov.

Candidatus Arcipia (NL. fem. n. *Arcipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MADRE1*. The type species for the genus is *Candidatus* Arcipia adsusibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arciposa cinipousia sp. nov.

Candidatus Arciposa cinipousia (NL. fem. n. *cinipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2688435 sp002688435*. The type genome for the species is the GenBank assembly GCA_002688435.1. The GC content of the type genome is 52.13 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Arciposa gen. nov.

Candidatus Arciposa (NL. fem. n. *Arciposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2688435*. The type species for the genus is *Candidatus* Arciposa cinipousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Arcipula effacifica sp. nov.

Candidatus Arcipula effacifica (NL. fem. n. *effacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QHBW01 sp003244205*. The type genome for the species is the GenBank assembly GCA_003244205.1. The GC content of the type genome is 69.64 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Arcipula gen. nov.

Candidatus Arcipula (NL. fem. n. *Arcipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHBW01*. The type species for the genus is *Candidatus* Arcipula effacifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcitaria vehicimonia sp. nov.

Candidatus Arcitaria vehicimonia (NL. fem. n. *vehicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX10 sp013112715*. The type genome for the species is the GenBank assembly GCA_013112715.1. The GC content of the type genome is 51.17 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Arcitaria gen. nov.

Candidatus Arcitaria (NL. fem. n. *Arcitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFX10*. The type species for the genus is *Candidatus* Arcitaria vehicimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J027*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemellaceae.

Description of *Candidatus* Arcitella revulitoga sp. nov.

Candidatus Arcitella revulitoga (NL. fem. n. *revulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19058 sp001310555*. The type genome for the species is the

GenBank assembly GCA_001310555.1. The GC content of the type genome is 42.66 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Arcitella gen. nov.

Candidatus Arcitella (NL. fem. n. *Arcitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JCM-19058*. The type species for the genus is *Candidatus* Arcitella revulitoga .

According to GTDB R06-RS202, this genus belongs to the family _D.

Description of *Candidatus* Arcitia defasugo sp. nov.

Candidatus Arcitia defasugo (NL. fem. n. *defasugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-402-N21 sp003216435*. The type genome for the species is the GenBank assembly GCA_003216435.1. The GC content of the type genome is 36.11 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Arcitia gen. nov.

Candidatus Arcitia (NL. fem. n. *Arcitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-402-N21*. The type species for the genus is *Candidatus* Arcitia defasugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arcitia pericitia sp. nov.

Candidatus Arcitia pericitia (NL. fem. n. *pericitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-402-N21 sp902587615*. The type genome for the species is the GenBank assembly GCA_902587615.1. The GC content of the type genome is 35.8 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Arcitida insubessa sp. nov.

Candidatus Arcitida insubessa (NL. fem. n. *insubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ECT2AJA-110-A sp006969385*. The type genome for the species is the GenBank assembly GCA_006969385.1. The GC content of the type genome is 57.34 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Arcitida gen. nov.

Candidatus Arcitida (NL. fem. n. *Arcitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ECT2AJA-110-A*. The type species for the genus is *Candidatus* Arcitida insubessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPLA1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumidaceae.

Description of *Candidatus* Arcitula inabrax sp. nov.

Candidatus Arcitula inabrax (NL. fem. n. *inabrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PTKB01 sp002937555*. The type genome for the species is the GenBank assembly GCA_002937555.1. The GC content of the type genome is 61.32 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Arcitula gen. nov.

Candidatus Arcitula (NL. fem. n. *Arcitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PTKB01*. The type species for the genus is *Candidatus* Arcitula inabrax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Arcobacter epogdilenta sp. nov.

Candidatus Arcobacter epogdilenta (NL. fem. n. *epogdilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcobacter sp004116465*. The type genome for the species is the GenBank assembly RS_GCF_004116465.1. The GC content of the type genome is 28.11 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Arcobacter panifitio sp. nov.

Candidatus Arcobacter panifitio (NL. fem. n. *panifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcobacter sp002869535*. The type genome for the species is the GenBank assembly GCA_002869535.1. The GC content of the type genome is 28.95 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Arcobacter benepitio sp. nov.

Candidatus Arcobacter benepitio (NL. fem. n. *benepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arcobacter_A sp001655195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001655195.1. The GC content of the type genome is 31.94 % and the genome length is 3.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "culture containing one eukaryotic species and its associated bacterial epibionts isolated from marine sediment".

Description of *Candidatus* Arcubaria sicunicella sp. nov.

Candidatus Arcubaria sicunicella (NL. fem. n. *sicunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGX01 sp007376805*. The type genome for the species is the GenBank assembly GCA_007376805.1. The GC content of the type genome is 32.3 %

and the genome length is 0.63 Mbp.

Description of *Candidatus* Arcubaria gen. nov.

Candidatus Arcubaria (NL. fem. n. *Arcubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGX01*. The type species for the genus is *Candidatus* Arcubaria sicunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-all-36-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ridibanaceae.

Description of *Candidatus* Arcubella atricilega sp. nov.

Candidatus Arcubella atricilega (NL. fem. n. *atricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFHE01 sp001778495*. The type genome for the species is the GenBank assembly GCA_001778495.1. The GC content of the type genome is 46.75 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arcubella gen. nov.

Candidatus Arcubella (NL. fem. n. *Arcubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFHE01*. The type species for the genus is *Candidatus* Arcubella atricilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametellaceae.

Description of *Candidatus* Arcubia esculatica sp. nov.

Candidatus Arcubia esculatica (NL. fem. n. *esculatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAA01 sp009780015*. The type genome for the species is the GenBank assembly GCA_009780015.1. The GC content of the type genome is 51.25 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Arcubia gen. nov.

Candidatus Arcubia (NL. fem. n. *Arcubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAA01*. The type species for the genus is *Candidatus* Arcubia esculatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Arcubia refinitudo sp. nov.

Candidatus Arcubia refinitudo (NL. fem. n. *refinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAA01 sp009780445*. The type genome for the species is the GenBank assembly GCA_009780445.1. The GC content of the type genome is 57.71 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Arcubida resacigena sp. nov.

Candidatus Arcubida resacigena (NL. fem. n. *resacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBK01 sp009781625*. The type genome for the species is the GenBank assembly GCA_009781625.1. The GC content of the type genome is 47.13 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Arcubida gen. nov.

Candidatus Arcubida (NL. fem. n. *Arcubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBK01*. The type species for the genus is *Candidatus* Arcubida

resacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Arcubida vacilitio sp. nov.

Candidatus Arcubida vacilitio (NL. fem. n. *vacilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBK01 sp009784575*. The type genome for the species is the GenBank assembly GCA_009784575.1. The GC content of the type genome is 42.6 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Arcubosa attubicula sp. nov.

Candidatus Arcubosa attubicula (NL. fem. n. *attubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWNV01 sp003551425*. The type genome for the species is the GenBank assembly GCA_003551425.1. The GC content of the type genome is 41.29 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Arcubosa gen. nov.

Candidatus Arcubosa (NL. fem. n. *Arcubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWNV01*. The type species for the genus is *Candidatus* Arcubosa attubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinidaceae.

Description of *Candidatus* Arcubosa obverastra sp. nov.

Candidatus Arcubosa obverastra (NL. fem. n. *obverastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWNV01 sp003557645*. The type genome for the species is the GenBank assembly GCA_003557645.1. The GC content of the type genome is 36.77 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Ardifana immusessa sp. nov.

Candidatus Ardifana immusessa (NL. fem. n. *immusessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7109 sp002492335*. The type genome for the species is the GenBank assembly GCA_002492335.1. The GC content of the type genome is 43.18 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Ardifana gen. nov.

Candidatus Ardifana (NL. fem. n. *Ardifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7109*. The type species for the genus is *Candidatus* Ardifana immusessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ardifaria laculentia sp. nov.

Candidatus Ardifaria laculentia (NL. fem. n. *laculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTG01 sp009377835*. The type genome for the species is the GenBank assembly GCA_009377835.1. The GC content of the type genome is 68.74 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Ardifaria gen. nov.

Candidatus Ardifaria (NL. fem. n. *Ardifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTG01*. The type species for the genus is *Candidatus* Ardifaria laculentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ardifella assudax sp. nov.

Candidatus Ardifella assudax (NL. fem. n. *assudax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDQW01 sp013042055*. The type genome for the species is the GenBank assembly GCA_013042055.1. The GC content of the type genome is 51.64 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Ardifella gen. nov.

Candidatus Ardifella (NL. fem. n. *Ardifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDQW01*. The type species for the genus is *Candidatus* Ardifella assudax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunanaceae.

Description of *Candidatus* Ardifia acistibra sp. nov.

Candidatus Ardifia acistibra (NL. fem. n. *acistibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBD01 sp011049365*. The type genome for the species is the GenBank assembly GCA_011049365.1. The GC content of the type genome is 34.77 % and the genome length is 0.44 Mbp.

Description of *Candidatus* Ardifia gen. nov.

Candidatus Ardifia (NL. fem. n. *Ardifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBD01*. The type species for the genus is *Candidatus* Ardifia acistibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Ardifida lapiciforma sp. nov.

Candidatus Ardifida lapiciforma (NL. fem. n. *lapiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OESV01 sp900240995*. The type genome for the species is the GenBank assembly RS_GCF_900240995.1. The GC content of the type genome is 36.07 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Ardifida gen. nov.

Candidatus Ardifida (NL. fem. n. *Ardifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OESV01*. The type species for the genus is *Candidatus* Ardifida lapiciforma .

According to GTDB R06-RS202, this genus belongs to the family _J.

Description of *Candidatus* Ardifosa energitura sp. nov.

Candidatus Ardifosa energitura (NL. fem. n. *energitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHXW01 sp003223115*. The type genome for the species is the GenBank assembly GCA_003223115.1. The GC content of the type genome is 58.43 % and the genome length is 9.14 Mbp.

Description of *Candidatus* Ardifosa gen. nov.

Candidatus Ardifosa (NL. fem. n. *Ardifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHXW01*. The type species for the genus is *Candidatus* Ardifosa energitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ardifula insubatica sp. nov.

Candidatus Ardifula insubatica (NL. fem. n. *insubatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMZ01 sp003551565*. The type genome for the species is the GenBank assembly GCA_003551565.1. The GC content of the type genome is 56.89 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Ardifula gen. nov.

Candidatus Ardifula (NL. fem. n. *Ardifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUMZ01*. The type species for the genus is *Candidatus* Ardifula insubatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefulaceae.

Description of *Candidatus* Arenibacter ambacitoga sp. nov.

Candidatus Arenibacter ambacitoga (NL. fem. n. *ambacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenibacter sp014397245*. The type genome for the species is the GenBank assembly RS_GCF_014397245.1. The GC content of the type genome is 38.74 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Arenibacter bicoditica sp. nov.

Candidatus Arenibacter bicoditica (NL. fem. n. *bicoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenibacter sp003426735*. The type genome for the species is the GenBank assembly RS_GCF_003426735.1. The GC content of the type genome is 40.93 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Arenibacter duricitia sp. nov.

Candidatus Arenibacter duricitia (NL. fem. n. *duricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenibacter sp002150785*. The type genome for the species is the GenBank assembly RS_GCF_002150785.1. The GC content of the type genome is 40.83 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Arenibacter utputibra sp. nov.

Candidatus Arenibacter utputibra (NL. fem. n. *utputibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenibacter sp012272855*. The type genome for the species is the GenBank assembly RS_GCF_012272855.1. The GC content of the type genome is 38.96 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Arenibacter vinulitas sp. nov.

Candidatus Arenibacter vinulitas (NL. fem. n. *vinulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenibacter sp003201775*. The type genome for the species is the GenBank assembly RS_GCF_003201775.1. The GC content of the type genome is 39.64 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Arenicella bicipicula sp. nov.

Candidatus Arenicella bicipicula (NL. fem. n. *bicipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenicella sp002470515*. The type genome for the species is the GenBank assembly GCA_002470515.1. The GC content of the type genome is 46.0 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Arenicella lubenax sp. nov.

Candidatus Arenicella lubenax (NL. fem. n. *lubenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Arenicella sp013002025*. The type genome for the species is the GenBank assembly GCA_013002025.1. The GC content of the type genome is 52.96 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Arenimonas adtumitia sp. nov.

Candidatus Arenimonas adtumitia (NL. fem. n. *adtumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp001801685*. The type genome for the species is the GenBank assembly GCA_001801685.1. The GC content of the type genome is 63.81 % and the genome length is 4.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Arenimonas conibatio sp. nov.

Candidatus Arenimonas conibatio (NL. fem. n. *conibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp903942465*. The type genome for the species is the GenBank assembly GCA_903938705.1. The GC content of the type genome is 60.71 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Arenimonas egregitica sp. nov.

Candidatus Arenimonas egregitica (NL. fem. n. *egregitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp003241895*. The type genome for the species is the GenBank assembly GCA_003241895.1. The GC content of the type genome is 68.28 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Arenimonas megalessa sp. nov.

Candidatus Arenimonas megalessa (NL. fem. n. *megalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp003497545*. The type genome for the species is the GenBank assembly GCA_001830235.1. The GC content of the type genome is 69.74 %

and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.1 filter".

Description of *Candidatus* Arenimonas metabibra sp. nov.

Candidatus Arenimonas metabibra (NL. fem. n. *metabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp001724815*. The type genome for the species is the GenBank assembly GCA_001724815.1. The GC content of the type genome is 70.26 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Arenimonas supeledo sp. nov.

Candidatus Arenimonas supeledo (NL. fem. n. *supeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arenimonas sp008386465*. The type genome for the species is the GenBank assembly RS_GCF_008386465.1. The GC content of the type genome is 69.77 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Argimaria impirifica sp. nov.

Candidatus Argimaria impirifica (NL. fem. n. *impirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-411 sp003245895*. The type genome for the species is the GenBank assembly GCA_003245895.1. The GC content of the type genome is 44.76 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Argimaria gen. nov.

Candidatus Argimaria (NL. fem. n. *Argimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-411*. The type species for the genus is *Candidatus* Argimaria impirifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argimida tresvitudo sp. nov.

Candidatus Argimida tresvitudo (NL. fem. n. *tresvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LJUQ01 sp001304505*. The type genome for the species is the GenBank assembly GCA_001304505.1. The GC content of the type genome is 40.12 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Argimida gen. nov.

Candidatus Argimida (NL. fem. n. *Argimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LJUQ01*. The type species for the genus is *Candidatus* Argimida tresvitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-62*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibellaceae.

Description of *Candidatus* Argimosa inobsentia sp. nov.

Candidatus Argimosa inobsentia (NL. fem. n. *inobsentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-994 sp903970305*. The type genome for the species is the GenBank assembly GCA_903970305.1. The GC content of the type genome is 62.22 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Argimosa gen. nov.

Candidatus Argimosa (NL. fem. n. *Argimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-994*. The type species for the genus is *Candidatus* Argimosa inobsentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argimosa scammibula sp. nov.

Candidatus Argimosa scammibula (NL. fem. n. *scammibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-994 sp003136595*. The type genome for the species is the GenBank assembly GCA_003136595.1. The GC content of the type genome is 64.85 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Argimula catecentia sp. nov.

Candidatus Argimula catecentia (NL. fem. n. *catecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA876 sp002294665*. The type genome for the species is the GenBank assembly GCA_002294665.1. The GC content of the type genome is 56.77 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Argimula gen. nov.

Candidatus Argimula (NL. fem. n. *Argimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA876*. The type species for the genus is *Candidatus* Argimula catecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucosaceae.

Description of *Candidatus* Argimula taxilatica sp. nov.

Candidatus Argimula taxilatica (NL. fem. n. *taxilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA876 sp011049425*. The type genome for the species is the GenBank assembly GCA_011049425.1. The GC content of the type genome is 55.61 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Argitaria obtenugo sp. nov.

Candidatus Argitaria obtenugo (NL. fem. n. *obtenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-B05 sp003216075*. The type genome for the species is the GenBank assembly GCA_003216075.1. The GC content of the type genome is 38.86 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Argitaria gen. nov.

Candidatus Argitaria (NL. fem. n. *Argitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-B05*. The type species for the genus is *Candidatus* Argitaria obtenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argitella fetutiforma sp. nov.

Candidatus Argitella fetutiforma (NL. fem. n. *fetutiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5628 sp002421565*. The type genome for the species is the GenBank assembly GCA_002421565.1. The GC content of the type genome is 60.1 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Argitella gen. nov.

Candidatus Argitella (NL. fem. n. *Argitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5628*. The type species for the genus is *Candidatus* Argitella fetutiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argitida decitiforma sp. nov.

Candidatus Argitida decitiforma (NL. fem. n. *decitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1329 sp003154375*. The type genome for the species is the GenBank assembly GCA_003154375.1. The GC content of the type genome is 50.99 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Argitida gen. nov.

Candidatus Argitida (NL. fem. n. *Argitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1329*. The type species for the genus is *Candidatus* Argitida decitiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-43-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ruricariaceae.

Description of *Candidatus* Argitosa alismilega sp. nov.

Candidatus Argitosa alismilega (NL. fem. n. *alismilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHUE01 sp009377375*. The type genome for the species is the GenBank assembly GCA_009377375.1. The GC content of the type genome is 68.28 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Argitosa gen. nov.

Candidatus Argitosa (NL. fem. n. *Argitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHUE01*. The type species for the genus is *Candidatus* Argitosa alismilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2964*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manibidaceae.

Description of *Candidatus* Argitula miracousia sp. nov.

Candidatus Argitula miracousia (NL. fem. n. *miracousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIW01 sp903970455*. The type genome for the species is the GenBank assembly GCA_903970455.1. The GC content of the type genome is 46.01 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Argitula gen. nov.

Candidatus Argitula (NL. fem. n. *Argitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIW01*. The type species for the genus is *Candidatus* Argitula miracousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argumana rosaredo sp. nov.

Candidatus Argumana rosaredo (NL. fem. n. *rosaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSQV01 sp013215565*. The type genome for the species is the GenBank assembly GCA_013215565.1. The GC content of the type genome is 66.89 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Argumana gen. nov.

Candidatus Argumana (NL. fem. n. *Argumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSQV01*. The type species for the genus is *Candidatus* Argumana rosaredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomaciaceae.

Description of *Candidatus* Argumaria cenodivita sp. nov.

Candidatus Argumaria cenodivita (NL. fem. n. *cenodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBB01 sp009779895*. The type genome for the species is the GenBank assembly GCA_009779895.1. The GC content of the type genome is 40.18 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Argumaria gen. nov.

Candidatus Argumaria (NL. fem. n. *Argumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBB01*. The type species for the genus is *Candidatus* Argumaria cenodivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argumella irregibula sp. nov.

Candidatus Argumella irregibula (NL. fem. n. *irregibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTK01 sp004298905*. The type genome for the species is the GenBank assembly GCA_004298905.1. The GC content of the type genome is 58.39 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Argumella gen. nov.

Candidatus Argumella (NL. fem. n. *Argumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTK01*. The type species for the genus is *Candidatus* Argumella irregibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argumia ruricago sp. nov.

Candidatus Argumia ruricago (NL. fem. n. *ruricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11215 sp902766875*. The type genome for the species is the

GenBank assembly GCA_902766875.1. The GC content of the type genome is 24.98 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Argumia gen. nov.

Candidatus Argumia (NL. fem. n. *Argumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11215*. The type species for the genus is *Candidatus* Argumia ruricago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Argumida dicanimonia sp. nov.

Candidatus Argumida dicanimonia (NL. fem. n. *dicanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6139 sp002423285*. The type genome for the species is the GenBank assembly GCA_002423285.1. The GC content of the type genome is 52.06 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Argumida gen. nov.

Candidatus Argumida (NL. fem. n. *Argumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6139*. The type species for the genus is *Candidatus* Argumida dicanimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argumosa xeramimonas sp. nov.

Candidatus Argumosa xeramimonas (NL. fem. n. *xeramimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin25 sp002238525*. The type genome for the species is the GenBank assembly GCA_002238525.1. The GC content of the type genome is 36.18 % and the

genome length is 2.96 Mbp.

Description of *Candidatus* Argumosa gen. nov.

Candidatus Argumosa (NL. fem. n. *Argumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin25*. The type species for the genus is *Candidatus* Argumosa xeramimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Argumula exorbiforma sp. nov.

Candidatus Argumula exorbiforma (NL. fem. n. *exorbiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1611 sp900553435*. The type genome for the species is the GenBank assembly GCA_900553435.1. The GC content of the type genome is 26.72 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Argumula gen. nov.

Candidatus Argumula (NL. fem. n. *Argumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1611*. The type species for the genus is *Candidatus* Argumula exorbiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Arillana clancitio sp. nov.

Candidatus Arillana clancitio (NL. fem. n. *clancitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAKD01 sp003343965*. The type genome for the species is the GenBank assembly GCA_003343965.1. The GC content of the type genome is 44.09 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Arillana gen. nov.

Candidatus Arillana (NL. fem. n. *Arillana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAKD01*. The type species for the genus is *Candidatus* Arillana clancitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arillella adnunitoga sp. nov.

Candidatus Arillella adnunitoga (NL. fem. n. *adnunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11507 sp900761005*. The type genome for the species is the GenBank assembly RS_GCF_900761005.1. The GC content of the type genome is 45.16 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Arillella gen. nov.

Candidatus Arillella (NL. fem. n. *Arillella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11507*. The type species for the genus is *Candidatus* Arillella adnunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1840*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicubulaceae.

Description of *Candidatus* Arillia umbililega sp. nov.

Candidatus Arillia umbililega (NL. fem. n. *umbililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSD01 sp012518465*. The type genome for the species is the GenBank assembly GCA_012518465.1. The GC content of the type genome is 34.58 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Arillia gen. nov.

Candidatus Arillia (NL. fem. n. *Arillia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSD01*. The type species for the genus is *Candidatus* Arillia umbililega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arillida denupitoga sp. nov.

Candidatus Arillida denupitoga (NL. fem. n. *denupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-39-15 sp000993565*. The type genome for the species is the GenBank assembly GCA_000993565.1. The GC content of the type genome is 38.73 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Arillida gen. nov.

Candidatus Arillida (NL. fem. n. *Arillida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-39-15*. The type species for the genus is *Candidatus* Arillida denupitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Arillula capucitas sp. nov.

Candidatus Arillula capucitas (NL. fem. n. *capucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSAU01 sp011046315*. The type genome for the species is the GenBank assembly GCA_011046315.1. The GC content of the type genome is 43.28 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Arillula gen. nov.

Candidatus Arillula (NL. fem. n. *Arillula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSAU01*. The type species for the genus is *Candidatus* Arillula capucitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AABM5-25-91*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Filifidaceae.

Description of *Candidatus* Armicella colutitas sp. nov.

Candidatus Armicella colutitas (NL. fem. n. *colutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFK01 sp013152925*. The type genome for the species is the GenBank assembly GCA_013152925.1. The GC content of the type genome is 67.61 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Armicella gen. nov.

Candidatus Armicella (NL. fem. n. *Armicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFK01*. The type species for the genus is *Candidatus* Armicella colutitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denoridaceae.

Description of *Candidatus* Armicia ardifatica sp. nov.

Candidatus Armicia ardifatica (NL. fem. n. *ardifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MLS-D sp002030015*. The type genome for the species is the GenBank assembly GCA_002030015.1. The GC content of the type genome is 55.2 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Armicia gen. nov.

Candidatus Armicia (NL. fem. n. *Armicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MLS-D*. The type species for the genus is *Candidatus* Armicia ardifatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2210*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haricanaceae.

Description of *Candidatus* Armicia lucifitas sp. nov.

Candidatus Armicia lucifitas (NL. fem. n. *lucifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MLS-D sp011056825*. The type genome for the species is the GenBank assembly GCA_011056825.1. The GC content of the type genome is 55.61 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Armicida tenebigena sp. nov.

Candidatus Armicida tenebigena (NL. fem. n. *tenebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTJ01 sp009377795*. The type genome for the species is the GenBank assembly GCA_009377795.1. The GC content of the type genome is 68.9 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Armicida gen. nov.

Candidatus Armicida (NL. fem. n. *Armicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTJ01*. The type species for the genus is *Candidatus* Armicida tenebigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armicosa visocago sp. nov.

Candidatus Armicosa visocago (NL. fem. n. *visocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFF01 sp009937635*. The type genome for the species is the GenBank assembly GCA_009937635.1. The GC content of the type genome is 52.08 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Armicosa gen. nov.

Candidatus Armicosa (NL. fem. n. *Armicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACFF01*. The type species for the genus is *Candidatus* Armicosa visocago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armicula ceraressa sp. nov.

Candidatus Armicula ceraressa (NL. fem. n. *ceraressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFVR01 sp004561455*. The type genome for the species is the GenBank assembly GCA_004561455.1. The GC content of the type genome is 38.58 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Armicula gen. nov.

Candidatus Armicula (NL. fem. n. *Armicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFVR01*. The type species for the genus is *Candidatus* Armicula ceraressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armicula inhorimonia sp. nov.

Candidatus Armicula inhorimonia (NL. fem. n. *inhorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFVR01 sp900769035*. The type genome for the species is the GenBank assembly RS_GCF_900769035.1. The GC content of the type genome is 36.96 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Armicula nubifetta sp. nov.

Candidatus Armicula nubifetta (NL. fem. n. *nubifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFVR01 sp900771035*. The type genome for the species is the GenBank assembly RS_GCF_900771035.1. The GC content of the type genome is 47.4 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Armidana fetutago sp. nov.

Candidatus Armidana fetutago (NL. fem. n. *fetutago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWNM01 sp003557825*. The type genome for the species is the GenBank assembly GCA_003557825.1. The GC content of the type genome is 56.77 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Armidana gen. nov.

Candidatus Armidana (NL. fem. n. *Armidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWNM01*. The type species for the genus is *Candidatus* Armidana fetutago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Armidaria nugigifica sp. nov.

Candidatus Armidaria nugigifica (NL. fem. n. *nugigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOLF01 sp903859075*. The type genome for the species is the GenBank assembly GCA_903859075.1. The GC content of the type genome is 45.83 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Armidaria gen. nov.

Candidatus Armidaria (NL. fem. n. *Armidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOLF01*. The type species for the genus is *Candidatus* Armidaria nugigifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapiaceae.

Description of *Candidatus* Armidella aglasitrix sp. nov.

Candidatus Armidella aglasitrix (NL. fem. n. *aglasitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-955 sp002050465*. The type genome for the species is the GenBank assembly GCA_002050465.1. The GC content of the type genome is 35.68 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Armidella gen. nov.

Candidatus Armidella (NL. fem. n. *Armidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-955*. The type species for the genus is *Candidatus* Armidella aglasitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armidella appecetta sp. nov.

Candidatus Armidella appecetta (NL. fem. n. *appecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-955 sp003721595*. The type genome for the species is the GenBank assembly RS_GCF_003721595.1. The GC content of the type genome is 39.05 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Armidella enucletta sp. nov.

Candidatus Armidella enucletta (NL. fem. n. *enucletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-955 sp008710285*. The type genome for the species is the GenBank assembly RS_GCF_008710285.1. The GC content of the type genome is 37.64 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Armidella eviscitia sp. nov.

Candidatus Armidella eviscitia (NL. fem. n. *eviscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-955 sp003132765*. The type genome for the species is the GenBank assembly GCA_003132765.1. The GC content of the type genome is 37.22 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Armidella pinigitudo sp. nov.

Candidatus Armidella pinigitudo (NL. fem. n. *pinigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-955 sp013694745*. The type genome for the species is the GenBank assembly GCA_013694745.1. The GC content of the type genome is 38.36 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Armidida inadfitrix sp. nov.

Candidatus Armidida inadfitrix (NL. fem. n. *inadfitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W5053 sp000467935*. The type genome for the species is the GenBank assembly RS_GCF_000467935.1. The GC content of the type genome is 37.1 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Armidida gen. nov.

Candidatus Armidida (NL. fem. n. *Armidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W5053*. The type species for the genus is *Candidatus* Armidida inadfitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armidula aprarigena sp. nov.

Candidatus Armidula aprarigena (NL. fem. n. *aprarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFBF01 sp001774865*. The type genome for the species is the GenBank assembly GCA_001774865.1. The GC content of the type genome is 41.73 % and the genome length is 0.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Armidula gen. nov.

Candidatus Armidula (NL. fem. n. *Armidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFBF01*. The type species for the genus is *Candidatus* Armidula aprarigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Armifana oppugax sp. nov.

Candidatus Armifana oppugax (NL. fem. n. *oppugax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12567 sp003520025*. The type genome for the species is the GenBank assembly GCA_003520025.1. The GC content of the type genome is 60.55 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Armifana gen. nov.

Candidatus Armifana (NL. fem. n. *Armifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12567*. The type species for the genus is *Candidatus* Armifana oppugax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Armifella omnigibra sp. nov.

Candidatus Armifella omnigibra (NL. fem. n. *omnigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3379 sp002359025*. The type genome for the species is the GenBank assembly GCA_002359025.1. The GC content of the type genome is 29.86 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Armifella gen. nov.

Candidatus Armifella (NL. fem. n. *Armifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3379*. The type species for the genus is *Candidatus* Armifella omnigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armifida adcogedo sp. nov.

Candidatus Armifida adcogedo (NL. fem. n. *adcogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0027 sp006227905*. The type genome for the species is the GenBank assembly GCA_006227905.1. The GC content of the type genome is 32.4 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Armifida gen. nov.

Candidatus Armifida (NL. fem. n. *Armifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0027*. The type species for the genus is *Candidatus* Armifida adcogedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armifula conamousia sp. nov.

Candidatus Armifula conamousia (NL. fem. n. *conamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQWV01 sp009785175*. The type genome for the species is the GenBank assembly GCA_009785175.1. The GC content of the type genome is 52.4 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Armifula gen. nov.

Candidatus Armifula (NL. fem. n. *Armifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQWV01*. The type species for the genus is *Candidatus* Armifula conamousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACZYB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturariaceae.

Description of *Candidatus* Armigaria innumitia sp. nov.

Candidatus Armigaria innumitia (NL. fem. n. *innumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZGD01 sp012511395*. The type genome for the species is the GenBank assembly GCA_012511395.1. The GC content of the type genome is 40.74 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Armigaria gen. nov.

Candidatus Armigaria (NL. fem. n. *Armigaria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZGD01*. The type species for the genus is *Candidatus* Armigaria innumitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armigella enimvetta sp. nov.

Candidatus Armigella enimvetta (NL. fem. n. *enimvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYGV01 sp004296885*. The type genome for the species is the GenBank assembly GCA_004296885.1. The GC content of the type genome is 61.97 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Armigella gen. nov.

Candidatus Armigella (NL. fem. n. *Armigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYGV01*. The type species for the genus is *Candidatus* Armigella enimvetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armigella pocililega sp. nov.

Candidatus Armigella pocililega (NL. fem. n. *pocililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYGV01 sp005799365*. The type genome for the species is the GenBank assembly GCA_005799365.1. The GC content of the type genome is 63.17 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Armigia imbecitudo sp. nov.

Candidatus Armigia imbecitudo (NL. fem. n. *imbecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1792 sp002315155*. The type genome for the species is the GenBank assembly GCA_002315155.1. The GC content of the type genome is 41.6 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Armigia gen. nov.

Candidatus Armigia (NL. fem. n. *Armigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1792*. The type species for the genus is *Candidatus* Armigia imbecitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armigida induvousia sp. nov.

Candidatus Armigida induvousia (NL. fem. n. *induvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-51-18 sp903915565*. The type genome for the species is the GenBank assembly GCA_903915565.1. The GC content of the type genome is 50.95 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Armigida gen. nov.

Candidatus Armigida (NL. fem. n. *Armigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-51-18*. The type species for the genus is *Candidatus* Armigida induvousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Armigida pomifitas sp. nov.

Candidatus Armigida pomifitas (NL. fem. n. *pomifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-51-18 sp001796525*. The type genome for the species is the GenBank assembly GCA_001796525.1. The GC content of the type genome is 49.74 % and the genome length is 1.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Armigida vecorugo sp. nov.

Candidatus Armigida vecorugo (NL. fem. n. *vecorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-51-18 sp001796495*. The type genome for the species is the GenBank assembly GCA_001796495.1. The GC content of the type genome is 51.01 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Armigosa fusifousia sp. nov.

Candidatus Armigosa fusifousia (NL. fem. n. *fusifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5614 sp002435865*. The type genome for the species is the GenBank assembly GCA_002435865.1. The GC content of the type genome is 39.07 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Armigosa gen. nov.

Candidatus Armigosa (NL. fem. n. *Armigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5614*. The type species for the genus is *Candidatus* Armigosa fusifousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armigosa xenoditio sp. nov.

Candidatus Armigosa xenoditio (NL. fem. n. *xenoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5614 sp002424605*. The type genome for the species is the GenBank assembly GCA_002424605.1. The GC content of the type genome is 48.0 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Armigula subodetta sp. nov.

Candidatus Armigula subodetta (NL. fem. n. *subodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBWE01 sp006218065*. The type genome for the species is the GenBank assembly GCA_006218065.1. The GC content of the type genome is 50.71 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Armigula gen. nov.

Candidatus Armigula (NL. fem. n. *Armigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBWE01*. The type species for the genus is *Candidatus* Armigula subodetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-965*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponanaceae.

Description of *Candidatus* Armipana irredimonia sp. nov.

Candidatus Armipana irredimonia (NL. fem. n. *irredimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO4C1 sp010671975*. The type genome for the species is the GenBank assembly GCA_010671975.1. The GC content of the type genome is 54.81 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Armipana gen. nov.

Candidatus Armipana (NL. fem. n. *Armipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SIO4C1*. The type species for the genus is *Candidatus* Armipana irredimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armiparia terebax sp. nov.

Candidatus Armiparia terebax (NL. fem. n. *terebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-39-12 sp000993405*. The type genome for the species is the GenBank assembly GCA_000993405.1. The GC content of the type genome is 38.95 % and the genome length is 1.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Armiparia gen. nov.

Candidatus Armiparia (NL. fem. n. *Armiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-39-12*. The type species for the genus is *Candidatus* Armiparia terebax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Armipia aclasitrix sp. nov.

Candidatus Armipia aclasitrix (NL. fem. n. *aclasitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKQL01 sp007119035*. The type genome for the species is the GenBank assembly GCA_007119035.1. The GC content of the type genome is 70.12 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Armipia gen. nov.

Candidatus Armipia (NL. fem. n. *Armipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SKQL01*. The type species for the genus is *Candidatus* Armipia aclasitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Armipida ossarilega sp. nov.

Candidatus Armipida ossarilega (NL. fem. n. *ossarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-42-9 sp001793775*. The type genome for the species is the GenBank assembly GCA_001793775.1. The GC content of the type genome is 42.07 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.1 filter".

Description of *Candidatus* Armipida gen. nov.

Candidatus Armipida (NL. fem. n. *Armipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-42-9*. The type species for the genus is *Candidatus* Armipida ossarilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Armiposa inresastra sp. nov.

Candidatus Armiposa inresastra (NL. fem. n. *inresastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPO01 sp013203015*. The type genome for the species is the GenBank assembly GCA_013203015.1. The GC content of the type genome is 43.28 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Armiposa gen. nov.

Candidatus Armiposa (NL. fem. n. *Armiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPO01*. The type species for the genus is *Candidatus* Armiposa inresastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS56*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turiciaceae.

Description of *Candidatus* Arnacana venefetta sp. nov.

Candidatus Arnacana venefetta (NL. fem. n. *venefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-25 sp003598135*. The type genome for the species is the GenBank assembly GCA_003598135.1. The GC content of the type genome is 45.85 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Arnacana gen. nov.

Candidatus Arnacana (NL. fem. n. *Arnacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-25*. The type species for the genus is *Candidatus* Arnacana venefetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Arnacia altipimonas sp. nov.

Candidatus Arnacia altipimonas (NL. fem. n. *altipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVQ01 sp012840965*. The type genome for the species is the GenBank assembly GCA_012840965.1. The GC content of the type genome is 50.33 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Arnacia gen. nov.

Candidatus Arnacia (NL. fem. n. *Arnacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUVQ01*. The type species for the genus is *Candidatus* Arnacia altipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelulaceae.

Description of *Candidatus* Arnacida dehisitura sp. nov.

Candidatus Arnacida dehisitura (NL. fem. n. *dehisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYT01 sp902810755*. The type genome for the species is the GenBank assembly RS_GCF_902810755.1. The GC content of the type genome is 58.26 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Arnacida gen. nov.

Candidatus Arnacida (NL. fem. n. *Arnacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYT01*. The type species for the genus is *Candidatus* Arnacida dehisitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arnogana susicitica sp. nov.

Candidatus Arnogana susicitica (NL. fem. n. *susicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-204 sp003228585*. The type genome for the species is the GenBank assembly GCA_003228585.1. The GC content of the type genome is 53.96 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Arnogana gen. nov.

Candidatus Arnogana (NL. fem. n. *Arnogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-204*. The type species for the genus is *Candidatus* Arnogana susicitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapellaceae.

Description of *Candidatus* Arnogella anaclicula sp. nov.

Candidatus Arnogella anaclicula (NL. fem. n. *anaclicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-647 sp003132585*. The type genome for the species is the GenBank assembly GCA_003132585.1. The GC content of the type genome is 67.1 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Arnogella gen. nov.

Candidatus Arnogella (NL. fem. n. *Arnogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-647*. The type species for the genus is *Candidatus* Arnogella anaclicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Arnogida labecivita sp. nov.

Candidatus Arnogida labecivita (NL. fem. n. *labecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FJAT-44876 sp002335745*. The type genome for the species is the GenBank assembly RS_GCF_002335745.1. The GC content of the type genome is 38.26 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Arnogida gen. nov.

Candidatus Arnogida (NL. fem. n. *Arnogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FJAT-44876*. The type species for the genus is *Candidatus* Arnogida labecivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arnogula inhonifica sp. nov.

Candidatus Arnogula inhonifica (NL. fem. n. *inhonifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1335 sp003153355*. The type genome for the species is the GenBank assembly GCA_003153355.1. The GC content of the type genome is 46.12 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Arnogula gen. nov.

Candidatus Arnogula (NL. fem. n. *Arnogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1335*. The type species for the genus is *Candidatus* Arnogula inhonifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malogiaceae.

Description of *Candidatus* Aromatoleum appecifica sp. nov.

Candidatus Aromatoleum appecifica (NL. fem. n. *appecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aromatoleum sp003628555*. The type genome for the species is the GenBank assembly RS_GCF_003628555.1. The GC content of the type genome is 66.3 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Aromatoleum cisalivita sp. nov.

Candidatus Aromatoleum cisalivita (NL. fem. n. *cisalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aromatoleum sp000349945*. The type genome for the species is the GenBank assembly RS_GCF_000349945.1. The GC content of the type genome is 65.03 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Aromatoleum fumacugo sp. nov.

Candidatus Aromatoleum fumacugo (NL. fem. n. *fumacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aromatoleum sp001190925*. The type genome for the species is the GenBank assembly RS_GCF_001190925.1. The GC content of the type genome is 65.84 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "reisolated from a DSMZ cell culture".

Description of *Candidatus* Aromatoleum maxumitia sp. nov.

Candidatus Aromatoleum maxumitia (NL. fem. n. *maxumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aromatoleum sp001274695*. The type genome for the species is the GenBank assembly RS_GCF_001274695.1. The GC content of the type genome is 66.08 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Wastewater treatment plant".

Description of *Candidatus* Arrabana colimitudo sp. nov.

Candidatus Arrabana colimitudo (NL. fem. n. *colimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQW01 sp011362745*. The type genome for the species is the GenBank assembly GCA_011362745.1. The GC content of the type genome is 64.56 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Arrabana gen. nov.

Candidatus Arrabana (NL. fem. n. *Arrabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSQW01*. The type species for the genus is *Candidatus* Arrabana

colimitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAUTS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifellaceae.

Description of *Candidatus* Arrabaria caselitura sp. nov.

Candidatus Arrabaria caselitura (NL. fem. n. *caselitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732755 sp009827205*. The type genome for the species is the GenBank assembly GCA_009827205.1. The GC content of the type genome is 60.4 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Arrabaria gen. nov.

Candidatus Arrabaria (NL. fem. n. *Arrabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2732755*. The type species for the genus is *Candidatus* Arrabaria caselitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Arrabaria frigdousia sp. nov.

Candidatus Arrabaria frigdousia (NL. fem. n. *frigdousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732755 sp002732755*. The type genome for the species is the GenBank assembly GCA_002732755.1. The GC content of the type genome is 58.82 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Arrabaria infelimonas sp. nov.

Candidatus Arrabaria infelimonas (NL. fem. n. *infelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732755 sp011053195*. The type genome for the species is the GenBank assembly GCA_011053195.1. The GC content of the type genome is 62.18 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Arrabaria irreditura sp. nov.

Candidatus Arrabaria irreditura (NL. fem. n. *irreditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732755 sp003712165*. The type genome for the species is the GenBank assembly GCA_003712165.1. The GC content of the type genome is 61.23 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Arrabella conabitio sp. nov.

Candidatus Arrabella conabitio (NL. fem. n. *conabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2184 sp002328745*. The type genome for the species is the GenBank assembly GCA_002328745.1. The GC content of the type genome is 67.82 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Arrabella gen. nov.

Candidatus Arrabella (NL. fem. n. *Arrabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2184*. The type species for the genus is *Candidatus* Arrabella conabitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Arrabosa divolilenta sp. nov.

Candidatus Arrabosa divolilenta (NL. fem. n. *divolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1224 sp002309235*. The type genome for the species is the GenBank assembly GCA_002309235.1. The GC content of the type genome is 54.13 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Arrabosa gen. nov.

Candidatus Arrabosa (NL. fem. n. *Arrabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1224*. The type species for the genus is *Candidatus* Arrabosa divolilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Arrabosa repecigena sp. nov.

Candidatus Arrabosa repecigena (NL. fem. n. *repecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1224 sp902782795*. The type genome for the species is the GenBank assembly GCA_902782795.1. The GC content of the type genome is 65.19 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Arrabula excucetta sp. nov.

Candidatus Arrabula excucetta (NL. fem. n. *excucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1880 sp900555875*. The type genome for the species is the GenBank assembly GCA_900555875.1. The GC content of the type genome is 54.2 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Arrabula gen. nov.

Candidatus Arrabula (NL. fem. n. *Arrabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1880*. The type species for the genus is *Candidatus* Arrabula excucetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Arrabula spastibra sp. nov.

Candidatus Arrabula spastibra (NL. fem. n. *spastibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1880 sp900761765*. The type genome for the species is the GenBank assembly RS_GCF_900761765.1. The GC content of the type genome is 58.61 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Arrecaria anacliforma sp. nov.

Candidatus Arrecaria anacliforma (NL. fem. n. *anacliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B6-G13 sp003641785*. The type genome for the species is the GenBank assembly GCA_003641785.1. The GC content of the type genome is 42.84 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Arrecaria gen. nov.

Candidatus Arrecaria (NL. fem. n. *Arrecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B6-G13*. The type species for the genus is *Candidatus* Arrecaria anacliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrecella expasugo sp. nov.

Candidatus Arrecella expasugo (NL. fem. n. *expasugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7994 sp003527145*. The type genome for the species is the GenBank assembly GCA_003527145.1. The GC content of the type genome is 39.34 %

and the genome length is 3.3 Mbp.

Description of *Candidatus* Arrecella gen. nov.

Candidatus Arrecella (NL. fem. n. *Arrecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7994*. The type species for the genus is *Candidatus* Arrecella expasugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrecosa adalgisca sp. nov.

Candidatus Arrecosa adalgisca (NL. fem. n. *adalgisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA09 sp003340565*. The type genome for the species is the GenBank assembly RS_GCF_003340565.1. The GC content of the type genome is 70.78 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Arrecosa gen. nov.

Candidatus Arrecosa (NL. fem. n. *Arrecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HLUCCA09*. The type species for the genus is *Candidatus* Arrecosa adalgisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrecosa irrefibula sp. nov.

Candidatus Arrecosa irrefibula (NL. fem. n. *irrefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA09 sp003390865*. The type genome for the species is the GenBank assembly RS_GCF_003390865.1. The GC content of the type genome is 66.7 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Arrecosa oblocitia sp. nov.

Candidatus Arrecosa oblocitia (NL. fem. n. *oblocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HLUCCA09 sp001314685*. The type genome for the species is the GenBank assembly GCA_001314685.1. The GC content of the type genome is 71.12 % and the genome length is 4.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-A from microbial mat sample; contains cyanobacterium Phormidesmis priestleyi ANA and associated heterotrophs".

Description of *Candidatus* Arrecula adtorago sp. nov.

Candidatus Arrecula adtorago (NL. fem. n. *adtorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MADRE2 sp004796375*. The type genome for the species is the GenBank assembly GCA_004796375.1. The GC content of the type genome is 50.5 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Arrecula gen. nov.

Candidatus Arrecula (NL. fem. n. *Arrecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MADRE2*. The type species for the genus is *Candidatus* Arrecula adtorago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arremana cerebitio sp. nov.

Candidatus Arremana cerebitio (NL. fem. n. *cerebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSUCC0057 sp004535795*. The type genome for the species is the GenBank assembly RS_GCF_004535795.1. The GC content of the type genome is 59.3 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Arremana gen. nov.

Candidatus Arremana (NL. fem. n. *Arremana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LSUCC0057*. The type species for the genus is *Candidatus* Arremana cerebitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arremella bucelilega sp. nov.

Candidatus Arremella bucelilega (NL. fem. n. *bucelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4087 sp002382615*. The type genome for the species is the GenBank assembly GCA_002382615.1. The GC content of the type genome is 48.23 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Arremella gen. nov.

Candidatus Arremella (NL. fem. n. *Arremella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4087*. The type species for the genus is *Candidatus* Arremella bucelilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arremida divulessa sp. nov.

Candidatus Arremida divulessa (NL. fem. n. *divulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-360 sp003247275*. The type genome for the species is the GenBank assembly GCA_003247275.1. The GC content of the type genome is 42.03 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Arremida gen. nov.

Candidatus Arremida (NL. fem. n. *Arremida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-360*. The type species for the genus is *Candidatus* Arremida divulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-45-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorifosaceae.

Description of *Candidatus* Arremosa siminitura sp. nov.

Candidatus Arremosa siminitura (NL. fem. n. *siminitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCPH02 sp013333235*. The type genome for the species is the GenBank assembly GCA_013333235.2. The GC content of the type genome is 29.04 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Arremosa gen. nov.

Candidatus Arremosa (NL. fem. n. *Arremosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCPH02*. The type species for the genus is *Candidatus* Arremosa siminitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrugana dehonilenta sp. nov.

Candidatus Arrugana dehonilenta (NL. fem. n. *dehonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPE01 sp007132145*. The type genome for the species is the GenBank assembly GCA_007132145.1. The GC content of the type genome is 51.89 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Arrugana gen. nov.

Candidatus Arrugana (NL. fem. n. *Arrugana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLPE01*. The type species for the genus is *Candidatus* Arrugana dehonilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrugella adhorigena sp. nov.

Candidatus Arrugella adhorigena (NL. fem. n. *adhorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGQ01 sp013285965*. The type genome for the species is the GenBank assembly GCA_013285965.1. The GC content of the type genome is 37.07 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Arrugella gen. nov.

Candidatus Arrugella (NL. fem. n. *Arrugella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGQ01*. The type species for the genus is *Candidatus* Arrugella adhorigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrugida remulatio sp. nov.

Candidatus Arrugida remulatio (NL. fem. n. *remulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5499 sp002426275*. The type genome for the species is the GenBank assembly GCA_002426275.1. The GC content of the type genome is 52.46 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Arrugida gen. nov.

Candidatus Arrugida (NL. fem. n. *Arrugida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5499*. The type species for the genus is *Candidatus* Arrugida remulatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU084*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabellaceae.

Description of *Candidatus* Arrugosa velifitoga sp. nov.

Candidatus Arrugosa velifitoga (NL. fem. n. *velifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJ22 sp014584305*. The type genome for the species is the GenBank assembly GCA_014584305.1. The GC content of the type genome is 56.64 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Arrugosa gen. nov.

Candidatus Arrugosa (NL. fem. n. *Arrugosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJ22*. The type species for the genus is *Candidatus* Arrugosa velifitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arrugula infenentia sp. nov.

Candidatus Arrugula infenentia (NL. fem. n. *infenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-60-11 sp001799975*. The type genome for the species is the GenBank assembly GCA_001799975.1. The GC content of the type genome is 54.23 % and the genome length is 1.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arrugula gen. nov.

Candidatus Arrugula (NL. fem. n. *Arrugula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-60-11*. The type species for the genus is *Candidatus* Arrugula infenentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocanaceae.

Description of *Candidatus* Arrugula insufitoga sp. nov.

Candidatus Arrugula insufitoga (NL. fem. n. *insufitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-60-11 sp001800085*. The type genome for the species is the GenBank assembly GCA_001800085.1. The GC content of the type genome is 59.68 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Arsenicicoccus indirago sp. nov.

Candidatus Arsenicicoccus indirago (NL. fem. n. *indirago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenicicoccus sp009707125*. The type genome for the species is the GenBank assembly RS_GCF_009707125.1. The GC content of the type genome is 71.98 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Arsenicicoccus murilitura sp. nov.

Candidatus Arsenicicoccus murilitura (NL. fem. n. *murilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenicicoccus sp001189535*. The type genome for the species is the GenBank assembly RS_GCF_001189535.1. The GC content of the type genome is 72.73 % and the genome length is 3.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Arsenophonus capabicula sp. nov.

Candidatus Arsenophonus capabicula (NL. fem. n. *capabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Arsenophonus sp902713415*. The type genome for the species is the GenBank assembly RS_GCF_902713415.1. The GC content of the type genome is 36.87 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Arsenophonus nubecago sp. nov.

Candidatus Arsenophonus nubecago (NL. fem. n. *nubecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenophonus sp900343025*. The type genome for the species is the GenBank assembly RS_GCF_900343025.1. The GC content of the type genome is 36.95 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Arsenophonus redunatio sp. nov.

Candidatus Arsenophonus redunatio (NL. fem. n. *redunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenophonus sp900343015*. The type genome for the species is the GenBank assembly RS_GCF_900343015.1. The GC content of the type genome is 32.19 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Arsenophonus scorbisca sp. nov.

Candidatus Arsenophonus scorbisca (NL. fem. n. *scorbisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenophonus sp903968575*. The type genome for the species is the GenBank assembly RS_GCF_903968575.1. The GC content of the type genome is 37.46 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Arsenophonus tegumicula sp. nov.

Candidatus Arsenophonus tegumicula (NL. fem. n. *tegumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsenophonus sp000757905*. The type genome for the species is the GenBank assembly RS_GCF_000757905.1. The GC content of the type genome is 37.59 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Arsukibacterium encoletta sp. nov.

Candidatus Arsukibacterium encoletta (NL. fem. n. *encoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsukibacterium sp000987765*. The type genome for the species is the GenBank assembly RS_GCF_000987765.1. The GC content of the type genome is 46.36 % and the genome length is 3.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "microbial mat of sediment".

Description of *Candidatus* Arsukibacterium tametiforma sp. nov.

Candidatus Arsukibacterium tametiforma (NL. fem. n. *tametiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsukibacterium sp002415085*. The type genome for the species is the GenBank assembly GCA_002364035.1. The GC content of the type genome is 48.45 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Arsukibacterium vecoritudo sp. nov.

Candidatus Arsukibacterium vecoritudo (NL. fem. n. *vecoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arsukibacterium sp002364615*. The type genome for the species is the GenBank assembly GCA_002685395.1. The GC content of the type genome is 46.41 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Arthrobacter ciminousia sp. nov.

Candidatus Arthrobacter ciminousia (NL. fem. n. *ciminousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter sp002008315*. The type genome for the species is the GenBank assembly RS_GCF_002008315.2. The GC content of the type genome is 66.13 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Arthrobacter luculax sp. nov.

Candidatus Arthrobacter luculax (NL. fem. n. *luculax* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter sp002892795*. The type genome for the species is the GenBank assembly RS_GCF_002892795.1. The GC content of the type genome is 65.88 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Arthrobacter omnimitoga sp. nov.

Candidatus Arthrobacter omnimitoga (NL. fem. n. *omnimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter sp002929275*. The type genome for the species is the GenBank assembly RS_GCF_002929275.1. The GC content of the type genome is 65.74 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Arthrobacter saxopibula sp. nov.

Candidatus Arthrobacter saxopibula (NL. fem. n. *saxopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter sp001428005*. The type genome for the species is the GenBank assembly RS_GCF_001428005.1. The GC content of the type genome is 65.45 % and the genome length is 5.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter vicecimonia sp. nov.

Candidatus Arthrobacter vicecimonia (NL. fem. n. *vicecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter sp001969265*. The type genome for the species is the GenBank assembly RS_GCF_001969265.1. The GC content of the type genome is 66.0 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Arthrobacter bonifitio sp. nov.

Candidatus Arthrobacter bonifitio (NL. fem. n. *bonifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp002929705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929705.1. The GC content of the type genome is 60.5 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Arthrobacter catobitica sp. nov.

Candidatus Arthrobacter catobitica (NL. fem. n. *catobitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp013376095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013376095.1. The GC content of the type genome is 66.83 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Arthrobacter cicaritio sp. nov.

Candidatus Arthrobacter cicaritio (NL. fem. n. *cicaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp002929305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929305.1. The GC content of the type genome is 61.35 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Arthrobacter depopitura sp. nov.

Candidatus Arthrobacter depopitura (NL. fem. n. *depopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp000785535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000785535.1. The GC content of the type genome is 62.79 % and the genome length is 4.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as

"environmental".

Description of *Candidatus* Arthrobacter ignobentia sp. nov.

Candidatus Arthrobacter ignobentia (NL. fem. n. *ignobentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp001281315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001281315.1. The GC content of the type genome is 65.37 % and the genome length is 4.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stream water".

Description of *Candidatus* Arthrobacter manomifica sp. nov.

Candidatus Arthrobacter manomifica (NL. fem. n. *manomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp013376105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013376105.1. The GC content of the type genome is 67.28 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Arthrobacter oblucitia sp. nov.

Candidatus Arthrobacter oblucitia (NL. fem. n. *oblucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp000482545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000482545.1. The GC content of the type genome is 66.82 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Arthrobacter rubecago sp. nov.

Candidatus Arthrobacter rubecago (NL. fem. n. *rubecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_A sp003946885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003946885.1. The GC content of the type genome is 68.83 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Arthrobacter televilega sp. nov.

Candidatus Arthrobacter televilega (NL. fem. n. *televilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_B sp002929435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929385.1. The GC content of the type genome is 64.47 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Arthrobacter vocamimonas sp. nov.

Candidatus Arthrobacter vocamimonas (NL. fem. n. *vocamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_B sp001307035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009696625.1. The GC content of the type genome is 64.85 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Arthrobacter xeramitudo sp. nov.

Candidatus Arthrobacter xeramitudo (NL. fem. n. *xeramitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_B sp007923395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009192775.1. The GC content of the type genome is 66.1 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Arthrobacter annubugo sp. nov.

Candidatus Arthrobacter annubugo (NL. fem. n. *annubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_C sp000520495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520495.1. The GC content of the type genome is 62.16 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter adbelitrix sp. nov.

Candidatus Arthrobacter adbelitrix (NL. fem. n. *adbelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp004001285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004001285.1. The GC content of the type genome is 68.82 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Arthrobacter adsudatio sp. nov.

Candidatus Arthrobacter adsudatio (NL. fem. n. *adsudatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp002384315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002384315.1. The GC content of the type genome is 63.77 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Arthrobacter aggenitica sp. nov.

Candidatus Arthrobacter aggenitica (NL. fem. n. *aggenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Arthrobacter_D sp000520555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520555.1. The GC content of the type genome is 65.98 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter benivousia sp. nov.

Candidatus Arthrobacter benivousia (NL. fem. n. *benivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp000816565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000816565.1. The GC content of the type genome is 69.85 % and the genome length is 3.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Water".

Description of *Candidatus* Arthrobacter cacalitrix sp. nov.

Candidatus Arthrobacter cacalitrix (NL. fem. n. *cacalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp003075455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000294595.1. The GC content of the type genome is 63.32 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sponge from Terra Nova Bay".

Description of *Candidatus* Arthrobacter ceraritia sp. nov.

Candidatus Arthrobacter ceraritia (NL. fem. n. *ceraritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp001187915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001187915.1. The GC

content of the type genome is 69.38 % and the genome length is 3.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "internal stem tissue".

Description of *Candidatus* Arthrobacter cibicimonia sp. nov.

Candidatus Arthrobacter cibicimonia (NL. fem. n. *cibicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp009828605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009828595.1. The GC content of the type genome is 67.98 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Arthrobacter depetitica sp. nov.

Candidatus Arthrobacter depetitica (NL. fem. n. *depetitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp001428435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428435.1. The GC content of the type genome is 63.4 % and the genome length is 3.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter dilicitrix sp. nov.

Candidatus Arthrobacter dilicitrix (NL. fem. n. *dilicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp002929355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929355.1. The GC content of the type genome is 68.8 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Arthrobacter evangatio sp. nov.

Candidatus Arthrobacter evangatio (NL. fem. n. *evangatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp002929375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929375.1. The GC content of the type genome is 69.3 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Arthrobacter humecicula sp. nov.

Candidatus Arthrobacter humecicula (NL. fem. n. *humecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp000520595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520595.1. The GC content of the type genome is 62.45 % and the genome length is 4.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter lenimivita sp. nov.

Candidatus Arthrobacter lenimivita (NL. fem. n. *lenimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp002929745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005281365.1. The GC content of the type genome is 67.55 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Arthrobacter macilivita sp. nov.

Candidatus Arthrobacter macilivita (NL. fem. n. *macilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp003602275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003602275.1. The GC

content of the type genome is 66.22 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Arthrobacter nicomivita sp. nov.

Candidatus Arthrobacter nicomivita (NL. fem. n. *nicomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp000520515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520515.1. The GC content of the type genome is 62.87 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter obsorax sp. nov.

Candidatus Arthrobacter obsorax (NL. fem. n. *obsorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp002929295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929295.1. The GC content of the type genome is 68.94 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Arthrobacter progritura sp. nov.

Candidatus Arthrobacter progritura (NL. fem. n. *progritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp000520535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520535.1. The GC content of the type genome is 66.09 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter roruligena sp. nov.

Candidatus Arthrobacter roruligena (NL. fem. n. *roruligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp001422665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001422665.1. The GC content of the type genome is 69.4 % and the genome length is 3.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Arthrobacter rumificula sp. nov.

Candidatus Arthrobacter rumificula (NL. fem. n. *rumificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp003602285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902805515.1. The GC content of the type genome is 68.45 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Arthrobacter veridicula sp. nov.

Candidatus Arthrobacter veridicula (NL. fem. n. *veridicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp009728235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009728235.1. The GC content of the type genome is 67.42 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Arthrobacter vitupastra sp. nov.

Candidatus Arthrobacter vitupastra (NL. fem. n. *vitupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_D sp013116745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013116745.1. The GC content of the type genome is 64.36 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Arthrobacter ciminitas sp. nov.

Candidatus Arthrobacter ciminitas (NL. fem. n. *ciminitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_F sp012952295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012952295.1. The GC content of the type genome is 64.28 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Arthrobacter ignomago sp. nov.

Candidatus Arthrobacter ignomago (NL. fem. n. *ignomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_F sp012395835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012395835.1. The GC content of the type genome is 68.69 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Arthrobacter octacetta sp. nov.

Candidatus Arthrobacter octacetta (NL. fem. n. *octacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_F sp004000035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004000035.1. The GC content of the type genome is 65.93 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Arthrobacter vagabentia sp. nov.

Candidatus Arthrobacter vagabentia (NL. fem. n. *vagabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_F sp005047635*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005047635.1. The GC content of the type genome is 65.96 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Arthrobacter effigitura sp. nov.

Candidatus Arthrobacter effigitura (NL. fem. n. *effigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_G sp003614925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003614925.1. The GC content of the type genome is 67.04 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Arthrobacter vivifitas sp. nov.

Candidatus Arthrobacter vivifitas (NL. fem. n. *vivifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_G sp001766675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001766675.1. The GC content of the type genome is 66.58 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge".

Description of *Candidatus* Arthrobacter abrepitudo sp. nov.

Candidatus Arthrobacter abrepitudo (NL. fem. n. *abrepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp001428365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001428365.1. The GC content of the type genome is 68.94 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter adcelitica sp. nov.

Candidatus Arthrobacter adcelitica (NL. fem. n. *adcelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp004798705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004798705.1. The GC content of the type genome is 66.71 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Arthrobacter adnulessa sp. nov.

Candidatus Arthrobacter adnulessa (NL. fem. n. *adnulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp900102785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900102785.1. The GC content of the type genome is 66.29 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Arthrobacter adporatio sp. nov.

Candidatus Arthrobacter adporatio (NL. fem. n. *adporatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp007858535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007858535.1. The GC content of the type genome is 68.52 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Arthrobacter ammatatica sp. nov.

Candidatus Arthrobacter ammatatica (NL. fem. n. *ammatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp005280255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_005280255.1. The GC content of the type genome is 65.07 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Arthrobacter arbavugo sp. nov.

Candidatus Arthrobacter arbavugo (NL. fem. n. *arbavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp000685965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000685965.1. The GC content of the type genome is 65.8 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Arthrobacter arundisca sp. nov.

Candidatus Arthrobacter arundisca (NL. fem. n. *arundisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp001422645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001422645.1. The GC content of the type genome is 66.97 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Arthrobacter carecitudo sp. nov.

Candidatus Arthrobacter carecitudo (NL. fem. n. *carecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp000876655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000876655.1. The GC content of the type genome is 65.72 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "diesel contaminated soil".

Description of *Candidatus* Arthrobacter cisalisca sp. nov.

Candidatus Arthrobacter cisalisca (NL. fem. n. *cisalisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp001512305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001512305.1. The GC content of the type genome is 67.84 % and the genome length is 4.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stem and leaf".

Description of *Candidatus* Arthrobacter decapicella sp. nov.

Candidatus Arthrobacter decapicella (NL. fem. n. *decapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp005937985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005937985.2. The GC content of the type genome is 67.92 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Arthrobacter defaledo sp. nov.

Candidatus Arthrobacter defaledo (NL. fem. n. *defaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp000196235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000196235.1. The GC content of the type genome is 65.39 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Arthrobacter delubitoga sp. nov.

Candidatus Arthrobacter delubitoga (NL. fem. n. *delubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp007679325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007679325.1. The GC content of the type genome is 67.17 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Arthrobacter domipessa sp. nov.

Candidatus Arthrobacter domipessa (NL. fem. n. *domipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp000374925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000620385.1. The GC content of the type genome is 67.16 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Arthrobacter ducililega sp. nov.

Candidatus Arthrobacter ducililega (NL. fem. n. *ducililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp009928425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009928425.1. The GC content of the type genome is 66.62 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Arthrobacter forabilenta sp. nov.

Candidatus Arthrobacter forabilenta (NL. fem. n. *forabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp003097355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900104405.1. The GC content of the type genome is 66.24 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Arthrobacter ignomibula sp. nov.

Candidatus Arthrobacter ignomibula (NL. fem. n. *ignomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp003352915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003352915.1. The GC content of the type genome is 67.93 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Arthrobacter lucubifica sp. nov.

Candidatus Arthrobacter lucubifica (NL. fem. n. *lucubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp900116495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900116495.1. The GC content of the type genome is 66.44 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Arthrobacter manomastra sp. nov.

Candidatus Arthrobacter manomastra (NL. fem. n. *manomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp000427315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000427315.1. The GC content of the type genome is 66.4 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sponge".

Description of *Candidatus* Arthrobacter masocitura sp. nov.

Candidatus Arthrobacter masocitura (NL. fem. n. *masocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp900102895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900102895.1. The GC content of the type genome is 66.47 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Arthrobacter obvolago sp. nov.

Candidatus Arthrobacter obvolago (NL. fem. n. *obvolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp013359735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013359735.1. The GC content of the type genome is 67.6 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Arthrobacter sacopivita sp. nov.

Candidatus Arthrobacter sacopivita (NL. fem. n. *sacopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp001750145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001750145.1. The GC content of the type genome is 66.34 % and the genome length is 4.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lake Untersee".

Description of *Candidatus* Arthrobacter semapousia sp. nov.

Candidatus Arthrobacter semapousia (NL. fem. n. *semapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp002929335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002929335.1. The GC content of the type genome is 65.41 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Arthrobacter tubicilenta sp. nov.

Candidatus Arthrobacter tubicilenta (NL. fem. n. *tubicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp900168135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000520575.1. The GC content of the type genome is 67.0 % and the genome length is 4.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Arthrobacter vavasitica sp. nov.

Candidatus Arthrobacter vavasitica (NL. fem. n. *vavasitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Arthrobacter_I sp001423745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001423745.1. The GC content of the type genome is 65.4 % and the genome length is 5.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Artifaria ecfunentia sp. nov.

Candidatus Artifaria ecfunentia (NL. fem. n. *ecfunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPRB01 sp003818285*. The type genome for the species is the GenBank assembly GCA_003818285.1. The GC content of the type genome is 70.58 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Artifaria gen. nov.

Candidatus Artifaria (NL. fem. n. *Artifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPRB01*. The type species for the genus is *Candidatus* Artifaria ecfunentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artifia exorcicula sp. nov.

Candidatus Artifia exorcicula (NL. fem. n. *exorcicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NHYM01 sp003288815*. The type genome for the species is the GenBank assembly RS_GCF_003288815.1. The GC content of the type genome is 33.27 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Artifia gen. nov.

Candidatus Artifia (NL. fem. n. *Artifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NHYM01*. The type species for the genus is *Candidatus* Artifia exorcicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artifia hexamitas sp. nov.

Candidatus Artifia hexamitas (NL. fem. n. *hexamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NHYM01 sp003364295*. The type genome for the species is the GenBank assembly RS_GCF_003364295.1. The GC content of the type genome is 29.39 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Artifida paropitudo sp. nov.

Candidatus Artifida paropitudo (NL. fem. n. *paropitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVQL01 sp002067205*. The type genome for the species is the GenBank assembly GCA_002067205.1. The GC content of the type genome is 46.52 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Artifida gen. nov.

Candidatus Artifida (NL. fem. n. *Artifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVQL01*. The type species for the genus is *Candidatus* Artifida

paropitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artifosa unetvetta sp. nov.

Candidatus Artifosa unetvetta (NL. fem. n. *unetvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-202 sp007116995*. The type genome for the species is the GenBank assembly GCA_007116995.1. The GC content of the type genome is 43.75 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Artifosa gen. nov.

Candidatus Artifosa (NL. fem. n. *Artifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-202*. The type species for the genus is *Candidatus* Artifosa unetvetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU012*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolellaceae.

Description of *Candidatus* Artilana diponitudo sp. nov.

Candidatus Artilana diponitudo (NL. fem. n. *diponitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HA3dbin3 sp002753495*. The type genome for the species is the GenBank assembly GCA_002753495.1. The GC content of the type genome is 61.72 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Artilana gen. nov.

Candidatus Artilana (NL. fem. n. *Artilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HA3dbin3*. The type species for the genus is *Candidatus* Artilana diponitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DC0425bin3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cunabidaceae.

Description of *Candidatus* Artilaria pocilitudo sp. nov.

Candidatus Artilaria pocilitudo (NL. fem. n. *pocilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-157 sp003554535*. The type genome for the species is the GenBank assembly GCA_003554535.1. The GC content of the type genome is 41.17 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Artilaria gen. nov.

Candidatus Artilaria (NL. fem. n. *Artilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-157*. The type species for the genus is *Candidatus* Artilaria pocilitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWGO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenodiaceae.

Description of *Candidatus* Artilella adposibra sp. nov.

Candidatus Artilella adposibra (NL. fem. n. *adposibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAV01 sp009784625*. The type genome for the species is the GenBank assembly GCA_009784625.1. The GC content of the type genome is 53.97 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Artilella gen. nov.

Candidatus Artilella (NL. fem. n. *Artilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAV01*. The type species for the genus is *Candidatus* Artilella

adposibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artilella defunivita sp. nov.

Candidatus Artilella defunivita (NL. fem. n. *defunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAV01 sp009777635*. The type genome for the species is the GenBank assembly GCA_009777635.1. The GC content of the type genome is 50.1 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Artilella innasibula sp. nov.

Candidatus Artilella innasibula (NL. fem. n. *innasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAV01 sp009780025*. The type genome for the species is the GenBank assembly GCA_009780025.1. The GC content of the type genome is 53.28 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Artilella menapimonia sp. nov.

Candidatus Artilella menapimonia (NL. fem. n. *menapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAV01 sp009776345*. The type genome for the species is the GenBank assembly GCA_009776345.1. The GC content of the type genome is 53.67 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Artilida nefarifica sp. nov.

Candidatus Artilida nefarifica (NL. fem. n. *nefarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS-M25 sp009866805*. The type genome for the species is the GenBank assembly RS_GCF_009866805.1. The GC content of the type genome is 62.26 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Artilida gen. nov.

Candidatus Artilida (NL. fem. n. *Artilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KS-M25*. The type species for the genus is *Candidatus* Artilida nefarifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artilula abpatitoga sp. nov.

Candidatus Artilula abpatitoga (NL. fem. n. *abpatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYLJ01 sp012521935*. The type genome for the species is the GenBank assembly GCA_012521935.1. The GC content of the type genome is 33.57 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Artilula gen. nov.

Candidatus Artilula (NL. fem. n. *Artilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYLJ01*. The type species for the genus is *Candidatus* Artilula abpatitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosidosaceae.

Description of *Candidatus* Artocaria antomitoga sp. nov.

Candidatus Artocaria antomitoga (NL. fem. n. *antomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2794515 sp002794515*. The type genome for the species is the GenBank assembly GCA_002794515.1. The GC content of the type genome is 48.07 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Artocaria gen. nov.

Candidatus Artocaria (NL. fem. n. *Artocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2794515*. The type species for the genus is *Candidatus* Artocaria antomitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Artocia bovicitrix sp. nov.

Candidatus Artocia bovicitrix (NL. fem. n. *bovicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-178 sp003170915*. The type genome for the species is the GenBank assembly GCA_003170915.1. The GC content of the type genome is 62.93 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Artocia gen. nov.

Candidatus Artocia (NL. fem. n. *Artocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-178*. The type species for the genus is *Candidatus* Artocia bovicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artocia detecousia sp. nov.

Candidatus Artocia detecousia (NL. fem. n. *detecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-178 sp003142355*. The type genome for the species is the GenBank assembly GCA_003142355.1. The GC content of the type genome is 62.99 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Artocosa infesitica sp. nov.

Candidatus Artocosa infesitica (NL. fem. n. *infesitica* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FJAT-45350 sp002335805*. The type genome for the species is the GenBank assembly RS_GCF_002335805.1. The GC content of the type genome is 36.16 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Artocosa gen. nov.

Candidatus Artocosa (NL. fem. n. *Artocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FJAT-45350*. The type species for the genus is *Candidatus* Artocosa infesitica .

According to GTDB R06-RS202, this genus belongs to the family _F.

Description of *Candidatus* Artocula acontousia sp. nov.

Candidatus Artocula acontousia (NL. fem. n. *acontousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6078 sp002428735*. The type genome for the species is the GenBank assembly GCA_002428735.1. The GC content of the type genome is 54.29 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Artocula gen. nov.

Candidatus Artocula (NL. fem. n. *Artocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6078*. The type species for the genus is *Candidatus* Artocula acontousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2210*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haricanaceae.

Description of *Candidatus* Artolana extorilega sp. nov.

Candidatus Artolana extorilega (NL. fem. n. *extorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM04792 sp900770705*. The type genome for the species is the GenBank assembly RS_GCF_900770705.1. The GC content of the type genome is 56.97 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Artolana gen. nov.

Candidatus Artolana (NL. fem. n. *Artolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM04792*. The type species for the genus is *Candidatus* Artolana extorilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artolaria effunugo sp. nov.

Candidatus Artolaria effunugo (NL. fem. n. *effunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWW01 sp013334765*. The type genome for the species is the GenBank assembly GCA_013334765.1. The GC content of the type genome is 46.2 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Artolaria gen. nov.

Candidatus Artolaria (NL. fem. n. *Artolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWW01*. The type species for the genus is *Candidatus* Artolaria effunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Artolella appicatio sp. nov.

Candidatus Artolella appicatio (NL. fem. n. *appicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DE0126 sp007679095*. The type genome for the species is the GenBank assembly RS_GCF_007679095.1. The GC content of the type genome is 36.16 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Artolella gen. nov.

Candidatus Artolella (NL. fem. n. *Artolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DE0126*. The type species for the genus is *Candidatus* Artolella appicatio .

According to GTDB R06-RS202, this genus belongs to the family _C.

Description of *Candidatus* Artolosa pabilatica sp. nov.

Candidatus Artolosa pabilatica (NL. fem. n. *pabilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5314 sp002410325*. The type genome for the species is the GenBank assembly GCA_002410325.1. The GC content of the type genome is 49.86 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Artolosa gen. nov.

Candidatus Artolosa (NL. fem. n. *Artolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5314*. The type species for the genus is *Candidatus* Artolosa pabilatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artolula detesessa sp. nov.

Candidatus Artolula detesessa (NL. fem. n. *detesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-M05 sp003215435*. The type genome for the species is the

GenBank assembly GCA_003215435.1. The GC content of the type genome is 40.7 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Artolula gen. nov.

Candidatus Artolula (NL. fem. n. *Artolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-M05*. The type species for the genus is *Candidatus* Artolula detesessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artopana absoritrix sp. nov.

Candidatus Artopana absoritrix (NL. fem. n. *absoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GN02-873 sp003260345*. The type genome for the species is the GenBank assembly GCA_003260345.1. The GC content of the type genome is 36.57 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Artopana gen. nov.

Candidatus Artopana (NL. fem. n. *Artopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GN02-873*. The type species for the genus is *Candidatus* Artopana absoritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Artopana adpecitoga sp. nov.

Candidatus Artopana adpecitoga (NL. fem. n. *adpecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GN02-873 sp002747975*. The type genome for the species is the GenBank assembly GCA_002747975.1. The GC content of the type genome is 35.46 %

and the genome length is 0.98 Mbp.

Description of *Candidatus* Artopana apporetta sp. nov.

Candidatus Artopana apporetta (NL. fem. n. *apporetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GN02-873 sp013332525*. The type genome for the species is the GenBank assembly GCA_013332525.2. The GC content of the type genome is 37.02 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Artopella arbavibra sp. nov.

Candidatus Artopella arbavibra (NL. fem. n. *arbavibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch71 sp013178015*. The type genome for the species is the GenBank assembly GCA_013178015.1. The GC content of the type genome is 65.95 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Artopella gen. nov.

Candidatus Artopella (NL. fem. n. *Artopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch71*. The type species for the genus is *Candidatus* Artopella arbavibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRVO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Momorariaceae.

Description of *Candidatus* Artopia adoscimonas sp. nov.

Candidatus Artopia adoscimonas (NL. fem. n. *adoscimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-116 sp003229115*. The type genome for the species is the GenBank assembly GCA_003229115.1. The GC content of the type genome is 45.94 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Artopia gen. nov.

Candidatus Artopia (NL. fem. n. *Artopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-116*. The type species for the genus is *Candidatus* Artopia adoscimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunanaceae.

Description of *Candidatus* Artopida incoritrix sp. nov.

Candidatus Artopida incoritrix (NL. fem. n. *incoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-57R1 sp007116505*. The type genome for the species is the GenBank assembly GCA_007116505.1. The GC content of the type genome is 73.24 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Artopida gen. nov.

Candidatus Artopida (NL. fem. n. *Artopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBr16-57R1*. The type species for the genus is *Candidatus* Artopida incoritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artoposa errabibula sp. nov.

Candidatus Artoposa errabibula (NL. fem. n. *errabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B12-G4 sp003641745*. The type genome for the species is the GenBank assembly GCA_003641745.1. The GC content of the type genome is 58.28 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Artoposa gen. nov.

Candidatus Artoposa (NL. fem. n. *Artoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B12-G4*. The type species for the genus is *Candidatus* Artoposa errabibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artufaria inpudicula sp. nov.

Candidatus Artufaria inpudicula (NL. fem. n. *inpudicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077541 sp001464995*. The type genome for the species is the GenBank assembly GCA_001464995.1. The GC content of the type genome is 73.85 % and the genome length is 3.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Artufaria gen. nov.

Candidatus Artufaria (NL. fem. n. *Artufaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077541*. The type species for the genus is *Candidatus* Artufaria inpudicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadurellaceae.

Description of *Candidatus* Artufella adtolibra sp. nov.

Candidatus Artufella adtolibra (NL. fem. n. *adtolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB15 sp013360465*. The type genome for the species is the GenBank assembly GCA_013360465.1. The GC content of the type genome is 61.88 % and the genome length is 5.93 Mbp.

Description of *Candidatus* Artufella gen. nov.

Candidatus Artufella (NL. fem. n. *Artufella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB15*. The type species for the genus is *Candidatus* Artufella adtolibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Artufella andabiforma sp. nov.

Candidatus Artufella andabiforma (NL. fem. n. *andabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB15 sp010092805*. The type genome for the species is the GenBank assembly GCA_010092805.1. The GC content of the type genome is 61.67 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Artufella oppanitia sp. nov.

Candidatus Artufella oppanitia (NL. fem. n. *oppanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB15 sp011047115*. The type genome for the species is the GenBank assembly GCA_011047115.1. The GC content of the type genome is 54.81 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Artufella sacomax sp. nov.

Candidatus Artufella sacomax (NL. fem. n. *sacomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB15 sp001567085*. The type genome for the species is the GenBank assembly GCA_001567085.1. The GC content of the type genome is 54.66 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato

processing industry".

Description of *Candidatus* Artufia infunivita sp. nov.

Candidatus Artufia infunivita (NL. fem. n. *infunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHT01 sp009782775*. The type genome for the species is the GenBank assembly GCA_009782775.1. The GC content of the type genome is 58.18 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Artufia gen. nov.

Candidatus Artufia (NL. fem. n. *Artufia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHT01*. The type species for the genus is *Candidatus* Artufia infunivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artufia verifilega sp. nov.

Candidatus Artufia verifilega (NL. fem. n. *verifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHT01 sp009783115*. The type genome for the species is the GenBank assembly GCA_009783115.1. The GC content of the type genome is 58.14 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Artufida gen. nov.

Candidatus Artufida (NL. fem. n. *Artufida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVQ01*. The type species for the genus is *Candidatus* Artufida paludicola_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Artufosa velifigena sp. nov.

Candidatus Artufosa velifigena (NL. fem. n. *velifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA924 sp002293725*. The type genome for the species is the GenBank assembly GCA_002293725.1. The GC content of the type genome is 44.72 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Artufosa gen. nov.

Candidatus Artufosa (NL. fem. n. *Artufosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA924*. The type species for the genus is *Candidatus* Artufosa velifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Arundana inexsastra sp. nov.

Candidatus Arundana inexsastra (NL. fem. n. *inexsastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PMNU01 sp002952755*. The type genome for the species is the GenBank assembly RS_GCF_002952755.1. The GC content of the type genome is 49.95 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Arundana gen. nov.

Candidatus Arundana (NL. fem. n. *Arundana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PMNU01*. The type species for the genus is *Candidatus* Arundana inexsastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Arundaria bicorugo sp. nov.

Candidatus Arundaria bicorugo (NL. fem. n. *bicorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCQ01 sp013288075*. The type genome for the species is the GenBank assembly GCA_013288075.1. The GC content of the type genome is 39.28 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Arundaria gen. nov.

Candidatus Arundaria (NL. fem. n. *Arundaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCQ01*. The type species for the genus is *Candidatus* Arundaria bicorugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arundella devecimonia sp. nov.

Candidatus Arundella devecimonia (NL. fem. n. *devecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *K2R23-3 sp003595195*. The type genome for the species is the GenBank assembly RS_GCF_003595195.1. The GC content of the type genome is 39.79 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Arundella gen. nov.

Candidatus Arundella (NL. fem. n. *Arundella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *K2R23-3*. The type species for the genus is *Candidatus* Arundella devecimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arundia curabitudo sp. nov.

Candidatus Arundia curabitudo (NL. fem. n. *curabitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPM01 sp012838315*. The type genome for the species is the GenBank assembly GCA_012838315.1. The GC content of the type genome is 45.71 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Arundia gen. nov.

Candidatus Arundia (NL. fem. n. *Arundia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPM01*. The type species for the genus is *Candidatus* Arundia curabitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arundia expecessa sp. nov.

Candidatus Arundia expecessa (NL. fem. n. *expecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPM01 sp012718915*. The type genome for the species is the GenBank assembly GCA_012718915.1. The GC content of the type genome is 44.89 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Arundosa abascetta sp. nov.

Candidatus Arundosa abascetta (NL. fem. n. *abascetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN39 sp002898955*. The type genome for the species is the GenBank assembly GCA_002898955.1. The GC content of the type genome is 72.63 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Arundosa gen. nov.

Candidatus Arundosa (NL. fem. n. *Arundosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HRBIN39*. The type species for the genus is *Candidatus* Arundosa abascetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arundula visibibula sp. nov.

Candidatus Arundula visibibula (NL. fem. n. *visibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCJ01 sp009784085*. The type genome for the species is the GenBank assembly GCA_009784085.1. The GC content of the type genome is 58.82 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Arundula gen. nov.

Candidatus Arundula (NL. fem. n. *Arundula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCJ01*. The type species for the genus is *Candidatus* Arundula visibibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aruspana dehonifica sp. nov.

Candidatus Aruspana dehonifica (NL. fem. n. *dehonifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBNZ01 sp902796155*. The type genome for the species is the GenBank assembly GCA_902796155.1. The GC content of the type genome is 37.8 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Aruspana gen. nov.

Candidatus Aruspana (NL. fem. n. *Aruspana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBNZ01*. The type species for the genus is *Candidatus* Aruspana dehonifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3830*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Parocellaceae.

Description of *Candidatus* Arusparia cobalitio sp. nov.

Candidatus Arusparia cobalitio (NL. fem. n. *cobalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720125 sp002720125*. The type genome for the species is the GenBank assembly GCA_002720125.1. The GC content of the type genome is 30.04 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Arusparia gen. nov.

Candidatus Arusparia (NL. fem. n. *Arusparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720125*. The type species for the genus is *Candidatus* Arusparia cobalitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Aruspella monodessa sp. nov.

Candidatus Aruspella monodessa (NL. fem. n. *monodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840305 sp002840305*. The type genome for the species is the GenBank assembly GCA_002840305.1. The GC content of the type genome is 32.96 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Aruspella gen. nov.

Candidatus Aruspella (NL. fem. n. *Aruspella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002840305*. The type species for the genus is *Candidatus*

Aruspella monodessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Aruspida videlitoga sp. nov.

Candidatus Aruspida videlitoga (NL. fem. n. *videlitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBY01 sp012513595*. The type genome for the species is the GenBank assembly GCA_012513595.1. The GC content of the type genome is 69.07 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Aruspida gen. nov.

Candidatus Aruspida (NL. fem. n. *Aruspida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBY01*. The type species for the genus is *Candidatus* Aruspida videlitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Aruspula chernessa sp. nov.

Candidatus Aruspula chernessa (NL. fem. n. *chernessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1305 sp002307275*. The type genome for the species is the GenBank assembly GCA_002307275.1. The GC content of the type genome is 43.51 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Aruspula gen. nov.

Candidatus Aruspula (NL. fem. n. *Aruspula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1305*. The type species for the genus is *Candidatus* Aruspula chernessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arvecia acrotitudo sp. nov.

Candidatus Arvecia acrotitudo (NL. fem. n. *acrotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBN01 sp011046055*. The type genome for the species is the GenBank assembly GCA_011046055.1. The GC content of the type genome is 55.48 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Arvecia gen. nov.

Candidatus Arvecia (NL. fem. n. *Arvecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBN01*. The type species for the genus is *Candidatus* Arvecia acrotitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arvecida obsigitoga sp. nov.

Candidatus Arvecida obsigitoga (NL. fem. n. *obsigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721105 sp002721105*. The type genome for the species is the GenBank assembly GCA_002721105.1. The GC content of the type genome is 41.28 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Arvecida gen. nov.

Candidatus Arvecida (NL. fem. n. *Arvecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721105*. The type species for the genus is *Candidatus* Arvecida obsigitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Arvecosa oblocisca sp. nov.

Candidatus Arvecosa oblocisca (NL. fem. n. *oblocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2791 sp002352105*. The type genome for the species is the GenBank assembly GCA_002352105.1. The GC content of the type genome is 48.33 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Arvecosa gen. nov.

Candidatus Arvecosa (NL. fem. n. *Arvecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2791*. The type species for the genus is *Candidatus* Arvecosa oblocisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Arvecosa semapitudo sp. nov.

Candidatus Arvecosa semapitudo (NL. fem. n. *semapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2791 sp014379345*. The type genome for the species is the GenBank assembly GCA_014379345.1. The GC content of the type genome is 41.25 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Arvecula insenitica sp. nov.

Candidatus Arvecula insenitica (NL. fem. n. *insenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19050 sp001310455*. The type genome for the species is the GenBank assembly RS_GCF_001310455.1. The GC content of the type genome is 50.1

% and the genome length is 5.44 Mbp.

Description of *Candidatus* Arvecula gen. nov.

Candidatus Arvecula (NL. fem. n. *Arvecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JCM-19050*. The type species for the genus is *Candidatus* Arvecula insenitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asaia semigastra sp. nov.

Candidatus Asaia semigastra (NL. fem. n. *semigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asaia sp003994335*. The type genome for the species is the GenBank assembly RS_GCF_003994335.1. The GC content of the type genome is 60.36 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Asbesana extunessa sp. nov.

Candidatus Asbesana extunessa (NL. fem. n. *extunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-I11 sp003215725*. The type genome for the species is the GenBank assembly GCA_003215725.1. The GC content of the type genome is 37.56 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Asbesana gen. nov.

Candidatus Asbesana (NL. fem. n. *Asbesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-I11*. The type species for the genus is *Candidatus* Asbesana extunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asbesella adsuditoga sp. nov.

Candidatus Asbesella adsuditoga (NL. fem. n. *adsuditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11237 sp902767135*. The type genome for the species is the GenBank assembly GCA_902767135.1. The GC content of the type genome is 38.74 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Asbesella gen. nov.

Candidatus Asbesella (NL. fem. n. *Asbesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11237*. The type species for the genus is *Candidatus* Asbesella adsuditoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asbesia recomitoga sp. nov.

Candidatus Asbesia recomitoga (NL. fem. n. *recomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDGH01 sp013815395*. The type genome for the species is the GenBank assembly GCA_013815395.1. The GC content of the type genome is 38.36 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Asbesia gen. nov.

Candidatus Asbesia (NL. fem. n. *Asbesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDGH01*. The type species for the genus is *Candidatus* Asbesia recomitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asbesida acrotetta sp. nov.

Candidatus Asbesida acrotetta (NL. fem. n. *acrotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8130 sp003509305*. The type genome for the species is the GenBank assembly GCA_003509305.1. The GC content of the type genome is 56.07 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Asbesida gen. nov.

Candidatus Asbesida (NL. fem. n. *Asbesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8130*. The type species for the genus is *Candidatus* Asbesida acrotetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asbesula inrelitia sp. nov.

Candidatus Asbesula inrelitia (NL. fem. n. *inrelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7706 sp002482465*. The type genome for the species is the GenBank assembly GCA_002482465.1. The GC content of the type genome is 39.52 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Asbesula gen. nov.

Candidatus Asbesula (NL. fem. n. *Asbesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7706*. The type species for the genus is *Candidatus* Asbesula inrelitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Ascalaria odollilega sp. nov.

Candidatus Ascalaria odollilega (NL. fem. n. *odollilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11523 sp900756545*. The type genome for the species is the GenBank assembly RS_GCF_900756545.1. The GC content of the type genome is 45.29 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Ascalaria gen. nov.

Candidatus Ascalaria (NL. fem. n. *Ascalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11523*. The type species for the genus is *Candidatus* Ascalaria odollilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Ascalella desoratica sp. nov.

Candidatus Ascalella desoratica (NL. fem. n. *desoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINWJ01 sp903854455*. The type genome for the species is the GenBank assembly GCA_903854455.1. The GC content of the type genome is 53.7 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Ascalella gen. nov.

Candidatus Ascalella (NL. fem. n. *Ascalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINWJ01*. The type species for the genus is *Candidatus* Ascalella desoratica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascalia depupedo sp. nov.

Candidatus Ascalia depupedo (NL. fem. n. *depupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAUSG01 sp012034055*. The type genome for the species is the GenBank assembly GCA_012034055.1. The GC content of the type genome is 50.65 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Ascalia gen. nov.

Candidatus Ascalia (NL. fem. n. *Ascalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSG01*. The type species for the genus is *Candidatus* Ascalia depupedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascalida grallimonia sp. nov.

Candidatus Ascalida grallimonia (NL. fem. n. *grallimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1375 sp002305795*. The type genome for the species is the GenBank assembly GCA_002305795.1. The GC content of the type genome is 55.4 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Ascalida gen. nov.

Candidatus Ascalida (NL. fem. n. *Ascalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1375*. The type species for the genus is *Candidatus* Ascalida grallimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascalosa cerucigena sp. nov.

Candidatus Ascalosa cerucigena (NL. fem. n. *cerucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAN01 sp012719345*. The type genome for the species is the GenBank assembly GCA_012719345.1. The GC content of the type genome is 35.14 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Ascalosa gen. nov.

Candidatus Ascalosa (NL. fem. n. *Ascalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAN01*. The type species for the genus is *Candidatus* Ascalosa cerucigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascelana ammigitia sp. nov.

Candidatus Ascelana ammigitia (NL. fem. n. *ammigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIC37A-2 sp002085155*. The type genome for the species is the GenBank assembly GCA_002085155.1. The GC content of the type genome is 63.75 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Ascelana gen. nov.

Candidatus Ascelana (NL. fem. n. *Ascelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIC37A-2*. The type species for the genus is *Candidatus* Ascelana ammigitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascelana depacatio sp. nov.

Candidatus Ascelana depacatio (NL. fem. n. *depacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIC37A-2 sp012514535*. The type genome for the species is the GenBank assembly GCA_012514535.1. The GC content of the type genome is 70.35 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Ascelaria arnacentia sp. nov.

Candidatus Ascelaria arnacentia (NL. fem. n. *arnacentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTD01 sp012518115*. The type genome for the species is the GenBank assembly GCA_012518115.1. The GC content of the type genome is 31.39 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Ascelaria gen. nov.

Candidatus Ascelaria (NL. fem. n. *Ascelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTD01*. The type species for the genus is *Candidatus* Ascelaria arnacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Ascelella amercicella sp. nov.

Candidatus Ascelella amercicella (NL. fem. n. *amercicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVX01 sp009785615*. The type genome for the species is the GenBank assembly GCA_009785615.1. The GC content of the type genome is 38.1 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Ascelella gen. nov.

Candidatus Ascelella (NL. fem. n. *Ascelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVX01*. The type species for the genus is *Candidatus* Ascelella amercicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Ascelia conigilenta sp. nov.

Candidatus Ascelia conigilenta (NL. fem. n. *conigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMQX01 sp014376765*. The type genome for the species is the GenBank assembly GCA_014376765.1. The GC content of the type genome is 63.34 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Ascelia gen. nov.

Candidatus Ascelia (NL. fem. n. *Ascelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMQX01*. The type species for the genus is *Candidatus* Ascelia conigilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascelia excalago sp. nov.

Candidatus Ascelia excalago (NL. fem. n. *excalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMQX01 sp013297875*. The type genome for the species is the GenBank assembly GCA_013297875.1. The GC content of the type genome is 60.66 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Ascelida armifisca sp. nov.

Candidatus Ascelida armifisca (NL. fem. n. *armifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMPA01 sp014377695*. The type genome for the species is the GenBank assembly GCA_014377695.1. The GC content of the type genome is 48.49 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Ascelida gen. nov.

Candidatus Ascelida (NL. fem. n. *Ascelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMPA01*. The type species for the genus is *Candidatus* Ascelida armifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Ascelida illepilega sp. nov.

Candidatus Ascelida illepilega (NL. fem. n. *illepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMPA01 sp013289705*. The type genome for the species is the GenBank assembly GCA_013289705.1. The GC content of the type genome is 47.97 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Ascelula problimonas sp. nov.

Candidatus Ascelula problimonas (NL. fem. n. *problimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM10836 sp900772095*. The type genome for the species is the GenBank assembly RS_GCF_900772095.1. The GC content of the type genome is 31.81 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Ascelula gen. nov.

Candidatus Ascelula (NL. fem. n. *Ascelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM10836*. The type species for the genus is *Candidatus* Ascelula problimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ascenana arrabicula sp. nov.

Candidatus Ascenana arrabicula (NL. fem. n. *arrabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAI01 sp013289195*. The type genome for the species is the GenBank assembly GCA_013289195.1. The GC content of the type genome is 35.53 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Ascenana gen. nov.

Candidatus Ascenana (NL. fem. n. *Ascenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDAI01*. The type species for the genus is *Candidatus* Ascenana arrabicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-43-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinanaceae.

Description of *Candidatus* Ascenaria almucedo sp. nov.

Candidatus Ascenaria almucedo (NL. fem. n. *almucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHK01 sp013297565*. The type genome for the species is the GenBank assembly GCA_013297565.1. The GC content of the type genome is 38.85 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Ascenaria gen. nov.

Candidatus Ascenaria (NL. fem. n. *Ascenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHK01*. The type species for the genus is *Candidatus* Ascenaria almucedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascenella colapitica sp. nov.

Candidatus Ascenella colapitica (NL. fem. n. *colapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOU01 sp012838685*. The type genome for the species is the GenBank assembly GCA_012838685.1. The GC content of the type genome is 43.48 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Ascenella gen. nov.

Candidatus Ascenella (NL. fem. n. *Ascenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOU01*. The type species for the genus is *Candidatus* Ascenella colapitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Ascenia adnumedo sp. nov.

Candidatus Ascenia adnumedo (NL. fem. n. *adnumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSEL01 sp008012315*. The type genome for the species is the GenBank assembly GCA_008012315.1. The GC content of the type genome is 61.26 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Ascenia gen. nov.

Candidatus Ascenia (NL. fem. n. *Ascenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSEL01*. The type species for the genus is *Candidatus* Ascenia adnumedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascenida algifigena sp. nov.

Candidatus Ascenida algifigena (NL. fem. n. *algifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WFHF3C12 sp013519935*. The type genome for the species is the GenBank assembly GCA_013519935.1. The GC content of the type genome is 66.47 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Ascenida gen. nov.

Candidatus Ascenida (NL. fem. n. *Ascenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WFHF3C12*. The type species for the genus is *Candidatus* Ascenida algifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascenosa antecitura sp. nov.

Candidatus Ascenosa antecitura (NL. fem. n. *antecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066_A sp002308255*. The type genome for the species is the GenBank assembly GCA_002308255.1. The GC content of the type genome is 54.07 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Ascenosa gen. nov.

Candidatus Ascenosa (NL. fem. n. *Ascenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1066_A*. The type species for the genus is *Candidatus* Ascenosa antecitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascenula bicubiforma sp. nov.

Candidatus Ascenula bicubiforma (NL. fem. n. *bicubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCA01 sp009784275*. The type genome for the species is the GenBank assembly GCA_009784275.1. The GC content of the type genome is 44.48 %

and the genome length is 0.89 Mbp.

Description of *Candidatus* Ascenula gen. nov.

Candidatus Ascenula (NL. fem. n. *Ascenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCA01*. The type species for the genus is *Candidatus* Ascenula bicubiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapiaceae.

Description of *Candidatus* Ascenula exsuritia sp. nov.

Candidatus Ascenula exsuritia (NL. fem. n. *exsuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCA01 sp009783145*. The type genome for the species is the GenBank assembly GCA_009783145.1. The GC content of the type genome is 50.07 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Ascidiaceihabitans scellivita sp. nov.

Candidatus Ascidiaceihabitans scellivita (NL. fem. n. *scellivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ascidiaceihabitans sp002478745*. The type genome for the species is the GenBank assembly GCA_002478745.1. The GC content of the type genome is 51.56 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Ascisana bonifibra sp. nov.

Candidatus Ascisana bonifibra (NL. fem. n. *bonifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDG01 sp003565105*. The type genome for the species is the GenBank assembly GCA_003565105.1. The GC content of the type genome is 39.66 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Ascisana gen. nov.

Candidatus Ascisana (NL. fem. n. *Ascisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXDG01*. The type species for the genus is *Candidatus* Ascisana bonifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SW-4-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catagidaceae.

Description of *Candidatus* Ascisaria manibousia sp. nov.

Candidatus Ascisaria manibousia (NL. fem. n. *manibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCH01 sp002069945*. The type genome for the species is the GenBank assembly GCA_002069945.1. The GC content of the type genome is 40.76 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Ascisaria gen. nov.

Candidatus Ascisaria (NL. fem. n. *Ascisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCH01*. The type species for the genus is *Candidatus* Ascisaria manibousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifellaceae.

Description of *Candidatus* Ascisella abluvilenta sp. nov.

Candidatus Ascisella abluvilenta (NL. fem. n. *abluvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp002371895*. The type genome for the species is the GenBank assembly GCA_002371895.1. The GC content of the type genome is 45.38 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Ascisella gen. nov.

Candidatus Ascisella (NL. fem. n. *Ascisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2834*. The type species for the genus is *Candidatus* Ascisella abluvilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascisella alsidimonia sp. nov.

Candidatus Ascisella alsidimonia (NL. fem. n. *alsidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp004561445*. The type genome for the species is the GenBank assembly GCA_004561445.1. The GC content of the type genome is 44.17 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Ascisella argimitia sp. nov.

Candidatus Ascisella argimitia (NL. fem. n. *argimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp002351365*. The type genome for the species is the GenBank assembly GCA_002351365.1. The GC content of the type genome is 45.26 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Ascisella cimitax sp. nov.

Candidatus Ascisella cimitax (NL. fem. n. *cimitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp009783305*. The type genome for the species is the GenBank assembly GCA_009783305.1. The GC content of the type genome is 47.53 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Ascisella ensigitrix sp. nov.

Candidatus Ascisella ensigitrix (NL. fem. n. *ensigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp002391075*. The type genome for the species is the GenBank assembly GCA_002391075.1. The GC content of the type genome is 48.78 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Ascisella immatibula sp. nov.

Candidatus Ascisella immatibula (NL. fem. n. *immatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp002363515*. The type genome for the species is the GenBank assembly GCA_002363515.1. The GC content of the type genome is 43.38 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Ascisella perexedo sp. nov.

Candidatus Ascisella perexedo (NL. fem. n. *perexedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2834 sp002361425*. The type genome for the species is the GenBank assembly GCA_002361425.1. The GC content of the type genome is 46.07 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Ascisia abreligena sp. nov.

Candidatus Ascisia abreligena (NL. fem. n. *abreligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCB01 sp012744395*. The type genome for the species is the GenBank assembly GCA_012744395.1. The GC content of the type genome is 66.02 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Ascisia gen. nov.

Candidatus Ascisia (NL. fem. n. *Ascisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCB01*. The type species for the genus is *Candidatus* Ascisia

abreligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascisosa ludibilenta sp. nov.

Candidatus Ascisosa ludibilenta (NL. fem. n. *ludibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAAGED01 sp900768505*. The type genome for the species is the GenBank assembly RS_GCF_900768505.1. The GC content of the type genome is 46.42 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Ascisosa gen. nov.

Candidatus Ascisosa (NL. fem. n. *Ascisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAAGED01*. The type species for the genus is *Candidatus* Ascisosa ludibilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ascisula indidastra sp. nov.

Candidatus Ascisula indidastra (NL. fem. n. *indidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEDH01 sp902826025*. The type genome for the species is the GenBank assembly GCA_902826025.1. The GC content of the type genome is 71.03 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Ascisula gen. nov.

Candidatus Ascisula (NL. fem. n. *Ascisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEDH01*. The type species for the genus is *Candidatus* Ascisula indidastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SZUA-35. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatosaceae.

Description of *Candidatus* Aseptana butubivita sp. nov.

Candidatus Aseptana butubivita (NL. fem. n. *butubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEGZ01 sp013286785*. The type genome for the species is the GenBank assembly GCA_013286785.1. The GC content of the type genome is 42.03 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Aseptana gen. nov.

Candidatus Aseptana (NL. fem. n. *Aseptana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEGZ01*. The type species for the genus is *Candidatus* Aseptana butubivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6186*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laniganaceae.

Description of *Candidatus* Aseptana indiribula sp. nov.

Candidatus Aseptana indiribula (NL. fem. n. *indiribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEGZ01 sp902827015*. The type genome for the species is the GenBank assembly GCA_902827015.1. The GC content of the type genome is 37.55 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Aseptosa catilitio sp. nov.

Candidatus Aseptosa catilitio (NL. fem. n. *catilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSX01 sp012518255*. The type genome for the species is the

GenBank assembly GCA_012518255.1. The GC content of the type genome is 35.01 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Aseptosa gen. nov.

Candidatus Aseptosa (NL. fem. n. *Aseptosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSX01*. The type species for the genus is *Candidatus* Aseptosa catilitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aseptula culigifica sp. nov.

Candidatus Aseptula culigifica (NL. fem. n. *culigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2732805 sp002732805*. The type genome for the species is the GenBank assembly GCA_002732805.1. The GC content of the type genome is 43.88 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Aseptula gen. nov.

Candidatus Aseptula (NL. fem. n. *Aseptula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2732805*. The type species for the genus is *Candidatus* Aseptula culigifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aspilida sonipitas sp. nov.

Candidatus Aspilida sonipitas (NL. fem. n. *sonipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNFS01 sp014384515*. The type genome for the species is the GenBank assembly GCA_014384515.1. The GC content of the type genome is 50.91 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Aspilida gen. nov.

Candidatus Aspilida (NL. fem. n. *Aspilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNFS01*. The type species for the genus is *Candidatus* Aspilida sonipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Aspilula nicotessa sp. nov.

Candidatus Aspilula nicotessa (NL. fem. n. *nicotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXGX01 sp012271165*. The type genome for the species is the GenBank assembly GCA_012271165.1. The GC content of the type genome is 71.38 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Aspilula gen. nov.

Candidatus Aspilula (NL. fem. n. *Aspilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXGX01*. The type species for the genus is *Candidatus* Aspilula nicotessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8438*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiposaceae.

Description of *Candidatus* Asporana capudatio sp. nov.

Candidatus Asporana capudatio (NL. fem. n. *capudatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFS01 sp007376185*. The type genome for the species is the GenBank assembly GCA_007376185.1. The GC content of the type genome is 44.19 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Asporana gen. nov.

Candidatus Asporana (NL. fem. n. *Asporana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFS01*. The type species for the genus is *Candidatus* Asporana capudatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalidaceae.

Description of *Candidatus* Asporaria inconitio sp. nov.

Candidatus Asporaria inconitio (NL. fem. n. *inconitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pan265 sp007748075*. The type genome for the species is the GenBank assembly RS_GCF_007748075.1. The GC content of the type genome is 63.92 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Asporaria gen. nov.

Candidatus Asporaria (NL. fem. n. *Asporaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pan265*. The type species for the genus is *Candidatus* Asporaria inconitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asporella refulastra sp. nov.

Candidatus Asporella refulastra (NL. fem. n. *refulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMG01 sp012798935*. The type genome for the species is the GenBank assembly GCA_012798935.1. The GC content of the type genome is 30.99 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Asporella gen. nov.

Candidatus Asporella (NL. fem. n. *Asporella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMG01*. The type species for the genus is *Candidatus* Asporella refulastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Asporia ossarimonia sp. nov.

Candidatus Asporia ossarimonia (NL. fem. n. *ossarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C-114 sp005881055*. The type genome for the species is the GenBank assembly GCA_005881055.1. The GC content of the type genome is 71.43 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Asporia gen. nov.

Candidatus Asporia (NL. fem. n. *Asporia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C-114*. The type species for the genus is *Candidatus* Asporia ossarimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Asporida betacibra sp. nov.

Candidatus Asporida betacibra (NL. fem. n. *betacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8389 sp012718945*. The type genome for the species is the GenBank assembly GCA_012718945.1. The GC content of the type genome is 49.86 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Asporida gen. nov.

Candidatus Asporida (NL. fem. n. *Asporida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8389*. The type species for the genus is *Candidatus* Asporida betacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimidaceae.

Description of *Candidatus* Asporida monogitudo sp. nov.

Candidatus Asporida monogitudo (NL. fem. n. *monogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8389 sp003506275*. The type genome for the species is the GenBank assembly GCA_003506275.1. The GC content of the type genome is 50.64 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Asporosa fiducitura sp. nov.

Candidatus Asporosa fiducitura (NL. fem. n. *fiducitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACRTK01 sp014385225*. The type genome for the species is the GenBank assembly GCA_014385225.1. The GC content of the type genome is 30.85 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Asporosa gen. nov.

Candidatus Asporosa (NL. fem. n. *Asporosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACRTK01*. The type species for the genus is *Candidatus* Asporosa fiducitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assefana sacopitudo sp. nov.

Candidatus Assefana sacopitudo (NL. fem. n. *sacopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDEK01 sp013816445*. The type genome for the species is the GenBank assembly GCA_013816445.1. The GC content of the type genome is 40.17 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Assefana gen. nov.

Candidatus Assefana (NL. fem. n. *Assefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDEK01*. The type species for the genus is *Candidatus* Assefana sacopitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemosaceae.

Description of *Candidatus* Assefaria allacimonas sp. nov.

Candidatus Assefaria allacimonas (NL. fem. n. *allacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W1033 sp011192015*. The type genome for the species is the GenBank assembly GCA_011192015.1. The GC content of the type genome is 57.25 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Assefaria gen. nov.

Candidatus Assefaria (NL. fem. n. *Assefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W1033*. The type species for the genus is *Candidatus* Assefaria allacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binocidaceae.

Description of *Candidatus* Assefella dapifugo sp. nov.

Candidatus Assefella dapifugo (NL. fem. n. *dapifugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPT01 sp012797085*. The type genome for the species is the GenBank assembly GCA_012797085.1. The GC content of the type genome is 35.26 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Assefella gen. nov.

Candidatus Assefella (NL. fem. n. *Assefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZPT01*. The type species for the genus is *Candidatus* Assefella dapifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Assefia excinicula sp. nov.

Candidatus Assefia excinicula (NL. fem. n. *excinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2773 sp002352465*. The type genome for the species is the GenBank assembly GCA_002352465.1. The GC content of the type genome is 32.07 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Assefia gen. nov.

Candidatus Assefia (NL. fem. n. *Assefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2773*. The type species for the genus is *Candidatus* Assefia excinicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2193*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Laxitellaceae.

Description of *Candidatus* Assefida nocenitio sp. nov.

Candidatus Assefida nocenitio (NL. fem. n. *nocenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKG01 sp009782245*. The type genome for the species is the GenBank assembly GCA_009782245.1. The GC content of the type genome is 43.92 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Assefida gen. nov.

Candidatus Assefida (NL. fem. n. *Assefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKG01*. The type species for the genus is *Candidatus* Assefida nocenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Assefida ulcisicella sp. nov.

Candidatus Assefida ulcisicella (NL. fem. n. *ulcisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKG01 sp009778185*. The type genome for the species is the GenBank assembly GCA_009778185.1. The GC content of the type genome is 40.28 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Assefosa ludifigena sp. nov.

Candidatus Assefosa ludifigena (NL. fem. n. *ludifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVL01 sp009785865*. The type genome for the species is the GenBank assembly GCA_009785865.1. The GC content of the type genome is 33.09 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Assefosa gen. nov.

Candidatus Assefosa (NL. fem. n. *Assefosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVL01*. The type species for the genus is *Candidatus* Assefosa ludifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Assibaria alluvitudo sp. nov.

Candidatus Assibaria alluvitudo (NL. fem. n. *alluvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J010 sp003697065*. The type genome for the species is the GenBank assembly GCA_003697065.1. The GC content of the type genome is 72.75 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Assibaria gen. nov.

Candidatus Assibaria (NL. fem. n. *Assibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J010*. The type species for the genus is *Candidatus* Assibaria alluvitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Assibia eviscax sp. nov.

Candidatus Assibia eviscax (NL. fem. n. *eviscax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6082 sp002428665*. The type genome for the species is the GenBank assembly GCA_002428665.1. The GC content of the type genome is 57.89 % and the genome length is 6.89 Mbp.

Description of *Candidatus* Assibia gen. nov.

Candidatus Assibia (NL. fem. n. *Assibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6082*. The type species for the genus is *Candidatus* Assibia eviscax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Assibida obrigimonas sp. nov.

Candidatus Assibida obrigimonas (NL. fem. n. *obrigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXPC01 sp005778225*. The type genome for the species is the GenBank assembly GCA_005778225.1. The GC content of the type genome is 54.39 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Assibida gen. nov.

Candidatus Assibida (NL. fem. n. *Assibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXPC01*. The type species for the genus is *Candidatus* Assibida obrigimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assibosa conabessa sp. nov.

Candidatus Assibosa conabessa (NL. fem. n. *conabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVC01 sp010027485*. The type genome for the species is the GenBank assembly GCA_010027485.1. The GC content of the type genome is 39.98 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Assibosa gen. nov.

Candidatus Assibosa (NL. fem. n. *Assibosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGVC01*. The type species for the genus is *Candidatus* Assibosa conabessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Assicida adhoritia sp. nov.

Candidatus Assicida adhoritia (NL. fem. n. *adhoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11600 sp002720285*. The type genome for the species is the GenBank assembly GCA_002720285.1. The GC content of the type genome is 54.13 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Assicida gen. nov.

Candidatus Assicida (NL. fem. n. *Assicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11600*. The type species for the genus is *Candidatus* Assicida adhoritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metapiaceae.

Description of *Candidatus* Assicida citocitura sp. nov.

Candidatus Assicida citocitura (NL. fem. n. *citocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11600 sp002717745*. The type genome for the species is the GenBank assembly GCA_002717745.1. The GC content of the type genome is 55.29 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Assicida docibitoga sp. nov.

Candidatus Assicida docibitoga (NL. fem. n. *docibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11600 sp002714165*. The type genome for the species is the GenBank assembly GCA_002714165.1. The GC content of the type genome is 54.4 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Assicida effemitas sp. nov.

Candidatus Assicida effemitas (NL. fem. n. *effemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11600 sp002730735*. The type genome for the species is the GenBank assembly GCA_002730735.1. The GC content of the type genome is 55.26 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Assicosa fuligigena sp. nov.

Candidatus Assicosa fuligigena (NL. fem. n. *fuligigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO1A7 sp010672965*. The type genome for the species is the GenBank assembly GCA_010672965.1. The GC content of the type genome is 47.9 % and the genome length is 9.08 Mbp.

Description of *Candidatus* Assicosa gen. nov.

Candidatus Assicosa (NL. fem. n. *Assicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIO1A7*. The type species for the genus is *Candidatus* Assicosa fuligigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assicula verecitura sp. nov.

Candidatus Assicula verecitura (NL. fem. n. *verecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXH01 sp011367925*. The type genome for the species is the GenBank assembly GCA_011367925.1. The GC content of the type genome is 34.13 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Assicula gen. nov.

Candidatus Assicula (NL. fem. n. *Assicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXH01*. The type species for the genus is *Candidatus* Assicula verecitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assifaria armifimonia sp. nov.

Candidatus Assifaria armifimonia (NL. fem. n. *armifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSA4 sp013414705*. The type genome for the species is the GenBank assembly GCA_013414705.1. The GC content of the type genome is 63.6 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Assifaria gen. nov.

Candidatus Assifaria (NL. fem. n. *Assifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSA4*. The type species for the genus is *Candidatus* Assifaria armifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UXAT02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peraculaceae.

Description of *Candidatus* Assifida dimacago sp. nov.

Candidatus Assifida dimacago (NL. fem. n. *dimacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAV01 sp014238595*. The type genome for the species is the GenBank assembly GCA_014238595.1. The GC content of the type genome is 39.59 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Assifida gen. nov.

Candidatus Assifida (NL. fem. n. *Assifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAV01*. The type species for the genus is *Candidatus* Assifida dimacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J016*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepiaceae.

Description of *Candidatus* Assifosa casabicella sp. nov.

Candidatus Assifosa casabicella (NL. fem. n. *casabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11090 sp002839205*. The type genome for the species is the GenBank assembly GCA_002839205.1. The GC content of the type genome is 56.64 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Assifosa gen. nov.

Candidatus Assifosa (NL. fem. n. *Assifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11090*. The type species for the genus is *Candidatus* Assifosa casabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponosaceae.

Description of *Candidatus* Assifula mureletta sp. nov.

Candidatus Assifula mureletta (NL. fem. n. *mureletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REEP01 sp007695045*. The type genome for the species is the GenBank assembly GCA_007695045.1. The GC content of the type genome is 66.06 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Assifula gen. nov.

Candidatus Assifula (NL. fem. n. *Assifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REEP01*. The type species for the genus is *Candidatus* Assifula mureletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UXAT02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peraculaceae.

Description of *Candidatus* Assifula penicago sp. nov.

Candidatus Assifula penicago (NL. fem. n. *penicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REEP01 sp007694935*. The type genome for the species is the GenBank assembly GCA_007694935.1. The GC content of the type genome is 67.37 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Assubana depelibula sp. nov.

Candidatus Assubana depelibula (NL. fem. n. *depelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUT01 sp009781955*. The type genome for the species is the GenBank assembly GCA_009781955.1. The GC content of the type genome is 52.59 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Assubana gen. nov.

Candidatus Assubana (NL. fem. n. *Assubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WQUT01*. The type species for the genus is *Candidatus* Assubana depelibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapiaceae.

Description of *Candidatus* Assubaria immadimonia sp. nov.

Candidatus Assubaria immadimonia (NL. fem. n. *immadimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-432-D11 sp003212885*. The type genome for the species is the GenBank assembly GCA_003212885.1. The GC content of the type genome is 35.5 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Assubaria gen. nov.

Candidatus Assubaria (NL. fem. n. *Assubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-432-D11*. The type species for the genus is *Candidatus* Assubaria immadimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assubella incucisca sp. nov.

Candidatus Assubella incucisca (NL. fem. n. *incucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BK-30 sp002837145*. The type genome for the species is the GenBank assembly RS_GCF_002837145.1. The GC content of the type genome is 67.35 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Assubella gen. nov.

Candidatus Assubella (NL. fem. n. *Assubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BK-30*. The type species for the genus is *Candidatus* Assubella

incucisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assubosa revecitio sp. nov.

Candidatus Assubosa revecitio (NL. fem. n. *revecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MO-CFX2 sp003569045*. The type genome for the species is the GenBank assembly RS_GCF_003569045.1. The GC content of the type genome is 62.94 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Assubosa gen. nov.

Candidatus Assubosa (NL. fem. n. *Assubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MO-CFX2*. The type species for the genus is *Candidatus* Assubosa revecitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibariaceae.

Description of *Candidatus* Assucana allobigena sp. nov.

Candidatus Assucana allobigena (NL. fem. n. *allobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHZY01 sp009692065*. The type genome for the species is the GenBank assembly GCA_009692065.1. The GC content of the type genome is 60.84 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Assucana gen. nov.

Candidatus Assucana (NL. fem. n. *Assucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHZY01*. The type species for the genus is *Candidatus* Assucana allobigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assucaria amnigigena sp. nov.

Candidatus Assucaria amnigigena (NL. fem. n. *amnigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c25 sp001515955*. The type genome for the species is the GenBank assembly GCA_001515955.1. The GC content of the type genome is 40.76 % and the genome length is 5.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Assucaria gen. nov.

Candidatus Assucaria (NL. fem. n. *Assucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRH-c25*. The type species for the genus is *Candidatus* Assucaria amnigigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assucaria hexamitoga sp. nov.

Candidatus Assucaria hexamitoga (NL. fem. n. *hexamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c25 sp012519325*. The type genome for the species is the GenBank assembly GCA_012519325.1. The GC content of the type genome is 40.99 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Assucella adfabimonia sp. nov.

Candidatus Assucella adfabimonia (NL. fem. n. *adfabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5793 sp002418285*. The type genome for the species is the GenBank assembly GCA_002418285.1. The GC content of the type genome is 61.9 %

and the genome length is 4.84 Mbp.

Description of *Candidatus* Assucella gen. nov.

Candidatus Assucella (NL. fem. n. *Assucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5793*. The type species for the genus is *Candidatus* Assucella adfabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Assucella ascenibula sp. nov.

Candidatus Assucella ascenibula (NL. fem. n. *ascenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5793 sp011525805*. The type genome for the species is the GenBank assembly GCA_011525805.1. The GC content of the type genome is 67.05 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Assucella binocentia sp. nov.

Candidatus Assucella binocentia (NL. fem. n. *binocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5793 sp900696685*. The type genome for the species is the GenBank assembly GCA_900696685.1. The GC content of the type genome is 65.84 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Assucia inrefastra sp. nov.

Candidatus Assucia inrefastra (NL. fem. n. *inrefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1448 sp002329405*. The type genome for the species is the GenBank assembly GCA_002329405.1. The GC content of the type genome is 52.19 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Assucia gen. nov.

Candidatus Assucia (NL. fem. n. *Assucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1448*. The type species for the genus is *Candidatus* Assucia inrefastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assucula adsucentia sp. nov.

Candidatus Assucula adsucentia (NL. fem. n. *adsucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCX01 sp012729555*. The type genome for the species is the GenBank assembly GCA_012729555.1. The GC content of the type genome is 66.43 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Assucula gen. nov.

Candidatus Assucula (NL. fem. n. *Assucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCX01*. The type species for the genus is *Candidatus* Assucula adsucentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomulaceae.

Description of *Candidatus* Assucula adtemitas sp. nov.

Candidatus Assucula adtemitas (NL. fem. n. *adtemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCX01 sp012719455*. The type genome for the species is the GenBank assembly GCA_012719455.1. The GC content of the type genome is 64.64 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Assudaria thapsastra sp. nov.

Candidatus Assudaria thapsastra (NL. fem. n. *thapsastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BHEQ01 sp003864535*. The type genome for the species is the GenBank assembly GCA_003864535.1. The GC content of the type genome is 36.78 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Assudaria gen. nov.

Candidatus Assudaria (NL. fem. n. *Assudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BHEQ01*. The type species for the genus is *Candidatus* Assudaria thapsastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assudella bucolastra sp. nov.

Candidatus Assudella bucolastra (NL. fem. n. *bucolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMV01 sp012521185*. The type genome for the species is the GenBank assembly GCA_012521185.1. The GC content of the type genome is 38.28 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Assudella gen. nov.

Candidatus Assudella (NL. fem. n. *Assudella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYMV01*. The type species for the genus is *Candidatus* Assudella bucolastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU012*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolellaceae.

Description of *Candidatus* Assudia bulapitia sp. nov.

Candidatus Assudia bulapitia (NL. fem. n. *bulapitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICL01 sp009691445*. The type genome for the species is the GenBank assembly GCA_009691445.1. The GC content of the type genome is 46.97 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Assudia gen. nov.

Candidatus Assudia (NL. fem. n. *Assudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICL01*. The type species for the genus is *Candidatus* Assudia bulapitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-52-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semidulaceae.

Description of *Candidatus* Assudida semifisca sp. nov.

Candidatus Assudida semifisca (NL. fem. n. *semifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PTKQ01 sp002937815*. The type genome for the species is the GenBank assembly GCA_002937815.1. The GC content of the type genome is 28.13 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Assudida gen. nov.

Candidatus Assudida (NL. fem. n. *Assudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PTKQ01*. The type species for the genus is *Candidatus* Assudida semifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002720895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomariaceae.

Description of *Candidatus* Assudosa didacitica sp. nov.

Candidatus Assudosa didacitica (NL. fem. n. *didacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRD01 sp011391085*. The type genome for the species is the GenBank assembly GCA_011391085.1. The GC content of the type genome is 46.05 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Assudosa gen. nov.

Candidatus Assudosa (NL. fem. n. *Assudosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRD01*. The type species for the genus is *Candidatus* Assudosa didacitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Assudula denavimonia sp. nov.

Candidatus Assudula denavimonia (NL. fem. n. *denavimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-147 sp003230015*. The type genome for the species is the GenBank assembly GCA_003230015.1. The GC content of the type genome is 61.14 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Assudula gen. nov.

Candidatus Assudula (NL. fem. n. *Assudula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-147*. The type species for the genus is *Candidatus* Assudula denavimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Astaparia ranunitia sp. nov.

Candidatus Astaparia ranunitia (NL. fem. n. *ranunitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QLIT01 sp003574485*. The type genome for the species is the GenBank assembly RS_GCF_003574485.1. The GC content of the type genome is 37.76 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Astaparia gen. nov.

Candidatus Astaparia (NL. fem. n. *Astaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QLIT01*. The type species for the genus is *Candidatus* Astaparia ranunitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Astapella evangax sp. nov.

Candidatus Astapella evangax (NL. fem. n. *evangax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIZ01 sp013151055*. The type genome for the species is the GenBank assembly GCA_013151055.1. The GC content of the type genome is 31.95 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Astapella gen. nov.

Candidatus Astapella (NL. fem. n. *Astapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIZ01*. The type species for the genus is *Candidatus* Astapella evangax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Astapia pocilisca sp. nov.

Candidatus Astapia pocilisca (NL. fem. n. *pocilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGA01 sp011523765*. The type genome for the species is the GenBank assembly GCA_011523765.1. The GC content of the type genome is 56.95 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Astapia gen. nov.

Candidatus Astapia (NL. fem. n. *Astapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTGA01*. The type species for the genus is *Candidatus* Astapia pocilisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LS-SOB*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeciaceae.

Description of *Candidatus* Astapula abnepatio sp. nov.

Candidatus Astapula abnepatio (NL. fem. n. *abnepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2282 sp000995125*. The type genome for the species is the GenBank assembly GCA_000995125.1. The GC content of the type genome is 38.52 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Astapula gen. nov.

Candidatus Astapula (NL. fem. n. *Astapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2282*. The type species for the genus is *Candidatus* Astapula abnepatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Astapula ossaritudo sp. nov.

Candidatus Astapula ossaritudo (NL. fem. n. *ossaritudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2282 sp002345745*. The type genome for the species is the GenBank assembly GCA_002345745.1. The GC content of the type genome is 36.09 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Asticcacaulis adlenimonia sp. nov.

Candidatus Asticcacaulis adlenimonia (NL. fem. n. *adlenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp000495795*. The type genome for the species is the GenBank assembly RS_GCF_000495795.1. The GC content of the type genome is 62.01 % and the genome length is 5.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "school street marsh".

Description of *Candidatus* Asticcacaulis esculedo sp. nov.

Candidatus Asticcacaulis esculedo (NL. fem. n. *esculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp003053985*. The type genome for the species is the GenBank assembly RS_GCF_003053985.1. The GC content of the type genome is 61.96 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Asticcacaulis extunimonia sp. nov.

Candidatus Asticcacaulis extunimonia (NL. fem. n. *extunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp000495815*. The type genome for the species is the GenBank assembly RS_GCF_000495815.1. The GC content of the type genome is 58.84 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "school street marsh".

Description of *Candidatus* Asticcacaulis homicicella sp. nov.

Candidatus Asticcacaulis homicicella (NL. fem. n. *homicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp002342035*. The type genome for the species is the GenBank assembly GCA_002342035.1. The GC content of the type genome is 56.92 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Asticcacaulis inabritio sp. nov.

Candidatus Asticcacaulis inabritio (NL. fem. n. *inabritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp000495855*. The type genome for the species is the GenBank assembly RS_GCF_000495855.1. The GC content of the type genome is 60.67 % and the genome length is 4.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake water".

Description of *Candidatus* Asticcacaulis omnigedo sp. nov.

Candidatus Asticcacaulis omnigedo (NL. fem. n. *omnigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Asticcacaulis sp000495835*. The type genome for the species is the GenBank assembly RS_GCF_000495835.1. The GC content of the type genome is 60.44 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake water".

Description of *Candidatus* Astipana dimiditas sp. nov.

Candidatus Astipana dimiditas (NL. fem. n. *dimiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-190 sp011055945*. The type genome for the species is the GenBank assembly GCA_011055945.1. The GC content of the type genome is 73.71 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Astipana gen. nov.

Candidatus Astipana (NL. fem. n. *Astipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-190*. The type species for the genus is *Candidatus* Astipana

dimiditas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagiaceae.

Description of *Candidatus* Astipia cilotitudo sp. nov.

Candidatus Astipia cilotitudo (NL. fem. n. *cilotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2296 sp002345475*. The type genome for the species is the GenBank assembly GCA_002345475.1. The GC content of the type genome is 54.65 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Astipia gen. nov.

Candidatus Astipia (NL. fem. n. *Astipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2296*. The type species for the genus is *Candidatus* Astipia cilotitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonellaceae.

Description of *Candidatus* Astipida nimiritrix sp. nov.

Candidatus Astipida nimiritrix (NL. fem. n. *nimiritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11400 sp003448835*. The type genome for the species is the GenBank assembly GCA_003448835.1. The GC content of the type genome is 40.09 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Astipida gen. nov.

Candidatus Astipida (NL. fem. n. *Astipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA11400*. The type species for the genus is *Candidatus* Astipida nimiritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HLUCCA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubiganaceae.

Description of *Candidatus* Astiposa apperigena sp. nov.

Candidatus Astiposa apperigena (NL. fem. n. *apperigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEEZ01 sp902826485*. The type genome for the species is the GenBank assembly GCA_902826485.1. The GC content of the type genome is 37.63 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Astiposa gen. nov.

Candidatus Astiposa (NL. fem. n. *Astiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEEZ01*. The type species for the genus is *Candidatus* Astiposa apperigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Astipula revecitas sp. nov.

Candidatus Astipula revecitas (NL. fem. n. *revecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1265 sp902803145*. The type genome for the species is the GenBank assembly GCA_902803145.1. The GC content of the type genome is 43.6 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Astipula gen. nov.

Candidatus Astipula (NL. fem. n. *Astipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1265*. The type species for the genus is *Candidatus* Astipula

revecitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Astipula siticimonas sp. nov.

Candidatus Astipula siticimonas (NL. fem. n. *siticimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1265 sp002308475*. The type genome for the species is the GenBank assembly GCA_002308475.1. The GC content of the type genome is 44.17 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Aterrana subofimonia sp. nov.

Candidatus Aterrana subofimonia (NL. fem. n. *subofimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED123 sp002170165*. The type genome for the species is the GenBank assembly GCA_002170165.1. The GC content of the type genome is 38.5 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Aterrana gen. nov.

Candidatus Aterrana (NL. fem. n. *Aterrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED123*. The type species for the genus is *Candidatus* Aterrana subofimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Aterrella depeciforma sp. nov.

Candidatus Aterrella depeciforma (NL. fem. n. *depeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJT01 sp013003335*. The type genome for the species is the

GenBank assembly GCA_013003335.1. The GC content of the type genome is 56.43 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Aterrella gen. nov.

Candidatus Aterrella (NL. fem. n. *Aterrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJT01*. The type species for the genus is *Candidatus* Aterrella depeciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Aterrosa indirax sp. nov.

Candidatus Aterrosa indirax (NL. fem. n. *indirax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRR01 sp014534345*. The type genome for the species is the GenBank assembly GCA_014534345.1. The GC content of the type genome is 73.78 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Aterrosa gen. nov.

Candidatus Aterrosa (NL. fem. n. *Aterrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRR01*. The type species for the genus is *Candidatus* Aterrosa indirax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Aterrula adlubitudo sp. nov.

Candidatus Aterrula adlubitudo (NL. fem. n. *adlubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1633 sp900553645*. The type genome for the species is the GenBank assembly GCA_900553645.1. The GC content of the type genome is 58.04 %

and the genome length is 1.94 Mbp.

Description of *Candidatus* Aterrula gen. nov.

Candidatus Aterrula (NL. fem. n. *Aterrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1633*. The type species for the genus is *Candidatus* Aterrula adlubitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Athalassotoga reduvastra sp. nov.

Candidatus Athalassotoga reduvastra (NL. fem. n. *reduvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Athalassotoga sp002878315*. The type genome for the species is the GenBank assembly GCA_002878335.1. The GC content of the type genome is 40.76 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Atlanana inmementia sp. nov.

Candidatus Atlanana inmementia (NL. fem. n. *inmementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPM01 sp011054455*. The type genome for the species is the GenBank assembly GCA_011054455.1. The GC content of the type genome is 68.92 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Atlanana gen. nov.

Candidatus Atlanana (NL. fem. n. *Atlanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPM01*. The type species for the genus is *Candidatus* Atlanana inmementia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Docibariaceae.

Description of *Candidatus* Atlanaria adluvousia sp. nov.

Candidatus Atlanaria adluvousia (NL. fem. n. *adluvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW300-bin19 sp004297825*. The type genome for the species is the GenBank assembly GCA_004297825.1. The GC content of the type genome is 57.78 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Atlanaria gen. nov.

Candidatus Atlanaria (NL. fem. n. *Atlanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW300-bin19*. The type species for the genus is *Candidatus* Atlanaria adluvousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5368*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuferariaceae.

Description of *Candidatus* Atlania denicitura sp. nov.

Candidatus Atlania denicitura (NL. fem. n. *denicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp7-AA10 sp003223695*. The type genome for the species is the GenBank assembly GCA_003223695.1. The GC content of the type genome is 60.27 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Atlania gen. nov.

Candidatus Atlania (NL. fem. n. *Atlania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp7-AA10*. The type species for the genus is *Candidatus* Atlania denicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

Gp7-AA8. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viburanaceae.

Description of *Candidatus* Atlania octobibula sp. nov.

Candidatus Atlania octobibula (NL. fem. n. *octobibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp7-AA10 sp003222375*. The type genome for the species is the GenBank assembly GCA_003222375.1. The GC content of the type genome is 61.01 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Atlanida abluvibra sp. nov.

Candidatus Atlanida abluvibra (NL. fem. n. *abluvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP256 sp002714185*. The type genome for the species is the GenBank assembly GCA_002714185.1. The GC content of the type genome is 28.4 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Atlanida gen. nov.

Candidatus Atlanida (NL. fem. n. *Atlanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP256*. The type species for the genus is *Candidatus* Atlanida abluvibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Atlanida arrabago sp. nov.

Candidatus Atlanida arrabago (NL. fem. n. *arrabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP256 sp002713285*. The type genome for the species is the GenBank

assembly GCA_002713285.1. The GC content of the type genome is 30.1 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Atlanida cetaratica sp. nov.

Candidatus Atlanida cetaratica (NL. fem. n. *cetaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP256 sp002722215*. The type genome for the species is the GenBank assembly GCA_002722215.1. The GC content of the type genome is 31.55 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Atlantibacter funivimonas sp. nov.

Candidatus Atlantibacter funivimonas (NL. fem. n. *funivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Atlantibacter sp002345315*. The type genome for the species is the GenBank assembly RS_GCF_014193285.1. The GC content of the type genome is 54.99 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Atlantibacter saxifitica sp. nov.

Candidatus Atlantibacter saxifitica (NL. fem. n. *saxifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Atlantibacter sp002358165*. The type genome for the species is the GenBank assembly GCA_002478805.1. The GC content of the type genome is 52.89 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Atlanula dilemimonas sp. nov.

Candidatus Atlanula dilemimonas (NL. fem. n. *dilemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGU01 sp011523425*. The type genome for the species is the GenBank assembly GCA_011523425.1. The GC content of the type genome is 70.07 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Atlanula gen. nov.

Candidatus Atlanula (NL. fem. n. *Atlanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTGU01*. The type species for the genus is *Candidatus* Atlanula dilemimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Atopobacter cerucicula sp. nov.

Candidatus Atopobacter cerucicula (NL. fem. n. *cerucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Atopobacter sp003664595*. The type genome for the species is the GenBank assembly RS_GCF_003664595.1. The GC content of the type genome is 38.58 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Atricaria exheritrix sp. nov.

Candidatus Atricaria exheritrix (NL. fem. n. *exheritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002728675 sp002728675*. The type genome for the species is the GenBank assembly GCA_002728675.1. The GC content of the type genome is 63.4 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Atricaria gen. nov.

Candidatus Atricaria (NL. fem. n. *Atricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002728675*. The type species for the genus is *Candidatus* Atricaria exheritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Atricaria exhorigena sp. nov.

Candidatus Atricaria exhorigena (NL. fem. n. *exhorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002728675 sp002714125*. The type genome for the species is the GenBank assembly GCA_002714125.1. The GC content of the type genome is 58.03 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Atricida peribiforma sp. nov.

Candidatus Atricida peribiforma (NL. fem. n. *peribiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCU01 sp002070205*. The type genome for the species is the GenBank assembly GCA_002070205.1. The GC content of the type genome is 48.63 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Atricida gen. nov.

Candidatus Atricida (NL. fem. n. *Atricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCU01*. The type species for the genus is *Candidatus* Atricida peribiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Atricosa lapilessa sp. nov.

Candidatus Atricosa lapilessa (NL. fem. n. *lapilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13091 sp902785645*. The type genome for the species is the GenBank assembly GCA_902785645.1. The GC content of the type genome is 34.88 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Atricosa gen. nov.

Candidatus Atricosa (NL. fem. n. *Atricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13091*. The type species for the genus is *Candidatus* Atricosa lapilessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Atricula ammigimonia sp. nov.

Candidatus Atricula ammigimonia (NL. fem. n. *ammigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYCT01 sp903924765*. The type genome for the species is the GenBank assembly GCA_903924765.1. The GC content of the type genome is 57.63 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Atricula gen. nov.

Candidatus Atricula (NL. fem. n. *Atricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYCT01*. The type species for the genus is *Candidatus* Atricula ammigimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Atropana bucelivita sp. nov.

Candidatus Atropana bucelivita (NL. fem. n. *bucelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFB01 sp013286765*. The type genome for the species is the GenBank assembly GCA_013286765.1. The GC content of the type genome is 44.73 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Atropana gen. nov.

Candidatus Atropana (NL. fem. n. *Atropana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFB01*. The type species for the genus is *Candidatus* Atropana bucelivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Atropida conibitura sp. nov.

Candidatus Atropida conibitura (NL. fem. n. *conibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6240 sp002441445*. The type genome for the species is the GenBank assembly GCA_002441445.1. The GC content of the type genome is 62.46 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Atropida gen. nov.

Candidatus Atropida (NL. fem. n. *Atropida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6240*. The type species for the genus is *Candidatus* Atropida conibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Atroposa allapifica sp. nov.

Candidatus Atroposa allapifica (NL. fem. n. *allapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GLR113 sp013139935*. The type genome for the species is the GenBank assembly GCA_013139935.1. The GC content of the type genome is 60.28 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Atroposa gen. nov.

Candidatus Atroposa (NL. fem. n. *Atroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GLR113*. The type species for the genus is *Candidatus* Atroposa allapifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4811*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribariaceae.

Description of *Candidatus* Atropula siticitoga sp. nov.

Candidatus Atropula siticitoga (NL. fem. n. *siticitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDS01 sp009779675*. The type genome for the species is the GenBank assembly GCA_009779675.1. The GC content of the type genome is 59.75 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Atropula gen. nov.

Candidatus Atropula (NL. fem. n. *Atropula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDS01*. The type species for the genus is *Candidatus* Atropula siticitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimulaceae.

Description of *Candidatus* Atrusana octusibra sp. nov.

Candidatus Atrusana octusibra (NL. fem. n. *octusibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGXY01 sp002839375*. The type genome for the species is the GenBank assembly GCA_002839375.1. The GC content of the type genome is 47.52 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Atrusana gen. nov.

Candidatus Atrusana (NL. fem. n. *Atrusana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGXY01*. The type species for the genus is *Candidatus* Atrusana octusibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Atrusella tomogilenta sp. nov.

Candidatus Atrusella tomogilenta (NL. fem. n. *tomogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHVT01 sp003223645*. The type genome for the species is the GenBank assembly GCA_003223645.1. The GC content of the type genome is 63.61 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Atrusella gen. nov.

Candidatus Atrusella (NL. fem. n. *Atrusella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHVT01*. The type species for the genus is *Candidatus* Atrusella tomogilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp7-AA8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viburanaceae.

Description of *Candidatus* Atrusida coticicula sp. nov.

Candidatus Atrusida coticicula (NL. fem. n. *coticicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAFB01 sp013388545*. The type genome for the species is the GenBank assembly GCA_013388545.1. The GC content of the type genome is 36.04 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Atrusida gen. nov.

Candidatus Atrusida (NL. fem. n. *Atrusida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAFB01*. The type species for the genus is *Candidatus* Atrusida coticicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Atrusosa cohurilega sp. nov.

Candidatus Atrusosa cohurilega (NL. fem. n. *cohurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBB01 sp012719075*. The type genome for the species is the GenBank assembly GCA_012719075.1. The GC content of the type genome is 65.24 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Atrusosa gen. nov.

Candidatus Atrusosa (NL. fem. n. *Atrusosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBB01*. The type species for the genus is *Candidatus* Atrusosa cohurilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BX7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipiniaceae.

Description of *Candidatus* Atrusula adtemibula sp. nov.

Candidatus Atrusula adtemibula (NL. fem. n. *adtemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSEF01 sp008012175*. The type genome for the species is the GenBank assembly GCA_008012175.1. The GC content of the type genome is 53.71 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Atrusula gen. nov.

Candidatus Atrusula (NL. fem. n. *Atrusula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSEF01*. The type species for the genus is *Candidatus* Atrusula adtemibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1568*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicalulaceae.

Description of *Candidatus* Attegaria allapicula sp. nov.

Candidatus Attegaria allapicula (NL. fem. n. *allapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPT01 sp012799095*. The type genome for the species is the GenBank assembly GCA_012799095.1. The GC content of the type genome is 47.43 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Attegaria gen. nov.

Candidatus Attegaria (NL. fem. n. *Attegaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPT01*. The type species for the genus is *Candidatus* Attegaria allapicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attegaria cituvicella sp. nov.

Candidatus Attegaria cituvicella (NL. fem. n. *cituvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPT01 sp012838225*. The type genome for the species is the GenBank assembly GCA_012838225.1. The GC content of the type genome is 53.33 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Attegida irregitrix sp. nov.

Candidatus Attegida irregitrix (NL. fem. n. *irregitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J134 sp003694205*. The type genome for the species is the GenBank assembly GCA_003694205.1. The GC content of the type genome is 66.24 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Attegida gen. nov.

Candidatus Attegida (NL. fem. n. *Attegida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J134*. The type species for the genus is *Candidatus* Attegida irregitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attegosa irrecitas sp. nov.

Candidatus Attegosa irrecitas (NL. fem. n. *irrecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-10-47-8 sp002773975*. The type genome for the species is the GenBank assembly GCA_002773975.1. The GC content of the type genome is 46.82 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Attegosa gen. nov.

Candidatus Attegosa (NL. fem. n. *Attegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-10-47-8*. The type species for the genus is *Candidatus* Attegosa irrecitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attegula tegumitoga sp. nov.

Candidatus Attegula tegumitoga (NL. fem. n. *tegumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PHAA01 sp012522705*. The type genome for the species is the GenBank assembly GCA_012522705.1. The GC content of the type genome is 51.68 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Attegula gen. nov.

Candidatus Attegula (NL. fem. n. *Attegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHAA01*. The type species for the genus is *Candidatus* Attegula tegumitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attegula volucitudo sp. nov.

Candidatus Attegula volucitudo (NL. fem. n. *volucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHAA01 sp012798055*. The type genome for the species is the GenBank assembly GCA_012798055.1. The GC content of the type genome is 51.53 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Attegula xeramitoga sp. nov.

Candidatus Attegula xeramitoga (NL. fem. n. *xeramitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHAA01 sp002840245*. The type genome for the species is the GenBank assembly GCA_002840245.1. The GC content of the type genome is 42.49 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Attelana innasentia sp. nov.

Candidatus Attelana innasentia (NL. fem. n. *innasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRKF01 sp011051915*. The type genome for the species is the GenBank assembly GCA_011051915.1. The GC content of the type genome is 68.44 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Attelana gen. nov.

Candidatus Attelana (NL. fem. n. *Attelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRKF01*. The type species for the genus is *Candidatus* Attelana innasentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Attelella progritio sp. nov.

Candidatus Attelella progritio (NL. fem. n. *progritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RQOF01 sp003854955*. The type genome for the species is the GenBank assembly GCA_003854955.1. The GC content of the type genome is 43.58 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Attelella gen. nov.

Candidatus Attelella (NL. fem. n. *Attelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RQOF01*. The type species for the genus is *Candidatus* Attelella progritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogiaceae.

Description of *Candidatus* Attelia apercimonia sp. nov.

Candidatus Attelia apercimonia (NL. fem. n. *apercimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZLA01 sp012799545*. The type genome for the species is the GenBank assembly GCA_012799545.1. The GC content of the type genome is 38.5 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Attelia gen. nov.

Candidatus Attelia (NL. fem. n. *Attelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZLA01*. The type species for the genus is *Candidatus* Attelia apercimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attelosa adtubitia sp. nov.

Candidatus Attelosa adtubitia (NL. fem. n. *adtubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-32 sp005883965*. The type genome for the species is the GenBank assembly GCA_005883965.1. The GC content of the type genome is 70.17 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Attelosa gen. nov.

Candidatus Attelosa (NL. fem. n. *Attelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-32*. The type species for the genus is *Candidatus* Attelosa adtubitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attelosa dicibax sp. nov.

Candidatus Attelosa dicibax (NL. fem. n. *dicibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-32 sp005884155*. The type genome for the species is the GenBank assembly GCA_005884155.1. The GC content of the type genome is 69.57 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Attelosa milipilenta sp. nov.

Candidatus Attelosa milipilenta (NL. fem. n. *milipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-32 sp005883335*. The type genome for the species is the GenBank assembly GCA_005883335.1. The GC content of the type genome is 69.76 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Attelula excinifica sp. nov.

Candidatus Attelula excinifica (NL. fem. n. *excinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12931 sp902784045*. The type genome for the species is the GenBank assembly GCA_902784045.1. The GC content of the type genome is 45.78 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Attelula gen. nov.

Candidatus Attelula (NL. fem. n. *Attelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12931*. The type species for the genus is *Candidatus* Attelula excinifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attemana octopousia sp. nov.

Candidatus Attemana octopousia (NL. fem. n. *octopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-54 sp014385095*. The type genome for the species is the GenBank assembly GCA_014385095.1. The GC content of the type genome is 56.38 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Attemana gen. nov.

Candidatus Attemana (NL. fem. n. *Attemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-54*. The type species for the genus is *Candidatus* Attemana

octopousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attemaria necopessa sp. nov.

Candidatus Attemaria necopessa (NL. fem. n. *necopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVY01 sp009694045*. The type genome for the species is the GenBank assembly GCA_009694045.1. The GC content of the type genome is 68.13 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Attemaria gen. nov.

Candidatus Attemaria (NL. fem. n. *Attemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVY01*. The type species for the genus is *Candidatus* Attemaria necopessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SP197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Podagulaceae.

Description of *Candidatus* Attemida relenatio sp. nov.

Candidatus Attemida relenatio (NL. fem. n. *relenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA17 sp003140235*. The type genome for the species is the GenBank assembly GCA_003140235.1. The GC content of the type genome is 56.59 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Attemida gen. nov.

Candidatus Attemida (NL. fem. n. *Attemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA17*. The type species for the genus is *Candidatus* Attemida relenatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp1-AA117*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigellaceae.

Description of *Candidatus* Attemida sicinitio sp. nov.

Candidatus Attemida sicinitio (NL. fem. n. *sicinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA17 sp003223515*. The type genome for the species is the GenBank assembly GCA_003223515.1. The GC content of the type genome is 54.75 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Attemosa excanugo sp. nov.

Candidatus Attemosa excanugo (NL. fem. n. *excanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Hel1-33-131 sp001735745*. The type genome for the species is the GenBank assembly RS_GCF_001735745.1. The GC content of the type genome is 36.61 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Attemosa gen. nov.

Candidatus Attemosa (NL. fem. n. *Attemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Hel1-33-131*. The type species for the genus is *Candidatus* Attemosa excanugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attemula elastisca sp. nov.

Candidatus Attemula elastisca (NL. fem. n. *elastisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB2-37-7 sp001797185*. The type genome for the species is the GenBank assembly GCA_001797185.1. The GC content of the type genome is 37.22 %

and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Attemula gen. nov.

Candidatus Attemula (NL. fem. n. *Attemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB2-37-7*. The type species for the genus is *Candidatus* Attemula elastisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attesaria adfabibra sp. nov.

Candidatus Attesaria adfabibra (NL. fem. n. *adfabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZE01 sp013696105*. The type genome for the species is the GenBank assembly GCA_013696105.1. The GC content of the type genome is 66.89 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Attesaria gen. nov.

Candidatus Attesaria (NL. fem. n. *Attesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZE01*. The type species for the genus is *Candidatus* Attesaria adfabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Attesaria infesatica sp. nov.

Candidatus Attesaria infesatica (NL. fem. n. *infesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZE01 sp013816415*. The type genome for the species is the

GenBank assembly GCA_013816415.1. The GC content of the type genome is 66.43 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Attesella infisax sp. nov.

Candidatus Attesella infisax (NL. fem. n. *infisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSY01 sp004298625*. The type genome for the species is the GenBank assembly GCA_004298625.1. The GC content of the type genome is 45.48 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Attesella gen. nov.

Candidatus Attesella (NL. fem. n. *Attesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSY01*. The type species for the genus is *Candidatus* Attesella infisax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1546*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denecellaceae.

Description of *Candidatus* Attesella pinigousia sp. nov.

Candidatus Attesella pinigousia (NL. fem. n. *pinigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSY01 sp009773185*. The type genome for the species is the GenBank assembly GCA_009773185.1. The GC content of the type genome is 43.63 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Attesida dupunilega sp. nov.

Candidatus Attesida dupunilega (NL. fem. n. *dupunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMJD01 sp014380825*. The type genome for the species is the GenBank assembly GCA_014380825.1. The GC content of the type genome is 60.47 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Attesida gen. nov.

Candidatus Attesida (NL. fem. n. *Attesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMJD01*. The type species for the genus is *Candidatus* Attesida dupunilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Attesosa bonifentia sp. nov.

Candidatus Attesosa bonifentia (NL. fem. n. *bonifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXPZ01 sp012329065*. The type genome for the species is the GenBank assembly GCA_012329065.1. The GC content of the type genome is 38.34 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Attesosa gen. nov.

Candidatus Attesosa (NL. fem. n. *Attesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXPZ01*. The type species for the genus is *Candidatus* Attesosa bonifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attesula peribigena sp. nov.

Candidatus Attesula peribigena (NL. fem. n. *peribigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11247 sp902767315*. The type genome for the species is the GenBank assembly GCA_902767315.1. The GC content of the type genome is 59.38 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Attesula gen. nov.

Candidatus Attesula (NL. fem. n. *Attesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11247*. The type species for the genus is *Candidatus* Attesula peribigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Attolana ambusetta sp. nov.

Candidatus Attolana ambusetta (NL. fem. n. *ambusetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-8-64-29 sp003022125*. The type genome for the species is the GenBank assembly GCA_003022125.1. The GC content of the type genome is 64.39 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Attolana gen. nov.

Candidatus Attolana (NL. fem. n. *Attolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QS-8-64-29*. The type species for the genus is *Candidatus* Attolana ambusetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attolaria cunabilega sp. nov.

Candidatus Attolaria cunabilega (NL. fem. n. *cunabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1515 sp903970385*. The type genome for the species is the GenBank assembly GCA_903970385.1. The GC content of the type genome is 67.17 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Attolaria gen. nov.

Candidatus Attolaria (NL. fem. n. *Attolaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1515*. The type species for the genus is *Candidatus* Attolaria cunabilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attolella tomacedo sp. nov.

Candidatus Attolella tomacedo (NL. fem. n. *tomacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-78 sp001303225*. The type genome for the species is the GenBank assembly GCA_001303225.1. The GC content of the type genome is 40.1 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Attolella gen. nov.

Candidatus Attolella (NL. fem. n. *Attolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-78*. The type species for the genus is *Candidatus* Attolella tomacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Attolia cetaritrix sp. nov.

Candidatus Attolia cetaritrix (NL. fem. n. *cetaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11869 sp002721165*. The type genome for the species is the GenBank assembly GCA_002721165.1. The GC content of the type genome is 35.66 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Attolia gen. nov.

Candidatus Attolia (NL. fem. n. *Attolia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11869*. The type species for the genus is *Candidatus* Attolia cetaritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Attolia epigrimonas sp. nov.

Candidatus Attolia epigrimonas (NL. fem. n. *epigrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11869 sp014239225*. The type genome for the species is the GenBank assembly GCA_014239225.1. The GC content of the type genome is 35.33 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Attolia vanitiforma sp. nov.

Candidatus Attolia vanitiforma (NL. fem. n. *vanitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11869 sp002692205*. The type genome for the species is the GenBank assembly GCA_002692205.1. The GC content of the type genome is 35.09 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Attolia verifitio sp. nov.

Candidatus Attolia verifitio (NL. fem. n. *verifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11869 sp002698845*. The type genome for the species is the GenBank assembly GCA_002698845.1. The GC content of the type genome is 34.71 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Attolida arundatio sp. nov.

Candidatus Attolida arundatio (NL. fem. n. *arundatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPRO2 sp008933825*. The type genome for the species is the GenBank assembly GCA_008933825.1. The GC content of the type genome is 65.53 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Attolida gen. nov.

Candidatus Attolida (NL. fem. n. *Attolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTPRO2*. The type species for the genus is *Candidatus* Attolida arundatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attolida murelicula sp. nov.

Candidatus Attolida murelicula (NL. fem. n. *murelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPRO2 sp002840845*. The type genome for the species is the GenBank assembly GCA_002840845.1. The GC content of the type genome is 63.82 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Attolida negidibula sp. nov.

Candidatus Attolida negidibula (NL. fem. n. *negidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPRO2 sp003105015*. The type genome for the species is the GenBank assembly GCA_003105015.1. The GC content of the type genome is 65.95 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Attolida nitelisca sp. nov.

Candidatus Attolida nitelisca (NL. fem. n. *nitelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UTPRO2 sp011526165*. The type genome for the species is the GenBank assembly GCA_011526165.1. The GC content of the type genome is 67.21 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Attolida rubiciforma sp. nov.

Candidatus Attolida rubiciforma (NL. fem. n. *rubiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTPRO2 sp002066955*. The type genome for the species is the GenBank assembly GCA_002066955.1. The GC content of the type genome is 66.9 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Attolosa rudicitrix sp. nov.

Candidatus Attolosa rudicitrix (NL. fem. n. *rudicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-32 sp013214065*. The type genome for the species is the GenBank assembly GCA_013214065.1. The GC content of the type genome is 47.2 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Attolosa gen. nov.

Candidatus Attolosa (NL. fem. n. *Attolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-32*. The type species for the genus is *Candidatus* Attolosa rudicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attolula democetta sp. nov.

Candidatus Attolula democetta (NL. fem. n. *democetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-37-16 sp001801285*. The type genome for the species is the GenBank assembly GCA_001801285.1. The GC content of the type genome is 37.38 % and the genome length is 1.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m

depth; 0.2 filter".

Description of *Candidatus* Attolula gen. nov.

Candidatus Attolula (NL. fem. n. *Attolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-37-16*. The type species for the genus is *Candidatus* Attolula democetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9339*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetutanaceae.

Description of *Candidatus* Attorana demulilega sp. nov.

Candidatus Attorana demulilega (NL. fem. n. *demulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PTET01 sp004359435*. The type genome for the species is the GenBank assembly GCA_004359435.1. The GC content of the type genome is 37.78 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Attorana gen. nov.

Candidatus Attorana (NL. fem. n. *Attorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PTET01*. The type species for the genus is *Candidatus* Attorana demulilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attorella desupax sp. nov.

Candidatus Attorella desupax (NL. fem. n. *desupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKT01 sp011371605*. The type genome for the species is the GenBank assembly GCA_011371605.1. The GC content of the type genome is 32.65 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Attorella gen. nov.

Candidatus Attorella (NL. fem. n. *Attorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKT01*. The type species for the genus is *Candidatus* Attorella desupax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucidaceae.

Description of *Candidatus* Attorida oblocilega sp. nov.

Candidatus Attorida oblocilega (NL. fem. n. *oblocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUDO01 sp903897935*. The type genome for the species is the GenBank assembly GCA_903897935.1. The GC content of the type genome is 71.58 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Attorida gen. nov.

Candidatus Attorida (NL. fem. n. *Attorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUDO01*. The type species for the genus is *Candidatus* Attorida oblocilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Attorosa domigentia sp. nov.

Candidatus Attorosa domigentia (NL. fem. n. *domigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-10 sp003605055*. The type genome for the species is the GenBank assembly GCA_003605055.1. The GC content of the type genome is 66.98 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Attorosa gen. nov.

Candidatus Attorosa (NL. fem. n. *Attorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-10*. The type species for the genus is *Candidatus* Attorosa domigentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attubaria adoscitudo sp. nov.

Candidatus Attubaria adoscitudo (NL. fem. n. *adoscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-13 sp003644215*. The type genome for the species is the GenBank assembly GCA_003644215.1. The GC content of the type genome is 50.48 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Attubaria gen. nov.

Candidatus Attubaria (NL. fem. n. *Attubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-13*. The type species for the genus is *Candidatus* Attubaria adoscitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attubaria coticatica sp. nov.

Candidatus Attubaria coticatica (NL. fem. n. *coticatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-13 sp002084585*. The type genome for the species is the GenBank assembly GCA_002084585.1. The GC content of the type genome is 50.06 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Attubia algebugo sp. nov.

Candidatus Attubia algebugo (NL. fem. n. *algebugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-16 sp003605035*. The type genome for the species is the GenBank assembly GCA_003605035.1. The GC content of the type genome is 57.21 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Attubia gen. nov.

Candidatus Attubia (NL. fem. n. *Attubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-16*. The type species for the genus is *Candidatus* Attubia algebugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Attubia resurax sp. nov.

Candidatus Attubia resurax (NL. fem. n. *resurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-16 sp003249165*. The type genome for the species is the GenBank assembly GCA_003249165.1. The GC content of the type genome is 45.36 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Attubida infisousia sp. nov.

Candidatus Attubida infisousia (NL. fem. n. *infisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW602-bin19 sp004322375*. The type genome for the species is the GenBank assembly GCA_004322375.1. The GC content of the type genome is 44.7 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Attubida gen. nov.

Candidatus Attubida (NL. fem. n. *Attubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *FW602-bin19*. The type species for the genus is *Candidatus* Attubida infisousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarellaceae.

Description of *Candidatus* Attubosa coticitrix sp. nov.

Candidatus Attubosa coticitrix (NL. fem. n. *coticitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717625 sp002717625*. The type genome for the species is the GenBank assembly GCA_002717625.1. The GC content of the type genome is 28.99 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Attubosa gen. nov.

Candidatus Attubosa (NL. fem. n. *Attubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717625*. The type species for the genus is *Candidatus* Attubosa coticitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002707645*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipiaceae.

Description of *Candidatus* Attubula cisoricula sp. nov.

Candidatus Attubula cisoricula (NL. fem. n. *cisoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-688 sp003156795*. The type genome for the species is the GenBank assembly GCA_003156795.1. The GC content of the type genome is 66.22 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Attubula gen. nov.

Candidatus Attubula (NL. fem. n. *Attubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-688*. The type species for the genus is *Candidatus* Attubula cisoricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-688*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Attubulaceae.

Description of *Candidatus* Attubulaceae fam. nov.

Candidatus Attubulaceae (NL. fem. n. *Attubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-688.* The type genus for the taxon is *Candidatus* Attubula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Aulosira chalbitoga sp. nov.

Candidatus Aulosira chalbitoga (NL. fem. n. *chalbitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aulosira sp011769525*. The type genome for the species is the GenBank assembly RS_GCF_011769525.1. The GC content of the type genome is 40.59 % and the genome length is 8.76 Mbp.

Description of *Candidatus* Aulosira ciminax sp. nov.

Candidatus Aulosira ciminax (NL. fem. n. *ciminax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aulosira sp002368175*. The type genome for the species is the GenBank assembly RS_GCF_002368175.1. The GC content of the type genome is 41.18 % and the genome length is 8.88 Mbp.

Description of *Candidatus* Aulosira conaritura sp. nov.

Candidatus Aulosira conaritura (NL. fem. n. *conaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aulosira sp002368195*. The type genome for the species is the GenBank assembly RS_GCF_002368195.1. The GC content of the type genome is 41.45 % and the genome length is 9.96 Mbp.

Description of *Candidatus* Aulosira dimadetta sp. nov.

Candidatus Aulosira dimadetta (NL. fem. n. *dimadetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aulosira sp002154725*. The type genome for the species is the GenBank assembly RS_GCF_002154725.1. The GC content of the type genome is 41.29 % and the genome length is 8.66 Mbp.

Description of *Candidatus* Aulosira recomatio sp. nov.

Candidatus Aulosira recomatio (NL. fem. n. *recomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aulosira sp002154695*. The type genome for the species is the GenBank assembly RS_GCF_002154695.1. The GC content of the type genome is 41.52 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Aurantimicrobium levificula sp. nov.

Candidatus Aurantimicrobium levificula (NL. fem. n. *levificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aurantimicrobium sp003325955*. The type genome for the species is the GenBank assembly RS_GCF_003325955.1. The GC content of the type genome is 52.38 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Aurantimicrobium senacigena sp. nov.

Candidatus Aurantimicrobium senacigena (NL. fem. n. *senacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aurantimicrobium sp003194085*. The type genome for the species is the GenBank assembly RS_GCF_003194085.1. The GC content of the type genome is 54.56 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Aureibacillus illibitas sp. nov.

Candidatus Aureibacillus illibitas (NL. fem. n. *illibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibacillus sp011058155*. The type genome for the species is the GenBank assembly RS_GCF_011058155.1. The GC content of the type genome is 43.14 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Aureibaculum defanedo sp. nov.

Candidatus Aureibaculum defanedo (NL. fem. n. *defanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp011330545*. The type genome for the species is the GenBank assembly GCA_011330545.1. The GC content of the type genome is 35.46 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Aureibaculum detoressa sp. nov.

Candidatus Aureibaculum detoressa (NL. fem. n. *detoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp002352665*. The type genome for the species is the GenBank assembly GCA_002352665.1. The GC content of the type genome is 31.28 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Aureibaculum dilogax sp. nov.

Candidatus Aureibaculum dilogax (NL. fem. n. *dilogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp003511845*. The type genome for the species is the GenBank assembly GCA_003511845.1. The GC content of the type genome is 30.98 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Aureibaculum ensicessa sp. nov.

Candidatus Aureibaculum ensicessa (NL. fem. n. *ensicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp002747735*. The type genome for the species is the GenBank assembly GCA_002747735.1. The GC content of the type genome is 35.32 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Aureibaculum hirunibula sp. nov.

Candidatus Aureibaculum hirunibula (NL. fem. n. *hirunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp003449015*. The type genome for the species is the GenBank assembly RS_GCF_003449015.1. The GC content of the type genome is 32.0 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Aureibaculum intamitrix sp. nov.

Candidatus Aureibaculum intamitrix (NL. fem. n. *intamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureibaculum sp006065315*. The type genome for the species is the GenBank assembly RS_GCF_006065315.1. The GC content of the type genome is 32.21 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Aureimonas accomitia sp. nov.

Candidatus Aureimonas accomitia (NL. fem. n. *accomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp001463705*. The type genome for the species is the GenBank assembly RS_GCF_001463705.1. The GC content of the type genome is 67.74 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Aureimonas adtoritoga sp. nov.

Candidatus Aureimonas adtoritoga (NL. fem. n. *adtoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aureimonas sp014058705*. The type genome for the species is the GenBank assembly RS_GCF_014058705.1. The GC content of the type genome is 66.81 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Aureimonas ceromicella sp. nov.

Candidatus Aureimonas ceromicella (NL. fem. n. *ceromicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp001442755*. The type genome for the species is the GenBank assembly RS_GCF_001463725.1. The GC content of the type genome is 66.75 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Aureimonas desorilenta sp. nov.

Candidatus Aureimonas desorilenta (NL. fem. n. *desorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp001463765*. The type genome for the species is the GenBank assembly RS_GCF_001463765.1. The GC content of the type genome is 68.66 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Aureimonas ecligatica sp. nov.

Candidatus Aureimonas ecligatica (NL. fem. n. *ecligatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp001423245*. The type genome for the species is the GenBank assembly RS_GCF_001423245.1. The GC content of the type genome is 68.1 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Aureimonas enigmimonas sp. nov.

Candidatus Aureimonas enigmimonas (NL. fem. n. *enigmimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp001463745*. The type genome for the species is the GenBank assembly RS_GCF_001463745.1. The GC content of the type genome is 67.66 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Aureimonas furibedo sp. nov.

Candidatus Aureimonas furibedo (NL. fem. n. *furibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp008369445*. The type genome for the species is the GenBank assembly RS_GCF_008369445.1. The GC content of the type genome is 56.74 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Aureimonas lucubessa sp. nov.

Candidatus Aureimonas lucubessa (NL. fem. n. *lucubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas sp903970965*. The type genome for the species is the GenBank assembly RS_GCF_903970965.1. The GC content of the type genome is 66.89 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Aureimonas accerilega sp. nov.

Candidatus Aureimonas accerilega (NL. fem. n. *accerilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas_A sp001424685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001424685.1. The GC content of the type genome is 67.1 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Aureimonas aggubitio sp. nov.

Candidatus Aureimonas aggubitio (NL. fem. n. *aggubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas_A sp014380965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014380965.1. The GC

content of the type genome is 65.77 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Aureimonas capucimonia sp. nov.

Candidatus Aureimonas capucimonia (NL. fem. n. *capucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas_A sp001425485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001425485.1. The GC content of the type genome is 67.02 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Aureimonas haricitoga sp. nov.

Candidatus Aureimonas haricitoga (NL. fem. n. *haricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureimonas_A sp009176975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009176975.1. The GC content of the type genome is 64.64 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Aureispira irrecitudo sp. nov.

Candidatus Aureispira irrecitudo (NL. fem. n. *irrecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Aureispira sp000724545*. The type genome for the species is the GenBank assembly RS_GCF_000724545.1. The GC content of the type genome is 35.69 % and the genome length is 7.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seaweed".

Description of *Candidatus* Aureispira obsatedo sp. nov.

Candidatus Aureispira obsatedo (NL. fem. n. *obsatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Aureispira sp902727865*. The type genome for the species is the GenBank assembly GCA_902727865.1. The GC content of the type genome is 37.24 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Avoncaria ossucivita sp. nov.

Candidatus Avoncaria ossucivita (NL. fem. n. *ossucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-L18 sp003215535*. The type genome for the species is the GenBank assembly GCA_003215535.1. The GC content of the type genome is 40.52 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Avoncaria gen. nov.

Candidatus Avoncaria (NL. fem. n. *Avoncaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-L18*. The type species for the genus is *Candidatus* Avoncaria ossucivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avoncella sicuniforma sp. nov.

Candidatus Avoncella sicuniforma (NL. fem. n. *sicuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2339 sp002344785*. The type genome for the species is the GenBank assembly GCA_002344785.1. The GC content of the type genome is 55.91 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Avoncella gen. nov.

Candidatus Avoncella (NL. fem. n. *Avoncella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2339*. The type species for the genus is *Candidatus* Avoncella sicuniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avoncia effemitoga sp. nov.

Candidatus Avoncia effemitoga (NL. fem. n. *effemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYML01 sp012521395*. The type genome for the species is the GenBank assembly GCA_012521395.1. The GC content of the type genome is 33.85 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Avoncia gen. nov.

Candidatus Avoncia (NL. fem. n. *Avoncia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYML01*. The type species for the genus is *Candidatus* Avoncia effemitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avoncia omnimago sp. nov.

Candidatus Avoncia omnimago (NL. fem. n. *omnimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYML01 sp012518815*. The type genome for the species is the GenBank assembly GCA_012518815.1. The GC content of the type genome is 30.64 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Avoncida indivitura sp. nov.

Candidatus Avoncida indivitura (NL. fem. n. *indivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-31-9 sp001768155*. The type genome for the species is the GenBank assembly GCA_001768155.1. The GC content of the type genome is 30.21 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Avoncida gen. nov.

Candidatus Avoncida (NL. fem. n. *Avoncida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-31-9*. The type species for the genus is *Candidatus* Avoncida indivitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-33-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogiaceae.

Description of *Candidatus* Avoncida vavasibula sp. nov.

Candidatus Avoncida vavasibula (NL. fem. n. *vavasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-31-9 sp001768975*. The type genome for the species is the GenBank assembly GCA_001768975.1. The GC content of the type genome is 30.4 % and the genome length is 4.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Avoncosa antimousia sp. nov.

Candidatus Avoncosa antimousia (NL. fem. n. *antimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC21906 sp001010805*. The type genome for the species is the GenBank assembly RS_GCF_001010805.1. The GC content of the type genome is 50.66 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Seawater".

Description of *Candidatus* Avoncosa gen. nov.

Candidatus Avoncosa (NL. fem. n. *Avoncosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC21906*. The type species for the genus is *Candidatus* Avoncosa antimousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avoncula istinimonia sp. nov.

Candidatus Avoncula istinimonia (NL. fem. n. *istinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBJ01 sp013360595*. The type genome for the species is the GenBank assembly GCA_013360595.1. The GC content of the type genome is 69.27 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Avoncula gen. nov.

Candidatus Avoncula (NL. fem. n. *Avoncula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBJ01*. The type species for the genus is *Candidatus* Avoncula istinimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avuncana lucelitura sp. nov.

Candidatus Avuncana lucelitura (NL. fem. n. *lucelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1664 sp002401195*. The type genome for the species is the GenBank assembly GCA_002401195.1. The GC content of the type genome is 44.28 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Avuncana gen. nov.

Candidatus Avuncana (NL. fem. n. *Avuncana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1664*. The type species for the genus is *Candidatus* Avuncana lucelitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avuncana siligibula sp. nov.

Candidatus Avuncana siligibula (NL. fem. n. *siligibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1664 sp002320485*. The type genome for the species is the GenBank assembly GCA_002320485.1. The GC content of the type genome is 44.61 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Avuncaria obnupatio sp. nov.

Candidatus Avuncaria obnupatio (NL. fem. n. *obnupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCT01 sp012523365*. The type genome for the species is the GenBank assembly GCA_012523365.1. The GC content of the type genome is 50.94 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Avuncaria gen. nov.

Candidatus Avuncaria (NL. fem. n. *Avuncaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCT01*. The type species for the genus is *Candidatus* Avuncaria obnupatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avuncaria remedibra sp. nov.

Candidatus Avuncaria remedibra (NL. fem. n. *remedibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCT01 sp012729635*. The type genome for the species is the GenBank assembly GCA_012729635.1. The GC content of the type genome is 49.4 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Avuncella homolivita sp. nov.

Candidatus Avuncella homolivita (NL. fem. n. *homolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699125 sp002699125*. The type genome for the species is the GenBank assembly GCA_002699125.1. The GC content of the type genome is 53.96 % and the genome length is 8.05 Mbp.

Description of *Candidatus* Avuncella gen. nov.

Candidatus Avuncella (NL. fem. n. *Avuncella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699125*. The type species for the genus is *Candidatus* Avuncella homolivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avuncia adcucitura sp. nov.

Candidatus Avuncia adcucitura (NL. fem. n. *adcucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCIS01 sp903970435*. The type genome for the species is the GenBank assembly GCA_903970435.1. The GC content of the type genome is 64.08 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Avuncia gen. nov.

Candidatus Avuncia (NL. fem. n. *Avuncia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJCIS01*. The type species for the genus is *Candidatus* Avuncia adcucitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Avuncosa rubefitrix sp. nov.

Candidatus Avuncosa rubefitrix (NL. fem. n. *rubefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-52-11 sp001797745*. The type genome for the species is the GenBank assembly GCA_001797745.1. The GC content of the type genome is 52.05 %

and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Avuncosa gen. nov.

Candidatus Avuncosa (NL. fem. n. *Avuncosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-52-11*. The type species for the genus is *Candidatus* Avuncosa rubefitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-54-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funivariaceae.

Description of *Candidatus* Avuncula verecisca sp. nov.

Candidatus Avuncula verecisca (NL. fem. n. *verecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-1730015 sp001730015*. The type genome for the species is the GenBank assembly GCA_001730015.1. The GC content of the type genome is 50.36 % and the genome length is 7.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ovicells".

Description of *Candidatus* Avuncula gen. nov.

Candidatus Avuncula (NL. fem. n. *Avuncula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-1730015*. The type species for the genus is *Candidatus* Avuncula verecisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Azoarcus omnivitudo sp. nov.

Candidatus Azoarcus omnivitudo (NL. fem. n. *omnivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Azoarcus sp006496635*. The type genome for the species is the GenBank assembly RS_GCF_006496635.1. The GC content of the type genome is 66.68 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Azoarcus resalicella sp. nov.

Candidatus Azoarcus resalicella (NL. fem. n. *resalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azoarcus sp012911025*. The type genome for the species is the GenBank assembly RS_GCF_012911025.1. The GC content of the type genome is 67.67 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Azoarcus aspilitura sp. nov.

Candidatus Azoarcus aspilitura (NL. fem. n. *aspilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azoarcus_D sp013911595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013911595.1. The GC content of the type genome is 65.68 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Azoarcus proclivita sp. nov.

Candidatus Azoarcus proclivita (NL. fem. n. *proclivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azoarcus_D sp002872475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002872475.1. The GC content of the type genome is 66.53 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Azohydromonas adhosatica sp. nov.

Candidatus Azohydromonas adhosatica (NL. fem. n. *adhosatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Azohydromonas sp009760915*. The type genome for the species is the GenBank assembly RS_GCF_009760915.1. The GC content of the type genome is 70.3 % and the genome length is 7.82 Mbp.

Description of *Candidatus* Azohydromonas advecentia sp. nov.

Candidatus Azohydromonas advecentia (NL. fem. n. *advecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azohydromonas sp012927045*. The type genome for the species is the GenBank assembly RS_GCF_012927045.1. The GC content of the type genome is 69.92 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Azomonas adrenibula sp. nov.

Candidatus Azomonas adrenibula (NL. fem. n. *adrenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azomonas sp002417905*. The type genome for the species is the GenBank assembly GCA_002417905.1. The GC content of the type genome is 61.97 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Azonexus absocimonia sp. nov.

Candidatus Azonexus absocimonia (NL. fem. n. *absocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002840785*. The type genome for the species is the GenBank assembly GCA_002840785.1. The GC content of the type genome is 61.06 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Azonexus accomitudo sp. nov.

Candidatus Azonexus accomitudo (NL. fem. n. *accomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp003583745*. The type genome for the species is the GenBank assembly GCA_003583745.1. The GC content of the type genome is 60.87 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Azonexus adtilastra sp. nov.

Candidatus Azonexus adtilastra (NL. fem. n. *adtilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp013335535*. The type genome for the species is the GenBank assembly GCA_013335535.1. The GC content of the type genome is 60.02 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Azonexus almitetta sp. nov.

Candidatus Azonexus almitetta (NL. fem. n. *almitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002425245*. The type genome for the species is the GenBank assembly GCA_002425245.1. The GC content of the type genome is 62.97 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Azonexus apsegentia sp. nov.

Candidatus Azonexus apsegentia (NL. fem. n. *apsegentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp903922075*. The type genome for the species is the GenBank assembly GCA_903922075.1. The GC content of the type genome is 62.97 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Azonexus bicapedo sp. nov.

Candidatus Azonexus bicapedo (NL. fem. n. *bicapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp903951825*. The type genome for the species is the GenBank assembly GCA_903937605.1. The GC content of the type genome is 58.06 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Azonexus bicodousia sp. nov.

Candidatus Azonexus bicodousia (NL. fem. n. *bicodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp013693915*. The type genome for the species is the GenBank assembly GCA_013693915.1. The GC content of the type genome is 64.1 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Azonexus celumicula sp. nov.

Candidatus Azonexus celumicula (NL. fem. n. *celumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp012026885*. The type genome for the species is the GenBank assembly GCA_012026885.1. The GC content of the type genome is 65.7 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Azonexus cerifax sp. nov.

Candidatus Azonexus cerifax (NL. fem. n. *cerifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp008711155*. The type genome for the species is the GenBank assembly RS_GCF_008711155.1. The GC content of the type genome is 61.44 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Azonexus cimelimonia sp. nov.

Candidatus Azonexus cimelimonia (NL. fem. n. *cimelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002345845*. The type genome for the species is the GenBank assembly GCA_002345845.1. The GC content of the type genome is 63.27 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Azonexus encenivita sp. nov.

Candidatus Azonexus encenivita (NL. fem. n. *encenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Azonexus sp002840765*. The type genome for the species is the GenBank assembly GCA_002840765.1. The GC content of the type genome is 62.87 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Azonexus episcitas sp. nov.

Candidatus Azonexus episcitas (NL. fem. n. *episcitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp012839675*. The type genome for the species is the GenBank assembly GCA_012839675.1. The GC content of the type genome is 60.71 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Azonexus fibicimonia sp. nov.

Candidatus Azonexus fibicimonia (NL. fem. n. *fibicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002470165*. The type genome for the species is the GenBank assembly GCA_002470165.1. The GC content of the type genome is 63.46 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Azonexus impigilega sp. nov.

Candidatus Azonexus impigilega (NL. fem. n. *impigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002842345*. The type genome for the species is the GenBank assembly GCA_002842345.1. The GC content of the type genome is 64.12 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Azonexus intacimonas sp. nov.

Candidatus Azonexus intacimonas (NL. fem. n. *intacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp009782025*. The type genome for the species is the GenBank assembly GCA_009782025.1. The GC content of the type genome is 63.88 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Azonexus invinilenta sp. nov.

Candidatus Azonexus invinilenta (NL. fem. n. *invinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp008080565*. The type genome for the species is the GenBank assembly GCA_008080565.1. The GC content of the type genome is 59.62 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Azonexus lapicilega sp. nov.

Candidatus Azonexus lapicilega (NL. fem. n. *lapicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002440665*. The type genome for the species is the GenBank assembly GCA_002440665.1. The GC content of the type genome is 62.4 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Azonexus locelicula sp. nov.

Candidatus Azonexus locelicula (NL. fem. n. *locelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp009469615*. The type genome for the species is the GenBank assembly RS_GCF_009469615.1. The GC content of the type genome is 64.34 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Azonexus notabitas sp. nov.

Candidatus Azonexus notabitas (NL. fem. n. *notabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp900549295*. The type genome for the species is the GenBank assembly GCA_900549295.1. The GC content of the type genome is 63.08 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Azonexus obtenitas sp. nov.

Candidatus Azonexus obtenitas (NL. fem. n. *obtenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp003441615*. The type genome for the species is the GenBank assembly RS_GCF_003441615.1. The GC content of the type genome is 59.35 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Azonexus octinitura sp. nov.

Candidatus Azonexus octinitura (NL. fem. n. *octinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp012275485*. The type genome for the species is the GenBank assembly RS_GCF_012275485.1. The GC content of the type genome is 61.13 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Azonexus omnivimonia sp. nov.

Candidatus Azonexus omnivimonia (NL. fem. n. *omnivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp008933675*. The type genome for the species is the GenBank assembly GCA_008933675.1. The GC content of the type genome is 63.03 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Azonexus ontolugo sp. nov.

Candidatus Azonexus ontolugo (NL. fem. n. *ontolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002842145*. The type genome for the species is the GenBank assembly GCA_002842145.1. The GC content of the type genome is 59.9 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Azonexus revuledo sp. nov.

Candidatus Azonexus revuledo (NL. fem. n. *revuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Azonexus sp011391255*. The type genome for the species is the GenBank assembly GCA_011391255.1. The GC content of the type genome is 56.57 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Azonexus satacugo sp. nov.

Candidatus Azonexus satacugo (NL. fem. n. *satacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp009779265*. The type genome for the species is the GenBank assembly GCA_009779265.1. The GC content of the type genome is 63.06 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Azonexus scintitia sp. nov.

Candidatus Azonexus scintitia (NL. fem. n. *scintitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp903930395*. The type genome for the species is the GenBank assembly GCA_903930395.1. The GC content of the type genome is 61.08 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Azonexus semunibula sp. nov.

Candidatus Azonexus semunibula (NL. fem. n. *semunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp013363835*. The type genome for the species is the GenBank assembly GCA_013363835.1. The GC content of the type genome is 61.83 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Azonexus tirocilenta sp. nov.

Candidatus Azonexus tirocilenta (NL. fem. n. *tirocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp002396525*. The type genome for the species is the GenBank assembly GCA_002396465.1. The GC content of the type genome is 61.32 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Azonexus tresvousia sp. nov.

Candidatus Azonexus tresvousia (NL. fem. n. *tresvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp004379165*. The type genome for the species is the GenBank assembly GCA_004379165.1. The GC content of the type genome is 61.55 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Azonexus vacililega sp. nov.

Candidatus Azonexus vacililega (NL. fem. n. *vacililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azonexus sp009469585*. The type genome for the species is the GenBank assembly RS_GCF_009469585.1. The GC content of the type genome is 62.94 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Azospira adlecago sp. nov.

Candidatus Azospira adlecago (NL. fem. n. *adlecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospira sp003112695*. The type genome for the species is the GenBank assembly RS_GCF_003112695.1. The GC content of the type genome is 64.0 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Azospirillum cepulatica sp. nov.

Candidatus Azospirillum cepulatica (NL. fem. n. *cepulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003119115*. The type genome for the species is the GenBank assembly RS_GCF_003115995.1. The GC content of the type genome is 69.26 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Azospirillum colepax sp. nov.

Candidatus Azospirillum colepax (NL. fem. n. *colepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003115975*. The type genome for the species is the GenBank assembly RS_GCF_003115975.1. The GC content of the type genome is 67.41 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Azospirillum conaritrix sp. nov.

Candidatus Azospirillum conaritrix (NL. fem. n. *conaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp008364825*. The type genome for the species is the GenBank assembly RS_GCF_008364825.1. The GC content of the type genome is 67.33 % and the genome length is 7.46 Mbp.

Description of *Candidatus* Azospirillum dupunicella sp. nov.

Candidatus Azospirillum dupunicella (NL. fem. n. *dupunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp014192915*. The type genome for the species is the GenBank assembly RS_GCF_014192915.1. The GC content of the type genome is 68.55 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Azospirillum fusifastra sp. nov.

Candidatus Azospirillum fusifastra (NL. fem. n. *fusifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003116035*. The type genome for the species is the GenBank assembly RS_GCF_003116035.1. The GC content of the type genome is 67.7 % and the genome length is 7.9 Mbp.

Description of *Candidatus* Azospirillum manibitura sp. nov.

Candidatus Azospirillum manibitura (NL. fem. n. *manibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Azospirillum sp003966125*. The type genome for the species is the GenBank assembly RS_GCF_003966125.1. The GC content of the type genome is 66.59 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Azospirillum repagousia sp. nov.

Candidatus Azospirillum repagousia (NL. fem. n. *repagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003116095*. The type genome for the species is the GenBank assembly RS_GCF_003116095.1. The GC content of the type genome is 69.34 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Azospirillum turifitrix sp. nov.

Candidatus Azospirillum turifitrix (NL. fem. n. *turifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003590795*. The type genome for the species is the GenBank assembly RS_GCF_003590795.1. The GC content of the type genome is 65.95 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Azospirillum vinolitrix sp. nov.

Candidatus Azospirillum vinolitrix (NL. fem. n. *vinolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003116065*. The type genome for the species is the GenBank assembly RS_GCF_004923315.1. The GC content of the type genome is 67.2 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Azospirillum virecitia sp. nov.

Candidatus Azospirillum virecitia (NL. fem. n. *virecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp013423495*. The type genome for the species is the GenBank assembly RS_GCF_013423485.1. The GC content of the type genome is 69.55 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Azospirillum vitifilega sp. nov.

Candidatus Azospirillum vitifilega (NL. fem. n. *vitifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azospirillum sp003116015*. The type genome for the species is the GenBank assembly RS_GCF_003116015.1. The GC content of the type genome is 70.01 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Azovibrio biverastra sp. nov.

Candidatus Azovibrio biverastra (NL. fem. n. *biverastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azovibrio sp009777245*. The type genome for the species is the GenBank assembly GCA_009777245.1. The GC content of the type genome is 54.83 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Azovibrio effinastra sp. nov.

Candidatus Azovibrio effinastra (NL. fem. n. *effinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azovibrio sp002340095*. The type genome for the species is the GenBank assembly GCA_002340095.1. The GC content of the type genome is 64.94 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Azovibrio utillatica sp. nov.

Candidatus Azovibrio utillatica (NL. fem. n. *utillatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Azovibrio sp009777925*. The type genome for the species is the GenBank assembly GCA_009777925.1. The GC content of the type genome is 54.88 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Bacifana denixitudo sp. nov.

Candidatus Bacifana denixitudo (NL. fem. n. *denixitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3206 sp002363705*. The type genome for the species is the GenBank assembly GCA_902801785.1. The GC content of the type genome is 31.53 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Bacifana gen. nov.

Candidatus Bacifana (NL. fem. n. *Bacifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3206*. The type species for the genus is *Candidatus* Bacifana denixitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bacifaria deforousia sp. nov.

Candidatus Bacifaria deforousia (NL. fem. n. *deforousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B143-G9 sp003644275*. The type genome for the species is the GenBank assembly GCA_003644275.1. The GC content of the type genome is 66.41 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Bacifaria gen. nov.

Candidatus Bacifaria (NL. fem. n. *Bacifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B143-G9*. The type species for the genus is *Candidatus* Bacifaria deforousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B143-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bacifariaceae.

Description of *Candidatus* Bacifariaceae fam. nov.

Candidatus Bacifariaceae (NL. fem. n. *Bacifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B143-G9.* The type genus for the taxon is *Candidatus* Bacifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B143-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bacifariales.

Description of *Candidatus* Bacifariales ord. nov.

Candidatus Bacifariales (NL. fem. n. *Bacifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B143-G9.* The type genus for the taxon is *Candidatus* Bacifaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *B143-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bacifariae.

Description of *Candidatus* Bacifariae class. nov.

Candidatus Bacifariae (NL. fem. n. *c__Bacifariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B143-G9.* The type genus for the taxon is *Candidatus* Bacifaria .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Bacifella nocenigena sp. nov.

Candidatus Bacifella nocenigena (NL. fem. n. *nocenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-23 sp005879245*. The type genome for the species is the GenBank assembly GCA_005879175.1. The GC content of the type genome is 69.96 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Bacifella gen. nov.

Candidatus Bacifella (NL. fem. n. *Bacifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DP-23*. The type species for the genus is *Candidatus* Bacifella nocenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DP-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Betacariaceae.

Description of *Candidatus* Bacifia semibiforma sp. nov.

Candidatus Bacifia semibiforma (NL. fem. n. *semibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMB01 sp012840085*. The type genome for the species is the GenBank assembly GCA_012840085.1. The GC content of the type genome is 38.67 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Bacifia gen. nov.

Candidatus Bacifia (NL. fem. n. *Bacifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMB01*. The type species for the genus is *Candidatus* Bacifia semibiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bacifiaceae.

Description of *Candidatus* Bacifiaceae fam. nov.

Candidatus Bacifiaceae (NL. fem. n. *Bacifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMB01*. The type genus for the taxon is *Candidatus* Bacifia .

According to GTDB R06-RS202, this family belongs to the order *Acetivibrionales*.

Description of *Candidatus* Bacifida cadurago sp. nov.

Candidatus Bacifida cadurago (NL. fem. n. *cadurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-49-16 sp001029675*. The type genome for the species is the GenBank assembly GCA_003545475.1. The GC content of the type genome is 48.9 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Bacifida gen. nov.

Candidatus Bacifida (NL. fem. n. *Bacifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-49-16*. The type species for the genus is *Candidatus* Bacifida cadurago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-47-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuridaceae.

Description of *Candidatus* Bacifosa salubitia sp. nov.

Candidatus Bacifosa salubitia (NL. fem. n. *salubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZGN01 sp903932505*. The type genome for the species is the GenBank assembly GCA_903932505.1. The GC content of the type genome is 57.85 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Bacifosa gen. nov.

Candidatus Bacifosa (NL. fem. n. *Bacifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZGN01*. The type species for the genus is *Candidatus* Bacifosa salubitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZGN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bacifosaceae.

Description of *Candidatus* Bacifosaceae fam. nov.

Candidatus Bacifosaceae (NL. fem. n. *Bacifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIZGN01.* The type genus for the taxon is *Candidatus* Bacifosa .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Bacifula sicubousia sp. nov.

Candidatus Bacifula sicubousia (NL. fem. n. *sicubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKBP01 sp903825695*. The type genome for the species is the GenBank assembly GCA_903825695.1. The GC content of the type genome is 57.08 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Bacifula gen. nov.

Candidatus Bacifula (NL. fem. n. *Bacifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKBP01*. The type species for the genus is *Candidatus* Bacifula sicubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Bacillus depetax sp. nov.

Candidatus Bacillus depetax (NL. fem. n. *depetax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus sp010093085*. The type genome for the species is the GenBank assembly RS_GCF_010093085.1. The GC content of the type genome is 43.18 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Bacillus hirunitio sp. nov.

Candidatus Bacillus hirunitio (NL. fem. n. *hirunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bacillus sp013155385*. The type genome for the species is the GenBank assembly RS_GCF_013155385.1. The GC content of the type genome is 38.41 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Bacillus cenodago sp. nov.

Candidatus Bacillus cenodago (NL. fem. n. *cenodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp002975175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002975175.1. The GC content of the type genome is 35.13 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Bacillus defacibula sp. nov.

Candidatus Bacillus defacibula (NL. fem. n. *defacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp900112415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900112415.1. The GC content of the type genome is 35.87 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Bacillus dehinibula sp. nov.

Candidatus Bacillus dehinibula (NL. fem. n. *dehinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp002571225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002571225.1. The GC content of the type genome is 35.05 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Bacillus favonatio sp. nov.

Candidatus Bacillus favonatio (NL. fem. n. *favonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp006494425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006494425.1. The GC content of the type genome is 35.23 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Bacillus feculentia sp. nov.

Candidatus Bacillus feculentia (NL. fem. n. *feculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp000383235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000383235.1. The GC content of the type genome is 36.02 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Bacillus holovicella sp. nov.

Candidatus Bacillus holovicella (NL. fem. n. *holovicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp002551815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002552625.1. The GC content of the type genome is 35.67 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Bacillus munimousia sp. nov.

Candidatus Bacillus munimousia (NL. fem. n. *munimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp900116295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900113855.1. The GC content of the type genome is 35.76 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Bacillus omnivivita sp. nov.

Candidatus Bacillus omnivivita (NL. fem. n. *omnivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp002560985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002560985.1. The GC content of the type genome is 36.34 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Bacillus pepenibula sp. nov.

Candidatus Bacillus pepenibula (NL. fem. n. *pepenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp008923725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007678085.1. The GC content of the type genome is 35.38 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Bacillus tabitentia sp. nov.

Candidatus Bacillus tabitentia (NL. fem. n. *tabitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp013314535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014338615.1. The GC content of the type genome is 35.59 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Bacillus vecorilega sp. nov.

Candidatus Bacillus vecorilega (NL. fem. n. *vecorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_A sp002584985*. Although GTDB has assigned a genus name

with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002561435.1. The GC content of the type genome is 35.42 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Bacillus infunifica sp. nov.

Candidatus Bacillus infunifica (NL. fem. n. *infunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_AO sp002019795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002019795.1. The GC content of the type genome is 37.33 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Bacillus tranvatio sp. nov.

Candidatus Bacillus tranvatio (NL. fem. n. *tranvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_AR sp002153425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002153425.1. The GC content of the type genome is 37.78 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Bacillus viginivita sp. nov.

Candidatus Bacillus viginivita (NL. fem. n. *viginivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_AS sp003710255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003710255.1. The GC content of the type genome is 45.03 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Bacillus adsulitudo sp. nov.

Candidatus Bacillus adsulitudo (NL. fem. n. *adsulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BA sp000504165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000504165.1. The GC content of the type genome is 40.93 % and the genome length is 5.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Bacillus delacetta sp. nov.

Candidatus Bacillus delacetta (NL. fem. n. *delacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BB sp001884825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001884825.1. The GC content of the type genome is 56.49 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ZC4 (Zoo Composter number 4) at the Sao Paulo Zoo".

Description of *Candidatus* Bacillus casigitica sp. nov.

Candidatus Bacillus casigitica (NL. fem. n. *casigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BJ sp002860165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002860165.1. The GC content of the type genome is 42.23 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Bacillus diludisca sp. nov.

Candidatus Bacillus diludisca (NL. fem. n. *diludisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BM sp003316765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003316765.1. The GC content of the type genome is 42.64 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Bacillus susicatica sp. nov.

Candidatus Bacillus susicatica (NL. fem. n. *susicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BM sp000181495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000181495.1. The GC content of the type genome is 42.09 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Bacillus immigatica sp. nov.

Candidatus Bacillus immigatica (NL. fem. n. *immigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BN sp009466385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009466385.1. The GC content of the type genome is 38.05 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Bacillus algifentia sp. nov.

Candidatus Bacillus algifentia (NL. fem. n. *algifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BS sp008364785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_008364785.1. The GC content of the type genome is 36.55 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Bacillus desulitudo sp. nov.

Candidatus Bacillus desulitudo (NL. fem. n. *desulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BU sp000242895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000242895.2. The GC content of the type genome is 37.95 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Bacillus gasomitio sp. nov.

Candidatus Bacillus gasomitio (NL. fem. n. *gasomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_BU sp012843265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012843265.1. The GC content of the type genome is 38.8 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Bacillus defacitudo sp. nov.

Candidatus Bacillus defacitudo (NL. fem. n. *defacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_H sp900197585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900197585.1. The GC content of the type genome is 40.33 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Bacillus immigugo sp. nov.

Candidatus Bacillus immigugo (NL. fem. n. *immigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_H sp001310375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001310375.1. The GC content of the type genome is 40.21 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Bacillus nehalax sp. nov.

Candidatus Bacillus nehalax (NL. fem. n. *nehalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_H sp000576325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000576325.1. The GC content of the type genome is 40.98 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Bacillus depubibra sp. nov.

Candidatus Bacillus depubibra (NL. fem. n. *depubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_L sp001310635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001310635.1. The GC content of the type genome is 37.17 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Bacillus denoritura sp. nov.

Candidatus Bacillus denoritura (NL. fem. n. *denoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_P sp002858905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002858905.1. The GC content of the type genome is 39.11 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Bacillus nitelitia sp. nov.

Candidatus Bacillus nitelitia (NL. fem. n. *nitelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacillus_S sp002797325*. Although GTDB has assigned a genus name

with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002797325.1. The GC content of the type genome is 39.79 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Bacteriovorax impigitio sp. nov.

Candidatus Bacteriovorax impigitio (NL. fem. n. *impigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp014376445*. The type genome for the species is the GenBank assembly GCA_014376445.1. The GC content of the type genome is 38.14 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Bacteriovorax inlumivita sp. nov.

Candidatus Bacteriovorax inlumivita (NL. fem. n. *inlumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp014378525*. The type genome for the species is the GenBank assembly GCA_014378525.1. The GC content of the type genome is 38.89 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Bacteriovorax inmitatio sp. nov.

Candidatus Bacteriovorax inmitatio (NL. fem. n. *inmitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp002440825*. The type genome for the species is the GenBank assembly GCA_002440825.1. The GC content of the type genome is 41.39 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bacteriovorax macilitura sp. nov.

Candidatus Bacteriovorax macilitura (NL. fem. n. *macilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp002428265*. The type genome for the species is the GenBank assembly GCA_002428265.1. The GC content of the type genome is 37.95 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Bacteriovorax oblonicula sp. nov.

Candidatus Bacteriovorax oblonicula (NL. fem. n. *oblonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp013141065*. The type genome for the species is the GenBank assembly GCA_013141065.1. The GC content of the type genome is 35.46 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Bacteriovorax tibicatio sp. nov.

Candidatus Bacteriovorax tibicatio (NL. fem. n. *tibicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteriovorax sp014377485*. The type genome for the species is the GenBank assembly GCA_014377485.1. The GC content of the type genome is 36.05 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Bacteroides adcuciforma sp. nov.

Candidatus Bacteroides adcuciforma (NL. fem. n. *adcuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900765785*. The type genome for the species is the GenBank assembly GCA_900765785.1. The GC content of the type genome is 42.5 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Bacteroides addivisca sp. nov.

Candidatus Bacteroides addivisca (NL. fem. n. *addivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900755095*. The type genome for the species is the GenBank assembly GCA_900755095.1. The GC content of the type genome is 41.83 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Bacteroides admigifica sp. nov.

Candidatus Bacteroides admigifica (NL. fem. n. *admigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp009929715*. The type genome for the species is the GenBank assembly GCA_009929715.1. The GC content of the type genome is 43.25 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Bacteroides amnigatica sp. nov.

Candidatus Bacteroides amnigatica (NL. fem. n. *amnigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900766195*. The type genome for the species is the GenBank assembly GCA_900766195.1. The GC content of the type genome is 39.57 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Bacteroides asporitudo sp. nov.

Candidatus Bacteroides asporitudo (NL. fem. n. *asporitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp010500965*. The type genome for the species is the GenBank assembly RS_GCF_010500965.1. The GC content of the type genome is 42.77 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Bacteroides bicoritia sp. nov.

Candidatus Bacteroides bicoritia (NL. fem. n. *bicoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900066265*. The type genome for the species is the GenBank assembly GCA_001915495.1. The GC content of the type genome is 42.44 % and the genome length is 2.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Bacteroides butubastra sp. nov.

Candidatus Bacteroides butubastra (NL. fem. n. *butubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900762525*. The type genome for the species is the GenBank assembly GCA_900762525.1. The GC content of the type genome is 40.93 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Bacteroides cacomitudo sp. nov.

Candidatus Bacteroides cacomitudo (NL. fem. n. *cacomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900761785*. The type genome for the species is the GenBank assembly GCA_900761785.1. The GC content of the type genome is 42.49 % and the genome length is 8.3 Mbp.

Description of *Candidatus* Bacteroides catafedo sp. nov.

Candidatus Bacteroides catafedo (NL. fem. n. *catafedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp902362375*. The type genome for the species is the GenBank assembly RS_GCF_902362375.1. The GC content of the type genome is 42.15 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Bacteroides cenacilenta sp. nov.

Candidatus Bacteroides cenacilenta (NL. fem. n. *cenacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp007097645*. The type genome for the species is the GenBank assembly RS_GCF_007097645.1. The GC content of the type genome is 41.48 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Bacteroides depecatio sp. nov.

Candidatus Bacteroides depecatio (NL. fem. n. *depecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900760255*. The type genome for the species is the GenBank assembly GCA_900760255.1. The GC content of the type genome is 41.39 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bacteroides dimacimonas sp. nov.

Candidatus Bacteroides dimacimonas (NL. fem. n. *dimacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002471195*. The type genome for the species is the GenBank assembly GCA_002471195.1. The GC content of the type genome is 36.32 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Bacteroides disidastra sp. nov.

Candidatus Bacteroides disidastra (NL. fem. n. *disidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900555635*. The type genome for the species is the GenBank assembly GCA_900555635.1. The GC content of the type genome is 41.44 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Bacteroides excogifica sp. nov.

Candidatus Bacteroides excogifica (NL. fem. n. *excogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp010500995*. The type genome for the species is the GenBank assembly RS_GCF_010500995.1. The GC content of the type genome is 39.39 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Bacteroides giganetta sp. nov.

Candidatus Bacteroides giganetta (NL. fem. n. *giganetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp007896885*. The type genome for the species is the GenBank assembly RS_GCF_007896885.1. The GC content of the type genome is 39.3 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Bacteroides hiruditica sp. nov.

Candidatus Bacteroides hiruditica (NL. fem. n. *hiruditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002293435*. The type genome for the species is the GenBank assembly GCA_002293435.1. The GC content of the type genome is 44.09 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Bacteroides infiritica sp. nov.

Candidatus Bacteroides infiritica (NL. fem. n. *infiritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900766005*. The type genome for the species is the GenBank assembly GCA_900766005.1. The GC content of the type genome is 46.43 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Bacteroides inobsax sp. nov.

Candidatus Bacteroides inobsax (NL. fem. n. *inobsax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900557355*. The type genome for the species is the GenBank assembly GCA_900557355.1. The GC content of the type genome is 41.17 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Bacteroides inrevousia sp. nov.

Candidatus Bacteroides inrevousia (NL. fem. n. *inrevousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp012113595*. The type genome for the species is the GenBank assembly RS_GCF_012113595.1. The GC content of the type genome is 42.8 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Bacteroides insibicella sp. nov.

Candidatus Bacteroides insibicella (NL. fem. n. *insibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bacteroides sp900553815*. The type genome for the species is the GenBank assembly GCA_900553815.1. The GC content of the type genome is 49.24 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Bacteroides monimicella sp. nov.

Candidatus Bacteroides monimicella (NL. fem. n. *monimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp010501015*. The type genome for the species is the GenBank assembly RS_GCF_010501015.1. The GC content of the type genome is 41.37 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Bacteroides monopitudo sp. nov.

Candidatus Bacteroides monopitudo (NL. fem. n. *monopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002160055*. The type genome for the species is the GenBank assembly RS_GCF_002160055.1. The GC content of the type genome is 49.52 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Bacteroides nocumatica sp. nov.

Candidatus Bacteroides nocumatica (NL. fem. n. *nocumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002471185*. The type genome for the species is the GenBank assembly GCA_002471185.1. The GC content of the type genome is 38.7 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Bacteroides papilousia sp. nov.

Candidatus Bacteroides papilousia (NL. fem. n. *papilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002491635*. The type genome for the species is the GenBank assembly GCA_013316615.1. The GC content of the type genome is 46.78 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Bacteroides paralago sp. nov.

Candidatus Bacteroides paralago (NL. fem. n. *paralago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp010500955*. The type genome for the species is the GenBank assembly RS_GCF_010500955.1. The GC content of the type genome is 39.34 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Bacteroides refacifica sp. nov.

Candidatus Bacteroides refacifica (NL. fem. n. *refacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900547205*. The type genome for the species is the GenBank assembly GCA_900764305.1. The GC content of the type genome is 43.47 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Bacteroides regififica sp. nov.

Candidatus Bacteroides regififica (NL. fem. n. *regififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp003545565*. The type genome for the species is the GenBank assembly GCA_900539955.1. The GC content of the type genome is 44.12 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Bacteroides renavitura sp. nov.

Candidatus Bacteroides renavitura (NL. fem. n. *renavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900556625*. The type genome for the species is the GenBank assembly GCA_900556625.1. The GC content of the type genome is 42.24 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Bacteroides repagedo sp. nov.

Candidatus Bacteroides repagedo (NL. fem. n. *repagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp003463205*. The type genome for the species is the GenBank assembly RS_GCF_003458155.1. The GC content of the type genome is 41.76 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Bacteroides repepitudo sp. nov.

Candidatus Bacteroides repepitudo (NL. fem. n. *repepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900556215*. The type genome for the species is the GenBank assembly GCA_900556215.1. The GC content of the type genome is 42.04 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Bacteroides sicunax sp. nov.

Candidatus Bacteroides sicunax (NL. fem. n. *sicunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp002307035*. The type genome for the species is the GenBank assembly GCA_002307035.1. The GC content of the type genome is 39.78 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Bacteroides sifunitio sp. nov.

Candidatus Bacteroides sifunitio (NL. fem. n. *sifunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900552405*. The type genome for the species is the GenBank assembly GCA_900552405.1. The GC content of the type genome is 43.6 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Bacteroides vehemiforma sp. nov.

Candidatus Bacteroides vehemiforma (NL. fem. n. *vehemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bacteroides sp014385165*. The type genome for the species is the GenBank assembly GCA_014385165.1. The GC content of the type genome is 41.3 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Bacteroides vilipitudo sp. nov.

Candidatus Bacteroides vilipitudo (NL. fem. n. *vilipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp900765805*. The type genome for the species is the GenBank assembly GCA_900765805.1. The GC content of the type genome is 42.5 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Bacteroides viragivita sp. nov.

Candidatus Bacteroides viragivita (NL. fem. n. *viragivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp003865075*. The type genome for the species is the GenBank assembly RS_GCF_003865075.1. The GC content of the type genome is 39.5 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Bacteroides xenodugo sp. nov.

Candidatus Bacteroides xenodugo (NL. fem. n. *xenodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides sp902388495*. The type genome for the species is the GenBank assembly GCA_902388495.1. The GC content of the type genome is 47.19 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Bacteroides appugivita sp. nov.

Candidatus Bacteroides appugivita (NL. fem. n. *appugivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides_D sp013333835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013333835.2. The GC

content of the type genome is 55.15 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Bacteroides bifarastra sp. nov.

Candidatus Bacteroides bifarastra (NL. fem. n. *bifarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides_D sp002749065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002749065.1. The GC content of the type genome is 63.99 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Bacteroides indifitrix sp. nov.

Candidatus Bacteroides indifitrix (NL. fem. n. *indifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bacteroides_D sp002748015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002748015.1. The GC content of the type genome is 57.1 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Baditana alcalifica sp. nov.

Candidatus Baditana alcalifica (NL. fem. n. *alcalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-64-14 sp002255365*. The type genome for the species is the GenBank assembly GCA_002255365.1. The GC content of the type genome is 64.29 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Baditana gen. nov.

Candidatus Baditana (NL. fem. n. *Baditana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-64-14*. The type species for the genus is *Candidatus* Baditana alcalifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-64-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditanaceae.

Description of *Candidatus* Baditanaceae fam. nov.

Candidatus Baditanaceae (NL. fem. n. *Baditanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-64-14.* The type genus for the taxon is *Candidatus* Baditana .

According to the original version of GTDB R06-RS202, this family belongs to the order *21-64-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baditanales.

Description of *Candidatus* Baditanales ord. nov.

Candidatus Baditanales (NL. fem. n. *Baditanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-64-14.* The type genus for the taxon is *Candidatus* Baditana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Baditaria modifedo sp. nov.

Candidatus Baditaria modifedo (NL. fem. n. *modifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6952 sp002450515*. The type genome for the species is the GenBank assembly GCA_009392835.1. The GC content of the type genome is 33.47 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Baditaria gen. nov.

Candidatus Baditaria (NL. fem. n. *Baditaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6952*. The type species for the genus is *Candidatus* Baditaria modifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6952*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditariaceae.

Description of *Candidatus* Baditariaceae fam. nov.

Candidatus Baditariaceae (NL. fem. n. *Baditariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6952.* The type genus for the taxon is *Candidatus* Baditaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6952*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baditariales.

Description of *Candidatus* Baditariales ord. nov.

Candidatus Baditariales (NL. fem. n. *Baditariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6952.* The type genus for the taxon is *Candidatus* Baditaria .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Baditaria obfenimonia sp. nov.

Candidatus Baditaria obfenimonia (NL. fem. n. *obfenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6952 sp009392515*. The type genome for the species is the GenBank assembly GCA_009392515.1. The GC content of the type genome is 33.82 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Baditella paropimonia sp. nov.

Candidatus Baditella paropimonia (NL. fem. n. *paropimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5200 sp002412825*. The type genome for the species is the GenBank assembly GCA_002412825.1. The GC content of the type genome is 59.12 %

and the genome length is 3.46 Mbp.

Description of *Candidatus* Baditella gen. nov.

Candidatus Baditella (NL. fem. n. *Baditella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5200*. The type species for the genus is *Candidatus* Baditella paropimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12059*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubicanaceae.

Description of *Candidatus* Baditella sonivimonia sp. nov.

Candidatus Baditella sonivimonia (NL. fem. n. *sonivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5200 sp004525355*. The type genome for the species is the GenBank assembly GCA_004525355.1. The GC content of the type genome is 58.92 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Baditia refinessa sp. nov.

Candidatus Baditia refinessa (NL. fem. n. *refinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2168 sp002327525*. The type genome for the species is the GenBank assembly GCA_002327525.1. The GC content of the type genome is 60.2 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Baditia gen. nov.

Candidatus Baditia (NL. fem. n. *Baditia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2168*. The type species for the genus is *Candidatus* Baditia refinessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Baditia visibitrix sp. nov.

Candidatus Baditia visibitrix (NL. fem. n. *visibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2168 sp009843635*. The type genome for the species is the GenBank assembly GCA_009842155.1. The GC content of the type genome is 64.12 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Baditida aggenitrix sp. nov.

Candidatus Baditida aggenitrix (NL. fem. n. *aggenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002712245*. The type genome for the species is the GenBank assembly GCA_002712245.1. The GC content of the type genome is 34.17 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Baditida gen. nov.

Candidatus Baditida (NL. fem. n. *Baditida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED108*. The type species for the genus is *Candidatus* Baditida aggenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Baditida decacisca sp. nov.

Candidatus Baditida decacisca (NL. fem. n. *decacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002717765*. The type genome for the species is the GenBank assembly GCA_002717765.1. The GC content of the type genome is 35.45 %

and the genome length is 1.31 Mbp.

Description of *Candidatus* Baditida diludax sp. nov.

Candidatus Baditida diludax (NL. fem. n. *diludax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002702225*. The type genome for the species is the GenBank assembly GCA_002702225.1. The GC content of the type genome is 38.18 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Baditida hirunitas sp. nov.

Candidatus Baditida hirunitas (NL. fem. n. *hirunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002724475*. The type genome for the species is the GenBank assembly GCA_002724475.1. The GC content of the type genome is 37.26 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Baditida insemibula sp. nov.

Candidatus Baditida insemibula (NL. fem. n. *insemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002724735*. The type genome for the species is the GenBank assembly GCA_002724735.1. The GC content of the type genome is 36.5 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Baditida isoscessa sp. nov.

Candidatus Baditida isoscessa (NL. fem. n. *isoscessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002725545*. The type genome for the species is the GenBank assembly GCA_002725545.1. The GC content of the type genome is 36.19 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Baditida tegimitia sp. nov.

Candidatus Baditida tegimitia (NL. fem. n. *tegimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED108 sp002172545*. The type genome for the species is the GenBank assembly GCA_002172545.1. The GC content of the type genome is 34.99 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Baditosa dececentia sp. nov.

Candidatus Baditosa dececentia (NL. fem. n. *dececentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-41-26 sp002773545*. The type genome for the species is the GenBank assembly GCA_002773545.1. The GC content of the type genome is 41.06 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Baditosa gen. nov.

Candidatus Baditosa (NL. fem. n. *Baditosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-41-26*. The type species for the genus is *Candidatus* Baditosa dececentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-41-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditosaceae.

Description of *Candidatus* Baditosaceae fam. nov.

Candidatus Baditosaceae (NL. fem. n. *Baditosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-41-26.* The type genus for the taxon is *Candidatus* Baditosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Baditula adcucedo sp. nov.

Candidatus Baditula adcucedo (NL. fem. n. *adcucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2821 sp902763335*. The type genome for the species is the GenBank assembly GCA_902763335.1. The GC content of the type genome is 37.38 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Baditula gen. nov.

Candidatus Baditula (NL. fem. n. *Baditula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2821*. The type species for the genus is *Candidatus* Baditula adcucedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Baditula benivibula sp. nov.

Candidatus Baditula benivibula (NL. fem. n. *benivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2821 sp902786515*. The type genome for the species is the GenBank assembly GCA_902786515.1. The GC content of the type genome is 36.59 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Baditula regifago sp. nov.

Candidatus Baditula regifago (NL. fem. n. *regifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2821 sp002351535*. The type genome for the species is the GenBank assembly GCA_902773645.1. The GC content of the type genome is 35.79 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Baia insubibra sp. nov.

Candidatus Baia insubibra (NL. fem. n. *insubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Baia sp900107305*. The type genome for the species is the GenBank assembly RS_GCF_900107305.1. The GC content of the type genome is 41.68 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Baia smegmugo sp. nov.

Candidatus Baia smegmugo (NL. fem. n. *smegmugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Baia sp900119485*. The type genome for the species is the GenBank assembly RS_GCF_900119485.1. The GC content of the type genome is 41.48 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Balnearium capuditio sp. nov.

Candidatus Balnearium capuditio (NL. fem. n. *capuditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Balnearium sp003978105*. The type genome for the species is the GenBank assembly GCA_003978105.1. The GC content of the type genome is 41.44 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Balneola advecilenta sp. nov.

Candidatus Balneola advecilenta (NL. fem. n. *advecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Balneola sp006969905*. The type genome for the species is the GenBank assembly GCA_006969905.1. The GC content of the type genome is 40.54 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Balneola venefitoga sp. nov.

Candidatus Balneola venefitoga (NL. fem. n. *venefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Balneola sp002364085*. The type genome for the species is the GenBank assembly GCA_002325345.1. The GC content of the type genome is 37.49 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Balneola viginitica sp. nov.

Candidatus Balneola viginitica (NL. fem. n. *viginitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Balneola sp001650905*. The type genome for the species is the GenBank assembly RS_GCF_001650905.1. The GC content of the type genome is 38.08 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Bariatricus homunedo sp. nov.

Candidatus Bariatricus homunedo (NL. fem. n. *homunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bariatricus sp900554415*. The type genome for the species is the GenBank assembly RS_GCF_900771795.1. The GC content of the type genome is 40.58 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Bariatricus insemitica sp. nov.

Candidatus Bariatricus insemitica (NL. fem. n. *insemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bariatricus sp004560705*. The type genome for the species is the GenBank assembly GCA_004560705.1. The GC content of the type genome is 43.98 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Barnesiella depasilega sp. nov.

Candidatus Barnesiella depasilega (NL. fem. n. *depasilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Barnesiella sp900538705*. The type genome for the species is the GenBank assembly RS_GCF_900753775.1. The GC content of the type genome is 44.95 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Barnesiella feditessa sp. nov.

Candidatus Barnesiella feditessa (NL. fem. n. *feditessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Barnesiella sp002159975*. The type genome for the species is the GenBank assembly GCA_900540285.1. The GC content of the type genome is 54.4 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Barnesiella lavacifica sp. nov.

Candidatus Barnesiella lavacifica (NL. fem. n. *lavacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Barnesiella sp900538555*. The type genome for the species is the GenBank assembly GCA_900538555.1. The GC content of the type genome is 48.76 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Barnesiella optumatio sp. nov.

Candidatus Barnesiella optumatio (NL. fem. n. *optumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Barnesiella sp002161555*. The type genome for the species is the GenBank assembly RS_GCF_002161555.1. The GC content of the type genome is 51.39 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Barnesiella pinacitia sp. nov.

Candidatus Barnesiella pinacitia (NL. fem. n. *pinacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Barnesiella sp003150885*. The type genome for the species is the GenBank assembly GCA_003150885.1. The GC content of the type genome is 39.92 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Barnesiella tirunibra sp. nov.

Candidatus Barnesiella tirunibra (NL. fem. n. *tirunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Barnesiella sp900542255*. The type genome for the species is the GenBank assembly GCA_900542255.1. The GC content of the type genome is 50.08 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Baropana artolicula sp. nov.

Candidatus Baropana artolicula (NL. fem. n. *artolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN17 sp011380385*. The type genome for the species is the GenBank assembly GCA_011380385.1. The GC content of the type genome is 48.07 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Baropana gen. nov.

Candidatus Baropana (NL. fem. n. *Baropana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN17*. The type species for the genus is *Candidatus* Baropana artolicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baropanaceae.

Description of *Candidatus* Baropanaceae fam. nov.

Candidatus Baropanaceae (NL. fem. n. *Baropanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN17.* The type genus for the taxon is *Candidatus* Baropana .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baropanales.

Description of *Candidatus* Baropanales ord. nov.

Candidatus Baropanales (NL. fem. n. *Baropanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN17.* The type genus for the taxon is *Candidatus* Baropana .

According to the original version of GTDB R06-RS202, this family belongs to the class *HRBIN17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Baropanae.

Description of *Candidatus* Baropanae class. nov.

Candidatus Baropanae (NL. fem. n. *c__Baropanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN17.* The type genus for the taxon is *Candidatus* Baropana .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Baropana bugililenta sp. nov.

Candidatus Baropana bugililenta (NL. fem. n. *bugililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN17 sp011335125*. The type genome for the species is the GenBank assembly GCA_011335125.1. The GC content of the type genome is 51.85 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Baropana fusifivita sp. nov.

Candidatus Baropana fusifivita (NL. fem. n. *fusifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN17 sp011380395*. The type genome for the species is the GenBank assembly GCA_011380395.1. The GC content of the type genome is 50.32 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Baropana manufisca sp. nov.

Candidatus Baropana manufisca (NL. fem. n. *manufisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN17 sp002898575*. The type genome for the species is the GenBank assembly GCA_002898575.1. The GC content of the type genome is 58.62 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Baropana nimiricula sp. nov.

Candidatus Baropana nimiricula (NL. fem. n. *nimiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN17 sp011055095*. The type genome for the species is the GenBank assembly GCA_011053875.1. The GC content of the type genome is 56.85 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Baroparia labecastra sp. nov.

Candidatus Baroparia labecastra (NL. fem. n. *labecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9978 sp000995065*. The type genome for the species is the GenBank assembly GCA_003500505.1. The GC content of the type genome is 38.93 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Baroparia gen. nov.

Candidatus Baroparia (NL. fem. n. *Baroparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9978*. The type species for the genus is *Candidatus* Baroparia labecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CPR2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defanosaceae.

Description of *Candidatus* Baropella senacitia sp. nov.

Candidatus Baropella senacitia (NL. fem. n. *senacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-54 sp003599635*. The type genome for the species is the GenBank assembly GCA_003599635.1. The GC content of the type genome is 39.66 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Baropella gen. nov.

Candidatus Baropella (NL. fem. n. *Baropella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-54*. The type species for the genus is *Candidatus* Baropella senacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-54*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baropellaceae.

Description of *Candidatus* Baropellaceae fam. nov.

Candidatus Baropellaceae (NL. fem. n. *Baropellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-54.* The type genus for the taxon is *Candidatus* Baropella .

According to GTDB R06-RS202, this family belongs to the order *Buchananbacterales*.

Description of *Candidatus* Baropia adfamitrix sp. nov.

Candidatus Baropia adfamitrix (NL. fem. n. *adfamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFB01 sp013138675*. The type genome for the species is the GenBank assembly GCA_013138675.1. The GC content of the type genome is 56.87 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Baropia gen. nov.

Candidatus Baropia (NL. fem. n. *Baropia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACFB01*. The type species for the genus is *Candidatus* Baropia adfamitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Baropia cunabago sp. nov.

Candidatus Baropia cunabago (NL. fem. n. *cunabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFB01 sp009937615*. The type genome for the species is the GenBank assembly GCA_009937615.1. The GC content of the type genome is 59.42 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Baropia depelimonia sp. nov.

Candidatus Baropia depelimonia (NL. fem. n. *depelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFB01 sp011772865*. The type genome for the species is the GenBank assembly GCA_011773825.1. The GC content of the type genome is 59.59 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Baropida malifibra sp. nov.

Candidatus Baropida malifibra (NL. fem. n. *malifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4996 sp012799535*. The type genome for the species is the GenBank assembly GCA_012799535.1. The GC content of the type genome is 44.74 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Baropida gen. nov.

Candidatus Baropida (NL. fem. n. *Baropida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4996*. The type species for the genus is *Candidatus* Baropida malifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Baropida visocisca sp. nov.

Candidatus Baropida visocisca (NL. fem. n. *visocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4996 sp002396805*. The type genome for the species is the GenBank assembly GCA_002396805.1. The GC content of the type genome is 46.33 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Baroposa avuncibra sp. nov.

Candidatus Baroposa avuncibra (NL. fem. n. *avuncibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp003523085*. The type genome for the species is the GenBank assembly GCA_003523085.1. The GC content of the type genome is 48.89 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Baroposa gen. nov.

Candidatus Baroposa (NL. fem. n. *Baroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ASP10-02a*. The type species for the genus is *Candidatus* Baroposa avuncibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Baroposa embametta sp. nov.

Candidatus Baroposa embametta (NL. fem. n. *embametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp003521845*. The type genome for the species is the GenBank assembly GCA_003521845.1. The GC content of the type genome is 48.38 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Baroposa errabilega sp. nov.

Candidatus Baroposa errabilega (NL. fem. n. *errabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp003497765*. The type genome for the species is the

GenBank assembly GCA_003497765.1. The GC content of the type genome is 44.41 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Baroposa homagibra sp. nov.

Candidatus Baroposa homagibra (NL. fem. n. *homagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp002335115*. The type genome for the species is the GenBank assembly GCA_002335115.1. The GC content of the type genome is 45.31 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Baroposa laculitura sp. nov.

Candidatus Baroposa laculitura (NL. fem. n. *laculitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp002470565*. The type genome for the species is the GenBank assembly GCA_002470565.1. The GC content of the type genome is 43.83 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Baroposa papavitia sp. nov.

Candidatus Baroposa papavitia (NL. fem. n. *papavitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp002686055*. The type genome for the species is the GenBank assembly GCA_003522645.1. The GC content of the type genome is 44.54 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Baroposa semilitura sp. nov.

Candidatus Baroposa semilitura (NL. fem. n. *semilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-02a sp002312935*. The type genome for the species is the GenBank assembly GCA_000981725.1. The GC content of the type genome is 44.97 % and the genome length is 2.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Amundsen Sea polynya".

Description of *Candidatus* Baropula admoditio sp. nov.

Candidatus Baropula admoditio (NL. fem. n. *admoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1258 sp002308235*. The type genome for the species is the GenBank assembly GCA_002308235.1. The GC content of the type genome is 46.78 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Baropula gen. nov.

Candidatus Baropula (NL. fem. n. *Baropula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1258*. The type species for the genus is *Candidatus* Baropula admoditio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Baropula insuritas sp. nov.

Candidatus Baropula insuritas (NL. fem. n. *insuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1258 sp900100895*. The type genome for the species is the GenBank assembly RS_GCF_900100895.1. The GC content of the type genome is 45.07 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Baropula monogicella sp. nov.

Candidatus Baropula monogicella (NL. fem. n. *monogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1258 sp902772805*. The type genome for the species is the GenBank assembly GCA_902795645.1. The GC content of the type genome is 44.95 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Bartonella bicodigena sp. nov.

Candidatus Bartonella bicodigena (NL. fem. n. *bicodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bartonella sp002022445*. The type genome for the species is the GenBank assembly RS_GCF_002022445.1. The GC content of the type genome is 35.94 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Bartonella catocimonia sp. nov.

Candidatus Bartonella catocimonia (NL. fem. n. *catocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bartonella sp903679515*. The type genome for the species is the GenBank assembly RS_GCF_903679515.1. The GC content of the type genome is 38.05 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Bartonella desucitio sp. nov.

Candidatus Bartonella desucitio (NL. fem. n. *desucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bartonella sp002022505*. The type genome for the species is the GenBank assembly RS_GCF_002022505.1. The GC content of the type genome is 37.57 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Bartonella intemicella sp. nov.

Candidatus Bartonella intemicella (NL. fem. n. *intemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bartonella sp002022415*. The type genome for the species is the GenBank assembly RS_GCF_002022415.1. The GC content of the type genome is 37.79 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Bartonella manubastra sp. nov.

Candidatus Bartonella manubastra (NL. fem. n. *manubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bartonella sp000278115*. The type genome for the species is the GenBank assembly RS_GCF_000278115.1. The GC content of the type genome is 38.73 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Bartonella vilipitoga sp. nov.

Candidatus Bartonella vilipitoga (NL. fem. n. *vilipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bartonella sp002022665*. The type genome for the species is the GenBank assembly RS_GCF_002022605.1. The GC content of the type genome is 35.33 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Bdellovibrio brabretta sp. nov.

Candidatus Bdellovibrio brabretta (NL. fem. n. *brabretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp006874625*. The type genome for the species is the GenBank assembly RS_GCF_006874625.1. The GC content of the type genome is 44.46 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Bdellovibrio cunabimonas sp. nov.

Candidatus Bdellovibrio cunabimonas (NL. fem. n. *cunabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp013360185*. The type genome for the species is the GenBank assembly GCA_013360185.1. The GC content of the type genome is 45.34 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Bdellovibrio debucifica sp. nov.

Candidatus Bdellovibrio debucifica (NL. fem. n. *debucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp000786105*. The type genome for the species is the GenBank assembly GCA_000786105.1. The GC content of the type genome is 47.01 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "microbial mats from Manikaran Hot

Springs".

Description of *Candidatus* Bdellovibrio demaditas sp. nov.

Candidatus Bdellovibrio demaditas (NL. fem. n. *demaditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp002381805*. The type genome for the species is the GenBank assembly GCA_002381805.1. The GC content of the type genome is 45.3 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Bdellovibrio desepicella sp. nov.

Candidatus Bdellovibrio desepicella (NL. fem. n. *desepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp006874645*. The type genome for the species is the GenBank assembly RS_GCF_006874645.1. The GC content of the type genome is 45.33 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Bdellovibrio infirax sp. nov.

Candidatus Bdellovibrio infirax (NL. fem. n. *infirax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp002209355*. The type genome for the species is the GenBank assembly RS_GCF_002209355.1. The GC content of the type genome is 44.78 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Bdellovibrio inmodago sp. nov.

Candidatus Bdellovibrio inmodago (NL. fem. n. *inmodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bdellovibrio sp013752535*. The type genome for the species is the GenBank assembly RS_GCF_013752535.1. The GC content of the type genome is 45.47 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Beduini abrepilega sp. nov.

Candidatus Beduini abrepilega (NL. fem. n. *abrepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Beduini sp900550005*. The type genome for the species is the GenBank assembly GCA_900550005.1. The GC content of the type genome is 30.07 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Beduini inergedo sp. nov.

Candidatus Beduini inergedo (NL. fem. n. *inergedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Beduini sp902363625*. The type genome for the species is the GenBank assembly RS_GCF_902363625.1. The GC content of the type genome is 35.73 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Bellilinea alectitura sp. nov.

Candidatus Bellilinea alectitura (NL. fem. n. *alectitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bellilinea sp003448875*. The type genome for the species is the GenBank assembly GCA_003448875.1. The GC content of the type genome is 51.99 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Bellilinea bacificula sp. nov.

Candidatus Bellilinea bacificula (NL. fem. n. *bacificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bellilinea sp001796355*. The type genome for the species is the GenBank assembly GCA_001796355.1. The GC content of the type genome is 54.44 % and the genome length is 2.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Bellilinea coticisca sp. nov.

Candidatus Bellilinea coticisca (NL. fem. n. *coticisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bellilinea sp004347695*. The type genome for the species is the GenBank assembly GCA_004347695.1. The GC content of the type genome is 53.7 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Belnapia exsanitica sp. nov.

Candidatus Belnapia exsanitica (NL. fem. n. *exsanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Belnapia sp902805545*. The type genome for the species is the GenBank assembly GCA_902805545.1. The GC content of the type genome is 71.69 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Belnapia inguriforma sp. nov.

Candidatus Belnapia inguriforma (NL. fem. n. *inguriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Belnapia sp000802185*. The type genome for the species is the GenBank assembly RS_GCF_000802185.1. The GC content of the type genome is 69.73 % and the genome length is 5.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Benemana decamitica sp. nov.

Candidatus Benemana decamitica (NL. fem. n. *decamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU025 sp001513145*. The type genome for the species is the GenBank assembly GCA_002385365.1. The GC content of the type genome is 63.52 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Benemana gen. nov.

Candidatus Benemana (NL. fem. n. *Benemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DTU025*. The type species for the genus is *Candidatus* Benemana decamitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemanaceae.

Description of *Candidatus* Benemanaceae fam. nov.

Candidatus Benemanaceae (NL. fem. n. *Benemanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU025.* The type genus for the taxon is *Candidatus* Benemana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTUO25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifariales.

Description of *Candidatus* Benemaria documitas sp. nov.

Candidatus Benemaria documitas (NL. fem. n. *documitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-977 sp900553035*. The type genome for the species is the GenBank assembly GCA_900553035.1. The GC content of the type genome is 53.89 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Benemaria gen. nov.

Candidatus Benemaria (NL. fem. n. *Benemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-977*. The type species for the genus is *Candidatus* Benemaria documitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-977*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemariaceae.

Description of *Candidatus* Benemariaceae fam. nov.

Candidatus Benemariaceae (NL. fem. n. *Benemariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-977.* The type genus for the taxon is *Candidatus* Benemaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Benemaria lucelitica sp. nov.

Candidatus Benemaria lucelitica (NL. fem. n. *lucelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-977 sp000434295*. The type genome for the species is the GenBank assembly GCA_000434295.1. The GC content of the type genome is 47.81 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Benemaria vicecugo sp. nov.

Candidatus Benemaria vicecugo (NL. fem. n. *vicecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-977 sp900768845*. The type genome for the species is the GenBank assembly RS_GCF_900768845.1. The GC content of the type genome is 50.27 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Benemella adfabitica sp. nov.

Candidatus Benemella adfabitica (NL. fem. n. *adfabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp014190215*. The type genome for the species is the GenBank assembly GCA_014190215.1. The GC content of the type genome is 52.24 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Benemella gen. nov.

Candidatus Benemella (NL. fem. n. *Benemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Casp-actino8*. The type species for the genus is *Candidatus* Benemella adfabitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Benemella benifitudo sp. nov.

Candidatus Benemella benifitudo (NL. fem. n. *benifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp001510455*. The type genome for the species is the GenBank assembly GCA_001510455.1. The GC content of the type genome is 63.02 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Capian Sea".

Description of *Candidatus* Benemella carunitudo sp. nov.

Candidatus Benemella carunitudo (NL. fem. n. *carunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp005801025*. The type genome for the species is the GenBank assembly GCA_005801025.1. The GC content of the type genome is 52.47 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Benemella cenacousia sp. nov.

Candidatus Benemella cenacousia (NL. fem. n. *cenacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp005787025*. The type genome for the species is the GenBank assembly GCA_005787025.1. The GC content of the type genome is 64.65 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Benemella citocicella sp. nov.

Candidatus Benemella citocicella (NL. fem. n. *citocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Casp-actino8 sp009923785*. The type genome for the species is the GenBank assembly GCA_009923785.1. The GC content of the type genome is 62.37 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Benemella cituvitica sp. nov.

Candidatus Benemella cituvitica (NL. fem. n. *cituvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp004379135*. The type genome for the species is the GenBank assembly GCA_004379135.1. The GC content of the type genome is 65.42 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Benemella colimago sp. nov.

Candidatus Benemella colimago (NL. fem. n. *colimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp010030605*. The type genome for the species is the GenBank assembly GCA_010025905.1. The GC content of the type genome is 58.28 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Benemella gerunessa sp. nov.

Candidatus Benemella gerunessa (NL. fem. n. *gerunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp005787035*. The type genome for the species is the GenBank assembly GCA_005787035.1. The GC content of the type genome is 64.15 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Benemella haricastra sp. nov.

Candidatus Benemella haricastra (NL. fem. n. *haricastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp903872155*. The type genome for the species is the GenBank assembly GCA_903872155.1. The GC content of the type genome is 52.15 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Benemella inadfax sp. nov.

Candidatus Benemella inadfax (NL. fem. n. *inadfax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp009704425*. The type genome for the species is the GenBank assembly GCA_009704425.1. The GC content of the type genome is 65.64 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Benemella insenitoga sp. nov.

Candidatus Benemella insenitoga (NL. fem. n. *insenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp001510335*. The type genome for the species is the GenBank assembly GCA_001510335.1. The GC content of the type genome is 52.65 % and the genome length is 1.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Capian Sea".

Description of *Candidatus* Benemella lucelimonas sp. nov.

Candidatus Benemella lucelimonas (NL. fem. n. *lucelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp009694465*. The type genome for the species is the GenBank assembly GCA_009694465.1. The GC content of the type genome is 52.48 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Benemella rosacilenta sp. nov.

Candidatus Benemella rosacilenta (NL. fem. n. *rosacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp009700145*. The type genome for the species is the GenBank assembly GCA_009699725.1. The GC content of the type genome is 52.0 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Benemella vilititio sp. nov.

Candidatus Benemella vilititio (NL. fem. n. *vilititio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino8 sp009705435*. The type genome for the species is the GenBank assembly GCA_009705435.1. The GC content of the type genome is 52.35 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Benemia bifisago sp. nov.

Candidatus Benemia bifisago (NL. fem. n. *bifisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1758 sp002315595*. The type genome for the species is the GenBank assembly GCA_002315595.1. The GC content of the type genome is 49.83 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Benemia gen. nov.

Candidatus Benemia (NL. fem. n. *Benemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1758*. The type species for the genus is *Candidatus* Benemia bifisago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1758*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemiaceae.

Description of *Candidatus* Benemiaceae fam. nov.

Candidatus Benemiaceae (NL. fem. n. *Benemiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1758.* The type genus for the taxon is *Candidatus* Benemia .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Benemida valefitia sp. nov.

Candidatus Benemida valefitia (NL. fem. n. *valefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXSY01 sp903922175*. The type genome for the species is the GenBank assembly GCA_903845735.1. The GC content of the type genome is 52.6 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Benemida gen. nov.

Candidatus Benemida (NL. fem. n. *Benemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXSY01*. The type species for the genus is *Candidatus* Benemida valefitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXSY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemidaceae.

Description of *Candidatus* Benemidaceae fam. nov.

Candidatus Benemidaceae (NL. fem. n. *Benemidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXSY01*. The type genus for the taxon is *Candidatus* Benemida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuciales.

Description of *Candidatus* Benemosa innasousia sp. nov.

Candidatus Benemosa innasousia (NL. fem. n. *innasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil12 sp002633275*. The type genome for the species is the GenBank assembly GCA_002633275.1. The GC content of the type genome is 37.53 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Benemosa gen. nov.

Candidatus Benemosa (NL. fem. n. *Benemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Phil12*. The type species for the genus is *Candidatus* Benemosa innasousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Benemosa levidicella sp. nov.

Candidatus Benemosa levidicella (NL. fem. n. *levidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil12 sp900319595*. The type genome for the species is the GenBank assembly GCA_900319595.1. The GC content of the type genome is 33.38 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Benemosa munimitura sp. nov.

Candidatus Benemosa munimitura (NL. fem. n. *munimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil12 sp900315335*. The type genome for the species is the GenBank assembly GCA_900315335.1. The GC content of the type genome is 36.83 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Benemosa refuniforma sp. nov.

Candidatus Benemosa refuniforma (NL. fem. n. *refuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil12 sp900314725*. The type genome for the species is the GenBank assembly GCA_902755555.1. The GC content of the type genome is 33.75 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Benemula indidetta sp. nov.

Candidatus Benemula indidetta (NL. fem. n. *indidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COTS27 sp013426755*. The type genome for the species is the GenBank assembly GCA_013426755.1. The GC content of the type genome is 39.6 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Benemula gen. nov.

Candidatus Benemula (NL. fem. n. *Benemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *COTS27*. The type species for the genus is *Candidatus* Benemula indidetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *COTS27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemulaceae.

Description of *Candidatus* Benemulaceae fam. nov.

Candidatus Benemulaceae (NL. fem. n. *Benemulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *COTS27.* The type genus for the taxon is *Candidatus* Benemula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bulapidales.

Description of *Candidatus* Benepana nicomibra sp. nov.

Candidatus Benepana nicomibra (NL. fem. n. *nicomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753255 sp002753255*. The type genome for the species is the GenBank assembly GCA_002753255.1. The GC content of the type genome is 41.83 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Benepana gen. nov.

Candidatus Benepana (NL. fem. n. *Benepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2753255*. The type species for the genus is *Candidatus* Benepana nicomibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2753255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepanaceae.

Description of *Candidatus* Benepanaceae fam. nov.

Candidatus Benepanaceae (NL. fem. n. *Benepanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2753255.* The type genus for the taxon is *Candidatus* Benepana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Necopanales.

Description of *Candidatus* Benepella alceditio sp. nov.

Candidatus Benepella alceditio (NL. fem. n. *alceditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJY01 sp013003285*. The type genome for the species is the GenBank assembly GCA_013003285.1. The GC content of the type genome is 60.04 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Benepella gen. nov.

Candidatus Benepella (NL. fem. n. *Benepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJY01*. The type species for the genus is *Candidatus* Benepella alceditio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Benepella conabedo sp. nov.

Candidatus Benepella conabedo (NL. fem. n. *conabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJY01 sp011087645*. The type genome for the species is the GenBank assembly GCA_011087645.1. The GC content of the type genome is 60.38 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Benepia voragetta sp. nov.

Candidatus Benepia voragetta (NL. fem. n. *voragetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-85 sp002011745*. The type genome for the species is the GenBank assembly GCA_002011745.1. The GC content of the type genome is 41.54 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Benepia gen. nov.

Candidatus Benepia (NL. fem. n. *Benepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-85*. The type species for the genus is *Candidatus* Benepia voragetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-85*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepiaceae.

Description of *Candidatus* Benepiaceae fam. nov.

Candidatus Benepiaceae (NL. fem. n. *Benepiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-85.* The type genus for the taxon is *Candidatus* Benepia .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Benepida apsorousia sp. nov.

Candidatus Benepida apsorousia (NL. fem. n. *apsorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OB1-4 sp008124665*. The type genome for the species is the GenBank assembly RS_GCF_008124665.1. The GC content of the type genome is 31.64 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Benepida gen. nov.

Candidatus Benepida (NL. fem. n. *Benepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OB1-4*. The type species for the genus is *Candidatus* Benepida apsorousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Beneposa bicipimonia sp. nov.

Candidatus Beneposa bicipimonia (NL. fem. n. *bicipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin18 sp011523265*. The type genome for the species is the GenBank assembly GCA_011523265.1. The GC content of the type genome is 58.11 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Beneposa gen. nov.

Candidatus Beneposa (NL. fem. n. *Beneposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin18*. The type species for the genus is *Candidatus* Beneposa bicipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beneposaceae.

Description of *Candidatus* Beneposaceae fam. nov.

Candidatus Beneposaceae (NL. fem. n. *Beneposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *Bin18.* The type genus for the taxon is *Candidatus* Beneposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Beneposales.

Description of *Candidatus* Beneposales ord. nov.

Candidatus Beneposales (NL. fem. n. *Beneposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin18.* The type genus for the taxon is *Candidatus* Beneposa .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Beneposa muriletta sp. nov.

Candidatus Beneposa muriletta (NL. fem. n. *muriletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin18 sp002238415*. The type genome for the species is the GenBank assembly GCA_002238415.1. The GC content of the type genome is 57.83 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Benepula malifitrix sp. nov.

Candidatus Benepula malifitrix (NL. fem. n. *malifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746185 sp002746185*. The type genome for the species is the GenBank assembly GCA_002746185.1. The GC content of the type genome is 49.96 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Benepula gen. nov.

Candidatus Benepula (NL. fem. n. *Benepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746185*. The type species for the genus is *Candidatus* Benepula malifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepulaceae.

Description of *Candidatus* Benepulaceae fam. nov.

Candidatus Benepulaceae (NL. fem. n. *Benepulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746185.* The type genus for the taxon is *Candidatus* Benepula .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Benevana rubecimonas sp. nov.

Candidatus Benevana rubecimonas (NL. fem. n. *rubecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-43-12 sp001783065*. The type genome for the species is the GenBank assembly GCA_001783065.1. The GC content of the type genome is 43.23 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Benevana gen. nov.

Candidatus Benevana (NL. fem. n. *Benevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-43-12*. The type species for the genus is *Candidatus* Benevana rubecimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Benevaria adrecibula sp. nov.

Candidatus Benevaria adrecibula (NL. fem. n. *adrecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002412715*. The type genome for the species is the GenBank assembly GCA_002412715.1. The GC content of the type genome is 53.61 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Benevaria gen. nov.

Candidatus Benevaria (NL. fem. n. *Benevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Delta-02*. The type species for the genus is *Candidatus* Benevaria adrecibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Benevaria argimilenta sp. nov.

Candidatus Benevaria argimilenta (NL. fem. n. *argimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002305765*. The type genome for the species is the GenBank assembly GCA_002305765.1. The GC content of the type genome is 57.67 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Benevaria cacomitura sp. nov.

Candidatus Benevaria cacomitura (NL. fem. n. *cacomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002408185*. The type genome for the species is the GenBank assembly GCA_002408185.1. The GC content of the type genome is 51.42 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Benevaria cerebugo sp. nov.

Candidatus Benevaria cerebugo (NL. fem. n. *cerebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002067235*. The type genome for the species is the GenBank assembly GCA_002067235.1. The GC content of the type genome is 57.63 %

and the genome length is 3.64 Mbp.

Description of *Candidatus* Benevaria cilotibula sp. nov.

Candidatus Benevaria cilotibula (NL. fem. n. *cilotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp001603955*. The type genome for the species is the GenBank assembly GCA_001603955.1. The GC content of the type genome is 56.8 % and the genome length is 4.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Benevaria desacatica sp. nov.

Candidatus Benevaria desacatica (NL. fem. n. *desacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp012719415*. The type genome for the species is the GenBank assembly GCA_012719415.1. The GC content of the type genome is 57.81 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Benevaria infenilega sp. nov.

Candidatus Benevaria infenilega (NL. fem. n. *infenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002067555*. The type genome for the species is the GenBank assembly GCA_002067555.1. The GC content of the type genome is 56.72 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Benevaria omnifibula sp. nov.

Candidatus Benevaria omnifibula (NL. fem. n. *omnifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp003506795*. The type genome for the species is the GenBank assembly GCA_003506795.1. The GC content of the type genome is 53.8 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Benevaria pavimatio sp. nov.

Candidatus Benevaria pavimatio (NL. fem. n. *pavimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp903872255*. The type genome for the species is the GenBank assembly GCA_903872255.1. The GC content of the type genome is 50.94 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Benevaria repurigena sp. nov.

Candidatus Benevaria repurigena (NL. fem. n. *repurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Delta-02 sp002418985*. The type genome for the species is the GenBank assembly GCA_002383625.1. The GC content of the type genome is 53.39 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Benevella linigatio sp. nov.

Candidatus Benevella linigatio (NL. fem. n. *linigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-21 sp001777655*. The type genome for the species is the GenBank assembly GCA_001777655.1. The GC content of the type genome is 43.44 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Benevella gen. nov.

Candidatus Benevella (NL. fem. n. *Benevella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-44-21*. The type species for the genus is *Candidatus* Benevella linigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-02-FULL-48-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicariaceae.

Description of *Candidatus* Benevia indubigena sp. nov.

Candidatus Benevia indubigena (NL. fem. n. *indubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J009 sp003696765*. The type genome for the species is the GenBank assembly GCA_003696765.1. The GC content of the type genome is 68.65 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Benevia gen. nov.

Candidatus Benevia (NL. fem. n. *Benevia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J009*. The type species for the genus is *Candidatus* Benevia indubigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J009*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beneviaceae.

Description of *Candidatus* Beneviaceae fam. nov.

Candidatus Beneviaceae (NL. fem. n. *Beneviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J009.* The type genus for the taxon is *Candidatus* Benevia .

According to GTDB R06-RS202, this family belongs to the order *Mariprofundales*.

Description of *Candidatus* Benevida benevibra sp. nov.

Candidatus Benevida benevibra (NL. fem. n. *benevibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002691585 sp902603055*. The type genome for the species is the GenBank assembly RS_GCF_902603055.1. The GC content of the type genome is 35.63 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Benevida gen. nov.

Candidatus Benevida (NL. fem. n. *Benevida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002691585*. The type species for the genus is *Candidatus* Benevida benevibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002691585*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benevidaceae.

Description of *Candidatus* Benevidaceae fam. nov.

Candidatus Benevidaceae (NL. fem. n. *Benevidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002691585.* The type genus for the taxon is *Candidatus* Benevida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venuniales.

Description of *Candidatus* Benevida periditio sp. nov.

Candidatus Benevida periditio (NL. fem. n. *periditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002691585 sp002691585*. The type genome for the species is the GenBank assembly GCA_002691585.1. The GC content of the type genome is 35.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Benevida vilipastra sp. nov.

Candidatus Benevida vilipastra (NL. fem. n. *vilipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002691585 sp002690495*. The type genome for the species is the GenBank assembly GCA_002690495.1. The GC content of the type genome is 36.28 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Benevosa encenitas sp. nov.

Candidatus Benevosa encenitas (NL. fem. n. *encenitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-81 sp002011735*. The type genome for the species is the GenBank assembly GCA_002011735.1. The GC content of the type genome is 48.33 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Benevosa gen. nov.

Candidatus Benevosa (NL. fem. n. *Benevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-81*. The type species for the genus is *Candidatus* Benevosa encenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-81*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benevosaceae.

Description of *Candidatus* Benevosaceae fam. nov.

Candidatus Benevosaceae (NL. fem. n. *Benevosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-81*. The type genus for the taxon is *Candidatus* Benevosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monodosales.

Description of *Candidatus* Benevula benepimonas sp. nov.

Candidatus Benevula benepimonas (NL. fem. n. *benepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETH-SRB1 sp004193555*. The type genome for the species is the GenBank assembly GCA_004193555.1. The GC content of the type genome is 42.25 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Benevula gen. nov.

Candidatus Benevula (NL. fem. n. *Benevula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ETH-SRB1*. The type species for the genus is *Candidatus* Benevula benepimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ETH-SRB1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benevulaceae.

Description of *Candidatus* Benevulaceae fam. nov.

Candidatus Benevulaceae (NL. fem. n. *Benevulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ETH-SRB1.* The type genus for the taxon is *Candidatus* Benevula .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Benifana irrecicella sp. nov.

Candidatus Benifana irrecicella (NL. fem. n. *irrecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGZA01 sp010031785*. The type genome for the species is the GenBank assembly GCA_010031785.1. The GC content of the type genome is 47.92 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Benifana gen. nov.

Candidatus Benifana (NL. fem. n. *Benifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGZA01*. The type species for the genus is *Candidatus* Benifana irrecicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGZA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifanaceae.

Description of *Candidatus* Benifanaceae fam. nov.

Candidatus Benifanaceae (NL. fem. n. *Benifanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGZA01*. The type genus for the taxon is *Candidatus* Benifana .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales_A*.

Description of *Candidatus* Benifaria arrabitrix sp. nov.

Candidatus Benifaria arrabitrix (NL. fem. n. *arrabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S20-B6 sp014381945*. The type genome for the species is the GenBank assembly GCA_014381945.1. The GC content of the type genome is 68.46 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Benifaria gen. nov.

Candidatus Benifaria (NL. fem. n. *Benifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S20-B6*. The type species for the genus is *Candidatus* Benifaria arrabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MedAcidi-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamidaceae.

Description of *Candidatus* Benifaria domigimonas sp. nov.

Candidatus Benifaria domigimonas (NL. fem. n. *domigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S20-B6 sp002346745*. The type genome for the species is the GenBank assembly GCA_001626165.1. The GC content of the type genome is 71.46 % and the genome length is 2.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 149 - depth 500m".

Description of *Candidatus* Benifaria pedepedo sp. nov.

Candidatus Benifaria pedepedo (NL. fem. n. *pedepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S20-B6 sp002329075*. The type genome for the species is the GenBank assembly GCA_002364905.1. The GC content of the type genome is 68.68 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Benifaria pudibitica sp. nov.

Candidatus Benifaria pudibitica (NL. fem. n. *pudibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S20-B6 sp002699725*. The type genome for the species is the GenBank assembly GCA_014240155.1. The GC content of the type genome is 68.5 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Benifella affanousia sp. nov.

Candidatus Benifella affanousia (NL. fem. n. *affanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFPC01 sp009926305*. The type genome for the species is the GenBank assembly GCA_009926305.1. The GC content of the type genome is 46.24 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Benifella gen. nov.

Candidatus Benifella (NL. fem. n. *Benifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFPC01*. The type species for the genus is *Candidatus* Benifella affanousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RFPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifellaceae.

Description of *Candidatus* Benifellaceae fam. nov.

Candidatus Benifellaceae (NL. fem. n. *Benifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RFPC01.* The type genus for the taxon is *Candidatus* Benifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuciales.

Description of *Candidatus* Benifia enigmitudo sp. nov.

Candidatus Benifia enigmitudo (NL. fem. n. *enigmitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEXW01 sp002774575*. The type genome for the species is the GenBank assembly GCA_002774575.1. The GC content of the type genome is 43.14 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Benifia gen. nov.

Candidatus Benifia (NL. fem. n. *Benifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PEXW01*. The type species for the genus is *Candidatus* Benifia enigmitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PEXW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifiaceae.

Description of *Candidatus* Benifiaceae fam. nov.

Candidatus Benifiaceae (NL. fem. n. *Benifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PEXW01.* The type genus for the taxon is *Candidatus* Benifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pinacellales.

Description of *Candidatus* Benifia necubitio sp. nov.

Candidatus Benifia necubitio (NL. fem. n. *necubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEXW01 sp003597955*. The type genome for the species is the GenBank assembly GCA_003597955.1. The GC content of the type genome is 45.9 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Benifida bacifedo sp. nov.

Candidatus Benifida bacifedo (NL. fem. n. *bacifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1064 sp003162335*. The type genome for the species is the GenBank assembly GCA_003155455.1. The GC content of the type genome is 47.7 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Benifida gen. nov.

Candidatus Benifida (NL. fem. n. *Benifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1064*. The type species for the genus is *Candidatus* Benifida bacifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1064*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifidaceae.

Description of *Candidatus* Benifidaceae fam. nov.

Candidatus Benifidaceae (NL. fem. n. *Benifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1064.* The type genus for the taxon is *Candidatus* Benifida .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Benifida deforugo sp. nov.

Candidatus Benifida deforugo (NL. fem. n. *deforugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1064 sp003153955*. The type genome for the species is the GenBank assembly GCA_003154455.1. The GC content of the type genome is 49.09 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Benifida forinitudo sp. nov.

Candidatus Benifida forinitudo (NL. fem. n. *forinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1064 sp003153075*. The type genome for the species is the GenBank assembly GCA_003153075.1. The GC content of the type genome is 48.37 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Benifida ignomisca sp. nov.

Candidatus Benifida ignomisca (NL. fem. n. *ignomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1064 sp903916765*. The type genome for the species is the GenBank assembly GCA_903916765.1. The GC content of the type genome is 45.7 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Benifosa navifimonas sp. nov.

Candidatus Benifosa navifimonas (NL. fem. n. *navifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-65-11 sp001767495*. The type genome for the species is the GenBank assembly GCA_001767495.1. The GC content of the type genome is 65.09 % and the genome length is 3.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Benifosa gen. nov.

Candidatus Benifosa (NL. fem. n. *Benifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-65-11*. The type species for the genus is *Candidatus*

Benifosa navifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Benifula isoscimonas sp. nov.

Candidatus Benifula isoscimonas (NL. fem. n. *isoscimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1257 sp002308775*. The type genome for the species is the GenBank assembly GCA_002308775.1. The GC content of the type genome is 47.53 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Benifula gen. nov.

Candidatus Benifula (NL. fem. n. *Benifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1257*. The type species for the genus is *Candidatus* Benifula isoscimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifulaceae.

Description of *Candidatus* Benifulaceae fam. nov.

Candidatus Benifulaceae (NL. fem. n. *Benifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1257.* The type genus for the taxon is *Candidatus* Benifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fatifosales.

Description of *Candidatus* Benivana cosidago sp. nov.

Candidatus Benivana cosidago (NL. fem. n. *cosidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUQI01 sp012032345*. The type genome for the species is the GenBank assembly GCA_012031865.1. The GC content of the type genome is 52.03 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Benivana gen. nov.

Candidatus Benivana (NL. fem. n. *Benivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUQI01*. The type species for the genus is *Candidatus* Benivana cosidago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Benivaria notacatio sp. nov.

Candidatus Benivaria notacatio (NL. fem. n. *notacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zrk29 sp013745115*. The type genome for the species is the GenBank assembly GCA_013745115.1. The GC content of the type genome is 30.68 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Benivaria gen. nov.

Candidatus Benivaria (NL. fem. n. *Benivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Zrk29*. The type species for the genus is *Candidatus* Benivaria notacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Benivella catilitudo sp. nov.

Candidatus Benivella catilitudo (NL. fem. n. *catilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900199385*. The type genome for the species is the GenBank assembly RS_GCF_900199385.1. The GC content of the type genome is 53.01 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Benivella gen. nov.

Candidatus Benivella (NL. fem. n. *Benivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-900199385*. The type species for the genus is *Candidatus* Benivella catilitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Benivella coturax sp. nov.

Candidatus Benivella coturax (NL. fem. n. *coturax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900315675*. The type genome for the species is the GenBank assembly GCA_900315675.1. The GC content of the type genome is 54.15 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Benivella inrecousia sp. nov.

Candidatus Benivella inrecousia (NL. fem. n. *inrecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900176495*. The type genome for the species is the GenBank assembly RS_GCF_900176495.1. The GC content of the type genome is 53.51 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Benivella levidivita sp. nov.

Candidatus Benivella levidivita (NL. fem. n. *levidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-900199385 sp900322155*. The type genome for the species is the GenBank assembly GCA_902764195.1. The GC content of the type genome is 54.39 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Benivella nubecitio sp. nov.

Candidatus Benivella nubecitio (NL. fem. n. *nubecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900320755*. The type genome for the species is the GenBank assembly GCA_900320755.1. The GC content of the type genome is 57.03 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Benivella repudugo sp. nov.

Candidatus Benivella repudugo (NL. fem. n. *repudugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900318145*. The type genome for the species is the GenBank assembly GCA_900318145.1. The GC content of the type genome is 55.54 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Benivella sicinicella sp. nov.

Candidatus Benivella sicinicella (NL. fem. n. *sicinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp902795555*. The type genome for the species is the GenBank assembly GCA_902795555.1. The GC content of the type genome is 56.43 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Benivella sugilitia sp. nov.

Candidatus Benivella sugilitia (NL. fem. n. *sugilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp902764875*. The type genome for the species is the GenBank assembly GCA_902790165.1. The GC content of the type genome is 55.81 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Benivella vocamivita sp. nov.

Candidatus Benivella vocamivita (NL. fem. n. *vocamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900199385 sp900315315*. The type genome for the species is the GenBank assembly GCA_900315315.1. The GC content of the type genome is 53.35 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Benivia recocitica sp. nov.

Candidatus Benivia recocitica (NL. fem. n. *recocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-44-9 sp001794215*. The type genome for the species is the GenBank assembly GCA_001795655.1. The GC content of the type genome is 43.86 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Benivia gen. nov.

Candidatus Benivia (NL. fem. n. *Benivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-44-9*. The type species for the genus is *Candidatus* Benivia recocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Beniviaceae fam. nov.

Candidatus Beniviaceae (NL. fem. n. *Beniviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-44-9.* The type genus for the taxon is *Candidatus* Benivia .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repagariales.

Description of *Candidatus* Benivida immemimonia sp. nov.

Candidatus Benivida immemimonia (NL. fem. n. *immemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWA01 sp009693995*. The type genome for the species is the GenBank assembly GCA_009693995.1. The GC content of the type genome is 69.15 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Benivida gen. nov.

Candidatus Benivida (NL. fem. n. *Benivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHWA01*. The type species for the genus is *Candidatus* Benivida immemimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHWA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benividaceae.

Description of *Candidatus* Benividaceae fam. nov.

Candidatus Benividaceae (NL. fem. n. *Benividaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHWA01.* The type genus for the taxon is *Candidatus* Benivida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHWA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Benividales.

Description of *Candidatus* Benividales ord. nov.

Candidatus Benividales (NL. fem. n. *Benividales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHWA01.* The type genus for the taxon is *Candidatus* Benivida .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Benivosa acrufentia sp. nov.

Candidatus Benivosa acrufentia (NL. fem. n. *acrufentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-38 sp013002645*. The type genome for the species is the GenBank assembly GCA_013002645.1. The GC content of the type genome is 62.85 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Benivosa gen. nov.

Candidatus Benivosa (NL. fem. n. *Benivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-38*. The type species for the genus is *Candidatus* Benivosa acrufentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Benivosaceae fam. nov.

Candidatus Benivosaceae (NL. fem. n. *Benivosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-38.* The type genus for the taxon is *Candidatus* Benivosa .

According to GTDB R06-RS202, this family belongs to the order *Polyangiales*.

Description of *Candidatus* Benivosa molecigena sp. nov.

Candidatus Benivosa molecigena (NL. fem. n. *molecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-38 sp003647035*. The type genome for the species is the GenBank assembly GCA_003647035.1. The GC content of the type genome is 63.03 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Benivosa oblocimonas sp. nov.

Candidatus Benivosa oblocimonas (NL. fem. n. *oblocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-38 sp001303415*. The type genome for the species is the GenBank assembly GCA_001303415.1. The GC content of the type genome is 63.45 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Benivosa telegibula sp. nov.

Candidatus Benivosa telegibula (NL. fem. n. *telegibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-38 sp004283055*. The type genome for the species is the GenBank assembly GCA_004283055.1. The GC content of the type genome is 63.41 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Benivula appecousia sp. nov.

Candidatus Benivula appecousia (NL. fem. n. *appecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6174 sp002422945*. The type genome for the species is the GenBank assembly GCA_002422945.1. The GC content of the type genome is 58.82 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Benivula gen. nov.

Candidatus Benivula (NL. fem. n. *Benivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6174*. The type species for the genus is *Candidatus* Benivula appecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Benivula maligicula sp. nov.

Candidatus Benivula maligicula (NL. fem. n. *maligicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6174 sp903821605*. The type genome for the species is the GenBank assembly GCA_903821605.1. The GC content of the type genome is 61.35 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Bergeyella retecugo sp. nov.

Candidatus Bergeyella retecugo (NL. fem. n. *retecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bergeyella_A sp002484105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002416265.1. The GC content of the type genome is 42.85 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Berkiella caravitura sp. nov.

Candidatus Berkiella caravitura (NL. fem. n. *caravitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Berkiella sp001898235*. The type genome for the species is the GenBank assembly GCA_001898235.1. The GC content of the type genome is 38.65 % and the genome length is 3.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Berkiella inlapatica sp. nov.

Candidatus Berkiella inlapatica (NL. fem. n. *inlapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Berkiella sp013288185*. The type genome for the species is the GenBank assembly GCA_013288185.1. The GC content of the type genome is 40.86 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Bermanella democitio sp. nov.

Candidatus Bermanella democitio (NL. fem. n. *democitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bermanella sp002162985*. The type genome for the species is the GenBank assembly GCA_002162985.1. The GC content of the type genome is 47.43 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Bermanella denomivita sp. nov.

Candidatus Bermanella denomivita (NL. fem. n. *denomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bermanella sp013373125*. The type genome for the species is the GenBank assembly GCA_013373125.1. The GC content of the type genome is 44.05 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Bermanella recomentia sp. nov.

Candidatus Bermanella recomentia (NL. fem. n. *recomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bermanella sp002683575*. The type genome for the species is the GenBank assembly GCA_002323455.1. The GC content of the type genome is 44.51 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Bernardetia antacousia sp. nov.

Candidatus Bernardetia antacousia (NL. fem. n. *antacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bernardetia sp002784125*. The type genome for the species is the GenBank assembly GCA_002784125.1. The GC content of the type genome is 32.24 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Betacana adpenibula sp. nov.

Candidatus Betacana adpenibula (NL. fem. n. *adpenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMC01 sp007134465*. The type genome for the species is the GenBank assembly GCA_007134465.1. The GC content of the type genome is 62.13 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Betacana gen. nov.

Candidatus Betacana (NL. fem. n. *Betacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMC01*. The type species for the genus is *Candidatus* Betacana adpenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLMC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Betacanaceae.

Description of *Candidatus* Betacanaceae fam. nov.

Candidatus Betacanaceae (NL. fem. n. *Betacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMC01.* The type genus for the taxon is *Candidatus* Betacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Betacana insibatio sp. nov.

Candidatus Betacana insibatio (NL. fem. n. *insibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMC01 sp007133745*. The type genome for the species is the GenBank assembly GCA_007133745.1. The GC content of the type genome is 60.05 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Betacaria denunousia sp. nov.

Candidatus Betacaria denunousia (NL. fem. n. *denunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-6 sp005879795*. The type genome for the species is the GenBank assembly GCA_005879795.1. The GC content of the type genome is 71.86 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Betacaria gen. nov.

Candidatus Betacaria (NL. fem. n. *Betacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-6*. The type species for the genus is *Candidatus* Betacaria denunousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DP-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Betacariaceae.

Description of *Candidatus* Betacariaceae fam. nov.

Candidatus Betacariaceae (NL. fem. n. *Betacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DP-6.* The type genus for the taxon is *Candidatus* Betacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UTPRO1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fetulidales.

Description of *Candidatus* Betacella ceracibra sp. nov.

Candidatus Betacella ceracibra (NL. fem. n. *ceracibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9619 sp002718155*. The type genome for the species is the GenBank assembly GCA_002725185.1. The GC content of the type genome is 56.82 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Betacella gen. nov.

Candidatus Betacella (NL. fem. n. *Betacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9619*. The type species for the genus is *Candidatus* Betacella ceracibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Betacia siligiforma sp. nov.

Candidatus Betacia siligiforma (NL. fem. n. *siligiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQPK01 sp903873705*. The type genome for the species is the GenBank assembly GCA_903895925.1. The GC content of the type genome is 61.61 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Betacia gen. nov.

Candidatus Betacia (NL. fem. n. *Betacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQPK01*. The type species for the genus is *Candidatus* Betacia siligiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Betacida advigilenta sp. nov.

Candidatus Betacida advigilenta (NL. fem. n. *advigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp011620595*. The type genome for the species is the GenBank assembly GCA_011620595.1. The GC content of the type genome is 50.83 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Betacida gen. nov.

Candidatus Betacida (NL. fem. n. *Betacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SR-FBR-E99*. The type species for the genus is *Candidatus* Betacida advigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Betacida ammulibula sp. nov.

Candidatus Betacida ammulibula (NL. fem. n. *ammulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp012513795*. The type genome for the species is the GenBank assembly GCA_012513795.1. The GC content of the type genome is 49.67 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Betacida bicapitura sp. nov.

Candidatus Betacida bicapitura (NL. fem. n. *bicapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp002403305*. The type genome for the species is the GenBank assembly GCA_002403305.1. The GC content of the type genome is 50.53 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Betacida bimotitrix sp. nov.

Candidatus Betacida bimotitrix (NL. fem. n. *bimotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp009881065*. The type genome for the species is the GenBank assembly GCA_009881065.1. The GC content of the type genome is 49.6 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Betacida dedigimonas sp. nov.

Candidatus Betacida dedigimonas (NL. fem. n. *dedigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp002409145*. The type genome for the species is the GenBank assembly GCA_002409145.1. The GC content of the type genome is 49.38 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Betacida hemititudo sp. nov.

Candidatus Betacida hemititudo (NL. fem. n. *hemititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp002325785*. The type genome for the species is the GenBank assembly GCA_002325785.1. The GC content of the type genome is 49.61 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Betacida ingurigena sp. nov.

Candidatus Betacida ingurigena (NL. fem. n. *ingurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp006227095*. The type genome for the species is the GenBank assembly GCA_006227095.1. The GC content of the type genome is 50.17 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Betacida ludimilenta sp. nov.

Candidatus Betacida ludimilenta (NL. fem. n. *ludimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp012514255*. The type genome for the species is the GenBank assembly GCA_012514255.1. The GC content of the type genome is 50.12 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Betacida metabessa sp. nov.

Candidatus Betacida metabessa (NL. fem. n. *metabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp002383485*. The type genome for the species is the GenBank assembly GCA_002347145.1. The GC content of the type genome is 50.19 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Betacida ossifigena sp. nov.

Candidatus Betacida ossifigena (NL. fem. n. *ossifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SR-FBR-E99 sp002402965*. The type genome for the species is the GenBank assembly GCA_002402965.1. The GC content of the type genome is 50.78 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Betacida sonivitoga sp. nov.

Candidatus Betacida sonivitoga (NL. fem. n. *sonivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp003250475*. The type genome for the species is the GenBank assembly GCA_003250475.1. The GC content of the type genome is 48.91 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Betacida utillentia sp. nov.

Candidatus Betacida utillentia (NL. fem. n. *utillentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SR-FBR-E99 sp003245695*. The type genome for the species is the GenBank assembly GCA_003245695.1. The GC content of the type genome is 42.49 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Betacosa lapicitura sp. nov.

Candidatus Betacosa lapicitura (NL. fem. n. *lapicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-51-10 sp001788965*. The type genome for the species is the GenBank assembly GCA_001787695.1. The GC content of the type genome is 51.23 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Betacosa gen. nov.

Candidatus Betacosa (NL. fem. n. *Betacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-51-10*. The type species for the genus is *Candidatus* Betacosa lapicitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Betacula armigivita sp. nov.

Candidatus Betacula armigivita (NL. fem. n. *armigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA965 sp903868295*. The type genome for the species is the GenBank assembly GCA_903868295.1. The GC content of the type genome is 56.97 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Betacula gen. nov.

Candidatus Betacula (NL. fem. n. *Betacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA965*. The type species for the genus is *Candidatus* Betacula armigivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Betacula buxifitas sp. nov.

Candidatus Betacula buxifitas (NL. fem. n. *buxifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA965 sp003670675*. The type genome for the species is the GenBank assembly GCA_003670675.1. The GC content of the type genome is 57.7 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Betacula panopigena sp. nov.

Candidatus Betacula panopigena (NL. fem. n. *panopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA965 sp002292925*. The type genome for the species is the GenBank assembly GCA_002292925.1. The GC content of the type genome is 53.56 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Betacula relapitia sp. nov.

Candidatus Betacula relapitia (NL. fem. n. *relapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA965 sp903932805*. The type genome for the species is the GenBank assembly GCA_903940205.1. The GC content of the type genome is 56.72 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Betacula semivilega sp. nov.

Candidatus Betacula semivilega (NL. fem. n. *semivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA965 sp903889425*. The type genome for the species is the GenBank assembly GCA_903862005.1. The GC content of the type genome is 53.61 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Bhargavaea vecorigena sp. nov.

Candidatus Bhargavaea vecorigena (NL. fem. n. *vecorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bhargavaea sp009761675*. The type genome for the species is the GenBank assembly RS_GCF_009761675.1. The GC content of the type genome is 53.61 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Bicalana adcucitudo sp. nov.

Candidatus Bicalana adcucitudo (NL. fem. n. *adcucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DNF00809 sp001552935*. The type genome for the species is the GenBank assembly RS_GCF_001552935.1. The GC content of the type genome is 46.27 % and the genome length is 1.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Bicalana gen. nov.

Candidatus Bicalana (NL. fem. n. *Bicalana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DNF00809*. The type species for the genus is *Candidatus* Bicalana adcucitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicalana inmoditas sp. nov.

Candidatus Bicalana inmoditas (NL. fem. n. *inmoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DNF00809 sp900604965*. The type genome for the species is the GenBank assembly RS_GCF_900604965.1. The GC content of the type genome is 60.87 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Bicalana supelugo sp. nov.

Candidatus Bicalana supelugo (NL. fem. n. *supelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DNF00809 sp000814825*. The type genome for the species is the GenBank assembly RS_GCF_000814825.1. The GC content of the type genome is 63.56 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "intestinal contents".

Description of *Candidatus* Bicalana venucitrix sp. nov.

Candidatus Bicalana venucitrix (NL. fem. n. *venucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DNF00809 sp013201155*. The type genome for the species is the GenBank assembly RS_GCF_013155505.1. The GC content of the type genome is 66.63 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Bicalaria coticitoga sp. nov.

Candidatus Bicalaria coticitoga (NL. fem. n. *coticitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSCS01 sp011048995*. The type genome for the species is the GenBank assembly GCA_011048995.1. The GC content of the type genome is 46.19 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Bicalaria gen. nov.

Candidatus Bicalaria (NL. fem. n. *Bicalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSCS01*. The type species for the genus is *Candidatus* Bicalaria coticitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSCS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicalariaceae.

Description of *Candidatus* Bicalariaceae fam. nov.

Candidatus Bicalariaceae (NL. fem. n. *Bicalariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSCS01*. The type genus for the taxon is *Candidatus* Bicalaria .

According to GTDB R06-RS202, this family belongs to the order *Mcinerneyibacteriales*.

Description of *Candidatus* Bicalella desepitica sp. nov.

Candidatus Bicalella desepitica (NL. fem. n. *desepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1795 sp900761165*. The type genome for the species is the GenBank assembly RS_GCF_900761165.1. The GC content of the type genome is 50.62 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Bicalella gen. nov.

Candidatus Bicalella (NL. fem. n. *Bicalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1795*. The type species for the genus is *Candidatus* Bicalella

desepitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Bicalella nosocugo sp. nov.

Candidatus Bicalella nosocugo (NL. fem. n. *nosocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1795 sp900553555*. The type genome for the species is the GenBank assembly GCA_900553555.1. The GC content of the type genome is 47.98 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Bicalella vepaledo sp. nov.

Candidatus Bicalella vepaledo (NL. fem. n. *vepaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1795 sp900555125*. The type genome for the species is the GenBank assembly RS_GCF_900767265.1. The GC content of the type genome is 45.88 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Bicalia betacax sp. nov.

Candidatus Bicalia betacax (NL. fem. n. *betacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10511 sp903861195*. The type genome for the species is the GenBank assembly GCA_903861195.1. The GC content of the type genome is 63.54 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Bicalia gen. nov.

Candidatus Bicalia (NL. fem. n. *Bicalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10511*. The type species for the genus is *Candidatus* Bicalia betacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10511*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicaliaceae.

Description of *Candidatus* Bicaliaceae fam. nov.

Candidatus Bicaliaceae (NL. fem. n. *Bicaliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10511*. The type genus for the taxon is *Candidatus* Bicalia .

According to GTDB R06-RS202, this family belongs to the order *Planctomycetales*.

Description of *Candidatus* Bicalia inlapitoga sp. nov.

Candidatus Bicalia inlapitoga (NL. fem. n. *inlapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10511 sp003508595*. The type genome for the species is the GenBank assembly GCA_003508595.1. The GC content of the type genome is 63.22 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Bicalida admurago sp. nov.

Candidatus Bicalida admurago (NL. fem. n. *admurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-154 sp003552525*. The type genome for the species is the GenBank assembly GCA_003552525.1. The GC content of the type genome is 59.25 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Bicalida gen. nov.

Candidatus Bicalida (NL. fem. n. *Bicalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED11-154*. The type species for the genus is *Candidatus* Bicalida admurago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Revecidaceae.

Description of *Candidatus* Bicalida adnubiforma sp. nov.

Candidatus Bicalida adnubiforma (NL. fem. n. *adnubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-154 sp007136565*. The type genome for the species is the GenBank assembly GCA_007136565.1. The GC content of the type genome is 60.52 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Bicalida manubedo sp. nov.

Candidatus Bicalida manubedo (NL. fem. n. *manubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-154 sp003563985*. The type genome for the species is the GenBank assembly GCA_003563985.1. The GC content of the type genome is 62.99 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Bicalosa mahemibula sp. nov.

Candidatus Bicalosa mahemibula (NL. fem. n. *mahemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SDRW01 sp007845485*. The type genome for the species is the GenBank assembly RS_GCF_007845485.1. The GC content of the type genome is 39.56 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Bicalosa gen. nov.

Candidatus Bicalosa (NL. fem. n. *Bicalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SDRW01*. The type species for the genus is *Candidatus* Bicalosa mahemibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicalosa nugigicella sp. nov.

Candidatus Bicalosa nugigicella (NL. fem. n. *nugigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SDRW01 sp013333595*. The type genome for the species is the GenBank assembly GCA_013333595.2. The GC content of the type genome is 54.07 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Bicalula cepurago sp. nov.

Candidatus Bicalula cepurago (NL. fem. n. *cepurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp001784695*. The type genome for the species is the GenBank assembly GCA_001784715.1. The GC content of the type genome is 53.94 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Bicalula gen. nov.

Candidatus Bicalula (NL. fem. n. *Bicalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1568*. The type species for the genus is *Candidatus* Bicalula cepurago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1568*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicalulaceae.

Description of *Candidatus* Bicalulaceae fam. nov.

Candidatus Bicalulaceae (NL. fem. n. *Bicalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1568.* The type genus for the taxon is *Candidatus* Bicalula .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Bicalula colimastra sp. nov.

Candidatus Bicalula colimastra (NL. fem. n. *colimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp001786575*. The type genome for the species is the GenBank assembly GCA_001786575.1. The GC content of the type genome is 54.34 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bicalula fumifitoga sp. nov.

Candidatus Bicalula fumifitoga (NL. fem. n. *fumifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp001784735*. The type genome for the species is the GenBank assembly GCA_001784735.1. The GC content of the type genome is 47.83 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Bicalula gabinibra sp. nov.

Candidatus Bicalula gabinibra (NL. fem. n. *gabinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp002790675*. The type genome for the species is the GenBank assembly GCA_002790675.1. The GC content of the type genome is 44.71 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Bicalula nubigitica sp. nov.

Candidatus Bicalula nubigitica (NL. fem. n. *nubigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp002782305*. The type genome for the species is the GenBank assembly GCA_002781465.1. The GC content of the type genome is 40.93 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Bicalula sanabentia sp. nov.

Candidatus Bicalula sanabentia (NL. fem. n. *sanabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1568 sp002307715*. The type genome for the species is the GenBank assembly GCA_002307715.1. The GC content of the type genome is 47.07 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Bicapana bifaressa sp. nov.

Candidatus Bicapana bifaressa (NL. fem. n. *bifaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp002393815*. The type genome for the species is the GenBank assembly GCA_002393815.1. The GC content of the type genome is 46.19 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Bicapana gen. nov.

Candidatus Bicapana (NL. fem. n. *Bicapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3855*. The type species for the genus is *Candidatus* Bicapana bifaressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicapana catapax sp. nov.

Candidatus Bicapana catapax (NL. fem. n. *catapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp002449575*. The type genome for the species is the GenBank assembly GCA_002449575.1. The GC content of the type genome is 42.61 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Bicapana cimelilenta sp. nov.

Candidatus Bicapana cimelilenta (NL. fem. n. *cimelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp002373165*. The type genome for the species is the GenBank assembly GCA_002373165.1. The GC content of the type genome is 45.69 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Bicapana coturastra sp. nov.

Candidatus Bicapana coturastra (NL. fem. n. *coturastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp900316885*. The type genome for the species is the GenBank assembly GCA_900316885.1. The GC content of the type genome is 55.26 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Bicapana daducibra sp. nov.

Candidatus Bicapana daducibra (NL. fem. n. *daducibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp002449585*. The type genome for the species is the GenBank assembly GCA_002449585.1. The GC content of the type genome is 40.44 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Bicapana dimacitio sp. nov.

Candidatus Bicapana dimacitio (NL. fem. n. *dimacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp900319285*. The type genome for the species is the GenBank assembly GCA_900319285.1. The GC content of the type genome is 62.43 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Bicapana fetificella sp. nov.

Candidatus Bicapana fetificella (NL. fem. n. *fetificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3855 sp902796255*. The type genome for the species is the GenBank assembly GCA_902796255.1. The GC content of the type genome is 41.31 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Bicapana gabinitura sp. nov.

Candidatus Bicapana gabinitura (NL. fem. n. *gabinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp902767115*. The type genome for the species is the GenBank assembly GCA_902785335.1. The GC content of the type genome is 54.19 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Bicapana hexagiforma sp. nov.

Candidatus Bicapana hexagiforma (NL. fem. n. *hexagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp002392545*. The type genome for the species is the GenBank assembly GCA_003454355.1. The GC content of the type genome is 42.71 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Bicapana repuritia sp. nov.

Candidatus Bicapana repuritia (NL. fem. n. *repuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3855 sp902783005*. The type genome for the species is the GenBank assembly GCA_902796615.1. The GC content of the type genome is 55.83 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Bicaparia cisoricella sp. nov.

Candidatus Bicaparia cisoricella (NL. fem. n. *cisoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZLB01 sp903933735*. The type genome for the species is the GenBank assembly GCA_903933735.1. The GC content of the type genome is 33.72 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Bicaparia gen. nov.

Candidatus Bicaparia (NL. fem. n. *Bicaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZLB01*. The type species for the genus is *Candidatus* Bicaparia cisoricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZLB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicapariaceae.

Description of *Candidatus* Bicapariaceae fam. nov.

Candidatus Bicapariaceae (NL. fem. n. *Bicapariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIZLB01.* The type genus for the taxon is *Candidatus* Bicaparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Bicaparia inpasastra sp. nov.

Candidatus Bicaparia inpasastra (NL. fem. n. *inpasastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZLB01 sp014378965*. The type genome for the species is the GenBank assembly GCA_014378965.1. The GC content of the type genome is 33.48 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Bicapella exsusilega sp. nov.

Candidatus Bicapella exsusilega (NL. fem. n. *exsusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHCD01 sp003244255*. The type genome for the species is the GenBank assembly GCA_003244255.1. The GC content of the type genome is 70.22 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Bicapella gen. nov.

Candidatus Bicapella (NL. fem. n. *Bicapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHCD01*. The type species for the genus is *Candidatus* Bicapella exsusilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicapellaceae.

Description of *Candidatus* Bicapellaceae fam. nov.

Candidatus Bicapellaceae (NL. fem. n. *Bicapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHCD01.* The type genus for the taxon is *Candidatus* Bicapella .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Bicapia caravitia sp. nov.

Candidatus Bicapia caravitia (NL. fem. n. *caravitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLF01 sp007134175*. The type genome for the species is the GenBank assembly GCA_007134175.1. The GC content of the type genome is 60.52 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Bicapia gen. nov.

Candidatus Bicapia (NL. fem. n. *Bicapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLF01*. The type species for the genus is *Candidatus* Bicapia caravitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reveculaceae.

Description of *Candidatus* Bicapia senacisca sp. nov.

Candidatus Bicapia senacisca (NL. fem. n. *senacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLF01 sp003562335*. The type genome for the species is the GenBank assembly GCA_007126115.1. The GC content of the type genome is 58.57 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Bicapida tibicibula sp. nov.

Candidatus Bicapida tibicibula (NL. fem. n. *tibicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9645 sp001818155*. The type genome for the species is the GenBank assembly GCA_001818155.1. The GC content of the type genome is 43.87 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Bicapida gen. nov.

Candidatus Bicapida (NL. fem. n. *Bicapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9645*. The type species for the genus is *Candidatus* Bicapida tibicibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogosaceae.

Description of *Candidatus* Bicaposa catecitica sp. nov.

Candidatus Bicaposa catecitica (NL. fem. n. *catecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003560095*. The type genome for the species is the GenBank assembly GCA_003560095.1. The GC content of the type genome is 33.96 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Bicaposa gen. nov.

Candidatus Bicaposa (NL. fem. n. *Bicaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWHW01*. The type species for the genus is *Candidatus* Bicaposa catecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lacinidaceae.

Description of *Candidatus* Bicaposa conibitrix sp. nov.

Candidatus Bicaposa conibitrix (NL. fem. n. *conibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003560665*. The type genome for the species is the GenBank assembly GCA_003560665.1. The GC content of the type genome is 39.57 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Bicaposa dibapifica sp. nov.

Candidatus Bicaposa dibapifica (NL. fem. n. *dibapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003561025*. The type genome for the species is the GenBank assembly GCA_003561025.1. The GC content of the type genome is 36.54 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Bicaposa mimogimonas sp. nov.

Candidatus Bicaposa mimogimonas (NL. fem. n. *mimogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003559635*. The type genome for the species is the GenBank assembly GCA_003559635.1. The GC content of the type genome is 39.89 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Bicaposa refunibra sp. nov.

Candidatus Bicaposa refunibra (NL. fem. n. *refunibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003551435*. The type genome for the species is the GenBank assembly GCA_003551435.1. The GC content of the type genome is 41.34 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Bicaposa vilitiforma sp. nov.

Candidatus Bicaposa vilitiforma (NL. fem. n. *vilitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHW01 sp003555075*. The type genome for the species is the GenBank assembly GCA_003552105.1. The GC content of the type genome is 41.19 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Bicapula facunatica sp. nov.

Candidatus Bicapula facunatica (NL. fem. n. *facunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNZ01 sp012520595*. The type genome for the species is the GenBank assembly GCA_012520595.1. The GC content of the type genome is 34.0 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Bicapula gen. nov.

Candidatus Bicapula (NL. fem. n. *Bicapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNZ01*. The type species for the genus is *Candidatus* Bicapula facunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicapulaceae.

Description of *Candidatus* Bicapulaceae fam. nov.

Candidatus Bicapulaceae (NL. fem. n. *Bicapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYNZ01.* The type genus for the taxon is *Candidatus* Bicapula .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Bicapula inornatica sp. nov.

Candidatus Bicapula inornatica (NL. fem. n. *inornatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNZ01 sp012524135*. The type genome for the species is the GenBank assembly GCA_012524135.1. The GC content of the type genome is 30.95 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Bicinana lanigedo sp. nov.

Candidatus Bicinana lanigedo (NL. fem. n. *lanigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-39-13 sp001824485*. The type genome for the species is the GenBank assembly GCA_001825635.1. The GC content of the type genome is 38.61 % and the genome length is 1.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Bicinana gen. nov.

Candidatus Bicinana (NL. fem. n. *Bicinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-39-13*. The type species for the genus is *Candidatus* Bicinana lanigedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicinaria demaditica sp. nov.

Candidatus Bicinaria demaditica (NL. fem. n. *demaditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-225 sp011053965*. The type genome for the species is the GenBank assembly GCA_011055185.1. The GC content of the type genome is 64.98 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Bicinaria gen. nov.

Candidatus Bicinaria (NL. fem. n. *Bicinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-225*. The type species for the genus is *Candidatus* Bicinaria demaditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicinariaceae.

Description of *Candidatus* Bicinariaceae fam. nov.

Candidatus Bicinariaceae (NL. fem. n. *Bicinariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-225.* The type genus for the taxon is *Candidatus* Bicinaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicinariales.

Description of *Candidatus* Bicinariales ord. nov.

Candidatus Bicinariales (NL. fem. n. *Bicinariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-225.* The type genus for the taxon is *Candidatus* Bicinaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2235*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nocumosae.

Description of *Candidatus* Bicinia capabibula sp. nov.

Candidatus Bicinia capabibula (NL. fem. n. *capabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha9-Bin7 sp002937585*. The type genome for the species is the GenBank assembly GCA_012965725.1. The GC content of the type genome is 49.93 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Bicinia gen. nov.

Candidatus Bicinia (NL. fem. n. *Bicinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha9-Bin7*. The type species for the genus is *Candidatus* Bicinia capabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulariaceae.

Description of *Candidatus* Bicinia secunastra sp. nov.

Candidatus Bicinia secunastra (NL. fem. n. *secunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha9-Bin7 sp002938115*. The type genome for the species is the GenBank assembly GCA_002938115.1. The GC content of the type genome is 50.02 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Bicinida acertax sp. nov.

Candidatus Bicinida acertax (NL. fem. n. *acertax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902606835*. The type genome for the species is the GenBank assembly GCA_902606835.1. The GC content of the type genome is 29.13 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Bicinida gen. nov.

Candidatus Bicinida (NL. fem. n. *Bicinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *AG-414-E02*. The type species for the genus is *Candidatus* Bicinida acertax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicinida adnumisca sp. nov.

Candidatus Bicinida adnumisca (NL. fem. n. *adnumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902589795*. The type genome for the species is the GenBank assembly GCA_902589795.1. The GC content of the type genome is 29.58 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Bicinida arcitivita sp. nov.

Candidatus Bicinida arcitivita (NL. fem. n. *arcitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902567945*. The type genome for the species is the GenBank assembly GCA_902567945.1. The GC content of the type genome is 29.47 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Bicinida exindentia sp. nov.

Candidatus Bicinida exindentia (NL. fem. n. *exindentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902590395*. The type genome for the species is the GenBank assembly GCA_902590395.1. The GC content of the type genome is 30.03 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Bicinida exsisibula sp. nov.

Candidatus Bicinida exsisibula (NL. fem. n. *exsisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902588335*. The type genome for the species is the GenBank assembly GCA_902588335.1. The GC content of the type genome is 29.73 %

and the genome length is 0.7 Mbp.

Description of *Candidatus* Bicinida extiniforma sp. nov.

Candidatus Bicinida extiniforma (NL. fem. n. *extiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902561465*. The type genome for the species is the GenBank assembly GCA_902561465.1. The GC content of the type genome is 29.11 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Bicinida holovatio sp. nov.

Candidatus Bicinida holovatio (NL. fem. n. *holovatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902607625*. The type genome for the species is the GenBank assembly GCA_902607625.1. The GC content of the type genome is 30.04 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Bicinida inefficula sp. nov.

Candidatus Bicinida inefficula (NL. fem. n. *inefficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902607735*. The type genome for the species is the GenBank assembly GCA_902607735.1. The GC content of the type genome is 29.5 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Bicinida istinitas sp. nov.

Candidatus Bicinida istinitas (NL. fem. n. *istinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902608065*. The type genome for the species is the GenBank assembly GCA_902608065.1. The GC content of the type genome is 29.76 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Bicinida macilimonia sp. nov.

Candidatus Bicinida macilimonia (NL. fem. n. *macilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902589505*. The type genome for the species is the GenBank assembly GCA_902589505.1. The GC content of the type genome is 29.79 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Bicinida obsecastra sp. nov.

Candidatus Bicinida obsecastra (NL. fem. n. *obsecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902607585*. The type genome for the species is the GenBank assembly GCA_902607585.1. The GC content of the type genome is 30.15 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Bicinida oppugibra sp. nov.

Candidatus Bicinida oppugibra (NL. fem. n. *oppugibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902588625*. The type genome for the species is the GenBank assembly GCA_902588625.1. The GC content of the type genome is 28.97 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Bicinida pecunicula sp. nov.

Candidatus Bicinida pecunicula (NL. fem. n. *pecunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902568465*. The type genome for the species is the GenBank assembly GCA_902568465.1. The GC content of the type genome is 29.76 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Bicinida recomilega sp. nov.

Candidatus Bicinida recomilega (NL. fem. n. *recomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902567785*. The type genome for the species is the GenBank assembly GCA_902567785.1. The GC content of the type genome is 29.18 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Bicinida reforilenta sp. nov.

Candidatus Bicinida reforilenta (NL. fem. n. *reforilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902607525*. The type genome for the species is the GenBank assembly GCA_902607525.1. The GC content of the type genome is 29.54 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Bicinida revecousia sp. nov.

Candidatus Bicinida revecousia (NL. fem. n. *revecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902606665*. The type genome for the species is the GenBank assembly GCA_902606665.1. The GC content of the type genome is 29.72 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Bicinida rosaressa sp. nov.

Candidatus Bicinida rosaressa (NL. fem. n. *rosaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp902519445*. The type genome for the species is the GenBank assembly GCA_902519445.1. The GC content of the type genome is 29.09 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Bicinida sacopugo sp. nov.

Candidatus Bicinida sacopugo (NL. fem. n. *sacopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp004213215*. The type genome for the species is the GenBank assembly GCA_004213215.1. The GC content of the type genome is 29.04 %

and the genome length is 0.98 Mbp.

Description of *Candidatus* Bicinida siminicella sp. nov.

Candidatus Bicinida siminicella (NL. fem. n. *siminicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-414-E02 sp003214615*. The type genome for the species is the GenBank assembly GCA_902567835.1. The GC content of the type genome is 29.99 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Bicinosa conubentia sp. nov.

Candidatus Bicinosa conubentia (NL. fem. n. *conubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-452 sp900770415*. The type genome for the species is the GenBank assembly RS_GCF_900770415.1. The GC content of the type genome is 28.32 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Bicinosa gen. nov.

Candidatus Bicinosa (NL. fem. n. *Bicinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-452*. The type species for the genus is *Candidatus* Bicinosa conubentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Bicinosa dehonibra sp. nov.

Candidatus Bicinosa dehonibra (NL. fem. n. *dehonibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-452 sp000434035*. The type genome for the species is the GenBank assembly GCA_900550655.1. The GC content of the type genome is 28.21 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Bicinosa eviscitudo sp. nov.

Candidatus Bicinosa eviscitudo (NL. fem. n. *eviscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-452 sp002314935*. The type genome for the species is the GenBank assembly GCA_002314935.1. The GC content of the type genome is 26.09 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Bicipana advicimonia sp. nov.

Candidatus Bicipana advicimonia (NL. fem. n. *advicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA112 sp003225215*. The type genome for the species is the GenBank assembly GCA_003225215.1. The GC content of the type genome is 55.74 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Bicipana gen. nov.

Candidatus Bicipana (NL. fem. n. *Bicipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA112*. The type species for the genus is *Candidatus* Bicipana advicimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp1-AA112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipanaceae.

Description of *Candidatus* Bicipanaceae fam. nov.

Candidatus Bicipanaceae (NL. fem. n. *Bicipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Gp1-AA112.* The type genus for the taxon is *Candidatus* Bicipana .

According to GTDB R06-RS202, this family belongs to the order *Acidobacteriales*.

Description of *Candidatus* Bicipana cibicifica sp. nov.

Candidatus Bicipana cibicifica (NL. fem. n. *cibicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA112 sp003225175*. The type genome for the species is the GenBank assembly GCA_003225175.1. The GC content of the type genome is 54.35 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Biciparia cerebedo sp. nov.

Candidatus Biciparia cerebedo (NL. fem. n. *cerebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Poly24 sp007751715*. The type genome for the species is the GenBank assembly RS_GCF_007751715.1. The GC content of the type genome is 58.21 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Biciparia gen. nov.

Candidatus Biciparia (NL. fem. n. *Biciparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Poly24*. The type species for the genus is *Candidatus* Biciparia cerebedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biciparia inmuticula sp. nov.

Candidatus Biciparia inmuticula (NL. fem. n. *inmuticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Poly24 sp007741475*. The type genome for the species is the GenBank assembly RS_GCF_007741475.1. The GC content of the type genome is 57.89 % and the genome length is 7.48 Mbp.

Description of *Candidatus* Biciparia vavasicella sp. nov.

Candidatus Biciparia vavasicella (NL. fem. n. *vavasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Poly24 sp007753095*. The type genome for the species is the GenBank assembly RS_GCF_007753095.1. The GC content of the type genome is 57.66 % and the genome length is 7.44 Mbp.

Description of *Candidatus* Bicipella adfanitio sp. nov.

Candidatus Bicipella adfanitio (NL. fem. n. *adfanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3495 sp009392775*. The type genome for the species is the GenBank assembly GCA_009392775.1. The GC content of the type genome is 43.48 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Bicipella gen. nov.

Candidatus Bicipella (NL. fem. n. *Bicipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3495*. The type species for the genus is *Candidatus* Bicipella adfanitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Bicipellaceae fam. nov.

Candidatus Bicipellaceae (NL. fem. n. *Bicipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3495.* The type genus for the taxon is *Candidatus* Bicipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicipellales.

Description of *Candidatus* Bicipellales ord. nov.

Candidatus Bicipellales (NL. fem. n. *Bicipellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3495.* The type genus for the taxon is *Candidatus* Bicipella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Bicipella lanugetta sp. nov.

Candidatus Bicipella lanugetta (NL. fem. n. *lanugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3495 sp002724585*. The type genome for the species is the GenBank assembly GCA_002377655.1. The GC content of the type genome is 43.81 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Bicipella vitabibra sp. nov.

Candidatus Bicipella vitabibra (NL. fem. n. *vitabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3495 sp002716645*. The type genome for the species is the GenBank assembly GCA_008373075.1. The GC content of the type genome is 43.79 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Bicipia cosidastra sp. nov.

Candidatus Bicipia cosidastra (NL. fem. n. *cosidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISPN01 sp903869185*. The type genome for the species is the GenBank assembly GCA_903837195.1. The GC content of the type genome is 40.46 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Bicipia gen. nov.

Candidatus Bicipia (NL. fem. n. *Bicipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISPN01*. The type species for the genus is *Candidatus* Bicipia cosidastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAISPN01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipiaceae.

Description of *Candidatus* Bicipiaceae fam. nov.

Candidatus Bicipiaceae (NL. fem. n. *Bicipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISPN01*. The type genus for the taxon is *Candidatus* Bicipia .

According to GTDB R06-RS202, this family belongs to the order *Cyanobacteriales*.

Description of *Candidatus* Bicipia navicugo sp. nov.

Candidatus Bicipia navicugo (NL. fem. n. *navicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISPN01 sp903887375*. The type genome for the species is the GenBank assembly GCA_903915915.1. The GC content of the type genome is 39.59 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Bicipida adbelitoga sp. nov.

Candidatus Bicipida adbelitoga (NL. fem. n. *adbelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012520355*. The type genome for the species is the GenBank assembly GCA_012520355.1. The GC content of the type genome is 49.28 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Bicipida gen. nov.

Candidatus Bicipida (NL. fem. n. *Bicipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5420*. The type species for the genus is *Candidatus* Bicipida adbelitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Bicipida attelatio sp. nov.

Candidatus Bicipida attelatio (NL. fem. n. *attelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp002409455*. The type genome for the species is the GenBank assembly GCA_002409455.1. The GC content of the type genome is 47.82 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Bicipida defeniforma sp. nov.

Candidatus Bicipida defeniforma (NL. fem. n. *defeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012518325*. The type genome for the species is the GenBank assembly GCA_012518325.1. The GC content of the type genome is 53.32 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Bicipida inremetta sp. nov.

Candidatus Bicipida inremetta (NL. fem. n. *inremetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012837925*. The type genome for the species is the GenBank assembly GCA_012837925.1. The GC content of the type genome is 49.94 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Bicipida licenago sp. nov.

Candidatus Bicipida licenago (NL. fem. n. *licenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012838305*. The type genome for the species is the GenBank assembly GCA_012838305.1. The GC content of the type genome is 52.45 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Bicipida nimirugo sp. nov.

Candidatus Bicipida nimirugo (NL. fem. n. *nimirugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012520315*. The type genome for the species is the GenBank assembly GCA_012520315.1. The GC content of the type genome is 50.48 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Bicipida pimenastra sp. nov.

Candidatus Bicipida pimenastra (NL. fem. n. *pimenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp012799115*. The type genome for the species is the GenBank assembly GCA_012799115.1. The GC content of the type genome is 49.34 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Bicipida vanitessa sp. nov.

Candidatus Bicipida vanitessa (NL. fem. n. *vanitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5420 sp002424045*. The type genome for the species is the GenBank assembly GCA_002424045.1. The GC content of the type genome is 48.16 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Biciposa hemitatica sp. nov.

Candidatus Biciposa hemitatica (NL. fem. n. *hemitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXH01 sp009784425*. The type genome for the species is the GenBank assembly GCA_009779685.1. The GC content of the type genome is 52.51 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Biciposa gen. nov.

Candidatus Biciposa (NL. fem. n. *Biciposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXH01*. The type species for the genus is *Candidatus* Biciposa

hemitatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Biciposa rudicessa sp. nov.

Candidatus Biciposa rudicessa (NL. fem. n. *rudicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXH01 sp009784945*. The type genome for the species is the GenBank assembly GCA_009784945.1. The GC content of the type genome is 50.05 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bicipula acratitia sp. nov.

Candidatus Bicipula acratitia (NL. fem. n. *acratitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp902518965*. The type genome for the species is the GenBank assembly GCA_902518965.1. The GC content of the type genome is 46.02 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Bicipula gen. nov.

Candidatus Bicipula (NL. fem. n. *Bicipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HIMB100*. The type species for the genus is *Candidatus* Bicipula acratitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicipula decacimonia sp. nov.

Candidatus Bicipula decacimonia (NL. fem. n. *decacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp002722385*. The type genome for the species is the

GenBank assembly GCA_002722385.1. The GC content of the type genome is 53.51 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Bicipula herinicula sp. nov.

Candidatus Bicipula herinicula (NL. fem. n. *herinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp902523435*. The type genome for the species is the GenBank assembly GCA_902523435.1. The GC content of the type genome is 45.83 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Bicipula peridago sp. nov.

Candidatus Bicipula peridago (NL. fem. n. *peridago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp002348585*. The type genome for the species is the GenBank assembly GCA_002348585.1. The GC content of the type genome is 46.77 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Bicipula redacax sp. nov.

Candidatus Bicipula redacax (NL. fem. n. *redacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp002721775*. The type genome for the species is the GenBank assembly GCA_002721775.1. The GC content of the type genome is 46.85 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Bicipula robigigena sp. nov.

Candidatus Bicipula robigigena (NL. fem. n. *robigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp902520575*. The type genome for the species is the GenBank assembly GCA_902520575.1. The GC content of the type genome is 45.61 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Bicipula tabifitica sp. nov.

Candidatus Bicipula tabifitica (NL. fem. n. *tabifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp002700485*. The type genome for the species is the GenBank assembly GCA_002700485.1. The GC content of the type genome is 47.06 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Bicipula urbicitrix sp. nov.

Candidatus Bicipula urbicitrix (NL. fem. n. *urbicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB100 sp000238815*. The type genome for the species is the GenBank assembly RS_GCF_000238815.1. The GC content of the type genome is 50.48 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Bicodana celumibra sp. nov.

Candidatus Bicodana celumibra (NL. fem. n. *celumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1XD42-69 sp014287635*. The type genome for the species is the GenBank assembly RS_GCF_014287635.1. The GC content of the type genome is 40.34 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Bicodana gen. nov.

Candidatus Bicodana (NL. fem. n. *Bicodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1XD42-69*. The type species for the genus is *Candidatus* Bicodana celumibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicodana indiditas sp. nov.

Candidatus Bicodana indiditas (NL. fem. n. *indiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1XD42-69 sp011959925*. The type genome for the species is the GenBank assembly RS_GCF_011959925.1. The GC content of the type genome is 44.99 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Bicodana milifimonas sp. nov.

Candidatus Bicodana milifimonas (NL. fem. n. *milifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1XD42-69 sp009911505*. The type genome for the species is the GenBank assembly RS_GCF_009911505.1. The GC content of the type genome is 44.83 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Bicodana nosocetta sp. nov.

Candidatus Bicodana nosocetta (NL. fem. n. *nosocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1XD42-69 sp003612565*. The type genome for the species is the GenBank assembly RS_GCF_003612565.1. The GC content of the type genome is 42.63 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Bicodaria sicubastra sp. nov.

Candidatus Bicodaria sicubastra (NL. fem. n. *sicubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1826 sp900555435*. The type genome for the species is the GenBank assembly GCA_900555435.1. The GC content of the type genome is 55.86 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Bicodaria gen. nov.

Candidatus Bicodaria (NL. fem. n. *Bicodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1826*. The type species for the genus is *Candidatus* Bicodaria sicubastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicodella admutitica sp. nov.

Candidatus Bicodella admutitica (NL. fem. n. *admutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2728135 sp002714015*. The type genome for the species is the GenBank assembly GCA_002714015.1. The GC content of the type genome is 37.48 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Bicodella gen. nov.

Candidatus Bicodella (NL. fem. n. *Bicodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2728135*. The type species for the genus is *Candidatus* Bicodella admutitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Bicodella depocentia sp. nov.

Candidatus Bicodella depocentia (NL. fem. n. *depocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2728135 sp002728135*. The type genome for the species is the GenBank assembly GCA_002718635.1. The GC content of the type genome is 37.23 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Bicodia assifessa sp. nov.

Candidatus Bicodia assifessa (NL. fem. n. *assifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR12 sp003220335*. The type genome for the species is the GenBank assembly GCA_003220335.1. The GC content of the type genome is 70.03 % and the

genome length is 5.52 Mbp.

Description of *Candidatus* Bicodia gen. nov.

Candidatus Bicodia (NL. fem. n. *Bicodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR12*. The type species for the genus is *Candidatus* Bicodia assifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Bicodia bicalitas sp. nov.

Candidatus Bicodia bicalitas (NL. fem. n. *bicalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR12 sp003220225*. The type genome for the species is the GenBank assembly GCA_003220415.1. The GC content of the type genome is 70.24 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Bicodia cotenedo sp. nov.

Candidatus Bicodia cotenedo (NL. fem. n. *cotenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR12 sp003220475*. The type genome for the species is the GenBank assembly GCA_003220725.1. The GC content of the type genome is 69.48 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Bicodida fecunessa sp. nov.

Candidatus Bicodida fecunessa (NL. fem. n. *fecunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-58-14 sp001824745*. The type genome for the species is the GenBank assembly GCA_001822855.1. The GC content of the type genome is 58.42 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2

conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bicodida gen. nov.

Candidatus Bicodida (NL. fem. n. *Bicodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-58-14*. The type species for the genus is *Candidatus* Bicodida fecunessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-58-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicodidaceae.

Description of *Candidatus* Bicodidaceae fam. nov.

Candidatus Bicodidaceae (NL. fem. n. *Bicodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-58-14.* The type genus for the taxon is *Candidatus* Bicodida .

According to GTDB R06-RS202, this family belongs to the order *Terrybacterales*.

Description of *Candidatus* Bicodosa adcumibula sp. nov.

Candidatus Bicodosa adcumibula (NL. fem. n. *adcumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp012840975*. The type genome for the species is the GenBank assembly GCA_012840975.1. The GC content of the type genome is 39.45 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Bicodosa gen. nov.

Candidatus Bicodosa (NL. fem. n. *Bicodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG099*. The type species for the genus is *Candidatus* Bicodosa adcumibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicodosa allubivita sp. nov.

Candidatus Bicodosa allubivita (NL. fem. n. *allubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902790885*. The type genome for the species is the GenBank assembly GCA_902790885.1. The GC content of the type genome is 50.62 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Bicodosa altipitio sp. nov.

Candidatus Bicodosa altipitio (NL. fem. n. *altipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902780815*. The type genome for the species is the GenBank assembly GCA_902780815.1. The GC content of the type genome is 48.01 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Bicodosa aneclastra sp. nov.

Candidatus Bicodosa aneclastra (NL. fem. n. *aneclastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902773835*. The type genome for the species is the GenBank assembly GCA_902773835.1. The GC content of the type genome is 45.01 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Bicodosa apoplitas sp. nov.

Candidatus Bicodosa apoplitas (NL. fem. n. *apoplitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902788245*. The type genome for the species is the GenBank assembly GCA_902788245.1. The GC content of the type genome is 47.14 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Bicodosa arcifitudo sp. nov.

Candidatus Bicodosa arcifitudo (NL. fem. n. *arcifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902793875*. The type genome for the species is the GenBank assembly GCA_902793875.1. The GC content of the type genome is 54.11 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Bicodosa cohuratica sp. nov.

Candidatus Bicodosa cohuratica (NL. fem. n. *cohuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902778585*. The type genome for the species is the GenBank assembly GCA_902778585.1. The GC content of the type genome is 51.01 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Bicodosa decucago sp. nov.

Candidatus Bicodosa decucago (NL. fem. n. *decucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902765035*. The type genome for the species is the GenBank assembly GCA_902765035.1. The GC content of the type genome is 50.1 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Bicodosa delebiforma sp. nov.

Candidatus Bicodosa delebiforma (NL. fem. n. *delebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp900318105*. The type genome for the species is the GenBank assembly GCA_900318105.1. The GC content of the type genome is 49.04 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Bicodosa democousia sp. nov.

Candidatus Bicodosa democousia (NL. fem. n. *democousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG099 sp902786355*. The type genome for the species is the GenBank assembly GCA_902786355.1. The GC content of the type genome is 48.33 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Bicodosa depetedo sp. nov.

Candidatus Bicodosa depetedo (NL. fem. n. *depetedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp900315485*. The type genome for the species is the GenBank assembly GCA_002350505.1. The GC content of the type genome is 50.18 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Bicodosa detecugo sp. nov.

Candidatus Bicodosa detecugo (NL. fem. n. *detecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp012510935*. The type genome for the species is the GenBank assembly GCA_012510935.1. The GC content of the type genome is 39.1 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Bicodosa fecunastra sp. nov.

Candidatus Bicodosa fecunastra (NL. fem. n. *fecunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp001513255*. The type genome for the species is the GenBank assembly GCA_012735145.1. The GC content of the type genome is 39.13 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Bicodosa funamifica sp. nov.

Candidatus Bicodosa funamifica (NL. fem. n. *funamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902786855*. The type genome for the species is the GenBank assembly GCA_902786855.1. The GC content of the type genome is 46.79 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Bicodosa hirudiforma sp. nov.

Candidatus Bicodosa hirudiforma (NL. fem. n. *hirudiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902760855*. The type genome for the species is the GenBank assembly GCA_902760855.1. The GC content of the type genome is 47.51 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Bicodosa homicimonia sp. nov.

Candidatus Bicodosa homicimonia (NL. fem. n. *homicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902790965*. The type genome for the species is the GenBank assembly GCA_902790965.1. The GC content of the type genome is 49.58 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Bicodosa idipsigena sp. nov.

Candidatus Bicodosa idipsigena (NL. fem. n. *idipsigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902775345*. The type genome for the species is the GenBank assembly GCA_902775345.1. The GC content of the type genome is 49.46 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bicodosa imbelentia sp. nov.

Candidatus Bicodosa imbelentia (NL. fem. n. *imbelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902774265*. The type genome for the species is the GenBank assembly GCA_902774265.1. The GC content of the type genome is 46.79 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Bicodosa inredago sp. nov.

Candidatus Bicodosa inredago (NL. fem. n. *inredago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902776285*. The type genome for the species is the GenBank assembly GCA_902776285.1. The GC content of the type genome is 51.02 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Bicodosa menapitrix sp. nov.

Candidatus Bicodosa menapitrix (NL. fem. n. *menapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp900320285*. The type genome for the species is the GenBank assembly GCA_902789655.1. The GC content of the type genome is 47.34 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Bicodosa nocenetta sp. nov.

Candidatus Bicodosa nocenetta (NL. fem. n. *nocenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902774195*. The type genome for the species is the GenBank assembly GCA_902774195.1. The GC content of the type genome is 52.65 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Bicodosa plascibra sp. nov.

Candidatus Bicodosa plascibra (NL. fem. n. *plascibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902798745*. The type genome for the species is the GenBank assembly GCA_902798745.1. The GC content of the type genome is 47.92 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Bicodosa reduvivita sp. nov.

Candidatus Bicodosa reduvivita (NL. fem. n. *reduvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG099 sp902795265*. The type genome for the species is the GenBank assembly GCA_902795265.1. The GC content of the type genome is 49.78 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Bicodosa saxopilega sp. nov.

Candidatus Bicodosa saxopilega (NL. fem. n. *saxopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902801255*. The type genome for the species is the GenBank assembly GCA_902801255.1. The GC content of the type genome is 47.97 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Bicodosa viburilega sp. nov.

Candidatus Bicodosa viburilega (NL. fem. n. *viburilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp902779185*. The type genome for the species is the GenBank assembly GCA_902779185.1. The GC content of the type genome is 49.15 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bicodosa vilipibula sp. nov.

Candidatus Bicodosa vilipibula (NL. fem. n. *vilipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG099 sp900317675*. The type genome for the species is the GenBank assembly GCA_900313365.1. The GC content of the type genome is 48.95 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Bicodula retecitudo sp. nov.

Candidatus Bicodula retecitudo (NL. fem. n. *retecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B25-G16 sp003646935*. The type genome for the species is the GenBank assembly GCA_003646935.1. The GC content of the type genome is 50.52 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Bicodula gen. nov.

Candidatus Bicodula (NL. fem. n. *Bicodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B25-G16*. The type species for the genus is *Candidatus* Bicodula retecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B25-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicodulaceae.

Description of *Candidatus* Bicodulaceae fam. nov.

Candidatus Bicodulaceae (NL. fem. n. *Bicodulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B25-G16.* The type genus for the taxon is *Candidatus* Bicodula .

According to GTDB R06-RS202, this family belongs to the order *Desulfatiglandales*.

Description of *Candidatus* Bicorana catafetta sp. nov.

Candidatus Bicorana catafetta (NL. fem. n. *catafetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903910795*. The type genome for the species is the GenBank assembly GCA_903911955.1. The GC content of the type genome is 52.15 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Bicorana gen. nov.

Candidatus Bicorana (NL. fem. n. *Bicorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5195*. The type species for the genus is *Candidatus* Bicorana catafetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Bicorana cocoditrix sp. nov.

Candidatus Bicorana cocoditrix (NL. fem. n. *cocoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903854805*. The type genome for the species is the GenBank assembly GCA_903854805.1. The GC content of the type genome is 49.76 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Bicorana dilibilenta sp. nov.

Candidatus Bicorana dilibilenta (NL. fem. n. *dilibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp003130845*. The type genome for the species is the GenBank assembly GCA_003130845.1. The GC content of the type genome is 53.89 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Bicorana estovibra sp. nov.

Candidatus Bicorana estovibra (NL. fem. n. *estovibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903908605*. The type genome for the species is the GenBank assembly GCA_903908605.1. The GC content of the type genome is 52.26 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Bicorana futatitoga sp. nov.

Candidatus Bicorana futatitoga (NL. fem. n. *futatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903875215*. The type genome for the species is the GenBank assembly GCA_903854505.1. The GC content of the type genome is 57.87 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Bicorana malivitas sp. nov.

Candidatus Bicorana malivitas (NL. fem. n. *malivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp011047105*. The type genome for the species is the GenBank assembly GCA_011047105.1. The GC content of the type genome is 55.84 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Bicorana melopitica sp. nov.

Candidatus Bicorana melopitica (NL. fem. n. *melopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp005778035*. The type genome for the species is the GenBank assembly GCA_903929785.1. The GC content of the type genome is 50.18 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Bicorana monogentia sp. nov.

Candidatus Bicorana monogentia (NL. fem. n. *monogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903838415*. The type genome for the species is the GenBank assembly GCA_903870525.1. The GC content of the type genome is 53.97 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Bicorana omnigentia sp. nov.

Candidatus Bicorana omnigentia (NL. fem. n. *omnigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp903882765*. The type genome for the species is the GenBank assembly GCA_903882765.1. The GC content of the type genome is 46.81 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Bicorana rosacimonas sp. nov.

Candidatus Bicorana rosacimonas (NL. fem. n. *rosacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5195 sp903846015*. The type genome for the species is the GenBank assembly GCA_903846015.1. The GC content of the type genome is 50.74 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Bicorana vaciliforma sp. nov.

Candidatus Bicorana vaciliforma (NL. fem. n. *vaciliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5195 sp002412925*. The type genome for the species is the GenBank assembly GCA_002412925.1. The GC content of the type genome is 54.86 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Bicoraria abverentia sp. nov.

Candidatus Bicoraria abverentia (NL. fem. n. *abverentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902616675*. The type genome for the species is the GenBank assembly GCA_902616675.1. The GC content of the type genome is 29.65 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Bicoraria gen. nov.

Candidatus Bicoraria (NL. fem. n. *Bicoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED727*. The type species for the genus is *Candidatus* Bicoraria abverentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicoraria acrobiforma sp. nov.

Candidatus Bicoraria acrobiforma (NL. fem. n. *acrobiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902573835*. The type genome for the species is the GenBank assembly GCA_902573835.1. The GC content of the type genome is 29.44 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Bicoraria acropitudo sp. nov.

Candidatus Bicoraria acropitudo (NL. fem. n. *acropitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902599495*. The type genome for the species is the GenBank assembly GCA_902599495.1. The GC content of the type genome is 29.43 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Bicoraria adnilastra sp. nov.

Candidatus Bicoraria adnilastra (NL. fem. n. *adnilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902524105*. The type genome for the species is the GenBank assembly GCA_902524105.1. The GC content of the type genome is 29.47 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Bicoraria adrumisca sp. nov.

Candidatus Bicoraria adrumisca (NL. fem. n. *adrumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902633335*. The type genome for the species is the GenBank assembly GCA_902633335.1. The GC content of the type genome is 29.58 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Bicoraria antomitudo sp. nov.

Candidatus Bicoraria antomitudo (NL. fem. n. *antomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902620525*. The type genome for the species is the GenBank assembly GCA_902620525.1. The GC content of the type genome is 29.5 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Bicoraria ceracimonas sp. nov.

Candidatus Bicoraria ceracimonas (NL. fem. n. *ceracimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902587145*. The type genome for the species is the GenBank assembly GCA_902587145.1. The GC content of the type genome is 29.59 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Bicoraria cerevitica sp. nov.

Candidatus Bicoraria cerevitica (NL. fem. n. *cerevitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902530885*. The type genome for the species is the GenBank assembly GCA_902530885.1. The GC content of the type genome is 29.85 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Bicoraria cuferibula sp. nov.

Candidatus Bicoraria cuferibula (NL. fem. n. *cuferibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902605645*. The type genome for the species is the GenBank assembly GCA_902528125.1. The GC content of the type genome is 29.91 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Bicoraria demaditudo sp. nov.

Candidatus Bicoraria demaditudo (NL. fem. n. *demaditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902580115*. The type genome for the species is the GenBank assembly GCA_902580115.1. The GC content of the type genome is 29.58 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Bicoraria demigastra sp. nov.

Candidatus Bicoraria demigastra (NL. fem. n. *demigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MED727 sp902553555*. The type genome for the species is the GenBank assembly GCA_902553555.1. The GC content of the type genome is 29.66 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Bicoraria esculitudo sp. nov.

Candidatus Bicoraria esculitudo (NL. fem. n. *esculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902530455*. The type genome for the species is the GenBank assembly GCA_902530455.1. The GC content of the type genome is 30.02 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Bicoraria indipastra sp. nov.

Candidatus Bicoraria indipastra (NL. fem. n. *indipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902574035*. The type genome for the species is the GenBank assembly GCA_902574035.1. The GC content of the type genome is 29.55 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Bicoraria induvifica sp. nov.

Candidatus Bicoraria induvifica (NL. fem. n. *induvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902552185*. The type genome for the species is the GenBank assembly GCA_902552185.1. The GC content of the type genome is 29.88 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Bicoraria luceredo sp. nov.

Candidatus Bicoraria luceredo (NL. fem. n. *luceredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902596745*. The type genome for the species is the GenBank assembly GCA_902596745.1. The GC content of the type genome is 29.53 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Bicoraria mirifitia sp. nov.

Candidatus Bicoraria mirifitia (NL. fem. n. *mirifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp002689245*. The type genome for the species is the GenBank assembly GCA_002689245.1. The GC content of the type genome is 29.38 % and the genome length is 0.5 Mbp.

Description of *Candidatus* Bicoraria obnoxitudo sp. nov.

Candidatus Bicoraria obnoxitudo (NL. fem. n. *obnoxitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902629385*. The type genome for the species is the GenBank assembly GCA_902629385.1. The GC content of the type genome is 29.55 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Bicoraria pabilivita sp. nov.

Candidatus Bicoraria pabilivita (NL. fem. n. *pabilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902604065*. The type genome for the species is the GenBank assembly GCA_902604065.1. The GC content of the type genome is 29.27 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Bicoraria peribimonia sp. nov.

Candidatus Bicoraria peribimonia (NL. fem. n. *peribimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902561155*. The type genome for the species is the GenBank assembly GCA_902539025.1. The GC content of the type genome is 29.53 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Bicoraria repagibula sp. nov.

Candidatus Bicoraria repagibula (NL. fem. n. *repagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902579605*. The type genome for the species is the GenBank assembly GCA_902579605.1. The GC content of the type genome is 29.53 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Bicoraria sanabibula sp. nov.

Candidatus Bicoraria sanabibula (NL. fem. n. *sanabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902634845*. The type genome for the species is the GenBank assembly GCA_902634845.1. The GC content of the type genome is 29.81 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Bicoraria senipitudo sp. nov.

Candidatus Bicoraria senipitudo (NL. fem. n. *senipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED727 sp902582155*. The type genome for the species is the GenBank assembly GCA_902582155.1. The GC content of the type genome is 29.72 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Bicorella arcifedo sp. nov.

Candidatus Bicorella arcifedo (NL. fem. n. *arcifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDL01 sp013153915*. The type genome for the species is the GenBank assembly GCA_013153915.1. The GC content of the type genome is 36.92 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bicorella gen. nov.

Candidatus Bicorella (NL. fem. n. *Bicorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDL01*. The type species for the genus is *Candidatus* Bicorella

arcifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADDL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicorellaceae.

Description of *Candidatus* Bicorellaceae fam. nov.

Candidatus Bicorellaceae (NL. fem. n. *Bicorellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADDL01.* The type genus for the taxon is *Candidatus* Bicorella .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Bicoria obsecax sp. nov.

Candidatus Bicoria obsecax (NL. fem. n. *obsecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B130-G9 sp003647755*. The type genome for the species is the GenBank assembly GCA_003647755.1. The GC content of the type genome is 56.18 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bicoria gen. nov.

Candidatus Bicoria (NL. fem. n. *Bicoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B130-G9*. The type species for the genus is *Candidatus* Bicoria obsecax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B130-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicoriaceae.

Description of *Candidatus* Bicoriaceae fam. nov.

Candidatus Bicoriaceae (NL. fem. n. *Bicoriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B130-G9.* The type genus for the taxon is *Candidatus* Bicoria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B130-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicoriales.

Description of *Candidatus* Bicoriales ord. nov.

Candidatus Bicoriales (NL. fem. n. *Bicoriales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B130-G9.* The type genus for the taxon is *Candidatus* Bicoria .

According to the original version of GTDB R06-RS202, this family belongs to the class *B130-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bicoriae.

Description of *Candidatus* Bicoriae class. nov.

Candidatus Bicoriae (NL. fem. n. *c__Bicoriae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B130-G9.* The type genus for the taxon is *Candidatus* Bicoria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *B130-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Bicoriota.

Description of *Candidatus* Bicoriota phyl. nov.

Candidatus Bicoriota (NL. fem. n. *Bicoriota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B130-G9.* The type genus for the taxon is *Candidatus* Bicoria .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Bicorida bonitivita sp. nov.

Candidatus Bicorida bonitivita (NL. fem. n. *bonitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7694 sp002482705*. The type genome for the species is the

GenBank assembly GCA_002083815.1. The GC content of the type genome is 53.29 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Bicorida gen. nov.

Candidatus Bicorida (NL. fem. n. *Bicorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7694*. The type species for the genus is *Candidatus* Bicorida bonitivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7694*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicoridaceae.

Description of *Candidatus* Bicoridaceae fam. nov.

Candidatus Bicoridaceae (NL. fem. n. *Bicoridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7694.* The type genus for the taxon is *Candidatus* Bicorida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7694*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicoridales.

Description of *Candidatus* Bicoridales ord. nov.

Candidatus Bicoridales (NL. fem. n. *Bicoridales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7694.* The type genus for the taxon is *Candidatus* Bicorida .

According to the GTDB R06-RS202, this order belongs to the class *Sericytochromatia*.

Description of *Candidatus* Bicorosa adlenastra sp. nov.

Candidatus Bicorosa adlenastra (NL. fem. n. *adlenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902794125*. The type genome for the species is the GenBank assembly GCA_902794125.1. The GC content of the type genome is 44.95 %

and the genome length is 1.43 Mbp.

Description of *Candidatus* Bicorosa gen. nov.

Candidatus Bicorosa (NL. fem. n. *Bicorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1436*. The type species for the genus is *Candidatus* Bicorosa adlenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicorosa arancatio sp. nov.

Candidatus Bicorosa arancatio (NL. fem. n. *arancatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp002159705*. The type genome for the species is the GenBank assembly RS_GCF_002159705.1. The GC content of the type genome is 51.72 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Bicorosa cadavilenta sp. nov.

Candidatus Bicorosa cadavilenta (NL. fem. n. *cadavilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900315795*. The type genome for the species is the GenBank assembly GCA_900315795.1. The GC content of the type genome is 46.97 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Bicorosa cohuribula sp. nov.

Candidatus Bicorosa cohuribula (NL. fem. n. *cohuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902765225*. The type genome for the species is the GenBank assembly GCA_902792925.1. The GC content of the type genome is 48.1 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bicorosa devecousia sp. nov.

Candidatus Bicorosa devecousia (NL. fem. n. *devecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900319885*. The type genome for the species is the GenBank assembly GCA_900319885.1. The GC content of the type genome is 47.16 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Bicorosa dicanatica sp. nov.

Candidatus Bicorosa dicanatica (NL. fem. n. *dicanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp002329395*. The type genome for the species is the GenBank assembly GCA_002329395.1. The GC content of the type genome is 54.31 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Bicorosa exsoliforma sp. nov.

Candidatus Bicorosa exsoliforma (NL. fem. n. *exsoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902794895*. The type genome for the species is the GenBank assembly GCA_902794895.1. The GC content of the type genome is 43.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Bicorosa fibicivita sp. nov.

Candidatus Bicorosa fibicivita (NL. fem. n. *fibicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp002309715*. The type genome for the species is the GenBank assembly GCA_002309715.1. The GC content of the type genome is 45.4 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Bicorosa furibousia sp. nov.

Candidatus Bicorosa furibousia (NL. fem. n. *furibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp002432025*. The type genome for the species is the GenBank assembly GCA_002437085.1. The GC content of the type genome is 48.99 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Bicorosa induvatica sp. nov.

Candidatus Bicorosa induvatica (NL. fem. n. *induvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902766765*. The type genome for the species is the GenBank assembly GCA_902766765.1. The GC content of the type genome is 46.88 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Bicorosa inlibiforma sp. nov.

Candidatus Bicorosa inlibiforma (NL. fem. n. *inlibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902761975*. The type genome for the species is the GenBank assembly GCA_902761975.1. The GC content of the type genome is 48.6 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Bicorosa luxuribula sp. nov.

Candidatus Bicorosa luxuribula (NL. fem. n. *luxuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900541355*. The type genome for the species is the GenBank assembly RS_GCF_900768365.1. The GC content of the type genome is 47.07 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Bicorosa offuletta sp. nov.

Candidatus Bicorosa offuletta (NL. fem. n. *offuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902767385*. The type genome for the species is the GenBank assembly GCA_902767385.1. The GC content of the type genome is 46.09 %

and the genome length is 1.15 Mbp.

Description of *Candidatus* Bicorosa robigitudo sp. nov.

Candidatus Bicorosa robigitudo (NL. fem. n. *robigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902798835*. The type genome for the species is the GenBank assembly GCA_902798835.1. The GC content of the type genome is 45.64 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Bicorosa susicimonia sp. nov.

Candidatus Bicorosa susicimonia (NL. fem. n. *susicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900540405*. The type genome for the species is the GenBank assembly GCA_900540405.1. The GC content of the type genome is 50.58 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Bicorosa vavasentia sp. nov.

Candidatus Bicorosa vavasentia (NL. fem. n. *vavasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900319325*. The type genome for the species is the GenBank assembly GCA_900319325.1. The GC content of the type genome is 45.77 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Bicorosa venunatica sp. nov.

Candidatus Bicorosa venunatica (NL. fem. n. *venunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp900315845*. The type genome for the species is the GenBank assembly GCA_902757105.1. The GC content of the type genome is 44.71 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Bicorosa veridilenta sp. nov.

Candidatus Bicorosa veridilenta (NL. fem. n. *veridilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902781765*. The type genome for the species is the GenBank assembly GCA_902781765.1. The GC content of the type genome is 43.41 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Bicorosa voragastra sp. nov.

Candidatus Bicorosa voragastra (NL. fem. n. *voragastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1436 sp902772695*. The type genome for the species is the GenBank assembly GCA_902772695.1. The GC content of the type genome is 43.49 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Bicorula xenopax sp. nov.

Candidatus Bicorula xenopax (NL. fem. n. *xenopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-96 sp005889515*. The type genome for the species is the GenBank assembly GCA_005889515.1. The GC content of the type genome is 73.17 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Bicorula gen. nov.

Candidatus Bicorula (NL. fem. n. *Bicorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-96*. The type species for the genus is *Candidatus* Bicorula xenopax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Bicubana adtiletta sp. nov.

Candidatus Bicubana adtiletta (NL. fem. n. *adtiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2589 sp013002885*. The type genome for the species is the GenBank assembly GCA_013002885.1. The GC content of the type genome is 65.88 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Bicubana gen. nov.

Candidatus Bicubana (NL. fem. n. *Bicubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2589*. The type species for the genus is *Candidatus* Bicubana adtiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Bicubana antipivita sp. nov.

Candidatus Bicubana antipivita (NL. fem. n. *antipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2589 sp002390225*. The type genome for the species is the GenBank assembly GCA_002390225.1. The GC content of the type genome is 62.83 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Bicubana depopatio sp. nov.

Candidatus Bicubana depopatio (NL. fem. n. *depopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2589 sp002500925*. The type genome for the species is the GenBank assembly GCA_003539895.1. The GC content of the type genome is 54.96 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Bicubana fiducibra sp. nov.

Candidatus Bicubana fiducibra (NL. fem. n. *fiducibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2589 sp002348465*. The type genome for the species is the GenBank assembly GCA_003486145.1. The GC content of the type genome is 54.6 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Bicubana lapilastra sp. nov.

Candidatus Bicubana lapilastra (NL. fem. n. *lapilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2589 sp002348265*. The type genome for the species is the GenBank assembly GCA_002295625.1. The GC content of the type genome is 54.3 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Bicubella tubicitudo sp. nov.

Candidatus Bicubella tubicitudo (NL. fem. n. *tubicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG024 sp900314765*. The type genome for the species is the GenBank assembly GCA_902760165.1. The GC content of the type genome is 53.5 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Bicubella gen. nov.

Candidatus Bicubella (NL. fem. n. *Bicubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG024*. The type species for the genus is *Candidatus* Bicubella tubicitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicubia dibapatica sp. nov.

Candidatus Bicubia dibapatica (NL. fem. n. *dibapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-36-15b sp001782035*. The type genome for the species is the

GenBank assembly GCA_001782035.1. The GC content of the type genome is 36.79 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bicubia gen. nov.

Candidatus Bicubia (NL. fem. n. *Bicubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-36-15b*. The type species for the genus is *Candidatus* Bicubia dibapatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Bicubia rubecessa sp. nov.

Candidatus Bicubia rubecessa (NL. fem. n. *rubecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-36-15b sp001782045*. The type genome for the species is the GenBank assembly GCA_001782045.1. The GC content of the type genome is 35.2 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bicubida enunticula sp. nov.

Candidatus Bicubida enunticula (NL. fem. n. *enunticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPFW01 sp903864455*. The type genome for the species is the GenBank assembly GCA_903864455.1. The GC content of the type genome is 31.05 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Bicubida gen. nov.

Candidatus Bicubida (NL. fem. n. *Bicubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPFW01*. The type species for the genus is *Candidatus* Bicubida enunticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIPFW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubidaceae.

Description of *Candidatus* Bicubidaceae fam. nov.

Candidatus Bicubidaceae (NL. fem. n. *Bicubidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIPFW01.* The type genus for the taxon is *Candidatus* Bicubida .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Bicubosa impirax sp. nov.

Candidatus Bicubosa impirax (NL. fem. n. *impirax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-276 sp002254335*. The type genome for the species is the GenBank assembly GCA_002254335.1. The GC content of the type genome is 40.89 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Bicubosa gen. nov.

Candidatus Bicubosa (NL. fem. n. *Bicubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-276*. The type species for the genus is *Candidatus* Bicubosa impirax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-276*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubosaceae.

Description of *Candidatus* Bicubosaceae fam. nov.

Candidatus Bicubosaceae (NL. fem. n. *Bicubosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-276.* The type genus for the taxon is *Candidatus* Bicubosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Bicubosa insalimonas sp. nov.

Candidatus Bicubosa insalimonas (NL. fem. n. *insalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-276 sp002085215*. The type genome for the species is the GenBank assembly GCA_002085215.1. The GC content of the type genome is 39.9 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Bicubula benemitia sp. nov.

Candidatus Bicubula benemitia (NL. fem. n. *benemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNZC01 sp003978565*. The type genome for the species is the GenBank assembly GCA_003978565.1. The GC content of the type genome is 30.07 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Bicubula gen. nov.

Candidatus Bicubula (NL. fem. n. *Bicubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNZC01*. The type species for the genus is *Candidatus* Bicubula benemitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bicubula repudetta sp. nov.

Candidatus Bicubula repudetta (NL. fem. n. *repudetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNZC01 sp003978485*. The type genome for the species is the GenBank assembly GCA_003978485.1. The GC content of the type genome is 29.93 %

and the genome length is 1.16 Mbp.

Description of *Candidatus* Bifarana apraressa sp. nov.

Candidatus Bifarana apraressa (NL. fem. n. *apraressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVY01 sp012840805*. The type genome for the species is the GenBank assembly GCA_012840805.1. The GC content of the type genome is 39.7 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Bifarana gen. nov.

Candidatus Bifarana (NL. fem. n. *Bifarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUVY01*. The type species for the genus is *Candidatus* Bifarana apraressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUVY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifaranaceae.

Description of *Candidatus* Bifaranaceae fam. nov.

Candidatus Bifaranaceae (NL. fem. n. *Bifaranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUVY01*. The type genus for the taxon is *Candidatus* Bifarana .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Bifarana cibaratio sp. nov.

Candidatus Bifarana cibaratio (NL. fem. n. *cibaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVY01 sp012512255*. The type genome for the species is the GenBank assembly GCA_012512255.1. The GC content of the type genome is 40.87 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Bifararia nivomicella sp. nov.

Candidatus Bifararia nivomicella (NL. fem. n. *nivomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-217 sp000436335*. The type genome for the species is the GenBank assembly GCA_000436335.1. The GC content of the type genome is 53.58 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Bifararia gen. nov.

Candidatus Bifararia (NL. fem. n. *Bifararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-217*. The type species for the genus is *Candidatus* Bifararia nivomicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bifararia viginisca sp. nov.

Candidatus Bifararia viginisca (NL. fem. n. *viginisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-217 sp900547275*. The type genome for the species is the GenBank assembly GCA_900547275.1. The GC content of the type genome is 43.58 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Bifarella peracessa sp. nov.

Candidatus Bifarella peracessa (NL. fem. n. *peracessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1977 sp002313355*. The type genome for the species is the GenBank assembly GCA_002313355.1. The GC content of the type genome is 46.81 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Bifarella gen. nov.

Candidatus Bifarella (NL. fem. n. *Bifarella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1977*. The type species for the genus is *Candidatus* Bifarella peracessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1977*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifarellaceae.

Description of *Candidatus* Bifarellaceae fam. nov.

Candidatus Bifarellaceae (NL. fem. n. *Bifarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1977.* The type genus for the taxon is *Candidatus* Bifarella .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Bifarida codifessa sp. nov.

Candidatus Bifarida codifessa (NL. fem. n. *codifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJGV01 sp014190895*. The type genome for the species is the GenBank assembly GCA_014190895.1. The GC content of the type genome is 40.56 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Bifarida gen. nov.

Candidatus Bifarida (NL. fem. n. *Bifarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJGV01*. The type species for the genus is *Candidatus* Bifarida codifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bifarosa binocilenta sp. nov.

Candidatus Bifarosa binocilenta (NL. fem. n. *binocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCU01 sp009783805*. The type genome for the species is the GenBank assembly GCA_009783805.1. The GC content of the type genome is 64.31 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Bifarosa gen. nov.

Candidatus Bifarosa (NL. fem. n. *Bifarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRCU01*. The type species for the genus is *Candidatus* Bifarosa binocilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRCU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifarosaceae.

Description of *Candidatus* Bifarosaceae fam. nov.

Candidatus Bifarosaceae (NL. fem. n. *Bifarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRCU01.* The type genus for the taxon is *Candidatus* Bifarosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRCU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bifarosales.

Description of *Candidatus* Bifarosales ord. nov.

Candidatus Bifarosales (NL. fem. n. *Bifarosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRCU01.* The type genus for the taxon is *Candidatus* Bifarosa .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Bifarula catabugo sp. nov.

Candidatus Bifarula catabugo (NL. fem. n. *catabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp009691925*. The type genome for the species is the GenBank assembly GCA_009691925.1. The GC content of the type genome is 67.73 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Bifarula gen. nov.

Candidatus Bifarula (NL. fem. n. *Bifarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-20-MAGs016*. The type species for the genus is *Candidatus* Bifarula catabugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Bifarula coturivita sp. nov.

Candidatus Bifarula coturivita (NL. fem. n. *coturivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp903951635*. The type genome for the species is the GenBank assembly GCA_903951635.1. The GC content of the type genome is 67.96 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Bifarula humecibra sp. nov.

Candidatus Bifarula humecibra (NL. fem. n. *humecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp903885855*. The type genome for the species is the GenBank assembly GCA_903885855.1. The GC content of the type genome is 73.7 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Bifarula idipsetta sp. nov.

Candidatus Bifarula idipsetta (NL. fem. n. *idipsetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F1-20-MAGs016 sp009924545*. The type genome for the species is the GenBank assembly GCA_009924545.1. The GC content of the type genome is 70.7 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Bifarula inmodifica sp. nov.

Candidatus Bifarula inmodifica (NL. fem. n. *inmodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp003669605*. The type genome for the species is the GenBank assembly GCA_003669605.1. The GC content of the type genome is 65.43 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Bifarula obvoliforma sp. nov.

Candidatus Bifarula obvoliforma (NL. fem. n. *obvoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp005791575*. The type genome for the species is the GenBank assembly GCA_005791575.1. The GC content of the type genome is 70.73 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Bifarula senacicula sp. nov.

Candidatus Bifarula senacicula (NL. fem. n. *senacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp903949225*. The type genome for the species is the GenBank assembly GCA_903949225.1. The GC content of the type genome is 67.61 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Bifarula susicibula sp. nov.

Candidatus Bifarula susicibula (NL. fem. n. *susicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs016 sp903885565*. The type genome for the species is the GenBank assembly GCA_903885565.1. The GC content of the type genome is 64.24 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Bifidobacterium alembitrix sp. nov.

Candidatus Bifidobacterium alembitrix (NL. fem. n. *alembitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp010667615*. The type genome for the species is the GenBank assembly RS_GCF_010667615.1. The GC content of the type genome is 65.01 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bifidobacterium allubilega sp. nov.

Candidatus Bifidobacterium allubilega (NL. fem. n. *allubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp009193355*. The type genome for the species is the GenBank assembly RS_GCF_009193355.1. The GC content of the type genome is 64.68 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Bifidobacterium angipicula sp. nov.

Candidatus Bifidobacterium angipicula (NL. fem. n. *angipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp012932445*. The type genome for the species is the GenBank assembly RS_GCF_012932445.1. The GC content of the type genome is 59.95 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Bifidobacterium aprucimonia sp. nov.

Candidatus Bifidobacterium aprucimonia (NL. fem. n. *aprucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp009193305*. The type genome for the species is the GenBank assembly RS_GCF_009193305.1. The GC content of the type genome is 58.13 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Bifidobacterium cerimitrix sp. nov.

Candidatus Bifidobacterium cerimitrix (NL. fem. n. *cerimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp002451435*. The type genome for the species is the GenBank assembly GCA_002479115.1. The GC content of the type genome is 61.26 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Bifidobacterium cululivita sp. nov.

Candidatus Bifidobacterium cululivita (NL. fem. n. *cululivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp012932675*. The type genome for the species is the GenBank assembly RS_GCF_012932675.1. The GC content of the type genome is 61.22 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Bifidobacterium facunago sp. nov.

Candidatus Bifidobacterium facunago (NL. fem. n. *facunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp000499185*. The type genome for the species is the GenBank assembly RS_GCF_003688305.1. The GC content of the type genome is 60.27 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Bifidobacterium figilastra sp. nov.

Candidatus Bifidobacterium figilastra (NL. fem. n. *figilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp003585735*. The type genome for the species is the GenBank assembly RS_GCF_003585735.1. The GC content of the type genome is 43.62 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Bifidobacterium funebitrix sp. nov.

Candidatus Bifidobacterium funebitrix (NL. fem. n. *funebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bifidobacterium sp012932375*. The type genome for the species is the GenBank assembly RS_GCF_012932375.1. The GC content of the type genome is 58.94 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Bifidobacterium inardastra sp. nov.

Candidatus Bifidobacterium inardastra (NL. fem. n. *inardastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp012932365*. The type genome for the species is the GenBank assembly RS_GCF_012932365.1. The GC content of the type genome is 67.49 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Bifidobacterium inhonicella sp. nov.

Candidatus Bifidobacterium inhonicella (NL. fem. n. *inhonicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp000499285*. The type genome for the species is the GenBank assembly RS_GCF_000499285.1. The GC content of the type genome is 60.1 % and the genome length is 2.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "honeybee gut".

Description of *Candidatus* Bifidobacterium insomousia sp. nov.

Candidatus Bifidobacterium insomousia (NL. fem. n. *insomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp012932425*. The type genome for the species is the GenBank assembly RS_GCF_012932425.1. The GC content of the type genome is 57.74 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Bifidobacterium molecitrix sp. nov.

Candidatus Bifidobacterium molecitrix (NL. fem. n. *molecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp002298605*. The type genome for the species is the GenBank assembly GCA_002298605.1. The GC content of the type genome is 62.42 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Bifidobacterium nugigitia sp. nov.

Candidatus Bifidobacterium nugigitia (NL. fem. n. *nugigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp002742445*. The type genome for the species is the GenBank assembly RS_GCF_002742445.1. The GC content of the type genome is 56.05 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Bifidobacterium obtoretta sp. nov.

Candidatus Bifidobacterium obtoretta (NL. fem. n. *obtoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp010667645*. The type genome for the species is the GenBank assembly RS_GCF_010667645.1. The GC content of the type genome is 66.38 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Bifidobacterium pepenilega sp. nov.

Candidatus Bifidobacterium pepenilega (NL. fem. n. *pepenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp900551485*. The type genome for the species is the GenBank assembly RS_GCF_009727065.1. The GC content of the type genome is 57.5 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bifidobacterium sicinessa sp. nov.

Candidatus Bifidobacterium sicinessa (NL. fem. n. *sicinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp003585845*. The type genome for the species is the GenBank assembly RS_GCF_003585845.1. The GC content of the type genome is 42.18 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Bifidobacterium turiligena sp. nov.

Candidatus Bifidobacterium turiligena (NL. fem. n. *turiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bifidobacterium sp002884815*. The type genome for the species is the GenBank assembly RS_GCF_003397615.1. The GC content of the type genome is 42.47 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Bifisana benepifica sp. nov.

Candidatus Bifisana benepifica (NL. fem. n. *benepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA644 sp002299265*. The type genome for the species is the GenBank assembly GCA_902373415.1. The GC content of the type genome is 49.32 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Bifisana gen. nov.

Candidatus Bifisana (NL. fem. n. *Bifisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA644*. The type species for the genus is *Candidatus* Bifisana benepifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA644*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisanaceae.

Description of *Candidatus* Bifisanaceae fam. nov.

Candidatus Bifisanaceae (NL. fem. n. *Bifisanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA644.* The type genus for the taxon is *Candidatus* Bifisana .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Bifisana monacago sp. nov.

Candidatus Bifisana monacago (NL. fem. n. *monacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA644 sp900547165*. The type genome for the species is the GenBank assembly RS_GCF_900763085.1. The GC content of the type genome is 47.63 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Bifisaria lugubitrix sp. nov.

Candidatus Bifisaria lugubitrix (NL. fem. n. *lugubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *H1 sp001653155*. The type genome for the species is the GenBank assembly RS_GCF_001653175.1. The GC content of the type genome is 45.68 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Bifisaria gen. nov.

Candidatus Bifisaria (NL. fem. n. *Bifisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *H1*. The type species for the genus is *Candidatus* Bifisaria lugubitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bifisella detesitica sp. nov.

Candidatus Bifisella detesitica (NL. fem. n. *detesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737665 sp903873905*. The type genome for the species is the GenBank assembly GCA_903873905.1. The GC content of the type genome is 38.29 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Bifisella gen. nov.

Candidatus Bifisella (NL. fem. n. *Bifisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2737665*. The type species for the genus is *Candidatus* Bifisella detesitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

Palsa-965. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponanaceae.

Description of *Candidatus* Bifisella fefelitia sp. nov.

Candidatus Bifisella fefelitia (NL. fem. n. *fefelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737665 sp013298545*. The type genome for the species is the GenBank assembly GCA_013298545.1. The GC content of the type genome is 42.83 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Bifisella humecitudo sp. nov.

Candidatus Bifisella humecitudo (NL. fem. n. *humecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737665 sp002737665*. The type genome for the species is the GenBank assembly GCA_009693585.1. The GC content of the type genome is 35.74 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Bifisia denomugo sp. nov.

Candidatus Bifisia denomugo (NL. fem. n. *denomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001730085 sp001730085*. The type genome for the species is the GenBank assembly GCA_001730085.1. The GC content of the type genome is 34.69 % and the genome length is 1.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ovicells".

Description of *Candidatus* Bifisia gen. nov.

Candidatus Bifisia (NL. fem. n. *Bifisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-001730085*. The type species for the genus is *Candidatus* Bifisia denomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-001730085. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisiaceae.

Description of *Candidatus* Bifisiaceae fam. nov.

Candidatus Bifisiaceae (NL. fem. n. *Bifisiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001730085.* The type genus for the taxon is *Candidatus* Bifisia .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-001730085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bifisiales.

Description of *Candidatus* Bifisiales ord. nov.

Candidatus Bifisiales (NL. fem. n. *Bifisiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001730085.* The type genus for the taxon is *Candidatus* Bifisia .

According to the original version of GTDB R06-RS202, this family belongs to the class *GCA-001730085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bifisiae.

Description of *Candidatus* Bifisiae class. nov.

Candidatus Bifisiae (NL. fem. n. *c__Bifisiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001730085.* The type genus for the taxon is *Candidatus* Bifisia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *GCA-001730085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Bifisiota.

Description of *Candidatus* Bifisiota phyl. nov.

Candidatus Bifisiota (NL. fem. n. *Bifisiota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001730085.* The type genus for the taxon is *Candidatus* Bifisia .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Bifisida anancisca sp. nov.

Candidatus Bifisida anancisca (NL. fem. n. *anancisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBB01 sp005239895*. The type genome for the species is the GenBank assembly GCA_005239895.1. The GC content of the type genome is 33.48 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Bifisida gen. nov.

Candidatus Bifisida (NL. fem. n. *Bifisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBB01*. The type species for the genus is *Candidatus* Bifisida anancisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisidaceae.

Description of *Candidatus* Bifisidaceae fam. nov.

Candidatus Bifisidaceae (NL. fem. n. *Bifisidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBB01.* The type genus for the taxon is *Candidatus* Bifisida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bifisidales.

Description of *Candidatus* Bifisidales ord. nov.

Candidatus Bifisidales (NL. fem. n. *Bifisidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBB01.* The type genus for the taxon is *Candidatus* Bifisida .

According to the original version of GTDB R06-RS202, this family belongs to the class

ABY1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Bifisosa dilicatio sp. nov.

Candidatus Bifisosa dilicatio (NL. fem. n. *dilicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1372 sp002306295*. The type genome for the species is the GenBank assembly GCA_002306295.1. The GC content of the type genome is 36.19 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Bifisosa gen. nov.

Candidatus Bifisosa (NL. fem. n. *Bifisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1372*. The type species for the genus is *Candidatus* Bifisosa dilicatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Bifisula crastedo sp. nov.

Candidatus Bifisula crastedo (NL. fem. n. *crastedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CR-1 sp900659855*. The type genome for the species is the GenBank assembly GCA_900659855.1. The GC content of the type genome is 54.02 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Bifisula gen. nov.

Candidatus Bifisula (NL. fem. n. *Bifisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CR-1*. The type species for the genus is *Candidatus* Bifisula crastedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CR-1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisulaceae.

Description of *Candidatus* Bifisulaceae fam. nov.

Candidatus Bifisulaceae (NL. fem. n. *Bifisulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CR-1.* The type genus for the taxon is *Candidatus* Bifisula .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Bigarana catafentia sp. nov.

Candidatus Bigarana catafentia (NL. fem. n. *catafentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11373 sp003486285*. The type genome for the species is the GenBank assembly GCA_003486285.1. The GC content of the type genome is 68.64 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Bigarana gen. nov.

Candidatus Bigarana (NL. fem. n. *Bigarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11373*. The type species for the genus is *Candidatus* Bigarana catafentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11373*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigaranaceae.

Description of *Candidatus* Bigaranaceae fam. nov.

Candidatus Bigaranaceae (NL. fem. n. *Bigaranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11373.* The type genus for the taxon is *Candidatus* Bigarana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Rudicellales.

Description of *Candidatus* Bigararia detecitudo sp. nov.

Candidatus Bigararia detecitudo (NL. fem. n. *detecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4179 sp012798745*. The type genome for the species is the GenBank assembly GCA_012798745.1. The GC content of the type genome is 40.12 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Bigararia gen. nov.

Candidatus Bigararia (NL. fem. n. *Bigararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4179*. The type species for the genus is *Candidatus* Bigararia detecitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigararia emortugo sp. nov.

Candidatus Bigararia emortugo (NL. fem. n. *emortugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4179 sp002305015*. The type genome for the species is the GenBank assembly GCA_002305015.1. The GC content of the type genome is 41.02 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Bigararia herinousia sp. nov.

Candidatus Bigararia herinousia (NL. fem. n. *herinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4179 sp002381125*. The type genome for the species is the GenBank assembly GCA_001896575.1. The GC content of the type genome is 41.31 % and the genome length is 2.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge from a mesophilic anaerobic

wastewater digester enriched on phosphite and carbon dioxide".

Description of *Candidatus* Bigararia robigatica sp. nov.

Candidatus Bigararia robigatica (NL. fem. n. *robigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4179 sp002849245*. The type genome for the species is the GenBank assembly RS_GCF_002849245.1. The GC content of the type genome is 41.61 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Bigarella accogax sp. nov.

Candidatus Bigarella accogax (NL. fem. n. *accogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5336 sp009909065*. The type genome for the species is the GenBank assembly GCA_009909065.1. The GC content of the type genome is 64.52 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Bigarella gen. nov.

Candidatus Bigarella (NL. fem. n. *Bigarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5336*. The type species for the genus is *Candidatus* Bigarella accogax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigarella rinociforma sp. nov.

Candidatus Bigarella rinociforma (NL. fem. n. *rinociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5336 sp002408125*. The type genome for the species is the GenBank assembly GCA_002483825.1. The GC content of the type genome is 63.15 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Bigaria denicivita sp. nov.

Candidatus Bigaria denicivita (NL. fem. n. *denicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SORT01 sp004402895*. The type genome for the species is the GenBank assembly GCA_004402895.1. The GC content of the type genome is 42.11 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Bigaria gen. nov.

Candidatus Bigaria (NL. fem. n. *Bigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SORT01*. The type species for the genus is *Candidatus* Bigaria denicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SORT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigariaceae.

Description of *Candidatus* Bigariaceae fam. nov.

Candidatus Bigariaceae (NL. fem. n. *Bigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SORT01.* The type genus for the taxon is *Candidatus* Bigaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SORT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigariales.

Description of *Candidatus* Bigariales ord. nov.

Candidatus Bigariales (NL. fem. n. *Bigariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SORT01.* The type genus for the taxon is *Candidatus* Bigaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *SORT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bigariae.

Description of *Candidatus* Bigariae class. nov.

Candidatus Bigariae (NL. fem. n. *c__Bigariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SORT01*. The type genus for the taxon is *Candidatus* Bigaria .

According to GTDB R06-RS202, this class belongs to the phylum *Marinisomatota*.

Description of *Candidatus* Bigaria perabigena sp. nov.

Candidatus Bigaria perabigena (NL. fem. n. *perabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SORT01 sp004402915*. The type genome for the species is the GenBank assembly GCA_004402915.1. The GC content of the type genome is 42.03 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Bigarida caselifica sp. nov.

Candidatus Bigarida caselifica (NL. fem. n. *caselifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-43-12b sp001823875*. The type genome for the species is the GenBank assembly GCA_001825135.1. The GC content of the type genome is 42.98 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bigarida gen. nov.

Candidatus Bigarida (NL. fem. n. *Bigarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *12-FULL-43-12b*. The type species for the genus is *Candidatus* Bigarida caselifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigarosa abagmicella sp. nov.

Candidatus Bigarosa abagmicella (NL. fem. n. *abagmicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002395775*. The type genome for the species is the GenBank assembly GCA_002395775.1. The GC content of the type genome is 53.25 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Bigarosa gen. nov.

Candidatus Bigarosa (NL. fem. n. *Bigarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4372*. The type species for the genus is *Candidatus* Bigarosa abagmicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigarosa abveratio sp. nov.

Candidatus Bigarosa abveratio (NL. fem. n. *abveratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902771725*. The type genome for the species is the GenBank assembly GCA_902771725.1. The GC content of the type genome is 55.28 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Bigarosa acricitica sp. nov.

Candidatus Bigarosa acricitica (NL. fem. n. *acricitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902783885*. The type genome for the species is the GenBank assembly GCA_902783885.1. The GC content of the type genome is 52.63 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Bigarosa adselax sp. nov.

Candidatus Bigarosa adselax (NL. fem. n. *adselax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002314945*. The type genome for the species is the GenBank assembly GCA_002314945.1. The GC content of the type genome is 47.29 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Bigarosa carucax sp. nov.

Candidatus Bigarosa carucax (NL. fem. n. *carucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902763865*. The type genome for the species is the GenBank assembly GCA_902763865.1. The GC content of the type genome is 55.34 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Bigarosa catobatio sp. nov.

Candidatus Bigarosa catobatio (NL. fem. n. *catobatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902779845*. The type genome for the species is the GenBank assembly GCA_902773555.1. The GC content of the type genome is 54.33 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Bigarosa cemenilega sp. nov.

Candidatus Bigarosa cemenilega (NL. fem. n. *cemenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002373535*. The type genome for the species is the GenBank assembly GCA_002373535.1. The GC content of the type genome is 51.42 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Bigarosa cohorifica sp. nov.

Candidatus Bigarosa cohorifica (NL. fem. n. *cohorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900316355*. The type genome for the species is the GenBank assembly GCA_902788875.1. The GC content of the type genome is 54.41 %

and the genome length is 2.94 Mbp.

Description of *Candidatus* Bigarosa conipitas sp. nov.

Candidatus Bigarosa conipitas (NL. fem. n. *conipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902801325*. The type genome for the species is the GenBank assembly GCA_902801325.1. The GC content of the type genome is 48.91 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Bigarosa decinibula sp. nov.

Candidatus Bigarosa decinibula (NL. fem. n. *decinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902799985*. The type genome for the species is the GenBank assembly GCA_902799985.1. The GC content of the type genome is 54.66 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Bigarosa dedigiforma sp. nov.

Candidatus Bigarosa dedigiforma (NL. fem. n. *dedigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902778625*. The type genome for the species is the GenBank assembly GCA_902778625.1. The GC content of the type genome is 51.02 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Bigarosa denupentia sp. nov.

Candidatus Bigarosa denupentia (NL. fem. n. *denupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002297545*. The type genome for the species is the GenBank assembly GCA_002298065.1. The GC content of the type genome is 54.07 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Bigarosa divoligena sp. nov.

Candidatus Bigarosa divoligena (NL. fem. n. *divoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902802815*. The type genome for the species is the GenBank assembly GCA_902802815.1. The GC content of the type genome is 50.98 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Bigarosa divulitia sp. nov.

Candidatus Bigarosa divulitia (NL. fem. n. *divulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900770805*. The type genome for the species is the GenBank assembly GCA_900770805.1. The GC content of the type genome is 47.89 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Bigarosa edissousia sp. nov.

Candidatus Bigarosa edissousia (NL. fem. n. *edissousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002317475*. The type genome for the species is the GenBank assembly GCA_002317475.1. The GC content of the type genome is 48.0 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Bigarosa entomivita sp. nov.

Candidatus Bigarosa entomivita (NL. fem. n. *entomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900766785*. The type genome for the species is the GenBank assembly GCA_900766785.1. The GC content of the type genome is 50.51 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bigarosa excarisca sp. nov.

Candidatus Bigarosa excarisca (NL. fem. n. *excarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902803195*. The type genome for the species is the GenBank assembly GCA_902803195.1. The GC content of the type genome is 54.15 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Bigarosa femelitia sp. nov.

Candidatus Bigarosa femelitia (NL. fem. n. *femelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902801485*. The type genome for the species is the GenBank assembly GCA_902801485.1. The GC content of the type genome is 45.88 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bigarosa ficulatio sp. nov.

Candidatus Bigarosa ficulatio (NL. fem. n. *ficulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902776455*. The type genome for the species is the GenBank assembly GCA_902798265.1. The GC content of the type genome is 53.22 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Bigarosa levidilenta sp. nov.

Candidatus Bigarosa levidilenta (NL. fem. n. *levidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002394305*. The type genome for the species is the GenBank assembly GCA_902765045.1. The GC content of the type genome is 56.39 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Bigarosa loripax sp. nov.

Candidatus Bigarosa loripax (NL. fem. n. *loripax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900320435*. The type genome for the species is the GenBank assembly GCA_902786555.1. The GC content of the type genome is 57.04 %

and the genome length is 1.92 Mbp.

Description of *Candidatus* Bigarosa manomatio sp. nov.

Candidatus Bigarosa manomatio (NL. fem. n. *manomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900313705*. The type genome for the species is the GenBank assembly GCA_902765345.1. The GC content of the type genome is 52.63 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Bigarosa manupentia sp. nov.

Candidatus Bigarosa manupentia (NL. fem. n. *manupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900543815*. The type genome for the species is the GenBank assembly GCA_900543815.1. The GC content of the type genome is 54.61 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Bigarosa meridago sp. nov.

Candidatus Bigarosa meridago (NL. fem. n. *meridago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002316015*. The type genome for the species is the GenBank assembly GCA_002405055.1. The GC content of the type genome is 59.19 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Bigarosa monimigena sp. nov.

Candidatus Bigarosa monimigena (NL. fem. n. *monimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902791295*. The type genome for the species is the GenBank assembly GCA_902791295.1. The GC content of the type genome is 56.33 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Bigarosa nicotibra sp. nov.

Candidatus Bigarosa nicotibra (NL. fem. n. *nicotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900318115*. The type genome for the species is the GenBank assembly GCA_900318115.1. The GC content of the type genome is 55.95 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Bigarosa nutamentia sp. nov.

Candidatus Bigarosa nutamentia (NL. fem. n. *nutamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002450165*. The type genome for the species is the GenBank assembly GCA_902770215.1. The GC content of the type genome is 47.63 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Bigarosa ontoletta sp. nov.

Candidatus Bigarosa ontoletta (NL. fem. n. *ontoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902784475*. The type genome for the species is the GenBank assembly GCA_902784475.1. The GC content of the type genome is 56.23 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Bigarosa practivita sp. nov.

Candidatus Bigarosa practivita (NL. fem. n. *practivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp004559785*. The type genome for the species is the GenBank assembly GCA_004559785.1. The GC content of the type genome is 53.8 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Bigarosa resurentia sp. nov.

Candidatus Bigarosa resurentia (NL. fem. n. *resurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900320565*. The type genome for the species is the GenBank assembly GCA_900320565.1. The GC content of the type genome is 50.77 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Bigarosa ridibicula sp. nov.

Candidatus Bigarosa ridibicula (NL. fem. n. *ridibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902779315*. The type genome for the species is the GenBank assembly GCA_902779315.1. The GC content of the type genome is 49.64 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Bigarosa serotigena sp. nov.

Candidatus Bigarosa serotigena (NL. fem. n. *serotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902779165*. The type genome for the species is the GenBank assembly GCA_902789905.1. The GC content of the type genome is 52.54 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Bigarosa sicarilega sp. nov.

Candidatus Bigarosa sicarilega (NL. fem. n. *sicarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900313335*. The type genome for the species is the GenBank assembly GCA_900313335.1. The GC content of the type genome is 49.57 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Bigarosa sonabiforma sp. nov.

Candidatus Bigarosa sonabiforma (NL. fem. n. *sonabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902775385*. The type genome for the species is the GenBank assembly GCA_902775385.1. The GC content of the type genome is 50.86 %

and the genome length is 2.49 Mbp.

Description of *Candidatus* Bigarosa susicicella sp. nov.

Candidatus Bigarosa susicicella (NL. fem. n. *susicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902783655*. The type genome for the species is the GenBank assembly GCA_902783655.1. The GC content of the type genome is 53.37 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Bigarosa tametilenta sp. nov.

Candidatus Bigarosa tametilenta (NL. fem. n. *tametilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002391275*. The type genome for the species is the GenBank assembly GCA_002391275.1. The GC content of the type genome is 50.38 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bigarosa vagabastra sp. nov.

Candidatus Bigarosa vagabastra (NL. fem. n. *vagabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902788315*. The type genome for the species is the GenBank assembly GCA_902787795.1. The GC content of the type genome is 56.38 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Bigarosa videledo sp. nov.

Candidatus Bigarosa videledo (NL. fem. n. *videledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902781515*. The type genome for the species is the GenBank assembly GCA_902788515.1. The GC content of the type genome is 48.1 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Bigarosa videliforma sp. nov.

Candidatus Bigarosa videliforma (NL. fem. n. *videliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902791675*. The type genome for the species is the GenBank assembly GCA_902791675.1. The GC content of the type genome is 46.18 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Bigarosa viginessa sp. nov.

Candidatus Bigarosa viginessa (NL. fem. n. *viginessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp900320715*. The type genome for the species is the GenBank assembly GCA_902775505.1. The GC content of the type genome is 55.37 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Bigarosa vitabax sp. nov.

Candidatus Bigarosa vitabax (NL. fem. n. *vitabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902768605*. The type genome for the species is the GenBank assembly GCA_902768605.1. The GC content of the type genome is 53.93 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Bigarosa volubitudo sp. nov.

Candidatus Bigarosa volubitudo (NL. fem. n. *volubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp002494215*. The type genome for the species is the GenBank assembly GCA_002494215.1. The GC content of the type genome is 47.53 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Bigarosa volunicella sp. nov.

Candidatus Bigarosa volunicella (NL. fem. n. *volunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4372 sp902770725*. The type genome for the species is the GenBank assembly GCA_902770725.1. The GC content of the type genome is 50.51 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Bigarula capudifica sp. nov.

Candidatus Bigarula capudifica (NL. fem. n. *capudifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Chth-196 sp903916085*. The type genome for the species is the GenBank assembly GCA_903853475.1. The GC content of the type genome is 56.33 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Bigarula gen. nov.

Candidatus Bigarula (NL. fem. n. *Bigarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Chth-196*. The type species for the genus is *Candidatus* Bigarula capudifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigarula vavasisca sp. nov.

Candidatus Bigarula vavasisca (NL. fem. n. *vavasisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Chth-196 sp003402745*. The type genome for the species is the GenBank assembly GCA_003402745.1. The GC content of the type genome is 58.27 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Bigarula viragitoga sp. nov.

Candidatus Bigarula viragitoga (NL. fem. n. *viragitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Chth-196 sp903919125*. The type genome for the species is the

GenBank assembly GCA_903871035.1. The GC content of the type genome is 55.25 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Bigemana bimotugo sp. nov.

Candidatus Bigemana bimotugo (NL. fem. n. *bimotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-37 sp005885165*. The type genome for the species is the GenBank assembly GCA_005885525.1. The GC content of the type genome is 70.67 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Bigemana gen. nov.

Candidatus Bigemana (NL. fem. n. *Bigemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-37*. The type species for the genus is *Candidatus* Bigemana bimotugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bigemana prograstra sp. nov.

Candidatus Bigemana prograstra (NL. fem. n. *prograstra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-37 sp005883295*. The type genome for the species is the GenBank assembly GCA_005883295.1. The GC content of the type genome is 71.08 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Bigemaria meridentia sp. nov.

Candidatus Bigemaria meridentia (NL. fem. n. *meridentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDZ01 sp903847545*. The type genome for the species is the GenBank assembly GCA_903847545.1. The GC content of the type genome is 70.95 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Bigemaria gen. nov.

Candidatus Bigemaria (NL. fem. n. *Bigemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINDZ01*. The type species for the genus is *Candidatus* Bigemaria meridentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LZORAL124-64-63*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolellaceae.

Description of *Candidatus* Bigemaria tenebitia sp. nov.

Candidatus Bigemaria tenebitia (NL. fem. n. *tenebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDZ01 sp903912525*. The type genome for the species is the GenBank assembly GCA_903912525.1. The GC content of the type genome is 68.71 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Bigemaria turicifica sp. nov.

Candidatus Bigemaria turicifica (NL. fem. n. *turicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDZ01 sp903859215*. The type genome for the species is the GenBank assembly GCA_903834005.1. The GC content of the type genome is 69.31 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Bigemia refinigena sp. nov.

Candidatus Bigemia refinigena (NL. fem. n. *refinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6126 sp002428295*. The type genome for the species is the GenBank assembly GCA_002428295.1. The GC content of the type genome is 40.67 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Bigemia gen. nov.

Candidatus Bigemia (NL. fem. n. *Bigemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6126*. The type species for the genus is *Candidatus* Bigemia refinigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemiaceae.

Description of *Candidatus* Bigemiaceae fam. nov.

Candidatus Bigemiaceae (NL. fem. n. *Bigemiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6126.* The type genus for the taxon is *Candidatus* Bigemia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigemiales.

Description of *Candidatus* Bigemiales ord. nov.

Candidatus Bigemiales (NL. fem. n. *Bigemiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6126.* The type genus for the taxon is *Candidatus* Bigemia .

According to the GTDB R06-RS202, this order belongs to the class *Caldisericia*.

Description of *Candidatus* Bigemida appugimonia sp. nov.

Candidatus Bigemida appugimonia (NL. fem. n. *appugimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZN01 sp013349535*. The type genome for the species is the GenBank assembly GCA_013349535.1. The GC content of the type genome is 60.43 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Bigemida gen. nov.

Candidatus Bigemida (NL. fem. n. *Bigemida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUZN01*. The type species for the genus is *Candidatus* Bigemida appugimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUZN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemidaceae.

Description of *Candidatus* Bigemidaceae fam. nov.

Candidatus Bigemidaceae (NL. fem. n. *Bigemidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUZN01*. The type genus for the taxon is *Candidatus* Bigemida .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Bigemida robigatio sp. nov.

Candidatus Bigemida robigatio (NL. fem. n. *robigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZN01 sp013349485*. The type genome for the species is the GenBank assembly GCA_013349485.1. The GC content of the type genome is 60.18 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Bigemosa nefanax sp. nov.

Candidatus Bigemosa nefanax (NL. fem. n. *nefanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAD01 sp903832035*. The type genome for the species is the GenBank assembly GCA_903834555.1. The GC content of the type genome is 40.26 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Bigemosa gen. nov.

Candidatus Bigemosa (NL. fem. n. *Bigemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILAD01*. The type species for the genus is *Candidatus* Bigemosa nefanax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemosaceae.

Description of *Candidatus* Bigemosaceae fam. nov.

Candidatus Bigemosaceae (NL. fem. n. *Bigemosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILAD01.* The type genus for the taxon is *Candidatus* Bigemosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAILAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigemosales.

Description of *Candidatus* Bigemosales ord. nov.

Candidatus Bigemosales (NL. fem. n. *Bigemosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILAD01.* The type genus for the taxon is *Candidatus* Bigemosa .

According to the GTDB R06-RS202, this order belongs to the class *Saccharimonadia*.

Description of *Candidatus* Bigemula abrumastra sp. nov.

Candidatus Bigemula abrumastra (NL. fem. n. *abrumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDP01 sp903824935*. The type genome for the species is the GenBank assembly GCA_903824935.1. The GC content of the type genome is 46.66 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Bigemula gen. nov.

Candidatus Bigemula (NL. fem. n. *Bigemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRDP01*. The type species for the genus is *Candidatus* Bigemula abrumastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepariaceae.

Description of *Candidatus* Bigemula obtorugo sp. nov.

Candidatus Bigemula obtorugo (NL. fem. n. *obtorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDP01 sp903837605*. The type genome for the species is the GenBank assembly GCA_903837605.1. The GC content of the type genome is 46.04 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Bigemula turicentia sp. nov.

Candidatus Bigemula turicentia (NL. fem. n. *turicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDP01 sp903916595*. The type genome for the species is the GenBank assembly GCA_903826745.1. The GC content of the type genome is 45.23 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Bigemula vanidessa sp. nov.

Candidatus Bigemula vanidessa (NL. fem. n. *vanidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDP01 sp903877385*. The type genome for the species is the GenBank assembly GCA_903836025.1. The GC content of the type genome is 45.9 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Bigemula vicecessa sp. nov.

Candidatus Bigemula vicecessa (NL. fem. n. *vicecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRDP01 sp903887775*. The type genome for the species is the GenBank assembly GCA_903819705.1. The GC content of the type genome is 44.76 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Bilophila ficeditas sp. nov.

Candidatus Bilophila ficeditas (NL. fem. n. *ficeditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bilophila sp900553145*. The type genome for the species is the GenBank assembly GCA_900553145.1. The GC content of the type genome is 60.84 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Bilophila linigimonia sp. nov.

Candidatus Bilophila linigimonia (NL. fem. n. *linigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bilophila sp900550745*. The type genome for the species is the GenBank assembly GCA_900550745.1. The GC content of the type genome is 61.53 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Bilophila nubifessa sp. nov.

Candidatus Bilophila nubifessa (NL. fem. n. *nubifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bilophila sp902373525*. The type genome for the species is the GenBank assembly GCA_902373525.1. The GC content of the type genome is 62.48 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Bimetana aclasitudo sp. nov.

Candidatus Bimetana aclasitudo (NL. fem. n. *aclasitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JGIOTU-2 sp014382685*. The type genome for the species is the GenBank assembly GCA_014382685.1. The GC content of the type genome is 38.6 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Bimetana gen. nov.

Candidatus Bimetana (NL. fem. n. *Bimetana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JGIOTU-2*. The type species for the genus is *Candidatus* Bimetana aclasitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetanaceae.

Description of *Candidatus* Bimetanaceae fam. nov.

Candidatus Bimetanaceae (NL. fem. n. *Bimetanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JGIOTU-2.* The type genus for the taxon is *Candidatus* Bimetana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bimetanales.

Description of *Candidatus* Bimetanales ord. nov.

Candidatus Bimetanales (NL. fem. n. *Bimetanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JGIOTU-2.* The type genus for the taxon is *Candidatus* Bimetana .

According to the GTDB R06-RS202, this order belongs to the class *Cloacimonadia*.

Description of *Candidatus* Bimetana bifaratica sp. nov.

Candidatus Bimetana bifaratica (NL. fem. n. *bifaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JGIOTU-2 sp011043895*. The type genome for the species is the GenBank assembly GCA_011043895.1. The GC content of the type genome is 38.53 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Bimetana dehisibra sp. nov.

Candidatus Bimetana dehisibra (NL. fem. n. *dehisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JGIOTU-2 sp000404785*. The type genome for the species is the GenBank assembly GCA_000404825.1. The GC content of the type genome is 36.75 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Bimetana inexsimonia sp. nov.

Candidatus Bimetana inexsimonia (NL. fem. n. *inexsimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JGIOTU-2 sp002049945*. The type genome for the species is the GenBank assembly GCA_002049945.1. The GC content of the type genome is 38.49 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Bimetaria antecax sp. nov.

Candidatus Bimetaria antecax (NL. fem. n. *antecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG666 sp902788085*. The type genome for the species is the GenBank assembly GCA_902788085.1. The GC content of the type genome is 33.72 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Bimetaria gen. nov.

Candidatus Bimetaria (NL. fem. n. *Bimetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG666*. The type species for the genus is *Candidatus* Bimetaria antecax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Bimetaria navicitio sp. nov.

Candidatus Bimetaria navicitio (NL. fem. n. *navicitio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG666 sp900321185*. The type genome for the species is the GenBank assembly GCA_900321185.1. The GC content of the type genome is 36.72 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Bimetella verificella sp. nov.

Candidatus Bimetella verificella (NL. fem. n. *verificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11514 sp900757255*. The type genome for the species is the GenBank assembly RS_GCF_900757255.1. The GC content of the type genome is 44.82 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bimetella gen. nov.

Candidatus Bimetella (NL. fem. n. *Bimetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11514*. The type species for the genus is *Candidatus* Bimetella verificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGM11514*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetellaceae.

Description of *Candidatus* Bimetellaceae fam. nov.

Candidatus Bimetellaceae (NL. fem. n. *Bimetellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGM11514.* The type genus for the taxon is *Candidatus* Bimetella .

According to the original version of GTDB R06-RS202, this family belongs to the order *HGM11514*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bimetellales.

Description of *Candidatus* Bimetellales ord. nov.

Candidatus Bimetellales (NL. fem. n. *Bimetellales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGM11514.* The type genus for the taxon is *Candidatus* Bimetella .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Bimetia catabitica sp. nov.

Candidatus Bimetia catabitica (NL. fem. n. *catabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp003151815*. The type genome for the species is the GenBank assembly GCA_003151815.1. The GC content of the type genome is 34.58 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Bimetia gen. nov.

Candidatus Bimetia (NL. fem. n. *Bimetia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-35-15*. The type species for the genus is *Candidatus* Bimetia catabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetiaceae.

Description of *Candidatus* Bimetiaceae fam. nov.

Candidatus Bimetiaceae (NL. fem. n. *Bimetiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-35-15.* The type genus for the taxon is *Candidatus* Bimetia .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Bimetia ceroficella sp. nov.

Candidatus Bimetia ceroficella (NL. fem. n. *ceroficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp001769385*. The type genome for the species is the GenBank assembly GCA_001769385.1. The GC content of the type genome is 34.57 % and the genome length is 5.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Bimetia cobalicella sp. nov.

Candidatus Bimetia cobalicella (NL. fem. n. *cobalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903926385*. The type genome for the species is the GenBank assembly GCA_903917455.1. The GC content of the type genome is 37.52 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Bimetia colubitrix sp. nov.

Candidatus Bimetia colubitrix (NL. fem. n. *colubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903833025*. The type genome for the species is the GenBank assembly GCA_903833025.1. The GC content of the type genome is 35.92 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Bimetia hirudatio sp. nov.

Candidatus Bimetia hirudatio (NL. fem. n. *hirudatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903847205*. The type genome for the species is the GenBank assembly GCA_903850245.1. The GC content of the type genome is 37.26 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Bimetia malagitura sp. nov.

Candidatus Bimetia malagitura (NL. fem. n. *malagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp005772895*. The type genome for the species is the GenBank assembly GCA_005792295.1. The GC content of the type genome is 34.35 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Bimetia nefaritrix sp. nov.

Candidatus Bimetia nefaritrix (NL. fem. n. *nefaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903911435*. The type genome for the species is the GenBank assembly GCA_903882855.1. The GC content of the type genome is 37.46 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Bimetia ratifax sp. nov.

Candidatus Bimetia ratifax (NL. fem. n. *ratifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903881065*. The type genome for the species is the GenBank assembly GCA_903881065.1. The GC content of the type genome is 35.02 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Bimetia rudicastra sp. nov.

Candidatus Bimetia rudicastra (NL. fem. n. *rudicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903870175*. The type genome for the species is the GenBank assembly GCA_903916915.1. The GC content of the type genome is 35.08 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Bimetia turicilega sp. nov.

Candidatus Bimetia turicilega (NL. fem. n. *turicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-15 sp903919535*. The type genome for the species is the GenBank assembly GCA_903883015.1. The GC content of the type genome is 33.57 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Bimetida monimitas sp. nov.

Candidatus Bimetida monimitas (NL. fem. n. *monimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-FULL-47-45 sp001776775*. The type genome for the species is the GenBank assembly GCA_001777395.1. The GC content of the type genome is 42.32 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bimetida gen. nov.

Candidatus Bimetida (NL. fem. n. *Bimetida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-FULL-47-45*. The type species for the genus is *Candidatus* Bimetida monimitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Bimetosa vavasimonia sp. nov.

Candidatus Bimetosa vavasimonia (NL. fem. n. *vavasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6601 sp002433485*. The type genome for the species is the GenBank assembly GCA_002720175.1. The GC content of the type genome is 60.56 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Bimetosa gen. nov.

Candidatus Bimetosa (NL. fem. n. *Bimetosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6601*. The type species for the genus is *Candidatus* Bimetosa vavasimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Semifiaceae.

Description of *Candidatus* Bimetula cerifimonas sp. nov.

Candidatus Bimetula cerifimonas (NL. fem. n. *cerifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTNQ01 sp011358515*. The type genome for the species is the GenBank assembly GCA_011358515.1. The GC content of the type genome is 47.57 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Bimetula gen. nov.

Candidatus Bimetula (NL. fem. n. *Bimetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTNQ01*. The type species for the genus is *Candidatus* Bimetula cerifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTNQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetulaceae.

Description of *Candidatus* Bimetulaceae fam. nov.

Candidatus Bimetulaceae (NL. fem. n. *Bimetulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTNQ01*. The type genus for the taxon is *Candidatus* Bimetula .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Bimotana accoratio sp. nov.

Candidatus Bimotana accoratio (NL. fem. n. *accoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002713825*. The type genome for the species is the GenBank assembly GCA_002713825.1. The GC content of the type genome is 54.52 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Bimotana gen. nov.

Candidatus Bimotana (NL. fem. n. *Bimotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA868*. The type species for the genus is *Candidatus* Bimotana accoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Bimotanaceae fam. nov.

Candidatus Bimotanaceae (NL. fem. n. *Bimotanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA868.* The type genus for the taxon is *Candidatus* Bimotana .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Bimotana cilibitica sp. nov.

Candidatus Bimotana cilibitica (NL. fem. n. *cilibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002171735*. The type genome for the species is the GenBank assembly GCA_002171735.1. The GC content of the type genome is 53.24 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Bimotana cululago sp. nov.

Candidatus Bimotana cululago (NL. fem. n. *cululago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002477475*. The type genome for the species is the GenBank assembly GCA_002308855.1. The GC content of the type genome is 54.96 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Bimotana defalessa sp. nov.

Candidatus Bimotana defalessa (NL. fem. n. *defalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002346525*. The type genome for the species is the GenBank assembly GCA_002346525.1. The GC content of the type genome is 55.5 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Bimotana dibapago sp. nov.

Candidatus Bimotana dibapago (NL. fem. n. *dibapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp003529705*. The type genome for the species is the GenBank assembly GCA_003529705.1. The GC content of the type genome is 54.4 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Bimotana expopifica sp. nov.

Candidatus Bimotana expopifica (NL. fem. n. *expopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp011523045*. The type genome for the species is the GenBank assembly GCA_011523045.1. The GC content of the type genome is 55.63 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Bimotana herinessa sp. nov.

Candidatus Bimotana herinessa (NL. fem. n. *herinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002694065*. The type genome for the species is the GenBank assembly GCA_003447195.1. The GC content of the type genome is 56.01 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Bimotana lavacastra sp. nov.

Candidatus Bimotana lavacastra (NL. fem. n. *lavacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002295285*. The type genome for the species is the GenBank assembly GCA_002295285.1. The GC content of the type genome is 49.05 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Bimotana loraretta sp. nov.

Candidatus Bimotana loraretta (NL. fem. n. *loraretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp010025385*. The type genome for the species is the GenBank assembly GCA_010025385.1. The GC content of the type genome is 55.72 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Bimotana rorulilenta sp. nov.

Candidatus Bimotana rorulilenta (NL. fem. n. *rorulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA868 sp002327725*. The type genome for the species is the GenBank assembly GCA_003539835.1. The GC content of the type genome is 57.9 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Bimotaria colepimonia sp. nov.

Candidatus Bimotaria colepimonia (NL. fem. n. *colepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQE01 sp013203415*. The type genome for the species is the GenBank assembly GCA_013203415.1. The GC content of the type genome is 40.52 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Bimotaria gen. nov.

Candidatus Bimotaria (NL. fem. n. *Bimotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQE01*. The type species for the genus is *Candidatus* Bimotaria colepimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMQE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotariaceae.

Description of *Candidatus* Bimotariaceae fam. nov.

Candidatus Bimotariaceae (NL. fem. n. *Bimotariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQE01.* The type genus for the taxon is *Candidatus* Bimotaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMQE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bimotariales.

Description of *Candidatus* Bimotariales ord. nov.

Candidatus Bimotariales (NL. fem. n. *Bimotariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQE01.* The type genus for the taxon is *Candidatus* Bimotaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Bimotella agravatio sp. nov.

Candidatus Bimotella agravatio (NL. fem. n. *agravatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp900553105*. The type genome for the species is the GenBank assembly GCA_900553105.1. The GC content of the type genome is 48.49 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Bimotella gen. nov.

Candidatus Bimotella (NL. fem. n. *Bimotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-521*. The type species for the genus is *Candidatus* Bimotella

agravatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bimotella apogrousia sp. nov.

Candidatus Bimotella apogrousia (NL. fem. n. *apogrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp003543795*. The type genome for the species is the GenBank assembly GCA_003543795.1. The GC content of the type genome is 51.62 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Bimotella fetulifica sp. nov.

Candidatus Bimotella fetulifica (NL. fem. n. *fetulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp900545335*. The type genome for the species is the GenBank assembly GCA_900545335.1. The GC content of the type genome is 47.67 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Bimotella forabivita sp. nov.

Candidatus Bimotella forabivita (NL. fem. n. *forabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp000437635*. The type genome for the species is the GenBank assembly GCA_000437635.1. The GC content of the type genome is 46.94 % and the genome length is 1.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Bimotella loripitica sp. nov.

Candidatus Bimotella loripitica (NL. fem. n. *loripitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp900546995*. The type genome for the species is the GenBank assembly GCA_900546995.1. The GC content of the type genome is 48.19 %

and the genome length is 1.71 Mbp.

Description of *Candidatus* Bimotella monogivita sp. nov.

Candidatus Bimotella monogivita (NL. fem. n. *monogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp900554675*. The type genome for the species is the GenBank assembly GCA_900554675.1. The GC content of the type genome is 47.61 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Bimotella repecitrix sp. nov.

Candidatus Bimotella repecitrix (NL. fem. n. *repecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp902388655*. The type genome for the species is the GenBank assembly GCA_900765595.1. The GC content of the type genome is 48.51 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Bimotella semidago sp. nov.

Candidatus Bimotella semidago (NL. fem. n. *semidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp900544345*. The type genome for the species is the GenBank assembly GCA_900544345.1. The GC content of the type genome is 45.74 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Bimotella vehemugo sp. nov.

Candidatus Bimotella vehemugo (NL. fem. n. *vehemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-521 sp002329575*. The type genome for the species is the GenBank assembly GCA_002329575.1. The GC content of the type genome is 48.47 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Bimotida conopiforma sp. nov.

Candidatus Bimotida conopiforma (NL. fem. n. *conopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7326 sp003284265*. The type genome for the species is the GenBank assembly GCA_003284265.1. The GC content of the type genome is 41.76 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Bimotida gen. nov.

Candidatus Bimotida (NL. fem. n. *Bimotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7326*. The type species for the genus is *Candidatus* Bimotida conopiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bimotida dicabago sp. nov.

Candidatus Bimotida dicabago (NL. fem. n. *dicabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7326 sp002709155*. The type genome for the species is the GenBank assembly GCA_002709155.1. The GC content of the type genome is 41.51 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Bimotida penicimonas sp. nov.

Candidatus Bimotida penicimonas (NL. fem. n. *penicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7326 sp003212315*. The type genome for the species is the GenBank assembly GCA_002692375.1. The GC content of the type genome is 41.8 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Bimotida semifitoga sp. nov.

Candidatus Bimotida semifitoga (NL. fem. n. *semifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7326 sp002708305*. The type genome for the species is the GenBank assembly GCA_002708305.1. The GC content of the type genome is 41.13 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Bimotosa rumifitas sp. nov.

Candidatus Bimotosa rumifitas (NL. fem. n. *rumifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002787255 sp002787255*. The type genome for the species is the GenBank assembly GCA_002774495.1. The GC content of the type genome is 38.29 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Bimotosa gen. nov.

Candidatus Bimotosa (NL. fem. n. *Bimotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002787255*. The type species for the genus is *Candidatus* Bimotosa rumifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002787255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotosaceae.

Description of *Candidatus* Bimotosaceae fam. nov.

Candidatus Bimotosaceae (NL. fem. n. *Bimotosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002787255.* The type genus for the taxon is *Candidatus* Bimotosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Bimotula absuritura sp. nov.

Candidatus Bimotula absuritura (NL. fem. n. *absuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RZZR01 sp009929795*. The type genome for the species is the GenBank assembly GCA_009929795.1. The GC content of the type genome is 59.67 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Bimotula gen. nov.

Candidatus Bimotula (NL. fem. n. *Bimotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZZR01*. The type species for the genus is *Candidatus* Bimotula absuritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RZZR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotulaceae.

Description of *Candidatus* Bimotulaceae fam. nov.

Candidatus Bimotulaceae (NL. fem. n. *Bimotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RZZR01.* The type genus for the taxon is *Candidatus* Bimotula .

According to GTDB R06-RS202, this family belongs to the order *Desulfovibrionales*.

Description of *Candidatus* Binatus dilogatio sp. nov.

Candidatus Binatus dilogatio (NL. fem. n. *dilogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Binatus sp003135855*. The type genome for the species is the GenBank assembly GCA_003135855.1. The GC content of the type genome is 60.19 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Binatus fumacifica sp. nov.

Candidatus Binatus fumacifica (NL. fem. n. *fumacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Binatus sp003161515*. The type genome for the species is the GenBank assembly GCA_003161515.1. The GC content of the type genome is 60.38 % and the

genome length is 4.05 Mbp.

Description of *Candidatus* Binatus terebatio sp. nov.

Candidatus Binatus terebatio (NL. fem. n. *terebatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Binatus sp003135135*. The type genome for the species is the GenBank assembly GCA_003153535.1. The GC content of the type genome is 61.4 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Binocana bicodedo sp. nov.

Candidatus Binocana bicodedo (NL. fem. n. *bicodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKK01 sp007121535*. The type genome for the species is the GenBank assembly GCA_007135525.1. The GC content of the type genome is 60.16 % and the genome length is 9.08 Mbp.

Description of *Candidatus* Binocana gen. nov.

Candidatus Binocana (NL. fem. n. *Binocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKK01*. The type species for the genus is *Candidatus* Binocana bicodedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Binocaria biveressa sp. nov.

Candidatus Binocaria biveressa (NL. fem. n. *biveressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHV01 sp012270695*. The type genome for the species is the GenBank assembly GCA_012270695.1. The GC content of the type genome is 54.09 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Binocaria gen. nov.

Candidatus Binocaria (NL. fem. n. *Binocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHV01*. The type species for the genus is *Candidatus* Binocaria biveressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Binocaria desuritoga sp. nov.

Candidatus Binocaria desuritoga (NL. fem. n. *desuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHV01 sp009843675*. The type genome for the species is the GenBank assembly GCA_009843675.1. The GC content of the type genome is 58.03 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Binocella expalitrix sp. nov.

Candidatus Binocella expalitrix (NL. fem. n. *expalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOSU01 sp903861055*. The type genome for the species is the GenBank assembly GCA_903861055.1. The GC content of the type genome is 44.66 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Binocella gen. nov.

Candidatus Binocella (NL. fem. n. *Binocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOSU01*. The type species for the genus is *Candidatus* Binocella expalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIOSU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binocellaceae.

Description of *Candidatus* Binocellaceae fam. nov.

Candidatus Binocellaceae (NL. fem. n. *Binocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIOSU01.* The type genus for the taxon is *Candidatus* Binocella .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Binocia vitupifica sp. nov.

Candidatus Binocia vitupifica (NL. fem. n. *vitupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3531 sp002376885*. The type genome for the species is the GenBank assembly GCA_002708165.1. The GC content of the type genome is 42.0 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Binocia gen. nov.

Candidatus Binocia (NL. fem. n. *Binocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3531*. The type species for the genus is *Candidatus* Binocia vitupifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3531*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binociaceae.

Description of *Candidatus* Binociaceae fam. nov.

Candidatus Binociaceae (NL. fem. n. *Binociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3531.* The type genus for the taxon is *Candidatus* Binocia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Binocida gemebitas sp. nov.

Candidatus Binocida gemebitas (NL. fem. n. *gemebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin32 sp004376895*. The type genome for the species is the GenBank assembly GCA_004376895.1. The GC content of the type genome is 52.46 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Binocida gen. nov.

Candidatus Binocida (NL. fem. n. *Binocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin32*. The type species for the genus is *Candidatus* Binocida gemebitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binocidaceae.

Description of *Candidatus* Binocidaceae fam. nov.

Candidatus Binocidaceae (NL. fem. n. *Binocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin32.* The type genus for the taxon is *Candidatus* Binocida .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Binocida inheribra sp. nov.

Candidatus Binocida inheribra (NL. fem. n. *inheribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin32 sp004376465*. The type genome for the species is the GenBank assembly GCA_004376465.1. The GC content of the type genome is 52.37 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Binocosa divulentia sp. nov.

Candidatus Binocosa divulentia (NL. fem. n. *divulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVND01 sp903845085*. The type genome for the species is the GenBank assembly GCA_903925305.1. The GC content of the type genome is 60.19 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Binocosa gen. nov.

Candidatus Binocosa (NL. fem. n. *Binocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVND01*. The type species for the genus is *Candidatus* Binocosa divulentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-793*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibidaceae.

Description of *Candidatus* Binocosa forinilega sp. nov.

Candidatus Binocosa forinilega (NL. fem. n. *forinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVND01 sp903907185*. The type genome for the species is the GenBank assembly GCA_903859015.1. The GC content of the type genome is 56.31 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Binocula tubicibra sp. nov.

Candidatus Binocula tubicibra (NL. fem. n. *tubicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB-PLM-2 sp003389215*. The type genome for the species is the GenBank assembly GCA_003388515.1. The GC content of the type genome is 62.6 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Binocula gen. nov.

Candidatus Binocula (NL. fem. n. *Binocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MB-PLM-2*. The type species for the genus is *Candidatus* Binocula tubicibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7805*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficulariaceae.

Description of *Candidatus* Biomaibacter caselatio sp. nov.

Candidatus Biomaibacter caselatio (NL. fem. n. *caselatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Biomaibacter sp012840135*. The type genome for the species is the GenBank assembly GCA_012840135.1. The GC content of the type genome is 43.43 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Bipalana defunitica sp. nov.

Candidatus Bipalana defunitica (NL. fem. n. *defunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1439 sp003164675*. The type genome for the species is the GenBank assembly GCA_003164675.1. The GC content of the type genome is 59.09 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Bipalana gen. nov.

Candidatus Bipalana (NL. fem. n. *Bipalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1439*. The type species for the genus is *Candidatus* Bipalana defunitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalanaceae.

Description of *Candidatus* Bipalanaceae fam. nov.

Candidatus Bipalanaceae (NL. fem. n. *Bipalanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1439.* The type genus for the taxon is *Candidatus* Bipalana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipalanales.

Description of *Candidatus* Bipalanales ord. nov.

Candidatus Bipalanales (NL. fem. n. *Bipalanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1439.* The type genus for the taxon is *Candidatus* Bipalana .

According to the GTDB R06-RS202, this order belongs to the class *Verrucomicrobiae*.

Description of *Candidatus* Bipalana loripitia sp. nov.

Candidatus Bipalana loripitia (NL. fem. n. *loripitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1439 sp003152315*. The type genome for the species is the GenBank assembly GCA_003152315.1. The GC content of the type genome is 57.98 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Bipalaria detotibra sp. nov.

Candidatus Bipalaria detotibra (NL. fem. n. *detotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HOT-345 sp013333605*. The type genome for the species is the GenBank assembly GCA_013333605.2. The GC content of the type genome is 35.8 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Bipalaria gen. nov.

Candidatus Bipalaria (NL. fem. n. *Bipalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HOT-345*. The type species for the genus is *Candidatus* Bipalaria

detotibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Bipalaria infatitudo sp. nov.

Candidatus Bipalaria infatitudo (NL. fem. n. *infatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HOT-345 sp013333295*. The type genome for the species is the GenBank assembly GCA_013333295.2. The GC content of the type genome is 35.35 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Bipalaria taraxibra sp. nov.

Candidatus Bipalaria taraxibra (NL. fem. n. *taraxibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HOT-345 sp003260355*. The type genome for the species is the GenBank assembly GCA_003260355.1. The GC content of the type genome is 38.21 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Bipalella vecoritas sp. nov.

Candidatus Bipalella vecoritas (NL. fem. n. *vecoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTSZ01 sp012965045*. The type genome for the species is the GenBank assembly GCA_012965045.1. The GC content of the type genome is 43.27 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Bipalella gen. nov.

Candidatus Bipalella (NL. fem. n. *Bipalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTSZ01*. The type species for the genus is *Candidatus* Bipalella vecoritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTSZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipalellaceae.

Description of *Candidatus* Bipalellaceae fam. nov.

Candidatus Bipalellaceae (NL. fem. n. *Bipalellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTSZ01.* The type genus for the taxon is *Candidatus* Bipalella .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Bipalia lucubiforma sp. nov.

Candidatus Bipalia lucubiforma (NL. fem. n. *lucubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7748 sp003862175*. The type genome for the species is the GenBank assembly GCA_003862175.1. The GC content of the type genome is 55.46 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Bipalia gen. nov.

Candidatus Bipalia (NL. fem. n. *Bipalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7748*. The type species for the genus is *Candidatus* Bipalia lucubiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipalia timefetta sp. nov.

Candidatus Bipalia timefetta (NL. fem. n. *timefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7748 sp900314535*. The type genome for the species is the GenBank assembly GCA_003862165.1. The GC content of the type genome is 59.0 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Bipalia tirunax sp. nov.

Candidatus Bipalia tirunax (NL. fem. n. *tirunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7748 sp900313905*. The type genome for the species is the GenBank assembly GCA_002481785.1. The GC content of the type genome is 60.88 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Bipalida ceraritrix sp. nov.

Candidatus Bipalida ceraritrix (NL. fem. n. *ceraritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha9-Bin2 sp002937675*. The type genome for the species is the GenBank assembly GCA_002937695.1. The GC content of the type genome is 32.08 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Bipalida gen. nov.

Candidatus Bipalida (NL. fem. n. *Bipalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha9-Bin2*. The type species for the genus is *Candidatus* Bipalida ceraritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifariaceae.

Description of *Candidatus* Bipalosa feculisca sp. nov.

Candidatus Bipalosa feculisca (NL. fem. n. *feculisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9910 sp003444085*. The type genome for the species is the GenBank assembly GCA_003444085.1. The GC content of the type genome is 46.17 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Bipalosa gen. nov.

Candidatus Bipalosa (NL. fem. n. *Bipalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9910*. The type species for the genus is *Candidatus* Bipalosa feculisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipalosa funivibula sp. nov.

Candidatus Bipalosa funivibula (NL. fem. n. *funivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9910 sp003561215*. The type genome for the species is the GenBank assembly GCA_003561215.1. The GC content of the type genome is 48.13 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Bipalula nicotitrix sp. nov.

Candidatus Bipalula nicotitrix (NL. fem. n. *nicotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S0819 sp009295635*. The type genome for the species is the GenBank assembly RS_GCF_009184365.1. The GC content of the type genome is 66.84 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Bipalula gen. nov.

Candidatus Bipalula (NL. fem. n. *Bipalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S0819*. The type species for the genus is *Candidatus* Bipalula nicotitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AK92*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifidaceae.

Description of *Candidatus* Biparana pecunifica sp. nov.

Candidatus Biparana pecunifica (NL. fem. n. *pecunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-47-19 sp001780275*. The type genome for the species is the GenBank assembly GCA_001780275.1. The GC content of the type genome is 46.38 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Biparana gen. nov.

Candidatus Biparana (NL. fem. n. *Biparana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-47-19*. The type species for the genus is *Candidatus* Biparana pecunifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12075*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lenociaceae.

Description of *Candidatus* Bipararia fibicago sp. nov.

Candidatus Bipararia fibicago (NL. fem. n. *fibicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1994 sp002335865*. The type genome for the species is the GenBank assembly GCA_003484625.1. The GC content of the type genome is 36.4 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Bipararia gen. nov.

Candidatus Bipararia (NL. fem. n. *Bipararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1994*. The type species for the genus is *Candidatus* Bipararia fibicago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biparella deculitrix sp. nov.

Candidatus Biparella deculitrix (NL. fem. n. *deculitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAZQ01 sp009377695*. The type genome for the species is the GenBank assembly GCA_009377695.1. The GC content of the type genome is 63.41 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Biparella gen. nov.

Candidatus Biparella (NL. fem. n. *Biparella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VAZQ01*. The type species for the genus is *Candidatus* Biparella deculitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biparella tomogitio sp. nov.

Candidatus Biparella tomogitio (NL. fem. n. *tomogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAZQ01 sp005883115*. The type genome for the species is the GenBank assembly GCA_005882395.1. The GC content of the type genome is 62.81 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Biparida binocitica sp. nov.

Candidatus Biparida binocitica (NL. fem. n. *binocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRJ01 sp013202745*. The type genome for the species is the GenBank assembly GCA_013202745.1. The GC content of the type genome is 44.35 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Biparida gen. nov.

Candidatus Biparida (NL. fem. n. *Biparida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABMRJ01*. The type species for the genus is *Candidatus* Biparida binocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biparidaceae.

Description of *Candidatus* Biparidaceae fam. nov.

Candidatus Biparidaceae (NL. fem. n. *Biparidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRJ01.* The type genus for the taxon is *Candidatus* Biparida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMRJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Biparidales.

Description of *Candidatus* Biparidales ord. nov.

Candidatus Biparidales (NL. fem. n. *Biparidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRJ01.* The type genus for the taxon is *Candidatus* Biparida .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Biparosa celamugo sp. nov.

Candidatus Biparosa celamugo (NL. fem. n. *celamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMZW01 sp903846075*. The type genome for the species is the GenBank assembly GCA_903846075.1. The GC content of the type genome is 48.49 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Biparosa gen. nov.

Candidatus Biparosa (NL. fem. n. *Biparosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMZW01*. The type species for the genus is *Candidatus* Biparosa celamugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biparosa defenitas sp. nov.

Candidatus Biparosa defenitas (NL. fem. n. *defenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMZW01 sp903873185*. The type genome for the species is the GenBank assembly GCA_903873185.1. The GC content of the type genome is 49.57 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Biparosa desulastra sp. nov.

Candidatus Biparosa desulastra (NL. fem. n. *desulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMZW01 sp903850565*. The type genome for the species is the GenBank assembly GCA_903889625.1. The GC content of the type genome is 48.04 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Biparula codifibra sp. nov.

Candidatus Biparula codifibra (NL. fem. n. *codifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs119 sp009919275*. The type genome for the species is the GenBank assembly GCA_009918205.1. The GC content of the type genome is 62.08 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Biparula gen. nov.

Candidatus Biparula (NL. fem. n. *Biparula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-20-MAGs119*. The type species for the genus is *Candidatus* Biparula codifibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biparula figilitica sp. nov.

Candidatus Biparula figilitica (NL. fem. n. *figilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs119 sp005787785*. The type genome for the species is the GenBank assembly GCA_005787785.1. The GC content of the type genome is 63.11 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Biparula fusifentia sp. nov.

Candidatus Biparula fusifentia (NL. fem. n. *fusifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs119 sp009711295*. The type genome for the species is the GenBank assembly GCA_903920665.1. The GC content of the type genome is 52.17 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Biparula insomax sp. nov.

Candidatus Biparula insomax (NL. fem. n. *insomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs119 sp903858075*. The type genome for the species is the GenBank assembly GCA_903858075.1. The GC content of the type genome is 51.79 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Biparula telefitio sp. nov.

Candidatus Biparula telefitio (NL. fem. n. *telefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs119 sp013205145*. The type genome for the species is the GenBank assembly GCA_013205145.1. The GC content of the type genome is 51.48 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Bipatana linigicella sp. nov.

Candidatus Bipatana linigicella (NL. fem. n. *linigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-47-10b sp001821795*. The type genome for the species is the GenBank assembly GCA_001819905.1. The GC content of the type genome is 47.25 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Bipatana gen. nov.

Candidatus Bipatana (NL. fem. n. *Bipatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-47-10b*. The type species for the genus is *Candidatus* Bipatana linigicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-47-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatanaceae.

Description of *Candidatus* Bipatanaceae fam. nov.

Candidatus Bipatanaceae (NL. fem. n. *Bipatanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-47-10b.* The type genus for the taxon is *Candidatus* Bipatana .

According to GTDB R06-RS202, this family belongs to the order *Ryanbacterales*.

Description of *Candidatus* Bipataria cimelibula sp. nov.

Candidatus Bipataria cimelibula (NL. fem. n. *cimelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLF01 sp011371585*. The type genome for the species is the GenBank assembly GCA_011371585.1. The GC content of the type genome is 45.98 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Bipataria gen. nov.

Candidatus Bipataria (NL. fem. n. *Bipataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLF01*. The type species for the genus is *Candidatus* Bipataria cimelibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatariaceae.

Description of *Candidatus* Bipatariaceae fam. nov.

Candidatus Bipatariaceae (NL. fem. n. *Bipatariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLF01*. The type genus for the taxon is *Candidatus* Bipataria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTLF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipatariales.

Description of *Candidatus* Bipatariales ord. nov.

Candidatus Bipatariales (NL. fem. n. *Bipatariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLF01*. The type genus for the taxon is *Candidatus* Bipataria .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTLF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipatariae.

Description of *Candidatus* Bipatariae class. nov.

Candidatus Bipatariae (NL. fem. n. *c__Bipatariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLF01*. The type genus for the taxon is *Candidatus* Bipataria .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Bipatella vilititoga sp. nov.

Candidatus Bipatella vilititoga (NL. fem. n. *vilititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUOP01 sp012034805*. The type genome for the species is the GenBank assembly GCA_012032025.1. The GC content of the type genome is 55.06 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Bipatella gen. nov.

Candidatus Bipatella (NL. fem. n. *Bipatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUOP01*. The type species for the genus is *Candidatus* Bipatella vilititoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipatia telegedo sp. nov.

Candidatus Bipatia telegedo (NL. fem. n. *telegedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-45-26 sp002787155*. The type genome for the species is the GenBank assembly GCA_002787155.1. The GC content of the type genome is 45.25 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Bipatia gen. nov.

Candidatus Bipatia (NL. fem. n. *Bipatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-45-26*. The type species for the genus is *Candidatus* Bipatia telegedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-45-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatiaceae.

Description of *Candidatus* Bipatiaceae fam. nov.

Candidatus Bipatiaceae (NL. fem. n. *Bipatiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-45-26.* The type genus for the taxon is *Candidatus* Bipatia .

According to GTDB R06-RS202, this family belongs to the order *Omnitrophales*.

Description of *Candidatus* Bipatida dehinicella sp. nov.

Candidatus Bipatida dehinicella (NL. fem. n. *dehinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5776 sp011620275*. The type genome for the species is the GenBank assembly GCA_011620275.1. The GC content of the type genome is 52.43 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Bipatida gen. nov.

Candidatus Bipatida (NL. fem. n. *Bipatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5776*. The type species for the genus is *Candidatus* Bipatida dehinicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Bipatida nucifago sp. nov.

Candidatus Bipatida nucifago (NL. fem. n. *nucifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5776 sp002418595*. The type genome for the species is the GenBank assembly GCA_002452395.1. The GC content of the type genome is 52.24 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Bipatosa ceracitura sp. nov.

Candidatus Bipatosa ceracitura (NL. fem. n. *ceracitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-35 sp003231975*. The type genome for the species is the GenBank assembly GCA_003231975.1. The GC content of the type genome is 60.37 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Bipatosa gen. nov.

Candidatus Bipatosa (NL. fem. n. *Bipatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-35*. The type species for the genus is *Candidatus* Bipatosa ceracitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatosaceae.

Description of *Candidatus* Bipatosaceae fam. nov.

Candidatus Bipatosaceae (NL. fem. n. *Bipatosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-35.* The type genus for the taxon is *Candidatus* Bipatosa .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Bipatula exsolitio sp. nov.

Candidatus Bipatula exsolitio (NL. fem. n. *exsolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-54-5 sp002772545*. The type genome for the species is the GenBank assembly GCA_002772545.1. The GC content of the type genome is 49.16 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bipatula gen. nov.

Candidatus Bipatula (NL. fem. n. *Bipatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-54-5*. The type species for the genus is *Candidatus* Bipatula

exsolitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipatula pimenousia sp. nov.

Candidatus Bipatula pimenousia (NL. fem. n. *pimenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-54-5 sp002787035*. The type genome for the species is the GenBank assembly GCA_002790955.1. The GC content of the type genome is 49.21 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Bipatula taxiledo sp. nov.

Candidatus Bipatula taxiledo (NL. fem. n. *taxiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-54-5 sp001787755*. The type genome for the species is the GenBank assembly GCA_001789125.1. The GC content of the type genome is 54.49 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Bipenana corocisca sp. nov.

Candidatus Bipenana corocisca (NL. fem. n. *corocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-878 sp000432255*. The type genome for the species is the GenBank assembly GCA_000432255.1. The GC content of the type genome is 25.88 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Bipenana gen. nov.

Candidatus Bipenana (NL. fem. n. *Bipenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-878*. The type species for the genus is *Candidatus* Bipenana

corocisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Bipenaria procletta sp. nov.

Candidatus Bipenaria procletta (NL. fem. n. *procletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYMT01 sp005805375*. The type genome for the species is the GenBank assembly GCA_005805375.1. The GC content of the type genome is 66.54 % and the genome length is 7.46 Mbp.

Description of *Candidatus* Bipenaria gen. nov.

Candidatus Bipenaria (NL. fem. n. *Bipenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYMT01*. The type species for the genus is *Candidatus* Bipenaria procletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SYMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenariaceae.

Description of *Candidatus* Bipenariaceae fam. nov.

Candidatus Bipenariaceae (NL. fem. n. *Bipenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SYMT01*. The type genus for the taxon is *Candidatus* Bipenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SYMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipenariales.

Description of *Candidatus* Bipenariales ord. nov.

Candidatus Bipenariales (NL. fem. n. *Bipenariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SYMT01*. The type genus for the taxon is *Candidatus* Bipenaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *SYMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipenariae.

Description of *Candidatus* Bipenariae class. nov.

Candidatus Bipenariae (NL. fem. n. *c__Bipenariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SYMT01*. The type genus for the taxon is *Candidatus* Bipenaria .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Bipenia delebitrix sp. nov.

Candidatus Bipenia delebitrix (NL. fem. n. *delebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *64-32 sp001508155*. The type genome for the species is the GenBank assembly GCA_001508155.1. The GC content of the type genome is 64.27 % and the genome length is 1.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample K3".

Description of *Candidatus* Bipenia gen. nov.

Candidatus Bipenia (NL. fem. n. *Bipenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *64-32*. The type species for the genus is *Candidatus* Bipenia delebitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipenida coticivita sp. nov.

Candidatus Bipenida coticivita (NL. fem. n. *coticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVCY01 sp002049985*. The type genome for the species is the

GenBank assembly GCA_003645905.1. The GC content of the type genome is 48.87 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Bipenida gen. nov.

Candidatus Bipenida (NL. fem. n. *Bipenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVCY01*. The type species for the genus is *Candidatus* Bipenida coticivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MVCY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenidaceae.

Description of *Candidatus* Bipenidaceae fam. nov.

Candidatus Bipenidaceae (NL. fem. n. *Bipenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVCY01*. The type genus for the taxon is *Candidatus* Bipenida .

According to the original version of GTDB R06-RS202, this family belongs to the order *MVCY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipenidales.

Description of *Candidatus* Bipenidales ord. nov.

Candidatus Bipenidales (NL. fem. n. *Bipenidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVCY01*. The type genus for the taxon is *Candidatus* Bipenida .

According to the original version of GTDB R06-RS202, this family belongs to the class *MVCY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipenidae.

Description of *Candidatus* Bipenidae class. nov.

Candidatus Bipenidae (NL. fem. n. *c__Bipenidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVCY01*. The type genus for the taxon is *Candidatus* Bipenida .

According to GTDB R06-RS202, this class belongs to the phylum *Latescibacterota*.

Description of *Candidatus* Bipenosa ammatilega sp. nov.

Candidatus Bipenosa ammatilega (NL. fem. n. *ammatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp902537815*. The type genome for the species is the GenBank assembly GCA_902537815.1. The GC content of the type genome is 52.97 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Bipenosa gen. nov.

Candidatus Bipenosa (NL. fem. n. *Bipenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9145*. The type species for the genus is *Candidatus* Bipenosa ammatilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipenosa ammixiforma sp. nov.

Candidatus Bipenosa ammixiforma (NL. fem. n. *ammixiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp013204155*. The type genome for the species is the GenBank assembly GCA_013204155.1. The GC content of the type genome is 49.19 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Bipenosa anactilega sp. nov.

Candidatus Bipenosa anactilega (NL. fem. n. *anactilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002723195*. The type genome for the species is the GenBank assembly GCA_002723195.1. The GC content of the type genome is 43.77 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Bipenosa astapimonas sp. nov.

Candidatus Bipenosa astapimonas (NL. fem. n. *astapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002401885*. The type genome for the species is the GenBank assembly GCA_002401885.1. The GC content of the type genome is 49.38 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bipenosa attoriforma sp. nov.

Candidatus Bipenosa attoriforma (NL. fem. n. *attoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp012960305*. The type genome for the species is the GenBank assembly GCA_012960305.1. The GC content of the type genome is 44.41 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Bipenosa bimotifica sp. nov.

Candidatus Bipenosa bimotifica (NL. fem. n. *bimotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002477465*. The type genome for the species is the GenBank assembly GCA_002470225.1. The GC content of the type genome is 52.59 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Bipenosa cepulicula sp. nov.

Candidatus Bipenosa cepulicula (NL. fem. n. *cepulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002715615*. The type genome for the species is the GenBank assembly GCA_002715615.1. The GC content of the type genome is 48.54 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bipenosa cerifastra sp. nov.

Candidatus Bipenosa cerifastra (NL. fem. n. *cerifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002457215*. The type genome for the species is the GenBank assembly GCA_002705145.1. The GC content of the type genome is 43.94 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Bipenosa cinipicella sp. nov.

Candidatus Bipenosa cinipicella (NL. fem. n. *cinipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002731775*. The type genome for the species is the GenBank assembly GCA_002731775.1. The GC content of the type genome is 52.4 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Bipenosa colapiforma sp. nov.

Candidatus Bipenosa colapiforma (NL. fem. n. *colapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp003483155*. The type genome for the species is the GenBank assembly GCA_003483155.1. The GC content of the type genome is 50.66 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Bipenosa dicabitia sp. nov.

Candidatus Bipenosa dicabitia (NL. fem. n. *dicabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp008081045*. The type genome for the species is the GenBank assembly GCA_009920395.1. The GC content of the type genome is 54.8 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Bipenosa exorcigena sp. nov.

Candidatus Bipenosa exorcigena (NL. fem. n. *exorcigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA9145 sp002726595*. The type genome for the species is the GenBank assembly GCA_002726595.1. The GC content of the type genome is 49.55 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Bipenosa hiruditura sp. nov.

Candidatus Bipenosa hiruditura (NL. fem. n. *hiruditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp009692305*. The type genome for the species is the GenBank assembly GCA_009692305.1. The GC content of the type genome is 52.69 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Bipenosa indivigena sp. nov.

Candidatus Bipenosa indivigena (NL. fem. n. *indivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002729315*. The type genome for the species is the GenBank assembly GCA_002729315.1. The GC content of the type genome is 51.71 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Bipenosa inlepugo sp. nov.

Candidatus Bipenosa inlepugo (NL. fem. n. *inlepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp902591495*. The type genome for the species is the GenBank assembly GCA_902591495.1. The GC content of the type genome is 42.7 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Bipenosa inmemitas sp. nov.

Candidatus Bipenosa inmemitas (NL. fem. n. *inmemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp902531515*. The type genome for the species is the GenBank assembly GCA_902531515.1. The GC content of the type genome is 43.12 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Bipenosa inpenisca sp. nov.

Candidatus Bipenosa inpenisca (NL. fem. n. *inpenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002719575*. The type genome for the species is the GenBank assembly GCA_002719575.1. The GC content of the type genome is 49.7 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Bipenosa licenisca sp. nov.

Candidatus Bipenosa licenisca (NL. fem. n. *licenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002402175*. The type genome for the species is the GenBank assembly GCA_002402175.1. The GC content of the type genome is 45.31 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Bipenosa meridessa sp. nov.

Candidatus Bipenosa meridessa (NL. fem. n. *meridessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002377605*. The type genome for the species is the GenBank assembly GCA_002377605.1. The GC content of the type genome is 44.18 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Bipenosa morigitia sp. nov.

Candidatus Bipenosa morigitia (NL. fem. n. *morigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp003451715*. The type genome for the species is the GenBank assembly GCA_003451715.1. The GC content of the type genome is 51.27 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Bipenosa musulastra sp. nov.

Candidatus Bipenosa musulastra (NL. fem. n. *musulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp012103535*. The type genome for the species is the GenBank assembly GCA_012103535.1. The GC content of the type genome is 45.78 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Bipenosa nimirifica sp. nov.

Candidatus Bipenosa nimirifica (NL. fem. n. *nimirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp003514305*. The type genome for the species is the GenBank assembly GCA_003514305.1. The GC content of the type genome is 49.92 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Bipenosa pecunousia sp. nov.

Candidatus Bipenosa pecunousia (NL. fem. n. *pecunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002172295*. The type genome for the species is the GenBank assembly GCA_002704105.1. The GC content of the type genome is 44.02 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Bipenosa penuretta sp. nov.

Candidatus Bipenosa penuretta (NL. fem. n. *penuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002714195*. The type genome for the species is the GenBank assembly GCA_002714195.1. The GC content of the type genome is 42.64 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Bipenosa peripatica sp. nov.

Candidatus Bipenosa peripatica (NL. fem. n. *peripatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA9145 sp002694855*. The type genome for the species is the GenBank assembly GCA_002699285.1. The GC content of the type genome is 46.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Bipenosa refinitoga sp. nov.

Candidatus Bipenosa refinitoga (NL. fem. n. *refinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002691885*. The type genome for the species is the GenBank assembly GCA_002172865.1. The GC content of the type genome is 52.5 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Bipenosa resacilenta sp. nov.

Candidatus Bipenosa resacilenta (NL. fem. n. *resacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002727755*. The type genome for the species is the GenBank assembly GCA_002697565.1. The GC content of the type genome is 43.0 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Bipenosa sanabibra sp. nov.

Candidatus Bipenosa sanabibra (NL. fem. n. *sanabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp902597095*. The type genome for the species is the GenBank assembly GCA_902597095.1. The GC content of the type genome is 52.75 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Bipenosa semifimonia sp. nov.

Candidatus Bipenosa semifimonia (NL. fem. n. *semifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002712055*. The type genome for the species is the GenBank assembly GCA_002360675.1. The GC content of the type genome is 46.0 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Bipenosa semivimonas sp. nov.

Candidatus Bipenosa semivimonas (NL. fem. n. *semivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002684935*. The type genome for the species is the GenBank assembly GCA_002323805.1. The GC content of the type genome is 52.17 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Bipenosa tolutilega sp. nov.

Candidatus Bipenosa tolutilega (NL. fem. n. *tolutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9145 sp002730035*. The type genome for the species is the GenBank assembly GCA_002501115.1. The GC content of the type genome is 51.61 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Bipinana acrimitoga sp. nov.

Candidatus Bipinana acrimitoga (NL. fem. n. *acrimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002719425*. The type genome for the species is the GenBank assembly GCA_002719425.1. The GC content of the type genome is 31.33 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Bipinana gen. nov.

Candidatus Bipinana (NL. fem. n. *Bipinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED-70*. The type species for the genus is *Candidatus* Bipinana acrimitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED-70*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinanaceae.

Description of *Candidatus* Bipinanaceae fam. nov.

Candidatus Bipinanaceae (NL. fem. n. *Bipinanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED-70.* The type genus for the taxon is *Candidatus* Bipinana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Carucellales.

Description of *Candidatus* Bipinana bicipitica sp. nov.

Candidatus Bipinana bicipitica (NL. fem. n. *bicipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002703265*. The type genome for the species is the GenBank assembly GCA_009391545.1. The GC content of the type genome is 31.07 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Bipinana bulapicella sp. nov.

Candidatus Bipinana bulapicella (NL. fem. n. *bulapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002171675*. The type genome for the species is the GenBank assembly GCA_009391625.1. The GC content of the type genome is 30.72 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Bipinana dilicedo sp. nov.

Candidatus Bipinana dilicedo (NL. fem. n. *dilicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002711965*. The type genome for the species is the GenBank assembly GCA_002711965.1. The GC content of the type genome is 30.62 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bipinana intemousia sp. nov.

Candidatus Bipinana intemousia (NL. fem. n. *intemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002721875*. The type genome for the species is the GenBank assembly GCA_002721875.1. The GC content of the type genome is 31.77 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Bipinana melilicula sp. nov.

Candidatus Bipinana melilicula (NL. fem. n. *melilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp002699165*. The type genome for the species is the GenBank assembly GCA_002699165.1. The GC content of the type genome is 30.59 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Bipinana peribugo sp. nov.

Candidatus Bipinana peribugo (NL. fem. n. *peribugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp009937255*. The type genome for the species is the GenBank assembly GCA_014240175.1. The GC content of the type genome is 28.87 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Bipinana pinifisca sp. nov.

Candidatus Bipinana pinifisca (NL. fem. n. *pinifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED-70 sp008373205*. The type genome for the species is the GenBank assembly GCA_008373205.1. The GC content of the type genome is 30.94 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Bipinana sceptimonas sp. nov.

Candidatus Bipinana sceptimonas (NL. fem. n. *sceptimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *TMED-70 sp002710135*. The type genome for the species is the GenBank assembly GCA_002710135.1. The GC content of the type genome is 30.87 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Bipinaria vavasessa sp. nov.

Candidatus Bipinaria vavasessa (NL. fem. n. *vavasessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-365 sp003246455*. The type genome for the species is the GenBank assembly GCA_003246455.1. The GC content of the type genome is 60.17 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Bipinaria gen. nov.

Candidatus Bipinaria (NL. fem. n. *Bipinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-365*. The type species for the genus is *Candidatus* Bipinaria vavasessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinariaceae.

Description of *Candidatus* Bipinariaceae fam. nov.

Candidatus Bipinariaceae (NL. fem. n. *Bipinariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-365.* The type genus for the taxon is *Candidatus* Bipinaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipinariales.

Description of *Candidatus* Bipinariales ord. nov.

Candidatus Bipinariales (NL. fem. n. *Bipinariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-365.* The type genus for the taxon is *Candidatus* Bipinaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *SZUA-365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipinariae.

Description of *Candidatus* Bipinariae class. nov.

Candidatus Bipinariae (NL. fem. n. *c__Bipinariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-365.* The type genus for the taxon is *Candidatus* Bipinaria .

According to GTDB R06-RS202, this class belongs to the phylum *Bacteroidota*.

Description of *Candidatus* Bipinella cobalitoga sp. nov.

Candidatus Bipinella cobalitoga (NL. fem. n. *cobalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-88 sp002011795*. The type genome for the species is the GenBank assembly GCA_002376155.1. The GC content of the type genome is 62.98 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Bipinella gen. nov.

Candidatus Bipinella (NL. fem. n. *Bipinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-88*. The type species for the genus is *Candidatus* Bipinella cobalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-88*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinellaceae.

Description of *Candidatus* Bipinellaceae fam. nov.

Candidatus Bipinellaceae (NL. fem. n. *Bipinellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-88.* The type genus for the taxon is *Candidatus* Bipinella .

According to GTDB R06-RS202, this family belongs to the order

Thermodesulfovibrionales.

Description of *Candidatus* Bipinia celamitia sp. nov.

Candidatus Bipinia celamitia (NL. fem. n. *celamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BX7 sp014384765*. The type genome for the species is the GenBank assembly GCA_014384765.1. The GC content of the type genome is 58.85 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Bipinia gen. nov.

Candidatus Bipinia (NL. fem. n. *Bipinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BX7*. The type species for the genus is *Candidatus* Bipinia celamitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BX7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipiniaceae.

Description of *Candidatus* Bipiniaceae fam. nov.

Candidatus Bipiniaceae (NL. fem. n. *Bipiniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BX7*. The type genus for the taxon is *Candidatus* Bipinia .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Bipinida anaplisca sp. nov.

Candidatus Bipinida anaplisca (NL. fem. n. *anaplisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp007280125*. The type genome for the species is the GenBank assembly GCA_007280125.1. The GC content of the type genome is 46.72 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Bipinida gen. nov.

Candidatus Bipinida (NL. fem. n. *Bipinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYPT01*. The type species for the genus is *Candidatus* Bipinida anaplisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipinida cocolitas sp. nov.

Candidatus Bipinida cocolitas (NL. fem. n. *cocolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp903928745*. The type genome for the species is the GenBank assembly GCA_903928745.1. The GC content of the type genome is 48.05 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Bipinida fiducitio sp. nov.

Candidatus Bipinida fiducitio (NL. fem. n. *fiducitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp009700405*. The type genome for the species is the GenBank assembly GCA_009705495.1. The GC content of the type genome is 47.22 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Bipinida fusifatica sp. nov.

Candidatus Bipinida fusifatica (NL. fem. n. *fusifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp903822425*. The type genome for the species is the GenBank assembly GCA_903822425.1. The GC content of the type genome is 47.11 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Bipinida lametibula sp. nov.

Candidatus Bipinida lametibula (NL. fem. n. *lametibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp014377015*. The type genome for the species is the GenBank assembly GCA_014377015.1. The GC content of the type genome is 50.24 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Bipinida laxitimonia sp. nov.

Candidatus Bipinida laxitimonia (NL. fem. n. *laxitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp009699375*. The type genome for the species is the GenBank assembly GCA_009699375.1. The GC content of the type genome is 45.65 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Bipinida nivomisca sp. nov.

Candidatus Bipinida nivomisca (NL. fem. n. *nivomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp009698615*. The type genome for the species is the GenBank assembly GCA_009701225.1. The GC content of the type genome is 47.8 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Bipinida recucitrix sp. nov.

Candidatus Bipinida recucitrix (NL. fem. n. *recucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp903834145*. The type genome for the species is the GenBank assembly GCA_903826505.1. The GC content of the type genome is 48.84 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Bipinida vanitifica sp. nov.

Candidatus Bipinida vanitifica (NL. fem. n. *vanitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QYPT01 sp903834705*. The type genome for the species is the GenBank assembly GCA_903834705.1. The GC content of the type genome is 46.04 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Bipinida venunibra sp. nov.

Candidatus Bipinida venunibra (NL. fem. n. *venunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp009699205*. The type genome for the species is the GenBank assembly GCA_009701685.1. The GC content of the type genome is 47.78 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Bipinida vinacigena sp. nov.

Candidatus Bipinida vinacigena (NL. fem. n. *vinacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPT01 sp903924485*. The type genome for the species is the GenBank assembly GCA_903888385.1. The GC content of the type genome is 48.66 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Bipinosa adnarousia sp. nov.

Candidatus Bipinosa adnarousia (NL. fem. n. *adnarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA5 sp002919235*. The type genome for the species is the GenBank assembly GCA_002919235.1. The GC content of the type genome is 67.75 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Bipinosa gen. nov.

Candidatus Bipinosa (NL. fem. n. *Bipinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA5*. The type species for the genus is *Candidatus* Bipinosa adnarousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

family *Candidatus* Bipinosaceae.

Description of *Candidatus* Bipinosaceae fam. nov.

Candidatus Bipinosaceae (NL. fem. n. *Bipinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RSA5.* The type genus for the taxon is *Candidatus* Bipinosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defosellales.

Description of *Candidatus* Bipinula diluvisca sp. nov.

Candidatus Bipinula diluvisca (NL. fem. n. *diluvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1467 sp003157575*. The type genome for the species is the GenBank assembly GCA_003157575.1. The GC content of the type genome is 63.34 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Bipinula gen. nov.

Candidatus Bipinula (NL. fem. n. *Bipinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1467*. The type species for the genus is *Candidatus* Bipinula diluvisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bipinula nubigax sp. nov.

Candidatus Bipinula nubigax (NL. fem. n. *nubigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1467 sp003142615*. The type genome for the species is the GenBank assembly GCA_003142615.1. The GC content of the type genome is 64.26 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Bipinula repudessa sp. nov.

Candidatus Bipinula repudessa (NL. fem. n. *repudessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1467 sp003153035*. The type genome for the species is the GenBank assembly GCA_003157495.1. The GC content of the type genome is 64.27 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Bipinula solipitio sp. nov.

Candidatus Bipinula solipitio (NL. fem. n. *solipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1467 sp003142955*. The type genome for the species is the GenBank assembly GCA_003154875.1. The GC content of the type genome is 62.37 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Bipinula tetenitio sp. nov.

Candidatus Bipinula tetenitio (NL. fem. n. *tetenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1467 sp903940425*. The type genome for the species is the GenBank assembly GCA_903866235.1. The GC content of the type genome is 64.74 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Bipolaricaulis habacilenta sp. nov.

Candidatus Bipolaricaulis habacilenta (NL. fem. n. *habacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bipolaricaulis sp014361015*. The type genome for the species is the GenBank assembly GCA_014361015.1. The GC content of the type genome is 68.85 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Bipolaricaulis infunugo sp. nov.

Candidatus Bipolaricaulis infunugo (NL. fem. n. *infunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bipolaricaulis sp014360985*. The type genome for the species is the GenBank assembly GCA_014360985.1. The GC content of the type genome is 67.57 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Bipolaricaulis pudibimonia sp. nov.

Candidatus Bipolaricaulis pudibimonia (NL. fem. n. *pudibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bipolaricaulis sp002479455*. The type genome for the species is the GenBank assembly GCA_002402715.1. The GC content of the type genome is 65.79 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Bipolaricaulis solifitudo sp. nov.

Candidatus Bipolaricaulis solifitudo (NL. fem. n. *solifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bipolaricaulis sp011057175*. The type genome for the species is the GenBank assembly GCA_011057175.1. The GC content of the type genome is 68.3 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Bisacana adpinentia sp. nov.

Candidatus Bisacana adpinentia (NL. fem. n. *adpinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJC01 sp009783265*. The type genome for the species is the GenBank assembly GCA_009783265.1. The GC content of the type genome is 38.64 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Bisacana gen. nov.

Candidatus Bisacana (NL. fem. n. *Bisacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRJC01*. The type species for the genus is *Candidatus* Bisacana

adpinentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRJC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacanaceae.

Description of *Candidatus* Bisacanaceae fam. nov.

Candidatus Bisacanaceae (NL. fem. n. *Bisacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRJC01.* The type genus for the taxon is *Candidatus* Bisacana .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Bisacana aphoritoga sp. nov.

Candidatus Bisacana aphoritoga (NL. fem. n. *aphoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJC01 sp009785015*. The type genome for the species is the GenBank assembly GCA_009785015.1. The GC content of the type genome is 48.33 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Bisacana innulago sp. nov.

Candidatus Bisacana innulago (NL. fem. n. *innulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJC01 sp009782405*. The type genome for the species is the GenBank assembly GCA_009782405.1. The GC content of the type genome is 48.35 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Bisacana monacilenta sp. nov.

Candidatus Bisacana monacilenta (NL. fem. n. *monacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJC01 sp009777355*. The type genome for the species is the GenBank assembly GCA_009777355.1. The GC content of the type genome is 44.47 %

and the genome length is 2.01 Mbp.

Description of *Candidatus* Bisacana paracitio sp. nov.

Candidatus Bisacana paracitio (NL. fem. n. *paracitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJC01 sp009780985*. The type genome for the species is the GenBank assembly GCA_009780985.1. The GC content of the type genome is 40.5 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Bisacaria effiniforma sp. nov.

Candidatus Bisacaria effiniforma (NL. fem. n. *effiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J137 sp003694175*. The type genome for the species is the GenBank assembly GCA_003694175.1. The GC content of the type genome is 33.88 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Bisacaria gen. nov.

Candidatus Bisacaria (NL. fem. n. *Bisacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J137*. The type species for the genus is *Candidatus* Bisacaria effiniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J137*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacariaceae.

Description of *Candidatus* Bisacariaceae fam. nov.

Candidatus Bisacariaceae (NL. fem. n. *Bisacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J137.* The type genus for the taxon is *Candidatus* Bisacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lapilulales.

Description of *Candidatus* Bisacella redunastra sp. nov.

Candidatus Bisacella redunastra (NL. fem. n. *redunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2185 sp003508565*. The type genome for the species is the GenBank assembly GCA_003508565.1. The GC content of the type genome is 45.94 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bisacella gen. nov.

Candidatus Bisacella (NL. fem. n. *Bisacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2185*. The type species for the genus is *Candidatus* Bisacella redunastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacellaceae.

Description of *Candidatus* Bisacellaceae fam. nov.

Candidatus Bisacellaceae (NL. fem. n. *Bisacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2185.* The type genus for the taxon is *Candidatus* Bisacella .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Bisacia defunicella sp. nov.

Candidatus Bisacia defunicella (NL. fem. n. *defunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBJ01 sp009377585*. The type genome for the species is the GenBank assembly GCA_009377585.1. The GC content of the type genome is 65.1 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Bisacia gen. nov.

Candidatus Bisacia (NL. fem. n. *Bisacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYBJ01*. The type species for the genus is *Candidatus* Bisacia defunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WYBJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisaciaceae.

Description of *Candidatus* Bisaciaceae fam. nov.

Candidatus Bisaciaceae (NL. fem. n. *Bisaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WYBJ01*. The type genus for the taxon is *Candidatus* Bisacia .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Bisacia pedepicella sp. nov.

Candidatus Bisacia pedepicella (NL. fem. n. *pedepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYBJ01 sp011525945*. The type genome for the species is the GenBank assembly GCA_011525945.1. The GC content of the type genome is 65.59 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Bisacida taxilentia sp. nov.

Candidatus Bisacida taxilentia (NL. fem. n. *taxilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA122 sp003225055*. The type genome for the species is the GenBank assembly GCA_003225635.1. The GC content of the type genome is 57.56 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Bisacida gen. nov.

Candidatus Bisacida (NL. fem. n. *Bisacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA122*. The type species for the genus is *Candidatus* Bisacida taxilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bisacosa colubibula sp. nov.

Candidatus Bisacosa colubibula (NL. fem. n. *colubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4738 sp002413305*. The type genome for the species is the GenBank assembly GCA_002413305.1. The GC content of the type genome is 69.16 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Bisacosa gen. nov.

Candidatus Bisacosa (NL. fem. n. *Bisacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4738*. The type species for the genus is *Candidatus* Bisacosa colubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisacosaceae.

Description of *Candidatus* Bisacosaceae fam. nov.

Candidatus Bisacosaceae (NL. fem. n. *Bisacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4738.* The type genus for the taxon is *Candidatus* Bisacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bisacosales.

Description of *Candidatus* Bisacosales ord. nov.

Candidatus Bisacosales (NL. fem. n. *Bisacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4738.* The type genus for the taxon is *Candidatus* Bisacosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bisacosae.

Description of *Candidatus* Bisacosae class. nov.

Candidatus Bisacosae (NL. fem. n. *c__Bisacosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4738.* The type genus for the taxon is *Candidatus* Bisacosa .

According to GTDB R06-RS202, this class belongs to the phylum *Actinobacteriota*.

Description of *Candidatus* Bisacula adnunedo sp. nov.

Candidatus Bisacula adnunedo (NL. fem. n. *adnunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737595 sp903844855*. The type genome for the species is the GenBank assembly GCA_903844855.1. The GC content of the type genome is 52.67 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Bisacula gen. nov.

Candidatus Bisacula (NL. fem. n. *Bisacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2737595*. The type species for the genus is *Candidatus* Bisacula adnunedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bisacula calipessa sp. nov.

Candidatus Bisacula calipessa (NL. fem. n. *calipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2737595 sp009702245*. The type genome for the species is the GenBank assembly GCA_009705875.1. The GC content of the type genome is 52.59 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Bisacula herinedo sp. nov.

Candidatus Bisacula herinedo (NL. fem. n. *herinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737595 sp002737595*. The type genome for the species is the GenBank assembly GCA_002737595.1. The GC content of the type genome is 52.48 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Bisacula lapilatica sp. nov.

Candidatus Bisacula lapilatica (NL. fem. n. *lapilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737595 sp009917815*. The type genome for the species is the GenBank assembly GCA_009919715.1. The GC content of the type genome is 53.19 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Bisacula monodilega sp. nov.

Candidatus Bisacula monodilega (NL. fem. n. *monodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737595 sp903863015*. The type genome for the species is the GenBank assembly GCA_903900125.1. The GC content of the type genome is 53.57 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Bisulana bacifitura sp. nov.

Candidatus Bisulana bacifitura (NL. fem. n. *bacifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs149 sp005798855*. The type genome for the species is the GenBank assembly GCA_005773085.1. The GC content of the type genome is 63.44 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Bisulana gen. nov.

Candidatus Bisulana (NL. fem. n. *Bisulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs149*. The type species for the genus is *Candidatus* Bisulana bacifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-60-MAGs149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulanaceae.

Description of *Candidatus* Bisulanaceae fam. nov.

Candidatus Bisulanaceae (NL. fem. n. *Bisulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F1-60-MAGs149.* The type genus for the taxon is *Candidatus* Bisulana .

According to GTDB R06-RS202, this family belongs to the order *Gaiellales*.

Description of *Candidatus* Bisulana dinupax sp. nov.

Candidatus Bisulana dinupax (NL. fem. n. *dinupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs149 sp903873565*. The type genome for the species is the GenBank assembly GCA_903920915.1. The GC content of the type genome is 73.99 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Bisulana galacugo sp. nov.

Candidatus Bisulana galacugo (NL. fem. n. *galacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs149 sp903960645*. The type genome for the species is the GenBank assembly GCA_903933885.1. The GC content of the type genome is 69.72 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Bisulana giganimonas sp. nov.

Candidatus Bisulana giganimonas (NL. fem. n. *giganimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs149 sp903847495*. The type genome for the species is the GenBank assembly GCA_903847495.1. The GC content of the type genome is 68.86 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Bisulana spastitia sp. nov.

Candidatus Bisulana spastitia (NL. fem. n. *spastitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs149 sp009694475*. The type genome for the species is the GenBank assembly GCA_009694475.1. The GC content of the type genome is 63.73 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Bisularia categitia sp. nov.

Candidatus Bisularia categitia (NL. fem. n. *categitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADAWZ01 sp902791745*. The type genome for the species is the GenBank assembly GCA_902782685.1. The GC content of the type genome is 29.6 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bisularia gen. nov.

Candidatus Bisularia (NL. fem. n. *Bisularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADAWZ01*. The type species for the genus is *Candidatus* Bisularia categitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADAWZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulariaceae.

Description of *Candidatus* Bisulariaceae fam. nov.

Candidatus Bisulariaceae (NL. fem. n. *Bisulariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADAWZ01.* The type genus for the taxon is *Candidatus* Bisularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADAWZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bisulariales.

Description of *Candidatus* Bisulariales ord. nov.

Candidatus Bisulariales (NL. fem. n. *Bisulariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADAWZ01.* The type genus for the taxon is *Candidatus* Bisularia .

According to the GTDB R06-RS202, this order belongs to the class *Xenobia*.

Description of *Candidatus* Bisularia semapetta sp. nov.

Candidatus Bisularia semapetta (NL. fem. n. *semapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADAWZ01 sp902790465*. The type genome for the species is the GenBank assembly GCA_902794495.1. The GC content of the type genome is 30.69 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Bisulella problivita sp. nov.

Candidatus Bisulella problivita (NL. fem. n. *problivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKL01 sp012522445*. The type genome for the species is the GenBank assembly GCA_012522445.1. The GC content of the type genome is 62.29 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Bisulella gen. nov.

Candidatus Bisulella (NL. fem. n. *Bisulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYKL01*. The type species for the genus is *Candidatus* Bisulella problivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYKL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulellaceae.

Description of *Candidatus* Bisulellaceae fam. nov.

Candidatus Bisulellaceae (NL. fem. n. *Bisulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYKL01*. The type genus for the taxon is *Candidatus* Bisulella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYKL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bisulellales.

Description of *Candidatus* Bisulellales ord. nov.

Candidatus Bisulellales (NL. fem. n. *Bisulellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYKL01*. The type genus for the taxon is *Candidatus* Bisulella .

According to the GTDB R06-RS202, this order belongs to the class *Polyangia*.

Description of *Candidatus* Bisulia lucelentia sp. nov.

Candidatus Bisulia lucelentia (NL. fem. n. *lucelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5109 sp002414385*. The type genome for the species is the GenBank assembly GCA_002366475.1. The GC content of the type genome is 49.38 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Bisulia gen. nov.

Candidatus Bisulia (NL. fem. n. *Bisulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA5109*. The type species for the genus is *Candidatus* Bisulia lucelentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bisulia tolutitura sp. nov.

Candidatus Bisulia tolutitura (NL. fem. n. *tolutitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5109 sp002746215*. The type genome for the species is the GenBank assembly GCA_002746215.1. The GC content of the type genome is 42.36 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Bisulida alismugo sp. nov.

Candidatus Bisulida alismugo (NL. fem. n. *alismugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8437 sp003445035*. The type genome for the species is the GenBank assembly GCA_003445035.1. The GC content of the type genome is 63.02 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Bisulida gen. nov.

Candidatus Bisulida (NL. fem. n. *Bisulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8437*. The type species for the genus is *Candidatus* Bisulida alismugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bisulida exhoritia sp. nov.

Candidatus Bisulida exhoritia (NL. fem. n. *exhoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8437 sp002724415*. The type genome for the species is the GenBank assembly GCA_002724415.1. The GC content of the type genome is 60.79 %

and the genome length is 6.26 Mbp.

Description of *Candidatus* Bisulida rosaricula sp. nov.

Candidatus Bisulida rosaricula (NL. fem. n. *rosaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8437 sp002724315*. The type genome for the species is the GenBank assembly GCA_003444135.1. The GC content of the type genome is 62.28 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Bisulosa adfabicula sp. nov.

Candidatus Bisulosa adfabicula (NL. fem. n. *adfabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902515775*. The type genome for the species is the GenBank assembly GCA_902515775.1. The GC content of the type genome is 34.76 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Bisulosa gen. nov.

Candidatus Bisulosa (NL. fem. n. *Bisulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D2472*. The type species for the genus is *Candidatus* Bisulosa adfabicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Bisulosaceae fam. nov.

Candidatus Bisulosaceae (NL. fem. n. *Bisulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D2472.* The type genus for the taxon is *Candidatus* Bisulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludimulales.

Description of *Candidatus* Bisulosa aggesugo sp. nov.

Candidatus Bisulosa aggesugo (NL. fem. n. *aggesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902511425*. The type genome for the species is the GenBank assembly GCA_902511425.1. The GC content of the type genome is 36.24 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Bisulosa agravicella sp. nov.

Candidatus Bisulosa agravicella (NL. fem. n. *agravicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902608115*. The type genome for the species is the GenBank assembly GCA_902608115.1. The GC content of the type genome is 34.13 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bisulosa almucousia sp. nov.

Candidatus Bisulosa almucousia (NL. fem. n. *almucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902513515*. The type genome for the species is the GenBank assembly GCA_902513515.1. The GC content of the type genome is 35.84 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Bisulosa ammoditudo sp. nov.

Candidatus Bisulosa ammoditudo (NL. fem. n. *ammoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902627055*. The type genome for the species is the GenBank assembly GCA_902627055.1. The GC content of the type genome is 34.76 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Bisulosa arcelousia sp. nov.

Candidatus Bisulosa arcelousia (NL. fem. n. *arcelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp000307935*. The type genome for the species is the GenBank assembly GCA_000307935.1. The GC content of the type genome is 36.17 % and the genome length is 1.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single cell isolated from 0.8 micron filter from seawater collected from 1m depth in the Scripps Institution of Oceanography Pier".

Description of *Candidatus* Bisulosa arnogitrix sp. nov.

Candidatus Bisulosa arnogitrix (NL. fem. n. *arnogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902541245*. The type genome for the species is the GenBank assembly GCA_902541245.1. The GC content of the type genome is 34.67 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Bisulosa delebatica sp. nov.

Candidatus Bisulosa delebatica (NL. fem. n. *delebatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp002358345*. The type genome for the species is the GenBank assembly GCA_001438545.1. The GC content of the type genome is 40.2 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Bisulosa depasitrix sp. nov.

Candidatus Bisulosa depasitrix (NL. fem. n. *depasitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp002469975*. The type genome for the species is the GenBank assembly GCA_002469975.1. The GC content of the type genome is 39.54 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Bisulosa dimacatica sp. nov.

Candidatus Bisulosa dimacatica (NL. fem. n. *dimacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp003283765*. The type genome for the species is the GenBank assembly GCA_003283765.1. The GC content of the type genome is 36.29 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Bisulosa exsupedo sp. nov.

Candidatus Bisulosa exsupedo (NL. fem. n. *exsupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902528215*. The type genome for the species is the GenBank assembly GCA_902528215.1. The GC content of the type genome is 34.6 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Bisulosa fatififica sp. nov.

Candidatus Bisulosa fatififica (NL. fem. n. *fatififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902593675*. The type genome for the species is the GenBank assembly GCA_902593675.1. The GC content of the type genome is 36.0 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Bisulosa halucibra sp. nov.

Candidatus Bisulosa halucibra (NL. fem. n. *halucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902623685*. The type genome for the species is the GenBank assembly GCA_902623685.1. The GC content of the type genome is 34.69 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Bisulosa homicitura sp. nov.

Candidatus Bisulosa homicitura (NL. fem. n. *homicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *D2472 sp902602595*. The type genome for the species is the GenBank assembly GCA_902602595.1. The GC content of the type genome is 35.5 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Bisulosa immobicula sp. nov.

Candidatus Bisulosa immobicula (NL. fem. n. *immobicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902596165*. The type genome for the species is the GenBank assembly GCA_902596165.1. The GC content of the type genome is 35.95 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Bisulosa insopitica sp. nov.

Candidatus Bisulosa insopitica (NL. fem. n. *insopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902511575*. The type genome for the species is the GenBank assembly GCA_902511575.1. The GC content of the type genome is 36.35 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Bisulosa latibitica sp. nov.

Candidatus Bisulosa latibitica (NL. fem. n. *latibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902509555*. The type genome for the species is the GenBank assembly GCA_902509555.1. The GC content of the type genome is 36.19 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Bisulosa lucifax sp. nov.

Candidatus Bisulosa lucifax (NL. fem. n. *lucifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902512655*. The type genome for the species is the GenBank assembly GCA_902512655.1. The GC content of the type genome is 35.94 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Bisulosa musulilega sp. nov.

Candidatus Bisulosa musulilega (NL. fem. n. *musulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902599315*. The type genome for the species is the GenBank assembly GCA_902575215.1. The GC content of the type genome is 34.63 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Bisulosa nucifibula sp. nov.

Candidatus Bisulosa nucifibula (NL. fem. n. *nucifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902515455*. The type genome for the species is the GenBank assembly GCA_902515455.1. The GC content of the type genome is 34.75 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Bisulosa siligisca sp. nov.

Candidatus Bisulosa siligisca (NL. fem. n. *siligisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp902595065*. The type genome for the species is the GenBank assembly GCA_902557815.1. The GC content of the type genome is 35.86 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Bisulosa turifax sp. nov.

Candidatus Bisulosa turifax (NL. fem. n. *turifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp003331545*. The type genome for the species is the GenBank assembly GCA_003331545.1. The GC content of the type genome is 35.63 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Bisulosa vehicatio sp. nov.

Candidatus Bisulosa vehicatio (NL. fem. n. *vehicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D2472 sp003284215*. The type genome for the species is the GenBank assembly GCA_902510005.1. The GC content of the type genome is 36.06 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bisulula hecatax sp. nov.

Candidatus Bisulula hecatax (NL. fem. n. *hecatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6794 sp002452835*. The type genome for the species is the GenBank assembly GCA_002452835.1. The GC content of the type genome is 35.31 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Bisulula gen. nov.

Candidatus Bisulula (NL. fem. n. *Bisulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6794*. The type species for the genus is *Candidatus* Bisulula hecatax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisululaceae.

Description of *Candidatus* Bisululaceae fam. nov.

Candidatus Bisululaceae (NL. fem. n. *Bisululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6794.* The type genus for the taxon is *Candidatus* Bisulula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SB-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nidifidales.

Description of *Candidatus* Bisulula inmacago sp. nov.

Candidatus Bisulula inmacago (NL. fem. n. *inmacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6794 sp012520575*. The type genome for the species is the GenBank assembly GCA_012520575.1. The GC content of the type genome is 37.74 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Biverana cacomimonas sp. nov.

Candidatus Biverana cacomimonas (NL. fem. n. *cacomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-183 sp003152095*. The type genome for the species is the GenBank assembly GCA_003152095.1. The GC content of the type genome is 67.67 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Biverana gen. nov.

Candidatus Biverana (NL. fem. n. *Biverana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-183*. The type species for the genus is *Candidatus* Biverana cacomimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebosaceae.

Description of *Candidatus* Biveraria celamago sp. nov.

Candidatus Biveraria celamago (NL. fem. n. *celamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXQ01 sp902624455*. The type genome for the species is the GenBank assembly GCA_902624455.1. The GC content of the type genome is 32.93 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Biveraria gen. nov.

Candidatus Biveraria (NL. fem. n. *Biveraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACNXQ01*. The type species for the genus is *Candidatus* Biveraria celamago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-422-B15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifosaceae.

Description of *Candidatus* Biveraria offulibula sp. nov.

Candidatus Biveraria offulibula (NL. fem. n. *offulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNXQ01 sp902527075*. The type genome for the species is the GenBank assembly GCA_902527075.1. The GC content of the type genome is 32.41 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Biverella bugilago sp. nov.

Candidatus Biverella bugilago (NL. fem. n. *bugilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp001822095*. The type genome for the species is the GenBank assembly GCA_001822095.1. The GC content of the type genome is 38.76 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point C".

Description of *Candidatus* Biverella gen. nov.

Candidatus Biverella (NL. fem. n. *Biverella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-39-28*. The type species for the genus is *Candidatus* Biverella bugilago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Biverella dececilenta sp. nov.

Candidatus Biverella dececilenta (NL. fem. n. *dececilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903835075*. The type genome for the species is the GenBank assembly GCA_903835075.1. The GC content of the type genome is 35.47 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Biverella depacibula sp. nov.

Candidatus Biverella depacibula (NL. fem. n. *depacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903839895*. The type genome for the species is the GenBank assembly GCA_903839895.1. The GC content of the type genome is 40.35 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Biverella depicitura sp. nov.

Candidatus Biverella depicitura (NL. fem. n. *depicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903923535*. The type genome for the species is the GenBank assembly GCA_903923535.1. The GC content of the type genome is 35.87 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Biverella innecilenta sp. nov.

Candidatus Biverella innecilenta (NL. fem. n. *innecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903928565*. The type genome for the species is the GenBank assembly GCA_903928565.1. The GC content of the type genome is 37.28 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Biverella luculitura sp. nov.

Candidatus Biverella luculitura (NL. fem. n. *luculitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *XYD1-FULL-39-28 sp903831095*. The type genome for the species is the GenBank assembly GCA_903831095.1. The GC content of the type genome is 35.32 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Biverella mavoratica sp. nov.

Candidatus Biverella mavoratica (NL. fem. n. *mavoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp011330845*. The type genome for the species is the GenBank assembly GCA_011330845.1. The GC content of the type genome is 29.85 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Biverella pinigugo sp. nov.

Candidatus Biverella pinigugo (NL. fem. n. *pinigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903885445*. The type genome for the species is the GenBank assembly GCA_903885445.1. The GC content of the type genome is 40.42 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Biverella pudibastra sp. nov.

Candidatus Biverella pudibastra (NL. fem. n. *pudibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp001822065*. The type genome for the species is the GenBank assembly GCA_001820515.1. The GC content of the type genome is 37.03 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Biverella terebitrix sp. nov.

Candidatus Biverella terebitrix (NL. fem. n. *terebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-39-28 sp903845295*. The type genome for the species is the GenBank assembly GCA_903845295.1. The GC content of the type genome is 40.03

% and the genome length is 0.78 Mbp.

Description of *Candidatus* Biveria voragatio sp. nov.

Candidatus Biveria voragatio (NL. fem. n. *voragatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGZZ01 sp010028905*. The type genome for the species is the GenBank assembly GCA_010028905.1. The GC content of the type genome is 66.57 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Biveria gen. nov.

Candidatus Biveria (NL. fem. n. *Biveria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGZZ01*. The type species for the genus is *Candidatus* Biveria voragatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGZZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biveriaceae.

Description of *Candidatus* Biveriaceae fam. nov.

Candidatus Biveriaceae (NL. fem. n. *Biveriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGZZ01*. The type genus for the taxon is *Candidatus* Biveria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RGZZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Biveriales.

Description of *Candidatus* Biveriales ord. nov.

Candidatus Biveriales (NL. fem. n. *Biveriales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGZZ01*. The type genus for the taxon is *Candidatus* Biveria .

According to the GTDB R06-RS202, this order belongs to the class *Xenobia*.

Description of *Candidatus* Biverida citipimonia sp. nov.

Candidatus Biverida citipimonia (NL. fem. n. *citipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-42-6 sp000997475*. The type genome for the species is the GenBank assembly GCA_000997475.1. The GC content of the type genome is 42.54 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Biverida gen. nov.

Candidatus Biverida (NL. fem. n. *Biverida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-42-6*. The type species for the genus is *Candidatus* Biverida citipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-42-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biveridaceae.

Description of *Candidatus* Biveridaceae fam. nov.

Candidatus Biveridaceae (NL. fem. n. *Biveridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-42-6.* The type genus for the taxon is *Candidatus* Biverida .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Biverosa tresvilenta sp. nov.

Candidatus Biverosa tresvilenta (NL. fem. n. *tresvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4778 sp002403175*. The type genome for the species is the GenBank assembly GCA_002403175.1. The GC content of the type genome is 46.45 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Biverosa gen. nov.

Candidatus Biverosa (NL. fem. n. *Biverosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4778*. The type species for the genus is *Candidatus* Biverosa tresvilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4778*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biverosaceae.

Description of *Candidatus* Biverosaceae fam. nov.

Candidatus Biverosaceae (NL. fem. n. *Biverosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4778.* The type genus for the taxon is *Candidatus* Biverosa .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Biverula accerastra sp. nov.

Candidatus Biverula accerastra (NL. fem. n. *accerastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900768815*. The type genome for the species is the GenBank assembly RS_GCF_900768815.1. The GC content of the type genome is 28.59 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Biverula gen. nov.

Candidatus Biverula (NL. fem. n. *Biverula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-877*. The type species for the genus is *Candidatus* Biverula accerastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Biverula bicalatio sp. nov.

Candidatus Biverula bicalatio (NL. fem. n. *bicalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900554315*. The type genome for the species is the GenBank assembly GCA_900554315.1. The GC content of the type genome is 29.65 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Biverula duponax sp. nov.

Candidatus Biverula duponax (NL. fem. n. *duponax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900548695*. The type genome for the species is the GenBank assembly GCA_900548695.1. The GC content of the type genome is 28.99 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Biverula linigiforma sp. nov.

Candidatus Biverula linigiforma (NL. fem. n. *linigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900552495*. The type genome for the species is the GenBank assembly GCA_900552495.1. The GC content of the type genome is 29.91 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Biverula obsoritas sp. nov.

Candidatus Biverula obsoritas (NL. fem. n. *obsoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900753325*. The type genome for the species is the GenBank assembly RS_GCF_900753325.1. The GC content of the type genome is 28.38 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Biverula refocitura sp. nov.

Candidatus Biverula refocitura (NL. fem. n. *refocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp000433455*. The type genome for the species is the GenBank assembly GCA_000433455.1. The GC content of the type genome is 28.41 % and the genome length is 1.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Biverula tenebicella sp. nov.

Candidatus Biverula tenebicella (NL. fem. n. *tenebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-877 sp900554305*. The type genome for the species is the GenBank assembly RS_GCF_900758765.1. The GC content of the type genome is 29.54 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Blactella latibimonia sp. nov.

Candidatus Blactella latibimonia (NL. fem. n. *latibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2707085 sp002707085*. The type genome for the species is the GenBank assembly GCA_002707085.1. The GC content of the type genome is 52.98 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Blactella gen. nov.

Candidatus Blactella (NL. fem. n. *Blactella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2707085*. The type species for the genus is *Candidatus* Blactella latibimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilanaceae.

Description of *Candidatus* Blactia sugilastra sp. nov.

Candidatus Blactia sugilastra (NL. fem. n. *sugilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXG01 sp013697225*. The type genome for the species is the GenBank assembly GCA_013697225.1. The GC content of the type genome is 66.61 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Blactia gen. nov.

Candidatus Blactia (NL. fem. n. *Blactia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXG01*. The type species for the genus is *Candidatus* Blactia sugilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Blactosa pabilitas sp. nov.

Candidatus Blactosa pabilitas (NL. fem. n. *pabilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1494 sp900552305*. The type genome for the species is the GenBank assembly GCA_900552305.1. The GC content of the type genome is 48.16 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Blactosa gen. nov.

Candidatus Blactosa (NL. fem. n. *Blactosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1494*. The type species for the genus is *Candidatus* Blactosa pabilitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Blastococcus anastigena sp. nov.

Candidatus Blastococcus anastigena (NL. fem. n. *anastigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp004570875*. The type genome for the species is the GenBank assembly RS_GCF_004570875.1. The GC content of the type genome is 72.44 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Blastococcus apsurisca sp. nov.

Candidatus Blastococcus apsurisca (NL. fem. n. *apsurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp004570425*. The type genome for the species is the GenBank assembly RS_GCF_004570425.1. The GC content of the type genome is 73.69 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Blastococcus aspilitrix sp. nov.

Candidatus Blastococcus aspilitrix (NL. fem. n. *aspilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp900109665*. The type genome for the species is the GenBank assembly RS_GCF_900109665.1. The GC content of the type genome is 74.22 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Blastococcus atropicula sp. nov.

Candidatus Blastococcus atropicula (NL. fem. n. *atropicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp005222955*. The type genome for the species is the GenBank assembly RS_GCF_005222955.1. The GC content of the type genome is 73.19 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Blastococcus bigemitia sp. nov.

Candidatus Blastococcus bigemitia (NL. fem. n. *bigemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp900230285*. The type genome for the species is the GenBank assembly RS_GCF_900230285.1. The GC content of the type genome is 73.29 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Blastococcus deculedo sp. nov.

Candidatus Blastococcus deculedo (NL. fem. n. *deculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp900102425*. The type genome for the species is the GenBank assembly RS_GCF_900102425.1. The GC content of the type genome is 73.57 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Blastococcus ensigitoga sp. nov.

Candidatus Blastococcus ensigitoga (NL. fem. n. *ensigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp003319185*. The type genome for the species is the GenBank assembly RS_GCF_003319185.1. The GC content of the type genome is 74.25 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Blastococcus exhorisca sp. nov.

Candidatus Blastococcus exhorisca (NL. fem. n. *exhorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp900112815*. The type genome for the species is the GenBank assembly RS_GCF_900112815.1. The GC content of the type genome is 73.64 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Blastococcus habacisca sp. nov.

Candidatus Blastococcus habacisca (NL. fem. n. *habacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp003319105*. The type genome for the species is the GenBank assembly RS_GCF_003319105.1. The GC content of the type genome is 73.72 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Blastococcus impavedo sp. nov.

Candidatus Blastococcus impavedo (NL. fem. n. *impavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp902805535*. The type genome for the species is the GenBank assembly GCA_902805535.1. The GC content of the type genome is 73.44 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Blastococcus incesicula sp. nov.

Candidatus Blastococcus incesicula (NL. fem. n. *incesicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp000702465*. The type genome for the species is the GenBank assembly RS_GCF_000702465.1. The GC content of the type genome is 72.35 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Blastococcus incucetta sp. nov.

Candidatus Blastococcus incucetta (NL. fem. n. *incucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp004570385*. The type genome for the species is the GenBank assembly RS_GCF_004570385.1. The GC content of the type genome is 72.99 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Blastococcus induventia sp. nov.

Candidatus Blastococcus induventia (NL. fem. n. *induventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp004570345*. The type genome for the species is the GenBank assembly RS_GCF_004570345.1. The GC content of the type genome is 72.73 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Blastococcus innupicella sp. nov.

Candidatus Blastococcus innupicella (NL. fem. n. *innupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Blastococcus sp900102115*. The type genome for the species is the GenBank assembly GCA_900102115.1. The GC content of the type genome is 73.39 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Blastococcus insubitio sp. nov.

Candidatus Blastococcus insubitio (NL. fem. n. *insubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp003319175*. The type genome for the species is the GenBank assembly RS_GCF_003319175.1. The GC content of the type genome is 73.18 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Blastococcus intolitia sp. nov.

Candidatus Blastococcus intolitia (NL. fem. n. *intolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp003319095*. The type genome for the species is the GenBank assembly RS_GCF_003319095.1. The GC content of the type genome is 73.82 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Blastococcus lenunax sp. nov.

Candidatus Blastococcus lenunax (NL. fem. n. *lenunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp004571075*. The type genome for the species is the GenBank assembly RS_GCF_004571075.1. The GC content of the type genome is 74.06 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Blastococcus nocenessa sp. nov.

Candidatus Blastococcus nocenessa (NL. fem. n. *nocenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp013410015*. The type genome for the species is the GenBank assembly RS_GCF_013410015.1. The GC content of the type genome is 73.49 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Blastococcus obambitoga sp. nov.

Candidatus Blastococcus obambitoga (NL. fem. n. *obambitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp000620185*. The type genome for the species is the GenBank assembly RS_GCF_000620185.1. The GC content of the type genome is 72.6 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Blastococcus semifatica sp. nov.

Candidatus Blastococcus semifatica (NL. fem. n. *semifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastococcus sp900188025*. The type genome for the species is the GenBank assembly RS_GCF_900188025.1. The GC content of the type genome is 72.52 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Blastomonas avuncitica sp. nov.

Candidatus Blastomonas avuncitica (NL. fem. n. *avuncitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastomonas sp000786215*. The type genome for the species is the GenBank assembly RS_GCF_000786215.1. The GC content of the type genome is 64.02 % and the genome length is 4.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake".

Description of *Candidatus* Blastomonas inhumibula sp. nov.

Candidatus Blastomonas inhumibula (NL. fem. n. *inhumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastomonas sp000331245*. The type genome for the species is the GenBank assembly RS_GCF_000331245.1. The GC content of the type genome is 63.6 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water from a freshwater lake in the southern Gobi Desert in Inner Mongolia".

Description of *Candidatus* Blastomonas nivomago sp. nov.

Candidatus Blastomonas nivomago (NL. fem. n. *nivomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blastomonas sp000503195*. The type genome for the species is the GenBank assembly RS_GCF_003426715.1. The GC content of the type genome is 64.78 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Blattabacterium absoritas sp. nov.

Candidatus Blattabacterium absoritas (NL. fem. n. *absoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp000233435*. The type genome for the species is the GenBank assembly RS_GCF_000233435.1. The GC content of the type genome is 27.5 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Blattabacterium adrenitio sp. nov.

Candidatus Blattabacterium adrenitio (NL. fem. n. *adrenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp011290385*. The type genome for the species is the GenBank assembly RS_GCF_011290385.1. The GC content of the type genome is 25.35 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Blattabacterium cinefimonas sp. nov.

Candidatus Blattabacterium cinefimonas (NL. fem. n. *cinefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp000334405*. The type genome for the species is the GenBank assembly RS_GCF_014251295.1. The GC content of the type genome is 27.94 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Blattabacterium dehonivita sp. nov.

Candidatus Blattabacterium dehonivita (NL. fem. n. *dehonivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp000262715*. The type genome for the species is the GenBank assembly RS_GCF_000262715.1. The GC content of the type genome is 25.7 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Blattabacterium edissessa sp. nov.

Candidatus Blattabacterium edissessa (NL. fem. n. *edissessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp000022605*. The type genome for the species is the GenBank assembly RS_GCF_000022605.2. The GC content of the type genome is 27.16 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Blattabacterium excomitio sp. nov.

Candidatus Blattabacterium excomitio (NL. fem. n. *excomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp003226855*. The type genome for the species is the GenBank assembly RS_GCF_003226855.1. The GC content of the type genome is 25.74 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Blattabacterium novilibra sp. nov.

Candidatus Blattabacterium novilibra (NL. fem. n. *novilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blattabacterium sp000471965*. The type genome for the species is the GenBank assembly RS_GCF_000471965.1. The GC content of the type genome is 26.05 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Blautia ambusimonia sp. nov.

Candidatus Blautia ambusimonia (NL. fem. n. *ambusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900765525*. The type genome for the species is the GenBank assembly GCA_900765525.1. The GC content of the type genome is 44.98 % and the

genome length is 3.39 Mbp.

Description of *Candidatus* Blautia celumousia sp. nov.

Candidatus Blautia celumousia (NL. fem. n. *celumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900541955*. The type genome for the species is the GenBank assembly RS_GCF_013304445.1. The GC content of the type genome is 43.58 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Blautia fuligilega sp. nov.

Candidatus Blautia fuligilega (NL. fem. n. *fuligilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900120295*. The type genome for the species is the GenBank assembly RS_GCF_900120295.1. The GC content of the type genome is 38.03 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Blautia funamousia sp. nov.

Candidatus Blautia funamousia (NL. fem. n. *funamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900556555*. The type genome for the species is the GenBank assembly GCA_900556555.1. The GC content of the type genome is 40.78 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Blautia halucatica sp. nov.

Candidatus Blautia halucatica (NL. fem. n. *halucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900539145*. The type genome for the species is the GenBank assembly GCA_900755775.1. The GC content of the type genome is 38.67 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Blautia insenilenta sp. nov.

Candidatus Blautia insenilenta (NL. fem. n. *insenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900547685*. The type genome for the species is the GenBank assembly GCA_900547685.1. The GC content of the type genome is 37.2 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Blautia meridatica sp. nov.

Candidatus Blautia meridatica (NL. fem. n. *meridatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp000432195*. The type genome for the species is the GenBank assembly RS_GCF_013302185.1. The GC content of the type genome is 40.9 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Blautia mirabimonas sp. nov.

Candidatus Blautia mirabimonas (NL. fem. n. *mirabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp001304935*. The type genome for the species is the GenBank assembly RS_GCF_000765245.1. The GC content of the type genome is 46.7 % and the genome length is 6.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fecal sample".

Description of *Candidatus* Blautia petuletta sp. nov.

Candidatus Blautia petuletta (NL. fem. n. *petuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900555025*. The type genome for the species is the GenBank assembly GCA_900555025.1. The GC content of the type genome is 37.06 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Blautia refinentia sp. nov.

Candidatus Blautia refinentia (NL. fem. n. *refinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900753905*. The type genome for the species is the GenBank assembly GCA_900753905.1. The GC content of the type genome is 39.38 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Blautia secunifica sp. nov.

Candidatus Blautia secunifica (NL. fem. n. *secunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp003287895*. The type genome for the species is the GenBank assembly GCA_900550995.1. The GC content of the type genome is 43.12 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Blautia semoditica sp. nov.

Candidatus Blautia semoditica (NL. fem. n. *semoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp900543715*. The type genome for the species is the GenBank assembly GCA_900543715.1. The GC content of the type genome is 45.06 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Blautia solifibra sp. nov.

Candidatus Blautia solifibra (NL. fem. n. *solifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia sp002161285*. The type genome for the species is the GenBank assembly RS_GCF_002161645.1. The GC content of the type genome is 44.6 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Blautia buxanitoga sp. nov.

Candidatus Blautia buxanitoga (NL. fem. n. *buxanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900541345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541345.1. The GC content of the type genome is 41.26 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Blautia celamitas sp. nov.

Candidatus Blautia celamitas (NL. fem. n. *celamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900120195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902363925.1. The GC content of the type genome is 42.4 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Blautia ceracentia sp. nov.

Candidatus Blautia ceracentia (NL. fem. n. *ceracentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900756405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756405.1. The GC content of the type genome is 43.65 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Blautia cocoditas sp. nov.

Candidatus Blautia cocoditas (NL. fem. n. *cocoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900541985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900755575.1. The GC content of the type genome is 44.07 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Blautia colapatica sp. nov.

Candidatus Blautia colapatica (NL. fem. n. *colapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900066355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900066355.1. The GC content of the type genome is 42.51 % and the genome length is 3.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Blautia cucuriforma sp. nov.

Candidatus Blautia cucuriforma (NL. fem. n. *cucuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp003474435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902364455.1. The GC content of the type genome is 42.99 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Blautia curacago sp. nov.

Candidatus Blautia curacago (NL. fem. n. *curacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900066335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003461885.1. The GC content of the type genome is 43.9 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Blautia defetitrix sp. nov.

Candidatus Blautia defetitrix (NL. fem. n. *defetitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900066205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902362565.1. The GC content of the type genome is 43.93 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Blautia defunessa sp. nov.

Candidatus Blautia defunessa (NL. fem. n. *defunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900751995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900751995.1. The GC content of the type genome is 45.21 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Blautia dimacedo sp. nov.

Candidatus Blautia dimacedo (NL. fem. n. *dimacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp003480185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013301725.1. The GC content of the type genome is 41.21 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Blautia diminousia sp. nov.

Candidatus Blautia diminousia (NL. fem. n. *diminousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp003477525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902366905.1. The GC content of the type genome is 42.2 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Blautia epigrago sp. nov.

Candidatus Blautia epigrago (NL. fem. n. *epigrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900763175*. Although GTDB has assigned a genus name

with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900763175.1. The GC content of the type genome is 44.51 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Blautia fefelax sp. nov.

Candidatus Blautia fefelax (NL. fem. n. *fefelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900549015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900549015.1. The GC content of the type genome is 42.46 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Blautia fragligena sp. nov.

Candidatus Blautia fragligena (NL. fem. n. *fragligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900551075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900551075.1. The GC content of the type genome is 44.52 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Blautia fusifilenta sp. nov.

Candidatus Blautia fusifilenta (NL. fem. n. *fusifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900548245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900548245.1. The GC content of the type genome is 43.44 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Blautia gemebigena sp. nov.

Candidatus Blautia gemebigena (NL. fem. n. *gemebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp902782975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782975.1. The GC content of the type genome is 48.33 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Blautia humecatio sp. nov.

Candidatus Blautia humecatio (NL. fem. n. *humecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900764225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900764225.1. The GC content of the type genome is 44.89 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Blautia inambicula sp. nov.

Candidatus Blautia inambicula (NL. fem. n. *inambicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900540785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900540785.1. The GC content of the type genome is 42.04 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Blautia innabitica sp. nov.

Candidatus Blautia innabitica (NL. fem. n. *innabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900553515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900553515.1. The GC content of the type genome is 43.48 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Blautia intecibula sp. nov.

Candidatus Blautia intecibula (NL. fem. n. *intecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp902803215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902803215.1. The GC content of the type genome is 49.48 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Blautia invetivita sp. nov.

Candidatus Blautia invetivita (NL. fem. n. *invetivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900542045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900542045.1. The GC content of the type genome is 47.94 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Blautia licenatica sp. nov.

Candidatus Blautia licenatica (NL. fem. n. *licenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp000436615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013302245.1. The GC content of the type genome is 44.05 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Blautia momoritoga sp. nov.

Candidatus Blautia momoritoga (NL. fem. n. *momoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900551465*. Although GTDB has assigned a genus name

with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900551465.1. The GC content of the type genome is 43.05 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Blautia monimimonas sp. nov.

Candidatus Blautia monimimonas (NL. fem. n. *monimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900066145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013305115.1. The GC content of the type genome is 44.56 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Blautia monodigena sp. nov.

Candidatus Blautia monodigena (NL. fem. n. *monodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900316115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900316115.1. The GC content of the type genome is 44.22 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Blautia morigiforma sp. nov.

Candidatus Blautia morigiforma (NL. fem. n. *morigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp902783305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783305.1. The GC content of the type genome is 50.28 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Blautia octacimonas sp. nov.

Candidatus Blautia octacimonas (NL. fem. n. *octacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900551715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900551715.1. The GC content of the type genome is 42.0 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Blautia pudibessa sp. nov.

Candidatus Blautia pudibessa (NL. fem. n. *pudibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900547615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900756315.1. The GC content of the type genome is 42.86 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Blautia repepentia sp. nov.

Candidatus Blautia repepentia (NL. fem. n. *repepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp003471165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003471165.1. The GC content of the type genome is 41.02 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Blautia semimessa sp. nov.

Candidatus Blautia semimessa (NL. fem. n. *semimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp002159835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002159835.1. The GC content of the type genome is 45.03 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Blautia senipibra sp. nov.

Candidatus Blautia senipibra (NL. fem. n. *senipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp000285855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000285855.2. The GC content of the type genome is 39.18 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Blautia taxiliforma sp. nov.

Candidatus Blautia taxiliforma (NL. fem. n. *taxiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blautia_A sp900066505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900066505.1. The GC content of the type genome is 43.13 % and the genome length is 3.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Blochmannia algebitrix sp. nov.

Candidatus Blochmannia algebitrix (NL. fem. n. *algebitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blochmannia sp000973545*. The type genome for the species is the GenBank assembly RS_GCF_000973545.1. The GC content of the type genome is 27.36 % and the genome length is 0.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ant colony in branch".

Description of *Candidatus* Blochmannia indepitura sp. nov.

Candidatus Blochmannia indepitura (NL. fem. n. *indepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blochmannia sp000973505*. The type genome for the species is the

GenBank assembly RS_GCF_000973505.1. The GC content of the type genome is 29.08 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ant nest on rock".

Description of *Candidatus* Blochmannia inorditas sp. nov.

Candidatus Blochmannia inorditas (NL. fem. n. *inorditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Blochmannia sp009827135*. The type genome for the species is the GenBank assembly RS_GCF_009827135.1. The GC content of the type genome is 29.0 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Bombella ambifitio sp. nov.

Candidatus Bombella ambifitio (NL. fem. n. *ambifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bombella sp014048475*. The type genome for the species is the GenBank assembly RS_GCF_014048475.1. The GC content of the type genome is 55.33 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Bombella capabitia sp. nov.

Candidatus Bombella capabitia (NL. fem. n. *capabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bombella sp014048465*. The type genome for the species is the GenBank assembly RS_GCF_014048465.1. The GC content of the type genome is 60.43 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Bombella papilitura sp. nov.

Candidatus Bombella papilitura (NL. fem. n. *papilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bombella sp009725755*. The type genome for the species is the GenBank assembly RS_GCF_009725755.1. The GC content of the type genome is 52.91 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Bombilactobacillus exsanago sp. nov.

Candidatus Bombilactobacillus exsanago (NL. fem. n. *exsanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bombilactobacillus sp013385145*. The type genome for the species is the GenBank assembly RS_GCF_013385145.1. The GC content of the type genome is 39.98 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Bonifana appagiforma sp. nov.

Candidatus Bonifana appagiforma (NL. fem. n. *appagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1709 sp002317215*. The type genome for the species is the GenBank assembly GCA_002317215.1. The GC content of the type genome is 28.34 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Bonifana gen. nov.

Candidatus Bonifana (NL. fem. n. *Bonifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1709*. The type species for the genus is *Candidatus* Bonifana appagiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1709*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifanaceae.

Description of *Candidatus* Bonifanaceae fam. nov.

Candidatus Bonifanaceae (NL. fem. n. *Bonifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1709.* The type genus for the taxon is *Candidatus* Bonifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Bonifaria demogitas sp. nov.

Candidatus Bonifaria demogitas (NL. fem. n. *demogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-43-11 sp001820955*. The type genome for the species is the GenBank assembly GCA_001822505.1. The GC content of the type genome is 43.12 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bonifaria gen. nov.

Candidatus Bonifaria (NL. fem. n. *Bonifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-43-11*. The type species for the genus is *Candidatus* Bonifaria demogitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Bonifella bicubitrix sp. nov.

Candidatus Bonifella bicubitrix (NL. fem. n. *bicubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXKJ01 sp003669125*. The type genome for the species is the GenBank assembly GCA_009886015.1. The GC content of the type genome is 60.04 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Bonifella gen. nov.

Candidatus Bonifella (NL. fem. n. *Bonifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXKJ01*. The type species for the genus is *Candidatus* Bonifella bicubitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonifella defasessa sp. nov.

Candidatus Bonifella defasessa (NL. fem. n. *defasessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXKJ01 sp005778115*. The type genome for the species is the GenBank assembly GCA_005798485.1. The GC content of the type genome is 59.48 % and the genome length is 7.52 Mbp.

Description of *Candidatus* Bonifella nutabigena sp. nov.

Candidatus Bonifella nutabigena (NL. fem. n. *nutabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXKJ01 sp005798445*. The type genome for the species is the GenBank assembly GCA_005779075.1. The GC content of the type genome is 59.43 % and the genome length is 7.87 Mbp.

Description of *Candidatus* Bonifida lucubax sp. nov.

Candidatus Bonifida lucubax (NL. fem. n. *lucubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWP01 sp014360855*. The type genome for the species is the GenBank assembly GCA_014360855.1. The GC content of the type genome is 64.67 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Bonifida gen. nov.

Candidatus Bonifida (NL. fem. n. *Bonifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIWP01*. The type species for the genus is *Candidatus* Bonifida lucubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIWP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifidaceae.

Description of *Candidatus* Bonifidaceae fam. nov.

Candidatus Bonifidaceae (NL. fem. n. *Bonifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIWP01.* The type genus for the taxon is *Candidatus* Bonifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogosales.

Description of *Candidatus* Bonifosa conamimonia sp. nov.

Candidatus Bonifosa conamimonia (NL. fem. n. *conamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp007123465*. The type genome for the species is the GenBank assembly GCA_007123465.1. The GC content of the type genome is 60.06 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Bonifosa gen. nov.

Candidatus Bonifosa (NL. fem. n. *Bonifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWMO01*. The type species for the genus is *Candidatus* Bonifosa conamimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWMO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifosaceae.

Description of *Candidatus* Bonifosaceae fam. nov.

Candidatus Bonifosaceae (NL. fem. n. *Bonifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWMO01.* The type genus for the taxon is *Candidatus* Bonifosa .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_C*.

Description of *Candidatus* Bonifosa eclecugo sp. nov.

Candidatus Bonifosa eclecugo (NL. fem. n. *eclecugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp007693945*. The type genome for the species is the GenBank assembly GCA_007693945.1. The GC content of the type genome is 61.17 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Bonifosa excamago sp. nov.

Candidatus Bonifosa excamago (NL. fem. n. *excamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp007693485*. The type genome for the species is the GenBank assembly GCA_007693485.1. The GC content of the type genome is 61.31 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Bonifosa ossuciforma sp. nov.

Candidatus Bonifosa ossuciforma (NL. fem. n. *ossuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp003558175*. The type genome for the species is the GenBank assembly GCA_003558175.1. The GC content of the type genome is 61.16 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Bonifosa subadilega sp. nov.

Candidatus Bonifosa subadilega (NL. fem. n. *subadilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp007130025*. The type genome for the species is the GenBank assembly GCA_007130025.1. The GC content of the type genome is 61.47 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Bonifosa tresvibula sp. nov.

Candidatus Bonifosa tresvibula (NL. fem. n. *tresvibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMO01 sp007693325*. The type genome for the species is the GenBank assembly GCA_007693325.1. The GC content of the type genome is 60.05 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Bonifula relapigena sp. nov.

Candidatus Bonifula relapigena (NL. fem. n. *relapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZV01 sp007127165*. The type genome for the species is the GenBank assembly GCA_007132125.1. The GC content of the type genome is 64.46 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Bonifula gen. nov.

Candidatus Bonifula (NL. fem. n. *Bonifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZV01*. The type species for the genus is *Candidatus* Bonifula relapigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonitana inmodilega sp. nov.

Candidatus Bonitana inmodilega (NL. fem. n. *inmodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-G13 sp003641555*. The type genome for the species is the GenBank assembly GCA_003641555.1. The GC content of the type genome is 39.14 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Bonitana gen. nov.

Candidatus Bonitana (NL. fem. n. *Bonitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-G13*. The type species for the genus is *Candidatus* Bonitana inmodilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family

B3-G13. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonitanaceae.

Description of *Candidatus* Bonitanaceae fam. nov.

Candidatus Bonitanaceae (NL. fem. n. *Bonitanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-G13.* The type genus for the taxon is *Candidatus* Bonitana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B3-G13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bonitanales.

Description of *Candidatus* Bonitanales ord. nov.

Candidatus Bonitanales (NL. fem. n. *Bonitanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-G13.* The type genus for the taxon is *Candidatus* Bonitana .

According to the GTDB R06-RS202, this order belongs to the class *Thermotogae*.

Description of *Candidatus* Bonitaria admuritas sp. nov.

Candidatus Bonitaria admuritas (NL. fem. n. *admuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900766975*. The type genome for the species is the GenBank assembly RS_GCF_900766975.1. The GC content of the type genome is 49.72 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Bonitaria gen. nov.

Candidatus Bonitaria (NL. fem. n. *Bonitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-485*. The type species for the genus is *Candidatus* Bonitaria admuritas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonitaria adsusago sp. nov.

Candidatus Bonitaria adsusago (NL. fem. n. *adsusago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp004552395*. The type genome for the species is the GenBank assembly GCA_004552395.1. The GC content of the type genome is 56.59 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Bonitaria aggesentia sp. nov.

Candidatus Bonitaria aggesentia (NL. fem. n. *aggesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900760815*. The type genome for the species is the GenBank assembly RS_GCF_900760815.1. The GC content of the type genome is 53.68 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Bonitaria algifitudo sp. nov.

Candidatus Bonitaria algifitudo (NL. fem. n. *algifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900556595*. The type genome for the species is the GenBank assembly GCA_900556595.1. The GC content of the type genome is 53.54 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Bonitaria alismibra sp. nov.

Candidatus Bonitaria alismibra (NL. fem. n. *alismibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900767075*. The type genome for the species is the GenBank assembly RS_GCF_900767075.1. The GC content of the type genome is 49.67 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Bonitaria arcifugo sp. nov.

Candidatus Bonitaria arcifugo (NL. fem. n. *arcifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900552315*. The type genome for the species is the GenBank assembly GCA_900552315.1. The GC content of the type genome is 56.73 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Bonitaria atricessa sp. nov.

Candidatus Bonitaria atricessa (NL. fem. n. *atricessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp009775375*. The type genome for the species is the GenBank assembly GCA_009775375.1. The GC content of the type genome is 48.82 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Bonitaria attubitura sp. nov.

Candidatus Bonitaria attubitura (NL. fem. n. *attubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp009177205*. The type genome for the species is the GenBank assembly GCA_009177205.1. The GC content of the type genome is 41.33 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Bonitaria binocigena sp. nov.

Candidatus Bonitaria binocigena (NL. fem. n. *binocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900554345*. The type genome for the species is the GenBank assembly RS_GCF_900755195.1. The GC content of the type genome is 56.88 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Bonitaria bonifousia sp. nov.

Candidatus Bonitaria bonifousia (NL. fem. n. *bonifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-485 sp900549375*. The type genome for the species is the GenBank assembly GCA_900549375.1. The GC content of the type genome is 50.85 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Bonitaria caduricella sp. nov.

Candidatus Bonitaria caduricella (NL. fem. n. *caduricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900547755*. The type genome for the species is the GenBank assembly GCA_900547755.1. The GC content of the type genome is 53.13 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Bonitaria camiledo sp. nov.

Candidatus Bonitaria camiledo (NL. fem. n. *camiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900541835*. The type genome for the species is the GenBank assembly GCA_900541835.1. The GC content of the type genome is 60.54 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Bonitaria catecilega sp. nov.

Candidatus Bonitaria catecilega (NL. fem. n. *catecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900555915*. The type genome for the species is the GenBank assembly GCA_900555915.1. The GC content of the type genome is 53.54 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Bonitaria catocax sp. nov.

Candidatus Bonitaria catocax (NL. fem. n. *catocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900550645*. The type genome for the species is the GenBank assembly GCA_900550645.1. The GC content of the type genome is 54.57 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Bonitaria cerucitura sp. nov.

Candidatus Bonitaria cerucitura (NL. fem. n. *cerucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900542185*. The type genome for the species is the GenBank assembly GCA_900542185.1. The GC content of the type genome is 52.65 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Bonitaria conigastra sp. nov.

Candidatus Bonitaria conigastra (NL. fem. n. *conigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002491165*. The type genome for the species is the GenBank assembly GCA_002491165.1. The GC content of the type genome is 55.63 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Bonitaria decapentia sp. nov.

Candidatus Bonitaria decapentia (NL. fem. n. *decapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900761855*. The type genome for the species is the GenBank assembly RS_GCF_900761855.1. The GC content of the type genome is 50.45 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Bonitaria decucivita sp. nov.

Candidatus Bonitaria decucivita (NL. fem. n. *decucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900760735*. The type genome for the species is the GenBank assembly RS_GCF_900752175.1. The GC content of the type genome is 53.15 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Bonitaria dicimessa sp. nov.

Candidatus Bonitaria dicimessa (NL. fem. n. *dicimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900321585*. The type genome for the species is the GenBank assembly GCA_004556305.1. The GC content of the type genome is 55.75 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Bonitaria duricentia sp. nov.

Candidatus Bonitaria duricentia (NL. fem. n. *duricentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp003979075*. The type genome for the species is the GenBank assembly GCA_003979075.1. The GC content of the type genome is 50.71 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Bonitaria feculitio sp. nov.

Candidatus Bonitaria feculitio (NL. fem. n. *feculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002361155*. The type genome for the species is the GenBank assembly GCA_002491555.1. The GC content of the type genome is 53.19 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Bonitaria funamentia sp. nov.

Candidatus Bonitaria funamentia (NL. fem. n. *funamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900554845*. The type genome for the species is the GenBank assembly GCA_900554845.1. The GC content of the type genome is 49.5 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Bonitaria habacibra sp. nov.

Candidatus Bonitaria habacibra (NL. fem. n. *habacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-485 sp900759795*. The type genome for the species is the GenBank assembly RS_GCF_900759795.1. The GC content of the type genome is 54.4 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Bonitaria inmenessa sp. nov.

Candidatus Bonitaria inmenessa (NL. fem. n. *inmenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp009775355*. The type genome for the species is the GenBank assembly GCA_009775355.1. The GC content of the type genome is 52.31 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Bonitaria licenivita sp. nov.

Candidatus Bonitaria licenivita (NL. fem. n. *licenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002362485*. The type genome for the species is the GenBank assembly GCA_002493475.1. The GC content of the type genome is 48.06 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Bonitaria locelentia sp. nov.

Candidatus Bonitaria locelentia (NL. fem. n. *locelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp001701105*. The type genome for the species is the GenBank assembly GCA_002477225.1. The GC content of the type genome is 47.23 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Bonitaria locupibula sp. nov.

Candidatus Bonitaria locupibula (NL. fem. n. *locupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp001701075*. The type genome for the species is the GenBank assembly GCA_002478515.1. The GC content of the type genome is 44.56 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Bonitaria nosocitudo sp. nov.

Candidatus Bonitaria nosocitudo (NL. fem. n. *nosocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp009775365*. The type genome for the species is the GenBank assembly GCA_009775365.1. The GC content of the type genome is 47.11 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Bonitaria resuratica sp. nov.

Candidatus Bonitaria resuratica (NL. fem. n. *resuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp004553095*. The type genome for the species is the GenBank assembly GCA_004553095.1. The GC content of the type genome is 50.61 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Bonitaria resurisca sp. nov.

Candidatus Bonitaria resurisca (NL. fem. n. *resurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp900760885*. The type genome for the species is the GenBank assembly RS_GCF_900760885.1. The GC content of the type genome is 56.54 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Bonitaria rorulago sp. nov.

Candidatus Bonitaria rorulago (NL. fem. n. *rorulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002491945*. The type genome for the species is the GenBank assembly GCA_002494005.1. The GC content of the type genome is 52.93 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Bonitaria rosacitoga sp. nov.

Candidatus Bonitaria rosacitoga (NL. fem. n. *rosacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002404675*. The type genome for the species is the GenBank assembly GCA_002432365.1. The GC content of the type genome is 55.93 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Bonitaria secunedo sp. nov.

Candidatus Bonitaria secunedo (NL. fem. n. *secunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp001701295*. The type genome for the species is the GenBank assembly GCA_001701295.1. The GC content of the type genome is 48.25 % and the genome length is 2.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Bonitaria subabitia sp. nov.

Candidatus Bonitaria subabitia (NL. fem. n. *subabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002493045*. The type genome for the species is the GenBank assembly GCA_002361835.1. The GC content of the type genome is 46.76 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bonitaria suboficula sp. nov.

Candidatus Bonitaria suboficula (NL. fem. n. *suboficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002361235*. The type genome for the species is the GenBank assembly GCA_002362615.1. The GC content of the type genome is 55.31 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Bonitaria vecorentia sp. nov.

Candidatus Bonitaria vecorentia (NL. fem. n. *vecorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002361215*. The type genome for the species is the GenBank assembly GCA_002361215.1. The GC content of the type genome is 52.05 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Bonitaria verecousia sp. nov.

Candidatus Bonitaria verecousia (NL. fem. n. *verecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp000437495*. The type genome for the species is the GenBank assembly GCA_900539245.1. The GC content of the type genome is 53.0 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Bonitaria viripivita sp. nov.

Candidatus Bonitaria viripivita (NL. fem. n. *viripivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-485 sp002493515*. The type genome for the species is the GenBank assembly GCA_002493515.1. The GC content of the type genome is 53.79 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Bonitella cuferessa sp. nov.

Candidatus Bonitella cuferessa (NL. fem. n. *cuferessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4207 sp002716825*. The type genome for the species is the GenBank assembly GCA_002379495.1. The GC content of the type genome is 42.23 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Bonitella gen. nov.

Candidatus Bonitella (NL. fem. n. *Bonitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4207*. The type species for the genus is *Candidatus* Bonitella cuferessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonitella vacilago sp. nov.

Candidatus Bonitella vacilago (NL. fem. n. *vacilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4207 sp002787775*. The type genome for the species is the GenBank assembly GCA_002787775.1. The GC content of the type genome is 37.89 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Bonitia arbavimonas sp. nov.

Candidatus Bonitia arbavimonas (NL. fem. n. *arbavimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJM01 sp013298895*. The type genome for the species is the GenBank assembly GCA_013298895.1. The GC content of the type genome is 31.86 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Bonitia gen. nov.

Candidatus Bonitia (NL. fem. n. *Bonitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJM01*. The type species for the genus is *Candidatus* Bonitia arbavimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Bonitia didacatica sp. nov.

Candidatus Bonitia didacatica (NL. fem. n. *didacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJM01 sp903901345*. The type genome for the species is the GenBank assembly GCA_903873465.1. The GC content of the type genome is 31.22 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Bonitia minagimonia sp. nov.

Candidatus Bonitia minagimonia (NL. fem. n. *minagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJM01 sp903888395*. The type genome for the species is the GenBank assembly GCA_903888395.1. The GC content of the type genome is 31.29 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Bonitida recocatica sp. nov.

Candidatus Bonitida recocatica (NL. fem. n. *recocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1494 sp002706365*. The type genome for the species is the GenBank assembly GCA_002325045.1. The GC content of the type genome is 40.57 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Bonitida gen. nov.

Candidatus Bonitida (NL. fem. n. *Bonitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1494*. The type species for the genus is *Candidatus* Bonitida recocatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonitosa adbelago sp. nov.

Candidatus Bonitosa adbelago (NL. fem. n. *adbelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2913 sp900770895*. The type genome for the species is the GenBank assembly GCA_900770895.1. The GC content of the type genome is 56.74 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Bonitosa gen. nov.

Candidatus Bonitosa (NL. fem. n. *Bonitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2913*. The type species for the genus is *Candidatus* Bonitosa adbelago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bonitosa cohuricula sp. nov.

Candidatus Bonitosa cohuricula (NL. fem. n. *cohuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2913 sp002349925*. The type genome for the species is the GenBank assembly GCA_902777195.1. The GC content of the type genome is 56.54 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Bonitula hirunatica sp. nov.

Candidatus Bonitula hirunatica (NL. fem. n. *hirunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1502 sp900552365*. The type genome for the species is the GenBank assembly GCA_900552365.1. The GC content of the type genome is 57.92 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Bonitula gen. nov.

Candidatus Bonitula (NL. fem. n. *Bonitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1502*. The type species for the genus is *Candidatus* Bonitula hirunatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bordetella direcitrix sp. nov.

Candidatus Bordetella direcitrix (NL. fem. n. *direcitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella sp002261475*. The type genome for the species is the

GenBank assembly RS_GCF_002261475.1. The GC content of the type genome is 67.22 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Bordetella ephipitica sp. nov.

Candidatus Bordetella ephipitica (NL. fem. n. *ephipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella sp002261355*. The type genome for the species is the GenBank assembly RS_GCF_002261355.1. The GC content of the type genome is 64.7 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Bordetella relenicula sp. nov.

Candidatus Bordetella relenicula (NL. fem. n. *relenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella sp002261335*. The type genome for the species is the GenBank assembly RS_GCF_002261335.1. The GC content of the type genome is 68.66 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Bordetella faticessa sp. nov.

Candidatus Bordetella faticessa (NL. fem. n. *faticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_A sp002261185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002261295.1. The GC content of the type genome is 59.63 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Bordetella luxurentia sp. nov.

Candidatus Bordetella luxurentia (NL. fem. n. *luxurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_A sp002261345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_000518965.1. The GC content of the type genome is 68.49 % and the genome length is 5.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Bordetella peridilenta sp. nov.

Candidatus Bordetella peridilenta (NL. fem. n. *peridilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_A sp009763255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009763235.1. The GC content of the type genome is 60.49 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Bordetella rarefatio sp. nov.

Candidatus Bordetella rarefatio (NL. fem. n. *rarefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_A sp002261265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002261415.1. The GC content of the type genome is 65.45 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Bordetella adambilenta sp. nov.

Candidatus Bordetella adambilenta (NL. fem. n. *adambilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_B sp002119665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002119665.1. The GC content of the type genome is 67.54 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Bordetella dilicifica sp. nov.

Candidatus Bordetella dilicifica (NL. fem. n. *dilicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_B sp007679965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007679965.1. The GC content of the type genome is 68.5 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Bordetella obfiritio sp. nov.

Candidatus Bordetella obfiritio (NL. fem. n. *obfiritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_B sp000382185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000382185.1. The GC content of the type genome is 63.46 % and the genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment".

Description of *Candidatus* Bordetella antimastra sp. nov.

Candidatus Bordetella antimastra (NL. fem. n. *antimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002261425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002261425.1. The GC content of the type genome is 66.62 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Bordetella armigetta sp. nov.

Candidatus Bordetella armigetta (NL. fem. n. *armigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp001433395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_001433395.1. The GC content of the type genome is 64.81 % and the genome length is 6.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Bordetella bifarilega sp. nov.

Candidatus Bordetella bifarilega (NL. fem. n. *bifarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002261225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002261225.1. The GC content of the type genome is 67.24 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Bordetella cicilibra sp. nov.

Candidatus Bordetella cicilibra (NL. fem. n. *cicilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002119725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002119725.1. The GC content of the type genome is 66.01 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Bordetella depetimonas sp. nov.

Candidatus Bordetella depetimonas (NL. fem. n. *depetimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp001704295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001704295.1. The GC content of the type genome is 66.12 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Bordetella inmutedo sp. nov.

Candidatus Bordetella inmutedo (NL. fem. n. *inmutedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002261215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002261215.1. The GC content of the type genome is 65.73 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Bordetella malivitia sp. nov.

Candidatus Bordetella malivitia (NL. fem. n. *malivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002209485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002209495.1. The GC content of the type genome is 64.84 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Bordetella melopibula sp. nov.

Candidatus Bordetella melopibula (NL. fem. n. *melopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bordetella_C sp002119685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002119685.1. The GC content of the type genome is 66.24 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Borkfalkia inardiforma sp. nov.

Candidatus Borkfalkia inardiforma (NL. fem. n. *inardiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Borkfalkia sp900557285*. The type genome for the species is the GenBank assembly GCA_900557285.1. The GC content of the type genome is 50.14 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Borkfalkia manupedo sp. nov.

Candidatus Borkfalkia manupedo (NL. fem. n. *manupedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Borkfalkia sp900761675*. The type genome for the species is the GenBank assembly RS_GCF_900761675.1. The GC content of the type genome is 53.89 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Borkfalkia subacago sp. nov.

Candidatus Borkfalkia subacago (NL. fem. n. *subacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Borkfalkia sp003343765*. The type genome for the species is the GenBank assembly RS_GCF_900761695.1. The GC content of the type genome is 47.67 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Borkfalkia vicatitio sp. nov.

Candidatus Borkfalkia vicatitio (NL. fem. n. *vicatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Borkfalkia sp900761665*. The type genome for the species is the GenBank assembly RS_GCF_900761665.1. The GC content of the type genome is 58.86 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Borrelia adrenitica sp. nov.

Candidatus Borrelia adrenitica (NL. fem. n. *adrenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Borrelia sp014084025*. The type genome for the species is the GenBank assembly RS_GCF_014084025.1. The GC content of the type genome is 27.86 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Bosea abhinigena sp. nov.

Candidatus Bosea abhinigena (NL. fem. n. *abhinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001429505*. The type genome for the species is the GenBank assembly RS_GCF_001429505.1. The GC content of the type genome is 66.41 % and the genome length is 6.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Bosea adambifica sp. nov.

Candidatus Bosea adambifica (NL. fem. n. *adambifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900473415*. The type genome for the species is the GenBank assembly RS_GCF_900473415.1. The GC content of the type genome is 66.08 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Bosea adpanastra sp. nov.

Candidatus Bosea adpanastra (NL. fem. n. *adpanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001429395*. The type genome for the species is the GenBank assembly RS_GCF_001429395.1. The GC content of the type genome is 66.74 % and the genome length is 5.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Bosea attelentia sp. nov.

Candidatus Bosea attelentia (NL. fem. n. *attelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp003241815*. The type genome for the species is the GenBank assembly GCA_003241815.1. The GC content of the type genome is 65.71 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Bosea bifisivita sp. nov.

Candidatus Bosea bifisivita (NL. fem. n. *bifisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001556125*. The type genome for the species is the GenBank

assembly RS_GCF_001556125.1. The GC content of the type genome is 67.65 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Bosea biverisca sp. nov.

Candidatus Bosea biverisca (NL. fem. n. *biverisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp004123845*. The type genome for the species is the GenBank assembly RS_GCF_004123845.1. The GC content of the type genome is 66.06 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Bosea bucolicella sp. nov.

Candidatus Bosea bucolicella (NL. fem. n. *bucolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001426225*. The type genome for the species is the GenBank assembly RS_GCF_001426225.1. The GC content of the type genome is 68.18 % and the genome length is 4.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Bosea catagitrix sp. nov.

Candidatus Bosea catagitrix (NL. fem. n. *catagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp003208615*. The type genome for the species is the GenBank assembly RS_GCF_003208615.1. The GC content of the type genome is 66.3 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Bosea categatica sp. nov.

Candidatus Bosea categatica (NL. fem. n. *categatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900113835*. The type genome for the species is the GenBank assembly RS_GCF_900113835.1. The GC content of the type genome is 65.33 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Bosea conubitudo sp. nov.

Candidatus Bosea conubitudo (NL. fem. n. *conubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp002917105*. The type genome for the species is the GenBank assembly RS_GCF_002917105.1. The GC content of the type genome is 65.84 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Bosea cosigicella sp. nov.

Candidatus Bosea cosigicella (NL. fem. n. *cosigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp003952665*. The type genome for the species is the GenBank assembly RS_GCF_004123895.1. The GC content of the type genome is 65.96 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Bosea defanousia sp. nov.

Candidatus Bosea defanousia (NL. fem. n. *defanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900112185*. The type genome for the species is the GenBank assembly RS_GCF_900112185.1. The GC content of the type genome is 66.62 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Bosea dehisago sp. nov.

Candidatus Bosea dehisago (NL. fem. n. *dehisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp000735605*. The type genome for the species is the GenBank assembly RS_GCF_000735605.1. The GC content of the type genome is 64.95 % and the genome length is 6.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cave surface layer".

Description of *Candidatus* Bosea denunatica sp. nov.

Candidatus Bosea denunatica (NL. fem. n. *denunatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp008253865*. The type genome for the species is the GenBank assembly RS_GCF_008253865.1. The GC content of the type genome is 65.42 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Bosea ducilicula sp. nov.

Candidatus Bosea ducilicula (NL. fem. n. *ducilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900156025*. The type genome for the species is the GenBank assembly GCA_004297045.1. The GC content of the type genome is 66.39 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Bosea effinibula sp. nov.

Candidatus Bosea effinibula (NL. fem. n. *effinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp002220095*. The type genome for the species is the GenBank assembly RS_GCF_002220095.1. The GC content of the type genome is 65.79 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Bosea feculedo sp. nov.

Candidatus Bosea feculedo (NL. fem. n. *feculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001713455*. The type genome for the species is the GenBank assembly GCA_013823585.1. The GC content of the type genome is 68.96 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Bosea fumifessa sp. nov.

Candidatus Bosea fumifessa (NL. fem. n. *fumifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001562255*. The type genome for the species is the GenBank assembly RS_GCF_001562255.1. The GC content of the type genome is 65.16 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Bosea futatatica sp. nov.

Candidatus Bosea futatatica (NL. fem. n. *futatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp003046175*. The type genome for the species is the GenBank assembly RS_GCF_003046175.1. The GC content of the type genome is 66.58 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Bosea inexpitio sp. nov.

Candidatus Bosea inexpitio (NL. fem. n. *inexpitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001295925*. The type genome for the species is the GenBank assembly RS_GCF_001295925.1. The GC content of the type genome is 66.09 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Bosea inmorousia sp. nov.

Candidatus Bosea inmorousia (NL. fem. n. *inmorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900470775*. The type genome for the species is the GenBank assembly GCA_900470775.1. The GC content of the type genome is 65.94 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Bosea inrepago sp. nov.

Candidatus Bosea inrepago (NL. fem. n. *inrepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001556025*. The type genome for the species is the GenBank assembly RS_GCF_001556025.1. The GC content of the type genome is 66.51 % and the

genome length is 5.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Bosea intoritura sp. nov.

Candidatus Bosea intoritura (NL. fem. n. *intoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900185715*. The type genome for the species is the GenBank assembly RS_GCF_900185715.1. The GC content of the type genome is 68.8 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Bosea molecibula sp. nov.

Candidatus Bosea molecibula (NL. fem. n. *molecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp902506165*. The type genome for the species is the GenBank assembly RS_GCF_902506165.1. The GC content of the type genome is 66.6 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Bosea molecugo sp. nov.

Candidatus Bosea molecugo (NL. fem. n. *molecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900470095*. The type genome for the species is the GenBank assembly RS_GCF_900470095.1. The GC content of the type genome is 64.8 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Bosea murelax sp. nov.

Candidatus Bosea murelax (NL. fem. n. *murelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp900466745*. The type genome for the species is the GenBank assembly GCA_900471415.1. The GC content of the type genome is 68.64 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Bosea negotax sp. nov.

Candidatus Bosea negotax (NL. fem. n. *negotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp002279705*. The type genome for the species is the GenBank assembly GCA_002280235.1. The GC content of the type genome is 68.13 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Bosea negotessa sp. nov.

Candidatus Bosea negotessa (NL. fem. n. *negotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp005502805*. The type genome for the species is the GenBank assembly RS_GCF_005502805.1. The GC content of the type genome is 66.51 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Bosea paracatica sp. nov.

Candidatus Bosea paracatica (NL. fem. n. *paracatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp004144595*. The type genome for the species is the GenBank assembly GCA_004144595.1. The GC content of the type genome is 66.42 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Bosea rarefessa sp. nov.

Candidatus Bosea rarefessa (NL. fem. n. *rarefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp003248805*. The type genome for the species is the GenBank assembly GCA_003248805.1. The GC content of the type genome is 68.39 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Bosea relenago sp. nov.

Candidatus Bosea relenago (NL. fem. n. *relenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001748145*. The type genome for the species is the GenBank assembly RS_GCF_001748145.1. The GC content of the type genome is 64.77 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Bosea resuratio sp. nov.

Candidatus Bosea resuratio (NL. fem. n. *resuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001509835*. The type genome for the species is the GenBank assembly RS_GCF_001509835.1. The GC content of the type genome is 66.84 % and the genome length is 6.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rock".

Description of *Candidatus* Bosea rutabatica sp. nov.

Candidatus Bosea rutabatica (NL. fem. n. *rutabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp001898115*. The type genome for the species is the GenBank assembly GCA_001898115.1. The GC content of the type genome is 67.19 % and the genome length is 4.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Bosea scellibra sp. nov.

Candidatus Bosea scellibra (NL. fem. n. *scellibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp013823325*. The type genome for the species is the GenBank assembly GCA_013823325.1. The GC content of the type genome is 66.98 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Bosea senacago sp. nov.

Candidatus Bosea senacago (NL. fem. n. *senacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bosea sp011764485*. The type genome for the species is the GenBank assembly RS_GCF_011764485.1. The GC content of the type genome is 66.22 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Bosea susicibra sp. nov.

Candidatus Bosea susicibra (NL. fem. n. *susicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bosea sp004341515*. The type genome for the species is the GenBank assembly RS_GCF_004341515.1. The GC content of the type genome is 66.15 % and the genome length is 7.63 Mbp.

Description of *Candidatus* Boseongicola colimicula sp. nov.

Candidatus Boseongicola colimicula (NL. fem. n. *colimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Boseongicola sp013042895*. The type genome for the species is the GenBank assembly GCA_013042895.1. The GC content of the type genome is 56.34 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Boseongicola encomentia sp. nov.

Candidatus Boseongicola encomentia (NL. fem. n. *encomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Boseongicola sp013042105*. The type genome for the species is the GenBank assembly GCA_013042105.1. The GC content of the type genome is 58.07 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Boseongicola luxuriforma sp. nov.

Candidatus Boseongicola luxuriforma (NL. fem. n. *luxuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Boseongicola sp014075275*. The type genome for the species is the GenBank assembly GCA_011087975.1. The GC content of the type genome is 55.27 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Botryobacter pedepitica sp. nov.

Candidatus Botryobacter pedepitica (NL. fem. n. *pedepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Botryobacter sp008017455*. The type genome for the species is the GenBank assembly RS_GCF_008017455.1. The GC content of the type genome is 47.08 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Bovicana acricago sp. nov.

Candidatus Bovicana acricago (NL. fem. n. *acricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp902571315*. The type genome for the species is the GenBank assembly RS_GCF_902571315.1. The GC content of the type genome is 28.77 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Bovicana gen. nov.

Candidatus Bovicana (NL. fem. n. *Bovicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED62*. The type species for the genus is *Candidatus* Bovicana acricago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Bovicana bacifigena sp. nov.

Candidatus Bovicana bacifigena (NL. fem. n. *bacifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp902615805*. The type genome for the species is the GenBank assembly RS_GCF_902615805.1. The GC content of the type genome is 28.65 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Bovicana desulatica sp. nov.

Candidatus Bovicana desulatica (NL. fem. n. *desulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp002170595*. The type genome for the species is the GenBank assembly GCA_002170595.1. The GC content of the type genome is 28.09 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Bovicana obtecitura sp. nov.

Candidatus Bovicana obtecitura (NL. fem. n. *obtecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp902614225*. The type genome for the species is the GenBank assembly RS_GCF_902614225.1. The GC content of the type genome is 28.49 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Bovicana ossaredo sp. nov.

Candidatus Bovicana ossaredo (NL. fem. n. *ossaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp902527765*. The type genome for the species is the GenBank assembly RS_GCF_902527765.1. The GC content of the type genome is 28.74 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Bovicana sacomessa sp. nov.

Candidatus Bovicana sacomessa (NL. fem. n. *sacomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED62 sp902547175*. The type genome for the species is the GenBank assembly RS_GCF_902547175.1. The GC content of the type genome is 28.41 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Bovicaria monumitura sp. nov.

Candidatus Bovicaria monumitura (NL. fem. n. *monumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG521 sp900319675*. The type genome for the species is the GenBank assembly GCA_902787495.1. The GC content of the type genome is 45.97 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Bovicaria gen. nov.

Candidatus Bovicaria (NL. fem. n. *Bovicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG521*. The type species for the genus is *Candidatus* Bovicaria monumitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bovicaria scaccicula sp. nov.

Candidatus Bovicaria scaccicula (NL. fem. n. *scaccicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG521 sp902795525*. The type genome for the species is the GenBank assembly GCA_902795525.1. The GC content of the type genome is 34.56 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Bovicella ecnepimonia sp. nov.

Candidatus Bovicella ecnepimonia (NL. fem. n. *ecnepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYL01 sp009692825*. The type genome for the species is the GenBank assembly GCA_009692825.1. The GC content of the type genome is 50.76 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Bovicella gen. nov.

Candidatus Bovicella (NL. fem. n. *Bovicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYL01*. The type species for the genus is *Candidatus* Bovicella ecnepimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bovicellaceae.

Description of *Candidatus* Bovicellaceae fam. nov.

Candidatus Bovicellaceae (NL. fem. n. *Bovicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYL01.* The type genus for the taxon is *Candidatus* Bovicella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHYB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucelosales.

Description of *Candidatus* Bovicia cilibatica sp. nov.

Candidatus Bovicia cilibatica (NL. fem. n. *cilibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2810 sp002351705*. The type genome for the species is the GenBank assembly GCA_902760495.1. The GC content of the type genome is 56.87 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Bovicia gen. nov.

Candidatus Bovicia (NL. fem. n. *Bovicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2810*. The type species for the genus is *Candidatus* Bovicia cilibatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bovicia vavasitrix sp. nov.

Candidatus Bovicia vavasitrix (NL. fem. n. *vavasitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2810 sp900317945*. The type genome for the species is the

GenBank assembly GCA_002349785.1. The GC content of the type genome is 55.83 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Bovicida rumifica sp. nov.

Candidatus Bovicida rumifica (NL. fem. n. *rumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-78 sp002084875*. The type genome for the species is the GenBank assembly GCA_002084875.1. The GC content of the type genome is 39.74 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Bovicida gen. nov.

Candidatus Bovicida (NL. fem. n. *Bovicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-78*. The type species for the genus is *Candidatus* Bovicida rumifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4572-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bovicidaceae.

Description of *Candidatus* Bovicidaceae fam. nov.

Candidatus Bovicidaceae (NL. fem. n. *Bovicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-78.* The type genus for the taxon is *Candidatus* Bovicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *4572-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bovicidales.

Description of *Candidatus* Bovicidales ord. nov.

Candidatus Bovicidales (NL. fem. n. *Bovicidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-78.* The type genus for the taxon is *Candidatus* Bovicida .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Bovicosa telefimonia sp. nov.

Candidatus Bovicosa telefimonia (NL. fem. n. *telefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXIK01 sp005772855*. The type genome for the species is the GenBank assembly GCA_005772855.1. The GC content of the type genome is 61.24 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Bovicosa gen. nov.

Candidatus Bovicosa (NL. fem. n. *Bovicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXIK01*. The type species for the genus is *Candidatus* Bovicosa telefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXIK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bovicosaceae.

Description of *Candidatus* Bovicosaceae fam. nov.

Candidatus Bovicosaceae (NL. fem. n. *Bovicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXIK01.* The type genus for the taxon is *Candidatus* Bovicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decomariales.

Description of *Candidatus* Bovicula paraletta sp. nov.

Candidatus Bovicula paraletta (NL. fem. n. *paraletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSQ01 sp012033195*. The type genome for the species is the

GenBank assembly GCA_012031155.1. The GC content of the type genome is 58.17 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Bovicula gen. nov.

Candidatus Bovicula (NL. fem. n. *Bovicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSQ01*. The type species for the genus is *Candidatus* Bovicula paraletta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Brabrana acontivita sp. nov.

Candidatus Brabrana acontivita (NL. fem. n. *acontivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-178 sp003229755*. The type genome for the species is the GenBank assembly GCA_003229755.1. The GC content of the type genome is 51.36 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Brabrana gen. nov.

Candidatus Brabrana (NL. fem. n. *Brabrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-178*. The type species for the genus is *Candidatus* Brabrana acontivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapellaceae.

Description of *Candidatus* Brabria cerevifica sp. nov.

Candidatus Brabria cerevifica (NL. fem. n. *cerevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWB01 sp011373805*. The type genome for the species is the GenBank assembly GCA_011373805.1. The GC content of the type genome is 37.58 %

and the genome length is 0.5 Mbp.

Description of *Candidatus* Brabria gen. nov.

Candidatus Brabria (NL. fem. n. *Brabria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWB01*. The type species for the genus is *Candidatus* Brabria cerevifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9983*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifosaceae.

Description of *Candidatus* Brabrida adhositura sp. nov.

Candidatus Brabrida adhositura (NL. fem. n. *adhositura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJI01 sp009782825*. The type genome for the species is the GenBank assembly GCA_009782825.1. The GC content of the type genome is 48.19 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Brabrida gen. nov.

Candidatus Brabrida (NL. fem. n. *Brabrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRJI01*. The type species for the genus is *Candidatus* Brabrida adhositura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Brabrida antacago sp. nov.

Candidatus Brabrida antacago (NL. fem. n. *antacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJI01 sp009778595*. The type genome for the species is the GenBank assembly GCA_009778595.1. The GC content of the type genome is 49.22 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Brabrida tegimivita sp. nov.

Candidatus Brabrida tegimivita (NL. fem. n. *tegimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRJI01 sp009783315*. The type genome for the species is the GenBank assembly GCA_009783315.1. The GC content of the type genome is 50.45 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Brabrosa asbesigena sp. nov.

Candidatus Brabrosa asbesigena (NL. fem. n. *asbesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGT01 sp009787025*. The type genome for the species is the GenBank assembly GCA_009787025.1. The GC content of the type genome is 35.41 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Brabrosa gen. nov.

Candidatus Brabrosa (NL. fem. n. *Brabrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGT01*. The type species for the genus is *Candidatus* Brabrosa asbesigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Brabrosa habacilega sp. nov.

Candidatus Brabrosa habacilega (NL. fem. n. *habacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGT01 sp002839285*. The type genome for the species is the GenBank assembly GCA_002839285.1. The GC content of the type genome is 39.18 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Brabrula adpugetta sp. nov.

Candidatus Brabrula adpugetta (NL. fem. n. *adpugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-32 sp003597935*. The type genome for the species is the GenBank assembly GCA_003597935.1. The GC content of the type genome is 67.26 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Brabrula gen. nov.

Candidatus Brabrula (NL. fem. n. *Brabrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-32*. The type species for the genus is *Candidatus* Brabrula adpugetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Brachybacterium adinvetta sp. nov.

Candidatus Brachybacterium adinvetta (NL. fem. n. *adinvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp002871795*. The type genome for the species is the GenBank assembly RS_GCF_002871795.1. The GC content of the type genome is 69.62 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Brachybacterium apporago sp. nov.

Candidatus Brachybacterium apporago (NL. fem. n. *apporago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp003711805*. The type genome for the species is the GenBank assembly RS_GCF_003711805.1. The GC content of the type genome is 72.22 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Brachybacterium butubago sp. nov.

Candidatus Brachybacterium butubago (NL. fem. n. *butubago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp900163615*. The type genome for the species is the GenBank assembly GCA_900163615.1. The GC content of the type genome is 69.92 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Brachybacterium conamicula sp. nov.

Candidatus Brachybacterium conamicula (NL. fem. n. *conamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp001969445*. The type genome for the species is the GenBank assembly RS_GCF_001969445.1. The GC content of the type genome is 70.93 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Brachybacterium emortiforma sp. nov.

Candidatus Brachybacterium emortiforma (NL. fem. n. *emortiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp003347015*. The type genome for the species is the GenBank assembly RS_GCF_003347015.1. The GC content of the type genome is 72.28 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Brachybacterium linigivita sp. nov.

Candidatus Brachybacterium linigivita (NL. fem. n. *linigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp005490785*. The type genome for the species is the GenBank assembly RS_GCF_005490785.1. The GC content of the type genome is 73.04 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Brachybacterium obtoritas sp. nov.

Candidatus Brachybacterium obtoritas (NL. fem. n. *obtoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp014400405*. The type genome for the species is the GenBank assembly GCA_014400405.1. The GC content of the type genome is 70.02 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Brachybacterium relecitura sp. nov.

Candidatus Brachybacterium relecitura (NL. fem. n. *relecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp012799425*. The type genome for the species is the GenBank assembly GCA_012799425.1. The GC content of the type genome is 70.71 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Brachybacterium vitificula sp. nov.

Candidatus Brachybacterium vitificula (NL. fem. n. *vitificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachybacterium sp009299795*. The type genome for the species is the GenBank assembly RS_GCF_009299795.1. The GC content of the type genome is 71.84 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Brachymonas turicimonia sp. nov.

Candidatus Brachymonas turicimonia (NL. fem. n. *turicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachymonas sp012729605*. The type genome for the species is the GenBank assembly GCA_012729605.1. The GC content of the type genome is 64.18 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Brachyspira bivericella sp. nov.

Candidatus Brachyspira bivericella (NL. fem. n. *bivericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachyspira sp002379365*. The type genome for the species is the GenBank assembly RS_GCF_002379365.1. The GC content of the type genome is 27.86 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Brachyspira catecousia sp. nov.

Candidatus Brachyspira catecousia (NL. fem. n. *catecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brachyspira sp009755885*. The type genome for the species is the GenBank assembly RS_GCF_009755885.1. The GC content of the type genome is 27.78 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Bradyrhizobium adpecitia sp. nov.

Candidatus Bradyrhizobium adpecitia (NL. fem. n. *adpecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp005884465*. The type genome for the species is the GenBank assembly GCA_005884465.1. The GC content of the type genome is 61.85 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Bradyrhizobium adtagago sp. nov.

Candidatus Bradyrhizobium adtagago (NL. fem. n. *adtagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003020115*. The type genome for the species is the GenBank assembly RS_GCF_003020115.1. The GC content of the type genome is 63.59 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Bradyrhizobium aneclitoga sp. nov.

Candidatus Bradyrhizobium aneclitoga (NL. fem. n. *aneclitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp009930815*. The type genome for the species is the GenBank assembly RS_GCF_009930815.1. The GC content of the type genome is 61.99 % and the genome length is 9.1 Mbp.

Description of *Candidatus* Bradyrhizobium annicatio sp. nov.

Candidatus Bradyrhizobium annicatio (NL. fem. n. *annicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp004216735*. The type genome for the species is the GenBank assembly RS_GCF_004216735.1. The GC content of the type genome is 64.57 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Bradyrhizobium antimibra sp. nov.

Candidatus Bradyrhizobium antimibra (NL. fem. n. *antimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000026145*. The type genome for the species is the GenBank assembly RS_GCF_000026145.1. The GC content of the type genome is 65.51 % and the genome length is 7.46 Mbp.

Description of *Candidatus* Bradyrhizobium assicousia sp. nov.

Candidatus Bradyrhizobium assicousia (NL. fem. n. *assicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp004799445*. The type genome for the species is the GenBank assembly GCA_004799445.1. The GC content of the type genome is 62.3 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Bradyrhizobium assubisca sp. nov.

Candidatus Bradyrhizobium assubisca (NL. fem. n. *assubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp011602485*. The type genome for the species is the GenBank assembly RS_GCF_011602485.1. The GC content of the type genome is 64.17 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Bradyrhizobium bicinitio sp. nov.

Candidatus Bradyrhizobium bicinitio (NL. fem. n. *bicinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bradyrhizobium sp900114915*. The type genome for the species is the GenBank assembly RS_GCF_014198205.1. The GC content of the type genome is 63.59 % and the genome length is 8.69 Mbp.

Description of *Candidatus* Bradyrhizobium bisulessa sp. nov.

Candidatus Bradyrhizobium bisulessa (NL. fem. n. *bisulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001590795*. The type genome for the species is the GenBank assembly RS_GCF_001590795.1. The GC content of the type genome is 64.56 % and the genome length is 7.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Bradyrhizobium bisulibula sp. nov.

Candidatus Bradyrhizobium bisulibula (NL. fem. n. *bisulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003957705*. The type genome for the species is the GenBank assembly RS_GCF_004571045.1. The GC content of the type genome is 63.93 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Bradyrhizobium capilisca sp. nov.

Candidatus Bradyrhizobium capilisca (NL. fem. n. *capilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000239815*. The type genome for the species is the GenBank assembly RS_GCF_000239815.1. The GC content of the type genome is 63.6 % and the genome length is 8.43 Mbp.

Description of *Candidatus* Bradyrhizobium catocitica sp. nov.

Candidatus Bradyrhizobium catocitica (NL. fem. n. *catocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000239775*. The type genome for the species is the GenBank assembly RS_GCF_000239775.1. The GC content of the type genome is 65.49 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Bradyrhizobium cinipitrix sp. nov.

Candidatus Bradyrhizobium cinipitrix (NL. fem. n. *cinipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp013114835*. The type genome for the species is the GenBank assembly RS_GCF_013114835.1. The GC content of the type genome is 62.26 % and the genome length is 7.02 Mbp.

Description of *Candidatus* Bradyrhizobium citivatica sp. nov.

Candidatus Bradyrhizobium citivatica (NL. fem. n. *citivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp002531575*. The type genome for the species is the GenBank assembly RS_GCF_002531575.1. The GC content of the type genome is 64.98 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Bradyrhizobium cobalax sp. nov.

Candidatus Bradyrhizobium cobalax (NL. fem. n. *cobalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000261685*. The type genome for the species is the GenBank assembly RS_GCF_000261685.1. The GC content of the type genome is 63.88 % and the genome length is 7.92 Mbp.

Description of *Candidatus* Bradyrhizobium cohurentia sp. nov.

Candidatus Bradyrhizobium cohurentia (NL. fem. n. *cohurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp008123965*. The type genome for the species is the GenBank assembly RS_GCF_008123965.1. The GC content of the type genome is 62.86 % and the genome length is 8.83 Mbp.

Description of *Candidatus* Bradyrhizobium conabimonas sp. nov.

Candidatus Bradyrhizobium conabimonas (NL. fem. n. *conabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp900109945*. The type genome for the species is the GenBank assembly RS_GCF_900109945.1. The GC content of the type genome is 63.89 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Bradyrhizobium curotiforma sp. nov.

Candidatus Bradyrhizobium curotiforma (NL. fem. n. *curotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp014530645*. The type genome for the species is the GenBank assembly RS_GCF_014530645.1. The GC content of the type genome is 63.71 % and the genome length is 8.87 Mbp.

Description of *Candidatus* Bradyrhizobium defesitura sp. nov.

Candidatus Bradyrhizobium defesitura (NL. fem. n. *defesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp004212635*. The type genome for the species is the GenBank assembly RS_GCF_900099855.1. The GC content of the type genome is 62.83 % and the genome length is 9.58 Mbp.

Description of *Candidatus* Bradyrhizobium delebedo sp. nov.

Candidatus Bradyrhizobium delebedo (NL. fem. n. *delebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp014198245*. The type genome for the species is the GenBank assembly RS_GCF_014198245.1. The GC content of the type genome is 63.81 % and the genome length is 8.65 Mbp.

Description of *Candidatus* Bradyrhizobium depacimonas sp. nov.

Candidatus Bradyrhizobium depacimonas (NL. fem. n. *depacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bradyrhizobium sp900103365*. The type genome for the species is the GenBank assembly RS_GCF_900103365.1. The GC content of the type genome is 62.64 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Bradyrhizobium dilemicella sp. nov.

Candidatus Bradyrhizobium dilemicella (NL. fem. n. *dilemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp900176205*. The type genome for the species is the GenBank assembly RS_GCF_000239755.1. The GC content of the type genome is 65.23 % and the genome length is 7.6 Mbp.

Description of *Candidatus* Bradyrhizobium duponicella sp. nov.

Candidatus Bradyrhizobium duponicella (NL. fem. n. *duponicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003001755*. The type genome for the species is the GenBank assembly RS_GCF_003001755.1. The GC content of the type genome is 64.55 % and the genome length is 7.53 Mbp.

Description of *Candidatus* Bradyrhizobium eclecigena sp. nov.

Candidatus Bradyrhizobium eclecigena (NL. fem. n. *eclecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003837805*. The type genome for the species is the GenBank assembly RS_GCF_003837805.1. The GC content of the type genome is 63.76 % and the genome length is 7.71 Mbp.

Description of *Candidatus* Bradyrhizobium ensicetta sp. nov.

Candidatus Bradyrhizobium ensicetta (NL. fem. n. *ensicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp005884765*. The type genome for the species is the GenBank assembly GCA_005884765.1. The GC content of the type genome is 61.79 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Bradyrhizobium esculimonia sp. nov.

Candidatus Bradyrhizobium esculimonia (NL. fem. n. *esculimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp009766005*. The type genome for the species is the GenBank assembly RS_GCF_009766005.1. The GC content of the type genome is 62.2 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Bradyrhizobium favonatica sp. nov.

Candidatus Bradyrhizobium favonatica (NL. fem. n. *favonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000938305*. The type genome for the species is the GenBank assembly RS_GCF_000938235.1. The GC content of the type genome is 62.82 % and the genome length is 9.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "forest soil".

Description of *Candidatus* Bradyrhizobium forinitrix sp. nov.

Candidatus Bradyrhizobium forinitrix (NL. fem. n. *forinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp005937885*. The type genome for the species is the GenBank assembly RS_GCF_005937885.2. The GC content of the type genome is 62.65 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Bradyrhizobium furibentia sp. nov.

Candidatus Bradyrhizobium furibentia (NL. fem. n. *furibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000244915*. The type genome for the species is the GenBank assembly RS_GCF_900011245.1. The GC content of the type genome is 63.77 % and the genome length is 7.55 Mbp.

Description of *Candidatus* Bradyrhizobium gasomibra sp. nov.

Candidatus Bradyrhizobium gasomibra (NL. fem. n. *gasomibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp004799405*. The type genome for the species is the GenBank assembly GCA_004799405.1. The GC content of the type genome is 62.03 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Bradyrhizobium gemebibra sp. nov.

Candidatus Bradyrhizobium gemebibra (NL. fem. n. *gemebibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp002831585*. The type genome for the species is the GenBank assembly RS_GCF_000497675.1. The GC content of the type genome is 64.71 % and the genome length is 7.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "blood".

Description of *Candidatus* Bradyrhizobium genociforma sp. nov.

Candidatus Bradyrhizobium genociforma (NL. fem. n. *genociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000015165*. The type genome for the species is the GenBank assembly RS_GCF_013179005.1. The GC content of the type genome is 64.75 % and the genome length is 8.33 Mbp.

Description of *Candidatus* Bradyrhizobium hemitilenta sp. nov.

Candidatus Bradyrhizobium hemitilenta (NL. fem. n. *hemitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000473065*. The type genome for the species is the GenBank assembly RS_GCF_000473065.1. The GC content of the type genome is 63.38 % and the genome length is 8.34 Mbp.

Description of *Candidatus* Bradyrhizobium horomibula sp. nov.

Candidatus Bradyrhizobium horomibula (NL. fem. n. *horomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000472925*. The type genome for the species is the GenBank assembly RS_GCF_000472925.1. The GC content of the type genome is 62.64 % and the genome length is 10.03 Mbp.

Description of *Candidatus* Bradyrhizobium impolitrix sp. nov.

Candidatus Bradyrhizobium impolitrix (NL. fem. n. *impolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001693485*. The type genome for the species is the GenBank assembly RS_GCF_001693485.1. The GC content of the type genome is 62.27 % and the genome length is 7.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root nodule".

Description of *Candidatus* Bradyrhizobium indirisca sp. nov.

Candidatus Bradyrhizobium indirisca (NL. fem. n. *indirisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000472425*. The type genome for the species is the GenBank assembly RS_GCF_000472425.1. The GC content of the type genome is 62.2 % and the genome length is 8.5 Mbp.

Description of *Candidatus* Bradyrhizobium ineffitio sp. nov.

Candidatus Bradyrhizobium ineffitio (NL. fem. n. *ineffitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp005884855*. The type genome for the species is the GenBank assembly GCA_005884855.1. The GC content of the type genome is 60.35 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Bradyrhizobium inhositica sp. nov.

Candidatus Bradyrhizobium inhositica (NL. fem. n. *inhositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001556045*. The type genome for the species is the

GenBank assembly RS_GCF_001556045.1. The GC content of the type genome is 64.12 % and the genome length is 8.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Bradyrhizobium insepugo sp. nov.

Candidatus Bradyrhizobium insepugo (NL. fem. n. *insepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001908185*. The type genome for the species is the GenBank assembly RS_GCF_001908185.1. The GC content of the type genome is 63.15 % and the genome length is 8.71 Mbp.

Description of *Candidatus* Bradyrhizobium laculitia sp. nov.

Candidatus Bradyrhizobium laculitia (NL. fem. n. *laculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000426105*. The type genome for the species is the GenBank assembly RS_GCF_000426105.1. The GC content of the type genome is 62.2 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Bradyrhizobium lanifigena sp. nov.

Candidatus Bradyrhizobium lanifigena (NL. fem. n. *lanifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp011516635*. The type genome for the species is the GenBank assembly RS_GCF_004634465.1. The GC content of the type genome is 63.61 % and the genome length is 9.05 Mbp.

Description of *Candidatus* Bradyrhizobium lucerilenta sp. nov.

Candidatus Bradyrhizobium lucerilenta (NL. fem. n. *lucerilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp009781045*. The type genome for the species is the GenBank assembly GCA_009781045.1. The GC content of the type genome is 62.15 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Bradyrhizobium ludimatio sp. nov.

Candidatus Bradyrhizobium ludimatio (NL. fem. n. *ludimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003020125*. The type genome for the species is the GenBank assembly RS_GCF_003020125.1. The GC content of the type genome is 64.16 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Bradyrhizobium maxilitrix sp. nov.

Candidatus Bradyrhizobium maxilitrix (NL. fem. n. *maxilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000472385*. The type genome for the species is the GenBank assembly RS_GCF_000472385.1. The GC content of the type genome is 62.01 % and the genome length is 8.61 Mbp.

Description of *Candidatus* Bradyrhizobium metabousia sp. nov.

Candidatus Bradyrhizobium metabousia (NL. fem. n. *metabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001464035*. The type genome for the species is the GenBank assembly GCA_001464035.1. The GC content of the type genome is 63.67 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Bradyrhizobium mirifetta sp. nov.

Candidatus Bradyrhizobium mirifetta (NL. fem. n. *mirifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001908235*. The type genome for the species is the GenBank assembly RS_GCF_001908235.1. The GC content of the type genome is 63.79 % and the genome length is 8.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root nodule".

Description of *Candidatus* Bradyrhizobium monogax sp. nov.

Candidatus Bradyrhizobium monogax (NL. fem. n. *monogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000617845*. The type genome for the species is the GenBank assembly RS_GCF_000617845.2. The GC content of the type genome is 64.49 % and the genome length is 7.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Bradyrhizobium offirentia sp. nov.

Candidatus Bradyrhizobium offirentia (NL. fem. n. *offirentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000473045*. The type genome for the species is the GenBank assembly RS_GCF_000473045.1. The GC content of the type genome is 62.97 % and the genome length is 8.79 Mbp.

Description of *Candidatus* Bradyrhizobium pocilitia sp. nov.

Candidatus Bradyrhizobium pocilitia (NL. fem. n. *pocilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000296215*. The type genome for the species is the GenBank assembly RS_GCF_001593325.1. The GC content of the type genome is 63.81 % and the genome length is 7.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizosphere soil".

Description of *Candidatus* Bradyrhizobium proscitrix sp. nov.

Candidatus Bradyrhizobium proscitrix (NL. fem. n. *proscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000701345*. The type genome for the species is the GenBank assembly RS_GCF_000701345.1. The GC content of the type genome is 60.68 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Bradyrhizobium pudibibula sp. nov.

Candidatus Bradyrhizobium pudibibula (NL. fem. n. *pudibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000515415*. The type genome for the species is the GenBank assembly RS_GCF_000515415.1. The GC content of the type genome is 63.17 % and the genome length is 8.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Bradyrhizobium repepastra sp. nov.

Candidatus Bradyrhizobium repepastra (NL. fem. n. *repepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp900113735*. The type genome for the species is the GenBank assembly RS_GCF_900113735.1. The GC content of the type genome is 62.87 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Bradyrhizobium retecastra sp. nov.

Candidatus Bradyrhizobium retecastra (NL. fem. n. *retecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003963435*. The type genome for the species is the GenBank assembly GCA_003963435.1. The GC content of the type genome is 64.31 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Bradyrhizobium rorulicella sp. nov.

Candidatus Bradyrhizobium rorulicella (NL. fem. n. *rorulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp002532045*. The type genome for the species is the GenBank assembly RS_GCF_002532045.1. The GC content of the type genome is 64.14 % and the genome length is 8.43 Mbp.

Description of *Candidatus* Bradyrhizobium rosarilenta sp. nov.

Candidatus Bradyrhizobium rosarilenta (NL. fem. n. *rosarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp005885285*. The type genome for the species is the GenBank assembly GCA_005884545.1. The GC content of the type genome is 62.51 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Bradyrhizobium ruricitudo sp. nov.

Candidatus Bradyrhizobium ruricitudo (NL. fem. n. *ruricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp003020075*. The type genome for the species is the GenBank assembly GCA_003476985.1. The GC content of the type genome is 64.54 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Bradyrhizobium semodibra sp. nov.

Candidatus Bradyrhizobium semodibra (NL. fem. n. *semodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp013178945*. The type genome for the species is the GenBank assembly RS_GCF_013178925.1. The GC content of the type genome is 65.54 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Bradyrhizobium seposimonia sp. nov.

Candidatus Bradyrhizobium seposimonia (NL. fem. n. *seposimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000426785*. The type genome for the species is the GenBank assembly RS_GCF_011058295.1. The GC content of the type genome is 63.29 % and the genome length is 10.01 Mbp.

Description of *Candidatus* Bradyrhizobium sifunitoga sp. nov.

Candidatus Bradyrhizobium sifunitoga (NL. fem. n. *sifunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000938255*. The type genome for the species is the GenBank assembly RS_GCF_000938255.1. The GC content of the type genome is 63.24

% and the genome length is 8.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "forest soil".

Description of *Candidatus* Bradyrhizobium siminitrix sp. nov.

Candidatus Bradyrhizobium siminitrix (NL. fem. n. *siminitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp011516665*. The type genome for the species is the GenBank assembly RS_GCF_011516665.2. The GC content of the type genome is 63.72 % and the genome length is 8.64 Mbp.

Description of *Candidatus* Bradyrhizobium subabibra sp. nov.

Candidatus Bradyrhizobium subabibra (NL. fem. n. *subabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000244935*. The type genome for the species is the GenBank assembly RS_GCF_000244935.1. The GC content of the type genome is 63.14 % and the genome length is 8.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Bradyrhizobium televifica sp. nov.

Candidatus Bradyrhizobium televifica (NL. fem. n. *televifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp900115265*. The type genome for the species is the GenBank assembly RS_GCF_900115265.1. The GC content of the type genome is 63.03 % and the genome length is 7.93 Mbp.

Description of *Candidatus* Bradyrhizobium triclousia sp. nov.

Candidatus Bradyrhizobium triclousia (NL. fem. n. *triclousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp001908205*. The type genome for the species is the GenBank assembly RS_GCF_001908205.1. The GC content of the type genome is 63.06 % and the genome length is 9.24 Mbp.

Description of *Candidatus* Bradyrhizobium triscitas sp. nov.

Candidatus Bradyrhizobium triscitas (NL. fem. n. *triscitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000426245*. The type genome for the species is the GenBank assembly RS_GCF_000426245.1. The GC content of the type genome is 62.58 % and the genome length is 9.03 Mbp.

Description of *Candidatus* Bradyrhizobium uberritia sp. nov.

Candidatus Bradyrhizobium uberritia (NL. fem. n. *uberritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000282615*. The type genome for the species is the GenBank assembly RS_GCF_000282615.1. The GC content of the type genome is 64.72 % and the genome length is 7.83 Mbp.

Description of *Candidatus* Bradyrhizobium vatilugo sp. nov.

Candidatus Bradyrhizobium vatilugo (NL. fem. n. *vatilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp000239795*. The type genome for the species is the GenBank assembly RS_GCF_000239795.1. The GC content of the type genome is 66.18 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Bradyrhizobium veridax sp. nov.

Candidatus Bradyrhizobium veridax (NL. fem. n. *veridax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp013114825*. The type genome for the species is the GenBank assembly RS_GCF_013114825.1. The GC content of the type genome is 61.88 % and the genome length is 7.44 Mbp.

Description of *Candidatus* Bradyrhizobium virecivita sp. nov.

Candidatus Bradyrhizobium virecivita (NL. fem. n. *virecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp013240495*. The type genome for the species is the GenBank assembly RS_GCF_013240495.1. The GC content of the type genome is 63.87 % and the genome length is 8.29 Mbp.

Description of *Candidatus* Bradyrhizobium xenodicula sp. nov.

Candidatus Bradyrhizobium xenodicula (NL. fem. n. *xenodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bradyrhizobium sp900113725*. The type genome for the species is the GenBank assembly RS_GCF_004571025.1. The GC content of the type genome is 63.53 % and the genome length is 9.79 Mbp.

Description of *Candidatus* Branchiibius depacilenta sp. nov.

Candidatus Branchiibius depacilenta (NL. fem. n. *depacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Branchiibius sp001594145*. The type genome for the species is the GenBank assembly GCA_001594145.1. The GC content of the type genome is 67.08 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mixed culture 16-3462 from Mycobacteria Growth Indicator Tube inoculated with human sputum sample containing Mycobacterium tuberculosis and Branchiibius sp. NY16-3462-2".

Description of *Candidatus* Brasilonema carucilega sp. nov.

Candidatus Brasilonema carucilega (NL. fem. n. *carucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brasilonema sp012031965*. The type genome for the species is the GenBank assembly GCA_012031965.1. The GC content of the type genome is 42.52 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Brasilonema indevatio sp. nov.

Candidatus Brasilonema indevatio (NL. fem. n. *indevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brasilonema sp012912105*. The type genome for the species is the GenBank assembly RS_GCF_012912105.1. The GC content of the type genome is 41.97 % and the genome length is 8.31 Mbp.

Description of *Candidatus* Brasmana adlocilega sp. nov.

Candidatus Brasmana adlocilega (NL. fem. n. *adlocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS599 sp900543705*. The type genome for the species is the GenBank assembly GCA_900543705.1. The GC content of the type genome is 49.78 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Brasmana gen. nov.

Candidatus Brasmana (NL. fem. n. *Brasmana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS599*. The type species for the genus is *Candidatus* Brasmana adlocilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Brasmaria abhinousia sp. nov.

Candidatus Brasmaria abhinousia (NL. fem. n. *abhinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4717 sp002404395*. The type genome for the species is the GenBank assembly GCA_002404395.1. The GC content of the type genome is 49.05 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Brasmaria gen. nov.

Candidatus Brasmaria (NL. fem. n. *Brasmaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4717*. The type species for the genus is *Candidatus* Brasmaria abhinousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Brasmella demulifica sp. nov.

Candidatus Brasmella demulifica (NL. fem. n. *demulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYI01 sp013696535*. The type genome for the species is the GenBank assembly GCA_013696535.1. The GC content of the type genome is 69.3 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Brasmella gen. nov.

Candidatus Brasmella (NL. fem. n. *Brasmella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYI01*. The type species for the genus is *Candidatus* Brasmella demulifica .
