According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Brasmida homolitica sp. nov.

Candidatus Brasmida homolitica (NL. fem. n. *homolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B17-G16 sp003646975*. The type genome for the species is the GenBank assembly GCA_003646975.1. The GC content of the type genome is 58.82 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Brasmida gen. nov.

Candidatus Brasmida (NL. fem. n. *Brasmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B17-G16*. The type species for the genus is *Candidatus* Brasmida homolitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bremerella troclitoga sp. nov.

Candidatus Bremerella troclitoga (NL. fem. n. *troclitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bremerella sp013618625*. The type genome for the species is the GenBank assembly GCA_013618625.1. The GC content of the type genome is 54.22 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Brenneria morigatica sp. nov.

Candidatus Brenneria morigatica (NL. fem. n. *morigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brenneria sp013155275*. The type genome for the species is the GenBank assembly RS_GCF_013155275.1. The GC content of the type genome is 53.48 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Breoghania invesastra sp. nov.

Candidatus Breoghania invesastra (NL. fem. n. *invesastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Breoghania sp003432385*. The type genome for the species is the GenBank assembly RS_GCF_003432385.1. The GC content of the type genome is 64.53 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Brevefilum adhinifica sp. nov.

Candidatus Brevefilum adhinifica (NL. fem. n. *adhinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp003542325*. The type genome for the species is the GenBank assembly GCA_003542325.1. The GC content of the type genome is 51.1 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Brevefilum admoditica sp. nov.

Candidatus Brevefilum admoditica (NL. fem. n. *admoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp007119455*. The type genome for the species is the GenBank assembly GCA_007119455.1. The GC content of the type genome is 49.46 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Brevefilum avoncetta sp. nov.

Candidatus Brevefilum avoncetta (NL. fem. n. *avoncetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp007135845*. The type genome for the species is the GenBank assembly GCA_007135845.1. The GC content of the type genome is 49.24 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Brevefilum direpitica sp. nov.

Candidatus Brevefilum direpitica (NL. fem. n. *direpitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp001508595*. The type genome for the species is the GenBank assembly GCA_003445515.1. The GC content of the type genome is 46.59 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Brevefilum domicibula sp. nov.

Candidatus Brevefilum domicibula (NL. fem. n. *domicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp002436005*. The type genome for the species is the GenBank assembly GCA_002403055.1. The GC content of the type genome is 49.32 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Brevefilum impolicella sp. nov.

Candidatus Brevefilum impolicella (NL. fem. n. *impolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Brevefilum sp012522475*. The type genome for the species is the GenBank assembly GCA_012522475.1. The GC content of the type genome is 48.85 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Brevefilum insurifica sp. nov.

Candidatus Brevefilum insurifica (NL. fem. n. *insurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp011620555*. The type genome for the species is the GenBank assembly GCA_011620555.1. The GC content of the type genome is 56.59 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Brevefilum pulegigena sp. nov.

Candidatus Brevefilum pulegigena (NL. fem. n. *pulegigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp002403205*. The type genome for the species is the GenBank assembly GCA_002403205.1. The GC content of the type genome is 54.72 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Brevefilum rudecivita sp. nov.

Candidatus Brevefilum rudecivita (NL. fem. n. *rudecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp002452315*. The type genome for the species is the GenBank assembly GCA_002452315.1. The GC content of the type genome is 54.11 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Brevefilum sotulentia sp. nov.

Candidatus Brevefilum sotulentia (NL. fem. n. *sotulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevefilum sp003563055*. The type genome for the species is the GenBank assembly GCA_003567435.1. The GC content of the type genome is 48.94 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Brevibacillus cohurastra sp. nov.

Candidatus Brevibacillus cohurastra (NL. fem. n. *cohurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacillus sp000282075*. The type genome for the species is the GenBank assembly RS_GCF_013284245.1. The GC content of the type genome is 47.3 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Brevibacillus selecitio sp. nov.

Candidatus Brevibacillus selecitio (NL. fem. n. *selecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacillus sp013284355*. The type genome for the species is the GenBank assembly RS_GCF_013284355.1. The GC content of the type genome is 47.29 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Brevibacillus vigenimonas sp. nov.

Candidatus Brevibacillus vigenimonas (NL. fem. n. *vigenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacillus sp003388715*. The type genome for the species is the GenBank assembly RS_GCF_013096935.1. The GC content of the type genome is 56.0 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Brevibacillus algifatica sp. nov.

Candidatus Brevibacillus algifatica (NL. fem. n. *algifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacillus_B sp006170445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006170445.1. The GC content of the type genome is 50.56 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Brevibacterium accoritas sp. nov.

Candidatus Brevibacterium accoritas (NL. fem. n. *accoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp012844365*. The type genome for the species is the GenBank assembly RS_GCF_012844365.1. The GC content of the type genome is 64.92 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Brevibacterium ambiditica sp. nov.

Candidatus Brevibacterium ambiditica (NL. fem. n. *ambiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp004745485*. The type genome for the species is the GenBank assembly RS_GCF_004745485.1. The GC content of the type genome is 64.17 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Brevibacterium dehisifica sp. nov.

Candidatus Brevibacterium dehisifica (NL. fem. n. *dehisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp006489205*. The type genome for the species is the GenBank assembly RS_GCF_006489205.1. The GC content of the type genome is 68.02 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Brevibacterium encolousia sp. nov.

Candidatus Brevibacterium encolousia (NL. fem. n. *encolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp004745075*. The type genome for the species is the GenBank assembly RS_GCF_004745075.1. The GC content of the type genome is 65.02 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Brevibacterium fibicentia sp. nov.

Candidatus Brevibacterium fibicentia (NL. fem. n. *fibicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp001815905*. The type genome for the species is the GenBank assembly RS_GCF_902500275.1. The GC content of the type genome is 62.23 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Brevibacterium ficedicella sp. nov.

Candidatus Brevibacterium ficedicella (NL. fem. n. *ficedicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp011617465*. The type genome for the species is the GenBank assembly RS_GCF_011617465.1. The GC content of the type genome is 64.65 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Brevibacterium incesitio sp. nov.

Candidatus Brevibacterium incesitio (NL. fem. n. *incesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp900169365*. The type genome for the species is the GenBank assembly RS_GCF_900169365.1. The GC content of the type genome is 62.07 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Brevibacterium intorimonas sp. nov.

Candidatus Brevibacterium intorimonas (NL. fem. n. *intorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp005280295*. The type genome for the species is the GenBank assembly RS_GCF_005280295.1. The GC content of the type genome is 70.51 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Brevibacterium plostitia sp. nov.

Candidatus Brevibacterium plostitia (NL. fem. n. *plostitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp009857845*. The type genome for the species is the GenBank assembly RS_GCF_009857845.1. The GC content of the type genome is 72.37

% and the genome length is 3.12 Mbp.

Description of *Candidatus* Brevibacterium repepitica sp. nov.

Candidatus Brevibacterium repepitica (NL. fem. n. *repepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp011617705*. The type genome for the species is the GenBank assembly RS_GCF_009299785.1. The GC content of the type genome is 64.9 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Brevibacterium rudicentia sp. nov.

Candidatus Brevibacterium rudicentia (NL. fem. n. *rudicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevibacterium sp011617245*. The type genome for the species is the GenBank assembly RS_GCF_011617245.1. The GC content of the type genome is 65.42 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Brevilactibacter chernilega sp. nov.

Candidatus Brevilactibacter chernilega (NL. fem. n. *chernilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevilactibacter sp012838755*. The type genome for the species is the GenBank assembly GCA_012838755.1. The GC content of the type genome is 71.21 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Brevilactibacter excorastra sp. nov.

Candidatus Brevilactibacter excorastra (NL. fem. n. *excorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevilactibacter sp011393335*. The type genome for the species is the GenBank assembly RS_GCF_011393335.1. The GC content of the type genome is 72.1 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Brevilactibacter recomimonas sp. nov.

Candidatus Brevilactibacter recomimonas (NL. fem. n. *recomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevilactibacter sp014164685*. The type genome for the species is the GenBank assembly RS_GCF_014164685.1. The GC content of the type genome is 71.05 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Brevundimonas aclasax sp. nov.

Candidatus Brevundimonas aclasax (NL. fem. n. *aclasax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp013760785*. The type genome for the species is the GenBank assembly RS_GCF_013760785.1. The GC content of the type genome is 60.48 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Brevundimonas adnarastra sp. nov.

Candidatus Brevundimonas adnarastra (NL. fem. n. *adnarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003248965*. The type genome for the species is the GenBank assembly GCA_003248965.1. The GC content of the type genome is 67.33 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Brevundimonas adnililega sp. nov.

Candidatus Brevundimonas adnililega (NL. fem. n. *adnililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003938605*. The type genome for the species is the GenBank assembly RS_GCF_003938605.1. The GC content of the type genome is 66.88 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Brevundimonas adtoredo sp. nov.

Candidatus Brevundimonas adtoredo (NL. fem. n. *adtoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002387245*. The type genome for the species is the GenBank assembly GCA_002387245.1. The GC content of the type genome is 67.0 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Brevundimonas altipedo sp. nov.

Candidatus Brevundimonas altipedo (NL. fem. n. *altipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002157625*. The type genome for the species is the GenBank assembly RS_GCF_002157625.1. The GC content of the type genome is 67.58 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Brevundimonas ambidicula sp. nov.

Candidatus Brevundimonas ambidicula (NL. fem. n. *ambidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001796045*. The type genome for the species is the GenBank assembly GCA_001796045.1. The GC content of the type genome is 67.57 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Brevundimonas antipentia sp. nov.

Candidatus Brevundimonas antipentia (NL. fem. n. *antipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003248455*. The type genome for the species is the GenBank assembly GCA_003248455.1. The GC content of the type genome is 67.66 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Brevundimonas arcitatio sp. nov.

Candidatus Brevundimonas arcitatio (NL. fem. n. *arcitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Brevundimonas sp006547065*. The type genome for the species is the GenBank assembly RS_GCF_006547065.1. The GC content of the type genome is 67.56 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Brevundimonas artilousia sp. nov.

Candidatus Brevundimonas artilousia (NL. fem. n. *artilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001295975*. The type genome for the species is the GenBank assembly RS_GCF_001295975.1. The GC content of the type genome is 67.73 % and the genome length is 2.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Brevundimonas assuditura sp. nov.

Candidatus Brevundimonas assuditura (NL. fem. n. *assuditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001424025*. The type genome for the species is the GenBank assembly RS_GCF_001424025.1. The GC content of the type genome is 68.55 % and the genome length is 3.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Brevundimonas baropago sp. nov.

Candidatus Brevundimonas baropago (NL. fem. n. *baropago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002292165*. The type genome for the species is the GenBank assembly GCA_002292165.1. The GC content of the type genome is 68.08 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Brevundimonas cerofousia sp. nov.

Candidatus Brevundimonas cerofousia (NL. fem. n. *cerofousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002483305*. The type genome for the species is the GenBank assembly GCA_002483305.1. The GC content of the type genome is 68.65 %

and the genome length is 2.92 Mbp.

Description of *Candidatus* Brevundimonas colapugo sp. nov.

Candidatus Brevundimonas colapugo (NL. fem. n. *colapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001427825*. The type genome for the species is the GenBank assembly RS_GCF_001427825.1. The GC content of the type genome is 68.97 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Brevundimonas colimugo sp. nov.

Candidatus Brevundimonas colimugo (NL. fem. n. *colimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002426005*. The type genome for the species is the GenBank assembly GCA_013693835.1. The GC content of the type genome is 64.41 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Brevundimonas cuticiforma sp. nov.

Candidatus Brevundimonas cuticiforma (NL. fem. n. *cuticiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp005484585*. The type genome for the species is the GenBank assembly RS_GCF_005484585.1. The GC content of the type genome is 66.23 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Brevundimonas defesibula sp. nov.

Candidatus Brevundimonas defesibula (NL. fem. n. *defesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp902506205*. The type genome for the species is the GenBank assembly RS_GCF_902506205.1. The GC content of the type genome is 66.38 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Brevundimonas dehinitudo sp. nov.

Candidatus Brevundimonas dehinitudo (NL. fem. n. *dehinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp013912005*. The type genome for the species is the GenBank assembly GCA_013912005.1. The GC content of the type genome is 71.59 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Brevundimonas desucax sp. nov.

Candidatus Brevundimonas desucax (NL. fem. n. *desucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp004210735*. The type genome for the species is the GenBank assembly GCA_004210735.1. The GC content of the type genome is 67.7 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Brevundimonas exoscetta sp. nov.

Candidatus Brevundimonas exoscetta (NL. fem. n. *exoscetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001794825*. The type genome for the species is the GenBank assembly GCA_001794825.1. The GC content of the type genome is 70.81 % and the genome length is 2.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Brevundimonas facunimonas sp. nov.

Candidatus Brevundimonas facunimonas (NL. fem. n. *facunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003241825*. The type genome for the species is the GenBank assembly GCA_003241995.1. The GC content of the type genome is 64.46 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Brevundimonas fetutedo sp. nov.

Candidatus Brevundimonas fetutedo (NL. fem. n. *fetutedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp004296955*. The type genome for the species is the GenBank assembly GCA_013791825.1. The GC content of the type genome is 69.49 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Brevundimonas fetutisca sp. nov.

Candidatus Brevundimonas fetutisca (NL. fem. n. *fetutisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002434505*. The type genome for the species is the GenBank assembly GCA_002294365.1. The GC content of the type genome is 67.48 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Brevundimonas fumacimonas sp. nov.

Candidatus Brevundimonas fumacimonas (NL. fem. n. *fumacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003248925*. The type genome for the species is the GenBank assembly GCA_003248925.1. The GC content of the type genome is 69.74 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Brevundimonas gemebifica sp. nov.

Candidatus Brevundimonas gemebifica (NL. fem. n. *gemebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp012270135*. The type genome for the species is the GenBank assembly GCA_012270135.1. The GC content of the type genome is 69.46 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Brevundimonas labecatica sp. nov.

Candidatus Brevundimonas labecatica (NL. fem. n. *labecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Brevundimonas sp013912065*. The type genome for the species is the GenBank assembly GCA_013912065.1. The GC content of the type genome is 67.1 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Brevundimonas lupanibra sp. nov.

Candidatus Brevundimonas lupanibra (NL. fem. n. *lupanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp000335735*. The type genome for the species is the GenBank assembly RS_GCF_000335735.1. The GC content of the type genome is 66.4 % and the genome length is 3.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Little Long Lake".

Description of *Candidatus* Brevundimonas metucitas sp. nov.

Candidatus Brevundimonas metucitas (NL. fem. n. *metucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp013823285*. The type genome for the species is the GenBank assembly GCA_013823285.1. The GC content of the type genome is 68.37 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Brevundimonas milifatica sp. nov.

Candidatus Brevundimonas milifatica (NL. fem. n. *milifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp003704105*. The type genome for the species is the GenBank assembly RS_GCF_003704105.1. The GC content of the type genome is 68.44 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Brevundimonas mirifibula sp. nov.

Candidatus Brevundimonas mirifibula (NL. fem. n. *mirifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002479325*. The type genome for the species is the GenBank assembly GCA_002479325.1. The GC content of the type genome is 68.61 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Brevundimonas murelessa sp. nov.

Candidatus Brevundimonas murelessa (NL. fem. n. *murelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002343425*. The type genome for the species is the GenBank assembly GCA_002343105.1. The GC content of the type genome is 68.05 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Brevundimonas negotugo sp. nov.

Candidatus Brevundimonas negotugo (NL. fem. n. *negotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002419815*. The type genome for the species is the GenBank assembly GCA_002419815.1. The GC content of the type genome is 62.18 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Brevundimonas nidifibra sp. nov.

Candidatus Brevundimonas nidifibra (NL. fem. n. *nidifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002002865*. The type genome for the species is the GenBank assembly RS_GCF_002002865.1. The GC content of the type genome is 68.37 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Brevundimonas nugigimonas sp. nov.

Candidatus Brevundimonas nugigimonas (NL. fem. n. *nugigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002979535*. The type genome for the species is the GenBank assembly RS_GCF_002979535.1. The GC content of the type genome is 67.08 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Brevundimonas ossucentia sp. nov.

Candidatus Brevundimonas ossucentia (NL. fem. n. *ossucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002483865*. The type genome for the species is the GenBank assembly GCA_002483865.1. The GC content of the type genome is 63.56 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Brevundimonas peracitura sp. nov.

Candidatus Brevundimonas peracitura (NL. fem. n. *peracitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002432125*. The type genome for the species is the GenBank assembly GCA_002432125.1. The GC content of the type genome is 62.25 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Brevundimonas recorago sp. nov.

Candidatus Brevundimonas recorago (NL. fem. n. *recorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp004683885*. The type genome for the species is the GenBank assembly RS_GCF_004683885.1. The GC content of the type genome is 67.76 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Brevundimonas saxifetta sp. nov.

Candidatus Brevundimonas saxifetta (NL. fem. n. *saxifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp001425945*. The type genome for the species is the GenBank assembly RS_GCF_001425945.1. The GC content of the type genome is 69.03 % and the genome length is 3.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Brevundimonas semunitura sp. nov.

Candidatus Brevundimonas semunitura (NL. fem. n. *semunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002430835*. The type genome for the species is the GenBank assembly GCA_002430835.1. The GC content of the type genome is 67.36 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Brevundimonas taraxivita sp. nov.

Candidatus Brevundimonas taraxivita (NL. fem. n. *taraxivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp006515835*. The type genome for the species is the GenBank assembly GCA_006515835.1. The GC content of the type genome is 67.53 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Brevundimonas vecoretta sp. nov.

Candidatus Brevundimonas vecoretta (NL. fem. n. *vecoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002484265*. The type genome for the species is the GenBank assembly GCA_002484265.1. The GC content of the type genome is 66.65 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Brevundimonas videlifica sp. nov.

Candidatus Brevundimonas videlifica (NL. fem. n. *videlifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002479495*. The type genome for the species is the GenBank assembly GCA_002479495.1. The GC content of the type genome is 67.46 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Brevundimonas vitigitia sp. nov.

Candidatus Brevundimonas vitigitia (NL. fem. n. *vitigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brevundimonas sp002386585*. The type genome for the species is the GenBank assembly GCA_003446915.1. The GC content of the type genome is 66.95 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Breznakia proscigena sp. nov.

Candidatus Breznakia proscigena (NL. fem. n. *proscigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Breznakia sp001695645*. The type genome for the species is the GenBank assembly RS_GCF_001695645.1. The GC content of the type genome is 37.22 % and the genome length is 2.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "swine manure storage pit".

Description of *Candidatus* Brocadia advoretta sp. nov.

Candidatus Brocadia advoretta (NL. fem. n. *advoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brocadia sp011525665*. The type genome for the species is the GenBank assembly GCA_011525665.1. The GC content of the type genome is 44.13 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Brocadia ducilitia sp. nov.

Candidatus Brocadia ducilitia (NL. fem. n. *ducilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brocadia sp007618135*. The type genome for the species is the GenBank assembly GCA_007618135.1. The GC content of the type genome is 43.18 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Brocadia semilisca sp. nov.

Candidatus Brocadia semilisca (NL. fem. n. *semilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brocadia sp013360945*. The type genome for the species is the GenBank assembly GCA_013360945.1. The GC content of the type genome is 42.35 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Brooklawnia exforatio sp. nov.

Candidatus Brooklawnia exforatio (NL. fem. n. *exforatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brooklawnia sp012517405*. The type genome for the species is the GenBank assembly GCA_012517405.1. The GC content of the type genome is 65.55 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Brooklawnia manupifica sp. nov.

Candidatus Brooklawnia manupifica (NL. fem. n. *manupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brooklawnia sp000413315*. The type genome for the species is the GenBank assembly RS_GCF_000413315.1. The GC content of the type genome is 61.37 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Brooklawnia sonivitudo sp. nov.

Candidatus Brooklawnia sonivitudo (NL. fem. n. *sonivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brooklawnia sp012517115*. The type genome for the species is the GenBank assembly GCA_012517115.1. The GC content of the type genome is 65.1 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Brumimicrobium expugitudo sp. nov.

Candidatus Brumimicrobium expugitudo (NL. fem. n. *expugitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brumimicrobium sp002734085*. The type genome for the species is the GenBank assembly GCA_002734085.1. The GC content of the type genome is 35.03 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Brumimicrobium peradiforma sp. nov.

Candidatus Brumimicrobium peradiforma (NL. fem. n. *peradiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brumimicrobium sp003143775*. The type genome for the species is the GenBank assembly RS_GCF_003143775.1. The GC content of the type genome is 35.49 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Brumimicrobium perexitura sp. nov.

Candidatus Brumimicrobium perexitura (NL. fem. n. *perexitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Brumimicrobium sp002331485*. The type genome for the species is the GenBank assembly GCA_002331485.1. The GC content of the type genome is 37.63 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Bruticola casigisca sp. nov.

Candidatus Bruticola casigisca (NL. fem. n. *casigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bruticola sp004554425*. The type genome for the species is the GenBank assembly GCA_004554425.1. The GC content of the type genome is 43.87 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Bruticola fumacitas sp. nov.

Candidatus Bruticola fumacitas (NL. fem. n. *fumacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bruticola sp900772775*. The type genome for the species is the GenBank assembly RS_GCF_900772775.1. The GC content of the type genome is 44.25 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Bruticola vitigatica sp. nov.

Candidatus Bruticola vitigatica (NL. fem. n. *vitigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bruticola sp900313515*. The type genome for the species is the GenBank assembly GCA_902764865.1. The GC content of the type genome is 49.28 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Bucelana dehonax sp. nov.

Candidatus Bucelana dehonax (NL. fem. n. *dehonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-65-14 sp001797615*. The type genome for the species is the GenBank assembly GCA_003524035.1. The GC content of the type genome is 65.98 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Bucelana gen. nov.

Candidatus Bucelana (NL. fem. n. *Bucelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-65-14*. The type species for the genus is *Candidatus* Bucelana dehonax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Bucelaria lapilitica sp. nov.

Candidatus Bucelaria lapilitica (NL. fem. n. *lapilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFUC01 sp001785575*. The type genome for the species is the GenBank assembly GCA_001785575.1. The GC content of the type genome is 37.81 % and the genome length is 0.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Bucelaria gen. nov.

Candidatus Bucelaria (NL. fem. n. *Bucelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFUC01*. The type species for the genus is *Candidatus* Bucelaria lapilitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Relaposaceae.

Description of *Candidatus* Bucelaria manomitura sp. nov.

Candidatus Bucelaria manomitura (NL. fem. n. *manomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFUC01 sp903869875*. The type genome for the species is the GenBank assembly GCA_903832115.1. The GC content of the type genome is 38.03 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Bucelella irredago sp. nov.

Candidatus Bucelella irredago (NL. fem. n. *irredago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-58-10 sp001780825*. The type genome for the species is the GenBank assembly GCA_001780825.1. The GC content of the type genome is 58.07 % and the genome length is 4.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Bucelella gen. nov.

Candidatus Bucelella (NL. fem. n. *Bucelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-58-10*. The type species for the genus is *Candidatus* Bucelella irredago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-58-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelellaceae.

Description of *Candidatus* Bucelellaceae fam. nov.

Candidatus Bucelellaceae (NL. fem. n. *Bucelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-58-10.* The type genus for the taxon is *Candidatus* Bucelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-58-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucelellales.

Description of *Candidatus* Bucelellales ord. nov.

Candidatus Bucelellales (NL. fem. n. *Bucelellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-58-10.* The type genus for the taxon is *Candidatus* Bucelella .

According to the GTDB R06-RS202, this order belongs to the class *Glassbacteria*.

Description of *Candidatus* Bucelia depopago sp. nov.

Candidatus Bucelia depopago (NL. fem. n. *depopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHH01 sp013151955*. The type genome for the species is the GenBank assembly GCA_013151955.1. The GC content of the type genome is 58.75 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Bucelia gen. nov.

Candidatus Bucelia (NL. fem. n. *Bucelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHH01*. The type species for the genus is *Candidatus* Bucelia depopago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buceliaceae.

Description of *Candidatus* Buceliaceae fam. nov.

Candidatus Buceliaceae (NL. fem. n. *Buceliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHH01.* The type genus for the taxon is *Candidatus* Bucelia .

According to GTDB R06-RS202, this family belongs to the order *Ardenticatenales*.

Description of *Candidatus* Bucelosa vitigibra sp. nov.

Candidatus Bucelosa vitigibra (NL. fem. n. *vitigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYB01 sp009693015*. The type genome for the species is the GenBank assembly GCA_009693015.1. The GC content of the type genome is 65.83 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Bucelosa gen. nov.

Candidatus Bucelosa (NL. fem. n. *Bucelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYB01*. The type species for the genus is *Candidatus* Bucelosa vitigibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelosaceae.

Description of *Candidatus* Bucelosaceae fam. nov.

Candidatus Bucelosaceae (NL. fem. n. *Bucelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYB01.* The type genus for the taxon is *Candidatus* Bucelosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHYB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucelosales.

Description of *Candidatus* Bucelosales ord. nov.

Candidatus Bucelosales (NL. fem. n. *Bucelosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYB01.* The type genus for the taxon is *Candidatus* Bucelosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Bucelula chancatica sp. nov.

Candidatus Bucelula chancatica (NL. fem. n. *chancatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJE01 sp011389165*. The type genome for the species is the GenBank assembly GCA_011389165.1. The GC content of the type genome is 49.58 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Bucelula gen. nov.

Candidatus Bucelula (NL. fem. n. *Bucelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJE01*. The type species for the genus is *Candidatus* Bucelula chancatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucelulaceae.

Description of *Candidatus* Bucelulaceae fam. nov.

Candidatus Bucelulaceae (NL. fem. n. *Bucelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJE01.* The type genus for the taxon is *Candidatus* Bucelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTJE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucelulales.

Description of *Candidatus* Bucelulales ord. nov.

Candidatus Bucelulales (NL. fem. n. *Bucelulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJE01.* The type genus for the taxon is *Candidatus* Bucelula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Bucolana defetigena sp. nov.

Candidatus Bucolana defetigena (NL. fem. n. *defetigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUMP01 sp903900335*. The type genome for the species is the GenBank assembly GCA_903837265.1. The GC content of the type genome is 53.22 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Bucolana gen. nov.

Candidatus Bucolana (NL. fem. n. *Bucolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUMP01*. The type species for the genus is *Candidatus* Bucolana defetigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1295*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Antegiaceae.

Description of *Candidatus* Bucolaria giganitia sp. nov.

Candidatus Bucolaria giganitia (NL. fem. n. *giganitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5435 sp002426645*. The type genome for the species is the GenBank assembly GCA_002426645.1. The GC content of the type genome is 39.46 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Bucolaria gen. nov.

Candidatus Bucolaria (NL. fem. n. *Bucolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5435*. The type species for the genus is *Candidatus* Bucolaria giganitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5435*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucolariaceae.

Description of *Candidatus* Bucolariaceae fam. nov.

Candidatus Bucolariaceae (NL. fem. n. *Bucolariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5435.* The type genus for the taxon is *Candidatus* Bucolaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5435*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolariales.

Description of *Candidatus* Bucolariales ord. nov.

Candidatus Bucolariales (NL. fem. n. *Bucolariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5435.* The type genus for the taxon is *Candidatus* Bucolaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5435*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bucolariae.

Description of *Candidatus* Bucolariae class. nov.

Candidatus Bucolariae (NL. fem. n. *c__Bucolariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5435.* The type genus for the taxon is *Candidatus* Bucolaria .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_G*.

Description of *Candidatus* Bucolella optumitas sp. nov.

Candidatus Bucolella optumitas (NL. fem. n. *optumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12545 sp013167955*. The type genome for the species is the GenBank assembly RS_GCF_013167955.1. The GC content of the type genome is 57.15 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Bucolella gen. nov.

Candidatus Bucolella (NL. fem. n. *Bucolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12545*. The type species for the genus is *Candidatus* Bucolella optumitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bucolella satacago sp. nov.

Candidatus Bucolella satacago (NL. fem. n. *satacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12545 sp003509545*. The type genome for the species is the GenBank assembly GCA_001508035.1. The GC content of the type genome is 59.52 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample K2".

Description of *Candidatus* Bucolia desuriforma sp. nov.

Candidatus Bucolia desuriforma (NL. fem. n. *desuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMWE01 sp903845115*. The type genome for the species is the GenBank assembly GCA_903877375.1. The GC content of the type genome is 69.88 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Bucolia gen. nov.

Candidatus Bucolia (NL. fem. n. *Bucolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMWE01*. The type species for the genus is *Candidatus* Bucolia desuriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebosaceae.

Description of *Candidatus* Bucolida codifax sp. nov.

Candidatus Bucolida codifax (NL. fem. n. *codifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1006 sp003151655*. The type genome for the species is the GenBank assembly GCA_003151655.1. The GC content of the type genome is 50.86 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Bucolida gen. nov.

Candidatus Bucolida (NL. fem. n. *Bucolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1006*. The type species for the genus is *Candidatus* Bucolida codifax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bucolida crabricula sp. nov.

Candidatus Bucolida crabricula (NL. fem. n. *crabricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1006 sp009773615*. The type genome for the species is the GenBank assembly GCA_009773615.1. The GC content of the type genome is 54.85 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Bucolida holovugo sp. nov.

Candidatus Bucolida holovugo (NL. fem. n. *holovugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1006 sp903876625*. The type genome for the species is the GenBank assembly GCA_903958425.1. The GC content of the type genome is 46.67 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Bucolida intoratio sp. nov.

Candidatus Bucolida intoratio (NL. fem. n. *intoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1006 sp004297065*. The type genome for the species is the GenBank assembly GCA_004297065.1. The GC content of the type genome is 56.95 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Bucolida malivimonas sp. nov.

Candidatus Bucolida malivimonas (NL. fem. n. *malivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1006 sp903913145*. The type genome for the species is the GenBank assembly GCA_903944825.1. The GC content of the type genome is 46.59 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Bucolosa ascenivita sp. nov.

Candidatus Bucolosa ascenivita (NL. fem. n. *ascenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM507 sp002869265*. The type genome for the species is the GenBank assembly GCA_002869265.1. The GC content of the type genome is 35.47 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Bucolosa gen. nov.

Candidatus Bucolosa (NL. fem. n. *Bucolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM507*. The type species for the genus is *Candidatus* Bucolosa ascenivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucolosaceae.

Description of *Candidatus* Bucolosaceae fam. nov.

Candidatus Bucolosaceae (NL. fem. n. *Bucolosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *BM507*. The type genus for the taxon is *Candidatus* Bucolosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Bucolosales ord. nov.

Candidatus Bucolosales (NL. fem. n. *Bucolosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM507*. The type genus for the taxon is *Candidatus* Bucolosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Bucolula lanigicella sp. nov.

Candidatus Bucolula lanigicella (NL. fem. n. *lanigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1400 sp002305125*. The type genome for the species is the GenBank assembly GCA_002305125.1. The GC content of the type genome is 36.8 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Bucolula gen. nov.

Candidatus Bucolula (NL. fem. n. *Bucolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1400*. The type species for the genus is *Candidatus* Bucolula lanigicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bucolulaceae.

Description of *Candidatus* Bucolulaceae fam. nov.

Candidatus Bucolulaceae (NL. fem. n. *Bucolulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1400.* The type genus for the taxon is *Candidatus* Bucolula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Bucolulales ord. nov.

Candidatus Bucolulales (NL. fem. n. *Bucolulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1400.* The type genus for the taxon is *Candidatus* Bucolula .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Bugilana resacatica sp. nov.

Candidatus Bugilana resacatica (NL. fem. n. *resacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VUNA01 sp002299625*. The type genome for the species is the GenBank assembly GCA_002299625.1. The GC content of the type genome is 50.85 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Bugilana gen. nov.

Candidatus Bugilana (NL. fem. n. *Bugilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VUNA01*. The type species for the genus is *Candidatus* Bugilana resacatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bugilaria nugivitrix sp. nov.

Candidatus Bugilaria nugivitrix (NL. fem. n. *nugivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-47-17b sp001793865*. The type genome for the species is the

GenBank assembly GCA_001793815.1. The GC content of the type genome is 47.43 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Bugilaria gen. nov.

Candidatus Bugilaria (NL. fem. n. *Bugilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-47-17b*. The type species for the genus is *Candidatus* Bugilaria nugivitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Bugilella bipalicella sp. nov.

Candidatus Bugilella bipalicella (NL. fem. n. *bipalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3567 sp002376045*. The type genome for the species is the GenBank assembly GCA_002376045.1. The GC content of the type genome is 39.47 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Bugilella gen. nov.

Candidatus Bugilella (NL. fem. n. *Bugilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3567*. The type species for the genus is *Candidatus* Bugilella bipalicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bugilellaceae.

Description of *Candidatus* Bugilellaceae fam. nov.

Candidatus Bugilellaceae (NL. fem. n. *Bugilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3567*. The type genus for the taxon is *Candidatus* Bugilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bugilellales.

Description of *Candidatus* Bugilellales ord. nov.

Candidatus Bugilellales (NL. fem. n. *Bugilellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3567*. The type genus for the taxon is *Candidatus* Bugilella .

According to the GTDB R06-RS202, this order belongs to the class *Thermosediminibacteria*.

Description of *Candidatus* Bugilia dececitia sp. nov.

Candidatus Bugilia dececitia (NL. fem. n. *dececitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp002316795*. The type genome for the species is the GenBank assembly GCA_002397955.1. The GC content of the type genome is 50.39 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Bugilia gen. nov.

Candidatus Bugilia (NL. fem. n. *Bugilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Syner-03*. The type species for the genus is *Candidatus* Bugilia dececitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bugilia decucentia sp. nov.

Candidatus Bugilia decucentia (NL. fem. n. *decucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Syner-03 sp002839185*. The type genome for the species is the GenBank assembly GCA_002839185.1. The GC content of the type genome is 46.53 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Bugilia dehisilenta sp. nov.

Candidatus Bugilia dehisilenta (NL. fem. n. *dehisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp012728505*. The type genome for the species is the GenBank assembly GCA_012728505.1. The GC content of the type genome is 43.84 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Bugilia denavilega sp. nov.

Candidatus Bugilia denavilega (NL. fem. n. *denavilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp002428495*. The type genome for the species is the GenBank assembly GCA_003452235.1. The GC content of the type genome is 47.99 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Bugilia intabago sp. nov.

Candidatus Bugilia intabago (NL. fem. n. *intabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp012513245*. The type genome for the species is the GenBank assembly GCA_012513245.1. The GC content of the type genome is 45.77 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Bugilia intacedo sp. nov.

Candidatus Bugilia intacedo (NL. fem. n. *intacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp012727545*. The type genome for the species is the GenBank assembly GCA_012727545.1. The GC content of the type genome is 47.47 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Bugilia solivivita sp. nov.

Candidatus Bugilia solivivita (NL. fem. n. *solivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Syner-03 sp002306075*. The type genome for the species is the GenBank assembly GCA_012520335.1. The GC content of the type genome is 52.23 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Bugilida rudicimonia sp. nov.

Candidatus Bugilida rudicimonia (NL. fem. n. *rudicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-46-15 sp002772575*. The type genome for the species is the GenBank assembly GCA_002772575.1. The GC content of the type genome is 35.31 % and the genome length is 0.37 Mbp.

Description of *Candidatus* Bugilida gen. nov.

Candidatus Bugilida (NL. fem. n. *Bugilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-46-15*. The type species for the genus is *Candidatus* Bugilida rudicimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-46-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bugilidaceae.

Description of *Candidatus* Bugilidaceae fam. nov.

Candidatus Bugilidaceae (NL. fem. n. *Bugilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-46-15.* The type genus for the taxon is *Candidatus* Bugilida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Bugilida siligousia sp. nov.

Candidatus Bugilida siligousia (NL. fem. n. *siligousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-46-15 sp001823105*. The type genome for the species is the GenBank assembly GCA_001823105.1. The GC content of the type genome is 46.48 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Bugilosa admutivita sp. nov.

Candidatus Bugilosa admutivita (NL. fem. n. *admutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp902778165*. The type genome for the species is the GenBank assembly GCA_902778165.1. The GC content of the type genome is 42.49 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Bugilosa gen. nov.

Candidatus Bugilosa (NL. fem. n. *Bugilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1712*. The type species for the genus is *Candidatus* Bugilosa admutivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bugilosa amfititica sp. nov.

Candidatus Bugilosa amfititica (NL. fem. n. *amfititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp002317175*. The type genome for the species is the GenBank assembly GCA_002317175.1. The GC content of the type genome is 38.24 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Bugilosa appugilega sp. nov.

Candidatus Bugilosa appugilega (NL. fem. n. *appugilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp902783735*. The type genome for the species is the GenBank assembly GCA_902783735.1. The GC content of the type genome is 41.86 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Bugilosa bipenifica sp. nov.

Candidatus Bugilosa bipenifica (NL. fem. n. *bipenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp002393095*. The type genome for the species is the GenBank assembly GCA_002393095.1. The GC content of the type genome is 45.48 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Bugilosa depupigena sp. nov.

Candidatus Bugilosa depupigena (NL. fem. n. *depupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp002317245*. The type genome for the species is the GenBank assembly GCA_002317245.1. The GC content of the type genome is 42.07 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Bugilosa devecimonas sp. nov.

Candidatus Bugilosa devecimonas (NL. fem. n. *devecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp902789785*. The type genome for the species is the GenBank assembly GCA_902789785.1. The GC content of the type genome is 41.68 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Bugilosa homicigena sp. nov.

Candidatus Bugilosa homicigena (NL. fem. n. *homicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp900766815*. The type genome for the species is the GenBank assembly RS_GCF_900766815.1. The GC content of the type genome is 44.18 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Bugilosa lucubitrix sp. nov.

Candidatus Bugilosa lucubitrix (NL. fem. n. *lucubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1712 sp902779505*. The type genome for the species is the GenBank assembly GCA_902779505.1. The GC content of the type genome is 42.45 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Bugilula duponiforma sp. nov.

Candidatus Bugilula duponiforma (NL. fem. n. *duponiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp000434015*. The type genome for the species is the GenBank assembly GCA_000434015.1. The GC content of the type genome is 25.87 % and the genome length is 1.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Bugilula gen. nov.

Candidatus Bugilula (NL. fem. n. *Bugilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-492*. The type species for the genus is *Candidatus* Bugilula duponiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Bugilula forinicella sp. nov.

Candidatus Bugilula forinicella (NL. fem. n. *forinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp900557195*. The type genome for the species is the GenBank assembly GCA_900557195.1. The GC content of the type genome is 26.26 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Bugilula ingigibra sp. nov.

Candidatus Bugilula ingigibra (NL. fem. n. *ingigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp900557045*. The type genome for the species is the GenBank assembly GCA_900557045.1. The GC content of the type genome is 26.9 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Bugilula mavorastra sp. nov.

Candidatus Bugilula mavorastra (NL. fem. n. *mavorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp000434335*. The type genome for the species is the GenBank assembly GCA_900551575.1. The GC content of the type genome is 27.2 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Bugilula pimenitura sp. nov.

Candidatus Bugilula pimenitura (NL. fem. n. *pimenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp002633185*. The type genome for the species is the GenBank assembly GCA_002633185.1. The GC content of the type genome is 28.87 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Bugilula selecifica sp. nov.

Candidatus Bugilula selecifica (NL. fem. n. *selecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-492 sp900553225*. The type genome for the species is the GenBank assembly GCA_900553225.1. The GC content of the type genome is 27.28 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Bulaparia adtacitrix sp. nov.

Candidatus Bulaparia adtacitrix (NL. fem. n. *adtacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1723 sp002317115*. The type genome for the species is the GenBank assembly GCA_002317115.1. The GC content of the type genome is 41.42 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Bulaparia gen. nov.

Candidatus Bulaparia (NL. fem. n. *Bulaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1723*. The type species for the genus is *Candidatus* Bulaparia adtacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bulaparia colutax sp. nov.

Candidatus Bulaparia colutax (NL. fem. n. *colutax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1723 sp002371265*. The type genome for the species is the GenBank assembly GCA_002371265.1. The GC content of the type genome is 40.79 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Bulaparia infunilenta sp. nov.

Candidatus Bulaparia infunilenta (NL. fem. n. *infunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1723 sp902782665*. The type genome for the species is the GenBank assembly GCA_902782665.1. The GC content of the type genome is 40.49 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Bulaparia rumifatio sp. nov.

Candidatus Bulaparia rumifatio (NL. fem. n. *rumifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1723 sp002392915*. The type genome for the species is the GenBank assembly GCA_002449735.1. The GC content of the type genome is 40.92 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Bulapella paralifica sp. nov.

Candidatus Bulapella paralifica (NL. fem. n. *paralifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG334 sp900317935*. The type genome for the species is the GenBank assembly GCA_902787505.1. The GC content of the type genome is 35.03 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Bulapella gen. nov.

Candidatus Bulapella (NL. fem. n. *Bulapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG334*. The type species for the genus is *Candidatus* Bulapella paralifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Bulapia paraciforma sp. nov.

Candidatus Bulapia paraciforma (NL. fem. n. *paraciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-147 sp003152355*. The type genome for the species is the GenBank assembly GCA_003152355.1. The GC content of the type genome is 57.5 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Bulapia gen. nov.

Candidatus Bulapia (NL. fem. n. *Bulapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-147*. The type species for the genus is *Candidatus* Bulapia

paraciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Bulapia siticastra sp. nov.

Candidatus Bulapia siticastra (NL. fem. n. *siticastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-147 sp013286465*. The type genome for the species is the GenBank assembly GCA_013286465.1. The GC content of the type genome is 57.57 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Bulapida medimifica sp. nov.

Candidatus Bulapida medimifica (NL. fem. n. *medimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12135 sp003497555*. The type genome for the species is the GenBank assembly GCA_003497555.1. The GC content of the type genome is 41.53 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Bulapida gen. nov.

Candidatus Bulapida (NL. fem. n. *Bulapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12135*. The type species for the genus is *Candidatus* Bulapida medimifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bulapidaceae.

Description of *Candidatus* Bulapidaceae fam. nov.

Candidatus Bulapidaceae (NL. fem. n. *Bulapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA12135.* The type genus for the taxon is *Candidatus* Bulapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bulapidales.

Description of *Candidatus* Bulapidales ord. nov.

Candidatus Bulapidales (NL. fem. n. *Bulapidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12135.* The type genus for the taxon is *Candidatus* Bulapida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA12135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bulapidae.

Description of *Candidatus* Bulapidae class. nov.

Candidatus Bulapidae (NL. fem. n. *c__Bulapidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12135.* The type genus for the taxon is *Candidatus* Bulapida .

According to GTDB R06-RS202, this class belongs to the phylum *Spirochaetota*.

Description of *Candidatus* Bulaposa sonabimonia sp. nov.

Candidatus Bulaposa sonabimonia (NL. fem. n. *sonabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVXK01 sp011773515*. The type genome for the species is the GenBank assembly GCA_011773515.1. The GC content of the type genome is 55.31 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Bulaposa gen. nov.

Candidatus Bulaposa (NL. fem. n. *Bulaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVXK01*. The type species for the genus is *Candidatus* Bulaposa sonabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J040*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detorariaceae.

Description of *Candidatus* Bulapula cacomastra sp. nov.

Candidatus Bulapula cacomastra (NL. fem. n. *cacomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLI01 sp009695465*. The type genome for the species is the GenBank assembly GCA_009695365.1. The GC content of the type genome is 62.08 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Bulapula gen. nov.

Candidatus Bulapula (NL. fem. n. *Bulapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYLI01*. The type species for the genus is *Candidatus* Bulapula cacomastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1100*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilanaceae.

Description of *Candidatus* Bulapula decunitia sp. nov.

Candidatus Bulapula decunitia (NL. fem. n. *decunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLI01 sp005809105*. The type genome for the species is the GenBank assembly GCA_005777705.1. The GC content of the type genome is 64.67 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Bulleidia annicifica sp. nov.

Candidatus Bulleidia annicifica (NL. fem. n. *annicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bulleidia sp902761625*. The type genome for the species is the GenBank assembly GCA_902761625.1. The GC content of the type genome is 48.44 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Bulleidia benematica sp. nov.

Candidatus Bulleidia benematica (NL. fem. n. *benematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp009929095*. The type genome for the species is the GenBank assembly GCA_009929095.1. The GC content of the type genome is 44.58 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Bulleidia carunetta sp. nov.

Candidatus Bulleidia carunetta (NL. fem. n. *carunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp003446295*. The type genome for the species is the GenBank assembly GCA_902766025.1. The GC content of the type genome is 47.77 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Bulleidia catafivita sp. nov.

Candidatus Bulleidia catafivita (NL. fem. n. *catafivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900319505*. The type genome for the species is the GenBank assembly GCA_900314075.1. The GC content of the type genome is 46.95 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Bulleidia cemenitoga sp. nov.

Candidatus Bulleidia cemenitoga (NL. fem. n. *cemenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902782955*. The type genome for the species is the GenBank assembly GCA_902782955.1. The GC content of the type genome is 48.93 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Bulleidia cimitivita sp. nov.

Candidatus Bulleidia cimitivita (NL. fem. n. *cimitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900320455*. The type genome for the species is the GenBank assembly GCA_902760085.1. The GC content of the type genome is 49.13 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Bulleidia detunatio sp. nov.

Candidatus Bulleidia detunatio (NL. fem. n. *detunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900314345*. The type genome for the species is the GenBank assembly GCA_900314345.1. The GC content of the type genome is 49.96 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Bulleidia disidisca sp. nov.

Candidatus Bulleidia disidisca (NL. fem. n. *disidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902775735*. The type genome for the species is the GenBank assembly GCA_902773855.1. The GC content of the type genome is 50.27 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Bulleidia ecastilenta sp. nov.

Candidatus Bulleidia ecastilenta (NL. fem. n. *ecastilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902795905*. The type genome for the species is the GenBank assembly GCA_902795905.1. The GC content of the type genome is 49.63 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Bulleidia ensicigena sp. nov.

Candidatus Bulleidia ensicigena (NL. fem. n. *ensicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902766005*. The type genome for the species is the GenBank assembly GCA_902766005.1. The GC content of the type genome is 40.7 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Bulleidia episcetta sp. nov.

Candidatus Bulleidia episcetta (NL. fem. n. *episcetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902778375*. The type genome for the species is the GenBank assembly GCA_902778375.1. The GC content of the type genome is 50.44 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Bulleidia ermelimonas sp. nov.

Candidatus Bulleidia ermelimonas (NL. fem. n. *ermelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902797775*. The type genome for the species is the GenBank assembly GCA_902797775.1. The GC content of the type genome is 34.18 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Bulleidia eviscisca sp. nov.

Candidatus Bulleidia eviscisca (NL. fem. n. *eviscisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902766435*. The type genome for the species is the GenBank assembly GCA_902766435.1. The GC content of the type genome is 47.63 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Bulleidia halucibula sp. nov.

Candidatus Bulleidia halucibula (NL. fem. n. *halucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bulleidia sp900539965*. The type genome for the species is the GenBank assembly RS_GCF_900759745.1. The GC content of the type genome is 35.71 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Bulleidia hibisessa sp. nov.

Candidatus Bulleidia hibisessa (NL. fem. n. *hibisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp000701725*. The type genome for the species is the GenBank assembly GCA_902785015.1. The GC content of the type genome is 49.21 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Bulleidia immusetta sp. nov.

Candidatus Bulleidia immusetta (NL. fem. n. *immusetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902796465*. The type genome for the species is the GenBank assembly GCA_902796465.1. The GC content of the type genome is 48.43 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Bulleidia inexpitica sp. nov.

Candidatus Bulleidia inexpitica (NL. fem. n. *inexpitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902766675*. The type genome for the species is the GenBank assembly GCA_902766675.1. The GC content of the type genome is 33.54 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Bulleidia inpuditoga sp. nov.

Candidatus Bulleidia inpuditoga (NL. fem. n. *inpuditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp012516665*. The type genome for the species is the GenBank assembly GCA_012516665.1. The GC content of the type genome is 44.65 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Bulleidia latibilega sp. nov.

Candidatus Bulleidia latibilega (NL. fem. n. *latibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp903789495*. The type genome for the species is the GenBank assembly GCA_903789515.1. The GC content of the type genome is 56.92 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Bulleidia lucubibra sp. nov.

Candidatus Bulleidia lucubibra (NL. fem. n. *lucubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900314905*. The type genome for the species is the GenBank assembly GCA_900314905.1. The GC content of the type genome is 50.59 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Bulleidia ornititrix sp. nov.

Candidatus Bulleidia ornititrix (NL. fem. n. *ornititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900554555*. The type genome for the species is the GenBank assembly GCA_900554555.1. The GC content of the type genome is 37.35 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Bulleidia pedepentia sp. nov.

Candidatus Bulleidia pedepentia (NL. fem. n. *pedepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900315225*. The type genome for the species is the GenBank assembly GCA_902772595.1. The GC content of the type genome is 46.15 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Bulleidia refinago sp. nov.

Candidatus Bulleidia refinago (NL. fem. n. *refinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900770275*. The type genome for the species is the GenBank assembly RS_GCF_900770275.1. The GC content of the type genome is 51.05 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Bulleidia regigugo sp. nov.

Candidatus Bulleidia regigugo (NL. fem. n. *regigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp002372175*. The type genome for the species is the GenBank assembly GCA_002372175.1. The GC content of the type genome is 49.19 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Bulleidia rubefastra sp. nov.

Candidatus Bulleidia rubefastra (NL. fem. n. *rubefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp900315065*. The type genome for the species is the GenBank assembly GCA_902794845.1. The GC content of the type genome is 44.54 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Bulleidia semiligena sp. nov.

Candidatus Bulleidia semiligena (NL. fem. n. *semiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902784015*. The type genome for the species is the GenBank assembly GCA_902784015.1. The GC content of the type genome is 30.26 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Bulleidia senipitia sp. nov.

Candidatus Bulleidia senipitia (NL. fem. n. *senipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Bulleidia sp902793635*. The type genome for the species is the GenBank assembly GCA_902793635.1. The GC content of the type genome is 50.23 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Bulleidia tabifitas sp. nov.

Candidatus Bulleidia tabifitas (NL. fem. n. *tabifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bulleidia sp902786245*. The type genome for the species is the GenBank assembly GCA_902786245.1. The GC content of the type genome is 49.9 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Burkholderia butubitas sp. nov.

Candidatus Burkholderia butubitas (NL. fem. n. *butubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp004343775*. The type genome for the species is the GenBank assembly RS_GCF_004343775.1. The GC content of the type genome is 67.15 % and the genome length is 8.59 Mbp.

Description of *Candidatus* Burkholderia cementas sp. nov.

Candidatus Burkholderia cementas (NL. fem. n. *cementas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp003853705*. The type genome for the species is the GenBank assembly RS_GCF_003853705.1. The GC content of the type genome is 66.63 % and the genome length is 8.09 Mbp.

Description of *Candidatus* Burkholderia colipedo sp. nov.

Candidatus Burkholderia colipedo (NL. fem. n. *colipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp003853415*. The type genome for the species is the GenBank assembly RS_GCF_003853425.1. The GC content of the type genome is 66.68 % and the genome length is 7.89 Mbp.

Description of *Candidatus* Burkholderia delacatica sp. nov.

Candidatus Burkholderia delacatica (NL. fem. n. *delacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp003854275*. The type genome for the species is the GenBank assembly RS_GCF_003854275.1. The GC content of the type genome is 65.74 % and the genome length is 8.16 Mbp.

Description of *Candidatus* Burkholderia denigax sp. nov.

Candidatus Burkholderia denigax (NL. fem. n. *denigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp000949135*. The type genome for the species is the GenBank assembly RS_GCF_000949135.2. The GC content of the type genome is 66.88 % and the genome length is 7.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root nodule from Rubber Plantation".

Description of *Candidatus* Burkholderia deparibula sp. nov.

Candidatus Burkholderia deparibula (NL. fem. n. *deparibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp902833145*. The type genome for the species is the GenBank assembly RS_GCF_902833175.1. The GC content of the type genome is 67.05 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Burkholderia disidetta sp. nov.

Candidatus Burkholderia disidetta (NL. fem. n. *disidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp902833225*. The type genome for the species is the GenBank assembly RS_GCF_902833225.1. The GC content of the type genome is 66.7 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Burkholderia hibisimonia sp. nov.

Candidatus Burkholderia hibisimonia (NL. fem. n. *hibisimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp013403875*. The type genome for the species is the GenBank assembly RS_GCF_013403875.1. The GC content of the type genome is 66.59 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Burkholderia intenitia sp. nov.

Candidatus Burkholderia intenitia (NL. fem. n. *intenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp003635165*. The type genome for the species is the GenBank assembly RS_GCF_003635165.1. The GC content of the type genome is 66.23 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Burkholderia invigiforma sp. nov.

Candidatus Burkholderia invigiforma (NL. fem. n. *invigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp001522865*. The type genome for the species is the GenBank assembly RS_GCF_001522865.1. The GC content of the type genome is 63.8 % and the genome length is 5.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Burkholderia lugubugo sp. nov.

Candidatus Burkholderia lugubugo (NL. fem. n. *lugubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp001524625*. The type genome for the species is the GenBank assembly RS_GCF_001524585.1. The GC content of the type genome is 67.14 % and the genome length is 7.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Burkholderia minuritica sp. nov.

Candidatus Burkholderia minuritica (NL. fem. n. *minuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp000687455*. The type genome for the species is the GenBank assembly RS_GCF_000687455.2. The GC content of the type genome is 66.52 % and the genome length is 5.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wet tropical forest soil".

Description of *Candidatus* Burkholderia nosocibula sp. nov.

Candidatus Burkholderia nosocibula (NL. fem. n. *nosocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp002223185*. The type genome for the species is the GenBank assembly RS_GCF_001541445.1. The GC content of the type genome is 65.68 % and the genome length is 8.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "agricultural soil".

Description of *Candidatus* Burkholderia octipilega sp. nov.

Candidatus Burkholderia octipilega (NL. fem. n. *octipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp011605345*. The type genome for the species is the GenBank assembly RS_GCF_011605345.1. The GC content of the type genome is 66.36 % and the genome length is 8.7 Mbp.

Description of *Candidatus* Burkholderia perabax sp. nov.

Candidatus Burkholderia perabax (NL. fem. n. *perabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp902833045*. The type genome for the species is the GenBank assembly RS_GCF_902833045.1. The GC content of the type genome is 66.26 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Burkholderia pinacimonia sp. nov.

Candidatus Burkholderia pinacimonia (NL. fem. n. *pinacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Burkholderia sp001522585*. The type genome for the species is the GenBank assembly RS_GCF_000504665.1. The GC content of the type genome is 66.89 % and the genome length is 7.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Burkholderia vavasatica sp. nov.

Candidatus Burkholderia vavasatica (NL. fem. n. *vavasatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Burkholderia sp003853645*. The type genome for the species is the GenBank assembly RS_GCF_003853645.1. The GC content of the type genome is 65.88 % and the genome length is 8.38 Mbp.

Description of *Candidatus* Buttiauxella admulousia sp. nov.

Candidatus Buttiauxella admulousia (NL. fem. n. *admulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Buttiauxella sp006376615*. The type genome for the species is the GenBank assembly RS_GCF_006376615.1. The GC content of the type genome is 49.12 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Buttiauxella apporedo sp. nov.

Candidatus Buttiauxella apporedo (NL. fem. n. *apporedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Buttiauxella sp014189855*. The type genome for the species is the GenBank assembly RS_GCF_014189855.1. The GC content of the type genome is 50.31 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Buttiauxella direpitura sp. nov.

Candidatus Buttiauxella direpitura (NL. fem. n. *direpitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Buttiauxella sp002321695*. The type genome for the species is the GenBank assembly RS_GCF_003628475.1. The GC content of the type genome is 54.91

% and the genome length is 4.13 Mbp.

Description of *Candidatus* Butubana catobimonia sp. nov.

Candidatus Butubana catobimonia (NL. fem. n. *catobimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902563105*. The type genome for the species is the GenBank assembly GCA_902515955.1. The GC content of the type genome is 34.41 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Butubana gen. nov.

Candidatus Butubana (NL. fem. n. *Butubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEDG-81*. The type species for the genus is *Candidatus* Butubana catobimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-339-G14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposariaceae.

Description of *Candidatus* Butubana cicilibula sp. nov.

Candidatus Butubana cicilibula (NL. fem. n. *cicilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp003279605*. The type genome for the species is the GenBank assembly GCA_902559765.1. The GC content of the type genome is 34.16 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Butubana conamastra sp. nov.

Candidatus Butubana conamastra (NL. fem. n. *conamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902561325*. The type genome for the species is the GenBank assembly GCA_902561325.1. The GC content of the type genome is 34.07 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Butubana conopitas sp. nov.

Candidatus Butubana conopitas (NL. fem. n. *conopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902625415*. The type genome for the species is the GenBank assembly GCA_902625415.1. The GC content of the type genome is 34.83 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Butubana cosigiforma sp. nov.

Candidatus Butubana cosigiforma (NL. fem. n. *cosigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902632605*. The type genome for the species is the GenBank assembly GCA_902632605.1. The GC content of the type genome is 34.41 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Butubana defetitudo sp. nov.

Candidatus Butubana defetitudo (NL. fem. n. *defetitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902514765*. The type genome for the species is the GenBank assembly GCA_902514765.1. The GC content of the type genome is 34.66 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Butubana denupimonia sp. nov.

Candidatus Butubana denupimonia (NL. fem. n. *denupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp003213595*. The type genome for the species is the GenBank assembly GCA_902574945.1. The GC content of the type genome is 34.8 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Butubana divolibula sp. nov.

Candidatus Butubana divolibula (NL. fem. n. *divolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902540995*. The type genome for the species is the GenBank assembly GCA_902613685.1. The GC content of the type genome is 34.93 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Butubana hirudatica sp. nov.

Candidatus Butubana hirudatica (NL. fem. n. *hirudatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp003331625*. The type genome for the species is the GenBank assembly GCA_902514675.1. The GC content of the type genome is 33.82 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Butubana indepivita sp. nov.

Candidatus Butubana indepivita (NL. fem. n. *indepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902595715*. The type genome for the species is the GenBank assembly GCA_902595715.1. The GC content of the type genome is 34.53 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Butubana inremitio sp. nov.

Candidatus Butubana inremitio (NL. fem. n. *inremitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902629465*. The type genome for the species is the GenBank assembly GCA_902629465.1. The GC content of the type genome is 34.79 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Butubana maligisca sp. nov.

Candidatus Butubana maligisca (NL. fem. n. *maligisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MEDG-81 sp902587545*. The type genome for the species is the GenBank assembly GCA_902587545.1. The GC content of the type genome is 34.96 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Butubana prognicella sp. nov.

Candidatus Butubana prognicella (NL. fem. n. *prognicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp002689405*. The type genome for the species is the GenBank assembly GCA_002689405.1. The GC content of the type genome is 34.71 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Butubana senacugo sp. nov.

Candidatus Butubana senacugo (NL. fem. n. *senacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902514645*. The type genome for the species is the GenBank assembly GCA_902514645.1. The GC content of the type genome is 34.48 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Butubana sonipicella sp. nov.

Candidatus Butubana sonipicella (NL. fem. n. *sonipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEDG-81 sp902627595*. The type genome for the species is the GenBank assembly GCA_902593265.1. The GC content of the type genome is 34.17 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Butubaria cacopilenta sp. nov.

Candidatus Butubaria cacopilenta (NL. fem. n. *cacopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1255 sp902782885*. The type genome for the species is the GenBank assembly GCA_902803045.1. The GC content of the type genome is 57.66 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Butubaria gen. nov.

Candidatus Butubaria (NL. fem. n. *Butubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1255*. The type species for the genus is *Candidatus* Butubaria cacopilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Butubariaceae.

Description of *Candidatus* Butubariaceae fam. nov.

Candidatus Butubariaceae (NL. fem. n. *Butubariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1255.* The type genus for the taxon is *Candidatus* Butubaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fatifosales.

Description of *Candidatus* Butubaria irrevifica sp. nov.

Candidatus Butubaria irrevifica (NL. fem. n. *irrevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1255 sp002308795*. The type genome for the species is the GenBank assembly GCA_002308795.1. The GC content of the type genome is 50.83 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Butubaria orgetibula sp. nov.

Candidatus Butubaria orgetibula (NL. fem. n. *orgetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1255 sp902796205*. The type genome for the species is the GenBank assembly GCA_902796205.1. The GC content of the type genome is 55.17 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Butubella cilotousia sp. nov.

Candidatus Butubella cilotousia (NL. fem. n. *cilotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSAR01 sp011046405*. The type genome for the species is the GenBank assembly GCA_011046405.1. The GC content of the type genome is 59.88 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Butubella gen. nov.

Candidatus Butubella (NL. fem. n. *Butubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSAR01*. The type species for the genus is *Candidatus* Butubella cilotousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Butubia adtumitrix sp. nov.

Candidatus Butubia adtumitrix (NL. fem. n. *adtumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903841915*. The type genome for the species is the GenBank assembly GCA_903841915.1. The GC content of the type genome is 37.95 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Butubia gen. nov.

Candidatus Butubia (NL. fem. n. *Butubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILAF01*. The type species for the genus is *Candidatus* Butubia adtumitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Butubia dibucousia sp. nov.

Candidatus Butubia dibucousia (NL. fem. n. *dibucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903881425*. The type genome for the species is the GenBank assembly GCA_903881425.1. The GC content of the type genome is 34.38 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Butubia legifica sp. nov.

Candidatus Butubia legifica (NL. fem. n. *legifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903870685*. The type genome for the species is the GenBank assembly GCA_903870685.1. The GC content of the type genome is 33.5 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Butubia milipigena sp. nov.

Candidatus Butubia milipigena (NL. fem. n. *milipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903884185*. The type genome for the species is the GenBank assembly GCA_903884185.1. The GC content of the type genome is 41.22 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Butubia semibitoga sp. nov.

Candidatus Butubia semibitoga (NL. fem. n. *semibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903830285*. The type genome for the species is the GenBank assembly GCA_903830285.1. The GC content of the type genome is 37.61 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Butubia semunax sp. nov.

Candidatus Butubia semunax (NL. fem. n. *semunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903832075*. The type genome for the species is the GenBank assembly GCA_903832075.1. The GC content of the type genome is 32.2 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Butubia telefedo sp. nov.

Candidatus Butubia telefedo (NL. fem. n. *telefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILAF01 sp903904335*. The type genome for the species is the GenBank assembly GCA_903904335.1. The GC content of the type genome is 36.7 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Butubida agnomicella sp. nov.

Candidatus Butubida agnomicella (NL. fem. n. *agnomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp012961035*. The type genome for the species is the GenBank assembly GCA_012961035.1. The GC content of the type genome is 68.6 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Butubida gen. nov.

Candidatus Butubida (NL. fem. n. *Butubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9410*. The type species for the genus is *Candidatus* Butubida agnomicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MedAcidi-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamidaceae.

Description of *Candidatus* Butubida antomessa sp. nov.

Candidatus Butubida antomessa (NL. fem. n. *antomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp002714485*. The type genome for the species is the GenBank assembly GCA_002714485.1. The GC content of the type genome is 64.65 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Butubida cruppugo sp. nov.

Candidatus Butubida cruppugo (NL. fem. n. *cruppugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp014239855*. The type genome for the species is the GenBank assembly GCA_014239855.1. The GC content of the type genome is 69.39 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Butubida dilicilenta sp. nov.

Candidatus Butubida dilicilenta (NL. fem. n. *dilicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp002727895*. The type genome for the species is the GenBank assembly GCA_002720045.1. The GC content of the type genome is 68.32 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Butubida lapilitura sp. nov.

Candidatus Butubida lapilitura (NL. fem. n. *lapilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp014240365*. The type genome for the species is the GenBank assembly GCA_014240365.1. The GC content of the type genome is 67.38 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Butubida manupatio sp. nov.

Candidatus Butubida manupatio (NL. fem. n. *manupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp003541675*. The type genome for the species is the GenBank assembly GCA_003541675.1. The GC content of the type genome is 66.16 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Butubida nucifica sp. nov.

Candidatus Butubida nucifica (NL. fem. n. *nucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp002348705*. The type genome for the species is the GenBank assembly GCA_002448675.1. The GC content of the type genome is 60.52 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Butubida panifetta sp. nov.

Candidatus Butubida panifetta (NL. fem. n. *panifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp002717365*. The type genome for the species is the GenBank assembly GCA_002717365.1. The GC content of the type genome is 64.3 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Butubida tirocicula sp. nov.

Candidatus Butubida tirocicula (NL. fem. n. *tirocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9410 sp014237715*. The type genome for the species is the GenBank assembly GCA_014237715.1. The GC content of the type genome is 66.4 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Butubosa cerofedo sp. nov.

Candidatus Butubosa cerofedo (NL. fem. n. *cerofedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012837965*. The type genome for the species is the GenBank assembly GCA_012837965.1. The GC content of the type genome is 47.78 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Butubosa gen. nov.

Candidatus Butubosa (NL. fem. n. *Butubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU024*. The type species for the genus is *Candidatus* Butubosa cerofedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Butubosa cilotilega sp. nov.

Candidatus Butubosa cilotilega (NL. fem. n. *cilotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012837525*. The type genome for the species is the GenBank assembly GCA_012837525.1. The GC content of the type genome is 57.81 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Butubosa denupisca sp. nov.

Candidatus Butubosa denupisca (NL. fem. n. *denupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012728815*. The type genome for the species is the GenBank assembly GCA_012728815.1. The GC content of the type genome is 64.34 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Butubosa desorousia sp. nov.

Candidatus Butubosa desorousia (NL. fem. n. *desorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp002411105*. The type genome for the species is the GenBank assembly GCA_002316605.1. The GC content of the type genome is 59.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Butubosa ermelilenta sp. nov.

Candidatus Butubosa ermelilenta (NL. fem. n. *ermelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012728435*. The type genome for the species is the GenBank assembly GCA_012728435.1. The GC content of the type genome is 55.87 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Butubosa infirastra sp. nov.

Candidatus Butubosa infirastra (NL. fem. n. *infirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp002428405*. The type genome for the species is the GenBank assembly GCA_002428405.1. The GC content of the type genome is 56.98 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Butubosa minuribra sp. nov.

Candidatus Butubosa minuribra (NL. fem. n. *minuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012522875*. The type genome for the species is the GenBank assembly GCA_012522875.1. The GC content of the type genome is 57.55 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Butubosa pabilugo sp. nov.

Candidatus Butubosa pabilugo (NL. fem. n. *pabilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012837835*. The type genome for the species is the GenBank assembly GCA_012837835.1. The GC content of the type genome is 42.08 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Butubosa tenebedo sp. nov.

Candidatus Butubosa tenebedo (NL. fem. n. *tenebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp001513425*. The type genome for the species is the GenBank assembly GCA_001513425.1. The GC content of the type genome is 54.29 %

and the genome length is 2.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Butubosa tenebibula sp. nov.

Candidatus Butubosa tenebibula (NL. fem. n. *tenebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012521895*. The type genome for the species is the GenBank assembly GCA_012521895.1. The GC content of the type genome is 59.33 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Butubosa volucitrix sp. nov.

Candidatus Butubosa volucitrix (NL. fem. n. *volucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012518615*. The type genome for the species is the GenBank assembly GCA_012518615.1. The GC content of the type genome is 42.59 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Butubosa xeramitio sp. nov.

Candidatus Butubosa xeramitio (NL. fem. n. *xeramitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU024 sp012514225*. The type genome for the species is the GenBank assembly GCA_012514225.1. The GC content of the type genome is 65.8 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Butubula camilivita sp. nov.

Candidatus Butubula camilivita (NL. fem. n. *camilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-41 sp900066215*. The type genome for the species is the GenBank assembly GCA_003520845.1. The GC content of the type genome is 38.53 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Butubula gen. nov.

Candidatus Butubula (NL. fem. n. *Butubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-41*. The type species for the genus is *Candidatus* Butubula camilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Butubula locelastra sp. nov.

Candidatus Butubula locelastra (NL. fem. n. *locelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-41 sp001941225*. The type genome for the species is the GenBank assembly GCA_001941225.1. The GC content of the type genome is 45.8 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Butubula videlatio sp. nov.

Candidatus Butubula videlatio (NL. fem. n. *videlatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-41 sp010206265*. The type genome for the species is the GenBank assembly RS_GCF_010206265.1. The GC content of the type genome is 39.5 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Butyricicoccus exculetta sp. nov.

Candidatus Butyricicoccus exculetta (NL. fem. n. *exculetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus sp900547195*. The type genome for the species is the GenBank assembly GCA_900547195.1. The GC content of the type genome is 56.1 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Butyricicoccus exsorilenta sp. nov.

Candidatus Butyricicoccus exsorilenta (NL. fem. n. *exsorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus sp900604335*. The type genome for the species is the GenBank assembly RS_GCF_900604335.1. The GC content of the type genome is 53.47 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Butyricicoccus solacatica sp. nov.

Candidatus Butyricicoccus solacatica (NL. fem. n. *solacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus sp004552245*. The type genome for the species is the GenBank assembly GCA_004552245.1. The GC content of the type genome is 62.41 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Butyricicoccus celamisca sp. nov.

Candidatus Butyricicoccus celamisca (NL. fem. n. *celamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus_A sp002449635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002361555.1. The GC content of the type genome is 56.18 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Butyricicoccus hexamitica sp. nov.

Candidatus Butyricicoccus hexamitica (NL. fem. n. *hexamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus_A sp004555915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004555915.1. The GC content of the type genome is 51.58 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Butyricicoccus lenocitura sp. nov.

Candidatus Butyricicoccus lenocitura (NL. fem. n. *lenocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricicoccus_A sp002395695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900550715.1. The GC content of the type genome is 51.65 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Butyricimonas benemibula sp. nov.

Candidatus Butyricimonas benemibula (NL. fem. n. *benemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricimonas sp900184685*. The type genome for the species is the GenBank assembly GCA_900556065.1. The GC content of the type genome is 44.5 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Butyricimonas minagibula sp. nov.

Candidatus Butyricimonas minagibula (NL. fem. n. *minagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricimonas sp003479425*. The type genome for the species is the GenBank assembly GCA_900547335.1. The GC content of the type genome is 43.75 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Butyricimonas nugivitura sp. nov.

Candidatus Butyricimonas nugivitura (NL. fem. n. *nugivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricimonas sp900761485*. The type genome for the species is the GenBank assembly GCA_900761485.1. The GC content of the type genome is 40.92 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Butyricimonas octopedo sp. nov.

Candidatus Butyricimonas octopedo (NL. fem. n. *octopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyricimonas sp900759925*. The type genome for the species is the GenBank assembly GCA_900759925.1. The GC content of the type genome is 44.5 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Butyrivibrio acrimivita sp. nov.

Candidatus Butyrivibrio acrimivita (NL. fem. n. *acrimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900108105*. The type genome for the species is the GenBank assembly RS_GCF_900108105.1. The GC content of the type genome is 39.92 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Butyrivibrio adlacigena sp. nov.

Candidatus Butyrivibrio adlacigena (NL. fem. n. *adlacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000423925*. The type genome for the species is the GenBank assembly RS_GCF_000423925.1. The GC content of the type genome is 41.19 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Butyrivibrio alectousia sp. nov.

Candidatus Butyrivibrio alectousia (NL. fem. n. *alectousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000702265*. The type genome for the species is the GenBank assembly RS_GCF_000702265.1. The GC content of the type genome is 40.2 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Butyrivibrio allobastra sp. nov.

Candidatus Butyrivibrio allobastra (NL. fem. n. *allobastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000621605*. The type genome for the species is the GenBank assembly RS_GCF_000621605.1. The GC content of the type genome is 44.41 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Butyrivibrio assucitura sp. nov.

Candidatus Butyrivibrio assucitura (NL. fem. n. *assucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900116865*. The type genome for the species is the GenBank assembly RS_GCF_900116865.1. The GC content of the type genome is 40.75 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Butyrivibrio citocago sp. nov.

Candidatus Butyrivibrio citocago (NL. fem. n. *citocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900116875*. The type genome for the species is the GenBank assembly RS_GCF_003625505.1. The GC content of the type genome is 42.42 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Butyrivibrio conamisca sp. nov.

Candidatus Butyrivibrio conamisca (NL. fem. n. *conamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424585*. The type genome for the species is the GenBank assembly RS_GCF_000424585.1. The GC content of the type genome is 44.01 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Butyrivibrio conifimonia sp. nov.

Candidatus Butyrivibrio conifimonia (NL. fem. n. *conifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900103635*. The type genome for the species is the GenBank assembly RS_GCF_900103635.1. The GC content of the type genome is 40.13

% and the genome length is 3.25 Mbp.

Description of *Candidatus* Butyrivibrio demulilenta sp. nov.

Candidatus Butyrivibrio demulilenta (NL. fem. n. *demulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000420945*. The type genome for the species is the GenBank assembly RS_GCF_000420945.1. The GC content of the type genome is 41.09 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Butyrivibrio denavugo sp. nov.

Candidatus Butyrivibrio denavugo (NL. fem. n. *denavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000526935*. The type genome for the species is the GenBank assembly RS_GCF_000526935.1. The GC content of the type genome is 45.85 % and the genome length is 4.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Butyrivibrio depopentia sp. nov.

Candidatus Butyrivibrio depopentia (NL. fem. n. *depopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424545*. The type genome for the species is the GenBank assembly GCA_902803175.1. The GC content of the type genome is 35.38 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Butyrivibrio disidatio sp. nov.

Candidatus Butyrivibrio disidatio (NL. fem. n. *disidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900112195*. The type genome for the species is the GenBank assembly RS_GCF_900112195.1. The GC content of the type genome is 38.65 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Butyrivibrio domigicula sp. nov.

Candidatus Butyrivibrio domigicula (NL. fem. n. *domigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp003625475*. The type genome for the species is the GenBank assembly RS_GCF_003625475.1. The GC content of the type genome is 42.21 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Butyrivibrio epitratio sp. nov.

Candidatus Butyrivibrio epitratio (NL. fem. n. *epitratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000420845*. The type genome for the species is the GenBank assembly RS_GCF_000420845.1. The GC content of the type genome is 44.43 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Butyrivibrio genufago sp. nov.

Candidatus Butyrivibrio genufago (NL. fem. n. *genufago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424385*. The type genome for the species is the GenBank assembly RS_GCF_000701985.1. The GC content of the type genome is 39.47 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Butyrivibrio hibisigena sp. nov.

Candidatus Butyrivibrio hibisigena (NL. fem. n. *hibisigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424265*. The type genome for the species is the GenBank assembly RS_GCF_000424265.1. The GC content of the type genome is 41.47 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Butyrivibrio milifax sp. nov.

Candidatus Butyrivibrio milifax (NL. fem. n. *milifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp900102515*. The type genome for the species is the GenBank assembly RS_GCF_900102515.1. The GC content of the type genome is 40.58 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Butyrivibrio musulitudo sp. nov.

Candidatus Butyrivibrio musulitudo (NL. fem. n. *musulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000423945*. The type genome for the species is the GenBank assembly RS_GCF_000423945.1. The GC content of the type genome is 41.77 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Butyrivibrio nefariforma sp. nov.

Candidatus Butyrivibrio nefariforma (NL. fem. n. *nefariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424145*. The type genome for the species is the GenBank assembly RS_GCF_000424145.1. The GC content of the type genome is 40.11 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Butyrivibrio noninitoga sp. nov.

Candidatus Butyrivibrio noninitoga (NL. fem. n. *noninitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000424285*. The type genome for the species is the GenBank assembly RS_GCF_000424165.1. The GC content of the type genome is 41.46 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Butyrivibrio notacitrix sp. nov.

Candidatus Butyrivibrio notacitrix (NL. fem. n. *notacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Butyrivibrio sp900104155*. The type genome for the species is the GenBank assembly RS_GCF_000424485.1. The GC content of the type genome is 41.95 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Butyrivibrio occenitio sp. nov.

Candidatus Butyrivibrio occenitio (NL. fem. n. *occenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp002372465*. The type genome for the species is the GenBank assembly GCA_002372465.1. The GC content of the type genome is 44.72 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Butyrivibrio rutabibula sp. nov.

Candidatus Butyrivibrio rutabibula (NL. fem. n. *rutabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000621565*. The type genome for the species is the GenBank assembly RS_GCF_000621565.1. The GC content of the type genome is 40.62 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Butyrivibrio rutabitia sp. nov.

Candidatus Butyrivibrio rutabitia (NL. fem. n. *rutabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000421405*. The type genome for the species is the GenBank assembly RS_GCF_000421405.1. The GC content of the type genome is 43.61 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Butyrivibrio scaccedo sp. nov.

Candidatus Butyrivibrio scaccedo (NL. fem. n. *scaccedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000420825*. The type genome for the species is the GenBank assembly RS_GCF_000420825.1. The GC content of the type genome is 39.85 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Butyrivibrio subacicula sp. nov.

Candidatus Butyrivibrio subacicula (NL. fem. n. *subacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp003625485*. The type genome for the species is the GenBank assembly RS_GCF_003625485.1. The GC content of the type genome is 43.7 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Butyrivibrio subofilega sp. nov.

Candidatus Butyrivibrio subofilega (NL. fem. n. *subofilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000703165*. The type genome for the species is the GenBank assembly RS_GCF_000703165.1. The GC content of the type genome is 39.6 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Butyrivibrio tirocatica sp. nov.

Candidatus Butyrivibrio tirocatica (NL. fem. n. *tirocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio sp000420865*. The type genome for the species is the GenBank assembly RS_GCF_000420865.1. The GC content of the type genome is 43.37 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Butyrivibrio adcucatica sp. nov.

Candidatus Butyrivibrio adcucatica (NL. fem. n. *adcucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio_A sp900771195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900771195.1. The GC content of the type genome is 43.78 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Butyrivibrio alcibisca sp. nov.

Candidatus Butyrivibrio alcibisca (NL. fem. n. *alcibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio_A sp900768755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900768755.1. The GC content of the type genome is 45.66 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Butyrivibrio letifitica sp. nov.

Candidatus Butyrivibrio letifitica (NL. fem. n. *letifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio_A sp900543865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900543865.1. The GC content of the type genome is 37.38 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Butyrivibrio monimitura sp. nov.

Candidatus Butyrivibrio monimitura (NL. fem. n. *monimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Butyrivibrio_A sp000431815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900538285.1. The GC content of the type genome is 41.53 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Buxanana colipilega sp. nov.

Candidatus Buxanana colipilega (NL. fem. n. *colipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWCZ01 sp002070295*. The type genome for the species is the GenBank assembly GCA_002070295.1. The GC content of the type genome is 59.73 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Buxanana gen. nov.

Candidatus Buxanana (NL. fem. n. *Buxanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCZ01*. The type species for the genus is *Candidatus* Buxanana colipilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWCZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxananaceae.

Description of *Candidatus* Buxananaceae fam. nov.

Candidatus Buxananaceae (NL. fem. n. *Buxananaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWCZ01.* The type genus for the taxon is *Candidatus* Buxanana .

According to the original version of GTDB R06-RS202, this family belongs to the order *MWCZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxananales.

Description of *Candidatus* Buxananales ord. nov.

Candidatus Buxananales (NL. fem. n. *Buxananales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWCZ01.* The type genus for the taxon is *Candidatus* Buxanana .

According to the GTDB R06-RS202, this order belongs to the class *Latescibacteria*.

Description of *Candidatus* Buxanaria cimitugo sp. nov.

Candidatus Buxanaria cimitugo (NL. fem. n. *cimitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA45 sp003222535*. The type genome for the species is the GenBank assembly GCA_003222505.1. The GC content of the type genome is 65.46 % and the genome length is 7.17 Mbp.

Description of *Candidatus* Buxanaria gen. nov.

Candidatus Buxanaria (NL. fem. n. *Buxanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp6-AA45*. The type species for the genus is *Candidatus* Buxanaria cimitugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Buxanaria infesetta sp. nov.

Candidatus Buxanaria infesetta (NL. fem. n. *infesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA45 sp003223775*. The type genome for the species is the GenBank assembly GCA_003223775.1. The GC content of the type genome is 68.39 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Buxanella brasmitio sp. nov.

Candidatus Buxanella brasmitio (NL. fem. n. *brasmitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACVAW01 sp902727925*. The type genome for the species is the GenBank assembly GCA_902727925.1. The GC content of the type genome is 29.96 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Buxanella gen. nov.

Candidatus Buxanella (NL. fem. n. *Buxanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACVAW01*. The type species for the genus is *Candidatus* Buxanella brasmitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACVAW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanellaceae.

Description of *Candidatus* Buxanellaceae fam. nov.

Candidatus Buxanellaceae (NL. fem. n. *Buxanellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACVAW01.* The type genus for the taxon is *Candidatus* Buxanella .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Buxania actutilega sp. nov.

Candidatus Buxania actutilega (NL. fem. n. *actutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902782395*. The type genome for the species is the GenBank assembly GCA_902782395.1. The GC content of the type genome is 36.62 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Buxania gen. nov.

Candidatus Buxania (NL. fem. n. *Buxania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14515*. The type species for the genus is *Candidatus* Buxania actutilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Buxania alismitudo sp. nov.

Candidatus Buxania alismitudo (NL. fem. n. *alismitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp012837435*. The type genome for the species is the GenBank assembly GCA_012837435.1. The GC content of the type genome is 36.3 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Buxania ammuritudo sp. nov.

Candidatus Buxania ammuritudo (NL. fem. n. *ammuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902799855*. The type genome for the species is the GenBank assembly GCA_902799855.1. The GC content of the type genome is 36.11 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Buxania catapitrix sp. nov.

Candidatus Buxania catapitrix (NL. fem. n. *catapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp012511695*. The type genome for the species is the GenBank assembly GCA_012511695.1. The GC content of the type genome is 37.61 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Buxania coturitica sp. nov.

Candidatus Buxania coturitica (NL. fem. n. *coturitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp012744375*. The type genome for the species is the GenBank assembly GCA_012744375.1. The GC content of the type genome is 36.23 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Buxania depecugo sp. nov.

Candidatus Buxania depecugo (NL. fem. n. *depecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902763555*. The type genome for the species is the GenBank assembly GCA_902791275.1. The GC content of the type genome is 36.16 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Buxania excerisca sp. nov.

Candidatus Buxania excerisca (NL. fem. n. *excerisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902801805*. The type genome for the species is the GenBank assembly GCA_902801805.1. The GC content of the type genome is 36.68 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Buxania insenago sp. nov.

Candidatus Buxania insenago (NL. fem. n. *insenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902777015*. The type genome for the species is the GenBank assembly GCA_902777015.1. The GC content of the type genome is 34.48 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Buxania sicaribula sp. nov.

Candidatus Buxania sicaribula (NL. fem. n. *sicaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14515 sp902798595*. The type genome for the species is the GenBank assembly GCA_902798595.1. The GC content of the type genome is 36.59 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Buxanida dehisivita sp. nov.

Candidatus Buxanida dehisivita (NL. fem. n. *dehisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZZ01 sp013695715*. The type genome for the species is the GenBank assembly GCA_013695715.1. The GC content of the type genome is 39.25 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Buxanida gen. nov.

Candidatus Buxanida (NL. fem. n. *Buxanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZZ01*. The type species for the genus is *Candidatus* Buxanida dehisivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vereciaceae.

Description of *Candidatus* Buxanida exsufitudo sp. nov.

Candidatus Buxanida exsufitudo (NL. fem. n. *exsufitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZZ01 sp013695775*. The type genome for the species is the GenBank assembly GCA_013695775.1. The GC content of the type genome is 40.48 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Buxanosa actutessa sp. nov.

Candidatus Buxanosa actutessa (NL. fem. n. *actutessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3BBIN04 sp002898195*. The type genome for the species is the GenBank assembly GCA_002898195.1. The GC content of the type genome is 50.95 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Buxanosa gen. nov.

Candidatus Buxanosa (NL. fem. n. *Buxanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3BBIN04*. The type species for the genus is *Candidatus* Buxanosa actutessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3BBIN04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanosaceae.

Description of *Candidatus* Buxanosaceae fam. nov.

Candidatus Buxanosaceae (NL. fem. n. *Buxanosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3BBIN04.* The type genus for the taxon is *Candidatus* Buxanosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *BMS3BBIN04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxanosales.

Description of *Candidatus* Buxanosales ord. nov.

Candidatus Buxanosales (NL. fem. n. *Buxanosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3BBIN04.* The type genus for the taxon is *Candidatus* Buxanosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *BMS3BBIN04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Buxanosae.

Description of *Candidatus* Buxanosae class. nov.

Candidatus Buxanosae (NL. fem. n. *c__Buxanosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3BBIN04.* The type genus for the taxon is *Candidatus* Buxanosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Desonellota.

Description of *Candidatus* Buxanula bacifago sp. nov.

Candidatus Buxanula bacifago (NL. fem. n. *bacifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-10 sp001804065*. The type genome for the species is the GenBank assembly GCA_001804305.1. The GC content of the type genome is 45.07 % and the genome length is 1.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Buxanula gen. nov.

Candidatus Buxanula (NL. fem. n. *Buxanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-10*. The type species for the genus is *Candidatus* Buxanula bacifago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanulaceae.

Description of *Candidatus* Buxanulaceae fam. nov.

Candidatus Buxanulaceae (NL. fem. n. *Buxanulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-45-10.* The type genus for the taxon is *Candidatus* Buxanula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vacilellales.

Description of *Candidatus* Buxifana absoricula sp. nov.

Candidatus Buxifana absoricula (NL. fem. n. *absoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp002255315*. The type genome for the species is the GenBank assembly GCA_002255315.1. The GC content of the type genome is 63.04 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Buxifana gen. nov.

Candidatus Buxifana (NL. fem. n. *Buxifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RAAP-2*. The type species for the genus is *Candidatus* Buxifana absoricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Buxifanaceae fam. nov.

Candidatus Buxifanaceae (NL. fem. n. *Buxifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RAAP-2.* The type genus for the taxon is *Candidatus* Buxifana .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Buxifana acrotatica sp. nov.

Candidatus Buxifana acrotatica (NL. fem. n. *acrotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003152215*. The type genome for the species is the GenBank assembly GCA_003152215.1. The GC content of the type genome is 61.0 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Buxifana alluvimonas sp. nov.

Candidatus Buxifana alluvimonas (NL. fem. n. *alluvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003134515*. The type genome for the species is the GenBank assembly GCA_003134515.1. The GC content of the type genome is 61.78 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Buxifana amercitura sp. nov.

Candidatus Buxifana amercitura (NL. fem. n. *amercitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133665*. The type genome for the species is the GenBank assembly GCA_003133665.1. The GC content of the type genome is 63.86 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Buxifana arillatica sp. nov.

Candidatus Buxifana arillatica (NL. fem. n. *arillatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003158855*. The type genome for the species is the GenBank assembly GCA_003158855.1. The GC content of the type genome is 63.17 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Buxifana astapiforma sp. nov.

Candidatus Buxifana astapiforma (NL. fem. n. *astapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp013044265*. The type genome for the species is the GenBank assembly GCA_013044265.1. The GC content of the type genome is 59.9 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Buxifana benivivita sp. nov.

Candidatus Buxifana benivivita (NL. fem. n. *benivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003152555*. The type genome for the species is the GenBank assembly GCA_003152555.1. The GC content of the type genome is 60.19 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Buxifana bipinibula sp. nov.

Candidatus Buxifana bipinibula (NL. fem. n. *bipinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp002255565*. The type genome for the species is the GenBank assembly GCA_002255565.1. The GC content of the type genome is 72.54 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Buxifana buxificula sp. nov.

Candidatus Buxifana buxificula (NL. fem. n. *buxificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903826715*. The type genome for the species is the GenBank assembly GCA_903895875.1. The GC content of the type genome is 49.49 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Buxifana capudago sp. nov.

Candidatus Buxifana capudago (NL. fem. n. *capudago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903860745*. The type genome for the species is the GenBank assembly GCA_903833445.1. The GC content of the type genome is 67.82 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Buxifana carecastra sp. nov.

Candidatus Buxifana carecastra (NL. fem. n. *carecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903830745*. The type genome for the species is the GenBank assembly GCA_903832945.1. The GC content of the type genome is 49.85 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Buxifana cicatitica sp. nov.

Candidatus Buxifana cicatitica (NL. fem. n. *cicatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903893745*. The type genome for the species is the GenBank assembly GCA_903903895.1. The GC content of the type genome is 57.99 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Buxifana conopigena sp. nov.

Candidatus Buxifana conopigena (NL. fem. n. *conopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133005*. The type genome for the species is the GenBank assembly GCA_003133005.1. The GC content of the type genome is 59.5 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Buxifana conopitia sp. nov.

Candidatus Buxifana conopitia (NL. fem. n. *conopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003168075*. The type genome for the species is the GenBank assembly GCA_003139595.1. The GC content of the type genome is 61.9 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Buxifana decomitas sp. nov.

Candidatus Buxifana decomitas (NL. fem. n. *decomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133125*. The type genome for the species is the GenBank assembly GCA_003164235.1. The GC content of the type genome is 61.32 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Buxifana deculitio sp. nov.

Candidatus Buxifana deculitio (NL. fem. n. *deculitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003132205*. The type genome for the species is the GenBank assembly GCA_003132205.1. The GC content of the type genome is 62.95 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Buxifana denigilenta sp. nov.

Candidatus Buxifana denigilenta (NL. fem. n. *denigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903970515*. The type genome for the species is the GenBank assembly GCA_903970515.1. The GC content of the type genome is 60.45 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Buxifana depetessa sp. nov.

Candidatus Buxifana depetessa (NL. fem. n. *depetessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RAAP-2 sp003155915*. The type genome for the species is the GenBank assembly GCA_003168835.1. The GC content of the type genome is 61.98 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Buxifana depocitas sp. nov.

Candidatus Buxifana depocitas (NL. fem. n. *depocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133685*. The type genome for the species is the GenBank assembly GCA_003135115.1. The GC content of the type genome is 62.05 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Buxifana dilicicella sp. nov.

Candidatus Buxifana dilicicella (NL. fem. n. *dilicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903854175*. The type genome for the species is the GenBank assembly GCA_903824535.1. The GC content of the type genome is 48.63 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Buxifana dilogimonas sp. nov.

Candidatus Buxifana dilogimonas (NL. fem. n. *dilogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903830655*. The type genome for the species is the GenBank assembly GCA_903868425.1. The GC content of the type genome is 55.41 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Buxifana dimacibra sp. nov.

Candidatus Buxifana dimacibra (NL. fem. n. *dimacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003136495*. The type genome for the species is the GenBank assembly GCA_003134195.1. The GC content of the type genome is 64.41 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Buxifana disidigena sp. nov.

Candidatus Buxifana disidigena (NL. fem. n. *disidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003138815*. The type genome for the species is the GenBank assembly GCA_003160225.1. The GC content of the type genome is 65.64 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Buxifana ensigisca sp. nov.

Candidatus Buxifana ensigisca (NL. fem. n. *ensigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp009701115*. The type genome for the species is the GenBank assembly GCA_009701115.1. The GC content of the type genome is 59.07 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Buxifana evangastra sp. nov.

Candidatus Buxifana evangastra (NL. fem. n. *evangastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003163875*. The type genome for the species is the GenBank assembly GCA_003163875.1. The GC content of the type genome is 58.75 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Buxifana femeletta sp. nov.

Candidatus Buxifana femeletta (NL. fem. n. *femeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003142095*. The type genome for the species is the GenBank assembly GCA_003142095.1. The GC content of the type genome is 61.03 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Buxifana fuligisca sp. nov.

Candidatus Buxifana fuligisca (NL. fem. n. *fuligisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003131665*. The type genome for the species is the GenBank assembly GCA_003131665.1. The GC content of the type genome is 61.55 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Buxifana fumacicula sp. nov.

Candidatus Buxifana fumacicula (NL. fem. n. *fumacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003160115*. The type genome for the species is the GenBank assembly GCA_003134395.1. The GC content of the type genome is 62.19 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Buxifana gerunitoga sp. nov.

Candidatus Buxifana gerunitoga (NL. fem. n. *gerunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003167415*. The type genome for the species is the GenBank assembly GCA_003152475.1. The GC content of the type genome is 62.1 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Buxifana homicessa sp. nov.

Candidatus Buxifana homicessa (NL. fem. n. *homicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133405*. The type genome for the species is the GenBank assembly GCA_003151195.1. The GC content of the type genome is 61.91 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Buxifana inbelimonas sp. nov.

Candidatus Buxifana inbelimonas (NL. fem. n. *inbelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RAAP-2 sp003151555*. The type genome for the species is the GenBank assembly GCA_003151555.1. The GC content of the type genome is 62.6 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Buxifana invetentia sp. nov.

Candidatus Buxifana invetentia (NL. fem. n. *invetentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp001443545*. The type genome for the species is the GenBank assembly GCA_001443545.1. The GC content of the type genome is 65.54 % and the genome length is 2.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "15% reads came from bioreactor metagenome SAMN04151528 and 85% came from mine drainage metagenome SAMN04151554".

Description of *Candidatus* Buxifana irrotisca sp. nov.

Candidatus Buxifana irrotisca (NL. fem. n. *irrotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003170315*. The type genome for the species is the GenBank assembly GCA_003170315.1. The GC content of the type genome is 62.03 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Buxifana loraribula sp. nov.

Candidatus Buxifana loraribula (NL. fem. n. *loraribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003138895*. The type genome for the species is the GenBank assembly GCA_003138895.1. The GC content of the type genome is 56.12 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Buxifana mavoritas sp. nov.

Candidatus Buxifana mavoritas (NL. fem. n. *mavoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp009726065*. The type genome for the species is the

GenBank assembly GCA_009726065.1. The GC content of the type genome is 58.3 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Buxifana mirifitoga sp. nov.

Candidatus Buxifana mirifitoga (NL. fem. n. *mirifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003136415*. The type genome for the species is the GenBank assembly GCA_003136415.1. The GC content of the type genome is 62.19 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Buxifana nicotentia sp. nov.

Candidatus Buxifana nicotentia (NL. fem. n. *nicotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp013044405*. The type genome for the species is the GenBank assembly GCA_013044405.1. The GC content of the type genome is 61.55 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Buxifana prodricella sp. nov.

Candidatus Buxifana prodricella (NL. fem. n. *prodricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003162475*. The type genome for the species is the GenBank assembly GCA_003162475.1. The GC content of the type genome is 61.33 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Buxifana pudibifica sp. nov.

Candidatus Buxifana pudibifica (NL. fem. n. *pudibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903924205*. The type genome for the species is the GenBank assembly GCA_903874945.1. The GC content of the type genome is 61.07 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Buxifana regigax sp. nov.

Candidatus Buxifana regigax (NL. fem. n. *regigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903825765*. The type genome for the species is the GenBank assembly GCA_903916315.1. The GC content of the type genome is 61.34 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Buxifana relecousia sp. nov.

Candidatus Buxifana relecousia (NL. fem. n. *relecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903885505*. The type genome for the species is the GenBank assembly GCA_903881845.1. The GC content of the type genome is 62.01 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Buxifana relenessa sp. nov.

Candidatus Buxifana relenessa (NL. fem. n. *relenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003132305*. The type genome for the species is the GenBank assembly GCA_003132705.1. The GC content of the type genome is 61.37 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Buxifana resurifica sp. nov.

Candidatus Buxifana resurifica (NL. fem. n. *resurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903871335*. The type genome for the species is the GenBank assembly GCA_903850515.1. The GC content of the type genome is 61.75 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Buxifana rosaritura sp. nov.

Candidatus Buxifana rosaritura (NL. fem. n. *rosaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003141095*. The type genome for the species is the GenBank assembly GCA_003156335.1. The GC content of the type genome is 61.99 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Buxifana selecitudo sp. nov.

Candidatus Buxifana selecitudo (NL. fem. n. *selecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903825035*. The type genome for the species is the GenBank assembly GCA_903845005.1. The GC content of the type genome is 55.06 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Buxifana sicinilenta sp. nov.

Candidatus Buxifana sicinilenta (NL. fem. n. *sicinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003141815*. The type genome for the species is the GenBank assembly GCA_003141815.1. The GC content of the type genome is 61.03 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Buxifana siligitia sp. nov.

Candidatus Buxifana siligitia (NL. fem. n. *siligitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903873775*. The type genome for the species is the GenBank assembly GCA_903878655.1. The GC content of the type genome is 63.28 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Buxifana siticitrix sp. nov.

Candidatus Buxifana siticitrix (NL. fem. n. *siticitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003133075*. The type genome for the species is the GenBank assembly GCA_003137115.1. The GC content of the type genome is 64.25 %

and the genome length is 1.54 Mbp.

Description of *Candidatus* Buxifana solifica sp. nov.

Candidatus Buxifana solifica (NL. fem. n. *solifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903848885*. The type genome for the species is the GenBank assembly GCA_903826605.1. The GC content of the type genome is 59.31 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Buxifana sonipitrix sp. nov.

Candidatus Buxifana sonipitrix (NL. fem. n. *sonipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903860915*. The type genome for the species is the GenBank assembly GCA_903833945.1. The GC content of the type genome is 58.78 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Buxifana subucitio sp. nov.

Candidatus Buxifana subucitio (NL. fem. n. *subucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903828785*. The type genome for the species is the GenBank assembly GCA_903828785.1. The GC content of the type genome is 60.88 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Buxifana utpotivita sp. nov.

Candidatus Buxifana utpotivita (NL. fem. n. *utpotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp903832015*. The type genome for the species is the GenBank assembly GCA_903832015.1. The GC content of the type genome is 56.16 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Buxifana vehemitrix sp. nov.

Candidatus Buxifana vehemitrix (NL. fem. n. *vehemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp013044285*. The type genome for the species is the GenBank assembly GCA_013044285.1. The GC content of the type genome is 63.81 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Buxifana vivifitura sp. nov.

Candidatus Buxifana vivifitura (NL. fem. n. *vivifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RAAP-2 sp003132165*. The type genome for the species is the GenBank assembly GCA_003133365.1. The GC content of the type genome is 62.01 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Buxifella acrimetta sp. nov.

Candidatus Buxifella acrimetta (NL. fem. n. *acrimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007694095*. The type genome for the species is the GenBank assembly GCA_007694095.1. The GC content of the type genome is 43.46 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Buxifella gen. nov.

Candidatus Buxifella (NL. fem. n. *Buxifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2664*. The type species for the genus is *Candidatus* Buxifella acrimetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Buxifella alsidousia sp. nov.

Candidatus Buxifella alsidousia (NL. fem. n. *alsidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007127395*. The type genome for the species is the GenBank assembly GCA_007127395.1. The GC content of the type genome is 43.2 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Buxifella aterrugo sp. nov.

Candidatus Buxifella aterrugo (NL. fem. n. *aterrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007693395*. The type genome for the species is the GenBank assembly GCA_007693395.1. The GC content of the type genome is 43.22 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Buxifella coniniforma sp. nov.

Candidatus Buxifella coniniforma (NL. fem. n. *coniniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007127745*. The type genome for the species is the GenBank assembly GCA_007133965.1. The GC content of the type genome is 44.12 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Buxifella conubitas sp. nov.

Candidatus Buxifella conubitas (NL. fem. n. *conubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007693745*. The type genome for the species is the GenBank assembly GCA_007693745.1. The GC content of the type genome is 47.87 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Buxifella decapatica sp. nov.

Candidatus Buxifella decapatica (NL. fem. n. *decapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007123715*. The type genome for the species is the GenBank assembly GCA_007123715.1. The GC content of the type genome is 43.34 %

and the genome length is 3.91 Mbp.

Description of *Candidatus* Buxifella desucatica sp. nov.

Candidatus Buxifella desucatica (NL. fem. n. *desucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007123785*. The type genome for the species is the GenBank assembly GCA_007131645.1. The GC content of the type genome is 44.46 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Buxifella effemax sp. nov.

Candidatus Buxifella effemax (NL. fem. n. *effemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp002359315*. The type genome for the species is the GenBank assembly GCA_002359315.1. The GC content of the type genome is 41.29 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Buxifella fetifedo sp. nov.

Candidatus Buxifella fetifedo (NL. fem. n. *fetifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp003559375*. The type genome for the species is the GenBank assembly GCA_007128775.1. The GC content of the type genome is 42.77 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Buxifella ficedastra sp. nov.

Candidatus Buxifella ficedastra (NL. fem. n. *ficedastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007135335*. The type genome for the species is the GenBank assembly GCA_007135335.1. The GC content of the type genome is 43.29 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Buxifella filifitoga sp. nov.

Candidatus Buxifella filifitoga (NL. fem. n. *filifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007131725*. The type genome for the species is the GenBank assembly GCA_007131725.1. The GC content of the type genome is 44.18 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Buxifella musuledo sp. nov.

Candidatus Buxifella musuledo (NL. fem. n. *musuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007134085*. The type genome for the species is the GenBank assembly GCA_003561455.1. The GC content of the type genome is 44.02 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Buxifella vinolago sp. nov.

Candidatus Buxifella vinolago (NL. fem. n. *vinolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2664 sp007123985*. The type genome for the species is the GenBank assembly GCA_003568095.1. The GC content of the type genome is 42.88 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Buxifia curacitudo sp. nov.

Candidatus Buxifia curacitudo (NL. fem. n. *curacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9160 sp003520425*. The type genome for the species is the GenBank assembly GCA_003520425.1. The GC content of the type genome is 66.39 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Buxifia gen. nov.

Candidatus Buxifia (NL. fem. n. *Buxifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9160*. The type species for the genus is *Candidatus* Buxifia curacitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifiaceae.

Description of *Candidatus* Buxifiaceae fam. nov.

Candidatus Buxifiaceae (NL. fem. n. *Buxifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9160.* The type genus for the taxon is *Candidatus* Buxifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifiales.

Description of *Candidatus* Buxifiales ord. nov.

Candidatus Buxifiales (NL. fem. n. *Buxifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9160.* The type genus for the taxon is *Candidatus* Buxifia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Buxifiae.

Description of *Candidatus* Buxifiae class. nov.

Candidatus Buxifiae (NL. fem. n. *c__Buxifiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9160.* The type genus for the taxon is *Candidatus* Buxifia .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Buxifida apperitio sp. nov.

Candidatus Buxifida apperitio (NL. fem. n. *apperitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1535 sp002332905*. The type genome for the species is the GenBank assembly GCA_002332905.1. The GC content of the type genome is 29.7 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Buxifida gen. nov.

Candidatus Buxifida (NL. fem. n. *Buxifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1535*. The type species for the genus is *Candidatus* Buxifida apperitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Buxifida apsenicella sp. nov.

Candidatus Buxifida apsenicella (NL. fem. n. *apsenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1535 sp002396645*. The type genome for the species is the GenBank assembly GCA_002396645.1. The GC content of the type genome is 33.22 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Buxifida repepugo sp. nov.

Candidatus Buxifida repepugo (NL. fem. n. *repepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1535 sp002479485*. The type genome for the species is the GenBank assembly GCA_002363015.1. The GC content of the type genome is 29.97 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Buxifida voragibra sp. nov.

Candidatus Buxifida voragibra (NL. fem. n. *voragibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1535 sp002323775*. The type genome for the species is the

GenBank assembly GCA_002323775.1. The GC content of the type genome is 31.52 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Buxifosa cacomugo sp. nov.

Candidatus Buxifosa cacomugo (NL. fem. n. *cacomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002719695 sp002719695*. The type genome for the species is the GenBank assembly GCA_002719695.1. The GC content of the type genome is 32.11 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Buxifosa gen. nov.

Candidatus Buxifosa (NL. fem. n. *Buxifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002719695*. The type species for the genus is *Candidatus* Buxifosa cacomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002719695*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifosaceae.

Description of *Candidatus* Buxifosaceae fam. nov.

Candidatus Buxifosaceae (NL. fem. n. *Buxifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002719695.* The type genus for the taxon is *Candidatus* Buxifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2716485*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resurulales.

Description of *Candidatus* Buxifosa exhilax sp. nov.

Candidatus Buxifosa exhilax (NL. fem. n. *exhilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002719695 sp002716725*. The type genome for the species is the

GenBank assembly GCA_002716725.1. The GC content of the type genome is 32.78 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Buxifosa revulitio sp. nov.

Candidatus Buxifosa revulitio (NL. fem. n. *revulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002719695 sp002697535*. The type genome for the species is the GenBank assembly GCA_002295665.1. The GC content of the type genome is 32.56 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Buxifula adessitas sp. nov.

Candidatus Buxifula adessitas (NL. fem. n. *adessitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002862325 sp002685335*. The type genome for the species is the GenBank assembly GCA_002685335.1. The GC content of the type genome is 64.95 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Buxifula gen. nov.

Candidatus Buxifula (NL. fem. n. *Buxifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002862325*. The type species for the genus is *Candidatus* Buxifula adessitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Buxifula antipibula sp. nov.

Candidatus Buxifula antipibula (NL. fem. n. *antipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002862325 sp002683195*. The type genome for the species is the GenBank assembly GCA_002683195.1. The GC content of the type genome is 63.35 %

and the genome length is 3.59 Mbp.

Description of *Candidatus* Buxifula innasilega sp. nov.

Candidatus Buxifula innasilega (NL. fem. n. *innasilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002862325 sp002862325*. The type genome for the species is the GenBank assembly GCA_002862325.1. The GC content of the type genome is 64.89 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Buxifula nitelatica sp. nov.

Candidatus Buxifula nitelatica (NL. fem. n. *nitelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002862325 sp002709295*. The type genome for the species is the GenBank assembly GCA_002709295.1. The GC content of the type genome is 65.71 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Bythopirellula apoplicula sp. nov.

Candidatus Bythopirellula apoplicula (NL. fem. n. *apoplicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bythopirellula sp013152205*. The type genome for the species is the GenBank assembly GCA_013152205.1. The GC content of the type genome is 53.84 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Bythopirellula attoletta sp. nov.

Candidatus Bythopirellula attoletta (NL. fem. n. *attoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bythopirellula sp007860015*. The type genome for the species is the GenBank assembly RS_GCF_007860015.1. The GC content of the type genome is 52.94 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Bythopirellula esculibra sp. nov.

Candidatus Bythopirellula esculibra (NL. fem. n. *esculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bythopirellula sp013152515*. The type genome for the species is the GenBank assembly GCA_013152515.1. The GC content of the type genome is 54.77 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Bythopirellula monumitoga sp. nov.

Candidatus Bythopirellula monumitoga (NL. fem. n. *monumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bythopirellula sp013151315*. The type genome for the species is the GenBank assembly GCA_013151315.1. The GC content of the type genome is 55.96 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Bythopirellula subacousia sp. nov.

Candidatus Bythopirellula subacousia (NL. fem. n. *subacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Bythopirellula sp002713555*. The type genome for the species is the GenBank assembly GCA_002713555.1. The GC content of the type genome is 50.26 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Caballeronia adcogibra sp. nov.

Candidatus Caballeronia adcogibra (NL. fem. n. *adcogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caballeronia sp902506145*. The type genome for the species is the GenBank assembly RS_GCF_902506145.1. The GC content of the type genome is 63.38 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Caballeronia conopimonas sp. nov.

Candidatus Caballeronia conopimonas (NL. fem. n. *conopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caballeronia sp001557535*. The type genome for the species is the GenBank assembly RS_GCF_001935975.1. The GC content of the type genome is 59.82 % and the genome length is 7.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lichen".

Description of *Candidatus* Caballeronia democentia sp. nov.

Candidatus Caballeronia democentia (NL. fem. n. *democentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caballeronia sp011493005*. The type genome for the species is the GenBank assembly RS_GCF_011039955.1. The GC content of the type genome is 59.52 % and the genome length is 9.32 Mbp.

Description of *Candidatus* Caballeronia ensigivita sp. nov.

Candidatus Caballeronia ensigivita (NL. fem. n. *ensigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caballeronia sp009766085*. The type genome for the species is the GenBank assembly RS_GCF_009766085.1. The GC content of the type genome is 59.63 % and the genome length is 8.49 Mbp.

Description of *Candidatus* Caballeronia maligigena sp. nov.

Candidatus Caballeronia maligigena (NL. fem. n. *maligigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caballeronia sp001424345*. The type genome for the species is the GenBank assembly RS_GCF_001424345.1. The GC content of the type genome is 59.2 % and the genome length is 6.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Caballeronia resupimonia sp. nov.

Candidatus Caballeronia resupimonia (NL. fem. n. *resupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Caballeronia sp902833455*. The type genome for the species is the GenBank assembly RS_GCF_902833455.1. The GC content of the type genome is 63.7 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Cacalana adsigigena sp. nov.

Candidatus Cacalana adsigigena (NL. fem. n. *adsigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002725925 sp002714085*. The type genome for the species is the GenBank assembly GCA_002714085.1. The GC content of the type genome is 47.51 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Cacalana gen. nov.

Candidatus Cacalana (NL. fem. n. *Cacalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002725925*. The type species for the genus is *Candidatus* Cacalana adsigigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Cacalana dicibilega sp. nov.

Candidatus Cacalana dicibilega (NL. fem. n. *dicibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002725925 sp009392785*. The type genome for the species is the GenBank assembly GCA_008373165.1. The GC content of the type genome is 46.49 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cacalana irremitrix sp. nov.

Candidatus Cacalana irremitrix (NL. fem. n. *irremitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002725925 sp009392215*. The type genome for the species is the

GenBank assembly GCA_009392215.1. The GC content of the type genome is 46.21 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cacalana levidicula sp. nov.

Candidatus Cacalana levidicula (NL. fem. n. *levidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002725925 sp002725925*. The type genome for the species is the GenBank assembly GCA_002725925.1. The GC content of the type genome is 46.64 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Cacalana omninitura sp. nov.

Candidatus Cacalana omninitura (NL. fem. n. *omninitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002725925 sp002687335*. The type genome for the species is the GenBank assembly GCA_002687335.1. The GC content of the type genome is 46.33 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Cacalaria cosigitas sp. nov.

Candidatus Cacalaria cosigitas (NL. fem. n. *cosigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXPL01 sp903829815*. The type genome for the species is the GenBank assembly GCA_903848175.1. The GC content of the type genome is 64.43 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Cacalaria gen. nov.

Candidatus Cacalaria (NL. fem. n. *Cacalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXPL01*. The type species for the genus is *Candidatus* Cacalaria cosigitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Cacalaria rarefitoga sp. nov.

Candidatus Cacalaria rarefitoga (NL. fem. n. *rarefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXPL01 sp903921325*. The type genome for the species is the GenBank assembly GCA_903909875.1. The GC content of the type genome is 61.51 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Cacalella acrufifica sp. nov.

Candidatus Cacalella acrufifica (NL. fem. n. *acrufifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-417 sp002477275*. The type genome for the species is the GenBank assembly GCA_002477275.1. The GC content of the type genome is 25.8 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cacalella gen. nov.

Candidatus Cacalella (NL. fem. n. *Cacalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-417*. The type species for the genus is *Candidatus* Cacalella acrufifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cacalella casabago sp. nov.

Candidatus Cacalella casabago (NL. fem. n. *casabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-417 sp902791625*. The type genome for the species is the GenBank assembly GCA_902791625.1. The GC content of the type genome is 26.35 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cacalella depubicella sp. nov.

Candidatus Cacalella depubicella (NL. fem. n. *depubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-417 sp000432835*. The type genome for the species is the GenBank assembly GCA_900538565.1. The GC content of the type genome is 27.76 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Cacalida voragilenta sp. nov.

Candidatus Cacalida voragilenta (NL. fem. n. *voragilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXHP01 sp903919315*. The type genome for the species is the GenBank assembly GCA_903862705.1. The GC content of the type genome is 59.77 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cacalida gen. nov.

Candidatus Cacalida (NL. fem. n. *Cacalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXHP01*. The type species for the genus is *Candidatus* Cacalida voragilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticidaceae.

Description of *Candidatus* Cacalosa lapicitica sp. nov.

Candidatus Cacalosa lapicitica (NL. fem. n. *lapicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs140 sp903908015*. The type genome for the species is the GenBank assembly GCA_903842525.1. The GC content of the type genome is 50.53 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cacalosa gen. nov.

Candidatus Cacalosa (NL. fem. n. *Cacalosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs140*. The type species for the genus is *Candidatus* Cacalosa lapicitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubanaceae.

Description of *Candidatus* Cacalosa vecoritia sp. nov.

Candidatus Cacalosa vecoritia (NL. fem. n. *vecoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs140 sp005799065*. The type genome for the species is the GenBank assembly GCA_005799065.1. The GC content of the type genome is 49.79 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Cacalula dicibimonia sp. nov.

Candidatus Cacalula dicibimonia (NL. fem. n. *dicibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXSK01 sp005793375*. The type genome for the species is the GenBank assembly GCA_005805585.1. The GC content of the type genome is 56.73 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Cacalula gen. nov.

Candidatus Cacalula (NL. fem. n. *Cacalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXSK01*. The type species for the genus is *Candidatus* Cacalula dicibimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Cacomana intamitura sp. nov.

Candidatus Cacomana intamitura (NL. fem. n. *intamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10347 sp003485885*. The type genome for the species is the GenBank assembly GCA_003485885.1. The GC content of the type genome is 60.1 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Cacomana gen. nov.

Candidatus Cacomana (NL. fem. n. *Cacomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10347*. The type species for the genus is *Candidatus* Cacomana intamitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10347*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomanaceae.

Description of *Candidatus* Cacomanaceae fam. nov.

Candidatus Cacomanaceae (NL. fem. n. *Cacomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10347.* The type genus for the taxon is *Candidatus* Cacomana .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Cacomaria colubilenta sp. nov.

Candidatus Cacomaria colubilenta (NL. fem. n. *colubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1845 sp002338715*. The type genome for the species is the GenBank assembly GCA_002338715.1. The GC content of the type genome is 57.0 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Cacomaria gen. nov.

Candidatus Cacomaria (NL. fem. n. *Cacomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1845*. The type species for the genus is *Candidatus* Cacomaria colubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Cacomariaceae fam. nov.

Candidatus Cacomariaceae (NL. fem. n. *Cacomariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1845.* The type genus for the taxon is *Candidatus* Cacomaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomariales.

Description of *Candidatus* Cacomariales ord. nov.

Candidatus Cacomariales (NL. fem. n. *Cacomariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1845.* The type genus for the taxon is *Candidatus* Cacomaria .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Cacomaria illuvilega sp. nov.

Candidatus Cacomaria illuvilega (NL. fem. n. *illuvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1845 sp013151185*. The type genome for the species is the GenBank assembly GCA_013151185.1. The GC content of the type genome is 56.6 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Cacomella adrumugo sp. nov.

Candidatus Cacomella adrumugo (NL. fem. n. *adrumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GM7ARS4 sp014332745*. The type genome for the species is the GenBank assembly GCA_014332745.1. The GC content of the type genome is 51.98 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Cacomella gen. nov.

Candidatus Cacomella (NL. fem. n. *Cacomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GM7ARS4*. The type species for the genus is *Candidatus* Cacomella adrumugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GM7ARS4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomellaceae.

Description of *Candidatus* Cacomellaceae fam. nov.

Candidatus Cacomellaceae (NL. fem. n. *Cacomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GM7ARS4.* The type genus for the taxon is *Candidatus* Cacomella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GM7ARS4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomellales.

Description of *Candidatus* Cacomellales ord. nov.

Candidatus Cacomellales (NL. fem. n. *Cacomellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GM7ARS4.* The type genus for the taxon is *Candidatus* Cacomella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Cacomia cohorimonia sp. nov.

Candidatus Cacomia cohorimonia (NL. fem. n. *cohorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITKP01 sp903885085*. The type genome for the species is the GenBank assembly GCA_903852365.1. The GC content of the type genome is 36.54 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cacomia gen. nov.

Candidatus Cacomia (NL. fem. n. *Cacomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITKP01*. The type species for the genus is *Candidatus* Cacomia cohorimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cacomia parocatio sp. nov.

Candidatus Cacomia parocatio (NL. fem. n. *parocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITKP01 sp903892995*. The type genome for the species is the GenBank assembly GCA_903905525.1. The GC content of the type genome is 36.48 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cacomida detunago sp. nov.

Candidatus Cacomida detunago (NL. fem. n. *detunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-16 sp011043375*. The type genome for the species is the GenBank assembly GCA_011043375.1. The GC content of the type genome is 36.97 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Cacomida gen. nov.

Candidatus Cacomida (NL. fem. n. *Cacomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-16*. The type species for the genus is *Candidatus* Cacomida detunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family

HyVt-16. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomidaceae.

Description of *Candidatus* Cacomidaceae fam. nov.

Candidatus Cacomidaceae (NL. fem. n. *Cacomidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HyVt-16.* The type genus for the taxon is *Candidatus* Cacomida .

According to the original version of GTDB R06-RS202, this family belongs to the order *B21-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hexagidales.

Description of *Candidatus* Cacomosa milipatio sp. nov.

Candidatus Cacomosa milipatio (NL. fem. n. *milipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJYI01 sp903824855*. The type genome for the species is the GenBank assembly GCA_903833805.1. The GC content of the type genome is 39.77 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Cacomosa gen. nov.

Candidatus Cacomosa (NL. fem. n. *Cacomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJYI01*. The type species for the genus is *Candidatus* Cacomosa milipatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomosaceae.

Description of *Candidatus* Cacomosaceae fam. nov.

Candidatus Cacomosaceae (NL. fem. n. *Cacomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJYI01.* The type genus for the taxon is *Candidatus* Cacomosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Cacomula tenemitica sp. nov.

Candidatus Cacomula tenemitica (NL. fem. n. *tenemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQM01 sp012519315*. The type genome for the species is the GenBank assembly GCA_012519315.1. The GC content of the type genome is 45.38 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Cacomula gen. nov.

Candidatus Cacomula (NL. fem. n. *Cacomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQM01*. The type species for the genus is *Candidatus* Cacomula tenemitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Cacopana utputetta sp. nov.

Candidatus Cacopana utputetta (NL. fem. n. *utputetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADJB01 sp013151035*. The type genome for the species is the GenBank assembly GCA_013151035.1. The GC content of the type genome is 46.57 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Cacopana gen. nov.

Candidatus Cacopana (NL. fem. n. *Cacopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADJB01*. The type species for the genus is *Candidatus* Cacopana

utputetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADJB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacopanaceae.

Description of *Candidatus* Cacopanaceae fam. nov.

Candidatus Cacopanaceae (NL. fem. n. *Cacopanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADJB01*. The type genus for the taxon is *Candidatus* Cacopana .

According to GTDB R06-RS202, this family belongs to the order *Thiohalobacterales*.

Description of *Candidatus* Cacoparia homunitoga sp. nov.

Candidatus Cacoparia homunitoga (NL. fem. n. *homunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-11 sp001817685*. The type genome for the species is the GenBank assembly GCA_001817795.1. The GC content of the type genome is 45.5 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cacoparia gen. nov.

Candidatus Cacoparia (NL. fem. n. *Cacoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-11*. The type species for the genus is *Candidatus* Cacoparia homunitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cacopia apharitrix sp. nov.

Candidatus Cacopia apharitrix (NL. fem. n. *apharitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DTOL01 sp011358165*. The type genome for the species is the GenBank assembly GCA_011358165.1. The GC content of the type genome is 58.88 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Cacopia gen. nov.

Candidatus Cacopia (NL. fem. n. *Cacopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOL01*. The type species for the genus is *Candidatus* Cacopia apharitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTOL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacopiaceae.

Description of *Candidatus* Cacopiaceae fam. nov.

Candidatus Cacopiaceae (NL. fem. n. *Cacopiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTOL01.* The type genus for the taxon is *Candidatus* Cacopia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTOL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacopiales.

Description of *Candidatus* Cacopiales ord. nov.

Candidatus Cacopiales (NL. fem. n. *Cacopiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTOL01.* The type genus for the taxon is *Candidatus* Cacopia .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTOL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cacopiae.

Description of *Candidatus* Cacopiae class. nov.

Candidatus Cacopiae (NL. fem. n. *c__Cacopiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DTOL01*. The type genus for the taxon is *Candidatus* Cacopia .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Cacopida assibago sp. nov.

Candidatus Cacopida assibago (NL. fem. n. *assibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26134_A sp010027235*. The type genome for the species is the GenBank assembly GCA_010027235.1. The GC content of the type genome is 61.68 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Cacopida gen. nov.

Candidatus Cacopida (NL. fem. n. *Cacopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC26134_A*. The type species for the genus is *Candidatus* Cacopida assibago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cacopida capudousia sp. nov.

Candidatus Cacopida capudousia (NL. fem. n. *capudousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26134_A sp903869675*. The type genome for the species is the GenBank assembly GCA_903851485.1. The GC content of the type genome is 63.35 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Cacopida hirunigena sp. nov.

Candidatus Cacopida hirunigena (NL. fem. n. *hirunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26134_A sp000972765*. The type genome for the species is the GenBank assembly GCA_903876315.1. The GC content of the type genome is 61.62 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Cacoposa monogimonas sp. nov.

Candidatus Cacoposa monogimonas (NL. fem. n. *monogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Asp313 sp003073475*. The type genome for the species is the GenBank assembly RS_GCF_003073475.1. The GC content of the type genome is 60.64 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Cacoposa gen. nov.

Candidatus Cacoposa (NL. fem. n. *Cacoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Asp313*. The type species for the genus is *Candidatus* Cacoposa monogimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cacopula nutamimonas sp. nov.

Candidatus Cacopula nutamimonas (NL. fem. n. *nutamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2377 sp002344205*. The type genome for the species is the GenBank assembly GCA_002344205.1. The GC content of the type genome is 65.29 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Cacopula gen. nov.

Candidatus Cacopula (NL. fem. n. *Cacopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2377*. The type species for the genus is *Candidatus* Cacopula nutamimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cacopula rinocitudo sp. nov.

Candidatus Cacopula rinocitudo (NL. fem. n. *rinocitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2377 sp903952145*. The type genome for the species is the GenBank assembly GCA_903885535.1. The GC content of the type genome is 63.95 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Cadavana fraglitoga sp. nov.

Candidatus Cadavana fraglitoga (NL. fem. n. *fraglitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA970 sp002292805*. The type genome for the species is the GenBank assembly GCA_002292805.1. The GC content of the type genome is 40.11 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Cadavana gen. nov.

Candidatus Cadavana (NL. fem. n. *Cadavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA970*. The type species for the genus is *Candidatus* Cadavana fraglitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Cadavana vinoligena sp. nov.

Candidatus Cadavana vinoligena (NL. fem. n. *vinoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA970 sp903845135*. The type genome for the species is the GenBank assembly GCA_903898885.1. The GC content of the type genome is 38.5 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Cadavaria bipenitas sp. nov.

Candidatus Cadavaria bipenitas (NL. fem. n. *bipenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-51-18 sp903867985*. The type genome for the species is the GenBank assembly GCA_903827825.1. The GC content of the type genome is 52.49 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Cadavaria gen. nov.

Candidatus Cadavaria (NL. fem. n. *Cadavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YA12-FULL-51-18*. The type species for the genus is *Candidatus* Cadavaria bipenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Cadavaria ficulitoga sp. nov.

Candidatus Cadavaria ficulitoga (NL. fem. n. *ficulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-51-18 sp001800245*. The type genome for the species is the GenBank assembly GCA_001800375.1. The GC content of the type genome is 52.83 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Cadavaria subacatica sp. nov.

Candidatus Cadavaria subacatica (NL. fem. n. *subacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-51-18 sp001799575*. The type genome for the species is the GenBank assembly GCA_001799575.1. The GC content of the type genome is 56.41 % and the genome length is 2.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Cadavella inorditura sp. nov.

Candidatus Cadavella inorditura (NL. fem. n. *inorditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-80-MAGS106 sp005805305*. The type genome for the species is the GenBank assembly GCA_005805305.1. The GC content of the type genome is 58.27 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Cadavella gen. nov.

Candidatus Cadavella (NL. fem. n. *Cadavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-80-MAGS106*. The type species for the genus is *Candidatus* Cadavella inorditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-80-MAGS106*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavellaceae.

Description of *Candidatus* Cadavellaceae fam. nov.

Candidatus Cadavellaceae (NL. fem. n. *Cadavellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F1-80-MAGS106.* The type genus for the taxon is *Candidatus* Cadavella .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Cadavia catafimonas sp. nov.

Candidatus Cadavia catafimonas (NL. fem. n. *catafimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAW01 sp903825575*. The type genome for the species is the GenBank assembly GCA_903901755.1. The GC content of the type genome is 60.79 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Cadavia gen. nov.

Candidatus Cadavia (NL. fem. n. *Cadavia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKAW01*. The type species for the genus is *Candidatus* Cadavia catafimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKAW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadaviaceae.

Description of *Candidatus* Cadaviaceae fam. nov.

Candidatus Cadaviaceae (NL. fem. n. *Cadaviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIKAW01.* The type genus for the taxon is *Candidatus* Cadavia .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Cadavida effacitura sp. nov.

Candidatus Cadavida effacitura (NL. fem. n. *effacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOD01 sp012838995*. The type genome for the species is the GenBank assembly GCA_012838995.1. The GC content of the type genome is 42.67 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cadavida gen. nov.

Candidatus Cadavida (NL. fem. n. *Cadavida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOD01*. The type species for the genus is *Candidatus* Cadavida effacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUOD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavidaceae.

Description of *Candidatus* Cadavidaceae fam. nov.

Candidatus Cadavidaceae (NL. fem. n. *Cadavidaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUOD01*. The type genus for the taxon is *Candidatus* Cadavida .

According to GTDB R06-RS202, this family belongs to the order *Mahellales*.

Description of *Candidatus* Cadavosa conaritia sp. nov.

Candidatus Cadavosa conaritia (NL. fem. n. *conaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATCC-39006 sp002847015*. The type genome for the species is the GenBank assembly RS_GCF_002847015.1. The GC content of the type genome is 49.3 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Cadavosa gen. nov.

Candidatus Cadavosa (NL. fem. n. *Cadavosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATCC-39006*. The type species for the genus is *Candidatus* Cadavosa conaritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cadavula egrititio sp. nov.

Candidatus Cadavula egrititio (NL. fem. n. *egrititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-4 sp005877815*. The type genome for the species is the GenBank assembly GCA_005877815.1. The GC content of the type genome is 58.02 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Cadavula gen. nov.

Candidatus Cadavula (NL. fem. n. *Cadavula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *NS-4*. The type species for the genus is *Candidatus* Cadavula egrititio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NS-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavulaceae.

Description of *Candidatus* Cadavulaceae fam. nov.

Candidatus Cadavulaceae (NL. fem. n. *Cadavulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NS-4.* The type genus for the taxon is *Candidatus* Cadavula .

According to GTDB R06-RS202, this family belongs to the order *Nitrospirales*.

Description of *Candidatus* Cadurana adfamitudo sp. nov.

Candidatus Cadurana adfamitudo (NL. fem. n. *adfamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900767595*. The type genome for the species is the GenBank assembly RS_GCF_900767595.1. The GC content of the type genome is 46.7 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Cadurana gen. nov.

Candidatus Cadurana (NL. fem. n. *Cadurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RF16*. The type species for the genus is *Candidatus* Cadurana adfamitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cadurana adgubibula sp. nov.

Candidatus Cadurana adgubibula (NL. fem. n. *adgubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902774185*. The type genome for the species is the GenBank assembly GCA_902774185.1. The GC content of the type genome is 47.67 % and the

genome length is 2.19 Mbp.

Description of *Candidatus* Cadurana admulivita sp. nov.

Candidatus Cadurana admulivita (NL. fem. n. *admulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902799875*. The type genome for the species is the GenBank assembly GCA_902799875.1. The GC content of the type genome is 49.31 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Cadurana adselessa sp. nov.

Candidatus Cadurana adselessa (NL. fem. n. *adselessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902798015*. The type genome for the species is the GenBank assembly GCA_902798015.1. The GC content of the type genome is 49.59 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Cadurana amnenitia sp. nov.

Candidatus Cadurana amnenitia (NL. fem. n. *amnenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902780495*. The type genome for the species is the GenBank assembly GCA_902780495.1. The GC content of the type genome is 47.06 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Cadurana artociforma sp. nov.

Candidatus Cadurana artociforma (NL. fem. n. *artociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900766775*. The type genome for the species is the GenBank assembly RS_GCF_900766775.1. The GC content of the type genome is 52.14 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Cadurana artocugo sp. nov.

Candidatus Cadurana artocugo (NL. fem. n. *artocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002351925*. The type genome for the species is the GenBank assembly GCA_002351925.1. The GC content of the type genome is 52.55 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Cadurana benificella sp. nov.

Candidatus Cadurana benificella (NL. fem. n. *benificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902779705*. The type genome for the species is the GenBank assembly GCA_902779705.1. The GC content of the type genome is 48.71 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Cadurana bifisisca sp. nov.

Candidatus Cadurana bifisisca (NL. fem. n. *bifisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002477945*. The type genome for the species is the GenBank assembly GCA_002477945.1. The GC content of the type genome is 47.31 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Cadurana bigarastra sp. nov.

Candidatus Cadurana bigarastra (NL. fem. n. *bigarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319995*. The type genome for the species is the GenBank assembly GCA_900319995.1. The GC content of the type genome is 46.43 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Cadurana bugilitura sp. nov.

Candidatus Cadurana bugilitura (NL. fem. n. *bugilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002371785*. The type genome for the species is the GenBank assembly GCA_002371785.1. The GC content of the type genome is 52.94 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Cadurana catobicella sp. nov.

Candidatus Cadurana catobicella (NL. fem. n. *catobicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319645*. The type genome for the species is the GenBank assembly GCA_902758385.1. The GC content of the type genome is 49.38 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Cadurana cerimitica sp. nov.

Candidatus Cadurana cerimitica (NL. fem. n. *cerimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902769535*. The type genome for the species is the GenBank assembly GCA_902769535.1. The GC content of the type genome is 49.71 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Cadurana ciciledo sp. nov.

Candidatus Cadurana ciciledo (NL. fem. n. *ciciledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900316005*. The type genome for the species is the GenBank assembly GCA_900316005.1. The GC content of the type genome is 50.36 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cadurana cimitatio sp. nov.

Candidatus Cadurana cimitatio (NL. fem. n. *cimitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902771935*. The type genome for the species is the GenBank assembly GCA_902771935.1. The GC content of the type genome is 45.33 % and the

genome length is 2.06 Mbp.

Description of *Candidatus* Cadurana cimitisca sp. nov.

Candidatus Cadurana cimitisca (NL. fem. n. *cimitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002373505*. The type genome for the species is the GenBank assembly GCA_902800915.1. The GC content of the type genome is 49.8 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cadurana cinipugo sp. nov.

Candidatus Cadurana cinipugo (NL. fem. n. *cinipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002309835*. The type genome for the species is the GenBank assembly GCA_002309835.1. The GC content of the type genome is 49.83 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Cadurana citipicella sp. nov.

Candidatus Cadurana citipicella (NL. fem. n. *citipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002392745*. The type genome for the species is the GenBank assembly GCA_002392745.1. The GC content of the type genome is 49.33 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Cadurana citivibula sp. nov.

Candidatus Cadurana citivibula (NL. fem. n. *citivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319035*. The type genome for the species is the GenBank assembly GCA_902794715.1. The GC content of the type genome is 47.88 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Cadurana cocolimonia sp. nov.

Candidatus Cadurana cocolimonia (NL. fem. n. *cocolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002440265*. The type genome for the species is the GenBank assembly GCA_002321485.1. The GC content of the type genome is 51.24 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Cadurana conigitura sp. nov.

Candidatus Cadurana conigitura (NL. fem. n. *conigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900320865*. The type genome for the species is the GenBank assembly GCA_902771975.1. The GC content of the type genome is 48.86 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cadurana culibimonia sp. nov.

Candidatus Cadurana culibimonia (NL. fem. n. *culibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902780235*. The type genome for the species is the GenBank assembly GCA_902780235.1. The GC content of the type genome is 49.14 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Cadurana decatitas sp. nov.

Candidatus Cadurana decatitas (NL. fem. n. *decatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900321005*. The type genome for the species is the GenBank assembly GCA_902771915.1. The GC content of the type genome is 50.21 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cadurana delebitas sp. nov.

Candidatus Cadurana delebitas (NL. fem. n. *delebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319105*. The type genome for the species is the GenBank assembly GCA_900319105.1. The GC content of the type genome is 49.15 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Cadurana demigentia sp. nov.

Candidatus Cadurana demigentia (NL. fem. n. *demigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002387325*. The type genome for the species is the GenBank assembly GCA_002297085.1. The GC content of the type genome is 49.76 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cadurana desomicella sp. nov.

Candidatus Cadurana desomicella (NL. fem. n. *desomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002452095*. The type genome for the species is the GenBank assembly GCA_002476535.1. The GC content of the type genome is 49.34 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Cadurana dibucicula sp. nov.

Candidatus Cadurana dibucicula (NL. fem. n. *dibucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002354055*. The type genome for the species is the GenBank assembly GCA_002354055.1. The GC content of the type genome is 49.89 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Cadurana dicanugo sp. nov.

Candidatus Cadurana dicanugo (NL. fem. n. *dicanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902774075*. The type genome for the species is the GenBank assembly GCA_902774075.1. The GC content of the type genome is 50.34 % and the

genome length is 1.8 Mbp.

Description of *Candidatus* Cadurana dicibugo sp. nov.

Candidatus Cadurana dicibugo (NL. fem. n. *dicibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002352705*. The type genome for the species is the GenBank assembly GCA_002352705.1. The GC content of the type genome is 47.64 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Cadurana dilogitia sp. nov.

Candidatus Cadurana dilogitia (NL. fem. n. *dilogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902798385*. The type genome for the species is the GenBank assembly GCA_902798385.1. The GC content of the type genome is 50.33 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cadurana diminessa sp. nov.

Candidatus Cadurana diminessa (NL. fem. n. *diminessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902765485*. The type genome for the species is the GenBank assembly GCA_902765485.1. The GC content of the type genome is 49.54 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Cadurana effositura sp. nov.

Candidatus Cadurana effositura (NL. fem. n. *effositura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902792535*. The type genome for the species is the GenBank assembly GCA_902792535.1. The GC content of the type genome is 50.01 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cadurana epicratio sp. nov.

Candidatus Cadurana epicratio (NL. fem. n. *epicratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902800525*. The type genome for the species is the GenBank assembly GCA_902800525.1. The GC content of the type genome is 48.36 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Cadurana expenibra sp. nov.

Candidatus Cadurana expenibra (NL. fem. n. *expenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002369075*. The type genome for the species is the GenBank assembly GCA_002369075.1. The GC content of the type genome is 51.06 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Cadurana extunilenta sp. nov.

Candidatus Cadurana extunilenta (NL. fem. n. *extunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902798965*. The type genome for the species is the GenBank assembly GCA_902798965.1. The GC content of the type genome is 50.02 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Cadurana famelitoga sp. nov.

Candidatus Cadurana famelitoga (NL. fem. n. *famelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002394335*. The type genome for the species is the GenBank assembly GCA_002394335.1. The GC content of the type genome is 49.46 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cadurana funamatica sp. nov.

Candidatus Cadurana funamatica (NL. fem. n. *funamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319005*. The type genome for the species is the GenBank assembly GCA_902791205.1. The GC content of the type genome is 47.36 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Cadurana inculugo sp. nov.

Candidatus Cadurana inculugo (NL. fem. n. *inculugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002315745*. The type genome for the species is the GenBank assembly GCA_002315745.1. The GC content of the type genome is 47.02 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Cadurana indiventia sp. nov.

Candidatus Cadurana indiventia (NL. fem. n. *indiventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002395805*. The type genome for the species is the GenBank assembly GCA_002395805.1. The GC content of the type genome is 49.54 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Cadurana infucitura sp. nov.

Candidatus Cadurana infucitura (NL. fem. n. *infucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902774995*. The type genome for the species is the GenBank assembly GCA_902774995.1. The GC content of the type genome is 51.44 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Cadurana inhabatica sp. nov.

Candidatus Cadurana inhabatica (NL. fem. n. *inhabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002309255*. The type genome for the species is the GenBank assembly GCA_002309255.1. The GC content of the type genome is 52.01 % and the

genome length is 2.23 Mbp.

Description of *Candidatus* Cadurana lapicimonas sp. nov.

Candidatus Cadurana lapicimonas (NL. fem. n. *lapicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902762355*. The type genome for the species is the GenBank assembly GCA_902762355.1. The GC content of the type genome is 49.93 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cadurana letifitio sp. nov.

Candidatus Cadurana letifitio (NL. fem. n. *letifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902785605*. The type genome for the species is the GenBank assembly GCA_902798175.1. The GC content of the type genome is 50.51 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cadurana loripitura sp. nov.

Candidatus Cadurana loripitura (NL. fem. n. *loripitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900317885*. The type genome for the species is the GenBank assembly GCA_002393655.1. The GC content of the type genome is 49.51 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Cadurana medimatica sp. nov.

Candidatus Cadurana medimatica (NL. fem. n. *medimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002310195*. The type genome for the species is the GenBank assembly GCA_002367495.1. The GC content of the type genome is 52.28 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cadurana mirabedo sp. nov.

Candidatus Cadurana mirabedo (NL. fem. n. *mirabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900768725*. The type genome for the species is the GenBank assembly RS_GCF_900768725.1. The GC content of the type genome is 52.28 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Cadurana navicousia sp. nov.

Candidatus Cadurana navicousia (NL. fem. n. *navicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900316845*. The type genome for the species is the GenBank assembly GCA_002372695.1. The GC content of the type genome is 50.66 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cadurana nosocimonas sp. nov.

Candidatus Cadurana nosocimonas (NL. fem. n. *nosocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902783545*. The type genome for the species is the GenBank assembly GCA_902783545.1. The GC content of the type genome is 52.26 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cadurana octodimonia sp. nov.

Candidatus Cadurana octodimonia (NL. fem. n. *octodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002308815*. The type genome for the species is the GenBank assembly GCA_002308815.1. The GC content of the type genome is 52.44 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Cadurana papavax sp. nov.

Candidatus Cadurana papavax (NL. fem. n. *papavax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900318245*. The type genome for the species is the GenBank assembly GCA_902799775.1. The GC content of the type genome is 50.89 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Cadurana peribilenta sp. nov.

Candidatus Cadurana peribilenta (NL. fem. n. *peribilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902778935*. The type genome for the species is the GenBank assembly GCA_902784215.1. The GC content of the type genome is 49.2 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cadurana pulegicella sp. nov.

Candidatus Cadurana pulegicella (NL. fem. n. *pulegicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902792835*. The type genome for the species is the GenBank assembly GCA_902792835.1. The GC content of the type genome is 50.44 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Cadurana ranunitura sp. nov.

Candidatus Cadurana ranunitura (NL. fem. n. *ranunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900319025*. The type genome for the species is the GenBank assembly GCA_902763395.1. The GC content of the type genome is 44.79 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Cadurana recucastra sp. nov.

Candidatus Cadurana recucastra (NL. fem. n. *recucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902799705*. The type genome for the species is the GenBank assembly GCA_902799705.1. The GC content of the type genome is 48.71 % and the

genome length is 2.33 Mbp.

Description of *Candidatus* Cadurana repecitica sp. nov.

Candidatus Cadurana repecitica (NL. fem. n. *repecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002394395*. The type genome for the species is the GenBank assembly GCA_002394395.1. The GC content of the type genome is 50.08 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Cadurana rorifitia sp. nov.

Candidatus Cadurana rorifitia (NL. fem. n. *rorifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002368645*. The type genome for the species is the GenBank assembly GCA_002368645.1. The GC content of the type genome is 45.91 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Cadurana rumifitia sp. nov.

Candidatus Cadurana rumifitia (NL. fem. n. *rumifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900321605*. The type genome for the species is the GenBank assembly GCA_902791495.1. The GC content of the type genome is 47.7 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Cadurana saxopentia sp. nov.

Candidatus Cadurana saxopentia (NL. fem. n. *saxopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902800215*. The type genome for the species is the GenBank assembly GCA_902800695.1. The GC content of the type genome is 48.61 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Cadurana siticago sp. nov.

Candidatus Cadurana siticago (NL. fem. n. *siticago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900321775*. The type genome for the species is the GenBank assembly GCA_902784385.1. The GC content of the type genome is 51.1 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Cadurana sonivugo sp. nov.

Candidatus Cadurana sonivugo (NL. fem. n. *sonivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902799555*. The type genome for the species is the GenBank assembly GCA_902799555.1. The GC content of the type genome is 48.6 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Cadurana suboditudo sp. nov.

Candidatus Cadurana suboditudo (NL. fem. n. *suboditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902784585*. The type genome for the species is the GenBank assembly GCA_902784585.1. The GC content of the type genome is 51.69 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Cadurana subucifica sp. nov.

Candidatus Cadurana subucifica (NL. fem. n. *subucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902799185*. The type genome for the species is the GenBank assembly GCA_902799185.1. The GC content of the type genome is 51.35 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Cadurana tametibra sp. nov.

Candidatus Cadurana tametibra (NL. fem. n. *tametibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002479035*. The type genome for the species is the GenBank assembly GCA_002478995.1. The GC content of the type genome is 50.21 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Cadurana terebitio sp. nov.

Candidatus Cadurana terebitio (NL. fem. n. *terebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp902785805*. The type genome for the species is the GenBank assembly GCA_902785805.1. The GC content of the type genome is 47.96 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Cadurana tirunivita sp. nov.

Candidatus Cadurana tirunivita (NL. fem. n. *tirunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900317745*. The type genome for the species is the GenBank assembly GCA_902780295.1. The GC content of the type genome is 49.85 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Cadurana totidigena sp. nov.

Candidatus Cadurana totidigena (NL. fem. n. *totidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900556095*. The type genome for the species is the GenBank assembly GCA_900556095.1. The GC content of the type genome is 47.74 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Cadurana totidimonas sp. nov.

Candidatus Cadurana totidimonas (NL. fem. n. *totidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002308195*. The type genome for the species is the GenBank assembly GCA_002308195.1. The GC content of the type genome is 47.71 % and the

genome length is 1.54 Mbp.

Description of *Candidatus* Cadurana turifigena sp. nov.

Candidatus Cadurana turifigena (NL. fem. n. *turifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900317345*. The type genome for the species is the GenBank assembly GCA_902759235.1. The GC content of the type genome is 49.58 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Cadurana vecorimonia sp. nov.

Candidatus Cadurana vecorimonia (NL. fem. n. *vecorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002449665*. The type genome for the species is the GenBank assembly GCA_002394445.1. The GC content of the type genome is 48.13 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cadurana vilitax sp. nov.

Candidatus Cadurana vilitax (NL. fem. n. *vilitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp900542355*. The type genome for the species is the GenBank assembly GCA_900542355.1. The GC content of the type genome is 48.3 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Cadurana volubastra sp. nov.

Candidatus Cadurana volubastra (NL. fem. n. *volubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002372135*. The type genome for the species is the GenBank assembly GCA_002394915.1. The GC content of the type genome is 47.89 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Cadurana xenopitia sp. nov.

Candidatus Cadurana xenopitia (NL. fem. n. *xenopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RF16 sp002317295*. The type genome for the species is the GenBank assembly GCA_002317295.1. The GC content of the type genome is 47.12 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Caduraria cohonousia sp. nov.

Candidatus Caduraria cohonousia (NL. fem. n. *cohonousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1183 sp003136635*. The type genome for the species is the GenBank assembly GCA_003136635.1. The GC content of the type genome is 46.69 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Caduraria gen. nov.

Candidatus Caduraria (NL. fem. n. *Caduraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-1183*. The type species for the genus is *Candidatus* Caduraria cohonousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1180*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Chernanaceae.

Description of *Candidatus* Caduraria derecatica sp. nov.

Candidatus Caduraria derecatica (NL. fem. n. *derecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1183 sp013286205*. The type genome for the species is the GenBank assembly GCA_013286205.1. The GC content of the type genome is 48.75 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Cadurella dilemitas sp. nov.

Candidatus Cadurella dilemitas (NL. fem. n. *dilemitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077560 sp903896045*. The type genome for the species is the GenBank assembly GCA_903819775.1. The GC content of the type genome is 60.22 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Cadurella gen. nov.

Candidatus Cadurella (NL. fem. n. *Cadurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077560*. The type species for the genus is *Candidatus* Cadurella dilemitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadurellaceae.

Description of *Candidatus* Cadurellaceae fam. nov.

Candidatus Cadurellaceae (NL. fem. n. *Cadurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077560.* The type genus for the taxon is *Candidatus* Cadurella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ga0077560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cadurellales.

Description of *Candidatus* Cadurellales ord. nov.

Candidatus Cadurellales (NL. fem. n. *Cadurellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077560.* The type genus for the taxon is *Candidatus* Cadurella .

According to the GTDB R06-RS202, this order belongs to the class *Thermoleophilia*.

Description of *Candidatus* Cadurella semodisca sp. nov.

Candidatus Cadurella semodisca (NL. fem. n. *semodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077560 sp001464275*. The type genome for the species is the GenBank assembly GCA_001464275.1. The GC content of the type genome is 73.61 % and the genome length is 3.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Caduria alectilenta sp. nov.

Candidatus Caduria alectilenta (NL. fem. n. *alectilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721545 sp014237605*. The type genome for the species is the GenBank assembly GCA_014237605.1. The GC content of the type genome is 39.63 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Caduria gen. nov.

Candidatus Caduria (NL. fem. n. *Caduria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721545*. The type species for the genus is *Candidatus* Caduria alectilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Caduria dinupicula sp. nov.

Candidatus Caduria dinupicula (NL. fem. n. *dinupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721545 sp002721545*. The type genome for the species is the GenBank assembly GCA_002448775.1. The GC content of the type genome is 36.36 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Caduria innasimonas sp. nov.

Candidatus Caduria innasimonas (NL. fem. n. *innasimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721545 sp004525885*. The type genome for the species is the GenBank assembly GCA_004525885.1. The GC content of the type genome is 42.19 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Caduria manufedo sp. nov.

Candidatus Caduria manufedo (NL. fem. n. *manufedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721545 sp004356775*. The type genome for the species is the GenBank assembly GCA_004356835.1. The GC content of the type genome is 44.44 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Caduria monocimonia sp. nov.

Candidatus Caduria monocimonia (NL. fem. n. *monocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721545 sp003230615*. The type genome for the species is the GenBank assembly GCA_003230615.1. The GC content of the type genome is 43.13 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Cadurida cimitiforma sp. nov.

Candidatus Cadurida cimitiforma (NL. fem. n. *cimitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG30 sp003242275*. The type genome for the species is the GenBank assembly GCA_003242275.1. The GC content of the type genome is 69.86 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Cadurida gen. nov.

Candidatus Cadurida (NL. fem. n. *Cadurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG30*. The type species for the genus is *Candidatus* Cadurida cimitiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cadurida homulax sp. nov.

Candidatus Cadurida homulax (NL. fem. n. *homulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG30 sp903868595*. The type genome for the species is the GenBank assembly GCA_903924525.1. The GC content of the type genome is 67.48 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Cadurida obfenitrix sp. nov.

Candidatus Cadurida obfenitrix (NL. fem. n. *obfenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG30 sp903908825*. The type genome for the species is the GenBank assembly GCA_903908825.1. The GC content of the type genome is 62.46 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Cadurosa cocibastra sp. nov.

Candidatus Cadurosa cocibastra (NL. fem. n. *cocibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSZJ01 sp009773755*. The type genome for the species is the GenBank assembly GCA_009773755.1. The GC content of the type genome is 65.7 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Cadurosa gen. nov.

Candidatus Cadurosa (NL. fem. n. *Cadurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSZJ01*. The type species for the genus is *Candidatus* Cadurosa cocibastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WSZJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadurosaceae.

Description of *Candidatus* Cadurosaceae fam. nov.

Candidatus Cadurosaceae (NL. fem. n. *Cadurosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WSZJ01*. The type genus for the taxon is *Candidatus* Cadurosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *WSZJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cadurosales.

Description of *Candidatus* Cadurosales ord. nov.

Candidatus Cadurosales (NL. fem. n. *Cadurosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WSZJ01*. The type genus for the taxon is *Candidatus* Cadurosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *MHYJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fetifosae.

Description of *Candidatus* Cadurula nubecitura sp. nov.

Candidatus Cadurula nubecitura (NL. fem. n. *nubecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EMTCatB1 sp001950395*. The type genome for the species is the GenBank assembly GCA_001950395.1. The GC content of the type genome is 67.17 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Cadurula gen. nov.

Candidatus Cadurula (NL. fem. n. *Cadurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *EMTCatB1*. The type species for the genus is *Candidatus* Cadurula nubecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Caecibacter cacalitica sp. nov.

Candidatus Caecibacter cacalitica (NL. fem. n. *cacalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caecibacter sp900549385*. The type genome for the species is the GenBank assembly GCA_900752195.1. The GC content of the type genome is 46.13 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Caecibacter maxilax sp. nov.

Candidatus Caecibacter maxilax (NL. fem. n. *maxilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caecibacter sp003467125*. The type genome for the species is the GenBank assembly GCA_900765725.1. The GC content of the type genome is 49.75 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Caenibius ceracisca sp. nov.

Candidatus Caenibius ceracisca (NL. fem. n. *ceracisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caenibius sp001898545*. The type genome for the species is the GenBank assembly GCA_001898545.1. The GC content of the type genome is 62.5 % and the genome length is 3.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Caenibius expurago sp. nov.

Candidatus Caenibius expurago (NL. fem. n. *expurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caenibius sp001305965*. The type genome for the species is the GenBank assembly RS_GCF_001305965.1. The GC content of the type genome is 63.03 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Caldatribacterium fiducitrix sp. nov.

Candidatus Caldatribacterium fiducitrix (NL. fem. n. *fiducitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldatribacterium sp014359405*. The type genome for the species is the GenBank assembly GCA_014359405.1. The GC content of the type genome is 54.01 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Caldilinea capudugo sp. nov.

Candidatus Caldilinea capudugo (NL. fem. n. *capudugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldilinea sp003451595*. The type genome for the species is the GenBank assembly GCA_003451595.1. The GC content of the type genome is 60.84 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Caldilinea dehisisca sp. nov.

Candidatus Caldilinea dehisisca (NL. fem. n. *dehisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldilinea sp002391565*. The type genome for the species is the GenBank assembly GCA_002391565.1. The GC content of the type genome is 60.95 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Caldilinea turibiforma sp. nov.

Candidatus Caldilinea turibiforma (NL. fem. n. *turibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldilinea sp903858085*. The type genome for the species is the GenBank assembly GCA_903820485.1. The GC content of the type genome is 62.31 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Caldilinea venabigena sp. nov.

Candidatus Caldilinea venabigena (NL. fem. n. *venabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldilinea sp903879975*. The type genome for the species is the GenBank assembly GCA_903932405.1. The GC content of the type genome is 60.75 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Caldimicrobium ablepisca sp. nov.

Candidatus Caldimicrobium ablepisca (NL. fem. n. *ablepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldimicrobium sp011055415*. The type genome for the species is the GenBank assembly GCA_011055415.1. The GC content of the type genome is 41.89 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Caldimicrobium abrepentia sp. nov.

Candidatus Caldimicrobium abrepentia (NL. fem. n. *abrepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldimicrobium sp002441555*. The type genome for the species is the GenBank assembly GCA_002441555.1. The GC content of the type genome is 37.32 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Caldimicrobium cocodentia sp. nov.

Candidatus Caldimicrobium cocodentia (NL. fem. n. *cocodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldimicrobium sp009903935*. The type genome for the species is the GenBank assembly GCA_009903935.1. The GC content of the type genome is 42.64 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Caldimicrobium luxurimonia sp. nov.

Candidatus Caldimicrobium luxurimonia (NL. fem. n. *luxurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldimicrobium sp011375865*. The type genome for the species is the GenBank assembly GCA_011375865.1. The GC content of the type genome is 42.05 %

and the genome length is 1.19 Mbp.

Description of *Candidatus* Caldipriscus inmenitica sp. nov.

Candidatus Caldipriscus inmenitica (NL. fem. n. *inmenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldipriscus sp000980735*. The type genome for the species is the GenBank assembly GCA_000980735.1. The GC content of the type genome is 44.3 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hot spring filament".

Description of *Candidatus* Caldithrix adlicatica sp. nov.

Candidatus Caldithrix adlicatica (NL. fem. n. *adlicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caldithrix sp013151275*. The type genome for the species is the GenBank assembly GCA_013151275.1. The GC content of the type genome is 44.05 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Calescibacterium carecimonas sp. nov.

Candidatus Calescibacterium carecimonas (NL. fem. n. *carecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calescibacterium sp011364105*. The type genome for the species is the GenBank assembly GCA_011367265.1. The GC content of the type genome is 36.4 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Calescibacterium insufentia sp. nov.

Candidatus Calescibacterium insufentia (NL. fem. n. *insufentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calescibacterium sp002898315*. The type genome for the species is the GenBank assembly GCA_002898315.1. The GC content of the type genome is 36.94 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Calidifontibacillus futatitura sp. nov.

Candidatus Calidifontibacillus futatitura (NL. fem. n. *futatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calidifontibacillus sp012840465*. The type genome for the species is the GenBank assembly GCA_012840465.1. The GC content of the type genome is 37.84 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Calidifontibacillus intoressa sp. nov.

Candidatus Calidifontibacillus intoressa (NL. fem. n. *intoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calidifontibacillus sp013303125*. The type genome for the species is the GenBank assembly RS_GCF_013303125.1. The GC content of the type genome is 36.12 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Calidifontibacillus necubentia sp. nov.

Candidatus Calidifontibacillus necubentia (NL. fem. n. *necubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calidifontibacillus sp012842745*. The type genome for the species is the GenBank assembly GCA_012842745.1. The GC content of the type genome is 36.88 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Calipana malogivita sp. nov.

Candidatus Calipana malogivita (NL. fem. n. *malogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITZA01 sp903896745*. The type genome for the species is the GenBank assembly GCA_903909775.1. The GC content of the type genome is 47.27 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Calipana gen. nov.

Candidatus Calipana (NL. fem. n. *Calipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITZA01*. The type species for the genus is *Candidatus* Calipana malogivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Caliparia denomilega sp. nov.

Candidatus Caliparia denomilega (NL. fem. n. *denomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp010023085*. The type genome for the species is the GenBank assembly GCA_010022565.1. The GC content of the type genome is 34.92 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Caliparia gen. nov.

Candidatus Caliparia (NL. fem. n. *Caliparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BACL14*. The type species for the genus is *Candidatus* Caliparia denomilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Caliparia derelastra sp. nov.

Candidatus Caliparia derelastra (NL. fem. n. *derelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp002384685*. The type genome for the species is the GenBank assembly GCA_002340895.1. The GC content of the type genome is 38.37 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Caliparia holovitura sp. nov.

Candidatus Caliparia holovitura (NL. fem. n. *holovitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp000168995*. The type genome for the species is the

GenBank assembly RS_GCF_000168995.1. The GC content of the type genome is 37.93 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Caliparia locupentia sp. nov.

Candidatus Caliparia locupentia (NL. fem. n. *locupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp001044335*. The type genome for the species is the GenBank assembly RS_GCF_001044355.1. The GC content of the type genome is 35.48 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Caliparia palifitia sp. nov.

Candidatus Caliparia palifitia (NL. fem. n. *palifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp013205275*. The type genome for the species is the GenBank assembly GCA_013205275.1. The GC content of the type genome is 37.69 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Caliparia rubecitoga sp. nov.

Candidatus Caliparia rubecitoga (NL. fem. n. *rubecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp902558495*. The type genome for the species is the GenBank assembly GCA_902558495.1. The GC content of the type genome is 33.73 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Caliparia viragilenta sp. nov.

Candidatus Caliparia viragilenta (NL. fem. n. *viragilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL14 sp000156155*. The type genome for the species is the GenBank assembly RS_GCF_000156155.1. The GC content of the type genome is 35.37 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Calipella mimogousia sp. nov.

Candidatus Calipella mimogousia (NL. fem. n. *mimogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2247 sp002347295*. The type genome for the species is the GenBank assembly GCA_002347295.1. The GC content of the type genome is 42.59 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Calipella gen. nov.

Candidatus Calipella (NL. fem. n. *Calipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2247*. The type species for the genus is *Candidatus* Calipella mimogousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2247*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Calipellaceae.

Description of *Candidatus* Calipellaceae fam. nov.

Candidatus Calipellaceae (NL. fem. n. *Calipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2247.* The type genus for the taxon is *Candidatus* Calipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2247*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Calipellales.

Description of *Candidatus* Calipellales ord. nov.

Candidatus Calipellales (NL. fem. n. *Calipellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2247.* The type genus for the taxon is *Candidatus* Calipella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Calipia revulessa sp. nov.

Candidatus Calipia revulessa (NL. fem. n. *revulessa* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXPQ01 sp009839485*. The type genome for the species is the GenBank assembly GCA_009839485.1. The GC content of the type genome is 58.72 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Calipia gen. nov.

Candidatus Calipia (NL. fem. n. *Calipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXPQ01*. The type species for the genus is *Candidatus* Calipia revulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Calipiaceae.

Description of *Candidatus* Calipiaceae fam. nov.

Candidatus Calipiaceae (NL. fem. n. *Calipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXPQ01.* The type genus for the taxon is *Candidatus* Calipia .

According to GTDB R06-RS202, this family belongs to the order *Rhodothermales*.

Description of *Candidatus* Calipida biparibra sp. nov.

Candidatus Calipida biparibra (NL. fem. n. *biparibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA817 sp002296285*. The type genome for the species is the GenBank assembly GCA_002480255.1. The GC content of the type genome is 39.22 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Calipida gen. nov.

Candidatus Calipida (NL. fem. n. *Calipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA817*. The type species for the genus is *Candidatus* Calipida biparibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA817*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Calipidaceae.

Description of *Candidatus* Calipidaceae fam. nov.

Candidatus Calipidaceae (NL. fem. n. *Calipidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA817.* The type genus for the taxon is *Candidatus* Calipida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA817*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Calipidales.

Description of *Candidatus* Calipidales ord. nov.

Candidatus Calipidales (NL. fem. n. *Calipidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA817.* The type genus for the taxon is *Candidatus* Calipida .

According to the GTDB R06-RS202, this order belongs to the class *Marinamargulisbacteria*.

Description of *Candidatus* Caliposa adnicimonas sp. nov.

Candidatus Caliposa adnicimonas (NL. fem. n. *adnicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-313 sp900760745*. The type genome for the species is the GenBank assembly RS_GCF_900760745.1. The GC content of the type genome is 30.89 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Caliposa gen. nov.

Candidatus Caliposa (NL. fem. n. *Caliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-313*. The type species for the genus is *Candidatus* Caliposa adnicimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Caliposaceae fam. nov.

Candidatus Caliposaceae (NL. fem. n. *Caliposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-313.* The type genus for the taxon is *Candidatus* Caliposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *ML615J-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monopidales.

Description of *Candidatus* Caliposa hemitedo sp. nov.

Candidatus Caliposa hemitedo (NL. fem. n. *hemitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-313 sp003539625*. The type genome for the species is the GenBank assembly GCA_900538525.1. The GC content of the type genome is 29.24 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Caliposa rumifedo sp. nov.

Candidatus Caliposa rumifedo (NL. fem. n. *rumifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-313 sp000433035*. The type genome for the species is the GenBank assembly GCA_900539305.1. The GC content of the type genome is 28.62 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Caliposa sacomousia sp. nov.

Candidatus Caliposa sacomousia (NL. fem. n. *sacomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-313 sp900539265*. The type genome for the species is the GenBank assembly GCA_900539265.1. The GC content of the type genome is 27.63 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Calipula monogibula sp. nov.

Candidatus Calipula monogibula (NL. fem. n. *monogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMN01 sp009841055*. The type genome for the species is the GenBank assembly GCA_009837045.1. The GC content of the type genome is 62.54 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Calipula gen. nov.

Candidatus Calipula (NL. fem. n. *Calipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXMN01*. The type species for the genus is *Candidatus* Calipula monogibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXMN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Calipulaceae.

Description of *Candidatus* Calipulaceae fam. nov.

Candidatus Calipulaceae (NL. fem. n. *Calipulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXMN01.* The type genus for the taxon is *Candidatus* Calipula .

According to the original version of GTDB R06-RS202, this family belongs to the order *VXMN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Calipulales.

Description of *Candidatus* Calipulales ord. nov.

Candidatus Calipulales (NL. fem. n. *Calipulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXMN01*. The type genus for the taxon is *Candidatus* Calipula .

According to the GTDB R06-RS202, this order belongs to the class *Acidobacteriae*.

Description of *Candidatus* Caloramator inculessa sp. nov.

Candidatus Caloramator inculessa (NL. fem. n. *inculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caloramator_B sp006016075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006016075.1. The GC content of the type genome is 31.31 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Caloranaerobacter divolax sp. nov.

Candidatus Caloranaerobacter divolax (NL. fem. n. *divolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caloranaerobacter sp001316435*. The type genome for the species is the GenBank assembly RS_GCF_001316435.1. The GC content of the type genome is 29.52 % and the genome length is 2.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface sediment from deep-sea hydrothermal field".

Description of *Candidatus* Calothrix adsecilega sp. nov.

Candidatus Calothrix adsecilega (NL. fem. n. *adsecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp004296455*. The type genome for the species is the GenBank assembly GCA_004296455.1. The GC content of the type genome is 39.66 % and the genome length is 7.59 Mbp.

Description of *Candidatus* Calothrix cerofiforma sp. nov.

Candidatus Calothrix cerofiforma (NL. fem. n. *cerofiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp001904745*. The type genome for the species is the GenBank assembly RS_GCF_001904745.1. The GC content of the type genome is 38.82 % and the genome length is 9.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Calothrix foricastra sp. nov.

Candidatus Calothrix foricastra (NL. fem. n. *foricastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp012034595*. The type genome for the species is the GenBank assembly GCA_012034595.1. The GC content of the type genome is 39.17 % and the genome length is 7.44 Mbp.

Description of *Candidatus* Calothrix ignobilega sp. nov.

Candidatus Calothrix ignobilega (NL. fem. n. *ignobilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp000734895*. The type genome for the species is the GenBank assembly RS_GCF_000734895.2. The GC content of the type genome is 41.1 % and the genome length is 6.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Calothrix immigitoga sp. nov.

Candidatus Calothrix immigitoga (NL. fem. n. *immigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp000331305*. The type genome for the species is the GenBank assembly RS_GCF_000331305.1. The GC content of the type genome is 38.55 % and the genome length is 11.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "herbarium material of Anacystis montana".

Description of *Candidatus* Calothrix pimenetta sp. nov.

Candidatus Calothrix pimenetta (NL. fem. n. *pimenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp002368415*. The type genome for the species is the GenBank assembly RS_GCF_002368415.1. The GC content of the type genome is 39.0 % and the genome length is 12.04 Mbp.

Description of *Candidatus* Calothrix sceptousia sp. nov.

Candidatus Calothrix sceptousia (NL. fem. n. *sceptousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Calothrix sp002368395*. The type genome for the species is the GenBank assembly RS_GCF_002368395.1. The GC content of the type genome is 41.53 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Camilana miracitio sp. nov.

Candidatus Camilana miracitio (NL. fem. n. *miracitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLQV01 sp009697555*. The type genome for the species is the GenBank assembly GCA_009697555.1. The GC content of the type genome is 48.77 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Camilana gen. nov.

Candidatus Camilana (NL. fem. n. *Camilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLQV01*. The type species for the genus is *Candidatus* Camilana miracitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Camilella volucax sp. nov.

Candidatus Camilella volucax (NL. fem. n. *volucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLOWO2-12-39-15 sp001804915*. The type genome for the species is

the GenBank assembly GCA_001804905.1. The GC content of the type genome is 39.11 % and the genome length is 1.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; 10% subassembly".

Description of *Candidatus* Camilella gen. nov.

Candidatus Camilella (NL. fem. n. *Camilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLOWO2-12-39-15*. The type species for the genus is *Candidatus* Camilella volucax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9942*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifidaceae.

Description of *Candidatus* Camilida lavabicella sp. nov.

Candidatus Camilida lavabicella (NL. fem. n. *lavabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002782345 sp002782345*. The type genome for the species is the GenBank assembly GCA_002790585.1. The GC content of the type genome is 33.38 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Camilida gen. nov.

Candidatus Camilida (NL. fem. n. *Camilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002782345*. The type species for the genus is *Candidatus* Camilida lavabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Camilosa arancago sp. nov.

Candidatus Camilosa arancago (NL. fem. n. *arancago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp002361875*. The type genome for the species is the GenBank assembly GCA_002361875.1. The GC content of the type genome is 41.23 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Camilosa gen. nov.

Candidatus Camilosa (NL. fem. n. *Camilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-180*. The type species for the genus is *Candidatus* Camilosa arancago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Camilosa baropax sp. nov.

Candidatus Camilosa baropax (NL. fem. n. *baropax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp004555265*. The type genome for the species is the GenBank assembly GCA_004552955.1. The GC content of the type genome is 49.33 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Camilosa bipatibula sp. nov.

Candidatus Camilosa bipatibula (NL. fem. n. *bipatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp900545625*. The type genome for the species is the GenBank assembly GCA_900545625.1. The GC content of the type genome is 55.22 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Camilosa conibiforma sp. nov.

Candidatus Camilosa conibiforma (NL. fem. n. *conibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp900540295*. The type genome for the species is the

GenBank assembly GCA_900540295.1. The GC content of the type genome is 48.78 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Camilosa excanessa sp. nov.

Candidatus Camilosa excanessa (NL. fem. n. *excanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp002437245*. The type genome for the species is the GenBank assembly GCA_002437245.1. The GC content of the type genome is 44.99 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Camilosa filifentia sp. nov.

Candidatus Camilosa filifentia (NL. fem. n. *filifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp000432435*. The type genome for the species is the GenBank assembly GCA_003541735.1. The GC content of the type genome is 45.12 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Camilosa inmematio sp. nov.

Candidatus Camilosa inmematio (NL. fem. n. *inmematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp900766945*. The type genome for the species is the GenBank assembly RS_GCF_900766945.1. The GC content of the type genome is 49.15 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Camilosa manibicula sp. nov.

Candidatus Camilosa manibicula (NL. fem. n. *manibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp004556705*. The type genome for the species is the GenBank assembly GCA_900540325.1. The GC content of the type genome is 41.87 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Camilosa negidimonia sp. nov.

Candidatus Camilosa negidimonia (NL. fem. n. *negidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp900315985*. The type genome for the species is the GenBank assembly GCA_900315235.1. The GC content of the type genome is 42.33 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Camilosa sacopilega sp. nov.

Candidatus Camilosa sacopilega (NL. fem. n. *sacopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp002314305*. The type genome for the species is the GenBank assembly GCA_002314305.1. The GC content of the type genome is 55.5 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Camilosa semibugo sp. nov.

Candidatus Camilosa semibugo (NL. fem. n. *semibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp002490525*. The type genome for the species is the GenBank assembly GCA_002491545.1. The GC content of the type genome is 46.64 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Camilosa turilitas sp. nov.

Candidatus Camilosa turilitas (NL. fem. n. *turilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-180 sp002490425*. The type genome for the species is the GenBank assembly GCA_002490425.1. The GC content of the type genome is 41.01 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Camilula depacibra sp. nov.

Candidatus Camilula depacibra (NL. fem. n. *depacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4066 sp002383685*. The type genome for the species is the GenBank assembly GCA_002328605.1. The GC content of the type genome is 52.35 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Camilula gen. nov.

Candidatus Camilula (NL. fem. n. *Camilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4066*. The type species for the genus is *Candidatus* Camilula depacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Campylobacter conabibra sp. nov.

Candidatus Campylobacter conabibra (NL. fem. n. *conabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp002139875*. The type genome for the species is the GenBank assembly RS_GCF_002139795.1. The GC content of the type genome is 32.43 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Campylobacter depacitio sp. nov.

Candidatus Campylobacter depacitio (NL. fem. n. *depacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp900319915*. The type genome for the species is the GenBank assembly GCA_900319915.1. The GC content of the type genome is 47.87 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Campylobacter exhonitudo sp. nov.

Candidatus Campylobacter exhonitudo (NL. fem. n. *exhonitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp002317305*. The type genome for the species is the

GenBank assembly GCA_002317305.1. The GC content of the type genome is 43.96 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Campylobacter furibitio sp. nov.

Candidatus Campylobacter furibitio (NL. fem. n. *furibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp013416015*. The type genome for the species is the GenBank assembly RS_GCF_900766765.1. The GC content of the type genome is 35.64 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Campylobacter recocax sp. nov.

Candidatus Campylobacter recocax (NL. fem. n. *recocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp900753405*. The type genome for the species is the GenBank assembly RS_GCF_900753405.1. The GC content of the type genome is 46.79 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Campylobacter taraxilega sp. nov.

Candidatus Campylobacter taraxilega (NL. fem. n. *taraxilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp002139915*. The type genome for the species is the GenBank assembly RS_GCF_002138695.1. The GC content of the type genome is 33.48 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Campylobacter venucitoga sp. nov.

Candidatus Campylobacter venucitoga (NL. fem. n. *venucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter sp002139855*. The type genome for the species is the GenBank assembly RS_GCF_002139855.1. The GC content of the type genome is 34.22 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Campylobacter dapifitrix sp. nov.

Candidatus Campylobacter dapifitrix (NL. fem. n. *dapifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_A sp004803835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012978655.1. The GC content of the type genome is 37.49 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Campylobacter divolimonia sp. nov.

Candidatus Campylobacter divolimonia (NL. fem. n. *divolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_A sp012978815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012978835.1. The GC content of the type genome is 36.31 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Campylobacter fecunilenta sp. nov.

Candidatus Campylobacter fecunilenta (NL. fem. n. *fecunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_A sp004803855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004803855.2. The GC content of the type genome is 35.74 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Campylobacter ridibatio sp. nov.

Candidatus Campylobacter ridibatio (NL. fem. n. *ridibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Campylobacter_A sp013201975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012978795.1. The GC content of the type genome is 37.78 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Campylobacter timefiforma sp. nov.

Candidatus Campylobacter timefiforma (NL. fem. n. *timefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_A sp014253065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014253065.1. The GC content of the type genome is 45.72 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Campylobacter abnepastra sp. nov.

Candidatus Campylobacter abnepastra (NL. fem. n. *abnepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_B sp012519705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012519705.1. The GC content of the type genome is 34.82 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Campylobacter funamimonas sp. nov.

Candidatus Campylobacter funamimonas (NL. fem. n. *funamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_B sp900539505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539505.1. The GC content of the type genome is 47.44 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Campylobacter risibifica sp. nov.

Candidatus Campylobacter risibifica (NL. fem. n. *risibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_B sp009690845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009690845.1. The GC content of the type genome is 28.34 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Campylobacter uberratica sp. nov.

Candidatus Campylobacter uberratica (NL. fem. n. *uberratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_B sp012728225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012728225.1. The GC content of the type genome is 32.68 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Campylobacter apsoressa sp. nov.

Candidatus Campylobacter apsoressa (NL. fem. n. *apsoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp003627915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003627915.1. The GC content of the type genome is 31.52 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Campylobacter dicanifica sp. nov.

Candidatus Campylobacter dicanifica (NL. fem. n. *dicanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp004378855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004378855.1. The GC content of the type genome is 30.7 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Campylobacter hibisitas sp. nov.

Candidatus Campylobacter hibisitas (NL. fem. n. *hibisitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp006864455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006864455.1. The GC content of the type genome is 33.93 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Campylobacter lavacitia sp. nov.

Candidatus Campylobacter lavacitia (NL. fem. n. *lavacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp900539255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900772045.1. The GC content of the type genome is 41.25 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Campylobacter malogessa sp. nov.

Candidatus Campylobacter malogessa (NL. fem. n. *malogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp900772495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900772495.1. The GC content of the type genome is 41.2 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Campylobacter mirabigena sp. nov.

Candidatus Campylobacter mirabigena (NL. fem. n. *mirabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp006864535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005406235.1. The GC content of the type genome is 34.67 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Campylobacter miracugo sp. nov.

Candidatus Campylobacter miracugo (NL. fem. n. *miracugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp006864365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006864365.1. The GC content of the type genome is 34.01 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Campylobacter nutamigena sp. nov.

Candidatus Campylobacter nutamigena (NL. fem. n. *nutamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp002738235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002738235.1. The GC content of the type genome is 34.7 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Campylobacter semodugo sp. nov.

Candidatus Campylobacter semodugo (NL. fem. n. *semodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp008633915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008633875.1. The GC content of the type genome is 29.91 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Campylobacter taraximonia sp. nov.

Candidatus Campylobacter taraximonia (NL. fem. n. *taraximonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Campylobacter_D sp000816245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000816245.1. The GC content of the type genome is 28.47 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "River water".

Description of *Candidatus* Canacana antimigena sp. nov.

Candidatus Canacana antimigena (NL. fem. n. *antimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKH01 sp903839985*. The type genome for the species is the GenBank assembly GCA_903839985.1. The GC content of the type genome is 41.61 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Canacana gen. nov.

Candidatus Canacana (NL. fem. n. *Canacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKH01*. The type species for the genus is *Candidatus* Canacana antimigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VFKH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Canacanaceae.

Description of *Candidatus* Canacanaceae fam. nov.

Candidatus Canacanaceae (NL. fem. n. *Canacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VFKH01*. The type genus for the taxon is *Candidatus* Canacana .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Canacana depupetta sp. nov.

Candidatus Canacana depupetta (NL. fem. n. *depupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKH01 sp009885615*. The type genome for the species is the GenBank assembly GCA_009885615.1. The GC content of the type genome is 39.84 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Canacaria hibisitica sp. nov.

Candidatus Canacaria hibisitica (NL. fem. n. *hibisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACPR01 sp009995365*. The type genome for the species is the GenBank assembly GCA_009995365.1. The GC content of the type genome is 33.74 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Canacaria gen. nov.

Candidatus Canacaria (NL. fem. n. *Canacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACPR01*. The type species for the genus is *Candidatus* Canacaria hibisitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACPR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Canacariaceae.

Description of *Candidatus* Canacariaceae fam. nov.

Candidatus Canacariaceae (NL. fem. n. *Canacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACPR01.* The type genus for the taxon is *Candidatus* Canacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Canacella pericugo sp. nov.

Candidatus Canacella pericugo (NL. fem. n. *pericugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED15 sp002729015*. The type genome for the species is the GenBank assembly GCA_002729015.1. The GC content of the type genome is 40.37 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Canacella gen. nov.

Candidatus Canacella (NL. fem. n. *Canacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED15*. The type species for the genus is *Candidatus* Canacella pericugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumulaceae.

Description of *Candidatus* Canacella semibedo sp. nov.

Candidatus Canacella semibedo (NL. fem. n. *semibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED15 sp002714785*. The type genome for the species is the GenBank assembly GCA_002726605.1. The GC content of the type genome is 40.19 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Canacia deculetta sp. nov.

Candidatus Canacia deculetta (NL. fem. n. *deculetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGNO01 sp003228195*. The type genome for the species is the GenBank assembly GCA_003228195.2. The GC content of the type genome is 45.9 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Canacia gen. nov.

Candidatus Canacia (NL. fem. n. *Canacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QGNO01*. The type species for the genus is *Candidatus* Canacia deculetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QGNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Canaciaceae.

Description of *Candidatus* Canaciaceae fam. nov.

Candidatus Canaciaceae (NL. fem. n. *Canaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QGNO01*. The type genus for the taxon is *Candidatus* Canacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6952*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baditariales.

Description of *Candidatus* Canacida depubitio sp. nov.

Candidatus Canacida depubitio (NL. fem. n. *depubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRW01 sp003567955*. The type genome for the species is the GenBank assembly GCA_007128575.1. The GC content of the type genome is 61.5 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Canacida gen. nov.

Candidatus Canacida (NL. fem. n. *Canacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLRW01*. The type species for the genus is *Candidatus* Canacida depubitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verifosaceae.

Description of *Candidatus* Canacida manupivita sp. nov.

Candidatus Canacida manupivita (NL. fem. n. *manupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLRW01 sp007130745*. The type genome for the species is the GenBank assembly GCA_003559115.1. The GC content of the type genome is 61.03 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Canacosa semibitica sp. nov.

Candidatus Canacosa semibitica (NL. fem. n. *semibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14258 sp902797345*. The type genome for the species is the GenBank assembly GCA_902797345.1. The GC content of the type genome is 54.34 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Canacosa gen. nov.

Candidatus Canacosa (NL. fem. n. *Canacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14258*. The type species for the genus is *Candidatus* Canacosa semibitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Canacula necubitrix sp. nov.

Candidatus Canacula necubitrix (NL. fem. n. *necubitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIZ01 sp011370625*. The type genome for the species is the GenBank assembly GCA_011370625.1. The GC content of the type genome is 68.78 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Canacula gen. nov.

Candidatus Canacula (NL. fem. n. *Canacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIZ01*. The type species for the genus is *Candidatus* Canacula necubitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTIZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Canaculaceae.

Description of *Candidatus* Canaculaceae fam. nov.

Candidatus Canaculaceae (NL. fem. n. *Canaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTIZ01.* The type genus for the taxon is *Candidatus* Canacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WVXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repeculales.

Description of *Candidatus* Candidimonas apogredo sp. nov.

Candidatus Candidimonas apogredo (NL. fem. n. *apogredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Candidimonas_A sp002849655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002849655.1. The GC content of the type genome is 57.92 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Candidimonas cisalibra sp. nov.

Candidatus Candidimonas cisalibra (NL. fem. n. *cisalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Candidimonas_A sp002849615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002849615.1. The GC content of the type genome is 57.24 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Candidimonas epistimonas sp. nov.

Candidatus Candidimonas epistimonas (NL. fem. n. *epistimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Candidimonas_A sp004339425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004339425.1. The GC content of the type genome is 55.63 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Candidimonas fatifousia sp. nov.

Candidatus Candidimonas fatifousia (NL. fem. n. *fatifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Candidimonas_A sp003971065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003971065.1. The GC content of the type genome is 55.43 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Candidimonas luculessa sp. nov.

Candidatus Candidimonas luculessa (NL. fem. n. *luculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Candidimonas_A sp013416445*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013416445.1. The GC content of the type genome is 55.39 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Canibacter venefiforma sp. nov.

Candidatus Canibacter venefiforma (NL. fem. n. *venefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Canibacter sp003859945*. The type genome for the species is the GenBank assembly RS_GCF_003859945.1. The GC content of the type genome is 58.87 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Canibacter vitigitudo sp. nov.

Candidatus Canibacter vitigitudo (NL. fem. n. *vitigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Canibacter sp011752015*. The type genome for the species is the GenBank assembly RS_GCF_011752015.1. The GC content of the type genome is 54.56 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Capabana inconisca sp. nov.

Candidatus Capabana inconisca (NL. fem. n. *inconisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLZ01 sp011322755*. The type genome for the species is the GenBank assembly GCA_011322755.1. The GC content of the type genome is 43.88 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Capabana gen. nov.

Candidatus Capabana (NL. fem. n. *Capabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRLZ01*. The type species for the genus is *Candidatus* Capabana inconisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family

DRLZ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capabanaceae.

Description of *Candidatus* Capabanaceae fam. nov.

Candidatus Capabanaceae (NL. fem. n. *Capabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRLZ01*. The type genus for the taxon is *Candidatus* Capabana .

According to GTDB R06-RS202, this family belongs to the order *Methylococcales*.

Description of *Candidatus* Capabaria peribastra sp. nov.

Candidatus Capabaria peribastra (NL. fem. n. *peribastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABJ01 sp014238275*. The type genome for the species is the GenBank assembly GCA_014238275.1. The GC content of the type genome is 39.22 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Capabaria gen. nov.

Candidatus Capabaria (NL. fem. n. *Capabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABJ01*. The type species for the genus is *Candidatus* Capabaria peribastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABAAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanulaceae.

Description of *Candidatus* Capabella categimonia sp. nov.

Candidatus Capabella categimonia (NL. fem. n. *categimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2702235 sp002702235*. The type genome for the species is the GenBank assembly GCA_902601745.1. The GC content of the type genome is 30.91 %

and the genome length is 0.86 Mbp.

Description of *Candidatus* Capabella gen. nov.

Candidatus Capabella (NL. fem. n. *Capabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2702235*. The type species for the genus is *Candidatus* Capabella categimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002705445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifanaceae.

Description of *Candidatus* Capabia cosigibra sp. nov.

Candidatus Capabia cosigibra (NL. fem. n. *cosigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp001917815*. The type genome for the species is the GenBank assembly GCA_001918325.1. The GC content of the type genome is 65.28 % and the genome length is 2.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 2 days after first rain event (91mm)".

Description of *Candidatus* Capabia gen. nov.

Candidatus Capabia (NL. fem. n. *Capabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10449*. The type species for the genus is *Candidatus* Capabia cosigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capabia cululatica sp. nov.

Candidatus Capabia cululatica (NL. fem. n. *cululatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp005880315*. The type genome for the species is the

GenBank assembly GCA_005880155.1. The GC content of the type genome is 65.88 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Capabia delubitica sp. nov.

Candidatus Capabia delubitica (NL. fem. n. *delubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp003446775*. The type genome for the species is the GenBank assembly GCA_003448015.1. The GC content of the type genome is 65.83 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Capabia denupitura sp. nov.

Candidatus Capabia denupitura (NL. fem. n. *denupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp001917895*. The type genome for the species is the GenBank assembly GCA_005883585.1. The GC content of the type genome is 65.64 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Capabia notacatica sp. nov.

Candidatus Capabia notacatica (NL. fem. n. *notacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp005880855*. The type genome for the species is the GenBank assembly GCA_005880855.1. The GC content of the type genome is 65.81 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Capabia voluciforma sp. nov.

Candidatus Capabia voluciforma (NL. fem. n. *voluciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10449 sp005879945*. The type genome for the species is the GenBank assembly GCA_005879945.1. The GC content of the type genome is 65.52 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Capabida excamimonia sp. nov.

Candidatus Capabida excamimonia (NL. fem. n. *excamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp009921505*. The type genome for the species is the GenBank assembly GCA_009921505.1. The GC content of the type genome is 42.5 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Capabida gen. nov.

Candidatus Capabida (NL. fem. n. *Capabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BACL21*. The type species for the genus is *Candidatus* Capabida excamimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capabida homolibra sp. nov.

Candidatus Capabida homolibra (NL. fem. n. *homolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp002335345*. The type genome for the species is the GenBank assembly GCA_002335345.1. The GC content of the type genome is 43.35 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Capabida levidedo sp. nov.

Candidatus Capabida levidedo (NL. fem. n. *levidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp002707025*. The type genome for the species is the GenBank assembly GCA_002696065.1. The GC content of the type genome is 39.43 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Capabida monacitoga sp. nov.

Candidatus Capabida monacitoga (NL. fem. n. *monacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp900299425*. The type genome for the species is the GenBank assembly GCA_900299425.1. The GC content of the type genome is 43.09 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Capabida regifitura sp. nov.

Candidatus Capabida regifitura (NL. fem. n. *regifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp002384055*. The type genome for the species is the GenBank assembly GCA_002430205.1. The GC content of the type genome is 44.34 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Capabida saxopicula sp. nov.

Candidatus Capabida saxopicula (NL. fem. n. *saxopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp002694465*. The type genome for the species is the GenBank assembly GCA_002694465.1. The GC content of the type genome is 36.05 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Capabida tibicastra sp. nov.

Candidatus Capabida tibicastra (NL. fem. n. *tibicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp011525065*. The type genome for the species is the GenBank assembly GCA_011525065.1. The GC content of the type genome is 44.63 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Capabida tibicilenta sp. nov.

Candidatus Capabida tibicilenta (NL. fem. n. *tibicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL21 sp002440705*. The type genome for the species is the GenBank assembly GCA_002440705.1. The GC content of the type genome is 43.54 %

and the genome length is 2.9 Mbp.

Description of *Candidatus* Capabosa ciloticula sp. nov.

Candidatus Capabosa ciloticula (NL. fem. n. *ciloticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-26 sp003554145*. The type genome for the species is the GenBank assembly GCA_003554145.1. The GC content of the type genome is 48.3 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Capabosa gen. nov.

Candidatus Capabosa (NL. fem. n. *Capabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-26*. The type species for the genus is *Candidatus* Capabosa ciloticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B1SED10-174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocosaceae.

Description of *Candidatus* Capabosa cohorago sp. nov.

Candidatus Capabosa cohorago (NL. fem. n. *cohorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-26 sp003550445*. The type genome for the species is the GenBank assembly GCA_003550445.1. The GC content of the type genome is 42.28 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Capabosa conabicella sp. nov.

Candidatus Capabosa conabicella (NL. fem. n. *conabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-26 sp003551665*. The type genome for the species is the GenBank assembly GCA_003551665.1. The GC content of the type genome is 45.9 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Capabosa hirunitura sp. nov.

Candidatus Capabosa hirunitura (NL. fem. n. *hirunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-26 sp007122335*. The type genome for the species is the GenBank assembly GCA_003554285.1. The GC content of the type genome is 43.9 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Capabosa infenugo sp. nov.

Candidatus Capabosa infenugo (NL. fem. n. *infenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-26 sp003554585*. The type genome for the species is the GenBank assembly GCA_003554585.1. The GC content of the type genome is 44.88 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Capabula affulago sp. nov.

Candidatus Capabula affulago (NL. fem. n. *affulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746255 sp002746255*. The type genome for the species is the GenBank assembly GCA_002746255.1. The GC content of the type genome is 56.52 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Capabula gen. nov.

Candidatus Capabula (NL. fem. n. *Capabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746255*. The type species for the genus is *Candidatus* Capabula affulago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capabulaceae.

Description of *Candidatus* Capabulaceae fam. nov.

Candidatus Capabulaceae (NL. fem. n. *Capabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746255.* The type genus for the taxon is *Candidatus* Capabula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2746255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capabulales.

Description of *Candidatus* Capabulales ord. nov.

Candidatus Capabulales (NL. fem. n. *Capabulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746255.* The type genus for the taxon is *Candidatus* Capabula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Capilana denigitio sp. nov.

Candidatus Capilana denigitio (NL. fem. n. *denigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9933 sp001029635*. The type genome for the species is the GenBank assembly GCA_000998475.1. The GC content of the type genome is 46.84 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Capilana gen. nov.

Candidatus Capilana (NL. fem. n. *Capilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9933*. The type species for the genus is *Candidatus* Capilana denigitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Capilanaceae fam. nov.

Candidatus Capilanaceae (NL. fem. n. *Capilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9933.* The type genus for the taxon is *Candidatus* Capilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Capilana hexagessa sp. nov.

Candidatus Capilana hexagessa (NL. fem. n. *hexagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9933 sp001000675*. The type genome for the species is the GenBank assembly GCA_003508115.1. The GC content of the type genome is 43.54 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Capilana opercibra sp. nov.

Candidatus Capilana opercibra (NL. fem. n. *opercibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9933 sp001793895*. The type genome for the species is the GenBank assembly GCA_001793895.1. The GC content of the type genome is 48.76 % and the genome length is 0.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Capilana sifunatio sp. nov.

Candidatus Capilana sifunatio (NL. fem. n. *sifunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9933 sp001793945*. The type genome for the species is the GenBank assembly GCA_001793975.1. The GC content of the type genome is 48.19 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Capilella defulisca sp. nov.

Candidatus Capilella defulisca (NL. fem. n. *defulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QPIN01 sp003666385*. The type genome for the species is the GenBank assembly GCA_003666335.1. The GC content of the type genome is 37.83 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Capilella gen. nov.

Candidatus Capilella (NL. fem. n. *Capilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QPIN01*. The type species for the genus is *Candidatus* Capilella defulisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capilella demadastra sp. nov.

Candidatus Capilella demadastra (NL. fem. n. *demadastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QPIN01 sp003666325*. The type genome for the species is the GenBank assembly GCA_003666345.1. The GC content of the type genome is 37.67 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Capilella insurimonia sp. nov.

Candidatus Capilella insurimonia (NL. fem. n. *insurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QPIN01 sp013139755*. The type genome for the species is the GenBank assembly GCA_013139755.1. The GC content of the type genome is 38.51 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Capilia colipimonia sp. nov.

Candidatus Capilia colipimonia (NL. fem. n. *colipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPEB01 sp903863885*. The type genome for the species is the GenBank assembly GCA_903922865.1. The GC content of the type genome is 60.93 % and the genome length is 11.01 Mbp.

Description of *Candidatus* Capilia gen. nov.

Candidatus Capilia (NL. fem. n. *Capilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPEB01*. The type species for the genus is *Candidatus* Capilia colipimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capilida blactisca sp. nov.

Candidatus Capilida blactisca (NL. fem. n. *blactisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDLF01 sp013003115*. The type genome for the species is the GenBank assembly GCA_013003115.1. The GC content of the type genome is 58.55 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Capilida gen. nov.

Candidatus Capilida (NL. fem. n. *Capilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDLF01*. The type species for the genus is *Candidatus* Capilida blactisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDLF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilidaceae.

Description of *Candidatus* Capilidaceae fam. nov.

Candidatus Capilidaceae (NL. fem. n. *Capilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDLF01.* The type genus for the taxon is *Candidatus* Capilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDLF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capilidales.

Description of *Candidatus* Capilidales ord. nov.

Candidatus Capilidales (NL. fem. n. *Capilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDLF01.* The type genus for the taxon is *Candidatus* Capilida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Capilosa accogitio sp. nov.

Candidatus Capilosa accogitio (NL. fem. n. *accogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp902516685*. The type genome for the species is the GenBank assembly GCA_902516685.1. The GC content of the type genome is 33.3 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Capilosa gen. nov.

Candidatus Capilosa (NL. fem. n. *Capilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3537*. The type species for the genus is *Candidatus* Capilosa accogitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capilosa ambecugo sp. nov.

Candidatus Capilosa ambecugo (NL. fem. n. *ambecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002698705*. The type genome for the species is the GenBank assembly GCA_002698705.1. The GC content of the type genome is 33.12 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Capilosa arcifitrix sp. nov.

Candidatus Capilosa arcifitrix (NL. fem. n. *arcifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002721175*. The type genome for the species is the GenBank assembly GCA_002721175.1. The GC content of the type genome is 32.12 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Capilosa deculimonas sp. nov.

Candidatus Capilosa deculimonas (NL. fem. n. *deculimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002709185*. The type genome for the species is the GenBank assembly GCA_002709185.1. The GC content of the type genome is 37.24 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Capilosa desupicula sp. nov.

Candidatus Capilosa desupicula (NL. fem. n. *desupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002690085*. The type genome for the species is the GenBank assembly GCA_002690085.1. The GC content of the type genome is 36.9 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Capilosa giganivita sp. nov.

Candidatus Capilosa giganivita (NL. fem. n. *giganivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002684355*. The type genome for the species is the GenBank assembly GCA_002684355.1. The GC content of the type genome is 37.13 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Capilosa homogousia sp. nov.

Candidatus Capilosa homogousia (NL. fem. n. *homogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp001735715*. The type genome for the species is the GenBank assembly GCA_009936855.1. The GC content of the type genome is 36.62 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Capilosa perabimonia sp. nov.

Candidatus Capilosa perabimonia (NL. fem. n. *perabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3537 sp002725015*. The type genome for the species is the GenBank assembly GCA_902605145.1. The GC content of the type genome is 37.88 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Capilula visocetta sp. nov.

Candidatus Capilula visocetta (NL. fem. n. *visocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4851 sp002408445*. The type genome for the species is the GenBank assembly GCA_002411165.1. The GC content of the type genome is 45.23 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Capilula gen. nov.

Candidatus Capilula (NL. fem. n. *Capilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4851*. The type species for the genus is *Candidatus* Capilula visocetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capnocytophaga adlenilega sp. nov.

Candidatus Capnocytophaga adlenilega (NL. fem. n. *adlenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Capnocytophaga sp002999135*. The type genome for the species is the GenBank assembly RS_GCF_002999135.1. The GC content of the type genome is 37.95 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Capnocytophaga appecivita sp. nov.

Candidatus Capnocytophaga appecivita (NL. fem. n. *appecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Capnocytophaga sp000318275*. The type genome for the species is the GenBank assembly RS_GCF_000318275.2. The GC content of the type genome is 38.4 % and the genome length is 2.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Capnocytophaga metapitio sp. nov.

Candidatus Capnocytophaga metapitio (NL. fem. n. *metapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Capnocytophaga sp000466425*. The type genome for the species is the GenBank assembly RS_GCF_000466425.1. The GC content of the type genome is 41.62 % and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "supragingival plaque biofilm of a molar".

Description of *Candidatus* Capnocytophaga semigitica sp. nov.

Candidatus Capnocytophaga semigitica (NL. fem. n. *semigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Capnocytophaga sp000192225*. The type genome for the species is the GenBank assembly RS_GCF_000192225.1. The GC content of the type genome is 36.67 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Caprobacter absorax sp. nov.

Candidatus Caprobacter absorax (NL. fem. n. *absorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp004103755*. The type genome for the species is the GenBank assembly RS_GCF_004103755.1. The GC content of the type genome is 53.81 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Caprobacter advigitura sp. nov.

Candidatus Caprobacter advigitura (NL. fem. n. *advigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002399225*. The type genome for the species is the GenBank assembly GCA_002399225.1. The GC content of the type genome is 52.41 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Caprobacter cohonimonia sp. nov.

Candidatus Caprobacter cohonimonia (NL. fem. n. *cohonimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002407675*. The type genome for the species is the GenBank assembly GCA_002316875.1. The GC content of the type genome is 50.71 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Caprobacter dehisugo sp. nov.

Candidatus Caprobacter dehisugo (NL. fem. n. *dehisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002409585*. The type genome for the species is the GenBank assembly GCA_002409585.1. The GC content of the type genome is 49.26 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Caprobacter excucugo sp. nov.

Candidatus Caprobacter excucugo (NL. fem. n. *excucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp900184925*. The type genome for the species is the GenBank assembly RS_GCF_900184925.1. The GC content of the type genome is 52.5

% and the genome length is 3.01 Mbp.

Description of *Candidatus* Caprobacter inhabilenta sp. nov.

Candidatus Caprobacter inhabilenta (NL. fem. n. *inhabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002397355*. The type genome for the species is the GenBank assembly GCA_002397355.1. The GC content of the type genome is 59.72 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Caprobacter notabitrix sp. nov.

Candidatus Caprobacter notabitrix (NL. fem. n. *notabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002411365*. The type genome for the species is the GenBank assembly GCA_002400245.1. The GC content of the type genome is 46.93 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Caprobacter ruricitoga sp. nov.

Candidatus Caprobacter ruricitoga (NL. fem. n. *ruricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002409675*. The type genome for the species is the GenBank assembly GCA_002426635.1. The GC content of the type genome is 61.3 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Caprobacter veridatio sp. nov.

Candidatus Caprobacter veridatio (NL. fem. n. *veridatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002316805*. The type genome for the species is the GenBank assembly GCA_002316805.1. The GC content of the type genome is 46.17 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Caprobacter visibilega sp. nov.

Candidatus Caprobacter visibilega (NL. fem. n. *visibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caprobacter sp002410755*. The type genome for the species is the GenBank assembly GCA_002410755.1. The GC content of the type genome is 49.19 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Caproiciproducens acontitio sp. nov.

Candidatus Caproiciproducens acontitio (NL. fem. n. *acontitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp002378845*. The type genome for the species is the GenBank assembly GCA_002378845.1. The GC content of the type genome is 47.35 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Caproiciproducens butubatica sp. nov.

Candidatus Caproiciproducens butubatica (NL. fem. n. *butubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp000752215*. The type genome for the species is the GenBank assembly RS_GCF_000752215.1. The GC content of the type genome is 51.34 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Caproiciproducens incesigena sp. nov.

Candidatus Caproiciproducens incesigena (NL. fem. n. *incesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp002338255*. The type genome for the species is the GenBank assembly GCA_002338255.1. The GC content of the type genome is 43.98 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Caproiciproducens inexcicella sp. nov.

Candidatus Caproiciproducens inexcicella (NL. fem. n. *inexcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp002359465*. The type genome for the species is the GenBank assembly GCA_002359465.1. The GC content of the type genome is 48.97 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Caproiciproducens maxumousia sp. nov.

Candidatus Caproiciproducens maxumousia (NL. fem. n. *maxumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp012839345*. The type genome for the species is the GenBank assembly GCA_012839345.1. The GC content of the type genome is 49.3 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Caproiciproducens morigitoga sp. nov.

Candidatus Caproiciproducens morigitoga (NL. fem. n. *morigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp012516295*. The type genome for the species is the GenBank assembly GCA_012516295.1. The GC content of the type genome is 50.03 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Caproiciproducens pragmitudo sp. nov.

Candidatus Caproiciproducens pragmitudo (NL. fem. n. *pragmitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp012517675*. The type genome for the species is the GenBank assembly GCA_012517675.1. The GC content of the type genome is 54.81 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Caproiciproducens sarabilenta sp. nov.

Candidatus Caproiciproducens sarabilenta (NL. fem. n. *sarabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp002407645*. The type genome for the species is the GenBank assembly GCA_002316755.1. The GC content of the type genome is 37.52

% and the genome length is 1.44 Mbp.

Description of *Candidatus* Caproiciproducens taxilitica sp. nov.

Candidatus Caproiciproducens taxilitica (NL. fem. n. *taxilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caproiciproducens sp900546895*. The type genome for the species is the GenBank assembly GCA_900546895.1. The GC content of the type genome is 51.47 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Capucana adsesicella sp. nov.

Candidatus Capucana adsesicella (NL. fem. n. *adsesicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp003569165*. The type genome for the species is the GenBank assembly GCA_003569165.1. The GC content of the type genome is 63.43 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Capucana gen. nov.

Candidatus Capucana (NL. fem. n. *Capucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA953*. The type species for the genus is *Candidatus* Capucana adsesicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA953*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucanaceae.

Description of *Candidatus* Capucanaceae fam. nov.

Candidatus Capucanaceae (NL. fem. n. *Capucanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA953*. The type genus for the taxon is *Candidatus* Capucana .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Capucana binocitas sp. nov.

Candidatus Capucana binocitas (NL. fem. n. *binocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903924185*. The type genome for the species is the GenBank assembly GCA_903924185.1. The GC content of the type genome is 61.15 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Capucana cenotitica sp. nov.

Candidatus Capucana cenotitica (NL. fem. n. *cenotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903925205*. The type genome for the species is the GenBank assembly GCA_903925205.1. The GC content of the type genome is 62.5 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Capucana chancastra sp. nov.

Candidatus Capucana chancastra (NL. fem. n. *chancastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp009926645*. The type genome for the species is the GenBank assembly GCA_009926645.1. The GC content of the type genome is 48.58 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Capucana cinefitoga sp. nov.

Candidatus Capucana cinefitoga (NL. fem. n. *cinefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp009917805*. The type genome for the species is the GenBank assembly GCA_009917805.1. The GC content of the type genome is 66.5 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Capucana cocibifica sp. nov.

Candidatus Capucana cocibifica (NL. fem. n. *cocibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903860195*. The type genome for the species is the GenBank assembly GCA_903910275.1. The GC content of the type genome is 68.32 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Capucana defosilega sp. nov.

Candidatus Capucana defosilega (NL. fem. n. *defosilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903840235*. The type genome for the species is the GenBank assembly GCA_903840235.1. The GC content of the type genome is 47.72 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Capucana demogifica sp. nov.

Candidatus Capucana demogifica (NL. fem. n. *demogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903910245*. The type genome for the species is the GenBank assembly GCA_903910245.1. The GC content of the type genome is 62.82 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Capucana depicimonia sp. nov.

Candidatus Capucana depicimonia (NL. fem. n. *depicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903895475*. The type genome for the species is the GenBank assembly GCA_903845765.1. The GC content of the type genome is 61.31 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Capucana dimidicula sp. nov.

Candidatus Capucana dimidicula (NL. fem. n. *dimidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA953 sp009924535*. The type genome for the species is the GenBank assembly GCA_009924535.1. The GC content of the type genome is 64.81 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Capucana dinupitas sp. nov.

Candidatus Capucana dinupitas (NL. fem. n. *dinupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903882335*. The type genome for the species is the GenBank assembly GCA_903926065.1. The GC content of the type genome is 68.03 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Capucana direcentia sp. nov.

Candidatus Capucana direcentia (NL. fem. n. *direcentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903831005*. The type genome for the species is the GenBank assembly GCA_903831005.1. The GC content of the type genome is 62.52 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Capucana fetulitica sp. nov.

Candidatus Capucana fetulitica (NL. fem. n. *fetulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp005798925*. The type genome for the species is the GenBank assembly GCA_005798925.1. The GC content of the type genome is 67.42 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Capucana fidenatio sp. nov.

Candidatus Capucana fidenatio (NL. fem. n. *fidenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp003569245*. The type genome for the species is the GenBank assembly GCA_003569245.1. The GC content of the type genome is 68.36 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Capucana hexagimonas sp. nov.

Candidatus Capucana hexagimonas (NL. fem. n. *hexagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903879465*. The type genome for the species is the GenBank assembly GCA_903879465.1. The GC content of the type genome is 60.53 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Capucana hirudedo sp. nov.

Candidatus Capucana hirudedo (NL. fem. n. *hirudedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903829855*. The type genome for the species is the GenBank assembly GCA_903850585.1. The GC content of the type genome is 60.16 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Capucana irremitudo sp. nov.

Candidatus Capucana irremitudo (NL. fem. n. *irremitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp003569205*. The type genome for the species is the GenBank assembly GCA_003569205.1. The GC content of the type genome is 61.2 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Capucana maledilenta sp. nov.

Candidatus Capucana maledilenta (NL. fem. n. *maledilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp002293125*. The type genome for the species is the GenBank assembly GCA_002293125.1. The GC content of the type genome is 64.11 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Capucana monopugo sp. nov.

Candidatus Capucana monopugo (NL. fem. n. *monopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp007280935*. The type genome for the species is the GenBank assembly GCA_007280935.1. The GC content of the type genome is 58.31 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Capucana nitelousia sp. nov.

Candidatus Capucana nitelousia (NL. fem. n. *nitelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp009924965*. The type genome for the species is the GenBank assembly GCA_009924965.1. The GC content of the type genome is 65.94 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Capucana pabilimonas sp. nov.

Candidatus Capucana pabilimonas (NL. fem. n. *pabilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp004293385*. The type genome for the species is the GenBank assembly GCA_004293385.1. The GC content of the type genome is 66.78 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Capucana palifedo sp. nov.

Candidatus Capucana palifedo (NL. fem. n. *palifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903850885*. The type genome for the species is the GenBank assembly GCA_903865765.1. The GC content of the type genome is 58.32 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Capucana pericilenta sp. nov.

Candidatus Capucana pericilenta (NL. fem. n. *pericilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA953 sp002737185*. The type genome for the species is the GenBank assembly GCA_009691685.1. The GC content of the type genome is 48.4 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Capucana pinacatio sp. nov.

Candidatus Capucana pinacatio (NL. fem. n. *pinacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903859115*. The type genome for the species is the GenBank assembly GCA_903859115.1. The GC content of the type genome is 46.95 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Capucana proslitrix sp. nov.

Candidatus Capucana proslitrix (NL. fem. n. *proslitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903889525*. The type genome for the species is the GenBank assembly GCA_903889525.1. The GC content of the type genome is 60.75 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Capucana repecitas sp. nov.

Candidatus Capucana repecitas (NL. fem. n. *repecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp003569405*. The type genome for the species is the GenBank assembly GCA_903820765.1. The GC content of the type genome is 66.21 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Capucana repudatio sp. nov.

Candidatus Capucana repudatio (NL. fem. n. *repudatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903909465*. The type genome for the species is the GenBank assembly GCA_903868735.1. The GC content of the type genome is 53.22 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Capucana saxifimonia sp. nov.

Candidatus Capucana saxifimonia (NL. fem. n. *saxifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903853185*. The type genome for the species is the GenBank assembly GCA_903883615.1. The GC content of the type genome is 63.72 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Capucana semidatio sp. nov.

Candidatus Capucana semidatio (NL. fem. n. *semidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp002470605*. The type genome for the species is the GenBank assembly GCA_903874045.1. The GC content of the type genome is 58.04 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Capucana semigigena sp. nov.

Candidatus Capucana semigigena (NL. fem. n. *semigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903840355*. The type genome for the species is the GenBank assembly GCA_903825845.1. The GC content of the type genome is 54.37 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Capucana seposentia sp. nov.

Candidatus Capucana seposentia (NL. fem. n. *seposentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903919185*. The type genome for the species is the GenBank assembly GCA_903900735.1. The GC content of the type genome is 61.16 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Capucana sonipatica sp. nov.

Candidatus Capucana sonipatica (NL. fem. n. *sonipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903921665*. The type genome for the species is the GenBank assembly GCA_903921665.1. The GC content of the type genome is 64.92 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Capucana timefitica sp. nov.

Candidatus Capucana timefitica (NL. fem. n. *timefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp002293065*. The type genome for the species is the GenBank assembly GCA_002293065.1. The GC content of the type genome is 64.52 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Capucana venucitia sp. nov.

Candidatus Capucana venucitia (NL. fem. n. *venucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903913915*. The type genome for the species is the GenBank assembly GCA_903913915.1. The GC content of the type genome is 65.66 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Capucana vitifisca sp. nov.

Candidatus Capucana vitifisca (NL. fem. n. *vitifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA953 sp903855995*. The type genome for the species is the GenBank assembly GCA_903905055.1. The GC content of the type genome is 62.17 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Capucaria obfenitia sp. nov.

Candidatus Capucaria obfenitia (NL. fem. n. *obfenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA9980 sp002423385*. The type genome for the species is the GenBank assembly GCA_002423385.1. The GC content of the type genome is 42.63 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Capucaria gen. nov.

Candidatus Capucaria (NL. fem. n. *Capucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9980*. The type species for the genus is *Candidatus* Capucaria obfenitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9980*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucariaceae.

Description of *Candidatus* Capucariaceae fam. nov.

Candidatus Capucariaceae (NL. fem. n. *Capucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9980.* The type genus for the taxon is *Candidatus* Capucaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9980*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capucariales.

Description of *Candidatus* Capucariales ord. nov.

Candidatus Capucariales (NL. fem. n. *Capucariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9980.* The type genus for the taxon is *Candidatus* Capucaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9980*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Capucariae.

Description of *Candidatus* Capucariae class. nov.

Candidatus Capucariae (NL. fem. n. *c__Capucariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA9980.* The type genus for the taxon is *Candidatus* Capucaria .

According to GTDB R06-RS202, this class belongs to the phylum *Wallbacteria*.

Description of *Candidatus* Capucaria pimeniforma sp. nov.

Candidatus Capucaria pimeniforma (NL. fem. n. *pimeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9980 sp001791795*. The type genome for the species is the GenBank assembly GCA_001791795.1. The GC content of the type genome is 49.87 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Capucaria senipilega sp. nov.

Candidatus Capucaria senipilega (NL. fem. n. *senipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9980 sp002069765*. The type genome for the species is the GenBank assembly GCA_002069765.1. The GC content of the type genome is 45.94 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Capucella absegiforma sp. nov.

Candidatus Capucella absegiforma (NL. fem. n. *absegiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp009692585*. The type genome for the species is the GenBank assembly GCA_009692585.1. The GC content of the type genome is 69.21 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Capucella gen. nov.

Candidatus Capucella (NL. fem. n. *Capucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXON01*. The type species for the genus is *Candidatus* Capucella absegiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXON01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucellaceae.

Description of *Candidatus* Capucellaceae fam. nov.

Candidatus Capucellaceae (NL. fem. n. *Capucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXON01.* The type genus for the taxon is *Candidatus* Capucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Melilanales.

Description of *Candidatus* Capucella adpinivita sp. nov.

Candidatus Capucella adpinivita (NL. fem. n. *adpinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp014191855*. The type genome for the species is the GenBank assembly GCA_014191855.1. The GC content of the type genome is 68.2 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Capucella antepatica sp. nov.

Candidatus Capucella antepatica (NL. fem. n. *antepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp005776735*. The type genome for the species is the GenBank assembly GCA_005776735.1. The GC content of the type genome is 72.45 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Capucella dicanousia sp. nov.

Candidatus Capucella dicanousia (NL. fem. n. *dicanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp005778355*. The type genome for the species is the

GenBank assembly GCA_005804125.1. The GC content of the type genome is 69.64 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Capucella necubugo sp. nov.

Candidatus Capucella necubugo (NL. fem. n. *necubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp903885375*. The type genome for the species is the GenBank assembly GCA_903820515.1. The GC content of the type genome is 71.4 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Capucella secunetta sp. nov.

Candidatus Capucella secunetta (NL. fem. n. *secunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXON01 sp903921785*. The type genome for the species is the GenBank assembly GCA_903871285.1. The GC content of the type genome is 71.41 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Capucia delucibula sp. nov.

Candidatus Capucia delucibula (NL. fem. n. *delucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6594 sp002480165*. The type genome for the species is the GenBank assembly GCA_002714285.1. The GC content of the type genome is 42.39 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Capucia gen. nov.

Candidatus Capucia (NL. fem. n. *Capucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6594*. The type species for the genus is *Candidatus* Capucia delucibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6594*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capuciaceae.

Description of *Candidatus* Capuciaceae fam. nov.

Candidatus Capuciaceae (NL. fem. n. *Capuciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6594.* The type genus for the taxon is *Candidatus* Capucia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venuniales.

Description of *Candidatus* Capucida recogitrix sp. nov.

Candidatus Capucida recogitrix (NL. fem. n. *recogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002282575 sp002281095*. The type genome for the species is the GenBank assembly GCA_002281095.1. The GC content of the type genome is 46.33 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Capucida gen. nov.

Candidatus Capucida (NL. fem. n. *Capucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002282575*. The type species for the genus is *Candidatus* Capucida recogitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capucosa assucilenta sp. nov.

Candidatus Capucosa assucilenta (NL. fem. n. *assucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2199 sp004525465*. The type genome for the species is the GenBank assembly GCA_004525465.1. The GC content of the type genome is 54.25 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Capucosa gen. nov.

Candidatus Capucosa (NL. fem. n. *Capucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2199*. The type species for the genus is *Candidatus* Capucosa assucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucosaceae.

Description of *Candidatus* Capucosaceae fam. nov.

Candidatus Capucosaceae (NL. fem. n. *Capucosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2199.* The type genus for the taxon is *Candidatus* Capucosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capucosales.

Description of *Candidatus* Capucosales ord. nov.

Candidatus Capucosales (NL. fem. n. *Capucosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2199.* The type genus for the taxon is *Candidatus* Capucosa .

According to the GTDB R06-RS202, this order belongs to the class *Aminicenantia*.

Description of *Candidatus* Capucosa cerevicella sp. nov.

Candidatus Capucosa cerevicella (NL. fem. n. *cerevicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2199 sp002327965*. The type genome for the species is the GenBank assembly GCA_002327965.1. The GC content of the type genome is 62.18 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Capucosa dimidicella sp. nov.

Candidatus Capucosa dimidicella (NL. fem. n. *dimidicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2199 sp002436105*. The type genome for the species is the GenBank assembly GCA_002436105.1. The GC content of the type genome is 62.56 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Capucosa ficulitia sp. nov.

Candidatus Capucosa ficulitia (NL. fem. n. *ficulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2199 sp002335385*. The type genome for the species is the GenBank assembly GCA_002335385.1. The GC content of the type genome is 62.76 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Capucula cocolilega sp. nov.

Candidatus Capucula cocolilega (NL. fem. n. *cocolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA910 sp002294445*. The type genome for the species is the GenBank assembly GCA_002294445.1. The GC content of the type genome is 38.88 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Capucula gen. nov.

Candidatus Capucula (NL. fem. n. *Capucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA910*. The type species for the genus is *Candidatus* Capucula cocolilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capucula pudibax sp. nov.

Candidatus Capucula pudibax (NL. fem. n. *pudibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA910 sp903870365*. The type genome for the species is the GenBank assembly GCA_903867005.1. The GC content of the type genome is 41.04 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Capudaria adordimonia sp. nov.

Candidatus Capudaria adordimonia (NL. fem. n. *adordimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU064 sp012522015*. The type genome for the species is the GenBank assembly GCA_012522015.1. The GC content of the type genome is 44.7 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Capudaria gen. nov.

Candidatus Capudaria (NL. fem. n. *Capudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU064*. The type species for the genus is *Candidatus* Capudaria adordimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Capudaria malogastra sp. nov.

Candidatus Capudaria malogastra (NL. fem. n. *malogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU064 sp001513385*. The type genome for the species is the GenBank assembly GCA_001513385.1. The GC content of the type genome is 45.17 % and the genome length is 1.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Capudella taxilago sp. nov.

Candidatus Capudella taxilago (NL. fem. n. *taxilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUSF01 sp012033255*. The type genome for the species is the GenBank assembly GCA_012033255.1. The GC content of the type genome is 48.14 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Capudella gen. nov.

Candidatus Capudella (NL. fem. n. *Capudella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUSF01*. The type species for the genus is *Candidatus* Capudella taxilago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Capudia cinefitas sp. nov.

Candidatus Capudia cinefitas (NL. fem. n. *cinefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11707 sp903848275*. The type genome for the species is the GenBank assembly GCA_903848275.1. The GC content of the type genome is 51.47 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Capudia gen. nov.

Candidatus Capudia (NL. fem. n. *Capudia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11707*. The type species for the genus is *Candidatus* Capudia cinefitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9934*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivanaceae.

Description of *Candidatus* Capudia desulilega sp. nov.

Candidatus Capudia desulilega (NL. fem. n. *desulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11707 sp003518105*. The type genome for the species is the GenBank assembly GCA_003518105.1. The GC content of the type genome is 50.84 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Capudia minagicula sp. nov.

Candidatus Capudia minagicula (NL. fem. n. *minagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11707 sp903891735*. The type genome for the species is the GenBank assembly GCA_903891735.1. The GC content of the type genome is 52.19 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Capudida curotitrix sp. nov.

Candidatus Capudida curotitrix (NL. fem. n. *curotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-18 sp001774075*. The type genome for the species is the GenBank assembly GCA_001774005.1. The GC content of the type genome is 44.28 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Capudida gen. nov.

Candidatus Capudida (NL. fem. n. *Capudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-18*. The type species for the genus is *Candidatus* Capudida curotitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10092*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimellaceae.

Description of *Candidatus* Capudosa innuledo sp. nov.

Candidatus Capudosa innuledo (NL. fem. n. *innuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B14-G1 sp011039915*. The type genome for the species is the GenBank assembly GCA_011039915.1. The GC content of the type genome is 53.65 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Capudosa gen. nov.

Candidatus Capudosa (NL. fem. n. *Capudosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B14-G1*. The type species for the genus is *Candidatus* Capudosa innuledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B14-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capudosaceae.

Description of *Candidatus* Capudosaceae fam. nov.

Candidatus Capudosaceae (NL. fem. n. *Capudosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B14-G1.* The type genus for the taxon is *Candidatus* Capudosa .

According to GTDB R06-RS202, this family belongs to the order *Thermosulfidibacterales*.

Description of *Candidatus* Capudosa munimivita sp. nov.

Candidatus Capudosa munimivita (NL. fem. n. *munimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B14-G1 sp003648675*. The type genome for the species is the GenBank assembly GCA_003648675.1. The GC content of the type genome is 53.53 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Capudula resuricella sp. nov.

Candidatus Capudula resuricella (NL. fem. n. *resuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5754 sp002419025*. The type genome for the species is the GenBank assembly GCA_002419025.1. The GC content of the type genome is 57.54 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Capudula gen. nov.

Candidatus Capudula (NL. fem. n. *Capudula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5754*. The type species for the genus is *Candidatus* Capudula resuricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5754*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capudulaceae.

Description of *Candidatus* Capudulaceae fam. nov.

Candidatus Capudulaceae (NL. fem. n. *Capudulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5754.* The type genus for the taxon is *Candidatus* Capudula .

According to GTDB R06-RS202, this family belongs to the order *Dissulfuribacterales*.

Description of *Candidatus* Caravaria adgesessa sp. nov.

Candidatus Caravaria adgesessa (NL. fem. n. *adgesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012838135*. The type genome for the species is the GenBank assembly GCA_012838135.1. The GC content of the type genome is 37.36 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Caravaria gen. nov.

Candidatus Caravaria (NL. fem. n. *Caravaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5436*. The type species for the genus is *Candidatus* Caravaria adgesessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Caravaria arcelastra sp. nov.

Candidatus Caravaria arcelastra (NL. fem. n. *arcelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012522435*. The type genome for the species is the GenBank assembly GCA_012522435.1. The GC content of the type genome is 36.52 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Caravaria ciminitica sp. nov.

Candidatus Caravaria ciminitica (NL. fem. n. *ciminitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012521015*. The type genome for the species is the GenBank assembly GCA_012521015.1. The GC content of the type genome is 36.07 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Caravaria impugugo sp. nov.

Candidatus Caravaria impugugo (NL. fem. n. *impugugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012838795*. The type genome for the species is the GenBank assembly GCA_012838795.1. The GC content of the type genome is 36.75 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Caravaria monumibra sp. nov.

Candidatus Caravaria monumibra (NL. fem. n. *monumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012518795*. The type genome for the species is the GenBank assembly GCA_012518795.1. The GC content of the type genome is 36.12 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Caravaria peribivita sp. nov.

Candidatus Caravaria peribivita (NL. fem. n. *peribivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp002427545*. The type genome for the species is the GenBank assembly GCA_012800445.1. The GC content of the type genome is 32.57 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Caravaria ulcisugo sp. nov.

Candidatus Caravaria ulcisugo (NL. fem. n. *ulcisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5436 sp012518845*. The type genome for the species is the GenBank assembly GCA_012518845.1. The GC content of the type genome is 33.77 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Caravia dicaniforma sp. nov.

Candidatus Caravia dicaniforma (NL. fem. n. *dicaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTY01 sp012031265*. The type genome for the species is the GenBank assembly GCA_012031265.1. The GC content of the type genome is 57.82 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Caravia gen. nov.

Candidatus Caravia (NL. fem. n. *Caravia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTY01*. The type species for the genus is *Candidatus* Caravia dicaniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Caravosa demaditura sp. nov.

Candidatus Caravosa demaditura (NL. fem. n. *demaditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILQE01 sp903836325*. The type genome for the species is the GenBank assembly GCA_903847695.1. The GC content of the type genome is 34.42 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Caravosa gen. nov.

Candidatus Caravosa (NL. fem. n. *Caravosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILQE01*. The type species for the genus is *Candidatus* Caravosa demaditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Caravula resupilega sp. nov.

Candidatus Caravula resupilega (NL. fem. n. *resupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMUX01 sp903844735*. The type genome for the species is the GenBank assembly GCA_903958525.1. The GC content of the type genome is 65.54 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Caravula gen. nov.

Candidatus Caravula (NL. fem. n. *Caravula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMUX01*. The type species for the genus is *Candidatus* Caravula resupilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIMUX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravulaceae.

Description of *Candidatus* Caravulaceae fam. nov.

Candidatus Caravulaceae (NL. fem. n. *Caravulaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMUX01.* The type genus for the taxon is *Candidatus* Caravula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIMUX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Caravulales.

Description of *Candidatus* Caravulales ord. nov.

Candidatus Caravulales (NL. fem. n. *Caravulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMUX01.* The type genus for the taxon is *Candidatus* Caravula .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonabidae.

Description of *Candidatus* Carboxylicivirga conubousia sp. nov.

Candidatus Carboxylicivirga conubousia (NL. fem. n. *conubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Carboxylicivirga sp002429115*. The type genome for the species is the GenBank assembly GCA_002429115.1. The GC content of the type genome is 38.7 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Carboxylicivirga siteliforma sp. nov.

Candidatus Carboxylicivirga siteliforma (NL. fem. n. *siteliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Carboxylicivirga sp007097485*. The type genome for the species is the GenBank assembly RS_GCF_007097485.1. The GC content of the type genome is 37.97 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Cardinium advorastra sp. nov.

Candidatus Cardinium advorastra (NL. fem. n. *advorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cardinium sp003351905*. The type genome for the species is the GenBank assembly RS_GCF_003351905.1. The GC content of the type genome is 39.23 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Cardinium ammatentia sp. nov.

Candidatus Cardinium ammatentia (NL. fem. n. *ammatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cardinium sp007559345*. The type genome for the species is the GenBank assembly RS_GCF_007559345.1. The GC content of the type genome is 37.29 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Cardinium culigibra sp. nov.

Candidatus Cardinium culigibra (NL. fem. n. *culigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cardinium sp000689375*. The type genome for the species is the GenBank assembly RS_GCF_004300865.1. The GC content of the type genome is 36.15 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Cardinium funamicula sp. nov.

Candidatus Cardinium funamicula (NL. fem. n. *funamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cardinium sp004354815*. The type genome for the species is the GenBank assembly RS_GCF_004354815.1. The GC content of the type genome is 33.71 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Cardinium infenax sp. nov.

Candidatus Cardinium infenax (NL. fem. n. *infenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Cardinium sp000304455*. The type genome for the species is the GenBank assembly RS_GCF_000304455.1. The GC content of the type genome is 36.31 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Carecana adtacax sp. nov.

Candidatus Carecana adtacax (NL. fem. n. *adtacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP16D-bin41 sp903896925*. The type genome for the species is the GenBank assembly GCA_903896925.1. The GC content of the type genome is 64.64 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Carecana gen. nov.

Candidatus Carecana (NL. fem. n. *Carecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP16D-bin41*. The type species for the genus is *Candidatus* Carecana adtacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQIC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibellaceae.

Description of *Candidatus* Carecana catocitudo sp. nov.

Candidatus Carecana catocitudo (NL. fem. n. *catocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP16D-bin41 sp903912445*. The type genome for the species is the GenBank assembly GCA_903912445.1. The GC content of the type genome is 64.77 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Carecana cobalitudo sp. nov.

Candidatus Carecana cobalitudo (NL. fem. n. *cobalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP16D-bin41 sp903889245*. The type genome for the species is the

GenBank assembly GCA_903928265.1. The GC content of the type genome is 64.76 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Carecana ruricigena sp. nov.

Candidatus Carecana ruricigena (NL. fem. n. *ruricigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP16D-bin41 sp004321905*. The type genome for the species is the GenBank assembly GCA_004321905.1. The GC content of the type genome is 58.99 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Carecaria innabimonas sp. nov.

Candidatus Carecaria innabimonas (NL. fem. n. *innabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GPF-1 sp013619125*. The type genome for the species is the GenBank assembly GCA_013619125.1. The GC content of the type genome is 44.15 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Carecaria gen. nov.

Candidatus Carecaria (NL. fem. n. *Carecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GPF-1*. The type species for the genus is *Candidatus* Carecaria innabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GPF-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecariaceae.

Description of *Candidatus* Carecariaceae fam. nov.

Candidatus Carecariaceae (NL. fem. n. *Carecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GPF-1.* The type genus for the taxon is *Candidatus* Carecaria .

According to GTDB R06-RS202, this family belongs to the order *Tissierellales*.

Description of *Candidatus* Carecella bisacitas sp. nov.

Candidatus Carecella bisacitas (NL. fem. n. *bisacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMIW01 sp900299205*. The type genome for the species is the GenBank assembly GCA_900299205.1. The GC content of the type genome is 53.85 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Carecella gen. nov.

Candidatus Carecella (NL. fem. n. *Carecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMIW01*. The type species for the genus is *Candidatus* Carecella bisacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuciaceae.

Description of *Candidatus* Carecosa derelimonas sp. nov.

Candidatus Carecosa derelimonas (NL. fem. n. *derelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5633 sp002452735*. The type genome for the species is the GenBank assembly GCA_002452735.1. The GC content of the type genome is 43.09 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Carecosa gen. nov.

Candidatus Carecosa (NL. fem. n. *Carecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5633*. The type species for the genus is *Candidatus* Carecosa derelimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Carecosaceae fam. nov.

Candidatus Carecosaceae (NL. fem. n. *Carecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5633.* The type genus for the taxon is *Candidatus* Carecosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Carecosa effositrix sp. nov.

Candidatus Carecosa effositrix (NL. fem. n. *effositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5633 sp002382025*. The type genome for the species is the GenBank assembly GCA_002382025.1. The GC content of the type genome is 29.16 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Carecula gasifitas sp. nov.

Candidatus Carecula gasifitas (NL. fem. n. *gasifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMEP01 sp007375595*. The type genome for the species is the GenBank assembly GCA_007375595.1. The GC content of the type genome is 39.14 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Carecula gen. nov.

Candidatus Carecula (NL. fem. n. *Carecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMEP01*. The type species for the genus is *Candidatus* Carecula gasifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMEP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Careculaceae.

Description of *Candidatus* Careculaceae fam. nov.

Candidatus Careculaceae (NL. fem. n. *Careculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMEP01.* The type genus for the taxon is *Candidatus* Carecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Carnobacterium facunastra sp. nov.

Candidatus Carnobacterium facunastra (NL. fem. n. *facunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Carnobacterium_A sp001483965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001483965.1. The GC content of the type genome is 38.11 % and the genome length is 2.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Carnobacterium ingurago sp. nov.

Candidatus Carnobacterium ingurago (NL. fem. n. *ingurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Carnobacterium_A sp000195575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000195575.1. The GC content of the type genome is 35.18 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Carnobacterium tirocilega sp. nov.

Candidatus Carnobacterium tirocilega (NL. fem. n. *tirocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Carnobacterium_A sp002418295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002418295.1. The GC content of the type genome is 36.36 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Carucana decinitia sp. nov.

Candidatus Carucana decinitia (NL. fem. n. *decinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002774445 sp002774445*. The type genome for the species is the GenBank assembly GCA_002771995.1. The GC content of the type genome is 41.02 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Carucana gen. nov.

Candidatus Carucana (NL. fem. n. *Carucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002774445*. The type species for the genus is *Candidatus* Carucana decinitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Carucella bimotitura sp. nov.

Candidatus Carucella bimotitura (NL. fem. n. *bimotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1151 sp002311865*. The type genome for the species is the GenBank assembly GCA_002311865.1. The GC content of the type genome is 57.2 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Carucella gen. nov.

Candidatus Carucella (NL. fem. n. *Carucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA1151*. The type species for the genus is *Candidatus* Carucella bimotitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carucellaceae.

Description of *Candidatus* Carucellaceae fam. nov.

Candidatus Carucellaceae (NL. fem. n. *Carucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1151.* The type genus for the taxon is *Candidatus* Carucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Carucellales.

Description of *Candidatus* Carucellales ord. nov.

Candidatus Carucellales (NL. fem. n. *Carucellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1151.* The type genus for the taxon is *Candidatus* Carucella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Carucella offiretta sp. nov.

Candidatus Carucella offiretta (NL. fem. n. *offiretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1151 sp013204555*. The type genome for the species is the GenBank assembly GCA_013204555.1. The GC content of the type genome is 55.97 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Carucia delacatio sp. nov.

Candidatus Carucia delacatio (NL. fem. n. *delacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BMS3Abin08 sp002897935*. The type genome for the species is the GenBank assembly GCA_002897875.1. The GC content of the type genome is 48.04 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Carucia gen. nov.

Candidatus Carucia (NL. fem. n. *Carucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Abin08*. The type species for the genus is *Candidatus* Carucia delacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-85*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benepiaceae.

Description of *Candidatus* Carucida vaniditica sp. nov.

Candidatus Carucida vaniditica (NL. fem. n. *vaniditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB-PLM-1 sp003388505*. The type genome for the species is the GenBank assembly GCA_003388505.1. The GC content of the type genome is 62.58 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Carucida gen. nov.

Candidatus Carucida (NL. fem. n. *Carucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MB-PLM-1*. The type species for the genus is *Candidatus* Carucida vaniditica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Carucosa acrobigena sp. nov.

Candidatus Carucosa acrobigena (NL. fem. n. *acrobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-752 sp003157715*. The type genome for the species is the

GenBank assembly GCA_003157715.1. The GC content of the type genome is 69.48 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Carucosa gen. nov.

Candidatus Carucosa (NL. fem. n. *Carucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-752*. The type species for the genus is *Candidatus* Carucosa acrobigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Carucosa denupetta sp. nov.

Candidatus Carucosa denupetta (NL. fem. n. *denupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-752 sp003132645*. The type genome for the species is the GenBank assembly GCA_003132645.1. The GC content of the type genome is 68.77 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Carucosa foricitura sp. nov.

Candidatus Carucosa foricitura (NL. fem. n. *foricitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-752 sp003164655*. The type genome for the species is the GenBank assembly GCA_003164655.1. The GC content of the type genome is 69.08 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Carucula refinifica sp. nov.

Candidatus Carucula refinifica (NL. fem. n. *refinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2794595 sp002794595*. The type genome for the species is the GenBank assembly GCA_002794595.1. The GC content of the type genome is 50.82 %

and the genome length is 2.21 Mbp.

Description of *Candidatus* Carucula gen. nov.

Candidatus Carucula (NL. fem. n. *Carucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2794595*. The type species for the genus is *Candidatus* Carucula refinifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Carunana oppanitas sp. nov.

Candidatus Carunana oppanitas (NL. fem. n. *oppanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-229 sp003228405*. The type genome for the species is the GenBank assembly GCA_003228405.1. The GC content of the type genome is 42.71 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Carunana gen. nov.

Candidatus Carunana (NL. fem. n. *Carunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-229*. The type species for the genus is *Candidatus* Carunana oppanitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunanaceae.

Description of *Candidatus* Carunanaceae fam. nov.

Candidatus Carunanaceae (NL. fem. n. *Carunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-229.* The type genus for the taxon is *Candidatus* Carunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Carunanales.

Description of *Candidatus* Carunanales ord. nov.

Candidatus Carunanales (NL. fem. n. *Carunanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-229.* The type genus for the taxon is *Candidatus* Carunana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Carunana solacibula sp. nov.

Candidatus Carunana solacibula (NL. fem. n. *solacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-229 sp003349885*. The type genome for the species is the GenBank assembly GCA_003349885.1. The GC content of the type genome is 38.89 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Carunaria catafousia sp. nov.

Candidatus Carunaria catafousia (NL. fem. n. *catafousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-40-21 sp000996205*. The type genome for the species is the GenBank assembly GCA_000996205.1. The GC content of the type genome is 40.37 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Carunaria gen. nov.

Candidatus Carunaria (NL. fem. n. *Carunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-40-21*. The type species for the genus is *Candidatus* Carunaria catafousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunariaceae.

Description of *Candidatus* Carunariaceae fam. nov.

Candidatus Carunariaceae (NL. fem. n. *Carunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA1-40-21.* The type genus for the taxon is *Candidatus* Carunaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Carunella diminugo sp. nov.

Candidatus Carunella diminugo (NL. fem. n. *diminugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITNM01 sp903893805*. The type genome for the species is the GenBank assembly GCA_903860665.1. The GC content of the type genome is 38.99 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Carunella gen. nov.

Candidatus Carunella (NL. fem. n. *Carunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITNM01*. The type species for the genus is *Candidatus* Carunella diminugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11393*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifanaceae.

Description of *Candidatus* Carunella fumacitrix sp. nov.

Candidatus Carunella fumacitrix (NL. fem. n. *fumacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITNM01 sp903874955*. The type genome for the species is the GenBank assembly GCA_903874955.1. The GC content of the type genome is 38.11 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Carunia nutabitia sp. nov.

Candidatus Carunia nutabitia (NL. fem. n. *nutabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCC01 sp007126035*. The type genome for the species is the GenBank assembly GCA_007126035.1. The GC content of the type genome is 68.55 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Carunia gen. nov.

Candidatus Carunia (NL. fem. n. *Carunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLCC01*. The type species for the genus is *Candidatus* Carunia nutabitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatulaceae.

Description of *Candidatus* Carunida invicetta sp. nov.

Candidatus Carunida invicetta (NL. fem. n. *invicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-943 sp003170595*. The type genome for the species is the GenBank assembly GCA_003170595.1. The GC content of the type genome is 66.1 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Carunida gen. nov.

Candidatus Carunida (NL. fem. n. *Carunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-943*. The type species for the genus is *Candidatus* Carunida

invicetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-943*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunidaceae.

Description of *Candidatus* Carunidaceae fam. nov.

Candidatus Carunidaceae (NL. fem. n. *Carunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-943.* The type genus for the taxon is *Candidatus* Carunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Carunosa adcesivita sp. nov.

Candidatus Carunosa adcesivita (NL. fem. n. *adcesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5172 sp903970395*. The type genome for the species is the GenBank assembly GCA_903970395.1. The GC content of the type genome is 60.21 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Carunosa gen. nov.

Candidatus Carunosa (NL. fem. n. *Carunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5172*. The type species for the genus is *Candidatus* Carunosa adcesivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Carunosa bisacousia sp. nov.

Candidatus Carunosa bisacousia (NL. fem. n. *bisacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5172 sp002413385*. The type genome for the species is the GenBank assembly GCA_002413385.1. The GC content of the type genome is 58.89 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Carunosa docibitia sp. nov.

Candidatus Carunosa docibitia (NL. fem. n. *docibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5172 sp014083945*. The type genome for the species is the GenBank assembly RS_GCF_014083945.1. The GC content of the type genome is 61.09 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Carunosa peracivita sp. nov.

Candidatus Carunosa peracivita (NL. fem. n. *peracivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5172 sp009765785*. The type genome for the species is the GenBank assembly RS_GCF_009765785.1. The GC content of the type genome is 58.64 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Carunosa ruricatio sp. nov.

Candidatus Carunosa ruricatio (NL. fem. n. *ruricatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5172 sp003138795*. The type genome for the species is the GenBank assembly GCA_003159275.1. The GC content of the type genome is 60.03 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Carunula immeditudo sp. nov.

Candidatus Carunula immeditudo (NL. fem. n. *immeditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMZ01 sp014584375*. The type genome for the species is the GenBank assembly GCA_014584375.1. The GC content of the type genome is 57.24 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Carunula gen. nov.

Candidatus Carunula (NL. fem. n. *Carunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACTMZ01*. The type species for the genus is *Candidatus* Carunula immeditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACTMZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunulaceae.

Description of *Candidatus* Carunulaceae fam. nov.

Candidatus Carunulaceae (NL. fem. n. *Carunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACTMZ01.* The type genus for the taxon is *Candidatus* Carunula .

According to GTDB R06-RS202, this family belongs to the order *Chthoniobacterales*.

Description of *Candidatus* Carunula pudibetta sp. nov.

Candidatus Carunula pudibetta (NL. fem. n. *pudibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMZ01 sp903934135*. The type genome for the species is the GenBank assembly GCA_903934135.1. The GC content of the type genome is 61.79 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Carunula visocastra sp. nov.

Candidatus Carunula visocastra (NL. fem. n. *visocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACTMZ01 sp903953565*. The type genome for the species is the GenBank assembly GCA_903940655.1. The GC content of the type genome is 61.3 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Casabana nugacigena sp. nov.

Candidatus Casabana nugacigena (NL. fem. n. *nugacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-24 sp001776975*. The type genome for the species is the GenBank assembly GCA_001776975.1. The GC content of the type genome is 40.3 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Casabana gen. nov.

Candidatus Casabana (NL. fem. n. *Casabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-40-24*. The type species for the genus is *Candidatus* Casabana nugacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Casabaria cisorimonia sp. nov.

Candidatus Casabaria cisorimonia (NL. fem. n. *cisorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-00278855 sp002788855*. The type genome for the species is the GenBank assembly GCA_002788855.1. The GC content of the type genome is 37.96 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Casabaria gen. nov.

Candidatus Casabaria (NL. fem. n. *Casabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-00278855*. The type species for the genus is *Candidatus* Casabaria cisorimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-00278855*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casabariaceae.

Description of *Candidatus* Casabariaceae fam. nov.

Candidatus Casabariaceae (NL. fem. n. *Casabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-00278855.* The type genus for the taxon is *Candidatus* Casabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-001788215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vocifosales.

Description of *Candidatus* Casabella purulitoga sp. nov.

Candidatus Casabella purulitoga (NL. fem. n. *purulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-149 sp003230795*. The type genome for the species is the GenBank assembly GCA_003230795.1. The GC content of the type genome is 48.41 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Casabella gen. nov.

Candidatus Casabella (NL. fem. n. *Casabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-149*. The type species for the genus is *Candidatus* Casabella purulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casabellaceae.

Description of *Candidatus* Casabellaceae fam. nov.

Candidatus Casabellaceae (NL. fem. n. *Casabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-149.* The type genus for the taxon is *Candidatus* Casabella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Casabellales.

Description of *Candidatus* Casabellales ord. nov.

Candidatus Casabellales (NL. fem. n. *Casabellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-149.* The type genus for the taxon is *Candidatus* Casabella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Recuciae.

Description of *Candidatus* Casabia benemicella sp. nov.

Candidatus Casabia benemicella (NL. fem. n. *benemicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDT01 sp007125125*. The type genome for the species is the GenBank assembly GCA_007125125.1. The GC content of the type genome is 69.18 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Casabia gen. nov.

Candidatus Casabia (NL. fem. n. *Casabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDT01*. The type species for the genus is *Candidatus* Casabia benemicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Casabida ermelitia sp. nov.

Candidatus Casabida ermelitia (NL. fem. n. *ermelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-259 sp003235465*. The type genome for the species is the GenBank assembly GCA_003235465.1. The GC content of the type genome is 62.26 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Casabida gen. nov.

Candidatus Casabida (NL. fem. n. *Casabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-259*. The type species for the genus is *Candidatus* Casabida ermelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Casabida minagetta sp. nov.

Candidatus Casabida minagetta (NL. fem. n. *minagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-259 sp003246675*. The type genome for the species is the GenBank assembly GCA_003246675.1. The GC content of the type genome is 59.51 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Casabosa adaggax sp. nov.

Candidatus Casabosa adaggax (NL. fem. n. *adaggax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7375 sp000482245*. The type genome for the species is the GenBank assembly RS_GCF_000482245.1. The GC content of the type genome is 48.05 % and the genome length is 8.06 Mbp.

Description of *Candidatus* Casabosa gen. nov.

Candidatus Casabosa (NL. fem. n. *Casabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCC-7375*. The type species for the genus is *Candidatus* Casabosa adaggax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Casabosa carecisca sp. nov.

Candidatus Casabosa carecisca (NL. fem. n. *carecisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7375 sp011009555*. The type genome for the species is the GenBank assembly RS_GCF_011009535.1. The GC content of the type genome is 47.38 % and the genome length is 8.89 Mbp.

Description of *Candidatus* Casabosa deculicella sp. nov.

Candidatus Casabosa deculicella (NL. fem. n. *deculicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCC-7375 sp000316115*. The type genome for the species is the GenBank assembly RS_GCF_000316115.1. The GC content of the type genome is 47.62 % and the genome length is 9.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "plankton".

Description of *Candidatus* Casabula depubigena sp. nov.

Candidatus Casabula depubigena (NL. fem. n. *depubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWZ01 sp004356455*. The type genome for the species is the GenBank assembly GCA_004356455.1. The GC content of the type genome is 65.95 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Casabula gen. nov.

Candidatus Casabula (NL. fem. n. *Casabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWZ01*. The type species for the genus is *Candidatus* Casabula depubigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomaciaceae.

Description of *Candidatus* Caselana ignobessa sp. nov.

Candidatus Caselana ignobessa (NL. fem. n. *ignobessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN21 sp011373595*. The type genome for the species is the GenBank assembly GCA_011373595.1. The GC content of the type genome is 64.14 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Caselana gen. nov.

Candidatus Caselana (NL. fem. n. *Caselana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN21*. The type species for the genus is *Candidatus* Caselana ignobessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NICIL-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifellaceae.

Description of *Candidatus* Caselana invetifica sp. nov.

Candidatus Caselana invetifica (NL. fem. n. *invetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN21 sp011373555*. The type genome for the species is the GenBank assembly GCA_011373555.1. The GC content of the type genome is 56.44 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Caselana refinimonia sp. nov.

Candidatus Caselana refinimonia (NL. fem. n. *refinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN21 sp002898295*. The type genome for the species is the GenBank assembly GCA_002898295.1. The GC content of the type genome is 61.74 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Caselaria luticitas sp. nov.

Candidatus Caselaria luticitas (NL. fem. n. *luticitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACDM01 sp009936795*. The type genome for the species is the GenBank assembly GCA_009936715.1. The GC content of the type genome is 54.06 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Caselaria gen. nov.

Candidatus Caselaria (NL. fem. n. *Caselaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACDM01*. The type species for the genus is *Candidatus* Caselaria luticitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Caselella exculago sp. nov.

Candidatus Caselella exculago (NL. fem. n. *exculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-5 sp003233535*. The type genome for the species is the GenBank assembly GCA_003233535.1. The GC content of the type genome is 59.83 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Caselella gen. nov.

Candidatus Caselella (NL. fem. n. *Caselella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-5*. The type species for the genus is *Candidatus* Caselella exculago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caselellaceae.

Description of *Candidatus* Caselellaceae fam. nov.

Candidatus Caselellaceae (NL. fem. n. *Caselellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-5*. The type genus for the taxon is *Candidatus* Caselella .

According to GTDB R06-RS202, this family belongs to the order *Xanthomonadales*.

Description of *Candidatus* Caselia cenodisca sp. nov.

Candidatus Caselia cenodisca (NL. fem. n. *cenodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902779875*. The type genome for the species is the GenBank assembly GCA_902762365.1. The GC content of the type genome is 51.55 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Caselia gen. nov.

Candidatus Caselia (NL. fem. n. *Caselia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1179*. The type species for the genus is *Candidatus* Caselia cenodisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Caselia delacibra sp. nov.

Candidatus Caselia delacibra (NL. fem. n. *delacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp002340405*. The type genome for the species is the GenBank assembly GCA_003491575.1. The GC content of the type genome is 46.89 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Caselia divoredo sp. nov.

Candidatus Caselia divoredo (NL. fem. n. *divoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp900318995*. The type genome for the species is the GenBank assembly GCA_900321045.1. The GC content of the type genome is 48.67 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Caselia documentia sp. nov.

Candidatus Caselia documentia (NL. fem. n. *documentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902802285*. The type genome for the species is the GenBank assembly GCA_902802285.1. The GC content of the type genome is 49.0 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Caselia extorifica sp. nov.

Candidatus Caselia extorifica (NL. fem. n. *extorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902763885*. The type genome for the species is the GenBank assembly GCA_902763885.1. The GC content of the type genome is 46.9 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Caselia funivatica sp. nov.

Candidatus Caselia funivatica (NL. fem. n. *funivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp900319225*. The type genome for the species is the GenBank assembly GCA_902787675.1. The GC content of the type genome is 49.46 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Caselia gasomedo sp. nov.

Candidatus Caselia gasomedo (NL. fem. n. *gasomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902782245*. The type genome for the species is the GenBank assembly GCA_902782245.1. The GC content of the type genome is 49.45 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Caselia lanugax sp. nov.

Candidatus Caselia lanugax (NL. fem. n. *lanugax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp002309915*. The type genome for the species is the GenBank assembly GCA_002309915.1. The GC content of the type genome is 50.36 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Caselia licenitio sp. nov.

Candidatus Caselia licenitio (NL. fem. n. *licenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp002310015*. The type genome for the species is the GenBank assembly GCA_002310015.1. The GC content of the type genome is 47.01 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Caselia loraricula sp. nov.

Candidatus Caselia loraricula (NL. fem. n. *loraricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902799685*. The type genome for the species is the GenBank assembly GCA_902799685.1. The GC content of the type genome is 48.21 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Caselia molecibra sp. nov.

Candidatus Caselia molecibra (NL. fem. n. *molecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902798685*. The type genome for the species is the GenBank assembly GCA_902798685.1. The GC content of the type genome is 49.95 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Caselia ontolitica sp. nov.

Candidatus Caselia ontolitica (NL. fem. n. *ontolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902774275*. The type genome for the species is the GenBank assembly GCA_902774275.1. The GC content of the type genome is 47.35 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Caselia pericimonas sp. nov.

Candidatus Caselia pericimonas (NL. fem. n. *pericimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902760965*. The type genome for the species is the GenBank assembly GCA_902760965.1. The GC content of the type genome is 47.7 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Caselia recocousia sp. nov.

Candidatus Caselia recocousia (NL. fem. n. *recocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp902774335*. The type genome for the species is the GenBank assembly GCA_902800825.1. The GC content of the type genome is 51.58 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Caselia sotulitas sp. nov.

Candidatus Caselia sotulitas (NL. fem. n. *sotulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1179 sp002310175*. The type genome for the species is the GenBank assembly GCA_002310175.1. The GC content of the type genome is 47.43 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Caselida adnumitio sp. nov.

Candidatus Caselida adnumitio (NL. fem. n. *adnumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1177 sp902780365*. The type genome for the species is the GenBank assembly GCA_902780365.1. The GC content of the type genome is 45.46 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Caselida gen. nov.

Candidatus Caselida (NL. fem. n. *Caselida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1177*. The type species for the genus is *Candidatus* Caselida adnumitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caselidaceae.

Description of *Candidatus* Caselidaceae fam. nov.

Candidatus Caselidaceae (NL. fem. n. *Caselidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1177.* The type genus for the taxon is *Candidatus* Caselida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Caselidales.

Description of *Candidatus* Caselidales ord. nov.

Candidatus Caselidales (NL. fem. n. *Caselidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1177.* The type genus for the taxon is *Candidatus* Caselida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Caselidae.

Description of *Candidatus* Caselidae class. nov.

Candidatus Caselidae (NL. fem. n. *c__Caselidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA1177*. The type genus for the taxon is *Candidatus* Caselida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Bicinellota.

Description of *Candidatus* Caselida defulessa sp. nov.

Candidatus Caselida defulessa (NL. fem. n. *defulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1177 sp002310995*. The type genome for the species is the GenBank assembly GCA_002366955.1. The GC content of the type genome is 44.14 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Caselida inherilega sp. nov.

Candidatus Caselida inherilega (NL. fem. n. *inherilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1177 sp002309575*. The type genome for the species is the GenBank assembly GCA_002309575.1. The GC content of the type genome is 49.79 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Caselida labecimonia sp. nov.

Candidatus Caselida labecimonia (NL. fem. n. *labecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1177 sp902774115*. The type genome for the species is the GenBank assembly GCA_902774115.1. The GC content of the type genome is 44.86 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Caselida obtunitio sp. nov.

Candidatus Caselida obtunitio (NL. fem. n. *obtunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1177 sp002310035*. The type genome for the species is the

GenBank assembly GCA_002310035.1. The GC content of the type genome is 45.68 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Caselosa demagastra sp. nov.

Candidatus Caselosa demagastra (NL. fem. n. *demagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-93 sp002085385*. The type genome for the species is the GenBank assembly GCA_002085385.1. The GC content of the type genome is 48.63 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Caselosa gen. nov.

Candidatus Caselosa (NL. fem. n. *Caselosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-93*. The type species for the genus is *Candidatus* Caselosa demagastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-93*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caselosaceae.

Description of *Candidatus* Caselosaceae fam. nov.

Candidatus Caselosaceae (NL. fem. n. *Caselosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-93.* The type genus for the taxon is *Candidatus* Caselosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-93*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Caselosales.

Description of *Candidatus* Caselosales ord. nov.

Candidatus Caselosales (NL. fem. n. *Caselosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-93.* The type genus for the taxon is *Candidatus* Caselosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vehemidae.

Description of *Candidatus* Caselula dilibibra sp. nov.

Candidatus Caselula dilibibra (NL. fem. n. *dilibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXDN01 sp903918235*. The type genome for the species is the GenBank assembly GCA_903864325.1. The GC content of the type genome is 46.89 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Caselula gen. nov.

Candidatus Caselula (NL. fem. n. *Caselula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXDN01*. The type species for the genus is *Candidatus* Caselula dilibibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Casigaria bicodicula sp. nov.

Candidatus Casigaria bicodicula (NL. fem. n. *bicodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9089 sp003485015*. The type genome for the species is the GenBank assembly GCA_003485015.1. The GC content of the type genome is 44.14 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Casigaria gen. nov.

Candidatus Casigaria (NL. fem. n. *Casigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9089*. The type species for the genus is *Candidatus* Casigaria

bicodicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigariaceae.

Description of *Candidatus* Casigariaceae fam. nov.

Candidatus Casigariaceae (NL. fem. n. *Casigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9089.* The type genus for the taxon is *Candidatus* Casigaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Casigariales.

Description of *Candidatus* Casigariales ord. nov.

Candidatus Casigariales (NL. fem. n. *Casigariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9089.* The type genus for the taxon is *Candidatus* Casigaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Casigariae.

Description of *Candidatus* Casigariae class. nov.

Candidatus Casigariae (NL. fem. n. *c__Casigariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9089.* The type genus for the taxon is *Candidatus* Casigaria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA9089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Casigariota.

Description of *Candidatus* Casigariota phyl. nov.

Candidatus Casigariota (NL. fem. n. *Casigariota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9089.* The type genus for the taxon is *Candidatus* Casigaria .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Casigella direcitio sp. nov.

Candidatus Casigella direcitio (NL. fem. n. *direcitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA927 sp002430725*. The type genome for the species is the GenBank assembly GCA_002430675.1. The GC content of the type genome is 44.3 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Casigella gen. nov.

Candidatus Casigella (NL. fem. n. *Casigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA927*. The type species for the genus is *Candidatus* Casigella direcitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Casigellaceae fam. nov.

Candidatus Casigellaceae (NL. fem. n. *Casigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA927.* The type genus for the taxon is *Candidatus* Casigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10105*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lupanellales.

Description of *Candidatus* Casigella sitelessa sp. nov.

Candidatus Casigella sitelessa (NL. fem. n. *sitelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA927 sp002433895*. The type genome for the species is the GenBank assembly GCA_002433895.1. The GC content of the type genome is 47.38 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Casigia ludimugo sp. nov.

Candidatus Casigia ludimugo (NL. fem. n. *ludimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-33-46 sp002792735*. The type genome for the species is the GenBank assembly GCA_002772915.1. The GC content of the type genome is 33.22 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Casigia gen. nov.

Candidatus Casigia (NL. fem. n. *Casigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-33-46*. The type species for the genus is *Candidatus* Casigia ludimugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-33-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigiaceae.

Description of *Candidatus* Casigiaceae fam. nov.

Candidatus Casigiaceae (NL. fem. n. *Casigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-33-46.* The type genus for the taxon is *Candidatus* Casigia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-33-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Casigiales.

Description of *Candidatus* Casigiales ord. nov.

Candidatus Casigiales (NL. fem. n. *Casigiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-33-46.* The type genus for the taxon is *Candidatus* Casigia .

According to the original version of GTDB R06-RS202, this family belongs to the class *CPR2_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sitelidae.

Description of *Candidatus* Casigida adcesatio sp. nov.

Candidatus Casigida adcesatio (NL. fem. n. *adcesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp003538525*. The type genome for the species is the GenBank assembly GCA_003538525.1. The GC content of the type genome is 37.87 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Casigida gen. nov.

Candidatus Casigida (NL. fem. n. *Casigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11063*. The type species for the genus is *Candidatus* Casigida adcesatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigidaceae.

Description of *Candidatus* Casigidaceae fam. nov.

Candidatus Casigidaceae (NL. fem. n. *Casigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11063.* The type genus for the taxon is *Candidatus* Casigida .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Casigida anancitrix sp. nov.

Candidatus Casigida anancitrix (NL. fem. n. *anancitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp002892535*. The type genome for the species is the GenBank assembly RS_GCF_002892535.1. The GC content of the type genome is 36.43 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Casigida attorigena sp. nov.

Candidatus Casigida attorigena (NL. fem. n. *attorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp003962895*. The type genome for the species is the GenBank assembly GCA_003962895.1. The GC content of the type genome is 32.95 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Casigida denomitrix sp. nov.

Candidatus Casigida denomitrix (NL. fem. n. *denomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp003963245*. The type genome for the species is the GenBank assembly GCA_003963245.1. The GC content of the type genome is 36.69 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Casigida inoccisca sp. nov.

Candidatus Casigida inoccisca (NL. fem. n. *inoccisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp008017145*. The type genome for the species is the GenBank assembly GCA_008017145.1. The GC content of the type genome is 36.74 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Casigida molecatica sp. nov.

Candidatus Casigida molecatica (NL. fem. n. *molecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp903891375*. The type genome for the species is the GenBank assembly GCA_903842265.1. The GC content of the type genome is 32.79 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Casigida repepibula sp. nov.

Candidatus Casigida repepibula (NL. fem. n. *repepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp003962985*. The type genome for the species is the GenBank assembly GCA_003962985.1. The GC content of the type genome is 35.03 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Casigida semigicula sp. nov.

Candidatus Casigida semigicula (NL. fem. n. *semigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11063 sp008017155*. The type genome for the species is the GenBank assembly GCA_008017155.1. The GC content of the type genome is 35.45 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Casigosa everbax sp. nov.

Candidatus Casigosa everbax (NL. fem. n. *everbax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9968 sp001798565*. The type genome for the species is the GenBank assembly GCA_001798565.1. The GC content of the type genome is 60.02 % and the genome length is 1.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Casigosa gen. nov.

Candidatus Casigosa (NL. fem. n. *Casigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9968*. The type species for the genus is *Candidatus* Casigosa everbax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Casigosaceae fam. nov.

Candidatus Casigosaceae (NL. fem. n. *Casigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9968.* The type genus for the taxon is *Candidatus* Casigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Casigosales.

Description of *Candidatus* Casigosales ord. nov.

Candidatus Casigosales (NL. fem. n. *Casigosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9968.* The type genus for the taxon is *Candidatus* Casigosa .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Casigosa gerunousia sp. nov.

Candidatus Casigosa gerunousia (NL. fem. n. *gerunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9968 sp001799045*. The type genome for the species is the GenBank assembly GCA_001799125.1. The GC content of the type genome is 55.32 % and the genome length is 2.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Casigosa levidatica sp. nov.

Candidatus Casigosa levidatica (NL. fem. n. *levidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9968 sp001798995*. The type genome for the species is the GenBank assembly GCA_001798995.1. The GC content of the type genome is 59.94 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Casigosa ossifedo sp. nov.

Candidatus Casigosa ossifedo (NL. fem. n. *ossifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9968 sp003490035*. The type genome for the species is the GenBank assembly GCA_003490035.1. The GC content of the type genome is 54.76 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Casigula fefelivita sp. nov.

Candidatus Casigula fefelivita (NL. fem. n. *fefelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *38-11 sp001509345*. The type genome for the species is the GenBank assembly GCA_003500195.1. The GC content of the type genome is 38.32 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Casigula gen. nov.

Candidatus Casigula (NL. fem. n. *Casigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *38-11*. The type species for the genus is *Candidatus* Casigula fefelivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Casigula utrarimonas sp. nov.

Candidatus Casigula utrarimonas (NL. fem. n. *utrarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *38-11 sp003446975*. The type genome for the species is the GenBank assembly GCA_003446975.1. The GC content of the type genome is 39.5 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Casimicrobium abluvitica sp. nov.

Candidatus Casimicrobium abluvitica (NL. fem. n. *abluvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp013298045*. The type genome for the species is the GenBank assembly GCA_013298045.1. The GC content of the type genome is 57.5 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Casimicrobium demogitio sp. nov.

Candidatus Casimicrobium demogitio (NL. fem. n. *demogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp014378555*. The type genome for the species is the GenBank assembly GCA_014378555.1. The GC content of the type genome is 57.6 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Casimicrobium immusentia sp. nov.

Candidatus Casimicrobium immusentia (NL. fem. n. *immusentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp013298695*. The type genome for the species is the GenBank assembly GCA_013298695.1. The GC content of the type genome is 55.4 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Casimicrobium invesimonia sp. nov.

Candidatus Casimicrobium invesimonia (NL. fem. n. *invesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp013298765*. The type genome for the species is the GenBank assembly GCA_013298765.1. The GC content of the type genome is 56.87 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Casimicrobium necubatio sp. nov.

Candidatus Casimicrobium necubatio (NL. fem. n. *necubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp004293675*. The type genome for the species is the GenBank assembly GCA_004294085.1. The GC content of the type genome is 56.73 %

and the genome length is 3.79 Mbp.

Description of *Candidatus* Casimicrobium penicax sp. nov.

Candidatus Casimicrobium penicax (NL. fem. n. *penicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp004294365*. The type genome for the species is the GenBank assembly GCA_004294365.1. The GC content of the type genome is 56.55 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Casimicrobium salubivita sp. nov.

Candidatus Casimicrobium salubivita (NL. fem. n. *salubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Casimicrobium sp013298455*. The type genome for the species is the GenBank assembly GCA_013298455.1. The GC content of the type genome is 57.35 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Castellaniella filifitio sp. nov.

Candidatus Castellaniella filifitio (NL. fem. n. *filifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Castellaniella sp004321985*. The type genome for the species is the GenBank assembly GCA_004321985.1. The GC content of the type genome is 62.66 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Castellaniella infanago sp. nov.

Candidatus Castellaniella infanago (NL. fem. n. *infanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Castellaniella sp002421865*. The type genome for the species is the GenBank assembly GCA_002421865.1. The GC content of the type genome is 66.44 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Catabana bimotentia sp. nov.

Candidatus Catabana bimotentia (NL. fem. n. *bimotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723295 sp002713495*. The type genome for the species is the GenBank assembly GCA_002713495.1. The GC content of the type genome is 29.45 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Catabana gen. nov.

Candidatus Catabana (NL. fem. n. *Catabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002723295*. The type species for the genus is *Candidatus* Catabana bimotentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catabana cilicatio sp. nov.

Candidatus Catabana cilicatio (NL. fem. n. *cilicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723295 sp002721275*. The type genome for the species is the GenBank assembly GCA_002721275.1. The GC content of the type genome is 30.36 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Catabana ciminilega sp. nov.

Candidatus Catabana ciminilega (NL. fem. n. *ciminilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723295 sp002711185*. The type genome for the species is the GenBank assembly GCA_002711185.1. The GC content of the type genome is 29.9 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Catabana decenicula sp. nov.

Candidatus Catabana decenicula (NL. fem. n. *decenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723295 sp002723295*. The type genome for the species is the GenBank assembly GCA_002723295.1. The GC content of the type genome is 29.45 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Catabana tomacibra sp. nov.

Candidatus Catabana tomacibra (NL. fem. n. *tomacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002723295 sp002690805*. The type genome for the species is the GenBank assembly GCA_002690805.1. The GC content of the type genome is 29.47 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Catabaria angipicella sp. nov.

Candidatus Catabaria angipicella (NL. fem. n. *angipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4459 sp002869465*. The type genome for the species is the GenBank assembly GCA_002869465.1. The GC content of the type genome is 38.91 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Catabaria gen. nov.

Candidatus Catabaria (NL. fem. n. *Catabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4459*. The type species for the genus is *Candidatus* Catabaria angipicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Catabaria conopitoga sp. nov.

Candidatus Catabaria conopitoga (NL. fem. n. *conopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4459 sp003648625*. The type genome for the species is the GenBank assembly GCA_003650385.1. The GC content of the type genome is 42.1 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Catabaria ecfacicella sp. nov.

Candidatus Catabaria ecfacicella (NL. fem. n. *ecfacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4459 sp002389465*. The type genome for the species is the GenBank assembly GCA_002389465.1. The GC content of the type genome is 42.02 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Catabella desupisca sp. nov.

Candidatus Catabella desupisca (NL. fem. n. *desupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3031 sp003485335*. The type genome for the species is the GenBank assembly GCA_003485335.1. The GC content of the type genome is 44.44 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Catabella gen. nov.

Candidatus Catabella (NL. fem. n. *Catabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3031*. The type species for the genus is *Candidatus* Catabella desupisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabellaceae.

Description of *Candidatus* Catabellaceae fam. nov.

Candidatus Catabellaceae (NL. fem. n. *Catabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3031.* The type genus for the taxon is *Candidatus* Catabella .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Catabella feditatio sp. nov.

Candidatus Catabella feditatio (NL. fem. n. *feditatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3031 sp002167745*. The type genome for the species is the GenBank assembly GCA_002167745.1. The GC content of the type genome is 44.12 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Catabella fuligitica sp. nov.

Candidatus Catabella fuligitica (NL. fem. n. *fuligitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3031 sp009886305*. The type genome for the species is the GenBank assembly GCA_009886305.1. The GC content of the type genome is 44.03 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Catabella maligedo sp. nov.

Candidatus Catabella maligedo (NL. fem. n. *maligedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3031 sp003483505*. The type genome for the species is the GenBank assembly GCA_003483505.1. The GC content of the type genome is 44.23 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Catabella tumefitrix sp. nov.

Candidatus Catabella tumefitrix (NL. fem. n. *tumefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3031 sp002367635*. The type genome for the species is the GenBank assembly GCA_002365775.1. The GC content of the type genome is 45.75 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Catabia camilitura sp. nov.

Candidatus Catabia camilitura (NL. fem. n. *camilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp002789895*. The type genome for the species is the GenBank assembly GCA_002770845.1. The GC content of the type genome is 42.93 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Catabia gen. nov.

Candidatus Catabia (NL. fem. n. *Catabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10133*. The type species for the genus is *Candidatus* Catabia camilitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MFAQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notabulaceae.

Description of *Candidatus* Catabia cohonatica sp. nov.

Candidatus Catabia cohonatica (NL. fem. n. *cohonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp001774685*. The type genome for the species is the GenBank assembly GCA_001774655.1. The GC content of the type genome is 44.95 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Catabia denomitudo sp. nov.

Candidatus Catabia denomitudo (NL. fem. n. *denomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp001001485*. The type genome for the species is the GenBank assembly GCA_001001635.1. The GC content of the type genome is 43.71 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Catabia inargessa sp. nov.

Candidatus Catabia inargessa (NL. fem. n. *inargessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp000998025*. The type genome for the species is the GenBank assembly GCA_000998025.1. The GC content of the type genome is 43.41 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Catabia sicinicula sp. nov.

Candidatus Catabia sicinicula (NL. fem. n. *sicinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp001000865*. The type genome for the species is the GenBank assembly GCA_001000865.1. The GC content of the type genome is 43.46 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Catabia solifivita sp. nov.

Candidatus Catabia solifivita (NL. fem. n. *solifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10133 sp003531665*. The type genome for the species is the GenBank assembly GCA_001000665.1. The GC content of the type genome is 44.02 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Catabosa bipenilenta sp. nov.

Candidatus Catabosa bipenilenta (NL. fem. n. *bipenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8905 sp002402795*. The type genome for the species is the GenBank assembly GCA_003501825.1. The GC content of the type genome is 40.92 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Catabosa gen. nov.

Candidatus Catabosa (NL. fem. n. *Catabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8905*. The type species for the genus is *Candidatus* Catabosa bipenilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catabula delebivita sp. nov.

Candidatus Catabula delebivita (NL. fem. n. *delebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3941 sp002385665*. The type genome for the species is the GenBank assembly GCA_002385665.1. The GC content of the type genome is 42.44 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Catabula gen. nov.

Candidatus Catabula (NL. fem. n. *Catabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3941*. The type species for the genus is *Candidatus* Catabula delebivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3941*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabulaceae.

Description of *Candidatus* Catabulaceae fam. nov.

Candidatus Catabulaceae (NL. fem. n. *Catabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3941.* The type genus for the taxon is *Candidatus* Catabula .

According to GTDB R06-RS202, this family belongs to the order *Caldicoprobacterales*.

Description of *Candidatus* Catabula innoxisca sp. nov.

Candidatus Catabula innoxisca (NL. fem. n. *innoxisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3941 sp012518535*. The type genome for the species is the GenBank assembly GCA_012518535.1. The GC content of the type genome is 43.33 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Catafana foricigena sp. nov.

Candidatus Catafana foricigena (NL. fem. n. *foricigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746425 sp002746425*. The type genome for the species is the GenBank assembly GCA_002746425.1. The GC content of the type genome is 50.47 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Catafana gen. nov.

Candidatus Catafana (NL. fem. n. *Catafana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746425*. The type species for the genus is *Candidatus* Catafana foricigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746425*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catafanaceae.

Description of *Candidatus* Catafanaceae fam. nov.

Candidatus Catafanaceae (NL. fem. n. *Catafanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746425.* The type genus for the taxon is *Candidatus* Catafana .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Catafaria tubicitas sp. nov.

Candidatus Catafaria tubicitas (NL. fem. n. *tubicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZJ293 sp011751725*. The type genome for the species is the GenBank assembly RS_GCF_011751725.1. The GC content of the type genome is 35.25 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Catafaria gen. nov.

Candidatus Catafaria (NL. fem. n. *Catafaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZJ293*. The type species for the genus is *Candidatus* Catafaria tubicitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catafella locupitica sp. nov.

Candidatus Catafella locupitica (NL. fem. n. *locupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMV01 sp903897855*. The type genome for the species is the GenBank assembly GCA_903895395.1. The GC content of the type genome is 39.83 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Catafella gen. nov.

Candidatus Catafella (NL. fem. n. *Catafella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINMV01*. The type species for the genus is *Candidatus* Catafella locupitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAINMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catafellaceae.

Description of *Candidatus* Catafellaceae fam. nov.

Candidatus Catafellaceae (NL. fem. n. *Catafellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINMV01*. The type genus for the taxon is *Candidatus* Catafella .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Catafella negotibra sp. nov.

Candidatus Catafella negotibra (NL. fem. n. *negotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMV01 sp903850915*. The type genome for the species is the GenBank assembly GCA_903900375.1. The GC content of the type genome is 37.09 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Catafella nehalitia sp. nov.

Candidatus Catafella nehalitia (NL. fem. n. *nehalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMV01 sp903910445*. The type genome for the species is the GenBank assembly GCA_903910445.1. The GC content of the type genome is 38.16 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Catafia hecatilega sp. nov.

Candidatus Catafia hecatilega (NL. fem. n. *hecatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-05a sp000981645*. The type genome for the species is the GenBank assembly GCA_002453235.1. The GC content of the type genome is 38.02 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Catafia gen. nov.

Candidatus Catafia (NL. fem. n. *Catafia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ASP10-05a*. The type species for the genus is *Candidatus* Catafia hecatilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UA16. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Catafia hegumigena sp. nov.

Candidatus Catafia hegumigena (NL. fem. n. *hegumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASP10-05a sp002336675*. The type genome for the species is the GenBank assembly GCA_002358805.1. The GC content of the type genome is 37.41 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Catafida forabicella sp. nov.

Candidatus Catafida forabicella (NL. fem. n. *forabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7930 sp003453535*. The type genome for the species is the GenBank assembly GCA_001508275.1. The GC content of the type genome is 66.08 % and the genome length is 2.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample SB1".

Description of *Candidatus* Catafida gen. nov.

Candidatus Catafida (NL. fem. n. *Catafida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7930*. The type species for the genus is *Candidatus* Catafida forabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Catafida venunicella sp. nov.

Candidatus Catafida venunicella (NL. fem. n. *venunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7930 sp011372845*. The type genome for the species is the GenBank assembly GCA_011372845.1. The GC content of the type genome is 66.57 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Catafosa cacalibula sp. nov.

Candidatus Catafosa cacalibula (NL. fem. n. *cacalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN34 sp002923395*. The type genome for the species is the GenBank assembly GCA_002923395.1. The GC content of the type genome is 30.74 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Catafosa gen. nov.

Candidatus Catafosa (NL. fem. n. *Catafosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN34*. The type species for the genus is *Candidatus* Catafosa cacalibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN34*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catafosaceae.

Description of *Candidatus* Catafosaceae fam. nov.

Candidatus Catafosaceae (NL. fem. n. *Catafosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN34.* The type genus for the taxon is *Candidatus* Catafosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Catafula denupitica sp. nov.

Candidatus Catafula denupitica (NL. fem. n. *denupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCYQ01 sp013290125*. The type genome for the species is the GenBank assembly GCA_013289595.1. The GC content of the type genome is 62.51 %

and the genome length is 2.91 Mbp.

Description of *Candidatus* Catafula gen. nov.

Candidatus Catafula (NL. fem. n. *Catafula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCYQ01*. The type species for the genus is *Candidatus* Catafula denupitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catagana obvalilenta sp. nov.

Candidatus Catagana obvalilenta (NL. fem. n. *obvalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin39 sp004376375*. The type genome for the species is the GenBank assembly GCA_004376375.1. The GC content of the type genome is 54.44 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Catagana gen. nov.

Candidatus Catagana (NL. fem. n. *Catagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin39*. The type species for the genus is *Candidatus* Catagana obvalilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cataganaceae.

Description of *Candidatus* Cataganaceae fam. nov.

Candidatus Cataganaceae (NL. fem. n. *Cataganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin39.* The type genus for the taxon is *Candidatus* Catagana .

According to the original version of GTDB R06-RS202, this family belongs to the order *E44-bin39*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Cataganales.

Description of *Candidatus* Cataganales ord. nov.

Candidatus Cataganales (NL. fem. n. *Cataganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin39.* The type genus for the taxon is *Candidatus* Catagana .

According to the original version of GTDB R06-RS202, this family belongs to the class *E44-bin39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cataganae.

Description of *Candidatus* Cataganae class. nov.

Candidatus Cataganae (NL. fem. n. *c__Cataganae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin39.* The type genus for the taxon is *Candidatus* Catagana .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Catagaria hibisicella sp. nov.

Candidatus Catagaria hibisicella (NL. fem. n. *hibisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTMQ01 sp011358805*. The type genome for the species is the GenBank assembly GCA_011358805.1. The GC content of the type genome is 44.26 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Catagaria gen. nov.

Candidatus Catagaria (NL. fem. n. *Catagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTMQ01*. The type species for the genus is *Candidatus* Catagaria hibisicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catagariaceae.

Description of *Candidatus* Catagariaceae fam. nov.

Candidatus Catagariaceae (NL. fem. n. *Catagariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTMQ01*. The type genus for the taxon is *Candidatus* Catagaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homulosales.

Description of *Candidatus* Catagella capudastra sp. nov.

Candidatus Catagella capudastra (NL. fem. n. *capudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITGV01 sp903892035*. The type genome for the species is the GenBank assembly GCA_903842285.1. The GC content of the type genome is 36.12 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Catagella gen. nov.

Candidatus Catagella (NL. fem. n. *Catagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITGV01*. The type species for the genus is *Candidatus* Catagella capudastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Catagia cacopivita sp. nov.

Candidatus Catagia cacopivita (NL. fem. n. *cacopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1032 sp002410505*. The type genome for the species is the GenBank assembly GCA_002316885.1. The GC content of the type genome is 47.52 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Catagia gen. nov.

Candidatus Catagia (NL. fem. n. *Catagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1032*. The type species for the genus is *Candidatus* Catagia cacopivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catagia diponilenta sp. nov.

Candidatus Catagia diponilenta (NL. fem. n. *diponilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1032 sp002412625*. The type genome for the species is the GenBank assembly GCA_002412625.1. The GC content of the type genome is 50.29 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Catagida obrigitrix sp. nov.

Candidatus Catagida obrigitrix (NL. fem. n. *obrigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW-4-49-11 sp003021915*. The type genome for the species is the GenBank assembly GCA_003021915.1. The GC content of the type genome is 49.36 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Catagida gen. nov.

Candidatus Catagida (NL. fem. n. *Catagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW-4-49-11*. The type species for the genus is *Candidatus* Catagida obrigitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SW-4-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catagidaceae.

Description of *Candidatus* Catagidaceae fam. nov.

Candidatus Catagidaceae (NL. fem. n. *Catagidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SW-4-49-11*. The type genus for the taxon is *Candidatus* Catagida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SW-4-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catagidales.

Description of *Candidatus* Catagidales ord. nov.

Candidatus Catagidales (NL. fem. n. *Catagidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SW-4-49-11*. The type genus for the taxon is *Candidatus* Catagida .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Catagosa bulapimonas sp. nov.

Candidatus Catagosa bulapimonas (NL. fem. n. *bulapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCB2 sp003577245*. The type genome for the species is the GenBank assembly GCA_003577245.1. The GC content of the type genome is 66.56 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Catagosa gen. nov.

Candidatus Catagosa (NL. fem. n. *Catagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UCB2*. The type species for the genus is *Candidatus* Catagosa bulapimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Catalaria cocodetta sp. nov.

Candidatus Catalaria cocodetta (NL. fem. n. *cocodetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA981 sp002292285*. The type genome for the species is the GenBank assembly GCA_002390245.1. The GC content of the type genome is 56.98 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Catalaria gen. nov.

Candidatus Catalaria (NL. fem. n. *Catalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA981*. The type species for the genus is *Candidatus* Catalaria cocodetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delebidaceae.

Description of *Candidatus* Catalella sonivitica sp. nov.

Candidatus Catalella sonivitica (NL. fem. n. *sonivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-50 sp014385105*. The type genome for the species is the GenBank assembly RS_GCF_900757245.1. The GC content of the type genome is 43.63 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Catalella gen. nov.

Candidatus Catalella (NL. fem. n. *Catalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-50*. The type species for the genus is *Candidatus* Catalella sonivitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1810*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonariaceae.

Description of *Candidatus* Catalia lavacentia sp. nov.

Candidatus Catalia lavacentia (NL. fem. n. *lavacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMS01 sp007132505*. The type genome for the species is the GenBank assembly GCA_007132505.1. The GC content of the type genome is 64.84 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Catalia gen. nov.

Candidatus Catalia (NL. fem. n. *Catalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMS01*. The type species for the genus is *Candidatus* Catalia lavacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLMS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cataliaceae.

Description of *Candidatus* Cataliaceae fam. nov.

Candidatus Cataliaceae (NL. fem. n. *Cataliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMS01.* The type genus for the taxon is *Candidatus* Catalia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLMS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cataliales.

Description of *Candidatus* Cataliales ord. nov.

Candidatus Cataliales (NL. fem. n. *Cataliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMS01.* The type genus for the taxon is *Candidatus* Catalia .

According to the GTDB R06-RS202, this order belongs to the class *Sumerlaeia*.

Description of *Candidatus* Catalia tumefilega sp. nov.

Candidatus Catalia tumefilega (NL. fem. n. *tumefilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMS01 sp007133495*. The type genome for the species is the GenBank assembly GCA_007133495.1. The GC content of the type genome is 64.82 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Catalida celametta sp. nov.

Candidatus Catalida celametta (NL. fem. n. *celametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-223 sp011053995*. The type genome for the species is the GenBank assembly GCA_011047725.1. The GC content of the type genome is 66.87 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Catalida gen. nov.

Candidatus Catalida (NL. fem. n. *Catalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-223*. The type species for the genus is *Candidatus* Catalida celametta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-223*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catalidaceae.

Description of *Candidatus* Catalidaceae fam. nov.

Candidatus Catalidaceae (NL. fem. n. *Catalidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-223.* The type genus for the taxon is *Candidatus* Catalida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-223*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catalidales.

Description of *Candidatus* Catalidales ord. nov.

Candidatus Catalidales (NL. fem. n. *Catalidales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-223.* The type genus for the taxon is *Candidatus* Catalida .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Catalosa relecicella sp. nov.

Candidatus Catalosa relecicella (NL. fem. n. *relecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1567 sp001872485*. The type genome for the species is the GenBank assembly GCA_001872485.1. The GC content of the type genome is 43.63 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Catalosa gen. nov.

Candidatus Catalosa (NL. fem. n. *Catalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1567*. The type species for the genus is *Candidatus* Catalosa relecicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catalula subabilenta sp. nov.

Candidatus Catalula subabilenta (NL. fem. n. *subabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin05 sp002897855*. The type genome for the species is the GenBank assembly GCA_002897855.1. The GC content of the type genome is 44.67 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Catalula gen. nov.

Candidatus Catalula (NL. fem. n. *Catalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Bbin05*. The type species for the genus is *Candidatus* Catalula subabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Bbin05*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catalulaceae.

Description of *Candidatus* Catalulaceae fam. nov.

Candidatus Catalulaceae (NL. fem. n. *Catalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Bbin05.* The type genus for the taxon is *Candidatus* Catalula .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Catapana cimelugo sp. nov.

Candidatus Catapana cimelugo (NL. fem. n. *cimelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-86 sp002011815*. The type genome for the species is the GenBank assembly GCA_002011815.1. The GC content of the type genome is 45.26 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Catapana gen. nov.

Candidatus Catapana (NL. fem. n. *Catapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-86*. The type species for the genus is *Candidatus* Catapana cimelugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapanaceae.

Description of *Candidatus* Catapanaceae fam. nov.

Candidatus Catapanaceae (NL. fem. n. *Catapanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-86.* The type genus for the taxon is *Candidatus* Catapana .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Cataparia attemiforma sp. nov.

Candidatus Cataparia attemiforma (NL. fem. n. *attemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715965 sp002715965*. The type genome for the species is the GenBank assembly GCA_002715965.1. The GC content of the type genome is 56.46 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Cataparia gen. nov.

Candidatus Cataparia (NL. fem. n. *Cataparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715965*. The type species for the genus is *Candidatus* Cataparia attemiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2715965*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapariaceae.

Description of *Candidatus* Catapariaceae fam. nov.

Candidatus Catapariaceae (NL. fem. n. *Catapariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2715965.* The type genus for the taxon is *Candidatus* Cataparia .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Catapella ancipastra sp. nov.

Candidatus Catapella ancipastra (NL. fem. n. *ancipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp002708935*. The type genome for the species is the GenBank assembly GCA_002708935.1. The GC content of the type genome is 52.97 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Catapella gen. nov.

Candidatus Catapella (NL. fem. n. *Catapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MedAcidi-G3*. The type species for the genus is *Candidatus* Catapella ancipastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Catapella appagessa sp. nov.

Candidatus Catapella appagessa (NL. fem. n. *appagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp002457435*. The type genome for the species is the GenBank assembly GCA_002457435.1. The GC content of the type genome is 52.99 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Catapella depopessa sp. nov.

Candidatus Catapella depopessa (NL. fem. n. *depopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp000817105*. The type genome for the species is the GenBank assembly GCA_002335965.1. The GC content of the type genome is 51.4 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Catapella lavacimonia sp. nov.

Candidatus Catapella lavacimonia (NL. fem. n. *lavacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp003445455*. The type genome for the species is the GenBank assembly GCA_003445455.1. The GC content of the type genome is 51.55 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Catapella lenimifica sp. nov.

Candidatus Catapella lenimifica (NL. fem. n. *lenimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp002722565*. The type genome for the species is the GenBank assembly GCA_002434645.1. The GC content of the type genome is 51.82 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Catapella milifimonia sp. nov.

Candidatus Catapella milifimonia (NL. fem. n. *milifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp004214275*. The type genome for the species is the GenBank assembly GCA_004214275.1. The GC content of the type genome is 52.75 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Catapella refunibula sp. nov.

Candidatus Catapella refunibula (NL. fem. n. *refunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G3 sp002713975*. The type genome for the species is the GenBank assembly GCA_002713975.1. The GC content of the type genome is 53.0 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Catapia adsifentia sp. nov.

Candidatus Catapia adsifentia (NL. fem. n. *adsifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp003194485*. The type genome for the species is the GenBank assembly GCA_003194485.1. The GC content of the type genome is 49.06 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Catapia gen. nov.

Candidatus Catapia (NL. fem. n. *Catapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3076*. The type species for the genus is *Candidatus* Catapia adsifentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3076*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapiaceae.

Description of *Candidatus* Catapiaceae fam. nov.

Candidatus Catapiaceae (NL. fem. n. *Catapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3076.* The type genus for the taxon is *Candidatus* Catapia .

According to GTDB R06-RS202, this family belongs to the order *Dissulfuribacterales*.

Description of *Candidatus* Catapia demagivita sp. nov.

Candidatus Catapia demagivita (NL. fem. n. *demagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp003194495*. The type genome for the species is the GenBank assembly GCA_003194495.1. The GC content of the type genome is 46.84 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Catapia lanigitas sp. nov.

Candidatus Catapia lanigitas (NL. fem. n. *lanigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp002367355*. The type genome for the species is the GenBank assembly GCA_002367355.1. The GC content of the type genome is 47.27 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Catapia lucelivita sp. nov.

Candidatus Catapia lucelivita (NL. fem. n. *lucelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp013138705*. The type genome for the species is the GenBank assembly GCA_013138705.1. The GC content of the type genome is 47.79 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Catapia opuscisca sp. nov.

Candidatus Catapia opuscisca (NL. fem. n. *opuscisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp003645605*. The type genome for the species is the GenBank assembly GCA_003645605.1. The GC content of the type genome is 46.56 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Catapia pedifimonia sp. nov.

Candidatus Catapia pedifimonia (NL. fem. n. *pedifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3076 sp011042225*. The type genome for the species is the GenBank assembly GCA_011042225.1. The GC content of the type genome is 45.75 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Catapida nosocitoga sp. nov.

Candidatus Catapida nosocitoga (NL. fem. n. *nosocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B12-G15 sp003646055*. The type genome for the species is the GenBank assembly GCA_003644995.1. The GC content of the type genome is 41.66 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Catapida gen. nov.

Candidatus Catapida (NL. fem. n. *Catapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B12-G15*. The type species for the genus is *Candidatus* Catapida nosocitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B12-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapidaceae.

Description of *Candidatus* Catapidaceae fam. nov.

Candidatus Catapidaceae (NL. fem. n. *Catapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B12-G15.* The type genus for the taxon is *Candidatus* Catapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tomogosales.

Description of *Candidatus* Cataposa subofimonas sp. nov.

Candidatus Cataposa subofimonas (NL. fem. n. *subofimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQCM01 sp903870305*. The type genome for the species is the GenBank assembly GCA_903876165.1. The GC content of the type genome is 53.45 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Cataposa gen. nov.

Candidatus Cataposa (NL. fem. n. *Cataposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQCM01*. The type species for the genus is *Candidatus* Cataposa subofimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQCM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cataposaceae.

Description of *Candidatus* Cataposaceae fam. nov.

Candidatus Cataposaceae (NL. fem. n. *Cataposaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQCM01.* The type genus for the taxon is *Candidatus* Cataposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Catapula fuligifica sp. nov.

Candidatus Catapula fuligifica (NL. fem. n. *fuligifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXQI01 sp008933045*. The type genome for the species is the GenBank assembly GCA_008933045.1. The GC content of the type genome is 52.1 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Catapula gen. nov.

Candidatus Catapula (NL. fem. n. *Catapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXQI01*. The type species for the genus is *Candidatus* Catapula fuligifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXQI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catapulaceae.

Description of *Candidatus* Catapulaceae fam. nov.

Candidatus Catapulaceae (NL. fem. n. *Catapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXQI01.* The type genus for the taxon is *Candidatus* Catapula .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Catapula monaciforma sp. nov.

Candidatus Catapula monaciforma (NL. fem. n. *monaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXQI01 sp005793025*. The type genome for the species is the GenBank assembly GCA_005800725.1. The GC content of the type genome is 51.31 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Catecaria caduritica sp. nov.

Candidatus Catecaria caduritica (NL. fem. n. *caduritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12049 sp001784155*. The type genome for the species is the GenBank assembly GCA_001782395.1. The GC content of the type genome is 40.37 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Catecaria gen. nov.

Candidatus Catecaria (NL. fem. n. *Catecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12049*. The type species for the genus is *Candidatus* Catecaria caduritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Catecariaceae fam. nov.

Candidatus Catecariaceae (NL. fem. n. *Catecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12049.* The type genus for the taxon is *Candidatus* Catecaria .

According to GTDB R06-RS202, this family belongs to the order *Levybacterales*.

Description of *Candidatus* Catecia mimogatica sp. nov.

Candidatus Catecia mimogatica (NL. fem. n. *mimogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-557 sp000435275*. The type genome for the species is the GenBank assembly GCA_900552535.1. The GC content of the type genome is 34.34 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Catecia gen. nov.

Candidatus Catecia (NL. fem. n. *Catecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-557*. The type species for the genus is *Candidatus* Catecia mimogatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catecida hexapatica sp. nov.

Candidatus Catecida hexapatica (NL. fem. n. *hexapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQPS01 sp903873715*. The type genome for the species is the GenBank assembly GCA_903887145.1. The GC content of the type genome is 66.95 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Catecida gen. nov.

Candidatus Catecida (NL. fem. n. *Catecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQPS01*. The type species for the genus is *Candidatus* Catecida hexapatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demululaceae.

Description of *Candidatus* Catecosa admodousia sp. nov.

Candidatus Catecosa admodousia (NL. fem. n. *admodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG591 sp902797275*. The type genome for the species is the GenBank assembly GCA_902797275.1. The GC content of the type genome is 23.87 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Catecosa gen. nov.

Candidatus Catecosa (NL. fem. n. *Catecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG591*. The type species for the genus is *Candidatus* Catecosa admodousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Catecosa expasimonas sp. nov.

Candidatus Catecosa expasimonas (NL. fem. n. *expasimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG591 sp902782915*. The type genome for the species is the GenBank assembly GCA_902782915.1. The GC content of the type genome is 24.58 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Catecosa selibicula sp. nov.

Candidatus Catecosa selibicula (NL. fem. n. *selibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG591 sp900320425*. The type genome for the species is the GenBank assembly GCA_902782525.1. The GC content of the type genome is 24.54 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Catecula catafessa sp. nov.

Candidatus Catecula catafessa (NL. fem. n. *catafessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8087 sp002684315*. The type genome for the species is the GenBank assembly GCA_002684315.1. The GC content of the type genome is 59.18 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Catecula gen. nov.

Candidatus Catecula (NL. fem. n. *Catecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8087*. The type species for the genus is *Candidatus* Catecula catafessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Catecula minagatio sp. nov.

Candidatus Catecula minagatio (NL. fem. n. *minagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8087 sp002709755*. The type genome for the species is the GenBank assembly GCA_002709755.1. The GC content of the type genome is 59.93 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Catecula recomitas sp. nov.

Candidatus Catecula recomitas (NL. fem. n. *recomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8087 sp902521645*. The type genome for the species is the GenBank assembly RS_GCF_902521645.1. The GC content of the type genome is 58.48 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Catecula saburiforma sp. nov.

Candidatus Catecula saburiforma (NL. fem. n. *saburiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8087 sp002171655*. The type genome for the species is the GenBank assembly GCA_002691635.1. The GC content of the type genome is 58.95 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Catecula tiguritica sp. nov.

Candidatus Catecula tiguritica (NL. fem. n. *tiguritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8087 sp002862305*. The type genome for the species is the GenBank assembly GCA_002862305.1. The GC content of the type genome is 68.02 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Categana accucastra sp. nov.

Candidatus Categana accucastra (NL. fem. n. *accucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-49-11 sp001794905*. The type genome for the species is the GenBank assembly GCA_001794905.1. The GC content of the type genome is 48.45 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Categana gen. nov.

Candidatus Categana (NL. fem. n. *Categana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-49-11*. The type species for the genus is *Candidatus* Categana accucastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categanaceae.

Description of *Candidatus* Categanaceae fam. nov.

Candidatus Categanaceae (NL. fem. n. *Categanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *2-12-FULL-49-11.* The type genus for the taxon is *Candidatus* Categana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Categanales.

Description of *Candidatus* Categanales ord. nov.

Candidatus Categanales (NL. fem. n. *Categanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-49-11.* The type genus for the taxon is *Candidatus* Categana .

According to the GTDB R06-RS202, this order belongs to the class *Chlamydiia*.

Description of *Candidatus* Categella bisacatio sp. nov.

Candidatus Categella bisacatio (NL. fem. n. *bisacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV133 sp003219265*. The type genome for the species is the GenBank assembly GCA_003220095.1. The GC content of the type genome is 56.23 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Categella gen. nov.

Candidatus Categella (NL. fem. n. *Categella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV133*. The type species for the genus is *Candidatus* Categella bisacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Categia adsecicula sp. nov.

Candidatus Categia adsecicula (NL. fem. n. *adsecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10212 sp001790525*. The type genome for the species is the GenBank assembly GCA_001790525.1. The GC content of the type genome is 46.63 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Categia gen. nov.

Candidatus Categia (NL. fem. n. *Categia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10212*. The type species for the genus is *Candidatus* Categia adsecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categiaceae.

Description of *Candidatus* Categiaceae fam. nov.

Candidatus Categiaceae (NL. fem. n. *Categiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10212.* The type genus for the taxon is *Candidatus* Categia .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Categia socagitica sp. nov.

Candidatus Categia socagitica (NL. fem. n. *socagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10212 sp001790575*. The type genome for the species is the GenBank assembly GCA_003545255.1. The GC content of the type genome is 46.98 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Categida adsicatio sp. nov.

Candidatus Categida adsicatio (NL. fem. n. *adsicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S36-B12 sp012103605*. The type genome for the species is the GenBank assembly GCA_012103605.1. The GC content of the type genome is 62.43 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Categida gen. nov.

Candidatus Categida (NL. fem. n. *Categida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S36-B12*. The type species for the genus is *Candidatus* Categida adsicatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Categidaceae fam. nov.

Candidatus Categidaceae (NL. fem. n. *Categidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *S36-B12.* The type genus for the taxon is *Candidatus* Categida .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Categida cosiditudo sp. nov.

Candidatus Categida cosiditudo (NL. fem. n. *cosiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S36-B12 sp002729215*. The type genome for the species is the GenBank assembly GCA_002323875.1. The GC content of the type genome is 62.44 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Categida fiducitudo sp. nov.

Candidatus Categida fiducitudo (NL. fem. n. *fiducitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *S36-B12 sp010029945*. The type genome for the species is the GenBank assembly GCA_010026005.1. The GC content of the type genome is 62.58 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Categida momoritia sp. nov.

Candidatus Categida momoritia (NL. fem. n. *momoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S36-B12 sp002728915*. The type genome for the species is the GenBank assembly GCA_002728915.1. The GC content of the type genome is 62.45 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Categida semibax sp. nov.

Candidatus Categida semibax (NL. fem. n. *semibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S36-B12 sp002694095*. The type genome for the species is the GenBank assembly GCA_002359715.1. The GC content of the type genome is 62.6 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Categosa vinulitura sp. nov.

Candidatus Categosa vinulitura (NL. fem. n. *vinulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-48-10 sp002771615*. The type genome for the species is the GenBank assembly GCA_002793255.1. The GC content of the type genome is 48.57 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Categosa gen. nov.

Candidatus Categosa (NL. fem. n. *Categosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-48-10*. The type species for the genus is *Candidatus* Categosa vinulitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-48-10*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Categosaceae.

Description of *Candidatus* Categosaceae fam. nov.

Candidatus Categosaceae (NL. fem. n. *Categosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-48-10.* The type genus for the taxon is *Candidatus* Categosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Categula citivicula sp. nov.

Candidatus Categula citivicula (NL. fem. n. *citivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJR01 sp013003415*. The type genome for the species is the GenBank assembly GCA_013003415.1. The GC content of the type genome is 55.22 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Categula gen. nov.

Candidatus Categula (NL. fem. n. *Categula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJR01*. The type species for the genus is *Candidatus* Categula citivicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDJR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categulaceae.

Description of *Candidatus* Categulaceae fam. nov.

Candidatus Categulaceae (NL. fem. n. *Categulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJR01.* The type genus for the taxon is *Candidatus* Categula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDJR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Categulales.

Description of *Candidatus* Categulales ord. nov.

Candidatus Categulales (NL. fem. n. *Categulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJR01*. The type genus for the taxon is *Candidatus* Categula .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonabidae.

Description of *Candidatus* Catelliglobosispora halucicella sp. nov.

Candidatus Catelliglobosispora halucicella (NL. fem. n. *halucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catelliglobosispora sp003543035*. The type genome for the species is the GenBank assembly GCA_003543015.1. The GC content of the type genome is 64.18 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Catenibacillus benemifica sp. nov.

Candidatus Catenibacillus benemifica (NL. fem. n. *benemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacillus sp900557175*. The type genome for the species is the GenBank assembly RS_GCF_900759215.1. The GC content of the type genome is 43.07 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Catenibacillus citipisca sp. nov.

Candidatus Catenibacillus citipisca (NL. fem. n. *citipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacillus sp902363555*. The type genome for the species is the

GenBank assembly RS_GCF_902363555.1. The GC content of the type genome is 47.45 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Catenibacillus horomilega sp. nov.

Candidatus Catenibacillus horomilega (NL. fem. n. *horomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacillus sp900553975*. The type genome for the species is the GenBank assembly GCA_900553975.1. The GC content of the type genome is 43.49 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Catenibacterium celamax sp. nov.

Candidatus Catenibacterium celamax (NL. fem. n. *celamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacterium sp900764725*. The type genome for the species is the GenBank assembly GCA_900764725.1. The GC content of the type genome is 34.18 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Catenibacterium devecessa sp. nov.

Candidatus Catenibacterium devecessa (NL. fem. n. *devecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacterium sp900540685*. The type genome for the species is the GenBank assembly GCA_900540685.1. The GC content of the type genome is 34.06 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Catenibacterium exorcitudo sp. nov.

Candidatus Catenibacterium exorcitudo (NL. fem. n. *exorcitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacterium sp900540665*. The type genome for the species is the GenBank assembly GCA_900540665.1. The GC content of the type genome is 33.87 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Catenibacterium femelago sp. nov.

Candidatus Catenibacterium femelago (NL. fem. n. *femelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacterium sp900764565*. The type genome for the species is the GenBank assembly GCA_900764565.1. The GC content of the type genome is 34.04 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Catenibacterium regifivita sp. nov.

Candidatus Catenibacterium regifivita (NL. fem. n. *regifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenibacterium sp000437715*. The type genome for the species is the GenBank assembly RS_GCF_009881245.1. The GC content of the type genome is 35.21 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Catenulispora epogdisca sp. nov.

Candidatus Catenulispora epogdisca (NL. fem. n. *epogdisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenulispora sp013362315*. The type genome for the species is the GenBank assembly GCA_013362315.1. The GC content of the type genome is 70.66 % and the genome length is 7.97 Mbp.

Description of *Candidatus* Catenulispora inabritura sp. nov.

Candidatus Catenulispora inabritura (NL. fem. n. *inabritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catenulispora sp013361685*. The type genome for the species is the GenBank assembly GCA_013361685.1. The GC content of the type genome is 70.92 % and the genome length is 9.53 Mbp.

Description of *Candidatus* Catilaria acrifastra sp. nov.

Candidatus Catilaria acrifastra (NL. fem. n. *acrifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903876465*. The type genome for the species is the GenBank assembly GCA_903876465.1. The GC content of the type genome is 39.55 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Catilaria gen. nov.

Candidatus Catilaria (NL. fem. n. *Catilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C7867-002*. The type species for the genus is *Candidatus* Catilaria acrifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colutulaceae.

Description of *Candidatus* Catilaria armifetta sp. nov.

Candidatus Catilaria armifetta (NL. fem. n. *armifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp002413065*. The type genome for the species is the GenBank assembly GCA_002413065.1. The GC content of the type genome is 45.36 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Catilaria cimititio sp. nov.

Candidatus Catilaria cimititio (NL. fem. n. *cimititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903846945*. The type genome for the species is the GenBank assembly GCA_903833515.1. The GC content of the type genome is 43.38 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Catilaria cohonitudo sp. nov.

Candidatus Catilaria cohonitudo (NL. fem. n. *cohonitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp003170325*. The type genome for the species is the GenBank assembly GCA_003170325.1. The GC content of the type genome is 49.21 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Catilaria coninitura sp. nov.

Candidatus Catilaria coninitura (NL. fem. n. *coninitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903842025*. The type genome for the species is the GenBank assembly GCA_903837745.1. The GC content of the type genome is 45.58 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Catilaria conipisca sp. nov.

Candidatus Catilaria conipisca (NL. fem. n. *conipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903900935*. The type genome for the species is the GenBank assembly GCA_903900935.1. The GC content of the type genome is 38.83 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Catilaria decinessa sp. nov.

Candidatus Catilaria decinessa (NL. fem. n. *decinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903826185*. The type genome for the species is the GenBank assembly GCA_903826185.1. The GC content of the type genome is 45.93 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Catilaria delebax sp. nov.

Candidatus Catilaria delebax (NL. fem. n. *delebax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp001821055*. The type genome for the species is the GenBank assembly GCA_001822495.1. The GC content of the type genome is 44.44 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Catilaria denicisca sp. nov.

Candidatus Catilaria denicisca (NL. fem. n. *denicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903839725*. The type genome for the species is the GenBank assembly GCA_903820715.1. The GC content of the type genome is 41.23 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Catilaria depetitudo sp. nov.

Candidatus Catilaria depetitudo (NL. fem. n. *depetitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903870235*. The type genome for the species is the GenBank assembly GCA_903870235.1. The GC content of the type genome is 42.63 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Catilaria domabetta sp. nov.

Candidatus Catilaria domabetta (NL. fem. n. *domabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903837075*. The type genome for the species is the GenBank assembly GCA_903837075.1. The GC content of the type genome is 44.87 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Catilaria domabifica sp. nov.

Candidatus Catilaria domabifica (NL. fem. n. *domabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903872035*. The type genome for the species is the GenBank assembly GCA_903874165.1. The GC content of the type genome is 46.57 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Catilaria inaccentia sp. nov.

Candidatus Catilaria inaccentia (NL. fem. n. *inaccentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903825415*. The type genome for the species is the GenBank assembly GCA_903825415.1. The GC content of the type genome is 46.19 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Catilaria lupanitura sp. nov.

Candidatus Catilaria lupanitura (NL. fem. n. *lupanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903902315*. The type genome for the species is the GenBank assembly GCA_903821965.1. The GC content of the type genome is 39.22 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Catilaria notacastra sp. nov.

Candidatus Catilaria notacastra (NL. fem. n. *notacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903905325*. The type genome for the species is the GenBank assembly GCA_903905325.1. The GC content of the type genome is 39.72 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Catilaria obtunousia sp. nov.

Candidatus Catilaria obtunousia (NL. fem. n. *obtunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903864905*. The type genome for the species is the GenBank assembly GCA_903864905.1. The GC content of the type genome is 38.87 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Catilaria sifunicella sp. nov.

Candidatus Catilaria sifunicella (NL. fem. n. *sifunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp001822575*. The type genome for the species is the GenBank assembly GCA_001821095.1. The GC content of the type genome is 43.97 % and the genome length is 0.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Catilaria sonabitica sp. nov.

Candidatus Catilaria sonabitica (NL. fem. n. *sonabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903870315*. The type genome for the species is the GenBank assembly GCA_903819545.1. The GC content of the type genome is 41.57 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Catilaria tenililenta sp. nov.

Candidatus Catilaria tenililenta (NL. fem. n. *tenililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp903868845*. The type genome for the species is the GenBank assembly GCA_903868845.1. The GC content of the type genome is 41.55 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Catilaria tomacitrix sp. nov.

Candidatus Catilaria tomacitrix (NL. fem. n. *tomacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-002 sp001189105*. The type genome for the species is the GenBank assembly GCA_001189105.1. The GC content of the type genome is 44.15 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Catilella notabivita sp. nov.

Candidatus Catilella notabivita (NL. fem. n. *notabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5122 sp002415485*. The type genome for the species is the GenBank assembly GCA_002415485.1. The GC content of the type genome is 55.03 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Catilella gen. nov.

Candidatus Catilella (NL. fem. n. *Catilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5122*. The type species for the genus is *Candidatus* Catilella notabivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catilida adcesimonia sp. nov.

Candidatus Catilida adcesimonia (NL. fem. n. *adcesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLA2 sp011525755*. The type genome for the species is the GenBank assembly GCA_011525755.1. The GC content of the type genome is 71.82 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Catilida gen. nov.

Candidatus Catilida (NL. fem. n. *Catilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLA2*. The type species for the genus is *Candidatus* Catilida adcesimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PLA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catilidaceae.

Description of *Candidatus* Catilidaceae fam. nov.

Candidatus Catilidaceae (NL. fem. n. *Catilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *PLA2.* The type genus for the taxon is *Candidatus* Catilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *PLA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catilidales.

Description of *Candidatus* Catilidales ord. nov.

Candidatus Catilidales (NL. fem. n. *Catilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PLA2.* The type genus for the taxon is *Candidatus* Catilida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Didacellae.

Description of *Candidatus* Catilosa bipalitas sp. nov.

Candidatus Catilosa bipalitas (NL. fem. n. *bipalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIULA01 sp903899945*. The type genome for the species is the GenBank assembly GCA_009921595.1. The GC content of the type genome is 39.54 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Catilosa gen. nov.

Candidatus Catilosa (NL. fem. n. *Catilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIULA01*. The type species for the genus is *Candidatus* Catilosa bipalitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11393*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifanaceae.

Description of *Candidatus* Catilula biverilenta sp. nov.

Candidatus Catilula biverilenta (NL. fem. n. *biverilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PB-SRB1 sp003500125*. The type genome for the species is the GenBank assembly GCA_000495595.1. The GC content of the type genome is 54.49 % and the genome length is 3.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pink berry consortia from the Sippewissett salt marsh".

Description of *Candidatus* Catilula gen. nov.

Candidatus Catilula (NL. fem. n. *Catilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PB-SRB1*. The type species for the genus is *Candidatus* Catilula biverilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catobana inhonago sp. nov.

Candidatus Catobana inhonago (NL. fem. n. *inhonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISOG01 sp903887035*. The type genome for the species is the GenBank assembly GCA_903887035.1. The GC content of the type genome is 56.73 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Catobana gen. nov.

Candidatus Catobana (NL. fem. n. *Catobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISOG01*. The type species for the genus is *Candidatus* Catobana inhonago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAISOG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobanaceae.

Description of *Candidatus* Catobanaceae fam. nov.

Candidatus Catobanaceae (NL. fem. n. *Catobanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISOG01*. The type genus for the taxon is *Candidatus* Catobana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAISOG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catobanales.

Description of *Candidatus* Catobanales ord. nov.

Candidatus Catobanales (NL. fem. n. *Catobanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISOG01*. The type genus for the taxon is *Candidatus* Catobana .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Catobaria abmatimonas sp. nov.

Candidatus Catobaria abmatimonas (NL. fem. n. *abmatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003244145*. The type genome for the species is the GenBank assembly GCA_003244145.1. The GC content of the type genome is 58.43 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Catobaria gen. nov.

Candidatus Catobaria (NL. fem. n. *Catobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV80*. The type species for the genus is *Candidatus* Catobaria abmatimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Catobaria homolitio sp. nov.

Candidatus Catobaria homolitio (NL. fem. n. *homolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003169695*. The type genome for the species is the GenBank assembly GCA_003169695.1. The GC content of the type genome is 57.16 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Catobaria intoretta sp. nov.

Candidatus Catobaria intoretta (NL. fem. n. *intoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003218305*. The type genome for the species is the GenBank assembly GCA_003218305.1. The GC content of the type genome is 58.97 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Catobaria nocumessa sp. nov.

Candidatus Catobaria nocumessa (NL. fem. n. *nocumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003167555*. The type genome for the species is the GenBank assembly GCA_003134735.1. The GC content of the type genome is 58.58 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Catobaria pavimitrix sp. nov.

Candidatus Catobaria pavimitrix (NL. fem. n. *pavimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003134785*. The type genome for the species is the GenBank assembly GCA_003134785.1. The GC content of the type genome is 57.81 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Catobaria pedepitas sp. nov.

Candidatus Catobaria pedepitas (NL. fem. n. *pedepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003134765*. The type genome for the species is the GenBank assembly GCA_003169855.1. The GC content of the type genome is 58.66 % and the

genome length is 4.33 Mbp.

Description of *Candidatus* Catobaria resupastra sp. nov.

Candidatus Catobaria resupastra (NL. fem. n. *resupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV80 sp003218375*. The type genome for the species is the GenBank assembly GCA_003218375.1. The GC content of the type genome is 58.82 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Catobia semibitas sp. nov.

Candidatus Catobia semibitas (NL. fem. n. *semibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3924 sp002385985*. The type genome for the species is the GenBank assembly GCA_002385985.1. The GC content of the type genome is 64.09 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Catobia gen. nov.

Candidatus Catobia (NL. fem. n. *Catobia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3924*. The type species for the genus is *Candidatus* Catobia semibitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catobida labecibula sp. nov.

Candidatus Catobida labecibula (NL. fem. n. *labecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1930 sp002337145*. The type genome for the species is the GenBank assembly GCA_002322745.1. The GC content of the type genome is 42.42 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Catobida gen. nov.

Candidatus Catobida (NL. fem. n. *Catobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1930*. The type species for the genus is *Candidatus* Catobida labecibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catobida paracilenta sp. nov.

Candidatus Catobida paracilenta (NL. fem. n. *paracilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1930 sp004028795*. The type genome for the species is the GenBank assembly GCA_013823265.1. The GC content of the type genome is 34.46 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Catobula detoritas sp. nov.

Candidatus Catobula detoritas (NL. fem. n. *detoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-52-15 sp001818365*. The type genome for the species is the GenBank assembly GCA_001818395.1. The GC content of the type genome is 52.37 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Catobula gen. nov.

Candidatus Catobula (NL. fem. n. *Catobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-52-15*. The type species for the genus is *Candidatus* Catobula detoritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-52-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobulaceae.

Description of *Candidatus* Catobulaceae fam. nov.

Candidatus Catobulaceae (NL. fem. n. *Catobulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-52-15*. The type genus for the taxon is *Candidatus* Catobula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugivellales.

Description of *Candidatus* Catocana adcesitia sp. nov.

Candidatus Catocana adcesitia (NL. fem. n. *adcesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp013373595*. The type genome for the species is the GenBank assembly GCA_013373595.1. The GC content of the type genome is 40.94 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Catocana gen. nov.

Candidatus Catocana (NL. fem. n. *Catocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4466*. The type species for the genus is *Candidatus* Catocana adcesitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catocana advoritrix sp. nov.

Candidatus Catocana advoritrix (NL. fem. n. *advoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp003149635*. The type genome for the species is the GenBank assembly GCA_003149635.1. The GC content of the type genome is 42.78 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Catocana depopax sp. nov.

Candidatus Catocana depopax (NL. fem. n. *depopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002389415*. The type genome for the species is the GenBank assembly GCA_002389415.1. The GC content of the type genome is 35.31 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Catocana immedatica sp. nov.

Candidatus Catocana immedatica (NL. fem. n. *immedatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002471375*. The type genome for the species is the GenBank assembly GCA_002471375.1. The GC content of the type genome is 39.1 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Catocana inorditia sp. nov.

Candidatus Catocana inorditia (NL. fem. n. *inorditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002734065*. The type genome for the species is the GenBank assembly GCA_002734065.1. The GC content of the type genome is 36.97 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Catocana lutulisca sp. nov.

Candidatus Catocana lutulisca (NL. fem. n. *lutulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp013215515*. The type genome for the species is the GenBank assembly GCA_013215515.1. The GC content of the type genome is 37.6 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Catocana nicomibula sp. nov.

Candidatus Catocana nicomibula (NL. fem. n. *nicomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002709305*. The type genome for the species is the GenBank assembly GCA_002709305.1. The GC content of the type genome is 32.5 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Catocana omnimimonas sp. nov.

Candidatus Catocana omnimimonas (NL. fem. n. *omnimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002427735*. The type genome for the species is the GenBank assembly GCA_002427735.1. The GC content of the type genome is 39.99 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Catocana rarefimonas sp. nov.

Candidatus Catocana rarefimonas (NL. fem. n. *rarefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4466 sp002733985*. The type genome for the species is the GenBank assembly GCA_013214785.1. The GC content of the type genome is 38.39 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Catocaria senipessa sp. nov.

Candidatus Catocaria senipessa (NL. fem. n. *senipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA124 sp003225075*. The type genome for the species is the GenBank assembly GCA_003225035.1. The GC content of the type genome is 55.57 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Catocaria gen. nov.

Candidatus Catocaria (NL. fem. n. *Catocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA124*. The type species for the genus is *Candidatus* Catocaria senipessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catocaria triscastra sp. nov.

Candidatus Catocaria triscastra (NL. fem. n. *triscastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA124 sp003225595*. The type genome for the species is the GenBank assembly GCA_003225595.1. The GC content of the type genome is 56.48 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Catocella benemitudo sp. nov.

Candidatus Catocella benemitudo (NL. fem. n. *benemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH-AL1 sp009765775*. The type genome for the species is the GenBank assembly RS_GCF_009765775.1. The GC content of the type genome is 63.75 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Catocella gen. nov.

Candidatus Catocella (NL. fem. n. *Catocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RH-AL1*. The type species for the genus is *Candidatus* Catocella benemitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Catocella reforessa sp. nov.

Candidatus Catocella reforessa (NL. fem. n. *reforessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH-AL1 sp901457705*. The type genome for the species is the GenBank assembly RS_GCF_901457695.1. The GC content of the type genome is 68.4 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Catocia bimetilenta sp. nov.

Candidatus Catocia bimetilenta (NL. fem. n. *bimetilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDJ01 sp013287645*. The type genome for the species is the GenBank assembly GCA_013287645.1. The GC content of the type genome is 40.39 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Catocia gen. nov.

Candidatus Catocia (NL. fem. n. *Catocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDJ01*. The type species for the genus is *Candidatus* Catocia bimetilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDDJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catociaceae.

Description of *Candidatus* Catociaceae fam. nov.

Candidatus Catociaceae (NL. fem. n. *Catociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDDJ01.* The type genus for the taxon is *Candidatus* Catocia .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Catocida notacicula sp. nov.

Candidatus Catocida notacicula (NL. fem. n. *notacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDQ01 sp903847465*. The type genome for the species is the GenBank assembly GCA_903847465.1. The GC content of the type genome is 39.73 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Catocida gen. nov.

Candidatus Catocida (NL. fem. n. *Catocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINDQ01*. The type species for the genus is *Candidatus* Catocida notacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Catocosa rarefitica sp. nov.

Candidatus Catocosa rarefitica (NL. fem. n. *rarefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBRS01 sp903958115*. The type genome for the species is the GenBank assembly GCA_903958115.1. The GC content of the type genome is 40.13 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Catocosa gen. nov.

Candidatus Catocosa (NL. fem. n. *Catocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBRS01*. The type species for the genus is *Candidatus* Catocosa rarefitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBRS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catocosaceae.

Description of *Candidatus* Catocosaceae fam. nov.

Candidatus Catocosaceae (NL. fem. n. *Catocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJBRS01.* The type genus for the taxon is *Candidatus* Catocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Catocula agrapitas sp. nov.

Candidatus Catocula agrapitas (NL. fem. n. *agrapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEMY01 sp009711825*. The type genome for the species is the GenBank assembly GCA_009711825.1. The GC content of the type genome is 50.55 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Catocula gen. nov.

Candidatus Catocula (NL. fem. n. *Catocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEMY01*. The type species for the genus is *Candidatus* Catocula agrapitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VEMY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catoculaceae.

Description of *Candidatus* Catoculaceae fam. nov.

Candidatus Catoculaceae (NL. fem. n. *Catoculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VEMY01.* The type genus for the taxon is *Candidatus* Catocula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Saxopellales.

Description of *Candidatus* Catonella adorditio sp. nov.

Candidatus Catonella adorditio (NL. fem. n. *adorditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catonella sp902783375*. The type genome for the species is the GenBank assembly GCA_902783375.1. The GC content of the type genome is 53.39 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Catonella omnigastra sp. nov.

Candidatus Catonella omnigastra (NL. fem. n. *omnigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catonella sp902796595*. The type genome for the species is the GenBank assembly GCA_902796595.1. The GC content of the type genome is 40.23 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Catonella peripitia sp. nov.

Candidatus Catonella peripitia (NL. fem. n. *peripitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Catonella sp900314885*. The type genome for the species is the GenBank assembly GCA_902788285.1. The GC content of the type genome is 44.14 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Caulobacter abambousia sp. nov.

Candidatus Caulobacter abambousia (NL. fem. n. *abambousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp000426025*. The type genome for the species is the GenBank assembly RS_GCF_000426025.1. The GC content of the type genome is 68.64 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Caulobacter abluvivita sp. nov.

Candidatus Caulobacter abluvivita (NL. fem. n. *abluvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp003185805*. The type genome for the species is the GenBank assembly RS_GCF_003185805.1. The GC content of the type genome is 68.99 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Caulobacter aglasibula sp. nov.

Candidatus Caulobacter aglasibula (NL. fem. n. *aglasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp000019145*. The type genome for the species is the GenBank assembly RS_GCF_000019145.1. The GC content of the type genome is 67.35 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Caulobacter bicipitura sp. nov.

Candidatus Caulobacter bicipitura (NL. fem. n. *bicipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002280875*. The type genome for the species is the GenBank assembly GCA_002279625.1. The GC content of the type genome is 66.72 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Caulobacter bigarilenta sp. nov.

Candidatus Caulobacter bigarilenta (NL. fem. n. *bigarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002742625*. The type genome for the species is the GenBank assembly RS_GCF_002742625.1. The GC content of the type genome is 67.38 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Caulobacter cacopifica sp. nov.

Candidatus Caulobacter cacopifica (NL. fem. n. *cacopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp011045195*. The type genome for the species is the GenBank assembly RS_GCF_011045195.1. The GC content of the type genome is 68.11 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Caulobacter cenodibra sp. nov.

Candidatus Caulobacter cenodibra (NL. fem. n. *cenodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Caulobacter sp001556515*. The type genome for the species is the GenBank assembly RS_GCF_001556515.1. The GC content of the type genome is 67.67 % and the genome length is 4.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Caulobacter cinipitura sp. nov.

Candidatus Caulobacter cinipitura (NL. fem. n. *cinipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp001426905*. The type genome for the species is the GenBank assembly RS_GCF_001427165.1. The GC content of the type genome is 68.66 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Caulobacter cituvibula sp. nov.

Candidatus Caulobacter cituvibula (NL. fem. n. *cituvibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp003116815*. The type genome for the species is the GenBank assembly RS_GCF_003116815.1. The GC content of the type genome is 68.68 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Caulobacter conabitoga sp. nov.

Candidatus Caulobacter conabitoga (NL. fem. n. *conabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp004144935*. The type genome for the species is the GenBank assembly GCA_004144935.1. The GC content of the type genome is 69.07 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Caulobacter derunigena sp. nov.

Candidatus Caulobacter derunigena (NL. fem. n. *derunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp003060965*. The type genome for the species is the GenBank assembly RS_GCF_003061125.1. The GC content of the type genome is 66.69

% and the genome length is 3.92 Mbp.

Description of *Candidatus* Caulobacter desorentia sp. nov.

Candidatus Caulobacter desorentia (NL. fem. n. *desorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002737755*. The type genome for the species is the GenBank assembly RS_GCF_002737755.1. The GC content of the type genome is 66.73 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Caulobacter echidivita sp. nov.

Candidatus Caulobacter echidivita (NL. fem. n. *echidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp903889785*. The type genome for the species is the GenBank assembly GCA_903889785.1. The GC content of the type genome is 63.36 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Caulobacter enimvitura sp. nov.

Candidatus Caulobacter enimvitura (NL. fem. n. *enimvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp004342605*. The type genome for the species is the GenBank assembly RS_GCF_004342605.1. The GC content of the type genome is 68.78 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Caulobacter funivibra sp. nov.

Candidatus Caulobacter funivibra (NL. fem. n. *funivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp000799245*. The type genome for the species is the GenBank assembly RS_GCF_001425725.1. The GC content of the type genome is 68.08 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Caulobacter hecatousia sp. nov.

Candidatus Caulobacter hecatousia (NL. fem. n. *hecatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002742645*. The type genome for the species is the GenBank assembly RS_GCF_002742645.2. The GC content of the type genome is 66.71 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Caulobacter homicentia sp. nov.

Candidatus Caulobacter homicentia (NL. fem. n. *homicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp014378155*. The type genome for the species is the GenBank assembly GCA_014378155.1. The GC content of the type genome is 66.97 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Caulobacter illapimonia sp. nov.

Candidatus Caulobacter illapimonia (NL. fem. n. *illapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002737765*. The type genome for the species is the GenBank assembly RS_GCF_002737765.1. The GC content of the type genome is 67.5 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Caulobacter inmemugo sp. nov.

Candidatus Caulobacter inmemugo (NL. fem. n. *inmemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp011043625*. The type genome for the species is the GenBank assembly RS_GCF_011043625.1. The GC content of the type genome is 69.34 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Caulobacter inrepax sp. nov.

Candidatus Caulobacter inrepax (NL. fem. n. *inrepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp014207215*. The type genome for the species is the GenBank assembly RS_GCF_014207215.1. The GC content of the type genome is 67.75 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Caulobacter insusicula sp. nov.

Candidatus Caulobacter insusicula (NL. fem. n. *insusicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp002742635*. The type genome for the species is the GenBank assembly RS_GCF_002742635.1. The GC content of the type genome is 67.66 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Caulobacter labecitia sp. nov.

Candidatus Caulobacter labecitia (NL. fem. n. *labecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp000712075*. The type genome for the species is the GenBank assembly RS_GCF_000712075.1. The GC content of the type genome is 69.52 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Caulobacter lanugedo sp. nov.

Candidatus Caulobacter lanugedo (NL. fem. n. *lanugedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp001427665*. The type genome for the species is the GenBank assembly RS_GCF_001427665.1. The GC content of the type genome is 68.41 % and the genome length is 5.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Caulobacter oratribula sp. nov.

Candidatus Caulobacter oratribula (NL. fem. n. *oratribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp003931565*. The type genome for the species is the

GenBank assembly RS_GCF_003931565.1. The GC content of the type genome is 67.79 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Caulobacter perabitrix sp. nov.

Candidatus Caulobacter perabitrix (NL. fem. n. *perabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp001896875*. The type genome for the species is the GenBank assembly GCA_001896875.1. The GC content of the type genome is 68.33 % and the genome length is 3.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Caulobacter pinigitia sp. nov.

Candidatus Caulobacter pinigitia (NL. fem. n. *pinigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp903858185*. The type genome for the species is the GenBank assembly GCA_903923725.1. The GC content of the type genome is 68.07 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Caulobacter pluscugo sp. nov.

Candidatus Caulobacter pluscugo (NL. fem. n. *pluscugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp013181195*. The type genome for the species is the GenBank assembly RS_GCF_013181195.1. The GC content of the type genome is 67.55 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Caulobacter prospitoga sp. nov.

Candidatus Caulobacter prospitoga (NL. fem. n. *prospitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp009905535*. The type genome for the species is the GenBank assembly RS_GCF_009905535.1. The GC content of the type genome is 68.31 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Caulobacter rinocilega sp. nov.

Candidatus Caulobacter rinocilega (NL. fem. n. *rinocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp011058465*. The type genome for the species is the GenBank assembly GCA_011058465.1. The GC content of the type genome is 67.89 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Caulobacter sacopessa sp. nov.

Candidatus Caulobacter sacopessa (NL. fem. n. *sacopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp903900155*. The type genome for the species is the GenBank assembly GCA_902373295.1. The GC content of the type genome is 67.73 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Caulobacter uxorcivita sp. nov.

Candidatus Caulobacter uxorcivita (NL. fem. n. *uxorcivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp000281955*. The type genome for the species is the GenBank assembly RS_GCF_000281955.1. The GC content of the type genome is 68.95 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Caulobacter viburentia sp. nov.

Candidatus Caulobacter viburentia (NL. fem. n. *viburentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Caulobacter sp900114015*. The type genome for the species is the GenBank assembly RS_GCF_900114015.1. The GC content of the type genome is 68.74 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Cecembia arvecastra sp. nov.

Candidatus Cecembia arvecastra (NL. fem. n. *arvecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cecembia sp003797895*. The type genome for the species is the GenBank assembly RS_GCF_003797895.1. The GC content of the type genome is 39.23 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Cecembia colimitas sp. nov.

Candidatus Cecembia colimitas (NL. fem. n. *colimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cecembia sp007126775*. The type genome for the species is the GenBank assembly GCA_007118815.1. The GC content of the type genome is 40.33 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Cedecea acrufitrix sp. nov.

Candidatus Cedecea acrufitrix (NL. fem. n. *acrufitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cedecea sp011752815*. The type genome for the species is the GenBank assembly RS_GCF_011752815.1. The GC content of the type genome is 54.84 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Cedecea cicaritudo sp. nov.

Candidatus Cedecea cicaritudo (NL. fem. n. *cicaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cedecea sp000277545*. The type genome for the species is the GenBank assembly RS_GCF_011752855.1. The GC content of the type genome is 54.88 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Cedecea peracatio sp. nov.

Candidatus Cedecea peracatio (NL. fem. n. *peracatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Cedecea sp009668225*. The type genome for the species is the GenBank assembly RS_GCF_009668225.1. The GC content of the type genome is 54.25 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Celamana attemibula sp. nov.

Candidatus Celamana attemibula (NL. fem. n. *attemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-252 sp003235575*. The type genome for the species is the GenBank assembly GCA_003235575.1. The GC content of the type genome is 68.06 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Celamana gen. nov.

Candidatus Celamana (NL. fem. n. *Celamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-252*. The type species for the genus is *Candidatus* Celamana attemibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamanaceae.

Description of *Candidatus* Celamanaceae fam. nov.

Candidatus Celamanaceae (NL. fem. n. *Celamanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-252.* The type genus for the taxon is *Candidatus* Celamana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-252*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celamanales.

Description of *Candidatus* Celamanales ord. nov.

Candidatus Celamanales (NL. fem. n. *Celamanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-252.* The type genus for the taxon is *Candidatus* Celamana .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonabidae.

Description of *Candidatus* Celamaria locelitas sp. nov.

Candidatus Celamaria locelitas (NL. fem. n. *locelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPLOWO2-01-44-7 sp001798075*. The type genome for the species is the GenBank assembly GCA_001799095.1. The GC content of the type genome is 44.04 % and the genome length is 2.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Celamaria gen. nov.

Candidatus Celamaria (NL. fem. n. *Celamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPLOWO2-01-44-7*. The type species for the genus is *Candidatus* Celamaria locelitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPLOWO2-01-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamariaceae.

Description of *Candidatus* Celamariaceae fam. nov.

Candidatus Celamariaceae (NL. fem. n. *Celamariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPLOWO2-01-44-7.* The type genus for the taxon is *Candidatus* Celamaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SPLOWO2-01-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celamariales.

Description of *Candidatus* Celamariales ord. nov.

Candidatus Celamariales (NL. fem. n. *Celamariales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPLOWO2-01-44-7.* The type genus for the taxon is *Candidatus* Celamaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Celamella inmobilenta sp. nov.

Candidatus Celamella inmobilenta (NL. fem. n. *inmobilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B48-G9 sp003644395*. The type genome for the species is the GenBank assembly GCA_003644395.1. The GC content of the type genome is 33.46 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Celamella gen. nov.

Candidatus Celamella (NL. fem. n. *Celamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B48-G9*. The type species for the genus is *Candidatus* Celamella inmobilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B48-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamellaceae.

Description of *Candidatus* Celamellaceae fam. nov.

Candidatus Celamellaceae (NL. fem. n. *Celamellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B48-G9.* The type genus for the taxon is *Candidatus* Celamella .

According to the original version of GTDB R06-RS202, this family belongs to the order *B48-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celamellales.

Description of *Candidatus* Celamellales ord. nov.

Candidatus Celamellales (NL. fem. n. *Celamellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B48-G9.* The type genus for the taxon is *Candidatus* Celamella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8468*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semodulae.

Description of *Candidatus* Celamida redacitoga sp. nov.

Candidatus Celamida redacitoga (NL. fem. n. *redacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-38-14 sp001772865*. The type genome for the species is the GenBank assembly GCA_001772885.1. The GC content of the type genome is 36.88 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Celamida gen. nov.

Candidatus Celamida (NL. fem. n. *Celamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-38-14*. The type species for the genus is *Candidatus* Celamida redacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Celamosa intacibula sp. nov.

Candidatus Celamosa intacibula (NL. fem. n. *intacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-34 sp002778785*. The type genome for the species is the GenBank assembly GCA_002778785.1. The GC content of the type genome is 45.27 %

and the genome length is 3.06 Mbp.

Description of *Candidatus* Celamosa gen. nov.

Candidatus Celamosa (NL. fem. n. *Celamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-45-34*. The type species for the genus is *Candidatus* Celamosa intacibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-45-34*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamosaceae.

Description of *Candidatus* Celamosaceae fam. nov.

Candidatus Celamosaceae (NL. fem. n. *Celamosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-45-34.* The type genus for the taxon is *Candidatus* Celamosa .

According to GTDB R06-RS202, this family belongs to the order *Bdellovibrionales*.

Description of *Candidatus* Celamula amnigitia sp. nov.

Candidatus Celamula amnigitia (NL. fem. n. *amnigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOW01 sp011358125*. The type genome for the species is the GenBank assembly GCA_011358125.1. The GC content of the type genome is 34.52 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Celamula gen. nov.

Candidatus Celamula (NL. fem. n. *Celamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOW01*. The type species for the genus is *Candidatus* Celamula amnigitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTOW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Celamulaceae.

Description of *Candidatus* Celamulaceae fam. nov.

Candidatus Celamulaceae (NL. fem. n. *Celamulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTOW01.* The type genus for the taxon is *Candidatus* Celamula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTOW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celamulales.

Description of *Candidatus* Celamulales ord. nov.

Candidatus Celamulales (NL. fem. n. *Celamulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTOW01.* The type genus for the taxon is *Candidatus* Celamula .

According to the GTDB R06-RS202, this order belongs to the class *Brevinematia*.

Description of *Candidatus* Celeribacter melilitura sp. nov.

Candidatus Celeribacter melilitura (NL. fem. n. *melilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Celeribacter sp011806455*. The type genome for the species is the GenBank assembly GCA_013373135.1. The GC content of the type genome is 59.92 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Cellulomonas abpatessa sp. nov.

Candidatus Cellulomonas abpatessa (NL. fem. n. *abpatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp006715865*. The type genome for the species is the GenBank assembly RS_GCF_006715865.1. The GC content of the type genome is 75.15 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Cellulomonas ammixibula sp. nov.

Candidatus Cellulomonas ammixibula (NL. fem. n. *ammixibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp012931845*. The type genome for the species is the GenBank assembly RS_GCF_012931845.1. The GC content of the type genome is 71.99 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Cellulomonas ancipifica sp. nov.

Candidatus Cellulomonas ancipifica (NL. fem. n. *ancipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp003755175*. The type genome for the species is the GenBank assembly RS_GCF_003755175.1. The GC content of the type genome is 72.75 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Cellulomonas antepiforma sp. nov.

Candidatus Cellulomonas antepiforma (NL. fem. n. *antepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009829685*. The type genome for the species is the GenBank assembly RS_GCF_009829685.1. The GC content of the type genome is 72.94 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Cellulomonas apharilenta sp. nov.

Candidatus Cellulomonas apharilenta (NL. fem. n. *apharilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009720485*. The type genome for the species is the GenBank assembly RS_GCF_009720485.1. The GC content of the type genome is 75.6 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Cellulomonas armigago sp. nov.

Candidatus Cellulomonas armigago (NL. fem. n. *armigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp000426185*. The type genome for the species is the GenBank assembly RS_GCF_000426185.1. The GC content of the type genome is 71.37 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Cellulomonas bimeticella sp. nov.

Candidatus Cellulomonas bimeticella (NL. fem. n. *bimeticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001898185*. The type genome for the species is the GenBank assembly GCA_001898185.1. The GC content of the type genome is 73.1 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Cellulomonas citivimonia sp. nov.

Candidatus Cellulomonas citivimonia (NL. fem. n. *citivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp003115775*. The type genome for the species is the GenBank assembly RS_GCF_003115775.1. The GC content of the type genome is 71.71 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Cellulomonas deforitas sp. nov.

Candidatus Cellulomonas deforitas (NL. fem. n. *deforitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp000708885*. The type genome for the species is the GenBank assembly RS_GCF_000708885.1. The GC content of the type genome is 73.01 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Southeast Pahang tropical peat swamp forest soil".

Description of *Candidatus* Cellulomonas depasimonas sp. nov.

Candidatus Cellulomonas depasimonas (NL. fem. n. *depasimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp003851725*. The type genome for the species is the GenBank assembly RS_GCF_003851725.1. The GC content of the type genome is 74.29 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Cellulomonas depetastra sp. nov.

Candidatus Cellulomonas depetastra (NL. fem. n. *depetastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001429255*. The type genome for the species is the GenBank assembly GCA_001429255.1. The GC content of the type genome is 72.52 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Cellulomonas detenatio sp. nov.

Candidatus Cellulomonas detenatio (NL. fem. n. *detenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001426705*. The type genome for the species is the GenBank assembly RS_GCF_001426705.1. The GC content of the type genome is 72.28 % and the genome length is 4.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Cellulomonas devecago sp. nov.

Candidatus Cellulomonas devecago (NL. fem. n. *devecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp012927595*. The type genome for the species is the GenBank assembly GCA_012927595.1. The GC content of the type genome is 70.79 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Cellulomonas eclecatica sp. nov.

Candidatus Cellulomonas eclecatica (NL. fem. n. *eclecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001424125*. The type genome for the species is the

GenBank assembly RS_GCF_001424125.1. The GC content of the type genome is 71.77 % and the genome length is 4.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Cellulomonas innoxago sp. nov.

Candidatus Cellulomonas innoxago (NL. fem. n. *innoxago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009777345*. The type genome for the species is the GenBank assembly GCA_009777345.1. The GC content of the type genome is 70.66 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Cellulomonas inpasitia sp. nov.

Candidatus Cellulomonas inpasitia (NL. fem. n. *inpasitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009783975*. The type genome for the species is the GenBank assembly GCA_009783975.1. The GC content of the type genome is 69.31 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Cellulomonas intolatio sp. nov.

Candidatus Cellulomonas intolatio (NL. fem. n. *intolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009785115*. The type genome for the species is the GenBank assembly GCA_009785115.1. The GC content of the type genome is 70.49 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Cellulomonas lanigibra sp. nov.

Candidatus Cellulomonas lanigibra (NL. fem. n. *lanigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp000688475*. The type genome for the species is the GenBank assembly RS_GCF_000688475.1. The GC content of the type genome is 71.04 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Cellulomonas navifastra sp. nov.

Candidatus Cellulomonas navifastra (NL. fem. n. *navifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp008033115*. The type genome for the species is the GenBank assembly RS_GCF_008033115.1. The GC content of the type genome is 75.35 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Cellulomonas omnimimonia sp. nov.

Candidatus Cellulomonas omnimimonia (NL. fem. n. *omnimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp011603975*. The type genome for the species is the GenBank assembly RS_GCF_011603975.1. The GC content of the type genome is 75.49 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Cellulomonas pepenigena sp. nov.

Candidatus Cellulomonas pepenigena (NL. fem. n. *pepenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp004168625*. The type genome for the species is the GenBank assembly RS_GCF_004168625.1. The GC content of the type genome is 71.62 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Cellulomonas pinifitrix sp. nov.

Candidatus Cellulomonas pinifitrix (NL. fem. n. *pinifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp002441315*. The type genome for the species is the GenBank assembly GCA_002441315.1. The GC content of the type genome is 71.39 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Cellulomonas pudibivita sp. nov.

Candidatus Cellulomonas pudibivita (NL. fem. n. *pudibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001462455*. The type genome for the species is the GenBank assembly RS_GCF_001462455.1. The GC content of the type genome is 75.07 % and the genome length is 4.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "decaying forest soil".

Description of *Candidatus* Cellulomonas rarefitio sp. nov.

Candidatus Cellulomonas rarefitio (NL. fem. n. *rarefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp900114185*. The type genome for the species is the GenBank assembly RS_GCF_900114185.1. The GC content of the type genome is 74.64 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Cellulomonas tranvitrix sp. nov.

Candidatus Cellulomonas tranvitrix (NL. fem. n. *tranvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001898175*. The type genome for the species is the GenBank assembly GCA_001898175.1. The GC content of the type genome is 73.47 % and the genome length is 3.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Cellulomonas troclessa sp. nov.

Candidatus Cellulomonas troclessa (NL. fem. n. *troclessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp003696205*. The type genome for the species is the GenBank assembly RS_GCF_003696205.1. The GC content of the type genome is 74.73 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Cellulomonas vigenetta sp. nov.

Candidatus Cellulomonas vigenetta (NL. fem. n. *vigenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp001424195*. The type genome for the species is the GenBank assembly RS_GCF_001424195.1. The GC content of the type genome is 72.31 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Cellulomonas volucimonia sp. nov.

Candidatus Cellulomonas volucimonia (NL. fem. n. *volucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulomonas sp009779195*. The type genome for the species is the GenBank assembly GCA_009779535.1. The GC content of the type genome is 68.09 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Cellulophaga defesax sp. nov.

Candidatus Cellulophaga defesax (NL. fem. n. *defesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulophaga sp002813425*. The type genome for the species is the GenBank assembly RS_GCF_002813425.1. The GC content of the type genome is 32.0 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Cellulophaga epicricella sp. nov.

Candidatus Cellulophaga epicricella (NL. fem. n. *epicricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulophaga sp000799565*. The type genome for the species is the GenBank assembly RS_GCF_000799565.1. The GC content of the type genome is 35.3 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Cellulophaga perabessa sp. nov.

Candidatus Cellulophaga perabessa (NL. fem. n. *perabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulophaga sp009797025*. The type genome for the species is the

GenBank assembly RS_GCF_009797025.1. The GC content of the type genome is 34.04 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Cellulosilyticum inremilega sp. nov.

Candidatus Cellulosilyticum inremilega (NL. fem. n. *inremilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulosilyticum sp002735925*. The type genome for the species is the GenBank assembly RS_GCF_002735925.1. The GC content of the type genome is 35.33 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Cellulosilyticum vocifigena sp. nov.

Candidatus Cellulosilyticum vocifigena (NL. fem. n. *vocifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulosilyticum sp900556665*. The type genome for the species is the GenBank assembly GCA_900556665.1. The GC content of the type genome is 33.48 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Cellulosimicrobium hexagitura sp. nov.

Candidatus Cellulosimicrobium hexagitura (NL. fem. n. *hexagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulosimicrobium sp009708005*. The type genome for the species is the GenBank assembly RS_GCF_009708005.2. The GC content of the type genome is 73.89 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Cellulosimicrobium obveriforma sp. nov.

Candidatus Cellulosimicrobium obveriforma (NL. fem. n. *obveriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellulosimicrobium sp001942335*. The type genome for the species is the GenBank assembly RS_GCF_001942335.1. The GC content of the type genome is 74.64 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Cellvibrio bicapisca sp. nov.

Candidatus Cellvibrio bicapisca (NL. fem. n. *bicapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp004363885*. The type genome for the species is the GenBank assembly RS_GCF_004363885.1. The GC content of the type genome is 48.34 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Cellvibrio cenoditia sp. nov.

Candidatus Cellvibrio cenoditia (NL. fem. n. *cenoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp003524365*. The type genome for the species is the GenBank assembly GCA_003524365.1. The GC content of the type genome is 47.66 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Cellvibrio defaredo sp. nov.

Candidatus Cellvibrio defaredo (NL. fem. n. *defaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp000263355*. The type genome for the species is the GenBank assembly RS_GCF_008806955.1. The GC content of the type genome is 49.1 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Cellvibrio eclecimonas sp. nov.

Candidatus Cellvibrio eclecimonas (NL. fem. n. *eclecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp003056245*. The type genome for the species is the GenBank assembly GCA_003056245.1. The GC content of the type genome is 46.21 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Cellvibrio ephementia sp. nov.

Candidatus Cellvibrio ephementia (NL. fem. n. *ephementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp000953825*. The type genome for the species is the GenBank assembly RS_GCF_000953825.1. The GC content of the type genome is 47.71 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Cellvibrio expurimonia sp. nov.

Candidatus Cellvibrio expurimonia (NL. fem. n. *expurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp002162135*. The type genome for the species is the GenBank assembly RS_GCF_002162135.1. The GC content of the type genome is 50.54 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Cellvibrio herinitas sp. nov.

Candidatus Cellvibrio herinitas (NL. fem. n. *herinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp002007605*. The type genome for the species is the GenBank assembly RS_GCF_002007605.1. The GC content of the type genome is 49.36 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Cellvibrio hexagisca sp. nov.

Candidatus Cellvibrio hexagisca (NL. fem. n. *hexagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp008806975*. The type genome for the species is the GenBank assembly RS_GCF_008806975.1. The GC content of the type genome is 47.89 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Cellvibrio incocisca sp. nov.

Candidatus Cellvibrio incocisca (NL. fem. n. *incocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp004173475*. The type genome for the species is the GenBank assembly GCA_004173475.1. The GC content of the type genome is 44.1 %

and the genome length is 4.73 Mbp.

Description of *Candidatus* Cellvibrio inobliforma sp. nov.

Candidatus Cellvibrio inobliforma (NL. fem. n. *inobliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp002483365*. The type genome for the species is the GenBank assembly GCA_002483365.1. The GC content of the type genome is 47.5 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Cellvibrio monopatio sp. nov.

Candidatus Cellvibrio monopatio (NL. fem. n. *monopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp002483145*. The type genome for the species is the GenBank assembly GCA_002483145.1. The GC content of the type genome is 47.94 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Cellvibrio murilitas sp. nov.

Candidatus Cellvibrio murilitas (NL. fem. n. *murilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp004172865*. The type genome for the species is the GenBank assembly GCA_004172865.1. The GC content of the type genome is 44.04 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Cellvibrio proscitica sp. nov.

Candidatus Cellvibrio proscitica (NL. fem. n. *proscitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp005801205*. The type genome for the species is the GenBank assembly GCA_005801205.1. The GC content of the type genome is 45.31 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Cellvibrio revulitrix sp. nov.

Candidatus Cellvibrio revulitrix (NL. fem. n. *revulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp001183545*. The type genome for the species is the GenBank assembly RS_GCF_001183545.1. The GC content of the type genome is 47.56 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Cellvibrio vicatentia sp. nov.

Candidatus Cellvibrio vicatentia (NL. fem. n. *vicatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cellvibrio sp903858205*. The type genome for the species is the GenBank assembly GCA_903858205.1. The GC content of the type genome is 48.41 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Celumaria dehisicula sp. nov.

Candidatus Celumaria dehisicula (NL. fem. n. *dehisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKO01 sp011359065*. The type genome for the species is the GenBank assembly GCA_011359065.1. The GC content of the type genome is 59.56 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Celumaria gen. nov.

Candidatus Celumaria (NL. fem. n. *Celumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKO01*. The type species for the genus is *Candidatus* Celumaria dehisicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTKO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumariaceae.

Description of *Candidatus* Celumariaceae fam. nov.

Candidatus Celumariaceae (NL. fem. n. *Celumariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKO01.* The type genus for the taxon is *Candidatus* Celumaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTKO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celumariales.

Description of *Candidatus* Celumariales ord. nov.

Candidatus Celumariales (NL. fem. n. *Celumariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKO01.* The type genus for the taxon is *Candidatus* Celumaria .

According to the GTDB R06-RS202, this order belongs to the class *Methylomirabilia*.

Description of *Candidatus* Celumella capudicula sp. nov.

Candidatus Celumella capudicula (NL. fem. n. *capudicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYLH01 sp903884235*. The type genome for the species is the GenBank assembly GCA_903849415.1. The GC content of the type genome is 69.02 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Celumella gen. nov.

Candidatus Celumella (NL. fem. n. *Celumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYLH01*. The type species for the genus is *Candidatus* Celumella capudicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Celumella nitelitudo sp. nov.

Candidatus Celumella nitelitudo (NL. fem. n. *nitelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYLH01 sp903879335*. The type genome for the species is the GenBank assembly GCA_903895245.1. The GC content of the type genome is 59.45 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Celumella rarefetta sp. nov.

Candidatus Celumella rarefetta (NL. fem. n. *rarefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYLH01 sp903927005*. The type genome for the species is the GenBank assembly GCA_903828995.1. The GC content of the type genome is 65.84 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Celumella vavasicula sp. nov.

Candidatus Celumella vavasicula (NL. fem. n. *vavasicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYLH01 sp903908265*. The type genome for the species is the GenBank assembly GCA_903843385.1. The GC content of the type genome is 61.04 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Celumia fetulibra sp. nov.

Candidatus Celumia fetulibra (NL. fem. n. *fetulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J004 sp003696775*. The type genome for the species is the GenBank assembly GCA_003696775.1. The GC content of the type genome is 49.3 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Celumia gen. nov.

Candidatus Celumia (NL. fem. n. *Celumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J004*. The type species for the genus is *Candidatus* Celumia fetulibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

J004. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumiaceae.

Description of *Candidatus* Celumiaceae fam. nov.

Candidatus Celumiaceae (NL. fem. n. *Celumiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J004.* The type genus for the taxon is *Candidatus* Celumia .

According to GTDB R06-RS202, this family belongs to the order *Calditrichales*.

Description of *Candidatus* Celumia palifitas sp. nov.

Candidatus Celumia palifitas (NL. fem. n. *palifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J004 sp011051485*. The type genome for the species is the GenBank assembly GCA_011051485.1. The GC content of the type genome is 51.23 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Celumida adalgatica sp. nov.

Candidatus Celumida adalgatica (NL. fem. n. *adalgatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp005789375*. The type genome for the species is the GenBank assembly GCA_005789375.1. The GC content of the type genome is 60.46 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Celumida gen. nov.

Candidatus Celumida (NL. fem. n. *Celumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXXZ01*. The type species for the genus is *Candidatus* Celumida adalgatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Celumida adnumax sp. nov.

Candidatus Celumida adnumax (NL. fem. n. *adnumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp009695405*. The type genome for the species is the GenBank assembly GCA_009695405.1. The GC content of the type genome is 51.43 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Celumida latibisca sp. nov.

Candidatus Celumida latibisca (NL. fem. n. *latibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp903854475*. The type genome for the species is the GenBank assembly GCA_903854475.1. The GC content of the type genome is 59.7 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Celumida lenimibula sp. nov.

Candidatus Celumida lenimibula (NL. fem. n. *lenimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp903939515*. The type genome for the species is the GenBank assembly GCA_903940805.1. The GC content of the type genome is 59.99 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Celumida scintilenta sp. nov.

Candidatus Celumida scintilenta (NL. fem. n. *scintilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp903858835*. The type genome for the species is the GenBank assembly GCA_903858835.1. The GC content of the type genome is 66.42 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Celumida tigurilega sp. nov.

Candidatus Celumida tigurilega (NL. fem. n. *tigurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp005805505*. The type genome for the species is the GenBank assembly GCA_005805505.1. The GC content of the type genome is 60.34 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Celumida utrolitudo sp. nov.

Candidatus Celumida utrolitudo (NL. fem. n. *utrolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXZ01 sp903930165*. The type genome for the species is the GenBank assembly GCA_903930165.1. The GC content of the type genome is 67.41 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Celumosa metucilenta sp. nov.

Candidatus Celumosa metucilenta (NL. fem. n. *metucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBMK01 sp903954165*. The type genome for the species is the GenBank assembly GCA_903940695.1. The GC content of the type genome is 42.78 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Celumosa gen. nov.

Candidatus Celumosa (NL. fem. n. *Celumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBMK01*. The type species for the genus is *Candidatus* Celumosa metucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumosaceae.

Description of *Candidatus* Celumosaceae fam. nov.

Candidatus Celumosaceae (NL. fem. n. *Celumosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJBMK01*. The type genus for the taxon is *Candidatus* Celumosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Celumula cimelisca sp. nov.

Candidatus Celumula cimelisca (NL. fem. n. *cimelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9662 sp002697225*. The type genome for the species is the GenBank assembly GCA_002713895.1. The GC content of the type genome is 41.98 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Celumula gen. nov.

Candidatus Celumula (NL. fem. n. *Celumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9662*. The type species for the genus is *Candidatus* Celumula cimelisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9662*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumulaceae.

Description of *Candidatus* Celumulaceae fam. nov.

Candidatus Celumulaceae (NL. fem. n. *Celumulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9662*. The type genus for the taxon is *Candidatus* Celumula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WGA-4E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demociales.

Description of *Candidatus* Celumula delubatio sp. nov.

Candidatus Celumula delubatio (NL. fem. n. *delubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9662 sp002690165*. The type genome for the species is the GenBank assembly GCA_002729415.1. The GC content of the type genome is 43.61 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Celumula expuratica sp. nov.

Candidatus Celumula expuratica (NL. fem. n. *expuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9662 sp002709695*. The type genome for the species is the GenBank assembly GCA_002709695.1. The GC content of the type genome is 41.1 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Celumula viripisca sp. nov.

Candidatus Celumula viripisca (NL. fem. n. *viripisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9662 sp012963885*. The type genome for the species is the GenBank assembly GCA_012963885.1. The GC content of the type genome is 43.68 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Cemenana aplesentia sp. nov.

Candidatus Cemenana aplesentia (NL. fem. n. *aplesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYU01 sp013695765*. The type genome for the species is the GenBank assembly GCA_013695765.1. The GC content of the type genome is 60.01 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Cemenana gen. nov.

Candidatus Cemenana (NL. fem. n. *Cemenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYU01*. The type species for the genus is *Candidatus* Cemenana

aplesentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCYU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenanaceae.

Description of *Candidatus* Cemenanaceae fam. nov.

Candidatus Cemenanaceae (NL. fem. n. *Cemenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCYU01.* The type genus for the taxon is *Candidatus* Cemenana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Paraciales.

Description of *Candidatus* Cemenana inremitura sp. nov.

Candidatus Cemenana inremitura (NL. fem. n. *inremitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYU01 sp013696315*. The type genome for the species is the GenBank assembly GCA_013696315.1. The GC content of the type genome is 60.36 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Cemenaria excinimonia sp. nov.

Candidatus Cemenaria excinimonia (NL. fem. n. *excinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUL01 sp013044465*. The type genome for the species is the GenBank assembly GCA_013044465.1. The GC content of the type genome is 44.66 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Cemenaria gen. nov.

Candidatus Cemenaria (NL. fem. n. *Cemenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEUL01*. The type species for the genus is *Candidatus* Cemenaria

excinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABEUL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenariaceae.

Description of *Candidatus* Cemenariaceae fam. nov.

Candidatus Cemenariaceae (NL. fem. n. *Cemenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABEUL01.* The type genus for the taxon is *Candidatus* Cemenaria .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Cemenia perexax sp. nov.

Candidatus Cemenia perexax (NL. fem. n. *perexax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-51-13 sp003520745*. The type genome for the species is the GenBank assembly GCA_001800835.1. The GC content of the type genome is 50.36 % and the genome length is 2.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m depth; 0.2 filter".

Description of *Candidatus* Cemenia gen. nov.

Candidatus Cemenia (NL. fem. n. *Cemenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-51-13*. The type species for the genus is *Candidatus* Cemenia perexax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cemenida sicunentia sp. nov.

Candidatus Cemenida sicunentia (NL. fem. n. *sicunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2861595 sp002861595*. The type genome for the species is the GenBank assembly GCA_002861595.1. The GC content of the type genome is 71.38 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Cemenida gen. nov.

Candidatus Cemenida (NL. fem. n. *Cemenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2861595*. The type species for the genus is *Candidatus* Cemenida sicunentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2861595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenidaceae.

Description of *Candidatus* Cemenidaceae fam. nov.

Candidatus Cemenidaceae (NL. fem. n. *Cemenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2861595.* The type genus for the taxon is *Candidatus* Cemenida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Cemenosa colepessa sp. nov.

Candidatus Cemenosa colepessa (NL. fem. n. *colepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFQ01 sp011064725*. The type genome for the species is the GenBank assembly GCA_011064725.1. The GC content of the type genome is 37.48 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Cemenosa gen. nov.

Candidatus Cemenosa (NL. fem. n. *Cemenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFQ01*. The type species for the genus is *Candidatus* Cemenosa colepessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAKFQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenosaceae.

Description of *Candidatus* Cemenosaceae fam. nov.

Candidatus Cemenosaceae (NL. fem. n. *Cemenosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAKFQ01.* The type genus for the taxon is *Candidatus* Cemenosa .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Cemenula exhoratio sp. nov.

Candidatus Cemenula exhoratio (NL. fem. n. *exhoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNO01 sp013824265*. The type genome for the species is the GenBank assembly GCA_013824265.1. The GC content of the type genome is 38.9 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Cemenula gen. nov.

Candidatus Cemenula (NL. fem. n. *Cemenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNO01*. The type species for the genus is *Candidatus* Cemenula exhoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PNNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cemenulaceae.

Description of *Candidatus* Cemenulaceae fam. nov.

Candidatus Cemenulaceae (NL. fem. n. *Cemenulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PNNO01.* The type genus for the taxon is *Candidatus* Cemenula .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA1369. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Cenacana tomacicula sp. nov.

Candidatus Cenacana tomacicula (NL. fem. n. *tomacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6620 sp002433075*. The type genome for the species is the GenBank assembly GCA_002720695.1. The GC content of the type genome is 59.38 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Cenacana gen. nov.

Candidatus Cenacana (NL. fem. n. *Cenacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6620*. The type species for the genus is *Candidatus* Cenacana tomacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimellaceae.

Description of *Candidatus* Cenacaria adnecilega sp. nov.

Candidatus Cenacaria adnecilega (NL. fem. n. *adnecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp011322135*. The type genome for the species is the GenBank assembly GCA_011322135.1. The GC content of the type genome is 42.12 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Cenacaria gen. nov.

Candidatus Cenacaria (NL. fem. n. *Cenacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C7867-001*. The type species for the genus is *Candidatus* Cenacaria adnecilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Cenacaria arvecatio sp. nov.

Candidatus Cenacaria arvecatio (NL. fem. n. *arvecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp002773355*. The type genome for the species is the GenBank assembly GCA_002773355.1. The GC content of the type genome is 56.21 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Cenacaria benivitica sp. nov.

Candidatus Cenacaria benivitica (NL. fem. n. *benivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001189215*. The type genome for the species is the GenBank assembly GCA_001189215.1. The GC content of the type genome is 47.89 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Cenacaria cacalilega sp. nov.

Candidatus Cenacaria cacalilega (NL. fem. n. *cacalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001781915*. The type genome for the species is the GenBank assembly GCA_001781915.1. The GC content of the type genome is 47.06 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Cenacaria derunitica sp. nov.

Candidatus Cenacaria derunitica (NL. fem. n. *derunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001004905*. The type genome for the species is the GenBank assembly GCA_003531405.1. The GC content of the type genome is 56.4 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Cenacaria desulicella sp. nov.

Candidatus Cenacaria desulicella (NL. fem. n. *desulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp003230945*. The type genome for the species is the GenBank assembly GCA_003230945.1. The GC content of the type genome is 41.24 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Cenacaria didacax sp. nov.

Candidatus Cenacaria didacax (NL. fem. n. *didacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp013815345*. The type genome for the species is the GenBank assembly GCA_013815345.1. The GC content of the type genome is 47.65 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Cenacaria dilibitas sp. nov.

Candidatus Cenacaria dilibitas (NL. fem. n. *dilibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001189095*. The type genome for the species is the GenBank assembly GCA_001189095.1. The GC content of the type genome is 53.39 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Cenacaria exheditudo sp. nov.

Candidatus Cenacaria exheditudo (NL. fem. n. *exheditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp903825105*. The type genome for the species is the

GenBank assembly GCA_903825105.1. The GC content of the type genome is 46.77 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Cenacaria exsusimonas sp. nov.

Candidatus Cenacaria exsusimonas (NL. fem. n. *exsusimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001781715*. The type genome for the species is the GenBank assembly GCA_001781715.1. The GC content of the type genome is 55.3 % and the genome length is 0.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cenacaria favonetta sp. nov.

Candidatus Cenacaria favonetta (NL. fem. n. *favonetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001783465*. The type genome for the species is the GenBank assembly GCA_001781565.1. The GC content of the type genome is 54.2 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Cenacaria impilimonas sp. nov.

Candidatus Cenacaria impilimonas (NL. fem. n. *impilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001781095*. The type genome for the species is the GenBank assembly GCA_001781095.1. The GC content of the type genome is 52.52 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cenacaria milifibra sp. nov.

Candidatus Cenacaria milifibra (NL. fem. n. *milifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp903994795*. The type genome for the species is the GenBank assembly GCA_903994775.1. The GC content of the type genome is 45.89 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Cenacaria modifentia sp. nov.

Candidatus Cenacaria modifentia (NL. fem. n. *modifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp002793115*. The type genome for the species is the GenBank assembly GCA_002322665.1. The GC content of the type genome is 50.22 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Cenacaria nefanatica sp. nov.

Candidatus Cenacaria nefanatica (NL. fem. n. *nefanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001781625*. The type genome for the species is the GenBank assembly GCA_001781625.1. The GC content of the type genome is 56.18 % and the genome length is 0.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Cenacaria nimiricella sp. nov.

Candidatus Cenacaria nimiricella (NL. fem. n. *nimiricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp011052355*. The type genome for the species is the GenBank assembly GCA_011052355.1. The GC content of the type genome is 43.97 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Cenacaria nubecitrix sp. nov.

Candidatus Cenacaria nubecitrix (NL. fem. n. *nubecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001189195*. The type genome for the species is the

GenBank assembly GCA_001189195.1. The GC content of the type genome is 48.12 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Cenacaria pulegimonia sp. nov.

Candidatus Cenacaria pulegimonia (NL. fem. n. *pulegimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp003229135*. The type genome for the species is the GenBank assembly GCA_003229135.1. The GC content of the type genome is 42.48 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Cenacaria ranunibula sp. nov.

Candidatus Cenacaria ranunibula (NL. fem. n. *ranunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp002255585*. The type genome for the species is the GenBank assembly GCA_002255585.1. The GC content of the type genome is 53.52 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Cenacaria selibitoga sp. nov.

Candidatus Cenacaria selibitoga (NL. fem. n. *selibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp002441425*. The type genome for the species is the GenBank assembly GCA_002441425.1. The GC content of the type genome is 48.08 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Cenacaria semigimonia sp. nov.

Candidatus Cenacaria semigimonia (NL. fem. n. *semigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp002429325*. The type genome for the species is the GenBank assembly GCA_002429325.1. The GC content of the type genome is 51.7 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cenacaria sicunitia sp. nov.

Candidatus Cenacaria sicunitia (NL. fem. n. *sicunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp001189075*. The type genome for the species is the GenBank assembly GCA_001189075.1. The GC content of the type genome is 56.07 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Cenacaria vecorivita sp. nov.

Candidatus Cenacaria vecorivita (NL. fem. n. *vecorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-001 sp900299275*. The type genome for the species is the GenBank assembly GCA_900299275.1. The GC content of the type genome is 52.59 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Cenacella delebessa sp. nov.

Candidatus Cenacella delebessa (NL. fem. n. *delebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1685 sp900546845*. The type genome for the species is the GenBank assembly GCA_900546845.1. The GC content of the type genome is 59.14 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Cenacella gen. nov.

Candidatus Cenacella (NL. fem. n. *Cenacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1685*. The type species for the genus is *Candidatus* Cenacella delebessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Cenacella habacitura sp. nov.

Candidatus Cenacella habacitura (NL. fem. n. *habacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1685 sp004560435*. The type genome for the species is the GenBank assembly GCA_004560435.1. The GC content of the type genome is 57.94 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cenacella paracugo sp. nov.

Candidatus Cenacella paracugo (NL. fem. n. *paracugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1685 sp002320595*. The type genome for the species is the GenBank assembly GCA_004556605.1. The GC content of the type genome is 55.27 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Cenacida volunugo sp. nov.

Candidatus Cenacida volunugo (NL. fem. n. *volunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO1D9 sp010672865*. The type genome for the species is the GenBank assembly GCA_010672865.1. The GC content of the type genome is 41.34 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Cenacida gen. nov.

Candidatus Cenacida (NL. fem. n. *Cenacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIO1D9*. The type species for the genus is *Candidatus* Cenacida volunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SIO1D9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenacidaceae.

Description of *Candidatus* Cenacidaceae fam. nov.

Candidatus Cenacidaceae (NL. fem. n. *Cenacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SIO1D9.* The type genus for the taxon is *Candidatus* Cenacida .

According to GTDB R06-RS202, this family belongs to the order *Cyanobacteriales*.

Description of *Candidatus* Cenacosa alismilenta sp. nov.

Candidatus Cenacosa alismilenta (NL. fem. n. *alismilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS902 sp900546635*. The type genome for the species is the GenBank assembly GCA_900546635.1. The GC content of the type genome is 51.07 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Cenacosa gen. nov.

Candidatus Cenacosa (NL. fem. n. *Cenacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS902*. The type species for the genus is *Candidatus* Cenacosa alismilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Cenacosa bovicilega sp. nov.

Candidatus Cenacosa bovicilega (NL. fem. n. *bovicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS902 sp004554105*. The type genome for the species is the GenBank assembly GCA_004552185.1. The GC content of the type genome is 57.66 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cenacosa exculilega sp. nov.

Candidatus Cenacosa exculilega (NL. fem. n. *exculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS902 sp900761025*. The type genome for the species is the GenBank assembly RS_GCF_900761025.1. The GC content of the type genome is 58.72 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Cenacosa peracentia sp. nov.

Candidatus Cenacosa peracentia (NL. fem. n. *peracentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS902 sp003343845*. The type genome for the species is the GenBank assembly GCA_900546405.1. The GC content of the type genome is 58.51 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cenobana apsuribra sp. nov.

Candidatus Cenobana apsuribra (NL. fem. n. *apsuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA932 sp002293585*. The type genome for the species is the GenBank assembly GCA_002293585.1. The GC content of the type genome is 47.18 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Cenobana gen. nov.

Candidatus Cenobana (NL. fem. n. *Cenobana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA932*. The type species for the genus is *Candidatus* Cenobana apsuribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Cenobanaceae fam. nov.

Candidatus Cenobanaceae (NL. fem. n. *Cenobanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA932.* The type genus for the taxon is *Candidatus* Cenobana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Cenobana dicimimonas sp. nov.

Candidatus Cenobana dicimimonas (NL. fem. n. *dicimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA932 sp009777095*. The type genome for the species is the GenBank assembly GCA_009776795.1. The GC content of the type genome is 43.67 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Cenobaria ammatibula sp. nov.

Candidatus Cenobaria ammatibula (NL. fem. n. *ammatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTMZ01 sp011355155*. The type genome for the species is the GenBank assembly GCA_011355155.1. The GC content of the type genome is 49.54 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Cenobaria gen. nov.

Candidatus Cenobaria (NL. fem. n. *Cenobaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTMZ01*. The type species for the genus is *Candidatus* Cenobaria ammatibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Cenobaria lenimitas sp. nov.

Candidatus Cenobaria lenimitas (NL. fem. n. *lenimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DTMZ01 sp011051175*. The type genome for the species is the GenBank assembly GCA_011051175.1. The GC content of the type genome is 53.84 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Cenobella telegitica sp. nov.

Candidatus Cenobella telegitica (NL. fem. n. *telegitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4142 sp002400365*. The type genome for the species is the GenBank assembly GCA_002412505.1. The GC content of the type genome is 60.11 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Cenobella gen. nov.

Candidatus Cenobella (NL. fem. n. *Cenobella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4142*. The type species for the genus is *Candidatus* Cenobella telegitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobellaceae.

Description of *Candidatus* Cenobellaceae fam. nov.

Candidatus Cenobellaceae (NL. fem. n. *Cenobellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4142.* The type genus for the taxon is *Candidatus* Cenobella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenobellales.

Description of *Candidatus* Cenobellales ord. nov.

Candidatus Cenobellales (NL. fem. n. *Cenobellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4142.* The type genus for the taxon is *Candidatus* Cenobella .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Cenobida conifetta sp. nov.

Candidatus Cenobida conifetta (NL. fem. n. *conifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTXE01 sp012962595*. The type genome for the species is the GenBank assembly GCA_012962595.1. The GC content of the type genome is 42.07 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Cenobida gen. nov.

Candidatus Cenobida (NL. fem. n. *Cenobida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTXE01*. The type species for the genus is *Candidatus* Cenobida conifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTXE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobidaceae.

Description of *Candidatus* Cenobidaceae fam. nov.

Candidatus Cenobidaceae (NL. fem. n. *Cenobidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTXE01.* The type genus for the taxon is *Candidatus* Cenobida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTXE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenobidales.

Description of *Candidatus* Cenobidales ord. nov.

Candidatus Cenobidales (NL. fem. n. *Cenobidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTXE01.* The type genus for the taxon is *Candidatus* Cenobida .

According to the original version of GTDB R06-RS202, this family belongs to the class

DTXE01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cenobidae.

Description of *Candidatus* Cenobidae class. nov.

Candidatus Cenobidae (NL. fem. n. *c__Cenobidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTXE01*. The type genus for the taxon is *Candidatus* Cenobida .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota*.

Description of *Candidatus* Cenobosa bicipicella sp. nov.

Candidatus Cenobosa bicipicella (NL. fem. n. *bicipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6168 sp004297645*. The type genome for the species is the GenBank assembly GCA_004297645.1. The GC content of the type genome is 51.25 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Cenobosa gen. nov.

Candidatus Cenobosa (NL. fem. n. *Cenobosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6168*. The type species for the genus is *Candidatus* Cenobosa bicipicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenobosa inculatio sp. nov.

Candidatus Cenobosa inculatio (NL. fem. n. *inculatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6168 sp011321935*. The type genome for the species is the GenBank assembly GCA_011321935.1. The GC content of the type genome is 47.51 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Cenobosa irrotatio sp. nov.

Candidatus Cenobosa irrotatio (NL. fem. n. *irrotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6168 sp002435785*. The type genome for the species is the GenBank assembly GCA_002435785.1. The GC content of the type genome is 51.44 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Cenobosa remedastra sp. nov.

Candidatus Cenobosa remedastra (NL. fem. n. *remedastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6168 sp002698985*. The type genome for the species is the GenBank assembly GCA_002698985.1. The GC content of the type genome is 51.85 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Cenobula adnumibula sp. nov.

Candidatus Cenobula adnumibula (NL. fem. n. *adnumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHG01 sp013297585*. The type genome for the species is the GenBank assembly GCA_013297585.1. The GC content of the type genome is 35.92 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Cenobula gen. nov.

Candidatus Cenobula (NL. fem. n. *Cenobula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHG01*. The type species for the genus is *Candidatus* Cenobula adnumibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenobula cisoratio sp. nov.

Candidatus Cenobula cisoratio (NL. fem. n. *cisoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHG01 sp903895845*. The type genome for the species is the GenBank assembly GCA_903897955.1. The GC content of the type genome is 38.68 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Cenobula infacicula sp. nov.

Candidatus Cenobula infacicula (NL. fem. n. *infacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHG01 sp903883945*. The type genome for the species is the GenBank assembly GCA_903883945.1. The GC content of the type genome is 37.51 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Cenodaria duricitrix sp. nov.

Candidatus Cenodaria duricitrix (NL. fem. n. *duricitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12445 sp003504275*. The type genome for the species is the GenBank assembly GCA_000993015.1. The GC content of the type genome is 36.97 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Cenodaria gen. nov.

Candidatus Cenodaria (NL. fem. n. *Cenodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12445*. The type species for the genus is *Candidatus* Cenodaria duricitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodariaceae.

Description of *Candidatus* Cenodariaceae fam. nov.

Candidatus Cenodariaceae (NL. fem. n. *Cenodariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12445.* The type genus for the taxon is *Candidatus* Cenodaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Cenodella affabedo sp. nov.

Candidatus Cenodella affabedo (NL. fem. n. *affabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11096 sp003696155*. The type genome for the species is the GenBank assembly GCA_003696155.1. The GC content of the type genome is 46.39 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Cenodella gen. nov.

Candidatus Cenodella (NL. fem. n. *Cenodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11096*. The type species for the genus is *Candidatus* Cenodella affabedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenodella depacax sp. nov.

Candidatus Cenodella depacax (NL. fem. n. *depacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11096 sp011006175*. The type genome for the species is the GenBank assembly RS_GCF_011006175.1. The GC content of the type genome is 44.03 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cenodella remeditrix sp. nov.

Candidatus Cenodella remeditrix (NL. fem. n. *remeditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11096 sp003534055*. The type genome for the species is the GenBank assembly GCA_003534055.1. The GC content of the type genome is 43.51 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Cenodella rudicatica sp. nov.

Candidatus Cenodella rudicatica (NL. fem. n. *rudicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11096 sp011054805*. The type genome for the species is the GenBank assembly GCA_011057385.1. The GC content of the type genome is 42.65 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Cenodia inargibra sp. nov.

Candidatus Cenodia inargibra (NL. fem. n. *inargibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OXYB2-FULL-49-7 sp001800515*. The type genome for the species is the GenBank assembly GCA_001800515.1. The GC content of the type genome is 48.74 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Cenodia gen. nov.

Candidatus Cenodia (NL. fem. n. *Cenodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OXYB2-FULL-49-7*. The type species for the genus is *Candidatus* Cenodia inargibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OXYB2-FULL-49-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodiaceae.

Description of *Candidatus* Cenodiaceae fam. nov.

Candidatus Cenodiaceae (NL. fem. n. *Cenodiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OXYB2-FULL-49-7*. The type genus for the taxon is *Candidatus* Cenodia .

According to the original version of GTDB R06-RS202, this family belongs to the order *OXYB2-FULL-49-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodiales.

Description of *Candidatus* Cenodiales ord. nov.

Candidatus Cenodiales (NL. fem. n. *Cenodiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OXYB2-FULL-49-7*. The type genus for the taxon is *Candidatus* Cenodia .

According to the original version of GTDB R06-RS202, this family belongs to the class *OXYB2-FULL-49-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cenodiae.

Description of *Candidatus* Cenodiae class. nov.

Candidatus Cenodiae (NL. fem. n. *c__Cenodiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OXYB2-FULL-49-7*. The type genus for the taxon is *Candidatus* Cenodia .

According to GTDB R06-RS202, this class belongs to the phylum *Fibrobacterota*.

Description of *Candidatus* Cenodida colipimonas sp. nov.

Candidatus Cenodida colipimonas (NL. fem. n. *colipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp900760615*. The type genome for the species is the GenBank assembly RS_GCF_900760615.1. The GC content of the type genome is 53.02 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Cenodida gen. nov.

Candidatus Cenodida (NL. fem. n. *Cenodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1829*. The type species for the genus is *Candidatus* Cenodida colipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodidaceae.

Description of *Candidatus* Cenodidaceae fam. nov.

Candidatus Cenodidaceae (NL. fem. n. *Cenodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1829.* The type genus for the taxon is *Candidatus* Cenodida .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Cenodida dicibastra sp. nov.

Candidatus Cenodida dicibastra (NL. fem. n. *dicibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp002338895*. The type genome for the species is the GenBank assembly GCA_002338895.1. The GC content of the type genome is 56.75 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Cenodida excogedo sp. nov.

Candidatus Cenodida excogedo (NL. fem. n. *excogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp002405835*. The type genome for the species is the GenBank assembly GCA_002405835.1. The GC content of the type genome is 54.67 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Cenodida lametax sp. nov.

Candidatus Cenodida lametax (NL. fem. n. *lametax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp900549415*. The type genome for the species is the GenBank assembly GCA_900549415.1. The GC content of the type genome is 55.07 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Cenodida luculilenta sp. nov.

Candidatus Cenodida luculilenta (NL. fem. n. *luculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp900549045*. The type genome for the species is the GenBank assembly RS_GCF_900768925.1. The GC content of the type genome is 55.77 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Cenodida tubicetta sp. nov.

Candidatus Cenodida tubicetta (NL. fem. n. *tubicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1829 sp900548385*. The type genome for the species is the GenBank assembly GCA_900548385.1. The GC content of the type genome is 53.47 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Cenodosa selibitia sp. nov.

Candidatus Cenodosa selibitia (NL. fem. n. *selibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F11 sp002176905*. The type genome for the species is the GenBank assembly GCA_002176905.1. The GC content of the type genome is 44.45 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Cenodosa gen. nov.

Candidatus Cenodosa (NL. fem. n. *Cenodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F11*. The type species for the genus is *Candidatus* Cenodosa selibitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

family *Candidatus* Cenodosaceae.

Description of *Candidatus* Cenodosaceae fam. nov.

Candidatus Cenodosaceae (NL. fem. n. *Cenodosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F11*. The type genus for the taxon is *Candidatus* Cenodosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *F11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodosales.

Description of *Candidatus* Cenodosales ord. nov.

Candidatus Cenodosales (NL. fem. n. *Cenodosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F11*. The type genus for the taxon is *Candidatus* Cenodosa .

According to the GTDB R06-RS202, this order belongs to the class *Elusimicrobia*.

Description of *Candidatus* Cenodula artopivita sp. nov.

Candidatus Cenodula artopivita (NL. fem. n. *artopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-51-18 sp001804125*. The type genome for the species is the GenBank assembly GCA_001804125.1. The GC content of the type genome is 51.42 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cenodula gen. nov.

Candidatus Cenodula (NL. fem. n. *Cenodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-51-18*. The type species for the genus is *Candidatus* Cenodula artopivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family

2-02-FULL-51-18. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodulaceae.

Description of *Candidatus* Cenodulaceae fam. nov.

Candidatus Cenodulaceae (NL. fem. n. *Cenodulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-51-18.* The type genus for the taxon is *Candidatus* Cenodula .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-51-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodulales.

Description of *Candidatus* Cenodulales ord. nov.

Candidatus Cenodulales (NL. fem. n. *Cenodulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-51-18.* The type genus for the taxon is *Candidatus* Cenodula .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Cenotana adsesatica sp. nov.

Candidatus Cenotana adsesatica (NL. fem. n. *adsesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902510475*. The type genome for the species is the GenBank assembly GCA_902510475.1. The GC content of the type genome is 31.01 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Cenotana gen. nov.

Candidatus Cenotana (NL. fem. n. *Cenotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *MED-G13*. The type species for the genus is *Candidatus* Cenotana adsesatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenotana cemenatica sp. nov.

Candidatus Cenotana cemenatica (NL. fem. n. *cemenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902626365*. The type genome for the species is the GenBank assembly GCA_902626365.1. The GC content of the type genome is 30.88 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Cenotana cnestigena sp. nov.

Candidatus Cenotana cnestigena (NL. fem. n. *cnestigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902626585*. The type genome for the species is the GenBank assembly GCA_902626585.1. The GC content of the type genome is 31.52 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Cenotana defunentia sp. nov.

Candidatus Cenotana defunentia (NL. fem. n. *defunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902605445*. The type genome for the species is the GenBank assembly GCA_902605445.1. The GC content of the type genome is 30.18 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Cenotana depicastra sp. nov.

Candidatus Cenotana depicastra (NL. fem. n. *depicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902560045*. The type genome for the species is the GenBank assembly GCA_902560045.1. The GC content of the type genome is 30.95 %

and the genome length is 1.16 Mbp.

Description of *Candidatus* Cenotana depicilenta sp. nov.

Candidatus Cenotana depicilenta (NL. fem. n. *depicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902526075*. The type genome for the species is the GenBank assembly GCA_902526075.1. The GC content of the type genome is 31.11 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Cenotana desuricella sp. nov.

Candidatus Cenotana desuricella (NL. fem. n. *desuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp002702745*. The type genome for the species is the GenBank assembly GCA_002702745.1. The GC content of the type genome is 30.41 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Cenotana dupunatio sp. nov.

Candidatus Cenotana dupunatio (NL. fem. n. *dupunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902510415*. The type genome for the species is the GenBank assembly GCA_902510415.1. The GC content of the type genome is 30.1 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Cenotana ephemitas sp. nov.

Candidatus Cenotana ephemitas (NL. fem. n. *ephemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp002697255*. The type genome for the species is the GenBank assembly GCA_002697255.1. The GC content of the type genome is 29.61 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Cenotana ficeditoga sp. nov.

Candidatus Cenotana ficeditoga (NL. fem. n. *ficeditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp008081325*. The type genome for the species is the GenBank assembly GCA_008081325.1. The GC content of the type genome is 30.48 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cenotana forabitura sp. nov.

Candidatus Cenotana forabitura (NL. fem. n. *forabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902604715*. The type genome for the species is the GenBank assembly GCA_902605685.1. The GC content of the type genome is 31.07 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Cenotana gasomimonia sp. nov.

Candidatus Cenotana gasomimonia (NL. fem. n. *gasomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp002691265*. The type genome for the species is the GenBank assembly GCA_902541085.1. The GC content of the type genome is 30.76 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cenotana inaccitio sp. nov.

Candidatus Cenotana inaccitio (NL. fem. n. *inaccitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902525795*. The type genome for the species is the GenBank assembly GCA_902525795.1. The GC content of the type genome is 30.95 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Cenotana inlepitia sp. nov.

Candidatus Cenotana inlepitia (NL. fem. n. *inlepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902519075*. The type genome for the species is the GenBank assembly GCA_902519075.1. The GC content of the type genome is 30.7 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Cenotana lenunitio sp. nov.

Candidatus Cenotana lenunitio (NL. fem. n. *lenunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902602415*. The type genome for the species is the GenBank assembly GCA_902531285.1. The GC content of the type genome is 30.87 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Cenotana progrentia sp. nov.

Candidatus Cenotana progrentia (NL. fem. n. *progrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902581145*. The type genome for the species is the GenBank assembly GCA_902581145.1. The GC content of the type genome is 30.99 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Cenotana ratifedo sp. nov.

Candidatus Cenotana ratifedo (NL. fem. n. *ratifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902608795*. The type genome for the species is the GenBank assembly GCA_902608795.1. The GC content of the type genome is 30.78 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cenotana socagitoga sp. nov.

Candidatus Cenotana socagitoga (NL. fem. n. *socagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902557655*. The type genome for the species is the GenBank assembly GCA_902558865.1. The GC content of the type genome is 30.93 %

and the genome length is 1.23 Mbp.

Description of *Candidatus* Cenotana subodisca sp. nov.

Candidatus Cenotana subodisca (NL. fem. n. *subodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp002457735*. The type genome for the species is the GenBank assembly GCA_002457735.1. The GC content of the type genome is 30.28 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Cenotana verifastra sp. nov.

Candidatus Cenotana verifastra (NL. fem. n. *verifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902517895*. The type genome for the species is the GenBank assembly GCA_902517895.1. The GC content of the type genome is 30.79 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Cenotana vinolitia sp. nov.

Candidatus Cenotana vinolitia (NL. fem. n. *vinolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902518355*. The type genome for the species is the GenBank assembly GCA_902614955.1. The GC content of the type genome is 30.84 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Cenotana vitigax sp. nov.

Candidatus Cenotana vitigax (NL. fem. n. *vitigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G13 sp902509675*. The type genome for the species is the GenBank assembly GCA_902509675.1. The GC content of the type genome is 31.41 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Cenotaria renavax sp. nov.

Candidatus Cenotaria renavax (NL. fem. n. *renavax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM1-46 sp001304215*. The type genome for the species is the GenBank assembly GCA_002451215.1. The GC content of the type genome is 62.04 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Cenotaria gen. nov.

Candidatus Cenotaria (NL. fem. n. *Cenotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM1-46*. The type species for the genus is *Candidatus* Cenotaria renavax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenotella luxuretta sp. nov.

Candidatus Cenotella luxuretta (NL. fem. n. *luxuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYF01 sp010014665*. The type genome for the species is the GenBank assembly GCA_010014665.1. The GC content of the type genome is 42.8 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Cenotella gen. nov.

Candidatus Cenotella (NL. fem. n. *Cenotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZYF01*. The type species for the genus is *Candidatus* Cenotella luxuretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenotia depelitas sp. nov.

Candidatus Cenotia depelitas (NL. fem. n. *depelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACEH01 sp011682595*. The type genome for the species is the GenBank assembly GCA_011682595.1. The GC content of the type genome is 64.38 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Cenotia gen. nov.

Candidatus Cenotia (NL. fem. n. *Cenotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACEH01*. The type species for the genus is *Candidatus* Cenotia depelitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotiaceae.

Description of *Candidatus* Cenotiaceae fam. nov.

Candidatus Cenotiaceae (NL. fem. n. *Cenotiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACEH01.* The type genus for the taxon is *Candidatus* Cenotia .

According to the original version of GTDB R06-RS202, this family belongs to the order *FEN-1346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Gerunidales.

Description of *Candidatus* Cenotida celamessa sp. nov.

Candidatus Cenotida celamessa (NL. fem. n. *celamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6156 sp002422365*. The type genome for the species is the GenBank assembly GCA_002422365.1. The GC content of the type genome is 59.68 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Cenotida gen. nov.

Candidatus Cenotida (NL. fem. n. *Cenotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6156*. The type species for the genus is *Candidatus* Cenotida celamessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotidaceae.

Description of *Candidatus* Cenotidaceae fam. nov.

Candidatus Cenotidaceae (NL. fem. n. *Cenotidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6156.* The type genus for the taxon is *Candidatus* Cenotida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1280*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacariales.

Description of *Candidatus* Cenotida innecetta sp. nov.

Candidatus Cenotida innecetta (NL. fem. n. *innecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6156 sp003241595*. The type genome for the species is the GenBank assembly GCA_003241595.1. The GC content of the type genome is 56.05 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Cenotida laculessa sp. nov.

Candidatus Cenotida laculessa (NL. fem. n. *laculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6156 sp005768725*. The type genome for the species is the GenBank assembly GCA_005768725.1. The GC content of the type genome is 56.62 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Cenotosa pepenitas sp. nov.

Candidatus Cenotosa pepenitas (NL. fem. n. *pepenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVR01 sp009694185*. The type genome for the species is the GenBank assembly GCA_009694185.1. The GC content of the type genome is 66.32 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Cenotosa gen. nov.

Candidatus Cenotosa (NL. fem. n. *Cenotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVR01*. The type species for the genus is *Candidatus* Cenotosa pepenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotosaceae.

Description of *Candidatus* Cenotosaceae fam. nov.

Candidatus Cenotosaceae (NL. fem. n. *Cenotosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVR01*. The type genus for the taxon is *Candidatus* Cenotosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHVR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenotosales.

Description of *Candidatus* Cenotosales ord. nov.

Candidatus Cenotosales (NL. fem. n. *Cenotosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVR01*. The type genus for the taxon is *Candidatus* Cenotosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Cenotula alsisetta sp. nov.

Candidatus Cenotula alsisetta (NL. fem. n. *alsisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-16 sp002310155*. The type genome for the species is the GenBank assembly GCA_002310155.1. The GC content of the type genome is 49.92 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Cenotula gen. nov.

Candidatus Cenotula (NL. fem. n. *Cenotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-16*. The type species for the genus is *Candidatus* Cenotula alsisetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cenotula anteviforma sp. nov.

Candidatus Cenotula anteviforma (NL. fem. n. *anteviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-16 sp001604185*. The type genome for the species is the GenBank assembly GCA_001604185.1. The GC content of the type genome is 49.32 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Cenotula infenivita sp. nov.

Candidatus Cenotula infenivita (NL. fem. n. *infenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-16 sp900317035*. The type genome for the species is the GenBank assembly GCA_900317035.1. The GC content of the type genome is 48.95 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Cenotula volubessa sp. nov.

Candidatus Cenotula volubessa (NL. fem. n. *volubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Firm-16 sp002368805*. The type genome for the species is the GenBank assembly GCA_003485275.1. The GC content of the type genome is 49.29 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Centipeda demagatio sp. nov.

Candidatus Centipeda demagatio (NL. fem. n. *demagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp000315545*. The type genome for the species is the GenBank assembly RS_GCF_000315545.1. The GC content of the type genome is 58.5 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Centipeda herinicella sp. nov.

Candidatus Centipeda herinicella (NL. fem. n. *herinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp001683335*. The type genome for the species is the GenBank assembly RS_GCF_001683335.1. The GC content of the type genome is 57.11 % and the genome length is 2.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Centipeda irregedo sp. nov.

Candidatus Centipeda irregedo (NL. fem. n. *irregedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp000468035*. The type genome for the species is the GenBank assembly RS_GCF_000468035.1. The GC content of the type genome is 54.91 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Centipeda meridigena sp. nov.

Candidatus Centipeda meridigena (NL. fem. n. *meridigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp000286455*. The type genome for the species is the

GenBank assembly RS_GCF_000286455.1. The GC content of the type genome is 57.08 % and the genome length is 2.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Centipeda nosocitia sp. nov.

Candidatus Centipeda nosocitia (NL. fem. n. *nosocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp000318175*. The type genome for the species is the GenBank assembly RS_GCF_000318175.2. The GC content of the type genome is 56.87 % and the genome length is 2.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Centipeda peribitica sp. nov.

Candidatus Centipeda peribitica (NL. fem. n. *peribitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Centipeda sp001717585*. The type genome for the species is the GenBank assembly RS_GCF_001717585.1. The GC content of the type genome is 55.84 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "curette".

Description of *Candidatus* Cephaloticoccus caravifica sp. nov.

Candidatus Cephaloticoccus caravifica (NL. fem. n. *caravifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cephaloticoccus sp002713695*. The type genome for the species is the GenBank assembly GCA_002713695.1. The GC content of the type genome is 55.96 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Cephaloticoccus insibiforma sp. nov.

Candidatus Cephaloticoccus insibiforma (NL. fem. n. *insibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cephaloticoccus sp002367815*. The type genome for the species is the GenBank assembly GCA_002367815.1. The GC content of the type genome is 54.25 %

and the genome length is 2.8 Mbp.

Description of *Candidatus* Cepulana desomimonia sp. nov.

Candidatus Cepulana desomimonia (NL. fem. n. *desomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPSZ01 sp903867845*. The type genome for the species is the GenBank assembly GCA_903927195.1. The GC content of the type genome is 54.7 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Cepulana gen. nov.

Candidatus Cepulana (NL. fem. n. *Cepulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPSZ01*. The type species for the genus is *Candidatus* Cepulana desomimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PEXW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benifiaceae.

Description of *Candidatus* Cepularia bulapigena sp. nov.

Candidatus Cepularia bulapigena (NL. fem. n. *bulapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGCAAA288-L16 sp003451695*. The type genome for the species is the GenBank assembly GCA_005239395.1. The GC content of the type genome is 45.62 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cepularia gen. nov.

Candidatus Cepularia (NL. fem. n. *Cepularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGCAAA288-L16*. The type species for the genus is *Candidatus* Cepularia bulapigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cepularia cibarimonia sp. nov.

Candidatus Cepularia cibarimonia (NL. fem. n. *cibarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGCAAA288-L16 sp002731985*. The type genome for the species is the GenBank assembly GCA_003487765.1. The GC content of the type genome is 45.73 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Cepularia ossifentia sp. nov.

Candidatus Cepularia ossifentia (NL. fem. n. *ossifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGCAAA288-L16 sp000372225*. The type genome for the species is the GenBank assembly GCA_000372225.1. The GC content of the type genome is 39.47 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Cepulella effuniforma sp. nov.

Candidatus Cepulella effuniforma (NL. fem. n. *effuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5808 sp903789415*. The type genome for the species is the GenBank assembly GCA_903789415.1. The GC content of the type genome is 47.81 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Cepulella gen. nov.

Candidatus Cepulella (NL. fem. n. *Cepulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5808*. The type species for the genus is *Candidatus* Cepulella effuniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cepulella palifilega sp. nov.

Candidatus Cepulella palifilega (NL. fem. n. *palifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5808 sp002417975*. The type genome for the species is the GenBank assembly GCA_002417975.1. The GC content of the type genome is 46.38 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Cepulia depupax sp. nov.

Candidatus Cepulia depupax (NL. fem. n. *depupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3636 sp002448475*. The type genome for the species is the GenBank assembly GCA_002373635.1. The GC content of the type genome is 64.62 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Cepulia gen. nov.

Candidatus Cepulia (NL. fem. n. *Cepulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3636*. The type species for the genus is *Candidatus* Cepulia depupax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3636*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuliaceae.

Description of *Candidatus* Cepuliaceae fam. nov.

Candidatus Cepuliaceae (NL. fem. n. *Cepuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3636.* The type genus for the taxon is *Candidatus* Cepulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFP12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capudanales.

Description of *Candidatus* Cepulia seposiforma sp. nov.

Candidatus Cepulia seposiforma (NL. fem. n. *seposiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3636 sp902761575*. The type genome for the species is the GenBank assembly GCA_902764755.1. The GC content of the type genome is 70.06 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Cepulia utricousia sp. nov.

Candidatus Cepulia utricousia (NL. fem. n. *utricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3636 sp902793555*. The type genome for the species is the GenBank assembly GCA_902793555.1. The GC content of the type genome is 69.85 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Cepulida sanabax sp. nov.

Candidatus Cepulida sanabax (NL. fem. n. *sanabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINCQ01 sp903847095*. The type genome for the species is the GenBank assembly GCA_903862575.1. The GC content of the type genome is 46.25 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Cepulida gen. nov.

Candidatus Cepulida (NL. fem. n. *Cepulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINCQ01*. The type species for the genus is *Candidatus* Cepulida sanabax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodiaceae.

Description of *Candidatus* Cepulosa ratifatica sp. nov.

Candidatus Cepulosa ratifatica (NL. fem. n. *ratifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-44-24b sp001793235*. The type genome for the species is the GenBank assembly GCA_001792455.1. The GC content of the type genome is 43.57 % and the genome length is 1.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cepulosa gen. nov.

Candidatus Cepulosa (NL. fem. n. *Cepulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-44-24b*. The type species for the genus is *Candidatus* Cepulosa ratifatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Cepulula citipiforma sp. nov.

Candidatus Cepulula citipiforma (NL. fem. n. *citipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5388 sp002409975*. The type genome for the species is the GenBank assembly GCA_002398595.1. The GC content of the type genome is 41.9 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Cepulula gen. nov.

Candidatus Cepulula (NL. fem. n. *Cepulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5388*. The type species for the genus is *Candidatus* Cepulula citipiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefulaceae.

Description of *Candidatus* Cepuraria negotago sp. nov.

Candidatus Cepuraria negotago (NL. fem. n. *negotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9786 sp003518745*. The type genome for the species is the GenBank assembly GCA_003518745.1. The GC content of the type genome is 49.0 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Cepuraria gen. nov.

Candidatus Cepuraria (NL. fem. n. *Cepuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9786*. The type species for the genus is *Candidatus* Cepuraria negotago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cepuraria pulegitio sp. nov.

Candidatus Cepuraria pulegitio (NL. fem. n. *pulegitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9786 sp902785705*. The type genome for the species is the GenBank assembly GCA_902785705.1. The GC content of the type genome is 53.85 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cepurella defenatio sp. nov.

Candidatus Cepurella defenatio (NL. fem. n. *defenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12042 sp001775555*. The type genome for the species is the GenBank assembly GCA_001773735.1. The GC content of the type genome is 47.69 % and the genome length is 0.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cepurella gen. nov.

Candidatus Cepurella (NL. fem. n. *Cepurella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12042*. The type species for the genus is *Candidatus* Cepurella defenatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cepurella hexapibra sp. nov.

Candidatus Cepurella hexapibra (NL. fem. n. *hexapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12042 sp001002325*. The type genome for the species is the GenBank assembly GCA_001773795.1. The GC content of the type genome is 46.82 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Cepuria echogitrix sp. nov.

Candidatus Cepuria echogitrix (NL. fem. n. *echogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3532 sp002376965*. The type genome for the species is the GenBank assembly GCA_002376965.1. The GC content of the type genome is 46.73 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Cepuria gen. nov.

Candidatus Cepuria (NL. fem. n. *Cepuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3532*. The type species for the genus is *Candidatus* Cepuria echogitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuriaceae.

Description of *Candidatus* Cepuriaceae fam. nov.

Candidatus Cepuriaceae (NL. fem. n. *Cepuriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3532.* The type genus for the taxon is *Candidatus* Cepuria .

According to GTDB R06-RS202, this family belongs to the order *Enterobacterales*.

Description of *Candidatus* Cepurida haricatio sp. nov.

Candidatus Cepurida haricatio (NL. fem. n. *haricatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3465 sp002729885*. The type genome for the species is the GenBank assembly GCA_002380645.1. The GC content of the type genome is 49.92 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Cepurida gen. nov.

Candidatus Cepurida (NL. fem. n. *Cepurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3465*. The type species for the genus is *Candidatus* Cepurida haricatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cepurida odollitio sp. nov.

Candidatus Cepurida odollitio (NL. fem. n. *odollitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3465 sp002717505*. The type genome for the species is the GenBank assembly GCA_002717505.1. The GC content of the type genome is 50.28 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Cepurida sicubugo sp. nov.

Candidatus Cepurida sicubugo (NL. fem. n. *sicubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3465 sp002730875*. The type genome for the species is the GenBank assembly GCA_002730875.1. The GC content of the type genome is 52.98 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Cepurosa adsesetta sp. nov.

Candidatus Cepurosa adsesetta (NL. fem. n. *adsesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3065 sp009923755*. The type genome for the species is the GenBank assembly GCA_009923755.1. The GC content of the type genome is 65.7 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Cepurosa gen. nov.

Candidatus Cepurosa (NL. fem. n. *Cepurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3065*. The type species for the genus is *Candidatus* Cepurosa adsesetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepurosaceae.

Description of *Candidatus* Cepurosaceae fam. nov.

Candidatus Cepurosaceae (NL. fem. n. *Cepurosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3065.* The type genus for the taxon is *Candidatus* Cepurosa .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Cepurosa denixivita sp. nov.

Candidatus Cepurosa denixivita (NL. fem. n. *denixivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3065 sp002367415*. The type genome for the species is the GenBank assembly GCA_002367415.1. The GC content of the type genome is 64.27 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Cepurula favonimonas sp. nov.

Candidatus Cepurula favonimonas (NL. fem. n. *favonimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMDX01 sp903839905*. The type genome for the species is the GenBank assembly GCA_903839905.1. The GC content of the type genome is 40.91 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cepurula gen. nov.

Candidatus Cepurula (NL. fem. n. *Cepurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMDX01*. The type species for the genus is *Candidatus* Cepurula favonimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Ceracana effinatica sp. nov.

Candidatus Ceracana effinatica (NL. fem. n. *effinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-126 sp003554945*. The type genome for the species is the GenBank assembly GCA_003554945.1. The GC content of the type genome is 48.13 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Ceracana gen. nov.

Candidatus Ceracana (NL. fem. n. *Ceracana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1Sed10-126*. The type species for the genus is *Candidatus* Ceracana effinatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T1Sed10-126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracanaceae.

Description of *Candidatus* Ceracanaceae fam. nov.

Candidatus Ceracanaceae (NL. fem. n. *Ceracanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1Sed10-126.* The type genus for the taxon is *Candidatus* Ceracana .

According to the original version of GTDB R06-RS202, this family belongs to the order *T1Sed10-126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceracanales.

Description of *Candidatus* Ceracanales ord. nov.

Candidatus Ceracanales (NL. fem. n. *Ceracanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1Sed10-126.* The type genus for the taxon is *Candidatus* Ceracana .

According to the original version of GTDB R06-RS202, this family belongs to the class *T1Sed10-126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceracanae.

Description of *Candidatus* Ceracanae class. nov.

Candidatus Ceracanae (NL. fem. n. *c__Ceracanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1Sed10-126.* The type genus for the taxon is *Candidatus* Ceracana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *T1Sed10-126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Ceracanota.

Description of *Candidatus* Ceracanota phyl. nov.

Candidatus Ceracanota (NL. fem. n. *Ceracanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *T1Sed10-126.* The type genus for the taxon is *Candidatus* Ceracana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Ceracaria patibitia sp. nov.

Candidatus Ceracaria patibitia (NL. fem. n. *patibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMOW01 sp013204025*. The type genome for the species is the GenBank assembly GCA_013204025.1. The GC content of the type genome is 40.39 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Ceracaria gen. nov.

Candidatus Ceracaria (NL. fem. n. *Ceracaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMOW01*. The type species for the genus is *Candidatus* Ceracaria patibitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMOW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracariaceae.

Description of *Candidatus* Ceracariaceae fam. nov.

Candidatus Ceracariaceae (NL. fem. n. *Ceracariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMOW01.* The type genus for the taxon is *Candidatus* Ceracaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Ceracella bicalitoga sp. nov.

Candidatus Ceracella bicalitoga (NL. fem. n. *bicalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3637 sp002373815*. The type genome for the species is the GenBank assembly GCA_002373815.1. The GC content of the type genome is 38.67 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Ceracella gen. nov.

Candidatus Ceracella (NL. fem. n. *Ceracella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3637*. The type species for the genus is *Candidatus* Ceracella bicalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3637*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracellaceae.

Description of *Candidatus* Ceracellaceae fam. nov.

Candidatus Ceracellaceae (NL. fem. n. *Ceracellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3637.* The type genus for the taxon is *Candidatus* Ceracella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Ceracella domabitica sp. nov.

Candidatus Ceracella domabitica (NL. fem. n. *domabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3637 sp002372315*. The type genome for the species is the GenBank assembly GCA_002372315.1. The GC content of the type genome is 37.45 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Ceracella problibula sp. nov.

Candidatus Ceracella problibula (NL. fem. n. *problibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3637 sp002373615*. The type genome for the species is the GenBank assembly GCA_002373615.1. The GC content of the type genome is 40.99 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Ceracida vilipatica sp. nov.

Candidatus Ceracida vilipatica (NL. fem. n. *vilipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIO01 sp009782695*. The type genome for the species is the GenBank assembly GCA_009782695.1. The GC content of the type genome is 39.27 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Ceracida gen. nov.

Candidatus Ceracida (NL. fem. n. *Ceracida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRIO01*. The type species for the genus is *Candidatus* Ceracida vilipatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRIO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracidaceae.

Description of *Candidatus* Ceracidaceae fam. nov.

Candidatus Ceracidaceae (NL. fem. n. *Ceracidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRIO01.* The type genus for the taxon is *Candidatus* Ceracida .

According to GTDB R06-RS202, this family belongs to the order *Cloacimonadales*.

Description of *Candidatus* Ceracosa adremedo sp. nov.

Candidatus Ceracosa adremedo (NL. fem. n. *adremedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mor1 sp001664505*. The type genome for the species is the GenBank assembly GCA_001664505.1. The GC content of the type genome is 66.8 % and the

genome length is 5.99 Mbp.

Description of *Candidatus* Ceracosa gen. nov.

Candidatus Ceracosa (NL. fem. n. *Ceracosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Mor1*. The type species for the genus is *Candidatus* Ceracosa adremedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracosaceae.

Description of *Candidatus* Ceracosaceae fam. nov.

Candidatus Ceracosaceae (NL. fem. n. *Ceracosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Mor1*. The type genus for the taxon is *Candidatus* Ceracosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceracosales.

Description of *Candidatus* Ceracosales ord. nov.

Candidatus Ceracosales (NL. fem. n. *Ceracosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Mor1*. The type genus for the taxon is *Candidatus* Ceracosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceracosae.

Description of *Candidatus* Ceracosae class. nov.

Candidatus Ceracosae (NL. fem. n. *c__Ceracosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Mor1*. The type genus for the taxon is *Candidatus* Ceracosa .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Ceracula catabicella sp. nov.

Candidatus Ceracula catabicella (NL. fem. n. *catabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903930425*. The type genome for the species is the GenBank assembly GCA_903930425.1. The GC content of the type genome is 57.93 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Ceracula gen. nov.

Candidatus Ceracula (NL. fem. n. *Ceracula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1315*. The type species for the genus is *Candidatus* Ceracula catabicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ceracula colutentia sp. nov.

Candidatus Ceracula colutentia (NL. fem. n. *colutentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp012032235*. The type genome for the species is the GenBank assembly GCA_012032235.1. The GC content of the type genome is 50.81 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Ceracula detesilega sp. nov.

Candidatus Ceracula detesilega (NL. fem. n. *detesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp007126655*. The type genome for the species is the GenBank assembly GCA_007126655.1. The GC content of the type genome is 63.22 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Ceracula exsolilenta sp. nov.

Candidatus Ceracula exsolilenta (NL. fem. n. *exsolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp008932935*. The type genome for the species is the GenBank assembly GCA_008932935.1. The GC content of the type genome is 60.46 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ceracula facunugo sp. nov.

Candidatus Ceracula facunugo (NL. fem. n. *facunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903875675*. The type genome for the species is the GenBank assembly GCA_903875675.1. The GC content of the type genome is 58.85 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Ceracula famelicella sp. nov.

Candidatus Ceracula famelicella (NL. fem. n. *famelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp008932955*. The type genome for the species is the GenBank assembly GCA_008932955.1. The GC content of the type genome is 60.29 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Ceracula funametta sp. nov.

Candidatus Ceracula funametta (NL. fem. n. *funametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903919975*. The type genome for the species is the GenBank assembly GCA_903941275.1. The GC content of the type genome is 57.34 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Ceracula galacibula sp. nov.

Candidatus Ceracula galacibula (NL. fem. n. *galacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903837825*. The type genome for the species is the GenBank assembly GCA_903837825.1. The GC content of the type genome is 55.12 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Ceracula galacitas sp. nov.

Candidatus Ceracula galacitas (NL. fem. n. *galacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp002307065*. The type genome for the species is the GenBank assembly GCA_002307065.1. The GC content of the type genome is 55.29 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Ceracula hexagatica sp. nov.

Candidatus Ceracula hexagatica (NL. fem. n. *hexagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp004294095*. The type genome for the species is the GenBank assembly GCA_013297845.1. The GC content of the type genome is 52.11 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Ceracula irrelentia sp. nov.

Candidatus Ceracula irrelentia (NL. fem. n. *irrelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903908495*. The type genome for the species is the GenBank assembly GCA_903908495.1. The GC content of the type genome is 62.55 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Ceracula manufitrix sp. nov.

Candidatus Ceracula manufitrix (NL. fem. n. *manufitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1315 sp014379305*. The type genome for the species is the GenBank assembly GCA_014379305.1. The GC content of the type genome is 55.06 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Ceracula paropiforma sp. nov.

Candidatus Ceracula paropiforma (NL. fem. n. *paropiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903906515*. The type genome for the species is the GenBank assembly GCA_903906515.1. The GC content of the type genome is 56.92 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Ceracula penicilenta sp. nov.

Candidatus Ceracula penicilenta (NL. fem. n. *penicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903827375*. The type genome for the species is the GenBank assembly GCA_903870255.1. The GC content of the type genome is 58.57 % and the genome length is 7.17 Mbp.

Description of *Candidatus* Ceracula ranunitio sp. nov.

Candidatus Ceracula ranunitio (NL. fem. n. *ranunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903826205*. The type genome for the species is the GenBank assembly GCA_903866835.1. The GC content of the type genome is 61.27 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Ceracula robigisca sp. nov.

Candidatus Ceracula robigisca (NL. fem. n. *robigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp005787565*. The type genome for the species is the GenBank assembly GCA_005787565.1. The GC content of the type genome is 60.21 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Ceracula scintentia sp. nov.

Candidatus Ceracula scintentia (NL. fem. n. *scintentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp003820635*. The type genome for the species is the GenBank assembly GCA_003820635.1. The GC content of the type genome is 60.79 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Ceracula senacimonia sp. nov.

Candidatus Ceracula senacimonia (NL. fem. n. *senacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903909905*. The type genome for the species is the GenBank assembly GCA_903909905.1. The GC content of the type genome is 57.76 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Ceracula sicaricella sp. nov.

Candidatus Ceracula sicaricella (NL. fem. n. *sicaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903888515*. The type genome for the species is the GenBank assembly GCA_903960095.1. The GC content of the type genome is 58.97 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Ceracula turicitas sp. nov.

Candidatus Ceracula turicitas (NL. fem. n. *turicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp009885905*. The type genome for the species is the GenBank assembly GCA_009885905.1. The GC content of the type genome is 52.29 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Ceracula venunilega sp. nov.

Candidatus Ceracula venunilega (NL. fem. n. *venunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1315 sp903934285*. The type genome for the species is the GenBank assembly GCA_903934285.1. The GC content of the type genome is 62.75 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Cerarana bisulitio sp. nov.

Candidatus Cerarana bisulitio (NL. fem. n. *bisulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753745 sp002753745*. The type genome for the species is the GenBank assembly GCA_002753745.1. The GC content of the type genome is 49.55 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Cerarana gen. nov.

Candidatus Cerarana (NL. fem. n. *Cerarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2753745*. The type species for the genus is *Candidatus* Cerarana bisulitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002753745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosaculaceae.

Description of *Candidatus* Cerarana dinupimonas sp. nov.

Candidatus Cerarana dinupimonas (NL. fem. n. *dinupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753745 sp903908245*. The type genome for the species is the GenBank assembly GCA_903878855.1. The GC content of the type genome is 52.41 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Cerararia resurilenta sp. nov.

Candidatus Cerararia resurilenta (NL. fem. n. *resurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU065 sp001512545*. The type genome for the species is the GenBank assembly GCA_002385915.1. The GC content of the type genome is 48.87 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cerararia gen. nov.

Candidatus Cerararia (NL. fem. n. *Cerararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU065*. The type species for the genus is *Candidatus* Cerararia resurilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerararia ceae.

Description of *Candidatus* Cerararia ceae fam. nov.

Candidatus Cerararia ceae (NL. fem. n. *Cerararia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU065.* The type genus for the taxon is *Candidatus* Cerararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerararia les.

Description of *Candidatus* Cerararia les ord. nov.

Candidatus Cerararia les (NL. fem. n. *Cerararia les* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU065.* The type genus for the taxon is *Candidatus* Cerararia .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cerararia e.

Description of *Candidatus* Cerararia e class. nov.

Candidatus Cerararia e (NL. fem. n. *c__Cerararia e* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU065.* The type genus for the taxon is *Candidatus* Cerararia .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_G*.

Description of *Candidatus* Cerarella cacalatio sp. nov.

Candidatus Cerarella cacalatio (NL. fem. n. *cacalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin88 sp004375675*. The type genome for the species is the GenBank assembly GCA_004375675.1. The GC content of the type genome is 57.23 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Cerarella gen. nov.

Candidatus Cerarella (NL. fem. n. *Cerarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin88*. The type species for the genus is *Candidatus* Cerarella cacalatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin88*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerarellaceae.

Description of *Candidatus* Cerarellaceae fam. nov.

Candidatus Cerarellaceae (NL. fem. n. *Cerarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin88.* The type genus for the taxon is *Candidatus* Cerarella .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Cerarella edulcax sp. nov.

Candidatus Cerarella edulcax (NL. fem. n. *edulcax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *E44-bin88 sp013202445*. The type genome for the species is the GenBank assembly GCA_013202445.1. The GC content of the type genome is 54.91 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Cerarella invecicula sp. nov.

Candidatus Cerarella invecicula (NL. fem. n. *invecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin88 sp011176635*. The type genome for the species is the GenBank assembly GCA_011176635.1. The GC content of the type genome is 55.56 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Cerarida bonititica sp. nov.

Candidatus Cerarida bonititica (NL. fem. n. *bonititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBL01 sp005239745*. The type genome for the species is the GenBank assembly GCA_005239745.1. The GC content of the type genome is 52.91 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Cerarida gen. nov.

Candidatus Cerarida (NL. fem. n. *Cerarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBL01*. The type species for the genus is *Candidatus* Cerarida bonititica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceraridaceae.

Description of *Candidatus* Ceraridaceae fam. nov.

Candidatus Ceraridaceae (NL. fem. n. *Ceraridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBL01.* The type genus for the taxon is *Candidatus* Cerarida .

According to the original version of GTDB R06-RS202, this family belongs to the order

SBBL01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceraridales.

Description of *Candidatus* Ceraridales ord. nov.

Candidatus Ceraridales (NL. fem. n. *Ceraridales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBL01.* The type genus for the taxon is *Candidatus* Cerarida .

According to the GTDB R06-RS202, this order belongs to the class *Nitrospiria*.

Description of *Candidatus* Cerarosa umbilatica sp. nov.

Candidatus Cerarosa umbilatica (NL. fem. n. *umbilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OSU-TB39 sp009392195*. The type genome for the species is the GenBank assembly GCA_009392195.1. The GC content of the type genome is 35.84 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Cerarosa gen. nov.

Candidatus Cerarosa (NL. fem. n. *Cerarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OSU-TB39*. The type species for the genus is *Candidatus* Cerarosa umbilatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OSU-TB39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerarosaceae.

Description of *Candidatus* Cerarosaceae fam. nov.

Candidatus Cerarosaceae (NL. fem. n. *Cerarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OSU-TB39.* The type genus for the taxon is *Candidatus* Cerarosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Defulidales.

Description of *Candidatus* Cerarula dedigitudo sp. nov.

Candidatus Cerarula dedigitudo (NL. fem. n. *dedigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDSEA-S09-B13 sp002456995*. The type genome for the species is the GenBank assembly GCA_012960865.1. The GC content of the type genome is 51.6 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Cerarula gen. nov.

Candidatus Cerarula (NL. fem. n. *Cerarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDSEA-S09-B13*. The type species for the genus is *Candidatus* Cerarula dedigitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Cerarula exceressa sp. nov.

Candidatus Cerarula exceressa (NL. fem. n. *exceressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDSEA-S09-B13 sp002731295*. The type genome for the species is the GenBank assembly GCA_002731295.1. The GC content of the type genome is 52.41 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Cerarula forabedo sp. nov.

Candidatus Cerarula forabedo (NL. fem. n. *forabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDSEA-S09-B13 sp003447825*. The type genome for the species is the GenBank assembly GCA_003972885.1. The GC content of the type genome is 53.67

% and the genome length is 2.81 Mbp.

Description of *Candidatus* Cerarula ratifentia sp. nov.

Candidatus Cerarula ratifentia (NL. fem. n. *ratifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDSEA-S09-B13 sp001629395*. The type genome for the species is the GenBank assembly GCA_001629415.1. The GC content of the type genome is 52.09 % and the genome length is 2.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 34 - depth 200m".

Description of *Candidatus* Cerasibacillus pepenitoga sp. nov.

Candidatus Cerasibacillus pepenitoga (NL. fem. n. *pepenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cerasibacillus sp001310515*. The type genome for the species is the GenBank assembly RS_GCF_008039555.1. The GC content of the type genome is 34.83 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Cerebana accogilega sp. nov.

Candidatus Cerebana accogilega (NL. fem. n. *accogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp013140605*. The type genome for the species is the GenBank assembly GCA_013140605.1. The GC content of the type genome is 48.98 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Cerebana gen. nov.

Candidatus Cerebana (NL. fem. n. *Cerebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB14*. The type species for the genus is *Candidatus* Cerebana accogilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Cerebana adnarimonas sp. nov.

Candidatus Cerebana adnarimonas (NL. fem. n. *adnarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp003599285*. The type genome for the species is the GenBank assembly GCA_003599285.1. The GC content of the type genome is 54.7 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Cerebana adpenibra sp. nov.

Candidatus Cerebana adpenibra (NL. fem. n. *adpenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp001567105*. The type genome for the species is the GenBank assembly GCA_001567105.1. The GC content of the type genome is 40.16 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Cerebana adtagimonas sp. nov.

Candidatus Cerebana adtagimonas (NL. fem. n. *adtagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp013388795*. The type genome for the species is the GenBank assembly GCA_013388795.1. The GC content of the type genome is 53.05 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Cerebana argimousia sp. nov.

Candidatus Cerebana argimousia (NL. fem. n. *argimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp003524705*. The type genome for the species is the GenBank assembly GCA_003524705.1. The GC content of the type genome is 40.74 % and the

genome length is 2.98 Mbp.

Description of *Candidatus* Cerebana crastitrix sp. nov.

Candidatus Cerebana crastitrix (NL. fem. n. *crastitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp008363285*. The type genome for the species is the GenBank assembly GCA_008363285.1. The GC content of the type genome is 53.63 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Cerebana defetitura sp. nov.

Candidatus Cerebana defetitura (NL. fem. n. *defetitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp013112685*. The type genome for the species is the GenBank assembly GCA_013112685.1. The GC content of the type genome is 55.71 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Cerebana dinupugo sp. nov.

Candidatus Cerebana dinupugo (NL. fem. n. *dinupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp009885945*. The type genome for the species is the GenBank assembly GCA_009885945.1. The GC content of the type genome is 44.74 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Cerebana feficentia sp. nov.

Candidatus Cerebana feficentia (NL. fem. n. *feficentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp011046595*. The type genome for the species is the GenBank assembly GCA_011046595.1. The GC content of the type genome is 46.12 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Cerebana innupilega sp. nov.

Candidatus Cerebana innupilega (NL. fem. n. *innupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp009885525*. The type genome for the species is the GenBank assembly GCA_009885525.1. The GC content of the type genome is 49.2 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Cerebana luculibula sp. nov.

Candidatus Cerebana luculibula (NL. fem. n. *luculibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp903837815*. The type genome for the species is the GenBank assembly GCA_903837815.1. The GC content of the type genome is 54.5 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Cerebana melliliforma sp. nov.

Candidatus Cerebana melliliforma (NL. fem. n. *melliliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp002343775*. The type genome for the species is the GenBank assembly GCA_002344295.1. The GC content of the type genome is 53.28 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Cerebana necopilenta sp. nov.

Candidatus Cerebana necopilenta (NL. fem. n. *necopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp900696595*. The type genome for the species is the GenBank assembly GCA_003577345.1. The GC content of the type genome is 56.77 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Cerebana paropicella sp. nov.

Candidatus Cerebana paropicella (NL. fem. n. *paropicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp903914955*. The type genome for the species is the GenBank assembly GCA_903840345.1. The GC content of the type genome is 47.84 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Cerebana senipisca sp. nov.

Candidatus Cerebana senipisca (NL. fem. n. *senipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp014379595*. The type genome for the species is the GenBank assembly GCA_014379595.1. The GC content of the type genome is 44.68 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Cerebana terebatica sp. nov.

Candidatus Cerebana terebatica (NL. fem. n. *terebatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB14 sp002345215*. The type genome for the species is the GenBank assembly GCA_002344225.1. The GC content of the type genome is 40.81 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Cerebaria ludifibra sp. nov.

Candidatus Cerebaria ludifibra (NL. fem. n. *ludifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13010 sp900754965*. The type genome for the species is the GenBank assembly GCA_900754965.1. The GC content of the type genome is 54.39 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cerebaria gen. nov.

Candidatus Cerebaria (NL. fem. n. *Cerebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13010*. The type species for the genus is *Candidatus* Cerebaria ludifibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerebia gasifigena sp. nov.

Candidatus Cerebia gasifigena (NL. fem. n. *gasifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7741 sp900314575*. The type genome for the species is the GenBank assembly GCA_900314575.1. The GC content of the type genome is 68.91 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Cerebia gen. nov.

Candidatus Cerebia (NL. fem. n. *Cerebia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7741*. The type species for the genus is *Candidatus* Cerebia gasifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerebia purulastra sp. nov.

Candidatus Cerebia purulastra (NL. fem. n. *purulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7741 sp900314495*. The type genome for the species is the GenBank assembly GCA_900314495.1. The GC content of the type genome is 64.07 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Cerebida hirunitia sp. nov.

Candidatus Cerebida hirunitia (NL. fem. n. *hirunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMJO01 sp900299395*. The type genome for the species is the GenBank assembly GCA_900299395.1. The GC content of the type genome is 47.76 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Cerebida gen. nov.

Candidatus Cerebida (NL. fem. n. *Cerebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMJO01*. The type species for the genus is *Candidatus* Cerebida hirunitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OMJO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerebidaceae.

Description of *Candidatus* Cerebidaceae fam. nov.

Candidatus Cerebidaceae (NL. fem. n. *Cerebidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OMJO01.* The type genus for the taxon is *Candidatus* Cerebida .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Cerebosa dapifibra sp. nov.

Candidatus Cerebosa dapifibra (NL. fem. n. *dapifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp900544625*. The type genome for the species is the GenBank assembly RS_GCF_900761245.1. The GC content of the type genome is 26.41 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Cerebosa gen. nov.

Candidatus Cerebosa (NL. fem. n. *Cerebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-460*. The type species for the genus is *Candidatus* Cerebosa dapifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cerebosa deforax sp. nov.

Candidatus Cerebosa deforax (NL. fem. n. *deforax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp002439555*. The type genome for the species is the GenBank assembly GCA_002404925.1. The GC content of the type genome is 26.06 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Cerebosa exceritrix sp. nov.

Candidatus Cerebosa exceritrix (NL. fem. n. *exceritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp900751815*. The type genome for the species is the GenBank assembly RS_GCF_900751815.1. The GC content of the type genome is 27.53 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Cerebosa feficibra sp. nov.

Candidatus Cerebosa feficibra (NL. fem. n. *feficibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp000437355*. The type genome for the species is the GenBank assembly GCA_000437355.1. The GC content of the type genome is 26.31 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cerebosa fumacax sp. nov.

Candidatus Cerebosa fumacax (NL. fem. n. *fumacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp000437315*. The type genome for the species is the GenBank assembly GCA_000437315.1. The GC content of the type genome is 25.28 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cerebosa ignicilega sp. nov.

Candidatus Cerebosa ignicilega (NL. fem. n. *ignicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp012799635*. The type genome for the species is the GenBank assembly GCA_012799635.1. The GC content of the type genome is 26.87 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cerebosa immatilenta sp. nov.

Candidatus Cerebosa immatilenta (NL. fem. n. *immatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp902797105*. The type genome for the species is the GenBank assembly GCA_902797105.1. The GC content of the type genome is 26.74 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Cerebosa monopatica sp. nov.

Candidatus Cerebosa monopatica (NL. fem. n. *monopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp000438075*. The type genome for the species is the GenBank assembly GCA_900549315.1. The GC content of the type genome is 26.61 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Cerebosa navicimonia sp. nov.

Candidatus Cerebosa navicimonia (NL. fem. n. *navicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp900546715*. The type genome for the species is the GenBank assembly GCA_900546715.1. The GC content of the type genome is 27.28 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Cerebosa vinacitoga sp. nov.

Candidatus Cerebosa vinacitoga (NL. fem. n. *vinacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-460 sp900551525*. The type genome for the species is the GenBank assembly GCA_900551525.1. The GC content of the type genome is 26.73 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Cerebula turifitica sp. nov.

Candidatus Cerebula turifitica (NL. fem. n. *turifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10001 sp003512705*. The type genome for the species is the GenBank assembly GCA_003512705.1. The GC content of the type genome is 44.0 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cerebula gen. nov.

Candidatus Cerebula (NL. fem. n. *Cerebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10001*. The type species for the genus is *Candidatus* Cerebula turifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacellaceae.

Description of *Candidatus* Cereibacter immusigena sp. nov.

Candidatus Cereibacter immusigena (NL. fem. n. *immusigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cereibacter_A sp002407205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002407205.1. The GC content of the type genome is 68.54 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Cerevana malogitrix sp. nov.

Candidatus Cerevana malogitrix (NL. fem. n. *malogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712665 sp002938035*. The type genome for the species is the GenBank assembly GCA_002712665.1. The GC content of the type genome is 44.66 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Cerevana gen. nov.

Candidatus Cerevana (NL. fem. n. *Cerevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712665*. The type species for the genus is *Candidatus* Cerevana malogitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Cerevana modifitio sp. nov.

Candidatus Cerevana modifitio (NL. fem. n. *modifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712665 sp012963665*. The type genome for the species is the GenBank assembly GCA_012963665.1. The GC content of the type genome is 44.85 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Cerevaria tirunessa sp. nov.

Candidatus Cerevaria tirunessa (NL. fem. n. *tirunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAISCU01 sp903883965*. The type genome for the species is the GenBank assembly GCA_903878395.1. The GC content of the type genome is 36.31 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Cerevaria gen. nov.

Candidatus Cerevaria (NL. fem. n. *Cerevaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAISCU01*. The type species for the genus is *Candidatus* Cerevaria tirunessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Cerevella sonabastra sp. nov.

Candidatus Cerevella sonabastra (NL. fem. n. *sonabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MES13 sp009711765*. The type genome for the species is the GenBank assembly GCA_009711765.1. The GC content of the type genome is 27.63 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Cerevella gen. nov.

Candidatus Cerevella (NL. fem. n. *Cerevella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MES13*. The type species for the genus is *Candidatus* Cerevella sonabastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MES13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerevellaceae.

Description of *Candidatus* Cerevellaceae fam. nov.

Candidatus Cerevellaceae (NL. fem. n. *Cerevellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MES13.* The type genus for the taxon is *Candidatus* Cerevella .

According to GTDB R06-RS202, this family belongs to the order *Tissierellales*.

Description of *Candidatus* Cerevella tolutisca sp. nov.

Candidatus Cerevella tolutisca (NL. fem. n. *tolutisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MES13 sp009711785*. The type genome for the species is the GenBank assembly GCA_009711785.1. The GC content of the type genome is 27.72 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Cerevia indepitica sp. nov.

Candidatus Cerevia indepitica (NL. fem. n. *indepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3496 sp002377645*. The type genome for the species is the GenBank assembly GCA_002377645.1. The GC content of the type genome is 35.26 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Cerevia gen. nov.

Candidatus Cerevia (NL. fem. n. *Cerevia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3496*. The type species for the genus is *Candidatus* Cerevia indepitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3496*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cereviaceae.

Description of *Candidatus* Cereviaceae fam. nov.

Candidatus Cereviaceae (NL. fem. n. *Cereviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3496.* The type genus for the taxon is *Candidatus* Cerevia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Turifosales.

Description of *Candidatus* Cerevida loripibula sp. nov.

Candidatus Cerevida loripibula (NL. fem. n. *loripibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBEU01 sp903952265*. The type genome for the species is the GenBank assembly GCA_903819765.1. The GC content of the type genome is 36.67 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Cerevida gen. nov.

Candidatus Cerevida (NL. fem. n. *Cerevida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBEU01*. The type species for the genus is *Candidatus* Cerevida loripibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerevosa milifatio sp. nov.

Candidatus Cerevosa milifatio (NL. fem. n. *milifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYGM01 sp005799545*. The type genome for the species is the GenBank assembly GCA_005776895.1. The GC content of the type genome is 66.97 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Cerevosa gen. nov.

Candidatus Cerevosa (NL. fem. n. *Cerevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYGM01*. The type species for the genus is *Candidatus* Cerevosa milifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Cerevula catobisca sp. nov.

Candidatus Cerevula catobisca (NL. fem. n. *catobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CSSED10-376 sp003557445*. The type genome for the species is the GenBank assembly GCA_003557445.1. The GC content of the type genome is 32.34 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Cerevula gen. nov.

Candidatus Cerevula (NL. fem. n. *Cerevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED10-376*. The type species for the genus is *Candidatus* Cerevula catobisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSED10-376*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerevulaceae.

Description of *Candidatus* Cerevulaceae fam. nov.

Candidatus Cerevulaceae (NL. fem. n. *Cerevulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSED10-376.* The type genus for the taxon is *Candidatus* Cerevula .

According to GTDB R06-RS202, this family belongs to the order *Halanaerobiales*.

Description of *Candidatus* Cerifaria actaribula sp. nov.

Candidatus Cerifaria actaribula (NL. fem. n. *actaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MARSEILLE-P3954 sp900604345*. The type genome for the species is the GenBank assembly RS_GCF_900604345.1. The GC content of the type genome is 60.82 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Cerifaria gen. nov.

Candidatus Cerifaria (NL. fem. n. *Cerifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MARSEILLE-P3954*. The type species for the genus is *Candidatus* Cerifaria actaribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MARSEILLE-P3954*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerifariaceae.

Description of *Candidatus* Cerifariaceae fam. nov.

Candidatus Cerifariaceae (NL. fem. n. *Cerifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MARSEILLE-P3954.* The type genus for the taxon is *Candidatus* Cerifaria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Cerifella acontilega sp. nov.

Candidatus Cerifella acontilega (NL. fem. n. *acontilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003135495*. The type genome for the species is the GenBank assembly GCA_003135495.1. The GC content of the type genome is 55.03 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Cerifella gen. nov.

Candidatus Cerifella (NL. fem. n. *Cerifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-209*. The type species for the genus is *Candidatus* Cerifella acontilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerifella cunabedo sp. nov.

Candidatus Cerifella cunabedo (NL. fem. n. *cunabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003132325*. The type genome for the species is the GenBank assembly GCA_003132325.1. The GC content of the type genome is 58.58 %

and the genome length is 5.32 Mbp.

Description of *Candidatus* Cerifella domicessa sp. nov.

Candidatus Cerifella domicessa (NL. fem. n. *domicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003138955*. The type genome for the species is the GenBank assembly GCA_003138955.1. The GC content of the type genome is 58.58 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Cerifella doxolilega sp. nov.

Candidatus Cerifella doxolilega (NL. fem. n. *doxolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003162255*. The type genome for the species is the GenBank assembly GCA_003162255.1. The GC content of the type genome is 58.01 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Cerifella fetulago sp. nov.

Candidatus Cerifella fetulago (NL. fem. n. *fetulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003162935*. The type genome for the species is the GenBank assembly GCA_003135275.1. The GC content of the type genome is 58.88 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Cerifella malagax sp. nov.

Candidatus Cerifella malagax (NL. fem. n. *malagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003168235*. The type genome for the species is the GenBank assembly GCA_003139375.1. The GC content of the type genome is 57.67 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Cerifella malivibra sp. nov.

Candidatus Cerifella malivibra (NL. fem. n. *malivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003139095*. The type genome for the species is the GenBank assembly GCA_003168695.1. The GC content of the type genome is 58.86 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Cerifella peropilega sp. nov.

Candidatus Cerifella peropilega (NL. fem. n. *peropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003134435*. The type genome for the species is the GenBank assembly GCA_003134435.1. The GC content of the type genome is 58.13 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Cerifella pocilatio sp. nov.

Candidatus Cerifella pocilatio (NL. fem. n. *pocilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003139995*. The type genome for the species is the GenBank assembly GCA_003160385.1. The GC content of the type genome is 58.11 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Cerifella reduvax sp. nov.

Candidatus Cerifella reduvax (NL. fem. n. *reduvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003131315*. The type genome for the species is the GenBank assembly GCA_003131315.1. The GC content of the type genome is 58.25 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Cerifella subofatica sp. nov.

Candidatus Cerifella subofatica (NL. fem. n. *subofatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003152795*. The type genome for the species is the GenBank assembly GCA_003152795.1. The GC content of the type genome is 59.05 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Cerifella uxorcetta sp. nov.

Candidatus Cerifella uxorcetta (NL. fem. n. *uxorcetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003139975*. The type genome for the species is the GenBank assembly GCA_003139975.1. The GC content of the type genome is 58.47 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Cerifella vecorousia sp. nov.

Candidatus Cerifella vecorousia (NL. fem. n. *vecorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-209 sp003132405*. The type genome for the species is the GenBank assembly GCA_003153635.1. The GC content of the type genome is 56.63 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Cerifia lanifousia sp. nov.

Candidatus Cerifia lanifousia (NL. fem. n. *lanifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWEI01 sp003553465*. The type genome for the species is the GenBank assembly GCA_003553465.1. The GC content of the type genome is 50.42 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Cerifia gen. nov.

Candidatus Cerifia (NL. fem. n. *Cerifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWEI01*. The type species for the genus is *Candidatus* Cerifia lanifousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Cerifida giganentia sp. nov.

Candidatus Cerifida giganentia (NL. fem. n. *giganentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-58-11 sp001770235*. The type genome for the species is the GenBank assembly GCA_001770235.1. The GC content of the type genome is 58.14 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Cerifida gen. nov.

Candidatus Cerifida (NL. fem. n. *Cerifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-58-11*. The type species for the genus is *Candidatus* Cerifida giganentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-58-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerifidaceae.

Description of *Candidatus* Cerifidaceae fam. nov.

Candidatus Cerifidaceae (NL. fem. n. *Cerifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-58-11.* The type genus for the taxon is *Candidatus* Cerifida .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Cerifosa cenobigena sp. nov.

Candidatus Cerifosa cenobigena (NL. fem. n. *cenobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin94 sp009844885*. The type genome for the species is the GenBank assembly GCA_009841825.1. The GC content of the type genome is 66.89 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Cerifosa gen. nov.

Candidatus Cerifosa (NL. fem. n. *Cerifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin94*. The type species for the genus is *Candidatus* Cerifosa cenobigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Cerifosa hexapessa sp. nov.

Candidatus Cerifosa hexapessa (NL. fem. n. *hexapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin94 sp009840215*. The type genome for the species is the GenBank assembly GCA_009839035.1. The GC content of the type genome is 67.18 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Cerifosa papilitio sp. nov.

Candidatus Cerifosa papilitio (NL. fem. n. *papilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin94 sp009838975*. The type genome for the species is the GenBank assembly GCA_009839265.1. The GC content of the type genome is 67.43 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Cerifosa pinacetta sp. nov.

Candidatus Cerifosa pinacetta (NL. fem. n. *pinacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bin94 sp009841475*. The type genome for the species is the GenBank assembly GCA_009836825.1. The GC content of the type genome is 67.82 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Cerifosa refunilega sp. nov.

Candidatus Cerifosa refunilega (NL. fem. n. *refunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin94 sp009841165*. The type genome for the species is the GenBank assembly GCA_009841165.1. The GC content of the type genome is 67.34 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Cerifosa vicecago sp. nov.

Candidatus Cerifosa vicecago (NL. fem. n. *vicecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin94 sp002238865*. The type genome for the species is the GenBank assembly GCA_002238865.1. The GC content of the type genome is 66.9 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Cerifula bipenicella sp. nov.

Candidatus Cerifula bipenicella (NL. fem. n. *bipenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAALKR01 sp011087955*. The type genome for the species is the GenBank assembly GCA_011087955.1. The GC content of the type genome is 44.57 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Cerifula gen. nov.

Candidatus Cerifula (NL. fem. n. *Cerifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAALKR01*. The type species for the genus is *Candidatus* Cerifula bipenicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAALKR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Cerifulaceae.

Description of *Candidatus* Cerifulaceae fam. nov.

Candidatus Cerifulaceae (NL. fem. n. *Cerifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAALKR01.* The type genus for the taxon is *Candidatus* Cerifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIPTA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocibiales.

Description of *Candidatus* Cerimana affunessa sp. nov.

Candidatus Cerimana affunessa (NL. fem. n. *affunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2708415 sp013215815*. The type genome for the species is the GenBank assembly GCA_013215815.1. The GC content of the type genome is 43.15 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cerimana gen. nov.

Candidatus Cerimana (NL. fem. n. *Cerimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2708415*. The type species for the genus is *Candidatus* Cerimana affunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerimana fatilitoga sp. nov.

Candidatus Cerimana fatilitoga (NL. fem. n. *fatilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2708415 sp002708415*. The type genome for the species is the GenBank assembly GCA_002708415.1. The GC content of the type genome is 41.55 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Cerimana metabimonas sp. nov.

Candidatus Cerimana metabimonas (NL. fem. n. *metabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2708415 sp009995595*. The type genome for the species is the GenBank assembly GCA_009995595.1. The GC content of the type genome is 43.75 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Cerimaria timefilenta sp. nov.

Candidatus Cerimaria timefilenta (NL. fem. n. *timefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *9FT-COMBO-42-15 sp001803815*. The type genome for the species is the GenBank assembly GCA_001803815.1. The GC content of the type genome is 41.42 % and the genome length is 1.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Cerimaria gen. nov.

Candidatus Cerimaria (NL. fem. n. *Cerimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *9FT-COMBO-42-15*. The type species for the genus is *Candidatus* Cerimaria timefilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *9FT-COMBO-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerimariaceae.

Description of *Candidatus* Cerimariaceae fam. nov.

Candidatus Cerimariaceae (NL. fem. n. *Cerimariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *9FT-COMBO-42-15.* The type genus for the taxon is *Candidatus* Cerimaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *9FT-COMBO-42-15*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Cerimariales.

Description of *Candidatus* Cerimariales ord. nov.

Candidatus Cerimariales (NL. fem. n. *Cerimariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *9FT-COMBO-42-15.* The type genus for the taxon is *Candidatus* Cerimaria .

According to the GTDB R06-RS202, this order belongs to the class *Nitrospiria*.

Description of *Candidatus* Cerimella modifax sp. nov.

Candidatus Cerimella modifax (NL. fem. n. *modifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-104 sp003231075*. The type genome for the species is the GenBank assembly GCA_003231075.1. The GC content of the type genome is 38.52 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Cerimella gen. nov.

Candidatus Cerimella (NL. fem. n. *Cerimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-104*. The type species for the genus is *Candidatus* Cerimella modifax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerimellaceae.

Description of *Candidatus* Cerimellaceae fam. nov.

Candidatus Cerimellaceae (NL. fem. n. *Cerimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-104.* The type genus for the taxon is *Candidatus* Cerimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Bucolosales.

Description of *Candidatus* Cerimia acropibra sp. nov.

Candidatus Cerimia acropibra (NL. fem. n. *acropibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWT01 sp014360825*. The type genome for the species is the GenBank assembly GCA_014360825.1. The GC content of the type genome is 56.84 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Cerimia gen. nov.

Candidatus Cerimia (NL. fem. n. *Cerimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIWT01*. The type species for the genus is *Candidatus* Cerimia acropibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIWT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerimiaceae.

Description of *Candidatus* Cerimiaceae fam. nov.

Candidatus Cerimiaceae (NL. fem. n. *Cerimiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIWT01.* The type genus for the taxon is *Candidatus* Cerimia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2200*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homunulales.

Description of *Candidatus* Cerimida bigarisca sp. nov.

Candidatus Cerimida bigarisca (NL. fem. n. *bigarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1 sp903927505*. The type genome for the species is the GenBank

assembly GCA_903899455.1. The GC content of the type genome is 36.56 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Cerimida gen. nov.

Candidatus Cerimida (NL. fem. n. *Cerimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1*. The type species for the genus is *Candidatus* Cerimida bigarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Cerimida impugitura sp. nov.

Candidatus Cerimida impugitura (NL. fem. n. *impugitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1 sp014376805*. The type genome for the species is the GenBank assembly GCA_014376805.1. The GC content of the type genome is 35.58 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Cerimida lenunitoga sp. nov.

Candidatus Cerimida lenunitoga (NL. fem. n. *lenunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1 sp002256395*. The type genome for the species is the GenBank assembly GCA_002256395.1. The GC content of the type genome is 36.28 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Cerimida occumitura sp. nov.

Candidatus Cerimida occumitura (NL. fem. n. *occumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1 sp903834625*. The type genome for the species is the GenBank assembly GCA_903834625.1. The GC content of the type genome is 37.58 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Cerimosa pavimugo sp. nov.

Candidatus Cerimosa pavimugo (NL. fem. n. *pavimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-33-14 sp001820215*. The type genome for the species is the GenBank assembly GCA_001820215.1. The GC content of the type genome is 33.01 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cerimosa gen. nov.

Candidatus Cerimosa (NL. fem. n. *Cerimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-33-14*. The type species for the genus is *Candidatus* Cerimosa pavimugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerimula lacinedo sp. nov.

Candidatus Cerimula lacinedo (NL. fem. n. *lacinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1081 sp003963305*. The type genome for the species is the GenBank assembly GCA_003963305.1. The GC content of the type genome is 50.29 % and the genome length is 7.48 Mbp.

Description of *Candidatus* Cerimula gen. nov.

Candidatus Cerimula (NL. fem. n. *Cerimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1081*. The type species for the genus is *Candidatus* Cerimula lacinedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerimula nivomitas sp. nov.

Candidatus Cerimula nivomitas (NL. fem. n. *nivomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1081 sp003153555*. The type genome for the species is the GenBank assembly GCA_003153555.1. The GC content of the type genome is 48.48 % and the genome length is 7.84 Mbp.

Description of *Candidatus* Cerimula repecetta sp. nov.

Candidatus Cerimula repecetta (NL. fem. n. *repecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1081 sp003151275*. The type genome for the species is the GenBank assembly GCA_003151275.1. The GC content of the type genome is 48.47 % and the genome length is 8.36 Mbp.

Description of *Candidatus* Cerofana annicugo sp. nov.

Candidatus Cerofana annicugo (NL. fem. n. *annicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp000403495*. The type genome for the species is the GenBank assembly RS_GCF_000403495.2. The GC content of the type genome is 40.95 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Cerofana gen. nov.

Candidatus Cerofana (NL. fem. n. *Cerofana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-95*. The type species for the genus is *Candidatus* Cerofana annicugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerofana caselentia sp. nov.

Candidatus Cerofana caselentia (NL. fem. n. *caselentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp002490775*. The type genome for the species is the GenBank assembly GCA_002490775.1. The GC content of the type genome is 40.21 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Cerofana corocitas sp. nov.

Candidatus Cerofana corocitas (NL. fem. n. *corocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp003612395*. The type genome for the species is the GenBank assembly RS_GCF_003612395.1. The GC content of the type genome is 43.48 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Cerofana decapedo sp. nov.

Candidatus Cerofana decapedo (NL. fem. n. *decapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp900554925*. The type genome for the species is the GenBank assembly GCA_900554925.1. The GC content of the type genome is 42.81 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Cerofana depicitio sp. nov.

Candidatus Cerofana depicitio (NL. fem. n. *depicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp900066375*. The type genome for the species is the GenBank assembly GCA_900066375.1. The GC content of the type genome is 44.43 % and the genome length is 3.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Cerofana dicibitoga sp. nov.

Candidatus Cerofana dicibitoga (NL. fem. n. *dicibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp000438155*. The type genome for the species is the

GenBank assembly GCA_003521595.1. The GC content of the type genome is 43.88 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Cerofana exaspousia sp. nov.

Candidatus Cerofana exaspousia (NL. fem. n. *exaspousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp009917485*. The type genome for the species is the GenBank assembly RS_GCF_009917485.1. The GC content of the type genome is 42.79 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Cerofana excanatica sp. nov.

Candidatus Cerofana excanatica (NL. fem. n. *excanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp009917455*. The type genome for the species is the GenBank assembly RS_GCF_009917455.1. The GC content of the type genome is 46.32 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Cerofana favilitudo sp. nov.

Candidatus Cerofana favilitudo (NL. fem. n. *favilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp009774465*. The type genome for the species is the GenBank assembly GCA_009774465.1. The GC content of the type genome is 41.33 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Cerofana infucibra sp. nov.

Candidatus Cerofana infucibra (NL. fem. n. *infucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp002492465*. The type genome for the species is the GenBank assembly GCA_002492465.1. The GC content of the type genome is 45.25 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Cerofana innupifica sp. nov.

Candidatus Cerofana innupifica (NL. fem. n. *innupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp011959285*. The type genome for the species is the GenBank assembly RS_GCF_011959285.1. The GC content of the type genome is 43.59 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Cerofana penurigena sp. nov.

Candidatus Cerofana penurigena (NL. fem. n. *penurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp900553305*. The type genome for the species is the GenBank assembly RS_GCF_900772925.1. The GC content of the type genome is 44.99 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Cerofana ridibitia sp. nov.

Candidatus Cerofana ridibitia (NL. fem. n. *ridibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp000436115*. The type genome for the species is the GenBank assembly GCA_000436115.1. The GC content of the type genome is 45.67 % and the genome length is 2.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cerofana semipibula sp. nov.

Candidatus Cerofana semipibula (NL. fem. n. *semipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp902766365*. The type genome for the species is the GenBank assembly GCA_902766365.1. The GC content of the type genome is 45.34 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Cerofana soniviforma sp. nov.

Candidatus Cerofana soniviforma (NL. fem. n. *soniviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-95 sp009911035*. The type genome for the species is the GenBank assembly RS_GCF_009911035.1. The GC content of the type genome is 44.5 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Cerofaria cunabatica sp. nov.

Candidatus Cerofaria cunabatica (NL. fem. n. *cunabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903850505*. The type genome for the species is the GenBank assembly GCA_903850505.1. The GC content of the type genome is 66.48 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Cerofaria gen. nov.

Candidatus Cerofaria (NL. fem. n. *Cerofaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYBN01*. The type species for the genus is *Candidatus* Cerofaria cunabatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Cerofaria curabentia sp. nov.

Candidatus Cerofaria curabentia (NL. fem. n. *curabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903869075*. The type genome for the species is the GenBank assembly GCA_903869075.1. The GC content of the type genome is 67.89 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Cerofaria desuricula sp. nov.

Candidatus Cerofaria desuricula (NL. fem. n. *desuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903896545*. The type genome for the species is the GenBank assembly GCA_903900455.1. The GC content of the type genome is 64.37 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Cerofaria dilacitrix sp. nov.

Candidatus Cerofaria dilacitrix (NL. fem. n. *dilacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903929795*. The type genome for the species is the GenBank assembly GCA_903928185.1. The GC content of the type genome is 66.81 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Cerofaria oratrifica sp. nov.

Candidatus Cerofaria oratrifica (NL. fem. n. *oratrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903924465*. The type genome for the species is the GenBank assembly GCA_903924465.1. The GC content of the type genome is 64.51 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Cerofaria penurago sp. nov.

Candidatus Cerofaria penurago (NL. fem. n. *penurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYBN01 sp903842345*. The type genome for the species is the GenBank assembly GCA_903842345.1. The GC content of the type genome is 66.33 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Cerofia demagiforma sp. nov.

Candidatus Cerofia demagiforma (NL. fem. n. *demagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFX01 sp011523825*. The type genome for the species is the GenBank assembly GCA_011523825.1. The GC content of the type genome is 67.45 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Cerofia gen. nov.

Candidatus Cerofia (NL. fem. n. *Cerofia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTFX01*. The type species for the genus is *Candidatus* Cerofia demagiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Cerofia galacastra sp. nov.

Candidatus Cerofia galacastra (NL. fem. n. *galacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFX01 sp009843525*. The type genome for the species is the GenBank assembly GCA_009836375.1. The GC content of the type genome is 67.11 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Cerofida vigenatio sp. nov.

Candidatus Cerofida vigenatio (NL. fem. n. *vigenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-46-19 sp001872925*. The type genome for the species is the GenBank assembly GCA_002781825.1. The GC content of the type genome is 45.8 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Cerofida gen. nov.

Candidatus Cerofida (NL. fem. n. *Cerofida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-46-19*. The type species for the genus is *Candidatus* Cerofida vigenatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Cerofosa cocoditudo sp. nov.

Candidatus Cerofosa cocoditudo (NL. fem. n. *cocoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-11 sp001776865*. The type genome for the species is the GenBank assembly GCA_001777095.1. The GC content of the type genome is 36.69 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Cerofosa gen. nov.

Candidatus Cerofosa (NL. fem. n. *Cerofosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-37-11*. The type species for the genus is *Candidatus* Cerofosa cocoditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Cerofula adpanetta sp. nov.

Candidatus Cerofula adpanetta (NL. fem. n. *adpanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5278 sp002427165*. The type genome for the species is the GenBank assembly GCA_002427165.1. The GC content of the type genome is 47.47 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Cerofula gen. nov.

Candidatus Cerofula (NL. fem. n. *Cerofula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5278*. The type species for the genus is *Candidatus* Cerofula adpanetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU084*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Sonabellaceae.

Description of *Candidatus* Cerofula docibitura sp. nov.

Candidatus Cerofula docibitura (NL. fem. n. *docibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5278 sp002409105*. The type genome for the species is the GenBank assembly GCA_002411405.1. The GC content of the type genome is 48.98 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ceromana pocilessa sp. nov.

Candidatus Ceromana pocilessa (NL. fem. n. *pocilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRAY01 sp903876665*. The type genome for the species is the GenBank assembly GCA_903939345.1. The GC content of the type genome is 52.3 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Ceromana gen. nov.

Candidatus Ceromana (NL. fem. n. *Ceromana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRAY01*. The type species for the genus is *Candidatus* Ceromana pocilessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ceromaria decucibra sp. nov.

Candidatus Ceromaria decucibra (NL. fem. n. *decucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKN01 sp007121455*. The type genome for the species is the GenBank assembly GCA_007126965.1. The GC content of the type genome is 66.39 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Ceromaria gen. nov.

Candidatus Ceromaria (NL. fem. n. *Ceromaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKN01*. The type species for the genus is *Candidatus* Ceromaria decucibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Ceromia bipenimonia sp. nov.

Candidatus Ceromia bipenimonia (NL. fem. n. *bipenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG343 sp902789225*. The type genome for the species is the GenBank assembly GCA_902789225.1. The GC content of the type genome is 26.12 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Ceromia gen. nov.

Candidatus Ceromia (NL. fem. n. *Ceromia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG343*. The type species for the genus is *Candidatus* Ceromia bipenimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ceromia munimax sp. nov.

Candidatus Ceromia munimax (NL. fem. n. *munimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG343 sp900317975*. The type genome for the species is the GenBank assembly GCA_902787765.1. The GC content of the type genome is 26.38 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Ceromida defalivita sp. nov.

Candidatus Ceromida defalivita (NL. fem. n. *defalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3939 sp002385705*. The type genome for the species is the GenBank assembly GCA_012842865.1. The GC content of the type genome is 62.41 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Ceromida gen. nov.

Candidatus Ceromida (NL. fem. n. *Ceromida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3939*. The type species for the genus is *Candidatus* Ceromida defalivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3939*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceromidaceae.

Description of *Candidatus* Ceromidaceae fam. nov.

Candidatus Ceromidaceae (NL. fem. n. *Ceromidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3939.* The type genus for the taxon is *Candidatus* Ceromida .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Ceromosa abpatimonia sp. nov.

Candidatus Ceromosa abpatimonia (NL. fem. n. *abpatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp002315715*. The type genome for the species is the GenBank assembly GCA_002315715.1. The GC content of the type genome is 50.73 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Ceromosa gen. nov.

Candidatus Ceromosa (NL. fem. n. *Ceromosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1740*. The type species for the genus is *Candidatus* Ceromosa abpatimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Ceromosa carucatio sp. nov.

Candidatus Ceromosa carucatio (NL. fem. n. *carucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp902778985*. The type genome for the species is the GenBank assembly GCA_902778985.1. The GC content of the type genome is 60.04 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Ceromosa decunicella sp. nov.

Candidatus Ceromosa decunicella (NL. fem. n. *decunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp900767415*. The type genome for the species is the GenBank assembly RS_GCF_900767415.1. The GC content of the type genome is 54.73 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Ceromosa gasomousia sp. nov.

Candidatus Ceromosa gasomousia (NL. fem. n. *gasomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp902796505*. The type genome for the species is the GenBank assembly GCA_902796505.1. The GC content of the type genome is 57.74 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Ceromosa locelatica sp. nov.

Candidatus Ceromosa locelatica (NL. fem. n. *locelatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp902779285*. The type genome for the species is the GenBank assembly GCA_902779285.1. The GC content of the type genome is 59.29 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ceromosa manufitia sp. nov.

Candidatus Ceromosa manufitia (NL. fem. n. *manufitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1740 sp004558975*. The type genome for the species is the GenBank assembly RS_GCF_900766365.1. The GC content of the type genome is 58.07 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ceromula dicimivita sp. nov.

Candidatus Ceromula dicimivita (NL. fem. n. *dicimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTCHB3 sp008363265*. The type genome for the species is the GenBank assembly GCA_008363265.1. The GC content of the type genome is 47.98 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Ceromula gen. nov.

Candidatus Ceromula (NL. fem. n. *Ceromula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UTCHB3*. The type species for the genus is *Candidatus* Ceromula dicimivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ceromula sifunilenta sp. nov.

Candidatus Ceromula sifunilenta (NL. fem. n. *sifunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UTCHB3 sp002050155*. The type genome for the species is the GenBank assembly GCA_008933765.1. The GC content of the type genome is 42.28 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Cerucana octobedo sp. nov.

Candidatus Cerucana octobedo (NL. fem. n. *octobedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WM01 sp004570605*. The type genome for the species is the GenBank assembly RS_GCF_004570605.1. The GC content of the type genome is 33.18 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Cerucana gen. nov.

Candidatus Cerucana (NL. fem. n. *Cerucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WM01*. The type species for the genus is *Candidatus* Cerucana octobedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerucana velivax sp. nov.

Candidatus Cerucana velivax (NL. fem. n. *velivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WM01 sp013874835*. The type genome for the species is the GenBank assembly RS_GCF_010892375.1. The GC content of the type genome is 33.58 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Cerucaria futatilega sp. nov.

Candidatus Cerucaria futatilega (NL. fem. n. *futatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOMY01 sp014324045*. The type genome for the species is the GenBank assembly GCA_014324045.1. The GC content of the type genome is 63.24 %

and the genome length is 2.82 Mbp.

Description of *Candidatus* Cerucaria gen. nov.

Candidatus Cerucaria (NL. fem. n. *Cerucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACOMY01*. The type species for the genus is *Candidatus* Cerucaria futatilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACOMY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerucariaceae.

Description of *Candidatus* Cerucariaceae fam. nov.

Candidatus Cerucariaceae (NL. fem. n. *Cerucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACOMY01.* The type genus for the taxon is *Candidatus* Cerucaria .

According to GTDB R06-RS202, this family belongs to the order *Kiloniellales*.

Description of *Candidatus* Cerucella bicubitoga sp. nov.

Candidatus Cerucella bicubitoga (NL. fem. n. *bicubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSF01 sp012523975*. The type genome for the species is the GenBank assembly GCA_012523975.1. The GC content of the type genome is 43.35 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Cerucella gen. nov.

Candidatus Cerucella (NL. fem. n. *Cerucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSF01*. The type species for the genus is *Candidatus* Cerucella bicubitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYSF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Cerucellaceae.

Description of *Candidatus* Cerucellaceae fam. nov.

Candidatus Cerucellaceae (NL. fem. n. *Cerucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYSF01*. The type genus for the taxon is *Candidatus* Cerucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYSF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerucellales.

Description of *Candidatus* Cerucellales ord. nov.

Candidatus Cerucellales (NL. fem. n. *Cerucellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYSF01*. The type genus for the taxon is *Candidatus* Cerucella .

According to the GTDB R06-RS202, this order belongs to the class *Negativicutes*.

Description of *Candidatus* Cerucia dilicivita sp. nov.

Candidatus Cerucia dilicivita (NL. fem. n. *dilicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLGR01 sp007136585*. The type genome for the species is the GenBank assembly GCA_007136585.1. The GC content of the type genome is 51.43 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Cerucia gen. nov.

Candidatus Cerucia (NL. fem. n. *Cerucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLGR01*. The type species for the genus is *Candidatus* Cerucia dilicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceruciaceae.

Description of *Candidatus* Ceruciaceae fam. nov.

Candidatus Ceruciaceae (NL. fem. n. *Ceruciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLGR01*. The type genus for the taxon is *Candidatus* Cerucia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceruciales.

Description of *Candidatus* Ceruciales ord. nov.

Candidatus Ceruciales (NL. fem. n. *Ceruciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLGR01*. The type genus for the taxon is *Candidatus* Cerucia .

According to the original version of GTDB R06-RS202, this family belongs to the class *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceruciae.

Description of *Candidatus* Ceruciae class. nov.

Candidatus Ceruciae (NL. fem. n. *c__Ceruciae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLGR01*. The type genus for the taxon is *Candidatus* Cerucia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Laxitanota.

Description of *Candidatus* Cerucida cisorimonas sp. nov.

Candidatus Cerucida cisorimonas (NL. fem. n. *cisorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp001799285*. The type genome for the species is the GenBank assembly GCA_001799285.1. The GC content of the type genome is 56.42 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Cerucida gen. nov.

Candidatus Cerucida (NL. fem. n. *Cerucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2262*. The type species for the genus is *Candidatus* Cerucida cisorimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerucida defenugo sp. nov.

Candidatus Cerucida defenugo (NL. fem. n. *defenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp002347095*. The type genome for the species is the GenBank assembly GCA_004348915.1. The GC content of the type genome is 57.58 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Cerucida detotastra sp. nov.

Candidatus Cerucida detotastra (NL. fem. n. *detotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp003517965*. The type genome for the species is the GenBank assembly GCA_001798725.1. The GC content of the type genome is 53.09 % and the genome length is 2.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Cerucida eclecitoga sp. nov.

Candidatus Cerucida eclecitoga (NL. fem. n. *eclecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp013791995*. The type genome for the species is the GenBank assembly GCA_013791995.1. The GC content of the type genome is 53.99 %

and the genome length is 2.96 Mbp.

Description of *Candidatus* Cerucida feculigena sp. nov.

Candidatus Cerucida feculigena (NL. fem. n. *feculigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp002841785*. The type genome for the species is the GenBank assembly GCA_002841785.1. The GC content of the type genome is 57.95 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Cerucida fusififorma sp. nov.

Candidatus Cerucida fusififorma (NL. fem. n. *fusififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp903869265*. The type genome for the species is the GenBank assembly GCA_903830245.1. The GC content of the type genome is 55.91 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Cerucida humecilenta sp. nov.

Candidatus Cerucida humecilenta (NL. fem. n. *humecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp002347185*. The type genome for the species is the GenBank assembly GCA_002347185.1. The GC content of the type genome is 61.68 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Cerucida minagilenta sp. nov.

Candidatus Cerucida minagilenta (NL. fem. n. *minagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp001799255*. The type genome for the species is the GenBank assembly GCA_001799255.1. The GC content of the type genome is 55.67 % and the genome length is 2.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Cerucida opuscicula sp. nov.

Candidatus Cerucida opuscicula (NL. fem. n. *opuscicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2262 sp013349295*. The type genome for the species is the GenBank assembly GCA_013349295.1. The GC content of the type genome is 55.15 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Cerucosa acratibra sp. nov.

Candidatus Cerucosa acratibra (NL. fem. n. *acratibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840015 sp002840015*. The type genome for the species is the GenBank assembly GCA_002840015.1. The GC content of the type genome is 61.46 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Cerucosa gen. nov.

Candidatus Cerucosa (NL. fem. n. *Cerucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002840015*. The type species for the genus is *Candidatus* Cerucosa acratibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerucosa acrimedo sp. nov.

Candidatus Cerucosa acrimedo (NL. fem. n. *acrimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840015 sp002839995*. The type genome for the species is the GenBank assembly GCA_002839995.1. The GC content of the type genome is 64.22 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Cerucosa solacicella sp. nov.

Candidatus Cerucosa solacicella (NL. fem. n. *solacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002840015 sp002782905*. The type genome for the species is the GenBank assembly GCA_002771025.1. The GC content of the type genome is 63.58 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Cerucula anatrifica sp. nov.

Candidatus Cerucula anatrifica (NL. fem. n. *anatrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYUN01 sp903919625*. The type genome for the species is the GenBank assembly GCA_903919625.1. The GC content of the type genome is 64.02 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Cerucula gen. nov.

Candidatus Cerucula (NL. fem. n. *Cerucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYUN01*. The type species for the genus is *Candidatus* Cerucula anatrifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cerucula benivatica sp. nov.

Candidatus Cerucula benivatica (NL. fem. n. *benivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYUN01 sp903929355*. The type genome for the species is the GenBank assembly GCA_903929355.1. The GC content of the type genome is 65.7 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Cerucula citivicella sp. nov.

Candidatus Cerucula citivicella (NL. fem. n. *citivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIYUN01 sp903872425*. The type genome for the species is the GenBank assembly GCA_903872425.1. The GC content of the type genome is 62.07 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Cerucula robigitica sp. nov.

Candidatus Cerucula robigitica (NL. fem. n. *robigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYUN01 sp903869665*. The type genome for the species is the GenBank assembly GCA_903869665.1. The GC content of the type genome is 66.1 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Cerucula viburimonas sp. nov.

Candidatus Cerucula viburimonas (NL. fem. n. *viburimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYUN01 sp903869955*. The type genome for the species is the GenBank assembly GCA_903824555.1. The GC content of the type genome is 64.95 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Cesiribacter morigicula sp. nov.

Candidatus Cesiribacter morigicula (NL. fem. n. *morigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cesiribacter sp000597885*. The type genome for the species is the GenBank assembly RS_GCF_000597885.1. The GC content of the type genome is 46.47 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Cetarana monumibula sp. nov.

Candidatus Cetarana monumibula (NL. fem. n. *monumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU027 sp002385745*. The type genome for the species is the GenBank assembly GCA_012838605.1. The GC content of the type genome is 49.28 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cetarana gen. nov.

Candidatus Cetarana (NL. fem. n. *Cetarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU027*. The type species for the genus is *Candidatus* Cetarana monumibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cetararia delebastra sp. nov.

Candidatus Cetararia delebastra (NL. fem. n. *delebastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-213 sp002085025*. The type genome for the species is the GenBank assembly GCA_002085025.1. The GC content of the type genome is 40.41 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Cetararia gen. nov.

Candidatus Cetararia (NL. fem. n. *Cetararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-213*. The type species for the genus is *Candidatus* Cetararia delebastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-213*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetararia ceae.

Description of *Candidatus* Cetararia ceae fam. nov.

Candidatus Cetararia ceae (NL. fem. n. *Cetararia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-213.* The type genus for the taxon is *Candidatus* Cetararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-213*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cetararia les.

Description of *Candidatus* Cetarariales ord. nov.

Candidatus Cetarariales (NL. fem. n. *Cetarariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-213.* The type genus for the taxon is *Candidatus* Cetararia .

According to the original version of GTDB R06-RS202, this family belongs to the class *4484-213*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetarariae.

Description of *Candidatus* Cetarariae class. nov.

Candidatus Cetarariae (NL. fem. n. *c__Cetarariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-213.* The type genus for the taxon is *Candidatus* Cetararia .

According to GTDB R06-RS202, this class belongs to the phylum *Omnitrophota*.

Description of *Candidatus* Cetarella utrinetta sp. nov.

Candidatus Cetarella utrinetta (NL. fem. n. *utrinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-254 sp003235555*. The type genome for the species is the GenBank assembly GCA_003235555.1. The GC content of the type genome is 61.85 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Cetarella gen. nov.

Candidatus Cetarella (NL. fem. n. *Cetarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-254*. The type species for the genus is *Candidatus* Cetarella utrinetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-254*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarellaceae.

Description of *Candidatus* Cetarellaceae fam. nov.

Candidatus Cetarellaceae (NL. fem. n. *Cetarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-254.* The type genus for the taxon is *Candidatus* Cetarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vagabanales.

Description of *Candidatus* Cetaria allacitudo sp. nov.

Candidatus Cetaria allacitudo (NL. fem. n. *allacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU015 sp012841065*. The type genome for the species is the GenBank assembly GCA_012841065.1. The GC content of the type genome is 51.43 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Cetaria gen. nov.

Candidatus Cetaria (NL. fem. n. *Cetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU015*. The type species for the genus is *Candidatus* Cetaria allacitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatosaceae.

Description of *Candidatus* Cetariae class. nov.

Candidatus Cetariae (NL. fem. n. *c__Cetariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU015.* The type genus for the taxon is *Candidatus* Cetaria .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_E*.

Description of *Candidatus* Cetaria apsurago sp. nov.

Candidatus Cetaria apsurago (NL. fem. n. *apsurago* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU015 sp012842105*. The type genome for the species is the GenBank assembly GCA_012842105.1. The GC content of the type genome is 49.82 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Cetaria lapilicula sp. nov.

Candidatus Cetaria lapilicula (NL. fem. n. *lapilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU015 sp012512325*. The type genome for the species is the GenBank assembly GCA_012512325.1. The GC content of the type genome is 54.7 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Cetaria novilatio sp. nov.

Candidatus Cetaria novilatio (NL. fem. n. *novilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU015 sp012837895*. The type genome for the species is the GenBank assembly GCA_012837895.1. The GC content of the type genome is 51.19 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Cetaria semivitoga sp. nov.

Candidatus Cetaria semivitoga (NL. fem. n. *semivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU015 sp001513185*. The type genome for the species is the GenBank assembly GCA_012720035.1. The GC content of the type genome is 53.36 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cetarida ephipigena sp. nov.

Candidatus Cetarida ephipigena (NL. fem. n. *ephipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002788555 sp002788555*. The type genome for the species is the GenBank assembly GCA_002788555.1. The GC content of the type genome is 35.51 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Cetarida gen. nov.

Candidatus Cetarida (NL. fem. n. *Cetarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002788555*. The type species for the genus is *Candidatus* Cetarida ephipigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002788555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetaridaceae.

Description of *Candidatus* Cetaridaceae fam. nov.

Candidatus Cetaridaceae (NL. fem. n. *Cetaridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002788555.* The type genus for the taxon is *Candidatus* Cetarida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Cetarosa conamibra sp. nov.

Candidatus Cetarosa conamibra (NL. fem. n. *conamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900763705*. The type genome for the species is the GenBank assembly GCA_900763705.1. The GC content of the type genome is 60.35 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cetarosa gen. nov.

Candidatus Cetarosa (NL. fem. n. *Cetarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ER4*. The type species for the genus is *Candidatus* Cetarosa conamibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cetarosa decamitio sp. nov.

Candidatus Cetarosa decamitio (NL. fem. n. *decamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp003522105*. The type genome for the species is the GenBank assembly GCA_004557605.1. The GC content of the type genome is 58.03 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Cetarosa defetastra sp. nov.

Candidatus Cetarosa defetastra (NL. fem. n. *defetastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900768135*. The type genome for the species is the GenBank assembly GCA_900768135.1. The GC content of the type genome is 59.62 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cetarosa demulax sp. nov.

Candidatus Cetarosa demulax (NL. fem. n. *demulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900550165*. The type genome for the species is the GenBank assembly GCA_900754235.1. The GC content of the type genome is 59.89 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Cetarosa extorigena sp. nov.

Candidatus Cetarosa extorigena (NL. fem. n. *extorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900552375*. The type genome for the species is the GenBank assembly GCA_900552375.1. The GC content of the type genome is 60.2 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cetarosa facunivita sp. nov.

Candidatus Cetarosa facunivita (NL. fem. n. *facunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900546295*. The type genome for the species is the GenBank assembly GCA_900546295.1. The GC content of the type genome is 59.7 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cetarosa inmenago sp. nov.

Candidatus Cetarosa inmenago (NL. fem. n. *inmenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900552015*. The type genome for the species is the GenBank assembly GCA_900552015.1. The GC content of the type genome is 59.2 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Cetarosa lapiliforma sp. nov.

Candidatus Cetarosa lapiliforma (NL. fem. n. *lapiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp000765235*. The type genome for the species is the GenBank assembly RS_GCF_003481145.1. The GC content of the type genome is 55.69 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Cetarosa nutabatio sp. nov.

Candidatus Cetarosa nutabatio (NL. fem. n. *nutabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900556145*. The type genome for the species is the GenBank assembly GCA_900556145.1. The GC content of the type genome is 60.75 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Cetarosa papavatio sp. nov.

Candidatus Cetarosa papavatio (NL. fem. n. *papavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp900317525*. The type genome for the species is the GenBank assembly GCA_004551705.1. The GC content of the type genome is 62.16 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Cetarosa rutabugo sp. nov.

Candidatus Cetarosa rutabugo (NL. fem. n. *rutabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp002405995*. The type genome for the species is the GenBank assembly GCA_002405995.1. The GC content of the type genome is 61.58 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Cetarosa semunimonia sp. nov.

Candidatus Cetarosa semunimonia (NL. fem. n. *semunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ER4 sp002437735*. The type genome for the species is the GenBank assembly GCA_002296425.1. The GC content of the type genome is 61.77 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Cetarula adcelifica sp. nov.

Candidatus Cetarula adcelifica (NL. fem. n. *adcelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-3 sp011390465*. The type genome for the species is the GenBank assembly GCA_011390465.1. The GC content of the type genome is 51.04 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Cetarula gen. nov.

Candidatus Cetarula (NL. fem. n. *Cetarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-3*. The type species for the genus is *Candidatus* Cetarula adcelifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarulaceae.

Description of *Candidatus* Cetarulaceae fam. nov.

Candidatus Cetarulaceae (NL. fem. n. *Cetarulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-3.* The type genus for the taxon is *Candidatus* Cetarula .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Cetarula herinilega sp. nov.

Candidatus Cetarula herinilega (NL. fem. n. *herinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-3 sp014237465*. The type genome for the species is the GenBank assembly GCA_014237275.1. The GC content of the type genome is 44.02 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Cetarula nefarilenta sp. nov.

Candidatus Cetarula nefarilenta (NL. fem. n. *nefarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-3 sp011390415*. The type genome for the species is the GenBank assembly GCA_011390415.1. The GC content of the type genome is 48.64 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Cetarula uberricella sp. nov.

Candidatus Cetarula uberricella (NL. fem. n. *uberricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-3 sp003599885*. The type genome for the species is the GenBank assembly GCA_003599885.1. The GC content of the type genome is 49.04 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Cetobacterium excometta sp. nov.

Candidatus Cetobacterium excometta (NL. fem. n. *excometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cetobacterium sp014250685*. The type genome for the species is the GenBank assembly RS_GCF_014250685.1. The GC content of the type genome is 29.85 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Cetobacterium abluvax sp. nov.

Candidatus Cetobacterium abluvax (NL. fem. n. *abluvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cetobacterium_A sp002428805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002428805.1. The GC content of the type genome is 30.35 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Cetobacterium cinipibra sp. nov.

Candidatus Cetobacterium cinipibra (NL. fem. n. *cinipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cetobacterium_A sp000799075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002436145.1. The GC content of the type genome is 29.78 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Cetobacterium indotimonia sp. nov.

Candidatus Cetobacterium indotimonia (NL. fem. n. *indotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cetobacterium_A sp014250675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_014250675.1. The GC content of the type genome is 29.88 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Cetobacterium visibago sp. nov.

Candidatus Cetobacterium visibago (NL. fem. n. *visibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cetobacterium_A sp900766645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900766645.1. The GC content of the type genome is 29.32 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Chachezhania apercitas sp. nov.

Candidatus Chachezhania apercitas (NL. fem. n. *apercitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chachezhania sp009765275*. The type genome for the species is the GenBank assembly RS_GCF_009765275.1. The GC content of the type genome is 65.64 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Chakrabartia adremago sp. nov.

Candidatus Chakrabartia adremago (NL. fem. n. *adremago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chakrabartia sp009923795*. The type genome for the species is the GenBank assembly GCA_009923795.1. The GC content of the type genome is 57.93 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Chakrabartia fetulitas sp. nov.

Candidatus Chakrabartia fetulitas (NL. fem. n. *fetulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chakrabartia sp903958285*. The type genome for the species is the GenBank assembly GCA_903958285.1. The GC content of the type genome is 60.07 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Chakrabartia nefanifica sp. nov.

Candidatus Chakrabartia nefanifica (NL. fem. n. *nefanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chakrabartia sp009920915*. The type genome for the species is the GenBank assembly GCA_009928105.1. The GC content of the type genome is 57.93 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Chakrabartia vatilentia sp. nov.

Candidatus Chakrabartia vatilentia (NL. fem. n. *vatilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chakrabartia sp002478575*. The type genome for the species is the GenBank assembly GCA_002478575.1. The GC content of the type genome is 56.38 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Chakrabartia vitupatica sp. nov.

Candidatus Chakrabartia vitupatica (NL. fem. n. *vitupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chakrabartia sp903839675*. The type genome for the species is the GenBank assembly GCA_903862675.1. The GC content of the type genome is 59.98 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Chalbana adsifitudo sp. nov.

Candidatus Chalbana adsifitudo (NL. fem. n. *adsifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B10-G9 sp003648195*. The type genome for the species is the GenBank assembly GCA_003648195.1. The GC content of the type genome is 47.31 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Chalbana gen. nov.

Candidatus Chalbana (NL. fem. n. *Chalbana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B10-G9*. The type species for the genus is *Candidatus* Chalbana adsifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11858*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifellaceae.

Description of *Candidatus* Chalbana mureliforma sp. nov.

Candidatus Chalbana mureliforma (NL. fem. n. *mureliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B10-G9 sp011039385*. The type genome for the species is the GenBank assembly GCA_011039385.1. The GC content of the type genome is 52.36 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Chalbella adfuniforma sp. nov.

Candidatus Chalbella adfuniforma (NL. fem. n. *adfuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSXW01 sp009773495*. The type genome for the species is the GenBank assembly GCA_009773495.1. The GC content of the type genome is 48.75 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Chalbella gen. nov.

Candidatus Chalbella (NL. fem. n. *Chalbella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSXW01*. The type species for the genus is *Candidatus* Chalbella adfuniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonellaceae.

Description of *Candidatus* Chalbia gasomatio sp. nov.

Candidatus Chalbia gasomatio (NL. fem. n. *gasomatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-30 sp001303245*. The type genome for the species is the GenBank assembly GCA_001303245.1. The GC content of the type genome is 68.73 % and the genome length is 2.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Chalbia gen. nov.

Candidatus Chalbia (NL. fem. n. *Chalbia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-30*. The type species for the genus is *Candidatus* Chalbia gasomatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Chalbida licenastra sp. nov.

Candidatus Chalbida licenastra (NL. fem. n. *licenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-607 sp003134755*. The type genome for the species is the GenBank assembly GCA_003134755.1. The GC content of the type genome is 66.89 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Chalbida gen. nov.

Candidatus Chalbida (NL. fem. n. *Chalbida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-607*. The type species for the genus is *Candidatus* Chalbida licenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Chalbosa intabatica sp. nov.

Candidatus Chalbosa intabatica (NL. fem. n. *intabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOS01 sp012520195*. The type genome for the species is the GenBank assembly GCA_012520195.1. The GC content of the type genome is 45.12 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Chalbosa gen. nov.

Candidatus Chalbosa (NL. fem. n. *Chalbosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYOS01*. The type species for the genus is *Candidatus* Chalbosa intabatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Chalbosa pedepousia sp. nov.

Candidatus Chalbosa pedepousia (NL. fem. n. *pedepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOS01 sp012521525*. The type genome for the species is the GenBank assembly GCA_012521525.1. The GC content of the type genome is 49.07 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Chancana resalousia sp. nov.

Candidatus Chancana resalousia (NL. fem. n. *resalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJ17 sp014584395*. The type genome for the species is the GenBank assembly GCA_014584395.1. The GC content of the type genome is 59.39 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Chancana gen. nov.

Candidatus Chancana (NL. fem. n. *Chancana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJ17*. The type species for the genus is *Candidatus* Chancana resalousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homululaceae.

Description of *Candidatus* Chancaria direpitia sp. nov.

Candidatus Chancaria direpitia (NL. fem. n. *direpitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUG01 sp012841675*. The type genome for the species is the GenBank assembly GCA_012841675.1. The GC content of the type genome is 50.71 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Chancaria gen. nov.

Candidatus Chancaria (NL. fem. n. *Chancaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUG01*. The type species for the genus is *Candidatus* Chancaria direpitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAMX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubidaceae.

Description of *Candidatus* Chancella monopitoga sp. nov.

Candidatus Chancella monopitoga (NL. fem. n. *monopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-46-10 sp001824645*. The type genome for the species is the GenBank assembly GCA_001824645.1. The GC content of the type genome is 44.57 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Chancella gen. nov.

Candidatus Chancella (NL. fem. n. *Chancella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-46-10*. The type species for the genus is *Candidatus* Chancella monopitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Chancida expasifica sp. nov.

Candidatus Chancida expasifica (NL. fem. n. *expasifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED78 sp002171615*. The type genome for the species is the GenBank assembly GCA_002171615.1. The GC content of the type genome is 34.5 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Chancida gen. nov.

Candidatus Chancida (NL. fem. n. *Chancida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED78*. The type species for the genus is *Candidatus* Chancida expasifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecariaceae.

Description of *Candidatus* Chania femelax sp. nov.

Candidatus Chania femelax (NL. fem. n. *femelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chania sp000743355*. The type genome for the species is the GenBank assembly RS_GCF_000743365.1. The GC content of the type genome is 52.27 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mosquito larval gut".

Description of *Candidatus* Chelativorans adcucitoga sp. nov.

Candidatus Chelativorans adcucitoga (NL. fem. n. *adcucitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chelativorans sp010993735*. The type genome for the species is the GenBank assembly RS_GCF_010993735.1. The GC content of the type genome is 64.11 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Chelativorans ambifimonia sp. nov.

Candidatus Chelativorans ambifimonia (NL. fem. n. *ambifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chelativorans sp000518985*. The type genome for the species is the GenBank assembly RS_GCF_000518985.1. The GC content of the type genome is 61.23 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Chelativorans evangitio sp. nov.

Candidatus Chelativorans evangitio (NL. fem. n. *evangitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chelativorans sp009812055*. The type genome for the species is the GenBank assembly RS_GCF_009812055.1. The GC content of the type genome is 64.33 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Chelativorans exaspivita sp. nov.

Candidatus Chelativorans exaspivita (NL. fem. n. *exaspivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chelativorans sp902809845*. The type genome for the species is the GenBank assembly RS_GCF_902809845.1. The GC content of the type genome is 59.67 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Chelonobacter codifetta sp. nov.

Candidatus Chelonobacter codifetta (NL. fem. n. *codifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chelonobacter sp006228005*. The type genome for the species is the GenBank assembly RS_GCF_006228025.1. The GC content of the type genome is 45.31 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Chengkuizengella senipedo sp. nov.

Candidatus Chengkuizengella senipedo (NL. fem. n. *senipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chengkuizengella sp009910845*. The type genome for the species is the GenBank assembly RS_GCF_009910845.1. The GC content of the type genome is 33.12 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Chernana acropivita sp. nov.

Candidatus Chernana acropivita (NL. fem. n. *acropivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1180 sp003152075*. The type genome for the species is the GenBank assembly GCA_003152075.1. The GC content of the type genome is 50.93 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Chernana gen. nov.

Candidatus Chernana (NL. fem. n. *Chernana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1180*. The type species for the genus is *Candidatus* Chernana acropivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1180*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Chernanaceae.

Description of *Candidatus* Chernanaceae fam. nov.

Candidatus Chernanaceae (NL. fem. n. *Chernanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *Palsa-1180.* The type genus for the taxon is *Candidatus* Chernana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1180*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Chernanales.

Description of *Candidatus* Chernanales ord. nov.

Candidatus Chernanales (NL. fem. n. *Chernanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1180.* The type genus for the taxon is *Candidatus* Chernana .

According to the original version of GTDB R06-RS202, this family belongs to the class *Palsa-1180*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Chernanae.

Description of *Candidatus* Chernanae class. nov.

Candidatus Chernanae (NL. fem. n. *c__Chernanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1180.* The type genus for the taxon is *Candidatus* Chernana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *FCPU426*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Denecariota.

Description of *Candidatus* Chernia esculentia sp. nov.

Candidatus Chernia esculentia (NL. fem. n. *esculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1649 sp900553785*. The type genome for the species is the GenBank assembly GCA_900553785.1. The GC content of the type genome is 30.68 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Chernia gen. nov.

Candidatus Chernia (NL. fem. n. *Chernia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UMGS1649*. The type species for the genus is *Candidatus* Chernia esculentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Televiaceae.

Description of *Candidatus* Chernida adalgugo sp. nov.

Candidatus Chernida adalgugo (NL. fem. n. *adalgugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLX01 sp011322715*. The type genome for the species is the GenBank assembly GCA_011322715.1. The GC content of the type genome is 50.79 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Chernida gen. nov.

Candidatus Chernida (NL. fem. n. *Chernida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRLX01*. The type species for the genus is *Candidatus* Chernida adalgugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Chernida antevax sp. nov.

Candidatus Chernida antevax (NL. fem. n. *antevax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRLX01 sp011051825*. The type genome for the species is the GenBank assembly GCA_011051825.1. The GC content of the type genome is 52.55 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Chernosa capucatio sp. nov.

Candidatus Chernosa capucatio (NL. fem. n. *capucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SURF-55 sp003604985*. The type genome for the species is the GenBank assembly GCA_003604985.1. The GC content of the type genome is 55.69 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Chernosa gen. nov.

Candidatus Chernosa (NL. fem. n. *Chernosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-55*. The type species for the genus is *Candidatus* Chernosa capucatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Chernosa defanicula sp. nov.

Candidatus Chernosa defanicula (NL. fem. n. *defanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-55 sp012961725*. The type genome for the species is the GenBank assembly GCA_012961725.1. The GC content of the type genome is 57.25 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Chernula lapicitoga sp. nov.

Candidatus Chernula lapicitoga (NL. fem. n. *lapicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYQ01 sp009692765*. The type genome for the species is the GenBank assembly GCA_009692765.1. The GC content of the type genome is 71.79 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Chernula gen. nov.

Candidatus Chernula (NL. fem. n. *Chernula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYQ01*. The type species for the genus is *Candidatus* Chernula lapicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Chernula omnigitudo sp. nov.

Candidatus Chernula omnigitudo (NL. fem. n. *omnigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYQ01 sp903917615*. The type genome for the species is the GenBank assembly GCA_903917615.1. The GC content of the type genome is 69.29 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Chimaeribacter arcubedo sp. nov.

Candidatus Chimaeribacter arcubedo (NL. fem. n. *arcubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chimaeribacter sp005491205*. The type genome for the species is the GenBank assembly RS_GCF_005491205.1. The GC content of the type genome is 60.02 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Chishuiella plascitura sp. nov.

Candidatus Chishuiella plascitura (NL. fem. n. *plascitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chishuiella sp002430925*. The type genome for the species is the GenBank assembly GCA_002430925.1. The GC content of the type genome is 28.5 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Chishuiella vicatitia sp. nov.

Candidatus Chishuiella vicatitia (NL. fem. n. *vicatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chishuiella sp002484335*. The type genome for the species is the GenBank assembly GCA_002484335.1. The GC content of the type genome is 28.01 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Chitinibacter inoffitio sp. nov.

Candidatus Chitinibacter inoffitio (NL. fem. n. *inoffitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinibacter sp013403565*. The type genome for the species is the GenBank assembly RS_GCF_013403565.1. The GC content of the type genome is 50.58 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Chitinibacter invetitia sp. nov.

Candidatus Chitinibacter invetitia (NL. fem. n. *invetitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinibacter sp009760905*. The type genome for the species is the GenBank assembly RS_GCF_009760905.1. The GC content of the type genome is 53.95 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Chitinimonas necubicella sp. nov.

Candidatus Chitinimonas necubicella (NL. fem. n. *necubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinimonas sp002735695*. The type genome for the species is the GenBank assembly RS_GCF_006151725.2. The GC content of the type genome is 54.36 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Chitinispirillum bifisicula sp. nov.

Candidatus Chitinispirillum bifisicula (NL. fem. n. *bifisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinispirillum sp007115975*. The type genome for the species is the GenBank assembly GCA_007115975.1. The GC content of the type genome is 45.31 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Chitinivorax vicatitoga sp. nov.

Candidatus Chitinivorax vicatitoga (NL. fem. n. *vicatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinivorax sp005503445*. The type genome for the species is the GenBank assembly RS_GCF_005503445.1. The GC content of the type genome is 53.18 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Chitinophaga agripitia sp. nov.

Candidatus Chitinophaga agripitia (NL. fem. n. *agripitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp902168105*. The type genome for the species is the GenBank assembly GCA_902168105.1. The GC content of the type genome is 45.15 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Chitinophaga albogessa sp. nov.

Candidatus Chitinophaga albogessa (NL. fem. n. *albogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp902168175*. The type genome for the species is the GenBank assembly GCA_902168175.1. The GC content of the type genome is 47.66 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Chitinophaga benevatica sp. nov.

Candidatus Chitinophaga benevatica (NL. fem. n. *benevatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp001975825*. The type genome for the species is the GenBank assembly RS_GCF_001975825.1. The GC content of the type genome is 43.45 % and the genome length is 8.63 Mbp.

Description of *Candidatus* Chitinophaga brabritica sp. nov.

Candidatus Chitinophaga brabritica (NL. fem. n. *brabritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp010093065*. The type genome for the species is the GenBank assembly RS_GCF_010093065.1. The GC content of the type genome is 46.19

% and the genome length is 7.97 Mbp.

Description of *Candidatus* Chitinophaga cerofitudo sp. nov.

Candidatus Chitinophaga cerofitudo (NL. fem. n. *cerofitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003177275*. The type genome for the species is the GenBank assembly RS_GCF_003568665.1. The GC content of the type genome is 53.4 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Chitinophaga depicitudo sp. nov.

Candidatus Chitinophaga depicitudo (NL. fem. n. *depicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003994345*. The type genome for the species is the GenBank assembly RS_GCF_003994345.2. The GC content of the type genome is 48.46 % and the genome length is 8.08 Mbp.

Description of *Candidatus* Chitinophaga depopibra sp. nov.

Candidatus Chitinophaga depopibra (NL. fem. n. *depopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp012516355*. The type genome for the species is the GenBank assembly RS_GCF_012516355.1. The GC content of the type genome is 50.95 % and the genome length is 8.51 Mbp.

Description of *Candidatus* Chitinophaga depupibula sp. nov.

Candidatus Chitinophaga depupibula (NL. fem. n. *depupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp004363865*. The type genome for the species is the GenBank assembly RS_GCF_004363865.1. The GC content of the type genome is 45.0 % and the genome length is 8.71 Mbp.

Description of *Candidatus* Chitinophaga dicanitoga sp. nov.

Candidatus Chitinophaga dicanitoga (NL. fem. n. *dicanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp002290065*. The type genome for the species is the GenBank assembly RS_GCF_002290065.1. The GC content of the type genome is 47.58 % and the genome length is 7.66 Mbp.

Description of *Candidatus* Chitinophaga dimiditura sp. nov.

Candidatus Chitinophaga dimiditura (NL. fem. n. *dimiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003412465*. The type genome for the species is the GenBank assembly RS_GCF_003412465.1. The GC content of the type genome is 44.71 % and the genome length is 8.36 Mbp.

Description of *Candidatus* Chitinophaga excocedo sp. nov.

Candidatus Chitinophaga excocedo (NL. fem. n. *excocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003419895*. The type genome for the species is the GenBank assembly RS_GCF_003419895.1. The GC content of the type genome is 39.81 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Chitinophaga holovibra sp. nov.

Candidatus Chitinophaga holovibra (NL. fem. n. *holovibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp011752935*. The type genome for the species is the GenBank assembly RS_GCF_011752935.1. The GC content of the type genome is 45.59 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Chitinophaga illapago sp. nov.

Candidatus Chitinophaga illapago (NL. fem. n. *illapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp900112615*. The type genome for the species is the GenBank assembly RS_GCF_900112615.1. The GC content of the type genome is 41.41 % and the genome length is 8.14 Mbp.

Description of *Candidatus* Chitinophaga infatastra sp. nov.

Candidatus Chitinophaga infatastra (NL. fem. n. *infatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp009758205*. The type genome for the species is the GenBank assembly RS_GCF_009758205.1. The GC content of the type genome is 45.64 % and the genome length is 7.97 Mbp.

Description of *Candidatus* Chitinophaga infelicula sp. nov.

Candidatus Chitinophaga infelicula (NL. fem. n. *infelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp900110995*. The type genome for the species is the GenBank assembly RS_GCF_900110995.1. The GC content of the type genome is 42.37 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Chitinophaga insuficella sp. nov.

Candidatus Chitinophaga insuficella (NL. fem. n. *insuficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp900114995*. The type genome for the species is the GenBank assembly RS_GCF_900114995.1. The GC content of the type genome is 45.51 % and the genome length is 9.12 Mbp.

Description of *Candidatus* Chitinophaga lapilax sp. nov.

Candidatus Chitinophaga lapilax (NL. fem. n. *lapilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp008086345*. The type genome for the species is the GenBank assembly RS_GCF_008086345.1. The GC content of the type genome is 51.49

% and the genome length is 6.18 Mbp.

Description of *Candidatus* Chitinophaga miracastra sp. nov.

Candidatus Chitinophaga miracastra (NL. fem. n. *miracastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003149455*. The type genome for the species is the GenBank assembly RS_GCF_003149455.1. The GC content of the type genome is 50.54 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Chitinophaga novilatica sp. nov.

Candidatus Chitinophaga novilatica (NL. fem. n. *novilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp003182155*. The type genome for the species is the GenBank assembly RS_GCF_003182155.1. The GC content of the type genome is 45.06 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Chitinophaga oblonetta sp. nov.

Candidatus Chitinophaga oblonetta (NL. fem. n. *oblonetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp009647655*. The type genome for the species is the GenBank assembly RS_GCF_009647655.1. The GC content of the type genome is 45.26 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Chitinophaga papiledo sp. nov.

Candidatus Chitinophaga papiledo (NL. fem. n. *papiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp012927205*. The type genome for the species is the GenBank assembly RS_GCF_012927205.1. The GC content of the type genome is 48.68 % and the genome length is 8.37 Mbp.

Description of *Candidatus* Chitinophaga saxifivita sp. nov.

Candidatus Chitinophaga saxifivita (NL. fem. n. *saxifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp012726295*. The type genome for the species is the GenBank assembly RS_GCF_012641295.1. The GC content of the type genome is 46.44 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Chitinophaga venunitoga sp. nov.

Candidatus Chitinophaga venunitoga (NL. fem. n. *venunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp008386695*. The type genome for the species is the GenBank assembly RS_GCF_008386695.1. The GC content of the type genome is 49.49 % and the genome length is 8.31 Mbp.

Description of *Candidatus* Chitinophaga vocifilega sp. nov.

Candidatus Chitinophaga vocifilega (NL. fem. n. *vocifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chitinophaga sp900142925*. The type genome for the species is the GenBank assembly RS_GCF_900142925.1. The GC content of the type genome is 45.47 % and the genome length is 8.63 Mbp.

Description of *Candidatus* Chlamydophila exsolitudo sp. nov.

Candidatus Chlamydophila exsolitudo (NL. fem. n. *exsolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlamydophila sp001653975*. The type genome for the species is the GenBank assembly RS_GCF_001653975.1. The GC content of the type genome is 38.5 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "choana".

Description of *Candidatus* Chlamydophila roruledo sp. nov.

Candidatus Chlamydophila roruledo (NL. fem. n. *roruledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlamydophila sp900239945*. The type genome for the species is the GenBank assembly RS_GCF_900239945.1. The GC content of the type genome is 37.42 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Chlamydophila subabibula sp. nov.

Candidatus Chlamydophila subabibula (NL. fem. n. *subabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlamydophila sp900239975*. The type genome for the species is the GenBank assembly RS_GCF_900239975.1. The GC content of the type genome is 37.47 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Chloracidobacterium adcomifica sp. nov.

Candidatus Chloracidobacterium adcomifica (NL. fem. n. *adcomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chloracidobacterium sp002254845*. The type genome for the species is the GenBank assembly GCA_002254845.1. The GC content of the type genome is 64.18 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Chlorobaculum abverivita sp. nov.

Candidatus Chlorobaculum abverivita (NL. fem. n. *abverivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp900299075*. The type genome for the species is the GenBank assembly GCA_900299075.1. The GC content of the type genome is 62.61 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Chlorobaculum advorago sp. nov.

Candidatus Chlorobaculum advorago (NL. fem. n. *advorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334975*. The type genome for the species is the GenBank assembly GCA_013334975.1. The GC content of the type genome is 52.34 %

and the genome length is 2.79 Mbp.

Description of *Candidatus* Chlorobaculum bulapivita sp. nov.

Candidatus Chlorobaculum bulapivita (NL. fem. n. *bulapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp903901395*. The type genome for the species is the GenBank assembly GCA_903901395.1. The GC content of the type genome is 54.78 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Chlorobaculum casabatio sp. nov.

Candidatus Chlorobaculum casabatio (NL. fem. n. *casabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334655*. The type genome for the species is the GenBank assembly GCA_013334655.1. The GC content of the type genome is 55.56 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Chlorobaculum infisibra sp. nov.

Candidatus Chlorobaculum infisibra (NL. fem. n. *infisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013335115*. The type genome for the species is the GenBank assembly GCA_013335115.1. The GC content of the type genome is 59.51 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Chlorobaculum inpudago sp. nov.

Candidatus Chlorobaculum inpudago (NL. fem. n. *inpudago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334855*. The type genome for the species is the GenBank assembly GCA_013334855.1. The GC content of the type genome is 55.65 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Chlorobaculum locupatica sp. nov.

Candidatus Chlorobaculum locupatica (NL. fem. n. *locupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334525*. The type genome for the species is the GenBank assembly GCA_013334525.1. The GC content of the type genome is 54.19 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Chlorobaculum occenimonia sp. nov.

Candidatus Chlorobaculum occenimonia (NL. fem. n. *occenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334965*. The type genome for the species is the GenBank assembly GCA_013334965.1. The GC content of the type genome is 54.07 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Chlorobaculum penuritica sp. nov.

Candidatus Chlorobaculum penuritica (NL. fem. n. *penuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp001602925*. The type genome for the species is the GenBank assembly GCA_001602925.1. The GC content of the type genome is 56.24 % and the genome length is 2.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Chlorobaculum refulisca sp. nov.

Candidatus Chlorobaculum refulisca (NL. fem. n. *refulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp004118635*. The type genome for the species is the GenBank assembly RS_GCF_004118635.1. The GC content of the type genome is 56.72 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Chlorobaculum rubicigena sp. nov.

Candidatus Chlorobaculum rubicigena (NL. fem. n. *rubicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334335*. The type genome for the species is the GenBank assembly GCA_013335825.1. The GC content of the type genome is 58.46 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Chlorobaculum semimilega sp. nov.

Candidatus Chlorobaculum semimilega (NL. fem. n. *semimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334925*. The type genome for the species is the GenBank assembly GCA_013334925.1. The GC content of the type genome is 54.75 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Chlorobaculum tolutugo sp. nov.

Candidatus Chlorobaculum tolutugo (NL. fem. n. *tolutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp013334865*. The type genome for the species is the GenBank assembly GCA_013334865.1. The GC content of the type genome is 60.18 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Chlorobaculum vehemessa sp. nov.

Candidatus Chlorobaculum vehemessa (NL. fem. n. *vehemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobaculum sp903929135*. The type genome for the species is the GenBank assembly GCA_903929135.1. The GC content of the type genome is 57.88 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Chlorobium adtoretta sp. nov.

Candidatus Chlorobium adtoretta (NL. fem. n. *adtoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chlorobium sp013334485*. The type genome for the species is the GenBank assembly GCA_013334485.1. The GC content of the type genome is 48.0 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Chlorobium annecilega sp. nov.

Candidatus Chlorobium annecilega (NL. fem. n. *annecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903920215*. The type genome for the species is the GenBank assembly GCA_903920215.1. The GC content of the type genome is 45.84 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Chlorobium arbavisca sp. nov.

Candidatus Chlorobium arbavisca (NL. fem. n. *arbavisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903838025*. The type genome for the species is the GenBank assembly GCA_903838025.1. The GC content of the type genome is 48.37 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Chlorobium bicalago sp. nov.

Candidatus Chlorobium bicalago (NL. fem. n. *bicalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903822595*. The type genome for the species is the GenBank assembly GCA_903822595.1. The GC content of the type genome is 48.25 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Chlorobium bicapibula sp. nov.

Candidatus Chlorobium bicapibula (NL. fem. n. *bicapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903882665*. The type genome for the species is the GenBank assembly GCA_903835515.1. The GC content of the type genome is 48.8 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Chlorobium bipenibula sp. nov.

Candidatus Chlorobium bipenibula (NL. fem. n. *bipenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903824295*. The type genome for the species is the GenBank assembly GCA_903876775.1. The GC content of the type genome is 48.91 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Chlorobium bonifetta sp. nov.

Candidatus Chlorobium bonifetta (NL. fem. n. *bonifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903851535*. The type genome for the species is the GenBank assembly GCA_903851535.1. The GC content of the type genome is 49.23 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Chlorobium cerofitrix sp. nov.

Candidatus Chlorobium cerofitrix (NL. fem. n. *cerofitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013334755*. The type genome for the species is the GenBank assembly GCA_013335795.1. The GC content of the type genome is 46.88 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Chlorobium ceromedo sp. nov.

Candidatus Chlorobium ceromedo (NL. fem. n. *ceromedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903840935*. The type genome for the species is the GenBank assembly GCA_903840935.1. The GC content of the type genome is 48.63 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Chlorobium coninimonas sp. nov.

Candidatus Chlorobium coninimonas (NL. fem. n. *coninimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp005843805*. The type genome for the species is the GenBank assembly GCA_005843805.1. The GC content of the type genome is 48.46 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Chlorobium corocugo sp. nov.

Candidatus Chlorobium corocugo (NL. fem. n. *corocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903940125*. The type genome for the species is the GenBank assembly GCA_903836935.1. The GC content of the type genome is 45.33 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Chlorobium cuferigena sp. nov.

Candidatus Chlorobium cuferigena (NL. fem. n. *cuferigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903937835*. The type genome for the species is the GenBank assembly GCA_903951235.1. The GC content of the type genome is 47.47 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Chlorobium cuferivita sp. nov.

Candidatus Chlorobium cuferivita (NL. fem. n. *cuferivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903851385*. The type genome for the species is the GenBank assembly GCA_903943615.1. The GC content of the type genome is 45.78 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Chlorobium culibisca sp. nov.

Candidatus Chlorobium culibisca (NL. fem. n. *culibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chlorobium sp005862285*. The type genome for the species is the GenBank assembly GCA_005862285.1. The GC content of the type genome is 48.74 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Chlorobium curacifica sp. nov.

Candidatus Chlorobium curacifica (NL. fem. n. *curacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903869365*. The type genome for the species is the GenBank assembly GCA_903861705.1. The GC content of the type genome is 46.1 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Chlorobium decenastra sp. nov.

Candidatus Chlorobium decenastra (NL. fem. n. *decenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013335405*. The type genome for the species is the GenBank assembly GCA_013335405.1. The GC content of the type genome is 52.55 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Chlorobium decomugo sp. nov.

Candidatus Chlorobium decomugo (NL. fem. n. *decomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp005843815*. The type genome for the species is the GenBank assembly GCA_005843815.1. The GC content of the type genome is 48.28 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Chlorobium defalicella sp. nov.

Candidatus Chlorobium defalicella (NL. fem. n. *defalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013334435*. The type genome for the species is the GenBank assembly GCA_013335785.1. The GC content of the type genome is 55.54 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Chlorobium denunilega sp. nov.

Candidatus Chlorobium denunilega (NL. fem. n. *denunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903994635*. The type genome for the species is the GenBank assembly GCA_903994415.1. The GC content of the type genome is 47.91 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Chlorobium depetigena sp. nov.

Candidatus Chlorobium depetigena (NL. fem. n. *depetigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903843305*. The type genome for the species is the GenBank assembly GCA_903898535.1. The GC content of the type genome is 46.28 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Chlorobium depetimonia sp. nov.

Candidatus Chlorobium depetimonia (NL. fem. n. *depetimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903939765*. The type genome for the species is the GenBank assembly GCA_903939765.1. The GC content of the type genome is 49.01 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Chlorobium derelessa sp. nov.

Candidatus Chlorobium derelessa (NL. fem. n. *derelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903917955*. The type genome for the species is the GenBank assembly GCA_903917955.1. The GC content of the type genome is 49.06 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Chlorobium desoniforma sp. nov.

Candidatus Chlorobium desoniforma (NL. fem. n. *desoniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903895195*. The type genome for the species is the GenBank assembly GCA_903858515.1. The GC content of the type genome is 46.81 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Chlorobium dibucitica sp. nov.

Candidatus Chlorobium dibucitica (NL. fem. n. *dibucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp005862225*. The type genome for the species is the GenBank assembly GCA_005862225.1. The GC content of the type genome is 46.81 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Chlorobium dicanigena sp. nov.

Candidatus Chlorobium dicanigena (NL. fem. n. *dicanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013203905*. The type genome for the species is the GenBank assembly GCA_013203905.1. The GC content of the type genome is 53.06 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Chlorobium direcugo sp. nov.

Candidatus Chlorobium direcugo (NL. fem. n. *direcugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903820085*. The type genome for the species is the GenBank assembly GCA_903821405.1. The GC content of the type genome is 48.51 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Chlorobium divulibula sp. nov.

Candidatus Chlorobium divulibula (NL. fem. n. *divulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chlorobium sp012972825*. The type genome for the species is the GenBank assembly GCA_012972825.1. The GC content of the type genome is 45.67 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Chlorobium feditilega sp. nov.

Candidatus Chlorobium feditilega (NL. fem. n. *feditilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903859055*. The type genome for the species is the GenBank assembly GCA_903859055.1. The GC content of the type genome is 47.94 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Chlorobium fefelugo sp. nov.

Candidatus Chlorobium fefelugo (NL. fem. n. *fefelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903839405*. The type genome for the species is the GenBank assembly GCA_903839405.1. The GC content of the type genome is 51.22 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Chlorobium fetifatica sp. nov.

Candidatus Chlorobium fetifatica (NL. fem. n. *fetifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp012972835*. The type genome for the species is the GenBank assembly GCA_012972835.1. The GC content of the type genome is 45.73 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Chlorobium figilugo sp. nov.

Candidatus Chlorobium figilugo (NL. fem. n. *figilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp011601315*. The type genome for the species is the GenBank assembly RS_GCF_011601315.1. The GC content of the type genome is 49.58 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Chlorobium foricicella sp. nov.

Candidatus Chlorobium foricicella (NL. fem. n. *foricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp005843825*. The type genome for the species is the GenBank assembly GCA_903844325.1. The GC content of the type genome is 46.31 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Chlorobium fusificella sp. nov.

Candidatus Chlorobium fusificella (NL. fem. n. *fusificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903824045*. The type genome for the species is the GenBank assembly GCA_903819835.1. The GC content of the type genome is 54.2 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Chlorobium inoffitica sp. nov.

Candidatus Chlorobium inoffitica (NL. fem. n. *inoffitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903838095*. The type genome for the species is the GenBank assembly GCA_903838095.1. The GC content of the type genome is 46.7 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Chlorobium laxitilenta sp. nov.

Candidatus Chlorobium laxitilenta (NL. fem. n. *laxitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013336025*. The type genome for the species is the GenBank assembly GCA_013336025.1. The GC content of the type genome is 47.71 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Chlorobium luceledo sp. nov.

Candidatus Chlorobium luceledo (NL. fem. n. *luceledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp004332115*. The type genome for the species is the GenBank assembly RS_GCF_004332115.1. The GC content of the type genome is 61.46 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Chlorobium lucifitica sp. nov.

Candidatus Chlorobium lucifitica (NL. fem. n. *lucifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903908555*. The type genome for the species is the GenBank assembly GCA_903908555.1. The GC content of the type genome is 45.77 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Chlorobium megalitia sp. nov.

Candidatus Chlorobium megalitia (NL. fem. n. *megalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903866255*. The type genome for the species is the GenBank assembly GCA_903922235.1. The GC content of the type genome is 47.82 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Chlorobium monacibra sp. nov.

Candidatus Chlorobium monacibra (NL. fem. n. *monacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903887845*. The type genome for the species is the GenBank assembly GCA_903847795.1. The GC content of the type genome is 47.24 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Chlorobium murilatica sp. nov.

Candidatus Chlorobium murilatica (NL. fem. n. *murilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chlorobium sp903871235*. The type genome for the species is the GenBank assembly GCA_903897035.1. The GC content of the type genome is 48.19 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Chlorobium nutabimonas sp. nov.

Candidatus Chlorobium nutabimonas (NL. fem. n. *nutabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903994455*. The type genome for the species is the GenBank assembly GCA_903845695.1. The GC content of the type genome is 47.78 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Chlorobium pedepicula sp. nov.

Candidatus Chlorobium pedepicula (NL. fem. n. *pedepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013334565*. The type genome for the species is the GenBank assembly GCA_013334565.1. The GC content of the type genome is 53.63 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Chlorobium pedifimonas sp. nov.

Candidatus Chlorobium pedifimonas (NL. fem. n. *pedifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903929845*. The type genome for the species is the GenBank assembly GCA_903870225.1. The GC content of the type genome is 47.29 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Chlorobium penurivita sp. nov.

Candidatus Chlorobium penurivita (NL. fem. n. *penurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903904495*. The type genome for the species is the GenBank assembly GCA_903904495.1. The GC content of the type genome is 46.08 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Chlorobium perabitas sp. nov.

Candidatus Chlorobium perabitas (NL. fem. n. *perabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903836465*. The type genome for the species is the GenBank assembly GCA_903845435.1. The GC content of the type genome is 47.3 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Chlorobium pericessa sp. nov.

Candidatus Chlorobium pericessa (NL. fem. n. *pericessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903994365*. The type genome for the species is the GenBank assembly GCA_903835785.1. The GC content of the type genome is 47.55 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Chlorobium recomiforma sp. nov.

Candidatus Chlorobium recomiforma (NL. fem. n. *recomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903942355*. The type genome for the species is the GenBank assembly GCA_903942355.1. The GC content of the type genome is 48.53 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Chlorobium redacastra sp. nov.

Candidatus Chlorobium redacastra (NL. fem. n. *redacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903915955*. The type genome for the species is the GenBank assembly GCA_903915955.1. The GC content of the type genome is 47.31 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Chlorobium saburibula sp. nov.

Candidatus Chlorobium saburibula (NL. fem. n. *saburibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp013334225*. The type genome for the species is the GenBank assembly GCA_013334225.1. The GC content of the type genome is 48.87 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Chlorobium sanabatica sp. nov.

Candidatus Chlorobium sanabatica (NL. fem. n. *sanabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp005843835*. The type genome for the species is the GenBank assembly GCA_903838815.1. The GC content of the type genome is 43.92 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Chlorobium telegimonas sp. nov.

Candidatus Chlorobium telegimonas (NL. fem. n. *telegimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903994525*. The type genome for the species is the GenBank assembly GCA_903914055.1. The GC content of the type genome is 47.43 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Chlorobium verecicella sp. nov.

Candidatus Chlorobium verecicella (NL. fem. n. *verecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903895485*. The type genome for the species is the GenBank assembly GCA_903901615.1. The GC content of the type genome is 48.72 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Chlorobium vicatitrix sp. nov.

Candidatus Chlorobium vicatitrix (NL. fem. n. *vicatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chlorobium sp903928225*. The type genome for the species is the GenBank assembly GCA_903928225.1. The GC content of the type genome is 53.01 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Chlorobium vinulifica sp. nov.

Candidatus Chlorobium vinulifica (NL. fem. n. *vinulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903874585*. The type genome for the species is the GenBank assembly GCA_903874585.1. The GC content of the type genome is 46.18 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Chlorobium volubivita sp. nov.

Candidatus Chlorobium volubivita (NL. fem. n. *volubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium sp903865705*. The type genome for the species is the GenBank assembly GCA_903844805.1. The GC content of the type genome is 47.68 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Chlorobium cibaritudo sp. nov.

Candidatus Chlorobium cibaritudo (NL. fem. n. *cibaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium_A sp002240205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002240205.1. The GC content of the type genome is 55.97 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Chlorobium denixicella sp. nov.

Candidatus Chlorobium denixicella (NL. fem. n. *denixicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorobium_A sp004028745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004028745.1. The GC content of the type genome is 47.83 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Chloroflexus armidugo sp. nov.

Candidatus Chloroflexus armidugo (NL. fem. n. *armidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chloroflexus sp000516515*. The type genome for the species is the GenBank assembly RS_GCF_000516515.1. The GC content of the type genome is 53.93 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Chloroflexus denecilega sp. nov.

Candidatus Chloroflexus denecilega (NL. fem. n. *denecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chloroflexus sp000735195*. The type genome for the species is the GenBank assembly RS_GCF_000735195.1. The GC content of the type genome is 54.26 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "phototrophic microbial mat".

Description of *Candidatus* Chlorogloeopsis viragicula sp. nov.

Candidatus Chlorogloeopsis viragicula (NL. fem. n. *viragicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chlorogloeopsis sp000332255*. The type genome for the species is the GenBank assembly RS_GCF_000332255.1. The GC content of the type genome is 42.39 % and the genome length is 4.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Chloroploca adgenitica sp. nov.

Candidatus Chloroploca adgenitica (NL. fem. n. *adgenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chloroploca sp004138165*. The type genome for the species is the GenBank assembly RS_GCF_004138165.1. The GC content of the type genome is 58.86 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Chloroploca lanigivita sp. nov.

Candidatus Chloroploca lanigivita (NL. fem. n. *lanigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chloroploca sp004762035*. The type genome for the species is the GenBank assembly RS_GCF_004762035.1. The GC content of the type genome is 58.53 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Christensenella inhonitoga sp. nov.

Candidatus Christensenella inhonitoga (NL. fem. n. *inhonitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Christensenella sp014287795*. The type genome for the species is the GenBank assembly RS_GCF_014287795.1. The GC content of the type genome is 48.9 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Christensenella necubimonas sp. nov.

Candidatus Christensenella necubimonas (NL. fem. n. *necubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Christensenella sp001678845*. The type genome for the species is the GenBank assembly RS_GCF_001678845.1. The GC content of the type genome is 52.07 % and the genome length is 3.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Chromatium cicatimonas sp. nov.

Candidatus Chromatium cicatimonas (NL. fem. n. *cicatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromatium sp903897335*. The type genome for the species is the GenBank assembly GCA_903897335.1. The GC content of the type genome is 58.27 %

and the genome length is 3.29 Mbp.

Description of *Candidatus* Chromobacterium adperitia sp. nov.

Candidatus Chromobacterium adperitia (NL. fem. n. *adperitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp002924365*. The type genome for the species is the GenBank assembly RS_GCF_002924365.1. The GC content of the type genome is 63.36 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Chromobacterium aggenitoga sp. nov.

Candidatus Chromobacterium aggenitoga (NL. fem. n. *aggenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp002848345*. The type genome for the species is the GenBank assembly RS_GCF_002848345.1. The GC content of the type genome is 65.13 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Chromobacterium atropitia sp. nov.

Candidatus Chromobacterium atropitia (NL. fem. n. *atropitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp002213445*. The type genome for the species is the GenBank assembly RS_GCF_002213445.1. The GC content of the type genome is 64.66 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Chromobacterium cerifitio sp. nov.

Candidatus Chromobacterium cerifitio (NL. fem. n. *cerifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp003325495*. The type genome for the species is the GenBank assembly RS_GCF_003325475.1. The GC content of the type genome is 63.91 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Chromobacterium hexapitoga sp. nov.

Candidatus Chromobacterium hexapitoga (NL. fem. n. *hexapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp001043705*. The type genome for the species is the GenBank assembly RS_GCF_001043705.1. The GC content of the type genome is 64.96 % and the genome length is 5.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Plant".

Description of *Candidatus* Chromobacterium ignicifica sp. nov.

Candidatus Chromobacterium ignicifica (NL. fem. n. *ignicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp008275125*. The type genome for the species is the GenBank assembly RS_GCF_008275125.1. The GC content of the type genome is 63.63 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Chromobacterium orgetago sp. nov.

Candidatus Chromobacterium orgetago (NL. fem. n. *orgetago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp001043555*. The type genome for the species is the GenBank assembly RS_GCF_001043555.1. The GC content of the type genome is 63.64 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Plant".

Description of *Candidatus* Chromobacterium vigenago sp. nov.

Candidatus Chromobacterium vigenago (NL. fem. n. *vigenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chromobacterium sp003052555*. The type genome for the species is the GenBank assembly RS_GCF_003052555.1. The GC content of the type genome is 64.02 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Chroogloeocystis adposisca sp. nov.

Candidatus Chroogloeocystis adposisca (NL. fem. n. *adposisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chroogloeocystis sp000317555*. The type genome for the species is the GenBank assembly RS_GCF_000317555.1. The GC content of the type genome is 43.36 % and the genome length is 5.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "moderate hot spring".

Description of *Candidatus* Chroogloeocystis cemenago sp. nov.

Candidatus Chroogloeocystis cemenago (NL. fem. n. *cemenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chroogloeocystis sp002964865*. The type genome for the species is the GenBank assembly RS_GCF_002964865.1. The GC content of the type genome is 42.42 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Chroogloeocystis epogdicella sp. nov.

Candidatus Chroogloeocystis epogdicella (NL. fem. n. *epogdicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chroogloeocystis sp002939305*. The type genome for the species is the GenBank assembly RS_GCF_002939305.1. The GC content of the type genome is 43.4 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Chroogloeocystis uberrago sp. nov.

Candidatus Chroogloeocystis uberrago (NL. fem. n. *uberrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chroogloeocystis sp002749975*. The type genome for the species is the GenBank assembly RS_GCF_002749975.1. The GC content of the type genome is 41.77 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Chryseobacterium abhinicula sp. nov.

Candidatus Chryseobacterium abhinicula (NL. fem. n. *abhinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000333355*. The type genome for the species is the GenBank assembly RS_GCF_000333355.1. The GC content of the type genome is 37.05 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Chryseobacterium adculousia sp. nov.

Candidatus Chryseobacterium adculousia (NL. fem. n. *adculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp006829085*. The type genome for the species is the GenBank assembly RS_GCF_006829085.1. The GC content of the type genome is 36.94 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Chryseobacterium adcumigena sp. nov.

Candidatus Chryseobacterium adcumigena (NL. fem. n. *adcumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001424145*. The type genome for the species is the GenBank assembly RS_GCF_001424145.1. The GC content of the type genome is 36.69 % and the genome length is 3.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Chryseobacterium addubimonia sp. nov.

Candidatus Chryseobacterium addubimonia (NL. fem. n. *addubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002754245*. The type genome for the species is the GenBank assembly RS_GCF_002754245.1. The GC content of the type genome is 37.04 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Chryseobacterium adinvitica sp. nov.

Candidatus Chryseobacterium adinvitica (NL. fem. n. *adinvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001045445*. The type genome for the species is the GenBank assembly RS_GCF_001045445.1. The GC content of the type genome is

37.57 % and the genome length is 4.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Chryseobacterium admorisca sp. nov.

Candidatus Chryseobacterium admorisca (NL. fem. n. *admorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001045455*. The type genome for the species is the GenBank assembly RS_GCF_001045455.1. The GC content of the type genome is 34.16 % and the genome length is 3.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Freshwater Creek".

Description of *Candidatus* Chryseobacterium adrumicella sp. nov.

Candidatus Chryseobacterium adrumicella (NL. fem. n. *adrumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp013153155*. The type genome for the species is the GenBank assembly GCA_013153155.1. The GC content of the type genome is 36.49 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Chryseobacterium almitessa sp. nov.

Candidatus Chryseobacterium almitessa (NL. fem. n. *almitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002979455*. The type genome for the species is the GenBank assembly RS_GCF_002979455.1. The GC content of the type genome is 35.63 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Chryseobacterium ammuritrix sp. nov.

Candidatus Chryseobacterium ammuritrix (NL. fem. n. *ammuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003347605*. The type genome for the species is the GenBank assembly RS_GCF_003347605.1. The GC content of the type genome is 36.61 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Chryseobacterium ancipicula sp. nov.

Candidatus Chryseobacterium ancipicula (NL. fem. n. *ancipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp902728305*. The type genome for the species is the GenBank assembly RS_GCF_902728305.1. The GC content of the type genome is 34.54 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Chryseobacterium apercitura sp. nov.

Candidatus Chryseobacterium apercitura (NL. fem. n. *apercitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002455915*. The type genome for the species is the GenBank assembly GCA_002455915.1. The GC content of the type genome is 34.66 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Chryseobacterium apsenivita sp. nov.

Candidatus Chryseobacterium apsenivita (NL. fem. n. *apsenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003815715*. The type genome for the species is the GenBank assembly RS_GCF_003815715.1. The GC content of the type genome is 35.53 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Chryseobacterium arrabitura sp. nov.

Candidatus Chryseobacterium arrabitura (NL. fem. n. *arrabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799235*. The type genome for the species is the GenBank assembly RS_GCF_000799235.1. The GC content of the type genome is 36.18 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Chryseobacterium attorago sp. nov.

Candidatus Chryseobacterium attorago (NL. fem. n. *attorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002434285*. The type genome for the species is the GenBank assembly GCA_002434285.1. The GC content of the type genome is 37.02 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Chryseobacterium bipatilega sp. nov.

Candidatus Chryseobacterium bipatilega (NL. fem. n. *bipatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003385515*. The type genome for the species is the GenBank assembly RS_GCF_003385515.1. The GC content of the type genome is 35.64 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Chryseobacterium celumitrix sp. nov.

Candidatus Chryseobacterium celumitrix (NL. fem. n. *celumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799335*. The type genome for the species is the GenBank assembly RS_GCF_000799335.1. The GC content of the type genome is 35.99 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Chryseobacterium cerebentia sp. nov.

Candidatus Chryseobacterium cerebentia (NL. fem. n. *cerebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp011752975*. The type genome for the species is the GenBank assembly RS_GCF_011752975.1. The GC content of the type genome is 36.18 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Chryseobacterium cetaritio sp. nov.

Candidatus Chryseobacterium cetaritio (NL. fem. n. *cetaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chryseobacterium sp001677955*. The type genome for the species is the GenBank assembly RS_GCF_001677955.1. The GC content of the type genome is 33.57 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Chryseobacterium cimititas sp. nov.

Candidatus Chryseobacterium cimititas (NL. fem. n. *cimititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799255*. The type genome for the species is the GenBank assembly RS_GCF_000799255.1. The GC content of the type genome is 35.17 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Chryseobacterium colapigena sp. nov.

Candidatus Chryseobacterium colapigena (NL. fem. n. *colapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp009900745*. The type genome for the species is the GenBank assembly RS_GCF_009900745.1. The GC content of the type genome is 35.17 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Chryseobacterium crasticula sp. nov.

Candidatus Chryseobacterium crasticula (NL. fem. n. *crasticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp012927325*. The type genome for the species is the GenBank assembly RS_GCF_012927325.1. The GC content of the type genome is 36.92 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Chryseobacterium culibimonas sp. nov.

Candidatus Chryseobacterium culibimonas (NL. fem. n. *culibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp903166575*. The type genome for the species is the GenBank assembly RS_GCF_903166575.1. The GC content of the type genome is 33.52 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Chryseobacterium decamicella sp. nov.

Candidatus Chryseobacterium decamicella (NL. fem. n. *decamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001297705*. The type genome for the species is the GenBank assembly RS_GCF_001297705.1. The GC content of the type genome is 34.07 % and the genome length is 5.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Moraine Ridge Soil".

Description of *Candidatus* Chryseobacterium decucifica sp. nov.

Candidatus Chryseobacterium decucifica (NL. fem. n. *decucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003815675*. The type genome for the species is the GenBank assembly RS_GCF_003815675.1. The GC content of the type genome is 35.99 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Chryseobacterium delacugo sp. nov.

Candidatus Chryseobacterium delacugo (NL. fem. n. *delacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp008329705*. The type genome for the species is the GenBank assembly RS_GCF_008329705.1. The GC content of the type genome is 41.11 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Chryseobacterium depubimonia sp. nov.

Candidatus Chryseobacterium depubimonia (NL. fem. n. *depubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp008274625*. The type genome for the species is the GenBank assembly RS_GCF_008274625.1. The GC content of the type genome is 36.45 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Chryseobacterium detosilenta sp. nov.

Candidatus Chryseobacterium detosilenta (NL. fem. n. *detosilenta* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp004119445*. The type genome for the species is the GenBank assembly RS_GCF_004119445.1. The GC content of the type genome is 35.86 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Chryseobacterium dilemousia sp. nov.

Candidatus Chryseobacterium dilemousia (NL. fem. n. *dilemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp004119455*. The type genome for the species is the GenBank assembly RS_GCF_004119415.1. The GC content of the type genome is 35.56 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Chryseobacterium divorifica sp. nov.

Candidatus Chryseobacterium divorifica (NL. fem. n. *divorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003669035*. The type genome for the species is the GenBank assembly RS_GCF_003669035.1. The GC content of the type genome is 34.5 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Chryseobacterium duponastra sp. nov.

Candidatus Chryseobacterium duponastra (NL. fem. n. *duponastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003729935*. The type genome for the species is the GenBank assembly RS_GCF_003729935.1. The GC content of the type genome is 36.82 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Chryseobacterium eccisigena sp. nov.

Candidatus Chryseobacterium eccisigena (NL. fem. n. *eccisigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000737715*. The type genome for the species is the GenBank assembly RS_GCF_000737715.1. The GC content of the type genome is 38.05 % and the genome length is 5.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "milk carafe".

Description of *Candidatus* Chryseobacterium epogdivita sp. nov.

Candidatus Chryseobacterium epogdivita (NL. fem. n. *epogdivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002899825*. The type genome for the species is the GenBank assembly RS_GCF_002899825.2. The GC content of the type genome is 36.3 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Chryseobacterium exaspago sp. nov.

Candidatus Chryseobacterium exaspago (NL. fem. n. *exaspago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp009602705*. The type genome for the species is the GenBank assembly RS_GCF_009602705.1. The GC content of the type genome is 37.4 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Chryseobacterium exhoritrix sp. nov.

Candidatus Chryseobacterium exhoritrix (NL. fem. n. *exhoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001421435*. The type genome for the species is the GenBank assembly RS_GCF_001421435.1. The GC content of the type genome is 39.54 % and the genome length is 4.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Chryseobacterium forabimonia sp. nov.

Candidatus Chryseobacterium forabimonia (NL. fem. n. *forabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp900156075*. The type genome for the species is

the GenBank assembly RS_GCF_900156075.1. The GC content of the type genome is 35.03 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Chryseobacterium fragmatio sp. nov.

Candidatus Chryseobacterium fragmatio (NL. fem. n. *fragmatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799515*. The type genome for the species is the GenBank assembly RS_GCF_000799515.1. The GC content of the type genome is 34.83 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Chryseobacterium ignifimonia sp. nov.

Candidatus Chryseobacterium ignifimonia (NL. fem. n. *ignifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002216065*. The type genome for the species is the GenBank assembly RS_GCF_002216065.1. The GC content of the type genome is 35.22 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Chryseobacterium impigicula sp. nov.

Candidatus Chryseobacterium impigicula (NL. fem. n. *impigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp012927265*. The type genome for the species is the GenBank assembly RS_GCF_012927265.1. The GC content of the type genome is 37.25 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Chryseobacterium impiriforma sp. nov.

Candidatus Chryseobacterium impiriforma (NL. fem. n. *impiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001424105*. The type genome for the species is the GenBank assembly RS_GCF_001424105.1. The GC content of the type genome is 36.52 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Chryseobacterium inaspitas sp. nov.

Candidatus Chryseobacterium inaspitas (NL. fem. n. *inaspitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000829375*. The type genome for the species is the GenBank assembly RS_GCF_000829375.1. The GC content of the type genome is 35.59 % and the genome length is 5.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Chryseobacterium isoscisca sp. nov.

Candidatus Chryseobacterium isoscisca (NL. fem. n. *isoscisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000745535*. The type genome for the species is the GenBank assembly RS_GCF_000745535.1. The GC content of the type genome is 35.88 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Chryseobacterium lavacicula sp. nov.

Candidatus Chryseobacterium lavacicula (NL. fem. n. *lavacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003815655*. The type genome for the species is the GenBank assembly RS_GCF_003815655.1. The GC content of the type genome is 34.16 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Chryseobacterium mirabibra sp. nov.

Candidatus Chryseobacterium mirabibra (NL. fem. n. *mirabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000745795*. The type genome for the species is the GenBank assembly RS_GCF_000745795.1. The GC content of the type genome is 33.8 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Chryseobacterium negotitica sp. nov.

Candidatus Chryseobacterium negotitica (NL. fem. n. *negotitica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003384725*. The type genome for the species is the GenBank assembly RS_GCF_003384725.1. The GC content of the type genome is 38.55 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Chryseobacterium occumetta sp. nov.

Candidatus Chryseobacterium occumetta (NL. fem. n. *occumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001424585*. The type genome for the species is the GenBank assembly RS_GCF_001424585.1. The GC content of the type genome is 38.33 % and the genome length is 3.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Chryseobacterium optumitrix sp. nov.

Candidatus Chryseobacterium optumitrix (NL. fem. n. *optumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799455*. The type genome for the species is the GenBank assembly RS_GCF_000799455.1. The GC content of the type genome is 34.49 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Chryseobacterium ossucatio sp. nov.

Candidatus Chryseobacterium ossucatio (NL. fem. n. *ossucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp013184525*. The type genome for the species is the GenBank assembly RS_GCF_013184525.1. The GC content of the type genome is 36.18 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Chryseobacterium penecibula sp. nov.

Candidatus Chryseobacterium penecibula (NL. fem. n. *penecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp900128945*. The type genome for the species is the GenBank assembly RS_GCF_000800075.1. The GC content of the type genome is 38.06 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Chryseobacterium pociledo sp. nov.

Candidatus Chryseobacterium pociledo (NL. fem. n. *pociledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp900156935*. The type genome for the species is the GenBank assembly RS_GCF_903969135.1. The GC content of the type genome is 36.11 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Chryseobacterium recucimonia sp. nov.

Candidatus Chryseobacterium recucimonia (NL. fem. n. *recucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp002835665*. The type genome for the species is the GenBank assembly RS_GCF_002835665.1. The GC content of the type genome is 34.78 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Chryseobacterium remulitas sp. nov.

Candidatus Chryseobacterium remulitas (NL. fem. n. *remulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp013410675*. The type genome for the species is the GenBank assembly RS_GCF_013410675.1. The GC content of the type genome is 35.41 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Chryseobacterium serotitoga sp. nov.

Candidatus Chryseobacterium serotitoga (NL. fem. n. *serotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003182335*. The type genome for the species is the GenBank assembly GCA_009648535.1. The GC content of the type genome is 36.85

% and the genome length is 5.0 Mbp.

Description of *Candidatus* Chryseobacterium triscitudo sp. nov.

Candidatus Chryseobacterium triscitudo (NL. fem. n. *triscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp003663845*. The type genome for the species is the GenBank assembly RS_GCF_003663845.1. The GC content of the type genome is 36.02 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Chryseobacterium vatilibra sp. nov.

Candidatus Chryseobacterium vatilibra (NL. fem. n. *vatilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001456155*. The type genome for the species is the GenBank assembly RS_GCF_003384775.1. The GC content of the type genome is 35.54 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Chryseobacterium vavasimonas sp. nov.

Candidatus Chryseobacterium vavasimonas (NL. fem. n. *vavasimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp000799195*. The type genome for the species is the GenBank assembly RS_GCF_000799195.1. The GC content of the type genome is 34.22 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Chryseobacterium velivastra sp. nov.

Candidatus Chryseobacterium velivastra (NL. fem. n. *velivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseobacterium sp001425355*. The type genome for the species is the GenBank assembly RS_GCF_001425355.1. The GC content of the type genome is 34.27 % and the genome length is 4.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Chryseoglobus ammixitio sp. nov.

Candidatus Chryseoglobus ammixitio (NL. fem. n. *ammixitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp005777405*. The type genome for the species is the GenBank assembly GCA_005777405.1. The GC content of the type genome is 67.7 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Chryseoglobus assibastra sp. nov.

Candidatus Chryseoglobus assibastra (NL. fem. n. *assibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp013414345*. The type genome for the species is the GenBank assembly RS_GCF_013414345.1. The GC content of the type genome is 69.61 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Chryseoglobus denomessa sp. nov.

Candidatus Chryseoglobus denomessa (NL. fem. n. *denomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp002729155*. The type genome for the species is the GenBank assembly RS_GCF_009371975.2. The GC content of the type genome is 69.42 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Chryseoglobus impudago sp. nov.

Candidatus Chryseoglobus impudago (NL. fem. n. *impudago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp001464255*. The type genome for the species is the GenBank assembly GCA_001464255.1. The GC content of the type genome is 71.28 % and the genome length is 2.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Chryseoglobus inlumastra sp. nov.

Candidatus Chryseoglobus inlumastra (NL. fem. n. *inlumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp002813345*. The type genome for the species is the GenBank assembly RS_GCF_002813345.1. The GC content of the type genome is 68.36 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Chryseoglobus monacigena sp. nov.

Candidatus Chryseoglobus monacigena (NL. fem. n. *monacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp013823625*. The type genome for the species is the GenBank assembly GCA_013824105.1. The GC content of the type genome is 66.51 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Chryseoglobus prospimonas sp. nov.

Candidatus Chryseoglobus prospimonas (NL. fem. n. *prospimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp002280615*. The type genome for the species is the GenBank assembly GCA_002280615.1. The GC content of the type genome is 70.45 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Chryseoglobus rudicigena sp. nov.

Candidatus Chryseoglobus rudicigena (NL. fem. n. *rudicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp002423075*. The type genome for the species is the GenBank assembly GCA_002423075.1. The GC content of the type genome is 67.55 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Chryseoglobus valefigena sp. nov.

Candidatus Chryseoglobus valefigena (NL. fem. n. *valefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Chryseoglobus sp013297625*. The type genome for the species is the GenBank assembly GCA_013297625.1. The GC content of the type genome is 66.46 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Chryseoglobus vavasivita sp. nov.

Candidatus Chryseoglobus vavasivita (NL. fem. n. *vavasivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseoglobus sp005778835*. The type genome for the species is the GenBank assembly GCA_005778835.1. The GC content of the type genome is 69.33 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Chryseotalea incesisca sp. nov.

Candidatus Chryseotalea incesisca (NL. fem. n. *incesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chryseotalea sp001464155*. The type genome for the species is the GenBank assembly GCA_001464155.1. The GC content of the type genome is 42.83 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Chthoniobacter valefiforma sp. nov.

Candidatus Chthoniobacter valefiforma (NL. fem. n. *valefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Chthoniobacter sp903874975*. The type genome for the species is the GenBank assembly GCA_008932945.1. The GC content of the type genome is 65.1 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Cibarana almucibula sp. nov.

Candidatus Cibarana almucibula (NL. fem. n. *almucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMJ01 sp014360335*. The type genome for the species is the GenBank assembly GCA_014360335.1. The GC content of the type genome is 37.65 %

and the genome length is 2.37 Mbp.

Description of *Candidatus* Cibarana gen. nov.

Candidatus Cibarana (NL. fem. n. *Cibarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMJ01*. The type species for the genus is *Candidatus* Cibarana almucibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibaranaceae.

Description of *Candidatus* Cibaranaceae fam. nov.

Candidatus Cibaranaceae (NL. fem. n. *Cibaranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMJ01.* The type genus for the taxon is *Candidatus* Cibarana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUMJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cibaranales.

Description of *Candidatus* Cibaranales ord. nov.

Candidatus Cibaranales (NL. fem. n. *Cibaranales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMJ01.* The type genus for the taxon is *Candidatus* Cibarana .

According to the original version of GTDB R06-RS202, this family belongs to the class *DUMJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cibaranae.

Description of *Candidatus* Cibaranae class. nov.

Candidatus Cibaranae (NL. fem. n. *c__Cibaranae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMJ01.* The type genus for the taxon is *Candidatus* Cibarana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *DUMJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Cibaranota.

Description of *Candidatus* Cibaranota phyl. nov.

Candidatus Cibaranota (NL. fem. n. *Cibaranota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMJ01*. The type genus for the taxon is *Candidatus* Cibarana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Cibarana epitritas sp. nov.

Candidatus Cibarana epitritas (NL. fem. n. *epitritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMJ01 sp011333285*. The type genome for the species is the GenBank assembly GCA_011333285.1. The GC content of the type genome is 40.75 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Cibarana excarugo sp. nov.

Candidatus Cibarana excarugo (NL. fem. n. *excarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMJ01 sp011334575*. The type genome for the species is the GenBank assembly GCA_011334575.1. The GC content of the type genome is 39.67 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Cibarana viginicella sp. nov.

Candidatus Cibarana viginicella (NL. fem. n. *viginicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMJ01 sp012839925*. The type genome for the species is the GenBank assembly GCA_012839925.1. The GC content of the type genome is 39.59 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Cibararia alceditura sp. nov.

Candidatus Cibararia alceditura (NL. fem. n. *alceditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-64-10 sp002787095*. The type genome for the species is the GenBank assembly GCA_002787095.1. The GC content of the type genome is 64.49 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Cibararia gen. nov.

Candidatus Cibararia (NL. fem. n. *Cibararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-64-10*. The type species for the genus is *Candidatus* Cibararia alceditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-64-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarariaceae.

Description of *Candidatus* Cibarariaceae fam. nov.

Candidatus Cibarariaceae (NL. fem. n. *Cibarariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-64-10.* The type genus for the taxon is *Candidatus* Cibararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *1-14-0-20-64-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cibarariales.

Description of *Candidatus* Cibarariales ord. nov.

Candidatus Cibarariales (NL. fem. n. *Cibarariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-64-10.* The type genus for the taxon is *Candidatus* Cibararia .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Cibarella repurisca sp. nov.

Candidatus Cibarella repurisca (NL. fem. n. *repurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTK01 sp009377745*. The type genome for the species is the GenBank assembly GCA_009377745.1. The GC content of the type genome is 63.76 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Cibarella gen. nov.

Candidatus Cibarella (NL. fem. n. *Cibarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTK01*. The type species for the genus is *Candidatus* Cibarella repurisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHTK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarellaceae.

Description of *Candidatus* Cibarellaceae fam. nov.

Candidatus Cibarellaceae (NL. fem. n. *Cibarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHTK01.* The type genus for the taxon is *Candidatus* Cibarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSTF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinefiales.

Description of *Candidatus* Cibarida vagabitia sp. nov.

Candidatus Cibarida vagabitia (NL. fem. n. *vagabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QXXE01 sp009911355*. The type genome for the species is the GenBank assembly RS_GCF_009911335.1. The GC content of the type genome is 57.14 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Cibarida gen. nov.

Candidatus Cibarida (NL. fem. n. *Cibarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QXXE01*. The type species for the genus is *Candidatus* Cibarida vagabitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cibarosa obsolimonas sp. nov.

Candidatus Cibarosa obsolimonas (NL. fem. n. *obsolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6265 sp002440805*. The type genome for the species is the GenBank assembly GCA_002440805.1. The GC content of the type genome is 58.98 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Cibarosa gen. nov.

Candidatus Cibarosa (NL. fem. n. *Cibarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6265*. The type species for the genus is *Candidatus* Cibarosa obsolimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Cibarosaceae fam. nov.

Candidatus Cibarosaceae (NL. fem. n. *Cibarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6265.* The type genus for the taxon is *Candidatus* Cibarosa .

According to GTDB R06-RS202, this family belongs to the order *Thermomicrobiales*.

Description of *Candidatus* Cibarula defanitrix sp. nov.

Candidatus Cibarula defanitrix (NL. fem. n. *defanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9637 sp001797665*. The type genome for the species is the GenBank assembly GCA_001797665.1. The GC content of the type genome is 42.05 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Cibarula gen. nov.

Candidatus Cibarula (NL. fem. n. *Cibarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9637*. The type species for the genus is *Candidatus* Cibarula defanitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9637*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarulaceae.

Description of *Candidatus* Cibarulaceae fam. nov.

Candidatus Cibarulaceae (NL. fem. n. *Cibarulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9637*. The type genus for the taxon is *Candidatus* Cibarula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Cibicana aruspentia sp. nov.

Candidatus Cibicana aruspentia (NL. fem. n. *aruspentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW10 sp002172625*. The type genome for the species is the GenBank assembly GCA_002172625.1. The GC content of the type genome is 53.96 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Cibicana gen. nov.

Candidatus Cibicana (NL. fem. n. *Cibicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW10*. The type species for the genus is *Candidatus* Cibicana aruspentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cibicana casigentia sp. nov.

Candidatus Cibicana casigentia (NL. fem. n. *casigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW10 sp002323895*. The type genome for the species is the GenBank assembly GCA_002862925.1. The GC content of the type genome is 49.25 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Cibicana insalifica sp. nov.

Candidatus Cibicana insalifica (NL. fem. n. *insalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW10 sp000383735*. The type genome for the species is the GenBank assembly GCA_000383735.1. The GC content of the type genome is 48.53 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Cibicana nimirastra sp. nov.

Candidatus Cibicana nimirastra (NL. fem. n. *nimirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW10 sp002420315*. The type genome for the species is the GenBank assembly GCA_003446495.1. The GC content of the type genome is 48.93 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Cibicana ratifitas sp. nov.

Candidatus Cibicana ratifitas (NL. fem. n. *ratifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW10 sp002729295*. The type genome for the species is the GenBank assembly GCA_002729295.1. The GC content of the type genome is 53.24 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Cibicaria virecitica sp. nov.

Candidatus Cibicaria virecitica (NL. fem. n. *virecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2742935 sp002742935*. The type genome for the species is the GenBank assembly GCA_002748965.1. The GC content of the type genome is 31.4 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Cibicaria gen. nov.

Candidatus Cibicaria (NL. fem. n. *Cibicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2742935*. The type species for the genus is *Candidatus* Cibicaria virecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecariaceae.

Description of *Candidatus* Cibicella latibitudo sp. nov.

Candidatus Cibicella latibitudo (NL. fem. n. *latibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6910 sp002451065*. The type genome for the species is the GenBank assembly GCA_002451065.1. The GC content of the type genome is 65.24 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Cibicella gen. nov.

Candidatus Cibicella (NL. fem. n. *Cibicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6910*. The type species for the genus is *Candidatus* Cibicella latibitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6910*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibicellaceae.

Description of *Candidatus* Cibicellaceae fam. nov.

Candidatus Cibicellaceae (NL. fem. n. *Cibicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6910.* The type genus for the taxon is *Candidatus* Cibicella .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Cibicia alsisicella sp. nov.

Candidatus Cibicia alsisicella (NL. fem. n. *alsisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *58-81 sp012729145*. The type genome for the species is the GenBank assembly GCA_012729145.1. The GC content of the type genome is 56.54 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cibicia gen. nov.

Candidatus Cibicia (NL. fem. n. *Cibicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *58-81*. The type species for the genus is *Candidatus* Cibicia alsisicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cibicia bipatetta sp. nov.

Candidatus Cibicia bipatetta (NL. fem. n. *bipatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *58-81 sp012523215*. The type genome for the species is the GenBank

assembly GCA_012523215.1. The GC content of the type genome is 58.02 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cibicia dibapilenta sp. nov.

Candidatus Cibicia dibapilenta (NL. fem. n. *dibapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *58-81 sp001509095*. The type genome for the species is the GenBank assembly GCA_001509095.1. The GC content of the type genome is 57.32 % and the genome length is 1.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample SB2".

Description of *Candidatus* Cibicia seposugo sp. nov.

Candidatus Cibicia seposugo (NL. fem. n. *seposugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *58-81 sp002070395*. The type genome for the species is the GenBank assembly GCA_002070395.1. The GC content of the type genome is 60.09 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Cibicosa desurifica sp. nov.

Candidatus Cibicosa desurifica (NL. fem. n. *desurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp002167285*. The type genome for the species is the GenBank assembly GCA_002167285.1. The GC content of the type genome is 52.28 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Cibicosa gen. nov.

Candidatus Cibicosa (NL. fem. n. *Cibicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12191*. The type species for the genus is *Candidatus* Cibicosa desurifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vigenanaceae.

Description of *Candidatus* Cibicosa homolitura sp. nov.

Candidatus Cibicosa homolitura (NL. fem. n. *homolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp002691835*. The type genome for the species is the GenBank assembly GCA_002691835.1. The GC content of the type genome is 51.79 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Cibicosa lucerago sp. nov.

Candidatus Cibicosa lucerago (NL. fem. n. *lucerago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp013911165*. The type genome for the species is the GenBank assembly GCA_013911165.1. The GC content of the type genome is 55.29 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Cibicosa malagago sp. nov.

Candidatus Cibicosa malagago (NL. fem. n. *malagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp009937185*. The type genome for the species is the GenBank assembly GCA_014239525.1. The GC content of the type genome is 49.81 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Cibicosa monumax sp. nov.

Candidatus Cibicosa monumax (NL. fem. n. *monumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp012269595*. The type genome for the species is the GenBank assembly GCA_012269595.1. The GC content of the type genome is 55.53 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Cibicosa rurigax sp. nov.

Candidatus Cibicosa rurigax (NL. fem. n. *rurigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12191 sp003540375*. The type genome for the species is the GenBank assembly GCA_014382255.1. The GC content of the type genome is 49.88 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Cibicula occenetta sp. nov.

Candidatus Cibicula occenetta (NL. fem. n. *occenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGB01 sp012727955*. The type genome for the species is the GenBank assembly GCA_012727955.1. The GC content of the type genome is 53.38 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cibicula gen. nov.

Candidatus Cibicula (NL. fem. n. *Cibicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGB01*. The type species for the genus is *Candidatus* Cibicula occenetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYGB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibiculaceae.

Description of *Candidatus* Cibiculaceae fam. nov.

Candidatus Cibiculaceae (NL. fem. n. *Cibiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYGB01.* The type genus for the taxon is *Candidatus* Cibicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Holovosales.

Description of *Candidatus* Cicarana actarisca sp. nov.

Candidatus Cicarana actarisca (NL. fem. n. *actarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003158875*. The type genome for the species is the GenBank assembly GCA_003158875.1. The GC content of the type genome is 65.99 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Cicarana gen. nov.

Candidatus Cicarana (NL. fem. n. *Cicarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1039*. The type species for the genus is *Candidatus* Cicarana actarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Cicarana adtoritura sp. nov.

Candidatus Cicarana adtoritura (NL. fem. n. *adtoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003153755*. The type genome for the species is the GenBank assembly GCA_003153755.1. The GC content of the type genome is 67.11 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Cicarana adveratio sp. nov.

Candidatus Cicarana adveratio (NL. fem. n. *adveratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003156975*. The type genome for the species is the GenBank assembly GCA_003156975.1. The GC content of the type genome is 66.6 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Cicarana ascalitia sp. nov.

Candidatus Cicarana ascalitia (NL. fem. n. *ascalitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003157875*. The type genome for the species is the GenBank assembly GCA_003157875.1. The GC content of the type genome is 67.64 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Cicarana cepuritudo sp. nov.

Candidatus Cicarana cepuritudo (NL. fem. n. *cepuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003158495*. The type genome for the species is the GenBank assembly GCA_003158495.1. The GC content of the type genome is 67.59 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Cicarana cicatousia sp. nov.

Candidatus Cicarana cicatousia (NL. fem. n. *cicatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003142755*. The type genome for the species is the GenBank assembly GCA_003171455.1. The GC content of the type genome is 67.74 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Cicarana curacitica sp. nov.

Candidatus Cicarana curacitica (NL. fem. n. *curacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003165675*. The type genome for the species is the GenBank assembly GCA_003156995.1. The GC content of the type genome is 68.0 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Cicarana decomousia sp. nov.

Candidatus Cicarana decomousia (NL. fem. n. *decomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003141455*. The type genome for the species is the GenBank assembly GCA_003141455.1. The GC content of the type genome is 67.68 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Cicarana effemiforma sp. nov.

Candidatus Cicarana effemiforma (NL. fem. n. *effemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003171255*. The type genome for the species is the GenBank assembly GCA_003171255.1. The GC content of the type genome is 67.58 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Cicarana holovivita sp. nov.

Candidatus Cicarana holovivita (NL. fem. n. *holovivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003171065*. The type genome for the species is the GenBank assembly GCA_003142735.1. The GC content of the type genome is 68.13 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Cicarana monimago sp. nov.

Candidatus Cicarana monimago (NL. fem. n. *monimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003158295*. The type genome for the species is the GenBank assembly GCA_003170695.1. The GC content of the type genome is 67.8 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Cicarana pomifugo sp. nov.

Candidatus Cicarana pomifugo (NL. fem. n. *pomifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003158675*. The type genome for the species is the GenBank assembly GCA_003158675.1. The GC content of the type genome is 67.22 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Cicarana recomastra sp. nov.

Candidatus Cicarana recomastra (NL. fem. n. *recomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003152995*. The type genome for the species is the GenBank assembly GCA_003152995.1. The GC content of the type genome is 67.49 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Cicarana sarabitura sp. nov.

Candidatus Cicarana sarabitura (NL. fem. n. *sarabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003141955*. The type genome for the species is the GenBank assembly GCA_003154815.1. The GC content of the type genome is 68.7 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Cicarana semigessa sp. nov.

Candidatus Cicarana semigessa (NL. fem. n. *semigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003141245*. The type genome for the species is the GenBank assembly GCA_003141245.1. The GC content of the type genome is 68.26 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Cicarana tetenibra sp. nov.

Candidatus Cicarana tetenibra (NL. fem. n. *tetenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003157175*. The type genome for the species is the GenBank assembly GCA_003165825.1. The GC content of the type genome is 68.22 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Cicarana verecicula sp. nov.

Candidatus Cicarana verecicula (NL. fem. n. *verecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1039 sp003171035*. The type genome for the species is the GenBank assembly GCA_003171035.1. The GC content of the type genome is 67.16 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Cicararia ceracugo sp. nov.

Candidatus Cicararia ceracugo (NL. fem. n. *ceracugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS929 sp900546875*. The type genome for the species is the GenBank assembly GCA_900546875.1. The GC content of the type genome is 45.33 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Cicararia gen. nov.

Candidatus Cicararia (NL. fem. n. *Cicararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS929*. The type species for the genus is *Candidatus* Cicararia ceracugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Cicarella cosiditura sp. nov.

Candidatus Cicarella cosiditura (NL. fem. n. *cosiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPRI01 sp003818505*. The type genome for the species is the GenBank assembly GCA_003818505.1. The GC content of the type genome is 44.77 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Cicarella gen. nov.

Candidatus Cicarella (NL. fem. n. *Cicarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPRI01*. The type species for the genus is *Candidatus* Cicarella cosiditura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RPRI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicarellaceae.

Description of *Candidatus* Cicarellaceae fam. nov.

Candidatus Cicarellaceae (NL. fem. n. *Cicarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPRI01*. The type genus for the taxon is *Candidatus* Cicarella .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Cicarella decinousia sp. nov.

Candidatus Cicarella decinousia (NL. fem. n. *decinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPRI01 sp011391695*. The type genome for the species is the GenBank assembly GCA_011391695.1. The GC content of the type genome is 44.27 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Cicaria octupitio sp. nov.

Candidatus Cicaria octupitio (NL. fem. n. *octupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNKJ01 sp014382085*. The type genome for the species is the GenBank assembly GCA_014382085.1. The GC content of the type genome is 57.28 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Cicaria gen. nov.

Candidatus Cicaria (NL. fem. n. *Cicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNKJ01*. The type species for the genus is *Candidatus* Cicaria

octupitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACNKJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicariaceae.

Description of *Candidatus* Cicariaceae fam. nov.

Candidatus Cicariaceae (NL. fem. n. *Cicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACNKJ01.* The type genus for the taxon is *Candidatus* Cicaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACNKJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cicariales.

Description of *Candidatus* Cicariales ord. nov.

Candidatus Cicariales (NL. fem. n. *Cicariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACNKJ01.* The type genus for the taxon is *Candidatus* Cicaria .

According to the GTDB R06-RS202, this order belongs to the class *Krumholzibacteria*.

Description of *Candidatus* Cicarida ornitisca sp. nov.

Candidatus Cicarida ornitisca (NL. fem. n. *ornitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp22-AA3 sp003223145*. The type genome for the species is the GenBank assembly GCA_003223145.1. The GC content of the type genome is 68.15 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Cicarida gen. nov.

Candidatus Cicarida (NL. fem. n. *Cicarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp22-AA3*. The type species for the genus is *Candidatus* Cicarida ornitisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp22-AA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilibosaceae.

Description of *Candidatus* Cicarida recucicella sp. nov.

Candidatus Cicarida recucicella (NL. fem. n. *recucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp22-AA3 sp003223135*. The type genome for the species is the GenBank assembly GCA_003223135.1. The GC content of the type genome is 67.57 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Cicarosa demadivita sp. nov.

Candidatus Cicarosa demadivita (NL. fem. n. *demadivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG10-46-32 sp001889965*. The type genome for the species is the GenBank assembly GCA_001889965.1. The GC content of the type genome is 45.86 % and the genome length is 1.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater".

Description of *Candidatus* Cicarosa gen. nov.

Candidatus Cicarosa (NL. fem. n. *Cicarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG10-46-32*. The type species for the genus is *Candidatus* Cicarosa demadivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacosaceae.

Description of *Candidatus* Cicatana cacalugo sp. nov.

Candidatus Cicatana cacalugo (NL. fem. n. *cacalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B13-G4 sp014237365*. The type genome for the species is the GenBank assembly GCA_014237195.1. The GC content of the type genome is 39.87 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Cicatana gen. nov.

Candidatus Cicatana (NL. fem. n. *Cicatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B13-G4*. The type species for the genus is *Candidatus* Cicatana cacalugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ETH-SRB1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benevulaceae.

Description of *Candidatus* Cicatana cocodiforma sp. nov.

Candidatus Cicatana cocodiforma (NL. fem. n. *cocodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B13-G4 sp013792055*. The type genome for the species is the GenBank assembly GCA_013792055.1. The GC content of the type genome is 40.77 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Cicatana inperilega sp. nov.

Candidatus Cicatana inperilega (NL. fem. n. *inperilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B13-G4 sp003647525*. The type genome for the species is the GenBank assembly GCA_003647525.1. The GC content of the type genome is 39.2 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Cicataria vinulastra sp. nov.

Candidatus Cicataria vinulastra (NL. fem. n. *vinulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8475 sp002780785*. The type genome for the species is the GenBank assembly GCA_002780785.1. The GC content of the type genome is 44.98 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Cicataria gen. nov.

Candidatus Cicataria (NL. fem. n. *Cicataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8475*. The type species for the genus is *Candidatus* Cicataria vinulastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-42-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biveridaceae.

Description of *Candidatus* Cicatia attemitoga sp. nov.

Candidatus Cicatia attemitoga (NL. fem. n. *attemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp012729335*. The type genome for the species is the GenBank assembly GCA_012729335.1. The GC content of the type genome is 54.09 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Cicatia gen. nov.

Candidatus Cicatia (NL. fem. n. *Cicatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1413*. The type species for the genus is *Candidatus* Cicatia attemitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cicatia carecitoga sp. nov.

Candidatus Cicatia carecitoga (NL. fem. n. *carecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp003486765*. The type genome for the species is the

GenBank assembly GCA_003486765.1. The GC content of the type genome is 44.39 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Cicatia decucitio sp. nov.

Candidatus Cicatia decucitio (NL. fem. n. *decucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp002304925*. The type genome for the species is the GenBank assembly GCA_012719055.1. The GC content of the type genome is 49.93 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Cicatia defanessa sp. nov.

Candidatus Cicatia defanessa (NL. fem. n. *defanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp002419285*. The type genome for the species is the GenBank assembly GCA_002419285.1. The GC content of the type genome is 44.04 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Cicatia incucitoga sp. nov.

Candidatus Cicatia incucitoga (NL. fem. n. *incucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp001270045*. The type genome for the species is the GenBank assembly RS_GCF_001270045.2. The GC content of the type genome is 45.47 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "paddy field soil in Japan".

Description of *Candidatus* Cicatia lacinatio sp. nov.

Candidatus Cicatia lacinatio (NL. fem. n. *lacinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp002428215*. The type genome for the species is the GenBank assembly GCA_002428215.1. The GC content of the type genome is 45.57 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Cicatia telegitrix sp. nov.

Candidatus Cicatia telegitrix (NL. fem. n. *telegitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1413 sp009782655*. The type genome for the species is the GenBank assembly GCA_009782655.1. The GC content of the type genome is 45.51 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Cicatida dilogigena sp. nov.

Candidatus Cicatida dilogigena (NL. fem. n. *dilogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIWR01 sp014360845*. The type genome for the species is the GenBank assembly GCA_014360845.1. The GC content of the type genome is 60.22 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Cicatida gen. nov.

Candidatus Cicatida (NL. fem. n. *Cicatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIWR01*. The type species for the genus is *Candidatus* Cicatida dilogigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatidaceae.

Description of *Candidatus* Cicatidaceae fam. nov.

Candidatus Cicatidaceae (NL. fem. n. *Cicatidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIWR01.* The type genus for the taxon is *Candidatus* Cicatida .

According to the original version of GTDB R06-RS202, this family belongs to the order *E26-bin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Penecariales.

Description of *Candidatus* Cicatosa delucitoga sp. nov.

Candidatus Cicatosa delucitoga (NL. fem. n. *delucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8231 sp002726335*. The type genome for the species is the GenBank assembly GCA_002726335.1. The GC content of the type genome is 63.93 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Cicatosa gen. nov.

Candidatus Cicatosa (NL. fem. n. *Cicatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8231*. The type species for the genus is *Candidatus* Cicatosa delucitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Cicatosaceae fam. nov.

Candidatus Cicatosaceae (NL. fem. n. *Cicatosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8231.* The type genus for the taxon is *Candidatus* Cicatosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cicatosales.

Description of *Candidatus* Cicatosales ord. nov.

Candidatus Cicatosales (NL. fem. n. *Cicatosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8231.* The type genus for the taxon is *Candidatus* Cicatosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Medimellae.

Description of *Candidatus* Cicatula monocax sp. nov.

Candidatus Cicatula monocax (NL. fem. n. *monocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA9 sp003242735*. The type genome for the species is the GenBank assembly GCA_003242735.1. The GC content of the type genome is 71.51 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Cicatula gen. nov.

Candidatus Cicatula (NL. fem. n. *Cicatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA9*. The type species for the genus is *Candidatus* Cicatula monocax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatulaceae.

Description of *Candidatus* Cicatulaceae fam. nov.

Candidatus Cicatulaceae (NL. fem. n. *Cicatulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RSA9.* The type genus for the taxon is *Candidatus* Cicatula .

According to GTDB R06-RS202, this family belongs to the order *Longimicrobiales*.

Description of *Candidatus* Cicilana bonifugo sp. nov.

Candidatus Cicilana bonifugo (NL. fem. n. *bonifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-40-35 sp001775095*. The type genome for the species is the GenBank assembly GCA_001775005.1. The GC content of the type genome is 40.93 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cicilana gen. nov.

Candidatus Cicilana (NL. fem. n. *Cicilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-40-35*. The type species for the genus is *Candidatus* Cicilana bonifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Cicilaria anancimonia sp. nov.

Candidatus Cicilaria anancimonia (NL. fem. n. *anancimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCBR16-9 sp007116095*. The type genome for the species is the GenBank assembly GCA_007116095.1. The GC content of the type genome is 57.64 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Cicilaria gen. nov.

Candidatus Cicilaria (NL. fem. n. *Cicilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCBR16-9*. The type species for the genus is *Candidatus* Cicilaria anancimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCBR16-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicilariaceae.

Description of *Candidatus* Cicilariaceae fam. nov.

Candidatus Cicilariaceae (NL. fem. n. *Cicilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCBR16-9.* The type genus for the taxon is *Candidatus* Cicilaria .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Cicilida errabugo sp. nov.

Candidatus Cicilida errabugo (NL. fem. n. *errabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-313 sp011047295*. The type genome for the species is the GenBank assembly GCA_011047295.1. The GC content of the type genome is 66.94 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Cicilida gen. nov.

Candidatus Cicilida (NL. fem. n. *Cicilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-313*. The type species for the genus is *Candidatus* Cicilida errabugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicilidaceae.

Description of *Candidatus* Cicilidaceae fam. nov.

Candidatus Cicilidaceae (NL. fem. n. *Cicilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-313.* The type genus for the taxon is *Candidatus* Cicilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cicilidales.

Description of *Candidatus* Cicilidales ord. nov.

Candidatus Cicilidales (NL. fem. n. *Cicilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-313.* The type genus for the taxon is *Candidatus* Cicilida .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Cicilosa enuclessa sp. nov.

Candidatus Cicilosa enuclessa (NL. fem. n. *enuclessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp013287765*. The type genome for the species is the GenBank assembly GCA_013287765.1. The GC content of the type genome is 35.49 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Cicilosa gen. nov.

Candidatus Cicilosa (NL. fem. n. *Cicilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4722*. The type species for the genus is *Candidatus* Cicilosa enuclessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Cicilosa exceribula sp. nov.

Candidatus Cicilosa exceribula (NL. fem. n. *exceribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp013287235*. The type genome for the species is the GenBank assembly GCA_013287235.1. The GC content of the type genome is 36.71 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Cicilosa exoscisca sp. nov.

Candidatus Cicilosa exoscisca (NL. fem. n. *exoscisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp002404295*. The type genome for the species is the GenBank assembly GCA_002404295.1. The GC content of the type genome is 38.91 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Cicilosa impavousia sp. nov.

Candidatus Cicilosa impavousia (NL. fem. n. *impavousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp013288655*. The type genome for the species is the GenBank assembly GCA_013288655.1. The GC content of the type genome is 37.06 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Cicilosa manufugo sp. nov.

Candidatus Cicilosa manufugo (NL. fem. n. *manufugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp013287025*. The type genome for the species is the GenBank assembly GCA_013287885.1. The GC content of the type genome is 36.64 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cicilosa ridibetta sp. nov.

Candidatus Cicilosa ridibetta (NL. fem. n. *ridibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4722 sp014132595*. The type genome for the species is the GenBank assembly GCA_014132595.1. The GC content of the type genome is 39.47 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Cicilula lapicitudo sp. nov.

Candidatus Cicilula lapicitudo (NL. fem. n. *lapicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-426-M11 sp003213095*. The type genome for the species is the GenBank assembly GCA_002696265.1. The GC content of the type genome is 36.58 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Cicilula gen. nov.

Candidatus Cicilula (NL. fem. n. *Cicilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-426-M11*. The type species for the genus is *Candidatus* Cicilula

lapicitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Cilibana bacificella sp. nov.

Candidatus Cilibana bacificella (NL. fem. n. *bacificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7001 sp002449785*. The type genome for the species is the GenBank assembly GCA_902778595.1. The GC content of the type genome is 26.16 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cilibana gen. nov.

Candidatus Cilibana (NL. fem. n. *Cilibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7001*. The type species for the genus is *Candidatus* Cilibana bacificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Cilibana fetuliforma sp. nov.

Candidatus Cilibana fetuliforma (NL. fem. n. *fetuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7001 sp900553685*. The type genome for the species is the GenBank assembly GCA_900553685.1. The GC content of the type genome is 25.52 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Cilibana nicotivita sp. nov.

Candidatus Cilibana nicotivita (NL. fem. n. *nicotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7001 sp900768805*. The type genome for the species is the GenBank assembly RS_GCF_900768805.1. The GC content of the type genome is 26.39 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cilibaria admodibra sp. nov.

Candidatus Cilibaria admodibra (NL. fem. n. *admodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTE01 sp012031815*. The type genome for the species is the GenBank assembly GCA_012031815.1. The GC content of the type genome is 52.28 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Cilibaria gen. nov.

Candidatus Cilibaria (NL. fem. n. *Cilibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTE01*. The type species for the genus is *Candidatus* Cilibaria admodibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAUTE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibariaceae.

Description of *Candidatus* Cilibariaceae fam. nov.

Candidatus Cilibariaceae (NL. fem. n. *Cilibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAUTE01.* The type genus for the taxon is *Candidatus* Cilibaria .

According to GTDB R06-RS202, this family belongs to the order *Cyanobacteriales*.

Description of *Candidatus* Cilibella immemimonas sp. nov.

Candidatus Cilibella immemimonas (NL. fem. n. *immemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-62 sp001303955*. The type genome for the species is the

GenBank assembly GCA_001303955.1. The GC content of the type genome is 45.9 % and the genome length is 5.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Cilibella gen. nov.

Candidatus Cilibella (NL. fem. n. *Cilibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-62*. The type species for the genus is *Candidatus* Cilibella immemimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-62*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibellaceae.

Description of *Candidatus* Cilibellaceae fam. nov.

Candidatus Cilibellaceae (NL. fem. n. *Cilibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-62.* The type genus for the taxon is *Candidatus* Cilibella .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Cilibella levifimonas sp. nov.

Candidatus Cilibella levifimonas (NL. fem. n. *levifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-62 sp011053095*. The type genome for the species is the GenBank assembly GCA_011053095.1. The GC content of the type genome is 43.29 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Cilibida horomugo sp. nov.

Candidatus Cilibida horomugo (NL. fem. n. *horomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA922 sp002293825*. The type genome for the species is the

GenBank assembly GCA_002293825.1. The GC content of the type genome is 41.4 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Cilibida gen. nov.

Candidatus Cilibida (NL. fem. n. *Cilibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA922*. The type species for the genus is *Candidatus* Cilibida horomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Cilibidaceae fam. nov.

Candidatus Cilibidaceae (NL. fem. n. *Cilibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA922.* The type genus for the taxon is *Candidatus* Cilibida .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Cilibosa advecetta sp. nov.

Candidatus Cilibosa advecetta (NL. fem. n. *advecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002432795*. The type genome for the species is the GenBank assembly GCA_002432795.1. The GC content of the type genome is 50.96 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Cilibosa gen. nov.

Candidatus Cilibosa (NL. fem. n. *Cilibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T78*. The type species for the genus is *Candidatus* Cilibosa advecetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cilibosa antefibra sp. nov.

Candidatus Cilibosa antefibra (NL. fem. n. *antefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002435825*. The type genome for the species is the GenBank assembly GCA_002435825.1. The GC content of the type genome is 51.67 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cilibosa apsolessa sp. nov.

Candidatus Cilibosa apsolessa (NL. fem. n. *apsolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002305635*. The type genome for the species is the GenBank assembly GCA_002305635.1. The GC content of the type genome is 50.31 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Cilibosa arvecousia sp. nov.

Candidatus Cilibosa arvecousia (NL. fem. n. *arvecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp012839565*. The type genome for the species is the GenBank assembly GCA_012839565.1. The GC content of the type genome is 46.83 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Cilibosa asbesimonia sp. nov.

Candidatus Cilibosa asbesimonia (NL. fem. n. *asbesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp012729755*. The type genome for the species is the GenBank assembly GCA_012729755.1. The GC content of the type genome is 50.34 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Cilibosa atrusitas sp. nov.

Candidatus Cilibosa atrusitas (NL. fem. n. *atrusitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002306055*. The type genome for the species is the GenBank assembly GCA_002306055.1. The GC content of the type genome is 50.75 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cilibosa cacalitas sp. nov.

Candidatus Cilibosa cacalitas (NL. fem. n. *cacalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp011620465*. The type genome for the species is the GenBank assembly GCA_011620465.1. The GC content of the type genome is 48.75 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Cilibosa cacomimonia sp. nov.

Candidatus Cilibosa cacomimonia (NL. fem. n. *cacomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp012514645*. The type genome for the species is the GenBank assembly GCA_012514645.1. The GC content of the type genome is 50.04 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Cilibosa capucago sp. nov.

Candidatus Cilibosa capucago (NL. fem. n. *capucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002423495*. The type genome for the species is the GenBank assembly GCA_002423495.1. The GC content of the type genome is 50.86 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Cilibosa cohorilenta sp. nov.

Candidatus Cilibosa cohorilenta (NL. fem. n. *cohorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *T78 sp002409365*. The type genome for the species is the GenBank assembly GCA_002408985.1. The GC content of the type genome is 48.3 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Cilibosa defarimonas sp. nov.

Candidatus Cilibosa defarimonas (NL. fem. n. *defarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp011620445*. The type genome for the species is the GenBank assembly GCA_011620445.1. The GC content of the type genome is 50.11 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cilibosa feditivita sp. nov.

Candidatus Cilibosa feditivita (NL. fem. n. *feditivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002409625*. The type genome for the species is the GenBank assembly GCA_002398025.1. The GC content of the type genome is 46.92 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Cilibosa inbelitudo sp. nov.

Candidatus Cilibosa inbelitudo (NL. fem. n. *inbelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp011620505*. The type genome for the species is the GenBank assembly GCA_011620505.1. The GC content of the type genome is 51.87 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cilibosa infenitia sp. nov.

Candidatus Cilibosa infenitia (NL. fem. n. *infenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp001603765*. The type genome for the species is the GenBank assembly GCA_001603765.1. The GC content of the type genome is 52.51 % and the genome length is 1.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters

sampled at day 96 and day 362".

Description of *Candidatus* Cilibosa innumastra sp. nov.

Candidatus Cilibosa innumastra (NL. fem. n. *innumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002399085*. The type genome for the species is the GenBank assembly GCA_002399085.1. The GC content of the type genome is 50.13 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cilibosa insemilenta sp. nov.

Candidatus Cilibosa insemilenta (NL. fem. n. *insemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp003532515*. The type genome for the species is the GenBank assembly GCA_003532515.1. The GC content of the type genome is 48.0 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Cilibosa irrotitura sp. nov.

Candidatus Cilibosa irrotitura (NL. fem. n. *irrotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002407905*. The type genome for the species is the GenBank assembly GCA_002407905.1. The GC content of the type genome is 56.69 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Cilibosa mirifessa sp. nov.

Candidatus Cilibosa mirifessa (NL. fem. n. *mirifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp012800995*. The type genome for the species is the GenBank assembly GCA_012800995.1. The GC content of the type genome is 46.01 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Cilibosa paralousia sp. nov.

Candidatus Cilibosa paralousia (NL. fem. n. *paralousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002347705*. The type genome for the species is the GenBank assembly GCA_002412845.1. The GC content of the type genome is 50.73 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cilibosa turilicula sp. nov.

Candidatus Cilibosa turilicula (NL. fem. n. *turilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T78 sp002411175*. The type genome for the species is the GenBank assembly GCA_002400055.1. The GC content of the type genome is 49.74 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Cilibula baropilenta sp. nov.

Candidatus Cilibula baropilenta (NL. fem. n. *baropilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINFV01 sp903848235*. The type genome for the species is the GenBank assembly GCA_903848235.1. The GC content of the type genome is 47.48 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Cilibula gen. nov.

Candidatus Cilibula (NL. fem. n. *Cilibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINFV01*. The type species for the genus is *Candidatus* Cilibula baropilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1388*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabulaceae.

Description of *Candidatus* Cilicana intesessa sp. nov.

Candidatus Cilicana intesessa (NL. fem. n. *intesessa* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-19 sp003141835*. The type genome for the species is the GenBank assembly GCA_003141835.1. The GC content of the type genome is 51.75 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Cilicana gen. nov.

Candidatus Cilicana (NL. fem. n. *Cilicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-50-19*. The type species for the genus is *Candidatus* Cilicana intesessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remulellaceae.

Description of *Candidatus* Cilicana recumetta sp. nov.

Candidatus Cilicana recumetta (NL. fem. n. *recumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-19 sp903889135*. The type genome for the species is the GenBank assembly GCA_903889135.1. The GC content of the type genome is 51.91 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Cilicana verifitura sp. nov.

Candidatus Cilicana verifitura (NL. fem. n. *verifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-19 sp001805885*. The type genome for the species is the GenBank assembly GCA_001805545.1. The GC content of the type genome is 49.69 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cilicaria rubecitio sp. nov.

Candidatus Cilicaria rubecitio (NL. fem. n. *rubecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6414 sp002438545*. The type genome for the species is the GenBank assembly GCA_002438545.1. The GC content of the type genome is 27.16 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cilicaria gen. nov.

Candidatus Cilicaria (NL. fem. n. *Cilicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6414*. The type species for the genus is *Candidatus* Cilicaria rubecitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cilicella catabitio sp. nov.

Candidatus Cilicella catabitio (NL. fem. n. *catabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDZD01 sp013299045*. The type genome for the species is the GenBank assembly GCA_013299045.1. The GC content of the type genome is 42.0 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Cilicella gen. nov.

Candidatus Cilicella (NL. fem. n. *Cilicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDZD01*. The type species for the genus is *Candidatus* Cilicella catabitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cilicella resalastra sp. nov.

Candidatus Cilicella resalastra (NL. fem. n. *resalastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDZD01 sp004293815*. The type genome for the species is the GenBank assembly GCA_004293815.1. The GC content of the type genome is 41.25 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Cilicosa femelimonia sp. nov.

Candidatus Cilicosa femelimonia (NL. fem. n. *femelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3064 sp002342365*. The type genome for the species is the GenBank assembly GCA_002359985.1. The GC content of the type genome is 56.88 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Cilicosa gen. nov.

Candidatus Cilicosa (NL. fem. n. *Cilicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3064*. The type species for the genus is *Candidatus* Cilicosa femelimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cilicosa penuratio sp. nov.

Candidatus Cilicosa penuratio (NL. fem. n. *penuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3064 sp002359635*. The type genome for the species is the GenBank assembly GCA_010021925.1. The GC content of the type genome is 54.78 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Cilicosa tomogitura sp. nov.

Candidatus Cilicosa tomogitura (NL. fem. n. *tomogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3064 sp005787245*. The type genome for the species is the GenBank assembly GCA_900299165.1. The GC content of the type genome is 52.99 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Cilicula lorarentia sp. nov.

Candidatus Cilicula lorarentia (NL. fem. n. *lorarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-37-14 sp002778705*. The type genome for the species is the GenBank assembly GCA_009992115.1. The GC content of the type genome is 37.11 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Cilicula gen. nov.

Candidatus Cilicula (NL. fem. n. *Cilicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-37-14*. The type species for the genus is *Candidatus* Cilicula lorarentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuriaceae.

Description of *Candidatus* Cilotana acculessa sp. nov.

Candidatus Cilotana acculessa (NL. fem. n. *acculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAUL01 sp012026975*. The type genome for the species is the GenBank assembly GCA_012026975.1. The GC content of the type genome is 62.21 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Cilotana gen. nov.

Candidatus Cilotana (NL. fem. n. *Cilotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VAUL01*. The type species for the genus is *Candidatus* Cilotana

acculessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetellaceae.

Description of *Candidatus* Cilotana domicifica sp. nov.

Candidatus Cilotana domicifica (NL. fem. n. *domicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAUL01 sp005774545*. The type genome for the species is the GenBank assembly GCA_005774545.1. The GC content of the type genome is 65.26 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Cilotaria velifitio sp. nov.

Candidatus Cilotaria velifitio (NL. fem. n. *velifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-43-16 sp001821935*. The type genome for the species is the GenBank assembly GCA_001820305.1. The GC content of the type genome is 43.36 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cilotaria gen. nov.

Candidatus Cilotaria (NL. fem. n. *Cilotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-43-16*. The type species for the genus is *Candidatus* Cilotaria velifitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cilotella metucilega sp. nov.

Candidatus Cilotella metucilega (NL. fem. n. *metucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002795985 sp002792395*. The type genome for the species is the GenBank assembly GCA_002782065.1. The GC content of the type genome is 44.04 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Cilotella gen. nov.

Candidatus Cilotella (NL. fem. n. *Cilotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002795985*. The type species for the genus is *Candidatus* Cilotella metucilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002795985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilotellaceae.

Description of *Candidatus* Cilotellaceae fam. nov.

Candidatus Cilotellaceae (NL. fem. n. *Cilotellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002795985.* The type genus for the taxon is *Candidatus* Cilotella .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Cilotia infabousia sp. nov.

Candidatus Cilotia infabousia (NL. fem. n. *infabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-107 sp002059205*. The type genome for the species is the GenBank assembly GCA_002059205.1. The GC content of the type genome is 55.5 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Cilotia gen. nov.

Candidatus Cilotia (NL. fem. n. *Cilotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-107*. The type species for the genus is *Candidatus* Cilotia infabousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-107*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilotiaceae.

Description of *Candidatus* Cilotiaceae fam. nov.

Candidatus Cilotiaceae (NL. fem. n. *Cilotiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-107.* The type genus for the taxon is *Candidatus* Cilotia .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-107*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cilotiales.

Description of *Candidatus* Cilotiales ord. nov.

Candidatus Cilotiales (NL. fem. n. *Cilotiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-107.* The type genus for the taxon is *Candidatus* Cilotia .

According to the GTDB R06-RS202, this order belongs to the class *Latescibacteria_A*.

Description of *Candidatus* Cilotida manufago sp. nov.

Candidatus Cilotida manufago (NL. fem. n. *manufago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-41-22 sp001788795*. The type genome for the species is the GenBank assembly GCA_001788805.1. The GC content of the type genome is 41.28 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Cilotida gen. nov.

Candidatus Cilotida (NL. fem. n. *Cilotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-41-22*. The type species for the genus is *Candidatus*

Cilotida manufago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12470*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penurariaceae.

Description of *Candidatus* Cilotosa supelitio sp. nov.

Candidatus Cilotosa supelitio (NL. fem. n. *supelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFBF01 sp006515885*. The type genome for the species is the GenBank assembly GCA_006515885.1. The GC content of the type genome is 66.36 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Cilotosa gen. nov.

Candidatus Cilotosa (NL. fem. n. *Cilotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFBF01*. The type species for the genus is *Candidatus* Cilotosa supelitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cilotula inexpedo sp. nov.

Candidatus Cilotula inexpedo (NL. fem. n. *inexpedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WYAZ01 sp011526105*. The type genome for the species is the GenBank assembly GCA_011526105.1. The GC content of the type genome is 65.54 % and the genome length is 7.28 Mbp.

Description of *Candidatus* Cilotula gen. nov.

Candidatus Cilotula (NL. fem. n. *Cilotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WYAZ01*. The type species for the genus is *Candidatus* Cilotula inexpedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WYAZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilotulaceae.

Description of *Candidatus* Cilotulaceae fam. nov.

Candidatus Cilotulaceae (NL. fem. n. *Cilotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WYAZ01.* The type genus for the taxon is *Candidatus* Cilotula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WYAZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cilotulales.

Description of *Candidatus* Cilotulales ord. nov.

Candidatus Cilotulales (NL. fem. n. *Cilotulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WYAZ01.* The type genus for the taxon is *Candidatus* Cilotula .

According to the original version of GTDB R06-RS202, this family belongs to the class *WYAZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cilotulae.

Description of *Candidatus* Cilotulae class. nov.

Candidatus Cilotulae (NL. fem. n. *c__Cilotulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WYAZ01.* The type genus for the taxon is *Candidatus* Cilotula .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Cimelana colepimonas sp. nov.

Candidatus Cimelana colepimonas (NL. fem. n. *colepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp009698745*. The type genome for the species is the

GenBank assembly GCA_009698745.1. The GC content of the type genome is 51.68 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cimelana gen. nov.

Candidatus Cimelana (NL. fem. n. *Cimelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3006*. The type species for the genus is *Candidatus* Cimelana colepimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cimelana demadago sp. nov.

Candidatus Cimelana demadago (NL. fem. n. *demadago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp903853285*. The type genome for the species is the GenBank assembly GCA_010023845.1. The GC content of the type genome is 51.4 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Cimelana derunibula sp. nov.

Candidatus Cimelana derunibula (NL. fem. n. *derunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp903895515*. The type genome for the species is the GenBank assembly GCA_903895515.1. The GC content of the type genome is 51.7 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cimelana fetuticella sp. nov.

Candidatus Cimelana fetuticella (NL. fem. n. *fetuticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp007279905*. The type genome for the species is the GenBank assembly GCA_007279905.1. The GC content of the type genome is 52.03 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Cimelana loripessa sp. nov.

Candidatus Cimelana loripessa (NL. fem. n. *loripessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp009701105*. The type genome for the species is the GenBank assembly GCA_009701105.1. The GC content of the type genome is 51.34 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Cimelana ossarigena sp. nov.

Candidatus Cimelana ossarigena (NL. fem. n. *ossarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp001438985*. The type genome for the species is the GenBank assembly GCA_001438985.1. The GC content of the type genome is 52.19 % and the genome length is 1.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Cimelana relenilenta sp. nov.

Candidatus Cimelana relenilenta (NL. fem. n. *relenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp002367695*. The type genome for the species is the GenBank assembly GCA_002346915.1. The GC content of the type genome is 51.16 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Cimelana scellessa sp. nov.

Candidatus Cimelana scellessa (NL. fem. n. *scellessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp009927375*. The type genome for the species is the GenBank assembly GCA_009927375.1. The GC content of the type genome is 61.13 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cimelana totidugo sp. nov.

Candidatus Cimelana totidugo (NL. fem. n. *totidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp903850275*. The type genome for the species is the GenBank assembly GCA_009703155.1. The GC content of the type genome is 53.86 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Cimelana venunousia sp. nov.

Candidatus Cimelana venunousia (NL. fem. n. *venunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3006 sp014190095*. The type genome for the species is the GenBank assembly GCA_014190095.1. The GC content of the type genome is 51.29 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Cimelaria fusifigena sp. nov.

Candidatus Cimelaria fusifigena (NL. fem. n. *fusifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-950 sp903927935*. The type genome for the species is the GenBank assembly GCA_903927935.1. The GC content of the type genome is 41.3 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Cimelaria gen. nov.

Candidatus Cimelaria (NL. fem. n. *Cimelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-950*. The type species for the genus is *Candidatus* Cimelaria fusifigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LD1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalidaceae.

Description of *Candidatus* Cimelaria peradax sp. nov.

Candidatus Cimelaria peradax (NL. fem. n. *peradax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-950 sp903919075*. The type genome for the species is the GenBank assembly GCA_903864205.1. The GC content of the type genome is 40.05 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Cimelaria relapatica sp. nov.

Candidatus Cimelaria relapatica (NL. fem. n. *relapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-950 sp903889265*. The type genome for the species is the GenBank assembly GCA_903919955.1. The GC content of the type genome is 43.14 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Cimelaria satacax sp. nov.

Candidatus Cimelaria satacax (NL. fem. n. *satacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-950 sp903861145*. The type genome for the species is the GenBank assembly GCA_903866755.1. The GC content of the type genome is 42.35 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Cimelaria semivilenta sp. nov.

Candidatus Cimelaria semivilenta (NL. fem. n. *semivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-950 sp003165895*. The type genome for the species is the GenBank assembly GCA_003165895.1. The GC content of the type genome is 42.62 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Cimelella tetenugo sp. nov.

Candidatus Cimelella tetenugo (NL. fem. n. *tetenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-42-13 sp002796125*. The type genome for the species is the GenBank assembly GCA_002796125.1. The GC content of the type genome is 41.89 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Cimelella gen. nov.

Candidatus Cimelella (NL. fem. n. *Cimelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-42-13*. The type species for the genus is *Candidatus* Cimelella tetenugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-42-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimelellaceae.

Description of *Candidatus* Cimelellaceae fam. nov.

Candidatus Cimelellaceae (NL. fem. n. *Cimelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-42-13.* The type genus for the taxon is *Candidatus* Cimelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *1-14-0-20-42-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cimelellales.

Description of *Candidatus* Cimelellales ord. nov.

Candidatus Cimelellales (NL. fem. n. *Cimelellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-42-13.* The type genus for the taxon is *Candidatus* Cimelella .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Cimelida peripetta sp. nov.

Candidatus Cimelida peripetta (NL. fem. n. *peripetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SOKK01 sp004374725*. The type genome for the species is the GenBank assembly GCA_004374725.1. The GC content of the type genome is 40.09 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Cimelida gen. nov.

Candidatus Cimelida (NL. fem. n. *Cimelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SOKK01*. The type species for the genus is *Candidatus* Cimelida peripetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SOKK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimelidaceae.

Description of *Candidatus* Cimelidaceae fam. nov.

Candidatus Cimelidaceae (NL. fem. n. *Cimelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SOKK01.* The type genus for the taxon is *Candidatus* Cimelida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SOKK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cimelidales.

Description of *Candidatus* Cimelidales ord. nov.

Candidatus Cimelidales (NL. fem. n. *Cimelidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SOKK01.* The type genus for the taxon is *Candidatus* Cimelida .

According to the original version of GTDB R06-RS202, this family belongs to the class *SOKK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cimelidae.

Description of *Candidatus* Cimelidae class. nov.

Candidatus Cimelidae (NL. fem. n. *c__Cimelidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SOKK01.* The type genus for the taxon is *Candidatus* Cimelida .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Cimelosa amnenentia sp. nov.

Candidatus Cimelosa amnenentia (NL. fem. n. *amnenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWKH01 sp003559765*. The type genome for the species is the GenBank assembly GCA_003559765.1. The GC content of the type genome is 55.3 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Cimelosa gen. nov.

Candidatus Cimelosa (NL. fem. n. *Cimelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWKH01*. The type species for the genus is *Candidatus* Cimelosa amnenentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWKH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimelosaceae.

Description of *Candidatus* Cimelosaceae fam. nov.

Candidatus Cimelosaceae (NL. fem. n. *Cimelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWKH01.* The type genus for the taxon is *Candidatus* Cimelosa .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_D*.

Description of *Candidatus* Cimelosa anxifago sp. nov.

Candidatus Cimelosa anxifago (NL. fem. n. *anxifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PWKH01 sp003557605*. The type genome for the species is the GenBank assembly GCA_003557605.1. The GC content of the type genome is 50.9 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Cimelosa obsoritia sp. nov.

Candidatus Cimelosa obsoritia (NL. fem. n. *obsoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWKH01 sp007116075*. The type genome for the species is the GenBank assembly GCA_007116075.1. The GC content of the type genome is 51.07 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Cimelula detositica sp. nov.

Candidatus Cimelula detositica (NL. fem. n. *detositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJPD01 sp903822495*. The type genome for the species is the GenBank assembly GCA_903822495.1. The GC content of the type genome is 71.65 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Cimelula gen. nov.

Candidatus Cimelula (NL. fem. n. *Cimelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJPD01*. The type species for the genus is *Candidatus* Cimelula detositica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Ciminana feditifica sp. nov.

Candidatus Ciminana feditifica (NL. fem. n. *feditifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6120 sp002422535*. The type genome for the species is the

GenBank assembly GCA_003451945.1. The GC content of the type genome is 42.88 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Ciminana gen. nov.

Candidatus Ciminana (NL. fem. n. *Ciminana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6120*. The type species for the genus is *Candidatus* Ciminana feditifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Ciminaria nefanivita sp. nov.

Candidatus Ciminaria nefanivita (NL. fem. n. *nefanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AE-B3A sp009618505*. The type genome for the species is the GenBank assembly GCA_009618505.1. The GC content of the type genome is 40.99 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Ciminaria gen. nov.

Candidatus Ciminaria (NL. fem. n. *Ciminaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AE-B3A*. The type species for the genus is *Candidatus* Ciminaria nefanivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AE-B3A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ciminariaceae.

Description of *Candidatus* Ciminariaceae fam. nov.

Candidatus Ciminariaceae (NL. fem. n. *Ciminariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AE-B3A*. The type genus for the taxon is *Candidatus* Ciminaria .

According to GTDB R06-RS202, this family belongs to the order *Aerophobales*.

Description of *Candidatus* Ciminaria vocificula sp. nov.

Candidatus Ciminaria vocificula (NL. fem. n. *vocificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AE-B3A sp005223095*. The type genome for the species is the GenBank assembly GCA_005223095.1. The GC content of the type genome is 41.81 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Ciminella vitififica sp. nov.

Candidatus Ciminella vitififica (NL. fem. n. *vitififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-36-5 sp001776785*. The type genome for the species is the GenBank assembly GCA_001776785.1. The GC content of the type genome is 36.8 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Ciminella gen. nov.

Candidatus Ciminella (NL. fem. n. *Ciminella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-36-5*. The type species for the genus is *Candidatus* Ciminella vitififica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Ciminia adtacitas sp. nov.

Candidatus Ciminia adtacitas (NL. fem. n. *adtacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA11891 sp011524905*. The type genome for the species is the GenBank assembly GCA_011524905.1. The GC content of the type genome is 40.21 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Ciminia gen. nov.

Candidatus Ciminia (NL. fem. n. *Ciminia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11891*. The type species for the genus is *Candidatus* Ciminia adtacitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ciminia odollivita sp. nov.

Candidatus Ciminia odollivita (NL. fem. n. *odollivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11891 sp009886755*. The type genome for the species is the GenBank assembly GCA_009886755.1. The GC content of the type genome is 42.17 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Ciminia tumefastra sp. nov.

Candidatus Ciminia tumefastra (NL. fem. n. *tumefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11891 sp003533785*. The type genome for the species is the GenBank assembly GCA_003533785.1. The GC content of the type genome is 40.88 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Ciminida velififica sp. nov.

Candidatus Ciminida velififica (NL. fem. n. *velififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYO01 sp009692745*. The type genome for the species is the GenBank assembly GCA_009692745.1. The GC content of the type genome is 55.7 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Ciminida gen. nov.

Candidatus Ciminida (NL. fem. n. *Ciminida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYO01*. The type species for the genus is *Candidatus* Ciminida velififica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ciminidaceae.

Description of *Candidatus* Ciminidaceae fam. nov.

Candidatus Ciminidaceae (NL. fem. n. *Ciminidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYO01.* The type genus for the taxon is *Candidatus* Ciminida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UCB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Derunosales.

Description of *Candidatus* Ciminosa renavitudo sp. nov.

Candidatus Ciminosa renavitudo (NL. fem. n. *renavitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ARS69 sp002686915*. The type genome for the species is the GenBank assembly GCA_002686915.1. The GC content of the type genome is 65.6 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ciminosa gen. nov.

Candidatus Ciminosa (NL. fem. n. *Ciminosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ARS69*. The type species for the genus is *Candidatus* Ciminosa renavitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ARS69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Ciminosaceae.

Description of *Candidatus* Ciminosaceae fam. nov.

Candidatus Ciminosaceae (NL. fem. n. *Ciminosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS69.* The type genus for the taxon is *Candidatus* Ciminosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *ARS69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ciminosales.

Description of *Candidatus* Ciminosales ord. nov.

Candidatus Ciminosales (NL. fem. n. *Ciminosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS69.* The type genus for the taxon is *Candidatus* Ciminosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *ARS69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ciminosae.

Description of *Candidatus* Ciminosae class. nov.

Candidatus Ciminosae (NL. fem. n. *c__Ciminosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS69.* The type genus for the taxon is *Candidatus* Ciminosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *ARS69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Ciminosota.

Description of *Candidatus* Ciminosota phyl. nov.

Candidatus Ciminosota (NL. fem. n. *Ciminosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS69.* The type genus for the taxon is *Candidatus* Ciminosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Ciminula risibitudo sp. nov.

Candidatus Ciminula risibitudo (NL. fem. n. *risibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIURC01 sp903901425*. The type genome for the species is the GenBank assembly GCA_903833885.1. The GC content of the type genome is 61.48 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Ciminula gen. nov.

Candidatus Ciminula (NL. fem. n. *Ciminula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIURC01*. The type species for the genus is *Candidatus* Ciminula risibitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cimitana recumax sp. nov.

Candidatus Cimitana recumax (NL. fem. n. *recumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711125 sp902627575*. The type genome for the species is the GenBank assembly GCA_902627575.1. The GC content of the type genome is 29.6 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Cimitana gen. nov.

Candidatus Cimitana (NL. fem. n. *Cimitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711125*. The type species for the genus is *Candidatus* Cimitana recumax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Cimitana tirunitas sp. nov.

Candidatus Cimitana tirunitas (NL. fem. n. *tirunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711125 sp002711125*. The type genome for the species is the GenBank assembly GCA_902588055.1. The GC content of the type genome is 29.54 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Cimitella depubax sp. nov.

Candidatus Cimitella depubax (NL. fem. n. *depubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSUN01 sp011327615*. The type genome for the species is the GenBank assembly GCA_011327615.1. The GC content of the type genome is 68.44 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Cimitella gen. nov.

Candidatus Cimitella (NL. fem. n. *Cimitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSUN01*. The type species for the genus is *Candidatus* Cimitella depubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSUN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitellaceae.

Description of *Candidatus* Cimitellaceae fam. nov.

Candidatus Cimitellaceae (NL. fem. n. *Cimitellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSUN01*. The type genus for the taxon is *Candidatus* Cimitella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSUN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cimitellales.

Description of *Candidatus* Cimitellales ord. nov.

Candidatus Cimitellales (NL. fem. n. *Cimitellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSUN01*. The type genus for the taxon is *Candidatus* Cimitella .

According to the original version of GTDB R06-RS202, this family belongs to the class *PUPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siteliae.

Description of *Candidatus* Cimitella essonax sp. nov.

Candidatus Cimitella essonax (NL. fem. n. *essonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSUN01 sp011329035*. The type genome for the species is the GenBank assembly GCA_011329035.1. The GC content of the type genome is 68.58 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Cimitia cadavicella sp. nov.

Candidatus Cimitia cadavicella (NL. fem. n. *cadavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFHL01 sp009392005*. The type genome for the species is the GenBank assembly GCA_009392005.1. The GC content of the type genome is 44.82 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Cimitia gen. nov.

Candidatus Cimitia (NL. fem. n. *Cimitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFHL01*. The type species for the genus is *Candidatus* Cimitia cadavicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VFHL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitiaceae.

Description of *Candidatus* Cimitiaceae fam. nov.

Candidatus Cimitiaceae (NL. fem. n. *Cimitiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VFHL01.* The type genus for the taxon is *Candidatus* Cimitia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6926*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Paropulales.

Description of *Candidatus* Cimitida dicanibula sp. nov.

Candidatus Cimitida dicanibula (NL. fem. n. *dicanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLXD01 sp012103255*. The type genome for the species is the GenBank assembly GCA_012103255.1. The GC content of the type genome is 64.26 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Cimitida gen. nov.

Candidatus Cimitida (NL. fem. n. *Cimitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLXD01*. The type species for the genus is *Candidatus* Cimitida dicanibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WLXD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitidaceae.

Description of *Candidatus* Cimitidaceae fam. nov.

Candidatus Cimitidaceae (NL. fem. n. *Cimitidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WLXD01.* The type genus for the taxon is *Candidatus* Cimitida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA890*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tumefidales.

Description of *Candidatus* Cimitosa ammigago sp. nov.

Candidatus Cimitosa ammigago (NL. fem. n. *ammigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2863065 sp002863065*. The type genome for the species is the GenBank assembly GCA_002863065.1. The GC content of the type genome is 53.85 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Cimitosa gen. nov.

Candidatus Cimitosa (NL. fem. n. *Cimitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2863065*. The type species for the genus is *Candidatus* Cimitosa ammigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2863065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitosaceae.

Description of *Candidatus* Cimitosaceae fam. nov.

Candidatus Cimitosaceae (NL. fem. n. *Cimitosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2863065.* The type genus for the taxon is *Candidatus* Cimitosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2863065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cimitosales.

Description of *Candidatus* Cimitosales ord. nov.

Candidatus Cimitosales (NL. fem. n. *Cimitosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2863065.* The type genus for the taxon is *Candidatus* Cimitosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Cimitula adalgilenta sp. nov.

Candidatus Cimitula adalgilenta (NL. fem. n. *adalgilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6680 sp002454955*. The type genome for the species is the GenBank assembly GCA_002454955.1. The GC content of the type genome is 34.21 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Cimitula gen. nov.

Candidatus Cimitula (NL. fem. n. *Cimitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6680*. The type species for the genus is *Candidatus* Cimitula adalgilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6680*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cimitulaceae.

Description of *Candidatus* Cimitulaceae fam. nov.

Candidatus Cimitulaceae (NL. fem. n. *Cimitulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6680.* The type genus for the taxon is *Candidatus* Cimitula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Cinefana morigax sp. nov.

Candidatus Cinefana morigax (NL. fem. n. *morigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-43-22 sp001797675*. The type genome for the species is the GenBank assembly GCA_001797675.1. The GC content of the type genome is 48.06 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Cinefana gen. nov.

Candidatus Cinefana (NL. fem. n. *Cinefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-43-22*. The type species for the genus is *Candidatus* Cinefana morigax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-43-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefanaceae.

Description of *Candidatus* Cinefanaceae fam. nov.

Candidatus Cinefanaceae (NL. fem. n. *Cinefanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-43-22.* The type genus for the taxon is *Candidatus* Cinefana .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-13-43-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinefanales.

Description of *Candidatus* Cinefanales ord. nov.

Candidatus Cinefanales (NL. fem. n. *Cinefanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-43-22.* The type genus for the taxon is *Candidatus* Cinefana .

According to the GTDB R06-RS202, this order belongs to the class *Desulfobaccia_A*.

Description of *Candidatus* Cinefaria bugililega sp. nov.

Candidatus Cinefaria bugililega (NL. fem. n. *bugililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-160 sp011065235*. The type genome for the species is the GenBank assembly GCA_011065235.1. The GC content of the type genome is 44.48 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cinefaria gen. nov.

Candidatus Cinefaria (NL. fem. n. *Cinefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-160*. The type species for the genus is *Candidatus* Cinefaria bugililega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cinefaria pudibilenta sp. nov.

Candidatus Cinefaria pudibilenta (NL. fem. n. *pudibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-160 sp003228815*. The type genome for the species is the GenBank assembly GCA_011064915.1. The GC content of the type genome is 42.98 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Cinefaria siligax sp. nov.

Candidatus Cinefaria siligax (NL. fem. n. *siligax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-160 sp011065225*. The type genome for the species is the GenBank assembly GCA_011065225.1. The GC content of the type genome is 41.77 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Cinefella lanificella sp. nov.

Candidatus Cinefella lanificella (NL. fem. n. *lanificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WCHB1-27 sp002328485*. The type genome for the species is the GenBank assembly GCA_002328485.1. The GC content of the type genome is 53.57 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Cinefella gen. nov.

Candidatus Cinefella (NL. fem. n. *Cinefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WCHB1-27*. The type species for the genus is *Candidatus* Cinefella lanificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefellaceae.

Description of *Candidatus* Cinefellaceae fam. nov.

Candidatus Cinefellaceae (NL. fem. n. *Cinefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WCHB1-27.* The type genus for the taxon is *Candidatus* Cinefella .

According to GTDB R06-RS202, this family belongs to the order *Syntrophorhabdales*.

Description of *Candidatus* Cinefida docibentia sp. nov.

Candidatus Cinefida docibentia (NL. fem. n. *docibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGG01 sp900696485*. The type genome for the species is the GenBank assembly GCA_011526055.1. The GC content of the type genome is 69.81 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Cinefida gen. nov.

Candidatus Cinefida (NL. fem. n. *Cinefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGG01*. The type species for the genus is *Candidatus* Cinefida docibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifiaceae.

Description of *Candidatus* Cinefosa triclicula sp. nov.

Candidatus Cinefosa triclicula (NL. fem. n. *triclicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CR04bin15 sp004357015*. The type genome for the species is the GenBank assembly GCA_004357015.1. The GC content of the type genome is 51.33 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Cinefosa gen. nov.

Candidatus Cinefosa (NL. fem. n. *Cinefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CR04bin15*. The type species for the genus is *Candidatus* Cinefosa triclicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CR04bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefosaceae.

Description of *Candidatus* Cinefosaceae fam. nov.

Candidatus Cinefosaceae (NL. fem. n. *Cinefosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CR04bin15.* The type genus for the taxon is *Candidatus* Cinefosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CR04bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinefosales.

Description of *Candidatus* Cinefosales ord. nov.

Candidatus Cinefosales (NL. fem. n. *Cinefosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CR04bin15.* The type genus for the taxon is *Candidatus* Cinefosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Renavosae.

Description of *Candidatus* Cinefula cocoligena sp. nov.

Candidatus Cinefula cocoligena (NL. fem. n. *cocoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10181 sp001784285*. The type genome for the species is the GenBank assembly GCA_001783045.1. The GC content of the type genome is 46.88 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cinefula gen. nov.

Candidatus Cinefula (NL. fem. n. *Cinefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10181*. The type species for the genus is *Candidatus* Cinefula cocoligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Cinipana pedifitas sp. nov.

Candidatus Cinipana pedifitas (NL. fem. n. *pedifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNR01 sp007132905*. The type genome for the species is the GenBank assembly GCA_007132905.1. The GC content of the type genome is 44.52 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Cinipana gen. nov.

Candidatus Cinipana (NL. fem. n. *Cinipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNR01*. The type species for the genus is *Candidatus* Cinipana pedifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipanaceae.

Description of *Candidatus* Cinipanaceae fam. nov.

Candidatus Cinipanaceae (NL. fem. n. *Cinipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLNR01.* The type genus for the taxon is *Candidatus* Cinipana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinipanales.

Description of *Candidatus* Cinipanales ord. nov.

Candidatus Cinipanales (NL. fem. n. *Cinipanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLNR01.* The type genus for the taxon is *Candidatus* Cinipana .

According to the original version of GTDB R06-RS202, this family belongs to the class *SLNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cinipanae.

Description of *Candidatus* Cinipanae class. nov.

Candidatus Cinipanae (NL. fem. n. *c__Cinipanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLNR01.* The type genus for the taxon is *Candidatus* Cinipana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SLNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Cinipanota.

Description of *Candidatus* Cinipanota phyl. nov.

Candidatus Cinipanota (NL. fem. n. *Cinipanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLNR01.* The type genus for the taxon is *Candidatus* Cinipana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Ciniparia bipalentia sp. nov.

Candidatus Ciniparia bipalentia (NL. fem. n. *bipalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIAM-69d sp001698445*. The type genome for the species is the GenBank assembly GCA_001698445.1. The GC content of the type genome is 55.28 % and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "co-culture originated from a tropical freshwater lake".

Description of *Candidatus* Ciniparia gen. nov.

Candidatus Ciniparia (NL. fem. n. *Ciniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIAM-69d*. The type species for the genus is *Candidatus* Ciniparia bipalentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACIAM-69d*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipariaceae.

Description of *Candidatus* Cinipariaceae fam. nov.

Candidatus Cinipariaceae (NL. fem. n. *Cinipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACIAM-69d.* The type genus for the taxon is *Candidatus* Ciniparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CACIAM-69d*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinipariales.

Description of *Candidatus* Cinipariales ord. nov.

Candidatus Cinipariales (NL. fem. n. *Cinipariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACIAM-69d.* The type genus for the taxon is *Candidatus* Ciniparia .

According to the GTDB R06-RS202, this order belongs to the class *Cyanobacteriia*.

Description of *Candidatus* Ciniparia dimiditoga sp. nov.

Candidatus Ciniparia dimiditoga (NL. fem. n. *dimiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIAM-69d sp004292515*. The type genome for the species is the GenBank assembly GCA_004292515.1. The GC content of the type genome is 56.35 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Ciniparia viripatio sp. nov.

Candidatus Ciniparia viripatio (NL. fem. n. *viripatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIAM-69d sp001913845*. The type genome for the species is the GenBank assembly GCA_001913845.2. The GC content of the type genome is 55.23 % and the genome length is 4.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Cinipella expugastra sp. nov.

Candidatus Cinipella expugastra (NL. fem. n. *expugastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA40 sp013140775*. The type genome for the species is the GenBank assembly GCA_013140775.1. The GC content of the type genome is 63.37 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Cinipella gen. nov.

Candidatus Cinipella (NL. fem. n. *Cinipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp6-AA40*. The type species for the genus is *Candidatus* Cinipella expugastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Cinipella vecoredo sp. nov.

Candidatus Cinipella vecoredo (NL. fem. n. *vecoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA40 sp003222635*. The type genome for the species is the GenBank assembly GCA_003222635.1. The GC content of the type genome is 65.46 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Cinipia detenastra sp. nov.

Candidatus Cinipia detenastra (NL. fem. n. *detenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRC01 sp007134665*. The type genome for the species is the GenBank assembly GCA_003556665.1. The GC content of the type genome is 41.89 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Cinipia gen. nov.

Candidatus Cinipia (NL. fem. n. *Cinipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKRC01*. The type species for the genus is *Candidatus* Cinipia detenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cinipia maleditio sp. nov.

Candidatus Cinipia maleditio (NL. fem. n. *maleditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRC01 sp007118695*. The type genome for the species is the GenBank assembly GCA_007130715.1. The GC content of the type genome is 47.4 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Cinipida cepulibula sp. nov.

Candidatus Cinipida cepulibula (NL. fem. n. *cepulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKKG01 sp903827975*. The type genome for the species is the GenBank assembly GCA_903851715.1. The GC content of the type genome is 39.78 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Cinipida gen. nov.

Candidatus Cinipida (NL. fem. n. *Cinipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKKG01*. The type species for the genus is *Candidatus* Cinipida cepulibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Ciniposa notacitica sp. nov.

Candidatus Ciniposa notacitica (NL. fem. n. *notacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM714 sp002869095*. The type genome for the species is the GenBank assembly GCA_002869095.1. The GC content of the type genome is 44.5 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Ciniposa gen. nov.

Candidatus Ciniposa (NL. fem. n. *Ciniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM714*. The type species for the genus is *Candidatus* Ciniposa notacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM714*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ciniposaceae.

Description of *Candidatus* Ciniposaceae fam. nov.

Candidatus Ciniposaceae (NL. fem. n. *Ciniposaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM714.* The type genus for the taxon is *Candidatus* Ciniposa .

According to GTDB R06-RS202, this family belongs to the order *Peptostreptococcales*.

Description of *Candidatus* Cinipula saxifugo sp. nov.

Candidatus Cinipula saxifugo (NL. fem. n. *saxifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-21 sp003233345*. The type genome for the species is the GenBank assembly GCA_003233345.1. The GC content of the type genome is 41.85 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Cinipula gen. nov.

Candidatus Cinipula (NL. fem. n. *Cinipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-21*. The type species for the genus is *Candidatus* Cinipula saxifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipulaceae.

Description of *Candidatus* Cinipulaceae fam. nov.

Candidatus Cinipulaceae (NL. fem. n. *Cinipulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-21.* The type genus for the taxon is *Candidatus* Cinipula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinipulales.

Description of *Candidatus* Cinipulales ord. nov.

Candidatus Cinipulales (NL. fem. n. *Cinipulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-21.* The type genus for the taxon is *Candidatus* Cinipula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Cisalana cohonibula sp. nov.

Candidatus Cisalana cohonibula (NL. fem. n. *cohonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXA01 sp010027915*. The type genome for the species is the GenBank assembly GCA_010027915.1. The GC content of the type genome is 51.59 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Cisalana gen. nov.

Candidatus Cisalana (NL. fem. n. *Cisalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXXA01*. The type species for the genus is *Candidatus* Cisalana cohonibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXXA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalanaceae.

Description of *Candidatus* Cisalanaceae fam. nov.

Candidatus Cisalanaceae (NL. fem. n. *Cisalanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXXA01.* The type genus for the taxon is *Candidatus* Cisalana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SXXA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cisalanales.

Description of *Candidatus* Cisalanales ord. nov.

Candidatus Cisalanales (NL. fem. n. *Cisalanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXXA01*. The type genus for the taxon is *Candidatus* Cisalana .

According to the GTDB R06-RS202, this order belongs to the class *Marinamargulisbacteria*.

Description of *Candidatus* Cisalana defarilenta sp. nov.

Candidatus Cisalana defarilenta (NL. fem. n. *defarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXA01 sp005791325*. The type genome for the species is the GenBank assembly GCA_005791325.1. The GC content of the type genome is 46.06 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Cisalaria bisacugo sp. nov.

Candidatus Cisalaria bisacugo (NL. fem. n. *bisacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQNR01 sp903873255*. The type genome for the species is the GenBank assembly GCA_903873255.1. The GC content of the type genome is 35.92 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Cisalaria gen. nov.

Candidatus Cisalaria (NL. fem. n. *Cisalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQNR01*. The type species for the genus is *Candidatus* Cisalaria bisacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQNR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalariaceae.

Description of *Candidatus* Cisalariaceae fam. nov.

Candidatus Cisalariaceae (NL. fem. n. *Cisalariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQNR01.* The type genus for the taxon is *Candidatus* Cisalaria .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Cisalia vilipitica sp. nov.

Candidatus Cisalia vilipitica (NL. fem. n. *vilipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQK01 sp013203265*. The type genome for the species is the GenBank assembly GCA_013203265.1. The GC content of the type genome is 35.95 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Cisalia gen. nov.

Candidatus Cisalia (NL. fem. n. *Cisalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQK01*. The type species for the genus is *Candidatus* Cisalia vilipitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMQK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisaliaceae.

Description of *Candidatus* Cisaliaceae fam. nov.

Candidatus Cisaliaceae (NL. fem. n. *Cisaliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQK01.* The type genus for the taxon is *Candidatus* Cisalia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1572*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celumanales.

Description of *Candidatus* Cisalida conopousia sp. nov.

Candidatus Cisalida conopousia (NL. fem. n. *conopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1322 sp900769815*. The type genome for the species is the GenBank assembly RS_GCF_900769815.1. The GC content of the type genome is 37.98 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Cisalida gen. nov.

Candidatus Cisalida (NL. fem. n. *Cisalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1322*. The type species for the genus is *Candidatus* Cisalida conopousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QALW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugariaceae.

Description of *Candidatus* Cisalida delecimonia sp. nov.

Candidatus Cisalida delecimonia (NL. fem. n. *delecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1322 sp900550765*. The type genome for the species is the GenBank assembly RS_GCF_900760805.1. The GC content of the type genome is 46.34 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Cisalosa abrumitica sp. nov.

Candidatus Cisalosa abrumitica (NL. fem. n. *abrumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp014379165*. The type genome for the species is the GenBank assembly GCA_014379165.1. The GC content of the type genome is 47.97 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cisalosa gen. nov.

Candidatus Cisalosa (NL. fem. n. *Cisalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-54-10*. The type species for the genus is *Candidatus* Cisalosa

abrumitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Cisalosa adtilisca sp. nov.

Candidatus Cisalosa adtilisca (NL. fem. n. *adtilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp001775475*. The type genome for the species is the GenBank assembly GCA_001775475.1. The GC content of the type genome is 53.0 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Cisalosa bigemitica sp. nov.

Candidatus Cisalosa bigemitica (NL. fem. n. *bigemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903878285*. The type genome for the species is the GenBank assembly GCA_903820465.1. The GC content of the type genome is 53.85 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Cisalosa casigifica sp. nov.

Candidatus Cisalosa casigifica (NL. fem. n. *casigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp003135635*. The type genome for the species is the GenBank assembly GCA_003135635.1. The GC content of the type genome is 46.48 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Cisalosa citocifica sp. nov.

Candidatus Cisalosa citocifica (NL. fem. n. *citocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp001773575*. The type genome for the species is the GenBank assembly GCA_001773575.1. The GC content of the type genome is 47.77 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point C".

Description of *Candidatus* Cisalosa decapibra sp. nov.

Candidatus Cisalosa decapibra (NL. fem. n. *decapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp007375995*. The type genome for the species is the GenBank assembly GCA_007375995.1. The GC content of the type genome is 49.57 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Cisalosa demagugo sp. nov.

Candidatus Cisalosa demagugo (NL. fem. n. *demagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903915735*. The type genome for the species is the GenBank assembly GCA_903915735.1. The GC content of the type genome is 55.21 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Cisalosa demulisca sp. nov.

Candidatus Cisalosa demulisca (NL. fem. n. *demulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp009691465*. The type genome for the species is the GenBank assembly GCA_009691465.1. The GC content of the type genome is 56.72 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Cisalosa denunigena sp. nov.

Candidatus Cisalosa denunigena (NL. fem. n. *denunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903884345*. The type genome for the species is the

GenBank assembly GCA_903835995.1. The GC content of the type genome is 57.51 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Cisalosa depacitas sp. nov.

Candidatus Cisalosa depacitas (NL. fem. n. *depacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903819895*. The type genome for the species is the GenBank assembly GCA_903819895.1. The GC content of the type genome is 54.89 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Cisalosa diminitas sp. nov.

Candidatus Cisalosa diminitas (NL. fem. n. *diminitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903851045*. The type genome for the species is the GenBank assembly GCA_903904145.1. The GC content of the type genome is 54.52 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Cisalosa divulitoga sp. nov.

Candidatus Cisalosa divulitoga (NL. fem. n. *divulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903840375*. The type genome for the species is the GenBank assembly GCA_903840375.1. The GC content of the type genome is 49.79 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Cisalosa doxolentia sp. nov.

Candidatus Cisalosa doxolentia (NL. fem. n. *doxolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp001775445*. The type genome for the species is the GenBank assembly GCA_001773545.1. The GC content of the type genome is 54.06 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cisalosa hecatatio sp. nov.

Candidatus Cisalosa hecatatio (NL. fem. n. *hecatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903900775*. The type genome for the species is the GenBank assembly GCA_903900775.1. The GC content of the type genome is 54.25 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Cisalosa inbelitura sp. nov.

Candidatus Cisalosa inbelitura (NL. fem. n. *inbelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp001004665*. The type genome for the species is the GenBank assembly GCA_001004665.1. The GC content of the type genome is 53.73 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Cisalosa pavicibula sp. nov.

Candidatus Cisalosa pavicibula (NL. fem. n. *pavicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp903824155*. The type genome for the species is the GenBank assembly GCA_903895825.1. The GC content of the type genome is 51.47 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Cisalosa roruletta sp. nov.

Candidatus Cisalosa roruletta (NL. fem. n. *roruletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-54-10 sp001775485*. The type genome for the species is the GenBank assembly GCA_001775485.1. The GC content of the type genome is 51.44 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cisalula abinvatio sp. nov.

Candidatus Cisalula abinvatio (NL. fem. n. *abinvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902783065*. The type genome for the species is the GenBank assembly GCA_902783065.1. The GC content of the type genome is 39.64 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Cisalula gen. nov.

Candidatus Cisalula (NL. fem. n. *Cisalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1213*. The type species for the genus is *Candidatus* Cisalula abinvatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cisalula absocitrix sp. nov.

Candidatus Cisalula absocitrix (NL. fem. n. *absocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902783815*. The type genome for the species is the GenBank assembly GCA_902783815.1. The GC content of the type genome is 41.67 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Cisalula acustedo sp. nov.

Candidatus Cisalula acustedo (NL. fem. n. *acustedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902763365*. The type genome for the species is the GenBank assembly GCA_902763365.1. The GC content of the type genome is 41.56 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Cisalula adsicitas sp. nov.

Candidatus Cisalula adsicitas (NL. fem. n. *adsicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902785555*. The type genome for the species is the GenBank assembly GCA_902785555.1. The GC content of the type genome is 38.15 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Cisalula aggesivita sp. nov.

Candidatus Cisalula aggesivita (NL. fem. n. *aggesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902803385*. The type genome for the species is the GenBank assembly GCA_902803385.1. The GC content of the type genome is 45.68 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Cisalula arcubicella sp. nov.

Candidatus Cisalula arcubicella (NL. fem. n. *arcubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902772855*. The type genome for the species is the GenBank assembly GCA_902772855.1. The GC content of the type genome is 54.4 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Cisalula argimago sp. nov.

Candidatus Cisalula argimago (NL. fem. n. *argimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902773135*. The type genome for the species is the GenBank assembly GCA_902773135.1. The GC content of the type genome is 41.04 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Cisalula asbesedo sp. nov.

Candidatus Cisalula asbesedo (NL. fem. n. *asbesedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902802985*. The type genome for the species is the GenBank assembly GCA_902802985.1. The GC content of the type genome is 41.81 %

and the genome length is 2.08 Mbp.

Description of *Candidatus* Cisalula cimeledo sp. nov.

Candidatus Cisalula cimeledo (NL. fem. n. *cimeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900321195*. The type genome for the species is the GenBank assembly GCA_900321195.1. The GC content of the type genome is 42.52 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cisalula cohuricella sp. nov.

Candidatus Cisalula cohuricella (NL. fem. n. *cohuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902778175*. The type genome for the species is the GenBank assembly GCA_902789975.1. The GC content of the type genome is 44.71 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Cisalula colimilega sp. nov.

Candidatus Cisalula colimilega (NL. fem. n. *colimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900319255*. The type genome for the species is the GenBank assembly GCA_902803425.1. The GC content of the type genome is 45.68 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Cisalula colubastra sp. nov.

Candidatus Cisalula colubastra (NL. fem. n. *colubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902766305*. The type genome for the species is the GenBank assembly GCA_902766305.1. The GC content of the type genome is 41.06 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Cisalula cosigimonas sp. nov.

Candidatus Cisalula cosigimonas (NL. fem. n. *cosigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902767155*. The type genome for the species is the GenBank assembly GCA_902767155.1. The GC content of the type genome is 39.5 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Cisalula cunabigena sp. nov.

Candidatus Cisalula cunabigena (NL. fem. n. *cunabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902772955*. The type genome for the species is the GenBank assembly GCA_902772955.1. The GC content of the type genome is 48.53 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Cisalula curabilega sp. nov.

Candidatus Cisalula curabilega (NL. fem. n. *curabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902803805*. The type genome for the species is the GenBank assembly GCA_902803805.1. The GC content of the type genome is 43.14 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Cisalula cuticibra sp. nov.

Candidatus Cisalula cuticibra (NL. fem. n. *cuticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902802105*. The type genome for the species is the GenBank assembly GCA_902802105.1. The GC content of the type genome is 46.43 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Cisalula decatitica sp. nov.

Candidatus Cisalula decatitica (NL. fem. n. *decatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902786345*. The type genome for the species is the GenBank assembly GCA_902786345.1. The GC content of the type genome is 38.68 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Cisalula denunago sp. nov.

Candidatus Cisalula denunago (NL. fem. n. *denunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900317795*. The type genome for the species is the GenBank assembly GCA_900317795.1. The GC content of the type genome is 39.43 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Cisalula derunousia sp. nov.

Candidatus Cisalula derunousia (NL. fem. n. *derunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902768825*. The type genome for the species is the GenBank assembly GCA_902768825.1. The GC content of the type genome is 47.99 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Cisalula desepitio sp. nov.

Candidatus Cisalula desepitio (NL. fem. n. *desepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900316925*. The type genome for the species is the GenBank assembly GCA_900316925.1. The GC content of the type genome is 51.75 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cisalula desorifica sp. nov.

Candidatus Cisalula desorifica (NL. fem. n. *desorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900316485*. The type genome for the species is the GenBank assembly GCA_902765315.1. The GC content of the type genome is 41.67 %

and the genome length is 3.07 Mbp.

Description of *Candidatus* Cisalula detecitio sp. nov.

Candidatus Cisalula detecitio (NL. fem. n. *detecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900320925*. The type genome for the species is the GenBank assembly GCA_900320925.1. The GC content of the type genome is 48.01 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Cisalula effigentia sp. nov.

Candidatus Cisalula effigentia (NL. fem. n. *effigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902764235*. The type genome for the species is the GenBank assembly GCA_902764235.1. The GC content of the type genome is 42.61 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Cisalula hecatitia sp. nov.

Candidatus Cisalula hecatitia (NL. fem. n. *hecatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902773065*. The type genome for the species is the GenBank assembly GCA_902773065.1. The GC content of the type genome is 41.73 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Cisalula hibisatio sp. nov.

Candidatus Cisalula hibisatio (NL. fem. n. *hibisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900322145*. The type genome for the species is the GenBank assembly GCA_902776555.1. The GC content of the type genome is 46.83 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Cisalula homilicula sp. nov.

Candidatus Cisalula homilicula (NL. fem. n. *homilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp002309275*. The type genome for the species is the GenBank assembly GCA_002309275.1. The GC content of the type genome is 40.05 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Cisalula incivatica sp. nov.

Candidatus Cisalula incivatica (NL. fem. n. *incivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902772895*. The type genome for the species is the GenBank assembly GCA_902772895.1. The GC content of the type genome is 46.78 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Cisalula incocifica sp. nov.

Candidatus Cisalula incocifica (NL. fem. n. *incocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902800065*. The type genome for the species is the GenBank assembly GCA_902800065.1. The GC content of the type genome is 38.03 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Cisalula lapilimonas sp. nov.

Candidatus Cisalula lapilimonas (NL. fem. n. *lapilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902801715*. The type genome for the species is the GenBank assembly GCA_902801715.1. The GC content of the type genome is 41.5 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Cisalula legifisca sp. nov.

Candidatus Cisalula legifisca (NL. fem. n. *legifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900322105*. The type genome for the species is the GenBank assembly GCA_902799155.1. The GC content of the type genome is 47.91 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Cisalula locelibra sp. nov.

Candidatus Cisalula locelibra (NL. fem. n. *locelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900317215*. The type genome for the species is the GenBank assembly GCA_900317215.1. The GC content of the type genome is 46.46 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cisalula lucerifica sp. nov.

Candidatus Cisalula lucerifica (NL. fem. n. *lucerifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902800005*. The type genome for the species is the GenBank assembly GCA_902800005.1. The GC content of the type genome is 40.8 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Cisalula ludifatica sp. nov.

Candidatus Cisalula ludifatica (NL. fem. n. *ludifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902773325*. The type genome for the species is the GenBank assembly GCA_902773325.1. The GC content of the type genome is 47.88 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Cisalula manufigena sp. nov.

Candidatus Cisalula manufigena (NL. fem. n. *manufigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902796475*. The type genome for the species is the GenBank assembly GCA_902796475.1. The GC content of the type genome is 47.0 %

and the genome length is 2.37 Mbp.

Description of *Candidatus* Cisalula metapitia sp. nov.

Candidatus Cisalula metapitia (NL. fem. n. *metapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902801055*. The type genome for the species is the GenBank assembly GCA_902801055.1. The GC content of the type genome is 46.44 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Cisalula mirabago sp. nov.

Candidatus Cisalula mirabago (NL. fem. n. *mirabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902783855*. The type genome for the species is the GenBank assembly GCA_902783855.1. The GC content of the type genome is 46.15 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Cisalula molecessa sp. nov.

Candidatus Cisalula molecessa (NL. fem. n. *molecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902803125*. The type genome for the species is the GenBank assembly GCA_902803125.1. The GC content of the type genome is 48.93 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Cisalula monumugo sp. nov.

Candidatus Cisalula monumugo (NL. fem. n. *monumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900315875*. The type genome for the species is the GenBank assembly GCA_902775145.1. The GC content of the type genome is 45.36 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Cisalula negiditudo sp. nov.

Candidatus Cisalula negiditudo (NL. fem. n. *negiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902762335*. The type genome for the species is the GenBank assembly GCA_902762335.1. The GC content of the type genome is 50.1 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Cisalula nivomatica sp. nov.

Candidatus Cisalula nivomatica (NL. fem. n. *nivomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp002351795*. The type genome for the species is the GenBank assembly GCA_002351795.1. The GC content of the type genome is 42.02 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Cisalula ocissimonia sp. nov.

Candidatus Cisalula ocissimonia (NL. fem. n. *ocissimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902766585*. The type genome for the species is the GenBank assembly GCA_902766585.1. The GC content of the type genome is 42.46 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cisalula omnimilega sp. nov.

Candidatus Cisalula omnimilega (NL. fem. n. *omnimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902773025*. The type genome for the species is the GenBank assembly GCA_902773025.1. The GC content of the type genome is 40.2 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Cisalula patibitudo sp. nov.

Candidatus Cisalula patibitudo (NL. fem. n. *patibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902767125*. The type genome for the species is the GenBank assembly GCA_902767125.1. The GC content of the type genome is 39.78 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Cisalula pulegibra sp. nov.

Candidatus Cisalula pulegibra (NL. fem. n. *pulegibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp002350705*. The type genome for the species is the GenBank assembly GCA_002350705.1. The GC content of the type genome is 43.23 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Cisalula purulilenta sp. nov.

Candidatus Cisalula purulilenta (NL. fem. n. *purulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900317395*. The type genome for the species is the GenBank assembly GCA_900317395.1. The GC content of the type genome is 40.51 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Cisalula secunousia sp. nov.

Candidatus Cisalula secunousia (NL. fem. n. *secunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp002308635*. The type genome for the species is the GenBank assembly GCA_902773405.1. The GC content of the type genome is 44.96 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Cisalula telegivita sp. nov.

Candidatus Cisalula telegivita (NL. fem. n. *telegivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902785765*. The type genome for the species is the GenBank assembly GCA_902785765.1. The GC content of the type genome is 51.67 %

and the genome length is 2.23 Mbp.

Description of *Candidatus* Cisalula vatilisca sp. nov.

Candidatus Cisalula vatilisca (NL. fem. n. *vatilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900315465*. The type genome for the species is the GenBank assembly GCA_900315465.1. The GC content of the type genome is 38.64 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Cisalula velivugo sp. nov.

Candidatus Cisalula velivugo (NL. fem. n. *velivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp900320235*. The type genome for the species is the GenBank assembly GCA_900320235.1. The GC content of the type genome is 40.25 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Cisalula vitabilega sp. nov.

Candidatus Cisalula vitabilega (NL. fem. n. *vitabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902803585*. The type genome for the species is the GenBank assembly GCA_902803585.1. The GC content of the type genome is 46.36 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Cisalula xeropetta sp. nov.

Candidatus Cisalula xeropetta (NL. fem. n. *xeropetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1213 sp902767175*. The type genome for the species is the GenBank assembly GCA_902767175.1. The GC content of the type genome is 43.54 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cisorana adtenax sp. nov.

Candidatus Cisorana adtenax (NL. fem. n. *adtenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-43 sp001796965*. The type genome for the species is the GenBank assembly GCA_001796965.1. The GC content of the type genome is 64.95 % and the genome length is 1.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Cisorana gen. nov.

Candidatus Cisorana (NL. fem. n. *Cisorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-64-43*. The type species for the genus is *Candidatus* Cisorana adtenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-43*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisoranaceae.

Description of *Candidatus* Cisoranaceae fam. nov.

Candidatus Cisoranaceae (NL. fem. n. *Cisoranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-43.* The type genus for the taxon is *Candidatus* Cisorana .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Cisoraria siteligena sp. nov.

Candidatus Cisoraria siteligena (NL. fem. n. *siteligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11346 sp003482625*. The type genome for the species is the GenBank assembly GCA_003482625.1. The GC content of the type genome is 68.04 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Cisoraria gen. nov.

Candidatus Cisoraria (NL. fem. n. *Cisoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11346*. The type species for the genus is *Candidatus* Cisoraria siteligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisorariaceae.

Description of *Candidatus* Cisorariaceae fam. nov.

Candidatus Cisorariaceae (NL. fem. n. *Cisorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11346.* The type genus for the taxon is *Candidatus* Cisoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cisorariales.

Description of *Candidatus* Cisorariales ord. nov.

Candidatus Cisorariales (NL. fem. n. *Cisorariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11346.* The type genus for the taxon is *Candidatus* Cisoraria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cisorariae.

Description of *Candidatus* Cisorariae class. nov.

Candidatus Cisorariae (NL. fem. n. *c__Cisorariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11346.* The type genus for the taxon is *Candidatus* Cisoraria .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Cisorella colapimonia sp. nov.

Candidatus Cisorella colapimonia (NL. fem. n. *colapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSJ01 sp007130525*. The type genome for the species is the GenBank assembly GCA_007122725.1. The GC content of the type genome is 63.15 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Cisorella gen. nov.

Candidatus Cisorella (NL. fem. n. *Cisorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSJ01*. The type species for the genus is *Candidatus* Cisorella colapimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cisoria nucifax sp. nov.

Candidatus Cisoria nucifax (NL. fem. n. *nucifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXXC01 sp903923205*. The type genome for the species is the GenBank assembly GCA_903923205.1. The GC content of the type genome is 59.96 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Cisoria gen. nov.

Candidatus Cisoria (NL. fem. n. *Cisoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXXC01*. The type species for the genus is *Candidatus* Cisoria nucifax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cisoria perabitia sp. nov.

Candidatus Cisoria perabitia (NL. fem. n. *perabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXXC01 sp903897565*. The type genome for the species is the GenBank assembly GCA_903897565.1. The GC content of the type genome is 65.03 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Cisorida echogibula sp. nov.

Candidatus Cisorida echogibula (NL. fem. n. *echogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2174 sp011042305*. The type genome for the species is the GenBank assembly GCA_011042305.1. The GC content of the type genome is 64.03 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Cisorida gen. nov.

Candidatus Cisorida (NL. fem. n. *Cisorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2174*. The type species for the genus is *Candidatus* Cisorida echogibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisoridaceae.

Description of *Candidatus* Cisoridaceae fam. nov.

Candidatus Cisoridaceae (NL. fem. n. *Cisoridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2174.* The type genus for the taxon is *Candidatus* Cisorida .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Cisorida lucelicella sp. nov.

Candidatus Cisorida lucelicella (NL. fem. n. *lucelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2174 sp002327445*. The type genome for the species is the GenBank assembly GCA_002327445.1. The GC content of the type genome is 62.31 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Cisorosa domigatio sp. nov.

Candidatus Cisorosa domigatio (NL. fem. n. *domigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-FULL-40-11 sp001776505*. The type genome for the species is the GenBank assembly GCA_001774915.1. The GC content of the type genome is 38.13 % and the genome length is 0.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Cisorosa gen. nov.

Candidatus Cisorosa (NL. fem. n. *Cisorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-FULL-40-11*. The type species for the genus is *Candidatus* Cisorosa domigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Cisorula inreticula sp. nov.

Candidatus Cisorula inreticula (NL. fem. n. *inreticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3857 sp002392505*. The type genome for the species is the GenBank assembly GCA_002392505.1. The GC content of the type genome is 57.0 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Cisorula gen. nov.

Candidatus Cisorula (NL. fem. n. *Cisorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA3857*. The type species for the genus is *Candidatus* Cisorula inreticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Cisorula xenopedo sp. nov.

Candidatus Cisorula xenopedo (NL. fem. n. *xenopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3857 sp900313585*. The type genome for the species is the GenBank assembly GCA_900313585.1. The GC content of the type genome is 49.94 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Citipana minuritoga sp. nov.

Candidatus Citipana minuritoga (NL. fem. n. *minuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSH01 sp013140705*. The type genome for the species is the GenBank assembly GCA_013140705.1. The GC content of the type genome is 46.01 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Citipana gen. nov.

Candidatus Citipana (NL. fem. n. *Citipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSH01*. The type species for the genus is *Candidatus* Citipana minuritoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Citiparia sugilatio sp. nov.

Candidatus Citiparia sugilatio (NL. fem. n. *sugilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *XYA12-FULL-58-9 sp001798605*. The type genome for the species is the GenBank assembly GCA_001798605.1. The GC content of the type genome is 58.35 % and the genome length is 6.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Citiparia gen. nov.

Candidatus Citiparia (NL. fem. n. *Citiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA12-FULL-58-9*. The type species for the genus is *Candidatus* Citiparia sugilatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA12-FULL-58-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipariaceae.

Description of *Candidatus* Citipariaceae fam. nov.

Candidatus Citipariaceae (NL. fem. n. *Citipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA12-FULL-58-9.* The type genus for the taxon is *Candidatus* Citiparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYA12-FULL-58-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Citipariales.

Description of *Candidatus* Citipariales ord. nov.

Candidatus Citipariales (NL. fem. n. *Citipariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA12-FULL-58-9.* The type genus for the taxon is *Candidatus* Citiparia .

According to the original version of GTDB R06-RS202, this family belongs to the class *XYA12-FULL-58-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Citipariae.

Description of *Candidatus* Citipariae class. nov.

Candidatus Citipariae (NL. fem. n. *c__Citipariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA12-FULL-58-9.* The type genus for the taxon is *Candidatus* Citiparia .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Citipella horomatica sp. nov.

Candidatus Citipella horomatica (NL. fem. n. *horomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA961 sp002293005*. The type genome for the species is the GenBank assembly GCA_002293005.1. The GC content of the type genome is 40.82 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Citipella gen. nov.

Candidatus Citipella (NL. fem. n. *Citipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA961*. The type species for the genus is *Candidatus* Citipella horomatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA961*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipellaceae.

Description of *Candidatus* Citipellaceae fam. nov.

Candidatus Citipellaceae (NL. fem. n. *Citipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA961.* The type genus for the taxon is *Candidatus* Citipella .

According to GTDB R06-RS202, this family belongs to the order *Kapabacteriales*.

Description of *Candidatus* Citipella redunitura sp. nov.

Candidatus Citipella redunitura (NL. fem. n. *redunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA961 sp009919265*. The type genome for the species is the GenBank assembly GCA_009919265.1. The GC content of the type genome is 39.59 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Citipella repudilenta sp. nov.

Candidatus Citipella repudilenta (NL. fem. n. *repudilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA961 sp005788035*. The type genome for the species is the GenBank assembly GCA_014191135.1. The GC content of the type genome is 40.22 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Citipia culilibra sp. nov.

Candidatus Citipia culilibra (NL. fem. n. *culilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp002699615*. The type genome for the species is the GenBank assembly GCA_902526095.1. The GC content of the type genome is 35.75 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Citipia gen. nov.

Candidatus Citipia (NL. fem. n. *Citipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED25*. The type species for the genus is *Candidatus* Citipia culilibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipiaceae.

Description of *Candidatus* Citipiaceae fam. nov.

Candidatus Citipiaceae (NL. fem. n. *Citipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED25.* The type genus for the taxon is *Candidatus* Citipia .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales_B*.

Description of *Candidatus* Citipia desulibra sp. nov.

Candidatus Citipia desulibra (NL. fem. n. *desulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp002704755*. The type genome for the species is the GenBank assembly GCA_002704755.1. The GC content of the type genome is 33.75 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Citipia minurisca sp. nov.

Candidatus Citipia minurisca (NL. fem. n. *minurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp902633855*. The type genome for the species is the GenBank assembly GCA_902633855.1. The GC content of the type genome is 35.96 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Citipia ridibitrix sp. nov.

Candidatus Citipia ridibitrix (NL. fem. n. *ridibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp902538185*. The type genome for the species is the GenBank assembly GCA_902538185.1. The GC content of the type genome is 35.79 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Citipia rubefago sp. nov.

Candidatus Citipia rubefago (NL. fem. n. *rubefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp002694595*. The type genome for the species is the GenBank assembly GCA_002694595.1. The GC content of the type genome is 35.55 %

and the genome length is 0.63 Mbp.

Description of *Candidatus* Citipia saxifedo sp. nov.

Candidatus Citipia saxifedo (NL. fem. n. *saxifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp002168075*. The type genome for the species is the GenBank assembly GCA_002716505.1. The GC content of the type genome is 33.21 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Citipia vanititrix sp. nov.

Candidatus Citipia vanititrix (NL. fem. n. *vanititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp902632055*. The type genome for the species is the GenBank assembly GCA_902632055.1. The GC content of the type genome is 35.82 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Citipia vivifilega sp. nov.

Candidatus Citipia vivifilega (NL. fem. n. *vivifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED25 sp902613795*. The type genome for the species is the GenBank assembly GCA_902613795.1. The GC content of the type genome is 35.98 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Citipida detumax sp. nov.

Candidatus Citipida detumax (NL. fem. n. *detumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mt11 sp001282665*. The type genome for the species is the GenBank assembly RS_GCF_001282665.1. The GC content of the type genome is 31.48 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Citipida gen. nov.

Candidatus Citipida (NL. fem. n. *Citipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Mt11*. The type species for the genus is *Candidatus* Citipida detumax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Citipida utrarousia sp. nov.

Candidatus Citipida utrarousia (NL. fem. n. *utrarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mt11 sp002398845*. The type genome for the species is the GenBank assembly GCA_002398845.1. The GC content of the type genome is 31.42 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Citiposa acratessa sp. nov.

Candidatus Citiposa acratessa (NL. fem. n. *acratessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp002726085*. The type genome for the species is the GenBank assembly GCA_002726085.1. The GC content of the type genome is 65.28 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Citiposa gen. nov.

Candidatus Citiposa (NL. fem. n. *Citiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8438*. The type species for the genus is *Candidatus* Citiposa acratessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8438*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiposaceae.

Description of *Candidatus* Citiposaceae fam. nov.

Candidatus Citiposaceae (NL. fem. n. *Citiposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8438.* The type genus for the taxon is *Candidatus* Citiposa .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Citiposa cocolitoga sp. nov.

Candidatus Citiposa cocolitoga (NL. fem. n. *cocolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp002346545*. The type genome for the species is the GenBank assembly GCA_002346545.1. The GC content of the type genome is 64.48 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Citiposa cohoratio sp. nov.

Candidatus Citiposa cohoratio (NL. fem. n. *cohoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp002347025*. The type genome for the species is the GenBank assembly GCA_002456055.1. The GC content of the type genome is 53.37 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Citiposa insusedo sp. nov.

Candidatus Citiposa insusedo (NL. fem. n. *insusedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp005778315*. The type genome for the species is the GenBank assembly GCA_005778315.1. The GC content of the type genome is 65.86 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Citiposa laxitimonas sp. nov.

Candidatus Citiposa laxitimonas (NL. fem. n. *laxitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp003533545*. The type genome for the species is the

GenBank assembly GCA_003533545.1. The GC content of the type genome is 60.26 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Citiposa oppugentia sp. nov.

Candidatus Citiposa oppugentia (NL. fem. n. *oppugentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8438 sp002712885*. The type genome for the species is the GenBank assembly GCA_002712885.1. The GC content of the type genome is 64.89 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Citipula saxifimonas sp. nov.

Candidatus Citipula saxifimonas (NL. fem. n. *saxifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC1-FULL-37-79 sp001769975*. The type genome for the species is the GenBank assembly GCA_001769975.1. The GC content of the type genome is 35.59 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point A".

Description of *Candidatus* Citipula gen. nov.

Candidatus Citipula (NL. fem. n. *Citipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC1-FULL-37-79*. The type species for the genus is *Candidatus* Citipula saxifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Citipula senipiforma sp. nov.

Candidatus Citipula senipiforma (NL. fem. n. *senipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC1-FULL-37-79 sp001770015*. The type genome for the species is the GenBank assembly GCA_001769995.1. The GC content of the type genome is 37.18

% and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point A".

Description of *Candidatus* Citivana adgenedo sp. nov.

Candidatus Citivana adgenedo (NL. fem. n. *adgenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBG01 sp009781275*. The type genome for the species is the GenBank assembly GCA_009781275.1. The GC content of the type genome is 46.77 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Citivana gen. nov.

Candidatus Citivana (NL. fem. n. *Citivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBG01*. The type species for the genus is *Candidatus* Citivana adgenedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Citivana aprarifica sp. nov.

Candidatus Citivana aprarifica (NL. fem. n. *aprarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBG01 sp009778375*. The type genome for the species is the GenBank assembly GCA_009778375.1. The GC content of the type genome is 46.92 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Citivana citocatio sp. nov.

Candidatus Citivana citocatio (NL. fem. n. *citocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBG01 sp009784635*. The type genome for the species is the

GenBank assembly GCA_009784635.1. The GC content of the type genome is 47.48 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Citivaria apoplimonia sp. nov.

Candidatus Citivaria apoplimonia (NL. fem. n. *apoplimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-25 sp005888395*. The type genome for the species is the GenBank assembly GCA_005888395.1. The GC content of the type genome is 71.31 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Citivaria gen. nov.

Candidatus Citivaria (NL. fem. n. *Citivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-25*. The type species for the genus is *Candidatus* Citivaria apoplimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citivariaceae.

Description of *Candidatus* Citivariaceae fam. nov.

Candidatus Citivariaceae (NL. fem. n. *Citivariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AC-25.* The type genus for the taxon is *Candidatus* Citivaria .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Citivella petulitudo sp. nov.

Candidatus Citivella petulitudo (NL. fem. n. *petulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG210 sp902796835*. The type genome for the species is the GenBank assembly GCA_902796835.1. The GC content of the type genome is 52.17 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Citivella gen. nov.

Candidatus Citivella (NL. fem. n. *Citivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG210*. The type species for the genus is *Candidatus* Citivella petulitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Citivella televitudo sp. nov.

Candidatus Citivella televitudo (NL. fem. n. *televitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG210 sp003265305*. The type genome for the species is the GenBank assembly RS_GCF_003265305.2. The GC content of the type genome is 46.38 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Citivella venucax sp. nov.

Candidatus Citivella venucax (NL. fem. n. *venucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG210 sp900316575*. The type genome for the species is the GenBank assembly GCA_902757175.1. The GC content of the type genome is 48.68 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Citivia parocedo sp. nov.

Candidatus Citivia parocedo (NL. fem. n. *parocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-38-27 sp001821475*. The type genome for the species is the GenBank assembly GCA_000992685.1. The GC content of the type genome is 38.27 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Citivia gen. nov.

Candidatus Citivia (NL. fem. n. *Citivia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-38-27*. The type species for the genus is *Candidatus* Citivia parocedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiviaceae.

Description of *Candidatus* Citiviaceae fam. nov.

Candidatus Citiviaceae (NL. fem. n. *Citiviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-27.* The type genus for the taxon is *Candidatus* Citivia .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Citivida delebilega sp. nov.

Candidatus Citivida delebilega (NL. fem. n. *delebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1255 sp003162215*. The type genome for the species is the GenBank assembly GCA_003162215.1. The GC content of the type genome is 55.56 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Citivida gen. nov.

Candidatus Citivida (NL. fem. n. *Citivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1255*. The type species for the genus is *Candidatus* Citivida delebilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Citivida resulitio sp. nov.

Candidatus Citivida resulitio (NL. fem. n. *resulitio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1255 sp003154155*. The type genome for the species is the GenBank assembly GCA_003160615.1. The GC content of the type genome is 59.01 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Citivosa bigemitudo sp. nov.

Candidatus Citivosa bigemitudo (NL. fem. n. *bigemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-20 sp002773335*. The type genome for the species is the GenBank assembly GCA_002773335.1. The GC content of the type genome is 44.82 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Citivosa gen. nov.

Candidatus Citivosa (NL. fem. n. *Citivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-45-20*. The type species for the genus is *Candidatus* Citivosa bigemitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Citivosa cacalitia sp. nov.

Candidatus Citivosa cacalitia (NL. fem. n. *cacalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-20 sp007378985*. The type genome for the species is the GenBank assembly GCA_007378985.1. The GC content of the type genome is 44.32 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Citivosa denecitudo sp. nov.

Candidatus Citivosa denecitudo (NL. fem. n. *denecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-20 sp004296925*. The type genome for the species is the GenBank assembly GCA_004296925.1. The GC content of the type genome is 44.03 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Citivosa insinicella sp. nov.

Candidatus Citivosa insinicella (NL. fem. n. *insinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-20 sp004322365*. The type genome for the species is the GenBank assembly GCA_004322365.1. The GC content of the type genome is 44.19 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Citivosa nocumigena sp. nov.

Candidatus Citivosa nocumigena (NL. fem. n. *nocumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-45-20 sp011331835*. The type genome for the species is the GenBank assembly GCA_011331835.1. The GC content of the type genome is 54.38 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Citivula indifugo sp. nov.

Candidatus Citivula indifugo (NL. fem. n. *indifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-600 sp011333005*. The type genome for the species is the GenBank assembly GCA_011333005.1. The GC content of the type genome is 54.63 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Citivula gen. nov.

Candidatus Citivula (NL. fem. n. *Citivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-600*. The type species for the genus is *Candidatus* Citivula indifugo

.

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-600*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citivulaceae.

Description of *Candidatus* Citivulaceae fam. nov.

Candidatus Citivulaceae (NL. fem. n. *Citivulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-600.* The type genus for the taxon is *Candidatus* Citivula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-600*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Citivulales.

Description of *Candidatus* Citivulales ord. nov.

Candidatus Citivulales (NL. fem. n. *Citivulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-600.* The type genus for the taxon is *Candidatus* Citivula .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Citivula manibitio sp. nov.

Candidatus Citivula manibitio (NL. fem. n. *manibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-600 sp011364775*. The type genome for the species is the GenBank assembly GCA_011364115.1. The GC content of the type genome is 51.09 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Citivula sitelax sp. nov.

Candidatus Citivula sitelax (NL. fem. n. *sitelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-600 sp011366485*. The type genome for the species is the GenBank assembly GCA_011366485.1. The GC content of the type genome is 53.33 %

and the genome length is 2.15 Mbp.

Description of *Candidatus* Citocana acertatio sp. nov.

Candidatus Citocana acertatio (NL. fem. n. *acertatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp014378485*. The type genome for the species is the GenBank assembly GCA_014378485.1. The GC content of the type genome is 34.85 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Citocana gen. nov.

Candidatus Citocana (NL. fem. n. *Citocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4416*. The type species for the genus is *Candidatus* Citocana acertatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-17BO*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogariaceae.

Description of *Candidatus* Citocana arcatitas sp. nov.

Candidatus Citocana arcatitas (NL. fem. n. *arcatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp013823565*. The type genome for the species is the GenBank assembly GCA_013823565.1. The GC content of the type genome is 32.23 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Citocana assubitica sp. nov.

Candidatus Citocana assubitica (NL. fem. n. *assubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp005800865*. The type genome for the species is the GenBank assembly GCA_005800865.1. The GC content of the type genome is 33.3 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Citocana colipatio sp. nov.

Candidatus Citocana colipatio (NL. fem. n. *colipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp002420145*. The type genome for the species is the GenBank assembly GCA_002420145.1. The GC content of the type genome is 32.3 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Citocana conarilenta sp. nov.

Candidatus Citocana conarilenta (NL. fem. n. *conarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp903928655*. The type genome for the species is the GenBank assembly GCA_903928655.1. The GC content of the type genome is 30.47 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Citocana expalitoga sp. nov.

Candidatus Citocana expalitoga (NL. fem. n. *expalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp002390745*. The type genome for the species is the GenBank assembly GCA_002390745.1. The GC content of the type genome is 48.34 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Citocana fetutessa sp. nov.

Candidatus Citocana fetutessa (NL. fem. n. *fetutessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp903893815*. The type genome for the species is the GenBank assembly GCA_903893815.1. The GC content of the type genome is 32.69 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Citocana necubifica sp. nov.

Candidatus Citocana necubifica (NL. fem. n. *necubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4416 sp903834765*. The type genome for the species is the GenBank assembly GCA_903825025.1. The GC content of the type genome is 32.36 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Citocaria defunibra sp. nov.

Candidatus Citocaria defunibra (NL. fem. n. *defunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp002424305*. The type genome for the species is the GenBank assembly GCA_002398585.1. The GC content of the type genome is 47.8 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Citocaria gen. nov.

Candidatus Citocaria (NL. fem. n. *Citocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4971*. The type species for the genus is *Candidatus* Citocaria defunibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4971*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citocariaceae.

Description of *Candidatus* Citocariaceae fam. nov.

Candidatus Citocariaceae (NL. fem. n. *Citocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4971.* The type genus for the taxon is *Candidatus* Citocaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4971*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Citocariales.

Description of *Candidatus* Citocariales ord. nov.

Candidatus Citocariales (NL. fem. n. *Citocariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4971.* The type genus for the taxon is *Candidatus* Citocaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *SHA-98*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Taxilidae.

Description of *Candidatus* Citocaria exherugo sp. nov.

Candidatus Citocaria exherugo (NL. fem. n. *exherugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp012518595*. The type genome for the species is the GenBank assembly GCA_012518595.1. The GC content of the type genome is 49.14 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Citocaria fidenugo sp. nov.

Candidatus Citocaria fidenugo (NL. fem. n. *fidenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp900019985*. The type genome for the species is the GenBank assembly GCA_002340435.1. The GC content of the type genome is 49.59 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Citocaria genufax sp. nov.

Candidatus Citocaria genufax (NL. fem. n. *genufax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp012512055*. The type genome for the species is the GenBank assembly GCA_012512055.1. The GC content of the type genome is 50.46 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Citocaria irradatica sp. nov.

Candidatus Citocaria irradatica (NL. fem. n. *irradatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp012841305*. The type genome for the species is the GenBank assembly GCA_012841305.1. The GC content of the type genome is 49.92 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Citocaria occucisca sp. nov.

Candidatus Citocaria occucisca (NL. fem. n. *occucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp012689375*. The type genome for the species is the GenBank assembly GCA_012689375.1. The GC content of the type genome is 42.97 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Citocaria rinocitica sp. nov.

Candidatus Citocaria rinocitica (NL. fem. n. *rinocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4971 sp002398515*. The type genome for the species is the GenBank assembly GCA_002397915.1. The GC content of the type genome is 49.71 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Citocella visifisca sp. nov.

Candidatus Citocella visifisca (NL. fem. n. *visifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6733 sp002454165*. The type genome for the species is the GenBank assembly GCA_002453935.1. The GC content of the type genome is 51.49 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Citocella gen. nov.

Candidatus Citocella (NL. fem. n. *Citocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6733*. The type species for the genus is *Candidatus* Citocella visifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family

HTCC2089. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Citocia adcesitas sp. nov.

Candidatus Citocia adcesitas (NL. fem. n. *adcesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3900 sp012519465*. The type genome for the species is the GenBank assembly GCA_012519465.1. The GC content of the type genome is 49.04 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Citocia gen. nov.

Candidatus Citocia (NL. fem. n. *Citocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3900*. The type species for the genus is *Candidatus* Citocia adcesitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Citocia exsanitio sp. nov.

Candidatus Citocia exsanitio (NL. fem. n. *exsanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3900 sp012522935*. The type genome for the species is the GenBank assembly GCA_012522935.1. The GC content of the type genome is 49.38 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Citocia vinolessa sp. nov.

Candidatus Citocia vinolessa (NL. fem. n. *vinolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3900 sp002391675*. The type genome for the species is the GenBank assembly GCA_002391675.1. The GC content of the type genome is 51.13 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Citocida affamilenta sp. nov.

Candidatus Citocida affamilenta (NL. fem. n. *affamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7542 sp003161635*. The type genome for the species is the GenBank assembly GCA_003161635.1. The GC content of the type genome is 56.81 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Citocida gen. nov.

Candidatus Citocida (NL. fem. n. *Citocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7542*. The type species for the genus is *Candidatus* Citocida affamilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11358*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Loceliaceae.

Description of *Candidatus* Citocida murelibra sp. nov.

Candidatus Citocida murelibra (NL. fem. n. *murelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7542 sp003134375*. The type genome for the species is the GenBank assembly GCA_003138605.1. The GC content of the type genome is 56.74 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Citocida proclatica sp. nov.

Candidatus Citocida proclatica (NL. fem. n. *proclatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7542 sp002479245*. The type genome for the species is the GenBank assembly GCA_002479245.1. The GC content of the type genome is 56.73 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Citocosa aterricella sp. nov.

Candidatus Citocosa aterricella (NL. fem. n. *aterricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVD01 sp013044025*. The type genome for the species is the GenBank assembly GCA_013044025.1. The GC content of the type genome is 57.89 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Citocosa gen. nov.

Candidatus Citocosa (NL. fem. n. *Citocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVD01*. The type species for the genus is *Candidatus* Citocosa aterricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABEVD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citocosaceae.

Description of *Candidatus* Citocosaceae fam. nov.

Candidatus Citocosaceae (NL. fem. n. *Citocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABEVD01.* The type genus for the taxon is *Candidatus* Citocosa .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Citocula cuticessa sp. nov.

Candidatus Citocula cuticessa (NL. fem. n. *cuticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED131 sp002689905*. The type genome for the species is the GenBank assembly GCA_002171235.1. The GC content of the type genome is 34.65 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Citocula gen. nov.

Candidatus Citocula (NL. fem. n. *Citocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED131*. The type species for the genus is *Candidatus* Citocula cuticessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Citoculaceae fam. nov.

Candidatus Citoculaceae (NL. fem. n. *Citoculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED131.* The type genus for the taxon is *Candidatus* Citocula .

According to the original version of GTDB R06-RS202, this family belongs to the order *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nubifariales.

Description of *Candidatus* Citricoccus cepurax sp. nov.

Candidatus Citricoccus cepurax (NL. fem. n. *cepurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citricoccus sp005877055*. The type genome for the species is the GenBank assembly RS_GCF_005877055.1. The GC content of the type genome is 73.41 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Citricoccus giganisca sp. nov.

Candidatus Citricoccus giganisca (NL. fem. n. *giganisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citricoccus sp000224415*. The type genome for the species is the GenBank assembly RS_GCF_014199555.1. The GC content of the type genome is 71.04 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Citricoccus modifousia sp. nov.

Candidatus Citricoccus modifousia (NL. fem. n. *modifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citricoccus sp902506195*. The type genome for the species is the GenBank assembly RS_GCF_902506195.1. The GC content of the type genome is 68.57 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Citrobacter adinvessa sp. nov.

Candidatus Citrobacter adinvessa (NL. fem. n. *adinvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citrobacter sp004684345*. The type genome for the species is the GenBank assembly RS_GCF_004684345.1. The GC content of the type genome is 51.95 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Citrobacter delubiforma sp. nov.

Candidatus Citrobacter delubiforma (NL. fem. n. *delubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citrobacter sp005281345*. The type genome for the species is the GenBank assembly RS_GCF_005281345.1. The GC content of the type genome is 51.57 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Citrobacter impililega sp. nov.

Candidatus Citrobacter impililega (NL. fem. n. *impililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citrobacter sp010231475*. The type genome for the species is the GenBank assembly RS_GCF_010231475.1. The GC content of the type genome is 51.76 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Citrobacter allacetta sp. nov.

Candidatus Citrobacter allacetta (NL. fem. n. *allacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Citrobacter_A sp013836145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013836145.1. The GC content of the type genome is 52.75 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Citrobacter direcitoga sp. nov.

Candidatus Citrobacter direcitoga (NL. fem. n. *direcitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Citrobacter_A sp009363175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009363175.1. The GC content of the type genome is 53.29 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Cituvana vinulitudo sp. nov.

Candidatus Cituvana vinulitudo (NL. fem. n. *vinulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HMF5848 sp003944835*. The type genome for the species is the GenBank assembly RS_GCF_003944835.1. The GC content of the type genome is 37.38 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Cituvana gen. nov.

Candidatus Cituvana (NL. fem. n. *Cituvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HMF5848*. The type species for the genus is *Candidatus* Cituvana vinulitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HMF5848*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cituvanaceae.

Description of *Candidatus* Cituvanaceae fam. nov.

Candidatus Cituvanaceae (NL. fem. n. *Cituvanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HMF5848.* The type genus for the taxon is *Candidatus* Cituvana .

According to GTDB R06-RS202, this family belongs to the order *Bacillales*.

Description of *Candidatus* Cituvella galacitrix sp. nov.

Candidatus Cituvella galacitrix (NL. fem. n. *galacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5456 sp002427325*. The type genome for the species is the GenBank assembly GCA_002427325.1. The GC content of the type genome is 46.32 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Cituvella gen. nov.

Candidatus Cituvella (NL. fem. n. *Cituvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5456*. The type species for the genus is *Candidatus* Cituvella galacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cituvella turibilega sp. nov.

Candidatus Cituvella turibilega (NL. fem. n. *turibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5456 sp012839325*. The type genome for the species is the GenBank assembly GCA_012839325.1. The GC content of the type genome is 46.34 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cituvia inretentia sp. nov.

Candidatus Cituvia inretentia (NL. fem. n. *inretentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-30 sp001303695*. The type genome for the species is the

GenBank assembly GCA_001303695.1. The GC content of the type genome is 51.01 % and the genome length is 4.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Cituvia gen. nov.

Candidatus Cituvia (NL. fem. n. *Cituvia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-30*. The type species for the genus is *Candidatus* Cituvia inretentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cituviaceae.

Description of *Candidatus* Cituviaceae fam. nov.

Candidatus Cituviaceae (NL. fem. n. *Cituviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-30.* The type genus for the taxon is *Candidatus* Cituvia .

According to GTDB R06-RS202, this family belongs to the order *Sedimentisphaerales*.

Description of *Candidatus* Cituvida nidifatio sp. nov.

Candidatus Cituvida nidifatio (NL. fem. n. *nidifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-150 sp011056185*. The type genome for the species is the GenBank assembly GCA_011054695.1. The GC content of the type genome is 68.61 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cituvida gen. nov.

Candidatus Cituvida (NL. fem. n. *Cituvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-150*. The type species for the genus is *Candidatus* Cituvida nidifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefiaceae.

Description of *Candidatus* Cituvosa habacatio sp. nov.

Candidatus Cituvosa habacatio (NL. fem. n. *habacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11359 sp003455555*. The type genome for the species is the GenBank assembly GCA_003455555.1. The GC content of the type genome is 44.34 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Cituvosa gen. nov.

Candidatus Cituvosa (NL. fem. n. *Cituvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11359*. The type species for the genus is *Candidatus* Cituvosa habacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cituvosaceae.

Description of *Candidatus* Cituvosaceae fam. nov.

Candidatus Cituvosaceae (NL. fem. n. *Cituvosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11359.* The type genus for the taxon is *Candidatus* Cituvosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Cituvosa pinacilega sp. nov.

Candidatus Cituvosa pinacilega (NL. fem. n. *pinacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11359 sp903831815*. The type genome for the species is the GenBank assembly GCA_903831815.1. The GC content of the type genome is 41.72 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Cituvula arvecentia sp. nov.

Candidatus Cituvula arvecentia (NL. fem. n. *arvecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG806 sp012839185*. The type genome for the species is the GenBank assembly GCA_012839185.1. The GC content of the type genome is 39.37 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Cituvula gen. nov.

Candidatus Cituvula (NL. fem. n. *Cituvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG806*. The type species for the genus is *Candidatus* Cituvula arvecentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cituvula direpitas sp. nov.

Candidatus Cituvula direpitas (NL. fem. n. *direpitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG806 sp900313475*. The type genome for the species is the GenBank assembly GCA_900313475.1. The GC content of the type genome is 48.38 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Clancana gasifivita sp. nov.

Candidatus Clancana gasifivita (NL. fem. n. *gasifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2698995 sp002698995*. The type genome for the species is the GenBank assembly GCA_002698995.1. The GC content of the type genome is 31.9 %

and the genome length is 4.23 Mbp.

Description of *Candidatus* Clancana gen. nov.

Candidatus Clancana (NL. fem. n. *Clancana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2698995*. The type species for the genus is *Candidatus* Clancana gasifivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Clancaria intemilega sp. nov.

Candidatus Clancaria intemilega (NL. fem. n. *intemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJU01 sp013298165*. The type genome for the species is the GenBank assembly GCA_013298165.1. The GC content of the type genome is 49.71 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Clancaria gen. nov.

Candidatus Clancaria (NL. fem. n. *Clancaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJU01*. The type species for the genus is *Candidatus* Clancaria intemilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Clancia ammigentia sp. nov.

Candidatus Clancia ammigentia (NL. fem. n. *ammigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W0P29-029 sp004558035*. The type genome for the species is the GenBank assembly GCA_004558035.1. The GC content of the type genome is 63.83 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Clancia gen. nov.

Candidatus Clancia (NL. fem. n. *Clancia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W0P29-029*. The type species for the genus is *Candidatus* Clancia ammigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA953*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucanaceae.

Description of *Candidatus* Clancula impugitas sp. nov.

Candidatus Clancula impugitas (NL. fem. n. *impugitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WARW01 sp013387215*. The type genome for the species is the GenBank assembly GCA_013387215.1. The GC content of the type genome is 34.37 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Clancula gen. nov.

Candidatus Clancula (NL. fem. n. *Clancula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WARW01*. The type species for the genus is *Candidatus* Clancula impugitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Clavibacter resulitas sp. nov.

Candidatus Clavibacter resulitas (NL. fem. n. *resulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clavibacter sp003576405*. The type genome for the species is the GenBank assembly RS_GCF_003576415.1. The GC content of the type genome is 73.15 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Clavibacter tibicivita sp. nov.

Candidatus Clavibacter tibicivita (NL. fem. n. *tibicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clavibacter sp003384945*. The type genome for the species is the GenBank assembly RS_GCF_003384945.1. The GC content of the type genome is 73.53 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Cloacibacterium immedousia sp. nov.

Candidatus Cloacibacterium immedousia (NL. fem. n. *immedousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cloacibacterium sp002337005*. The type genome for the species is the GenBank assembly GCA_002337005.1. The GC content of the type genome is 31.92 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Cloacibacterium recocedo sp. nov.

Candidatus Cloacibacterium recocedo (NL. fem. n. *recocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cloacibacterium sp002422665*. The type genome for the species is the GenBank assembly GCA_002422665.1. The GC content of the type genome is 32.79 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Cloacimonas volubago sp. nov.

Candidatus Cloacimonas volubago (NL. fem. n. *volubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cloacimonas sp002432865*. The type genome for the species is the GenBank assembly GCA_001603745.1. The GC content of the type genome is 36.45 % and the genome length is 1.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Clostridioides cuticitudo sp. nov.

Candidatus Clostridioides cuticitudo (NL. fem. n. *cuticitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridioides_A sp002390935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002387145.1. The GC content of the type genome is 30.49 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Clostridium addivitio sp. nov.

Candidatus Clostridium addivitio (NL. fem. n. *addivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp007115085*. The type genome for the species is the GenBank assembly RS_GCF_007115085.1. The GC content of the type genome is 29.78 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Clostridium admulugo sp. nov.

Candidatus Clostridium admulugo (NL. fem. n. *admulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp012520205*. The type genome for the species is the GenBank assembly GCA_012520205.1. The GC content of the type genome is 29.67 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Clostridium agnomitura sp. nov.

Candidatus Clostridium agnomitura (NL. fem. n. *agnomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900766315*. The type genome for the species is the GenBank assembly GCA_900766315.1. The GC content of the type genome is 27.87 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Clostridium agricifica sp. nov.

Candidatus Clostridium agricifica (NL. fem. n. *agricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp003539755*. The type genome for the species is the GenBank assembly GCA_003539755.1. The GC content of the type genome is 28.64 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Clostridium aphoribra sp. nov.

Candidatus Clostridium aphoribra (NL. fem. n. *aphoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp012843905*. The type genome for the species is the GenBank assembly RS_GCF_012843905.1. The GC content of the type genome is 28.59 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Clostridium arvecitas sp. nov.

Candidatus Clostridium arvecitas (NL. fem. n. *arvecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900116755*. The type genome for the species is the GenBank assembly RS_GCF_900116755.1. The GC content of the type genome is 28.86 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Clostridium caravatica sp. nov.

Candidatus Clostridium caravatica (NL. fem. n. *caravatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp009928485*. The type genome for the species is the GenBank assembly RS_GCF_009928485.1. The GC content of the type genome is 29.02 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Clostridium cilibicella sp. nov.

Candidatus Clostridium cilibicella (NL. fem. n. *cilibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Clostridium sp900759995*. The type genome for the species is the GenBank assembly GCA_900759995.1. The GC content of the type genome is 27.93 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Clostridium daducessa sp. nov.

Candidatus Clostridium daducessa (NL. fem. n. *daducessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp000230835*. The type genome for the species is the GenBank assembly RS_GCF_000230835.1. The GC content of the type genome is 30.1 % and the genome length is 6.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Clostridium denigigena sp. nov.

Candidatus Clostridium denigigena (NL. fem. n. *denigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900769625*. The type genome for the species is the GenBank assembly GCA_900769625.1. The GC content of the type genome is 30.21 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Clostridium denunatio sp. nov.

Candidatus Clostridium denunatio (NL. fem. n. *denunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp012519845*. The type genome for the species is the GenBank assembly GCA_012519845.1. The GC content of the type genome is 27.95 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Clostridium denunitoga sp. nov.

Candidatus Clostridium denunitoga (NL. fem. n. *denunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp001916075*. The type genome for the species is the GenBank assembly RS_GCF_014287855.1. The GC content of the type genome is 29.47

% and the genome length is 2.84 Mbp.

Description of *Candidatus* Clostridium dilemibra sp. nov.

Candidatus Clostridium dilemibra (NL. fem. n. *dilemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp000753455*. The type genome for the species is the GenBank assembly RS_GCF_000753455.2. The GC content of the type genome is 29.16 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Clostridium diludilenta sp. nov.

Candidatus Clostridium diludilenta (NL. fem. n. *diludilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp002760435*. The type genome for the species is the GenBank assembly GCA_000309845.1. The GC content of the type genome is 29.79 % and the genome length is 6.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sub-cultured for isolation from anaerobic microbial enrichment culture derived from a coal seam gas formation water sample".

Description of *Candidatus* Clostridium expisatica sp. nov.

Candidatus Clostridium expisatica (NL. fem. n. *expisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp012519155*. The type genome for the species is the GenBank assembly GCA_012519155.1. The GC content of the type genome is 27.88 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Clostridium feditimonas sp. nov.

Candidatus Clostridium feditimonas (NL. fem. n. *feditimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900540255*. The type genome for the species is the GenBank assembly GCA_900540255.1. The GC content of the type genome is 26.81 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Clostridium infesousia sp. nov.

Candidatus Clostridium infesousia (NL. fem. n. *infesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900547475*. The type genome for the species is the GenBank assembly GCA_900547475.1. The GC content of the type genome is 27.91 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Clostridium luticugo sp. nov.

Candidatus Clostridium luticugo (NL. fem. n. *luticugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900543325*. The type genome for the species is the GenBank assembly GCA_900543325.1. The GC content of the type genome is 27.82 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Clostridium manomitrix sp. nov.

Candidatus Clostridium manomitrix (NL. fem. n. *manomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900317445*. The type genome for the species is the GenBank assembly GCA_900317445.1. The GC content of the type genome is 27.21 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Clostridium navifilega sp. nov.

Candidatus Clostridium navifilega (NL. fem. n. *navifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp900539375*. The type genome for the species is the GenBank assembly GCA_900539375.1. The GC content of the type genome is 27.0 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Clostridium pluscitudo sp. nov.

Candidatus Clostridium pluscitudo (NL. fem. n. *pluscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp902785295*. The type genome for the species is the GenBank assembly GCA_902785295.1. The GC content of the type genome is 27.38 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Clostridium podagitura sp. nov.

Candidatus Clostridium podagitura (NL. fem. n. *podagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp000435835*. The type genome for the species is the GenBank assembly GCA_900543995.1. The GC content of the type genome is 29.2 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Clostridium velivibula sp. nov.

Candidatus Clostridium velivibula (NL. fem. n. *velivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium sp000498355*. The type genome for the species is the GenBank assembly RS_GCF_000498355.1. The GC content of the type genome is 26.75 % and the genome length is 3.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "landfill leacheate sludge".

Description of *Candidatus* Clostridium fuligitrix sp. nov.

Candidatus Clostridium fuligitrix (NL. fem. n. *fuligitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AD sp002403785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002403785.1. The GC content of the type genome is 30.69 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Clostridium alsidatio sp. nov.

Candidatus Clostridium alsidatio (NL. fem. n. *alsidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AI sp002297865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002297865.1. The GC content of the type genome is 35.98 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Clostridium manufibra sp. nov.

Candidatus Clostridium manufibra (NL. fem. n. *manufibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AK sp900185645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000765165.1. The GC content of the type genome is 31.36 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Clostridium abantibula sp. nov.

Candidatus Clostridium abantibula (NL. fem. n. *abantibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AM sp900759715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900759715.1. The GC content of the type genome is 31.21 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Clostridium corocatica sp. nov.

Candidatus Clostridium corocatica (NL. fem. n. *corocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AM sp012926525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012926525.1. The GC content of the type genome is 29.45 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Clostridium panopatio sp. nov.

Candidatus Clostridium panopatio (NL. fem. n. *panopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AP sp000509125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000471845.1. The GC content of the type genome is 47.54 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Clostridium femelilega sp. nov.

Candidatus Clostridium femelilega (NL. fem. n. *femelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AQ sp000165065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003603255.1. The GC content of the type genome is 42.63 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Clostridium refinitia sp. nov.

Candidatus Clostridium refinitia (NL. fem. n. *refinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AQ sp900552125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900759145.1. The GC content of the type genome is 32.79 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Clostridium retecitica sp. nov.

Candidatus Clostridium retecitica (NL. fem. n. *retecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_AQ sp003481775*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902385165.1. The GC content of the type genome is 43.59 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Clostridium addubimonas sp. nov.

Candidatus Clostridium addubimonas (NL. fem. n. *addubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_B sp004006395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004006395.2. The GC content of the type genome is 31.17 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Clostridium derelatica sp. nov.

Candidatus Clostridium derelatica (NL. fem. n. *derelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_B sp014050525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014050525.1. The GC content of the type genome is 29.79 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Clostridium dibapugo sp. nov.

Candidatus Clostridium dibapugo (NL. fem. n. *dibapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_B sp902809985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008692765.1. The GC content of the type genome is 34.16 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Clostridium vivifitudo sp. nov.

Candidatus Clostridium vivifitudo (NL. fem. n. *vivifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_B sp003497125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903789665.1. The GC content of the type genome is 35.69 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Clostridium negotitia sp. nov.

Candidatus Clostridium negotitia (NL. fem. n. *negotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_E sp002397665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002397665.1. The GC content of the type genome is 55.56 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Clostridium gasififorma sp. nov.

Candidatus Clostridium gasififorma (NL. fem. n. *gasififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_F sp001276215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011017215.1. The GC content of the type genome is 27.33 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Clostridium adfunetta sp. nov.

Candidatus Clostridium adfunetta (NL. fem. n. *adfunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp900547625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900547625.1. The GC content of the type genome is 28.18 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Clostridium adgesimonia sp. nov.

Candidatus Clostridium adgesimonia (NL. fem. n. *adgesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp002455975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002455975.1. The GC content of the type genome is 28.96 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Clostridium advecedo sp. nov.

Candidatus Clostridium advecedo (NL. fem. n. *advecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp002381695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002381695.1. The GC content of the type genome is 30.33 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Clostridium deforibula sp. nov.

Candidatus Clostridium deforibula (NL. fem. n. *deforibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp000447315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000447315.1. The GC content of the type genome is 31.31 % and the genome length is 4.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stool sample from healthy individual".

Description of *Candidatus* Clostridium excinetta sp. nov.

Candidatus Clostridium excinetta (NL. fem. n. *excinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp002341865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002341865.1. The GC content of the type genome is 28.44 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Clostridium inbeletta sp. nov.

Candidatus Clostridium inbeletta (NL. fem. n. *inbeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp002453475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002453475.1. The GC content of the type genome is 29.94 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Clostridium parocitrix sp. nov.

Candidatus Clostridium parocitrix (NL. fem. n. *parocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp002316385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002316385.1. The GC content of the type genome is 29.84 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Clostridium peridetta sp. nov.

Candidatus Clostridium peridetta (NL. fem. n. *peridetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp900548455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900548455.1. The GC content of the type genome is 29.68 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Clostridium prosliforma sp. nov.

Candidatus Clostridium prosliforma (NL. fem. n. *prosliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp902363375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902363375.1. The GC content of the type genome is 29.91 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Clostridium recomimonia sp. nov.

Candidatus Clostridium recomimonia (NL. fem. n. *recomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_J sp000821305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000821305.1. The GC content of the type genome is 32.22 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Clostridium cepuricula sp. nov.

Candidatus Clostridium cepuricula (NL. fem. n. *cepuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_Q sp900547735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900547735.1. The GC content of the type genome is 49.17 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Clostridium defarifica sp. nov.

Candidatus Clostridium defarifica (NL. fem. n. *defarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_Q sp003024715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_003480955.1. The GC content of the type genome is 48.26 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Clostridium excalisca sp. nov.

Candidatus Clostridium excalisca (NL. fem. n. *excalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_Q sp009911305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009911305.1. The GC content of the type genome is 51.45 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Clostridium refunisca sp. nov.

Candidatus Clostridium refunisca (NL. fem. n. *refunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_Q sp000435655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900538835.1. The GC content of the type genome is 50.01 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Clostridium decapivita sp. nov.

Candidatus Clostridium decapivita (NL. fem. n. *decapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_R sp900321355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766315.1. The GC content of the type genome is 57.97 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Clostridium fumifetta sp. nov.

Candidatus Clostridium fumifetta (NL. fem. n. *fumifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_R sp900321915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900321915.1. The GC content of the type genome is 56.81 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Clostridium retunitas sp. nov.

Candidatus Clostridium retunitas (NL. fem. n. *retunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_R sp003445895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902793165.1. The GC content of the type genome is 55.75 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Clostridium accucax sp. nov.

Candidatus Clostridium accucax (NL. fem. n. *accucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_S sp001270375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001270375.1. The GC content of the type genome is 30.63 % and the genome length is 3.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge of distillery waste treatment plant".

Description of *Candidatus* Clostridium veridimonas sp. nov.

Candidatus Clostridium veridimonas (NL. fem. n. *veridimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Clostridium_X sp002423705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002423705.1. The GC content of the type genome is 31.61 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Cnestana affunimonia sp. nov.

Candidatus Cnestana affunimonia (NL. fem. n. *affunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1203 sp002309695*. The type genome for the species is the GenBank assembly GCA_002309695.1. The GC content of the type genome is 60.56 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Cnestana gen. nov.

Candidatus Cnestana (NL. fem. n. *Cnestana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1203*. The type species for the genus is *Candidatus* Cnestana affunimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5297*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homogidaceae.

Description of *Candidatus* Cnestaria aminnilega sp. nov.

Candidatus Cnestaria aminnilega (NL. fem. n. *aminnilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWF01 sp011375985*. The type genome for the species is the GenBank assembly GCA_011375985.1. The GC content of the type genome is 54.87 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Cnestaria gen. nov.

Candidatus Cnestaria (NL. fem. n. *Cnestaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWF01*. The type species for the genus is *Candidatus* Cnestaria aminnilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cnestella detepiforma sp. nov.

Candidatus Cnestella detepiforma (NL. fem. n. *detepiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZZ01 sp012514595*. The type genome for the species is the GenBank assembly GCA_012514595.1. The GC content of the type genome is 58.2 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Cnestella gen. nov.

Candidatus Cnestella (NL. fem. n. *Cnestella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZZ01*. The type species for the genus is *Candidatus* Cnestella detepiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002753745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosaculaceae.

Description of *Candidatus* Cnestida adambitio sp. nov.

Candidatus Cnestida adambitio (NL. fem. n. *adambitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO3C6 sp010692645*. The type genome for the species is the GenBank assembly GCA_010692645.1. The GC content of the type genome is 43.17 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Cnestida gen. nov.

Candidatus Cnestida (NL. fem. n. *Cnestida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIO3C6*. The type species for the genus is *Candidatus* Cnestida adambitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cnestida molecitura sp. nov.

Candidatus Cnestida molecitura (NL. fem. n. *molecitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO3C6 sp010692425*. The type genome for the species is the GenBank assembly GCA_010692425.1. The GC content of the type genome is 42.55 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Cnestosa conarisca sp. nov.

Candidatus Cnestosa conarisca (NL. fem. n. *conarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-56-16 sp001817495*. The type genome for the species is the GenBank assembly GCA_001817495.1. The GC content of the type genome is 55.63 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cnestosa gen. nov.

Candidatus Cnestosa (NL. fem. n. *Cnestosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-56-16*. The type species for the genus is *Candidatus* Cnestosa conarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Cnestula demulivita sp. nov.

Candidatus Cnestula demulivita (NL. fem. n. *demulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XBD2001 sp900116395*. The type genome for the species is the GenBank assembly RS_GCF_900116395.1. The GC content of the type genome is 46.19 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Cnestula gen. nov.

Candidatus Cnestula (NL. fem. n. *Cnestula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XBD2001*. The type species for the genus is *Candidatus* Cnestula demulivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cobalana cruppessa sp. nov.

Candidatus Cobalana cruppessa (NL. fem. n. *cruppessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLST01 sp007130265*. The type genome for the species is the GenBank assembly GCA_007130265.1. The GC content of the type genome is 63.73 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Cobalana gen. nov.

Candidatus Cobalana (NL. fem. n. *Cobalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLST01*. The type species for the genus is *Candidatus* Cobalana cruppessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLST01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cobalanaceae.

Description of *Candidatus* Cobalanaceae fam. nov.

Candidatus Cobalanaceae (NL. fem. n. *Cobalanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLST01.* The type genus for the taxon is *Candidatus* Cobalana .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_C*.

Description of *Candidatus* Cobalana detumetta sp. nov.

Candidatus Cobalana detumetta (NL. fem. n. *detumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLST01 sp007694025*. The type genome for the species is the GenBank assembly GCA_007694025.1. The GC content of the type genome is 64.39 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Cobalana ducilugo sp. nov.

Candidatus Cobalana ducilugo (NL. fem. n. *ducilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLST01 sp007118855*. The type genome for the species is the GenBank assembly GCA_007132295.1. The GC content of the type genome is 64.97 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Cobalana homunatica sp. nov.

Candidatus Cobalana homunatica (NL. fem. n. *homunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLST01 sp007127335*. The type genome for the species is the GenBank assembly GCA_003560785.1. The GC content of the type genome is 64.19 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Cobalana inretatica sp. nov.

Candidatus Cobalana inretatica (NL. fem. n. *inretatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLST01 sp007129695*. The type genome for the species is the GenBank assembly GCA_007129695.1. The GC content of the type genome is 64.86 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Cobalaria haricitas sp. nov.

Candidatus Cobalaria haricitas (NL. fem. n. *haricitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RFSX01 sp009923745*. The type genome for the species is the GenBank assembly GCA_009923745.1. The GC content of the type genome is 41.34 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cobalaria gen. nov.

Candidatus Cobalaria (NL. fem. n. *Cobalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFSX01*. The type species for the genus is *Candidatus* Cobalaria haricitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cobalaria inlibentia sp. nov.

Candidatus Cobalaria inlibentia (NL. fem. n. *inlibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFSX01 sp013042795*. The type genome for the species is the GenBank assembly GCA_013042795.1. The GC content of the type genome is 38.7 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Cobalaria redunibula sp. nov.

Candidatus Cobalaria redunibula (NL. fem. n. *redunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFSX01 sp013001975*. The type genome for the species is the GenBank assembly GCA_013001975.1. The GC content of the type genome is 34.0 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Cobalaria solacilega sp. nov.

Candidatus Cobalaria solacilega (NL. fem. n. *solacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFSX01 sp013002625*. The type genome for the species is the GenBank assembly GCA_013002625.1. The GC content of the type genome is 39.02 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Cobalella detecibula sp. nov.

Candidatus Cobalella detecibula (NL. fem. n. *detecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3375 sp900551955*. The type genome for the species is the GenBank assembly GCA_900551955.1. The GC content of the type genome is 30.27 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Cobalella gen. nov.

Candidatus Cobalella (NL. fem. n. *Cobalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3375*. The type species for the genus is *Candidatus* Cobalella detecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3375*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cobalellaceae.

Description of *Candidatus* Cobalellaceae fam. nov.

Candidatus Cobalellaceae (NL. fem. n. *Cobalellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3375.* The type genus for the taxon is *Candidatus* Cobalella .

According to GTDB R06-RS202, this family belongs to the order *Mycoplasmatales*.

Description of *Candidatus* Cobalella isoscago sp. nov.

Candidatus Cobalella isoscago (NL. fem. n. *isoscago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3375 sp002359095*. The type genome for the species is the GenBank assembly GCA_002359095.1. The GC content of the type genome is 27.62 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Cobalida pereximonas sp. nov.

Candidatus Cobalida pereximonas (NL. fem. n. *pereximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MarineAlpha4-Bin1 sp002937525*. The type genome for the species is the GenBank assembly GCA_002937525.1. The GC content of the type genome is 62.14 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Cobalida gen. nov.

Candidatus Cobalida (NL. fem. n. *Cobalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MarineAlpha4-Bin1*. The type species for the genus is *Candidatus* Cobalida pereximonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2717185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munimellaceae.

Description of *Candidatus* Cobalosa cimelitica sp. nov.

Candidatus Cobalosa cimelitica (NL. fem. n. *cimelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVBF01 sp903904095*. The type genome for the species is the GenBank assembly GCA_903901065.1. The GC content of the type genome is 35.49 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Cobalosa gen. nov.

Candidatus Cobalosa (NL. fem. n. *Cobalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVBF01*. The type species for the genus is *Candidatus* Cobalosa cimelitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Cobalula accenessa sp. nov.

Candidatus Cobalula accenessa (NL. fem. n. *accenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4644 sp900763355*. The type genome for the species is the GenBank assembly RS_GCF_900763355.1. The GC content of the type genome is 63.13 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cobalula gen. nov.

Candidatus Cobalula (NL. fem. n. *Cobalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4644*. The type species for the genus is *Candidatus* Cobalula accenessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cobalula faticetta sp. nov.

Candidatus Cobalula faticetta (NL. fem. n. *faticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4644 sp900555855*. The type genome for the species is the GenBank assembly GCA_900555855.1. The GC content of the type genome is 61.04 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cobalula sifunitia sp. nov.

Candidatus Cobalula sifunitia (NL. fem. n. *sifunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4644 sp002405755*. The type genome for the species is the GenBank assembly GCA_002436645.1. The GC content of the type genome is 61.22 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cobetia cerevitoga sp. nov.

Candidatus Cobetia cerevitoga (NL. fem. n. *cerevitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cobetia sp009796845*. The type genome for the species is the GenBank assembly RS_GCF_009796845.1. The GC content of the type genome is 57.7 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Cocibana anagnitio sp. nov.

Candidatus Cocibana anagnitio (NL. fem. n. *anagnitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900553605*. The type genome for the species is the GenBank assembly GCA_900553605.1. The GC content of the type genome is 54.05 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cocibana gen. nov.

Candidatus Cocibana (NL. fem. n. *Cocibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1427*. The type species for the genus is *Candidatus* Cocibana anagnitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocibana cerofetta sp. nov.

Candidatus Cocibana cerofetta (NL. fem. n. *cerofetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900547965*. The type genome for the species is the GenBank assembly RS_GCF_900755315.1. The GC content of the type genome is 53.43 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cocibana colipitia sp. nov.

Candidatus Cocibana colipitia (NL. fem. n. *colipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-1427 sp000431675*. The type genome for the species is the GenBank assembly GCA_000431675.1. The GC content of the type genome is 45.38 % and the genome length is 2.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cocibana denixousia sp. nov.

Candidatus Cocibana denixousia (NL. fem. n. *denixousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900548955*. The type genome for the species is the GenBank assembly GCA_902406295.1. The GC content of the type genome is 44.91 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Cocibana detunicula sp. nov.

Candidatus Cocibana detunicula (NL. fem. n. *detunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900546175*. The type genome for the species is the GenBank assembly GCA_900546175.1. The GC content of the type genome is 42.83 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cocibana ephemibula sp. nov.

Candidatus Cocibana ephemibula (NL. fem. n. *ephemibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900544455*. The type genome for the species is the GenBank assembly GCA_900544455.1. The GC content of the type genome is 53.29 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Cocibana genocitoga sp. nov.

Candidatus Cocibana genocitoga (NL. fem. n. *genocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900542265*. The type genome for the species is the GenBank assembly GCA_900542265.1. The GC content of the type genome is 45.65 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Cocibana latibedo sp. nov.

Candidatus Cocibana latibedo (NL. fem. n. *latibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900554685*. The type genome for the species is the GenBank assembly GCA_900554685.1. The GC content of the type genome is 45.69 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Cocibana laxitetta sp. nov.

Candidatus Cocibana laxitetta (NL. fem. n. *laxitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900542525*. The type genome for the species is the GenBank assembly GCA_900542525.1. The GC content of the type genome is 52.94 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Cocibana menapifica sp. nov.

Candidatus Cocibana menapifica (NL. fem. n. *menapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp000434775*. The type genome for the species is the GenBank assembly GCA_000434775.1. The GC content of the type genome is 44.88 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cocibana menapilenta sp. nov.

Candidatus Cocibana menapilenta (NL. fem. n. *menapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp000435475*. The type genome for the species is the GenBank assembly GCA_900539085.1. The GC content of the type genome is 45.15 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Cocibana negotousia sp. nov.

Candidatus Cocibana negotousia (NL. fem. n. *negotousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900753095*. The type genome for the species is the GenBank assembly RS_GCF_900753095.1. The GC content of the type genome is 57.65 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cocibana redunitas sp. nov.

Candidatus Cocibana redunitas (NL. fem. n. *redunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900551155*. The type genome for the species is the GenBank assembly RS_GCF_900751735.1. The GC content of the type genome is 45.27 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cocibana refocimonia sp. nov.

Candidatus Cocibana refocimonia (NL. fem. n. *refocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900539675*. The type genome for the species is the GenBank assembly GCA_900539675.1. The GC content of the type genome is 49.08 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Cocibana refulitudo sp. nov.

Candidatus Cocibana refulitudo (NL. fem. n. *refulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900556585*. The type genome for the species is the GenBank assembly GCA_900556585.1. The GC content of the type genome is 44.79 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Cocibana revecago sp. nov.

Candidatus Cocibana revecago (NL. fem. n. *revecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900555755*. The type genome for the species is the GenBank assembly GCA_900555755.1. The GC content of the type genome is 56.55 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Cocibana semilitica sp. nov.

Candidatus Cocibana semilitica (NL. fem. n. *semilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp000435675*. The type genome for the species is the GenBank assembly GCA_000435675.1. The GC content of the type genome is 54.07 % and the genome length is 1.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cocibana televitio sp. nov.

Candidatus Cocibana televitio (NL. fem. n. *televitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp000436075*. The type genome for the species is the GenBank assembly GCA_001915265.1. The GC content of the type genome is 52.92 % and the genome length is 1.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Cocibana timefessa sp. nov.

Candidatus Cocibana timefessa (NL. fem. n. *timefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900540345*. The type genome for the species is the GenBank assembly GCA_900540345.1. The GC content of the type genome is 51.01 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Cocibana vepalax sp. nov.

Candidatus Cocibana vepalax (NL. fem. n. *vepalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1427 sp900538545*. The type genome for the species is the

GenBank assembly RS_GCF_900756395.1. The GC content of the type genome is 54.44 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Cocibaria episcicella sp. nov.

Candidatus Cocibaria episcicella (NL. fem. n. *episcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYLA01 sp012522135*. The type genome for the species is the GenBank assembly GCA_012522135.1. The GC content of the type genome is 62.74 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Cocibaria gen. nov.

Candidatus Cocibaria (NL. fem. n. *Cocibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYLA01*. The type species for the genus is *Candidatus* Cocibaria episcicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYLA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibariaceae.

Description of *Candidatus* Cocibariaceae fam. nov.

Candidatus Cocibariaceae (NL. fem. n. *Cocibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYLA01*. The type genus for the taxon is *Candidatus* Cocibaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defosellales.

Description of *Candidatus* Cocibella butubousia sp. nov.

Candidatus Cocibella butubousia (NL. fem. n. *butubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4636 sp900770945*. The type genome for the species is the

GenBank assembly RS_GCF_900770945.1. The GC content of the type genome is 45.5 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Cocibella gen. nov.

Candidatus Cocibella (NL. fem. n. *Cocibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4636*. The type species for the genus is *Candidatus* Cocibella butubousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocibella impugicella sp. nov.

Candidatus Cocibella impugicella (NL. fem. n. *impugicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4636 sp900764595*. The type genome for the species is the GenBank assembly RS_GCF_900764595.1. The GC content of the type genome is 42.41 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Cocibella mahelifica sp. nov.

Candidatus Cocibella mahelifica (NL. fem. n. *mahelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4636 sp002405915*. The type genome for the species is the GenBank assembly GCA_002404935.1. The GC content of the type genome is 45.14 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Cocibella utrinicella sp. nov.

Candidatus Cocibella utrinicella (NL. fem. n. *utrinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4636 sp902767455*. The type genome for the species is the GenBank assembly GCA_902767455.1. The GC content of the type genome is 47.39 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Cocibia monoditica sp. nov.

Candidatus Cocibia monoditica (NL. fem. n. *monoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPTA01 sp903867855*. The type genome for the species is the GenBank assembly GCA_903867855.1. The GC content of the type genome is 47.14 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Cocibia gen. nov.

Candidatus Cocibia (NL. fem. n. *Cocibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPTA01*. The type species for the genus is *Candidatus* Cocibia monoditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIPTA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibiaceae.

Description of *Candidatus* Cocibiaceae fam. nov.

Candidatus Cocibiaceae (NL. fem. n. *Cocibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIPTA01.* The type genus for the taxon is *Candidatus* Cocibia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIPTA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocibiales.

Description of *Candidatus* Cocibiales ord. nov.

Candidatus Cocibiales (NL. fem. n. *Cocibiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIPTA01.* The type genus for the taxon is *Candidatus* Cocibia .

According to the GTDB R06-RS202, this order belongs to the class *Bdellovibrionia_A*.

Description of *Candidatus* Cocibida tabitilega sp. nov.

Candidatus Cocibida tabitilega (NL. fem. n. *tabitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002748415 sp002748415*. The type genome for the species is the GenBank assembly GCA_002748415.1. The GC content of the type genome is 68.15 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Cocibida gen. nov.

Candidatus Cocibida (NL. fem. n. *Cocibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002748415*. The type species for the genus is *Candidatus* Cocibida tabitilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002748415*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibidaceae.

Description of *Candidatus* Cocibidaceae fam. nov.

Candidatus Cocibidaceae (NL. fem. n. *Cocibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002748415.* The type genus for the taxon is *Candidatus* Cocibida .

According to GTDB R06-RS202, this family belongs to the order *Actinomycetales*.

Description of *Candidatus* Cocibosa pomifimonas sp. nov.

Candidatus Cocibosa pomifimonas (NL. fem. n. *pomifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-53-67 sp001873285*. The type genome for the species is the GenBank assembly GCA_002783045.1. The GC content of the type genome is 52.81 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Cocibosa gen. nov.

Candidatus Cocibosa (NL. fem. n. *Cocibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-53-67*. The type species for the genus is *Candidatus* Cocibosa pomifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-53-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibosaceae.

Description of *Candidatus* Cocibosaceae fam. nov.

Candidatus Cocibosaceae (NL. fem. n. *Cocibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-53-67.* The type genus for the taxon is *Candidatus* Cocibosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-53-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocibosales.

Description of *Candidatus* Cocibosales ord. nov.

Candidatus Cocibosales (NL. fem. n. *Cocibosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-53-67.* The type genus for the taxon is *Candidatus* Cocibosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG2-30-53-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cocibosae.

Description of *Candidatus* Cocibosae class. nov.

Candidatus Cocibosae (NL. fem. n. *c__Cocibosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-53-67.* The type genus for the taxon is *Candidatus* Cocibosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CG2-30-53-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Cocibosota.

Description of *Candidatus* Cocibosota phyl. nov.

Candidatus Cocibosota (NL. fem. n. *Cocibosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-53-67.* The type genus for the taxon is *Candidatus* Cocibosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Cocibula fecunisca sp. nov.

Candidatus Cocibula fecunisca (NL. fem. n. *fecunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-242 sp003235715*. The type genome for the species is the GenBank assembly GCA_003235715.1. The GC content of the type genome is 57.86 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Cocibula gen. nov.

Candidatus Cocibula (NL. fem. n. *Cocibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-242*. The type species for the genus is *Candidatus* Cocibula fecunisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocibulaceae.

Description of *Candidatus* Cocibulaceae fam. nov.

Candidatus Cocibulaceae (NL. fem. n. *Cocibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-242.* The type genus for the taxon is *Candidatus* Cocibula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocibulales.

Description of *Candidatus* Cocibulales ord. nov.

Candidatus Cocibulales (NL. fem. n. *Cocibulales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-242.* The type genus for the taxon is *Candidatus* Cocibula .

According to the GTDB R06-RS202, this order belongs to the class *Thermodesulfovibrionia*.

Description of *Candidatus* Cocleimonas artopitia sp. nov.

Candidatus Cocleimonas artopitia (NL. fem. n. *artopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cocleimonas sp003972955*. The type genome for the species is the GenBank assembly GCA_003972955.1. The GC content of the type genome is 39.88 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cocodana bipatatica sp. nov.

Candidatus Cocodana bipatatica (NL. fem. n. *bipatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9862 sp012798755*. The type genome for the species is the GenBank assembly GCA_012798755.1. The GC content of the type genome is 43.99 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Cocodana gen. nov.

Candidatus Cocodana (NL. fem. n. *Cocodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9862*. The type species for the genus is *Candidatus* Cocodana bipatatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Cocodana dilacedo sp. nov.

Candidatus Cocodana dilacedo (NL. fem. n. *dilacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9862 sp003444595*. The type genome for the species is the GenBank assembly GCA_012520495.1. The GC content of the type genome is 47.5 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Cocodana selibitura sp. nov.

Candidatus Cocodana selibitura (NL. fem. n. *selibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9862 sp003605065*. The type genome for the species is the GenBank assembly GCA_003605065.1. The GC content of the type genome is 46.17 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Cocodaria canacugo sp. nov.

Candidatus Cocodaria canacugo (NL. fem. n. *canacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHH01 sp009838645*. The type genome for the species is the GenBank assembly GCA_009845765.1. The GC content of the type genome is 62.34 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Cocodaria gen. nov.

Candidatus Cocodaria (NL. fem. n. *Cocodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHH01*. The type species for the genus is *Candidatus* Cocodaria canacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXHH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocodariaceae.

Description of *Candidatus* Cocodariaceae fam. nov.

Candidatus Cocodariaceae (NL. fem. n. *Cocodariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXHH01.* The type genus for the taxon is *Candidatus* Cocodaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAXHH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocodariales.

Description of *Candidatus* Cocodariales ord. nov.

Candidatus Cocodariales (NL. fem. n. *Cocodariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXHH01.* The type genus for the taxon is *Candidatus* Cocodaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *JAAXHH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cocodariae.

Description of *Candidatus* Cocodariae class. nov.

Candidatus Cocodariae (NL. fem. n. *c__Cocodariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXHH01.* The type genus for the taxon is *Candidatus* Cocodaria .

According to GTDB R06-RS202, this class belongs to the phylum *Latescibacterota*.

Description of *Candidatus* Cocodaria cicarisca sp. nov.

Candidatus Cocodaria cicarisca (NL. fem. n. *cicarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHH01 sp012270975*. The type genome for the species is the GenBank assembly GCA_012270975.1. The GC content of the type genome is 61.41 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Cocodaria desoratio sp. nov.

Candidatus Cocodaria desoratio (NL. fem. n. *desoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAXHH01 sp009841265*. The type genome for the species is the GenBank assembly GCA_009841265.1. The GC content of the type genome is 62.25 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Cocodaria menapitica sp. nov.

Candidatus Cocodaria menapitica (NL. fem. n. *menapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHH01 sp009835325*. The type genome for the species is the GenBank assembly GCA_009835325.1. The GC content of the type genome is 62.42 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Cocodaria vicatago sp. nov.

Candidatus Cocodaria vicatago (NL. fem. n. *vicatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHH01 sp009837395*. The type genome for the species is the GenBank assembly GCA_009844015.1. The GC content of the type genome is 62.34 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Cocodella melopilega sp. nov.

Candidatus Cocodella melopilega (NL. fem. n. *melopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACUH01 sp009993005*. The type genome for the species is the GenBank assembly GCA_009995235.1. The GC content of the type genome is 67.18 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Cocodella gen. nov.

Candidatus Cocodella (NL. fem. n. *Cocodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACUH01*. The type species for the genus is *Candidatus* Cocodella melopilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocodia utrolilenta sp. nov.

Candidatus Cocodia utrolilenta (NL. fem. n. *utrolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ARS1246 sp002688185*. The type genome for the species is the GenBank assembly GCA_002688185.1. The GC content of the type genome is 50.04 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Cocodia gen. nov.

Candidatus Cocodia (NL. fem. n. *Cocodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ARS1246*. The type species for the genus is *Candidatus* Cocodia utrolilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ARS1246*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocodiaceae.

Description of *Candidatus* Cocodiaceae fam. nov.

Candidatus Cocodiaceae (NL. fem. n. *Cocodiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS1246.* The type genus for the taxon is *Candidatus* Cocodia .

According to the original version of GTDB R06-RS202, this family belongs to the order *ARS1246*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cocodiales.

Description of *Candidatus* Cocodiales ord. nov.

Candidatus Cocodiales (NL. fem. n. *Cocodiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ARS1246.* The type genus for the taxon is *Candidatus* Cocodia .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Cocodida divoressa sp. nov.

Candidatus Cocodida divoressa (NL. fem. n. *divoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-41-12 sp002778735*. The type genome for the species is the GenBank assembly GCA_002778735.1. The GC content of the type genome is 40.56 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Cocodida gen. nov.

Candidatus Cocodida (NL. fem. n. *Cocodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-41-12*. The type species for the genus is *Candidatus* Cocodida divoressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-41-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocodidaceae.

Description of *Candidatus* Cocodidaceae fam. nov.

Candidatus Cocodidaceae (NL. fem. n. *Cocodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-41-12.* The type genus for the taxon is *Candidatus* Cocodida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panifidales.

Description of *Candidatus* Cocodosa argitatio sp. nov.

Candidatus Cocodosa argitatio (NL. fem. n. *argitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp900547225*. The type genome for the species is the GenBank assembly GCA_900547225.1. The GC content of the type genome is 27.74 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Cocodosa gen. nov.

Candidatus Cocodosa (NL. fem. n. *Cocodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-594*. The type species for the genus is *Candidatus* Cocodosa argitatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cocodosa atlanitrix sp. nov.

Candidatus Cocodosa atlanitrix (NL. fem. n. *atlanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp900772415*. The type genome for the species is the GenBank assembly RS_GCF_900772415.1. The GC content of the type genome is 26.38 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Cocodosa attoritudo sp. nov.

Candidatus Cocodosa attoritudo (NL. fem. n. *attoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp902795755*. The type genome for the species is the GenBank assembly GCA_902795755.1. The GC content of the type genome is 26.8 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cocodosa bicapitia sp. nov.

Candidatus Cocodosa bicapitia (NL. fem. n. *bicapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp900766325*. The type genome for the species is the GenBank assembly RS_GCF_900766325.1. The GC content of the type genome is 30.27 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Cocodosa robigax sp. nov.

Candidatus Cocodosa robigax (NL. fem. n. *robigax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp000434835*. The type genome for the species is the GenBank assembly GCA_000434835.1. The GC content of the type genome is 27.42 % and the genome length is 1.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Cocodosa telegitas sp. nov.

Candidatus Cocodosa telegitas (NL. fem. n. *telegitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp900759985*. The type genome for the species is the GenBank assembly RS_GCF_900759985.1. The GC content of the type genome is 34.05 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Cocodosa vagabilega sp. nov.

Candidatus Cocodosa vagabilega (NL. fem. n. *vagabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-594 sp900771805*. The type genome for the species is the GenBank assembly RS_GCF_900771805.1. The GC content of the type genome is 24.86 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Cocodula desulimonas sp. nov.

Candidatus Cocodula desulimonas (NL. fem. n. *desulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDPF01 sp013001885*. The type genome for the species is the GenBank assembly GCA_013001885.1. The GC content of the type genome is 57.97 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Cocodula gen. nov.

Candidatus Cocodula (NL. fem. n. *Cocodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDPF01*. The type species for the genus is *Candidatus* Cocodula desulimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Cocodula inornilenta sp. nov.

Candidatus Cocodula inornilenta (NL. fem. n. *inornilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDPF01 sp013042915*. The type genome for the species is the GenBank assembly GCA_013042915.1. The GC content of the type genome is 61.95 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Cocolana decunimonas sp. nov.

Candidatus Cocolana decunimonas (NL. fem. n. *decunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12151 sp000990585*. The type genome for the species is the GenBank assembly GCA_000992055.1. The GC content of the type genome is 36.42 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Cocolana gen. nov.

Candidatus Cocolana (NL. fem. n. *Cocolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12151*. The type species for the genus is *Candidatus* Cocolana decunimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9337-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilecosaceae.

Description of *Candidatus* Cocolaria gerunimonas sp. nov.

Candidatus Cocolaria gerunimonas (NL. fem. n. *gerunimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-62-14 sp001805245*. The type genome for the species is the GenBank assembly GCA_001805245.1. The GC content of the type genome is 61.66 % and the genome length is 2.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cocolaria gen. nov.

Candidatus Cocolaria (NL. fem. n. *Cocolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-62-14*. The type species for the genus is *Candidatus* Cocolaria gerunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocolaria siticitudo sp. nov.

Candidatus Cocolaria siticitudo (NL. fem. n. *siticitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-62-14 sp009692155*. The type genome for the species is the GenBank assembly GCA_009692155.1. The GC content of the type genome is 60.52 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Cocolella foriciforma sp. nov.

Candidatus Cocolella foriciforma (NL. fem. n. *foriciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9215 sp003503995*. The type genome for the species is the GenBank assembly GCA_003503995.1. The GC content of the type genome is 41.15 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Cocolella gen. nov.

Candidatus Cocolella (NL. fem. n. *Cocolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9215*. The type species for the genus is *Candidatus* Cocolella foriciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocolellaceae.

Description of *Candidatus* Cocolellaceae fam. nov.

Candidatus Cocolellaceae (NL. fem. n. *Cocolellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9215.* The type genus for the taxon is *Candidatus* Cocolella .

According to GTDB R06-RS202, this family belongs to the order *Caedimonadales*.

Description of *Candidatus* Cocolella retunilega sp. nov.

Candidatus Cocolella retunilega (NL. fem. n. *retunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9215 sp009993885*. The type genome for the species is the GenBank assembly GCA_009993885.1. The GC content of the type genome is 42.72 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Cocolia almiticula sp. nov.

Candidatus Cocolia almiticula (NL. fem. n. *almiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-317 sp011960265*. The type genome for the species is the GenBank assembly RS_GCF_011960265.1. The GC content of the type genome is 45.32 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Cocolia gen. nov.

Candidatus Cocolia (NL. fem. n. *Cocolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAG-317*. The type species for the genus is *Candidatus* Cocolia almiticula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocolia cohonitia sp. nov.

Candidatus Cocolia cohonitia (NL. fem. n. *cohonitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-317 sp900543415*. The type genome for the species is the GenBank assembly GCA_900543415.1. The GC content of the type genome is 41.67 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Cocolia semibitio sp. nov.

Candidatus Cocolia semibitio (NL. fem. n. *semibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-317 sp000433215*. The type genome for the species is the GenBank assembly RS_GCF_014287705.1. The GC content of the type genome is 41.16 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Cocolia siminimonas sp. nov.

Candidatus Cocolia siminimonas (NL. fem. n. *siminimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-317 sp000433535*. The type genome for the species is the GenBank assembly GCA_900542705.1. The GC content of the type genome is 41.28 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Cocolida homunatio sp. nov.

Candidatus Cocolida homunatio (NL. fem. n. *homunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PN-J185 sp001581925*. The type genome for the species is the GenBank assembly RS_GCF_001581925.1. The GC content of the type genome is 39.87

% and the genome length is 1.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "acid mine drainage water".

Description of *Candidatus* Cocolida gen. nov.

Candidatus Cocolida (NL. fem. n. *Cocolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PN-J185*. The type species for the genus is *Candidatus* Cocolida homunatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cocolida tenemicula sp. nov.

Candidatus Cocolida tenemicula (NL. fem. n. *tenemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PN-J185 sp001431705*. The type genome for the species is the GenBank assembly GCA_002279055.1. The GC content of the type genome is 44.23 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Cocolosa ablacitudo sp. nov.

Candidatus Cocolosa ablacitudo (NL. fem. n. *ablacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6944 sp002721305*. The type genome for the species is the GenBank assembly GCA_002721305.1. The GC content of the type genome is 54.37 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cocolosa gen. nov.

Candidatus Cocolosa (NL. fem. n. *Cocolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6944*. The type species for the genus is *Candidatus* Cocolosa ablacitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Cocolosa arcipisca sp. nov.

Candidatus Cocolosa arcipisca (NL. fem. n. *arcipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6944 sp002448715*. The type genome for the species is the GenBank assembly GCA_002448715.1. The GC content of the type genome is 52.96 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Cocolosa dilemitrix sp. nov.

Candidatus Cocolosa dilemitrix (NL. fem. n. *dilemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6944 sp002296525*. The type genome for the species is the GenBank assembly GCA_002480245.1. The GC content of the type genome is 52.85 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Cocolosa vanititio sp. nov.

Candidatus Cocolosa vanititio (NL. fem. n. *vanititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6944 sp002724355*. The type genome for the species is the GenBank assembly GCA_002296165.1. The GC content of the type genome is 53.09 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Cocolula carucilenta sp. nov.

Candidatus Cocolula carucilenta (NL. fem. n. *carucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-14 sp001779925*. The type genome for the species is the GenBank assembly GCA_001779925.1. The GC content of the type genome is 47.08 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cocolula gen. nov.

Candidatus Cocolula (NL. fem. n. *Cocolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-46-14*. The type species for the genus is *Candidatus* Cocolula carucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cocolulaceae.

Description of *Candidatus* Cocolulaceae fam. nov.

Candidatus Cocolulaceae (NL. fem. n. *Cocolulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-46-14.* The type genus for the taxon is *Candidatus* Cocolula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Cocolula rosaricella sp. nov.

Candidatus Cocolula rosaricella (NL. fem. n. *rosaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-46-14 sp001777515*. The type genome for the species is the GenBank assembly GCA_001777515.1. The GC content of the type genome is 47.75 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions 0.1 micron filter; 10% subassembly".

Description of *Candidatus* Codifana homolousia sp. nov.

Candidatus Codifana homolousia (NL. fem. n. *homolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-47-10 sp001824325*. The type genome for the species is the GenBank assembly GCA_001824325.1. The GC content of the type genome is 47.23

% and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Codifana gen. nov.

Candidatus Codifana (NL. fem. n. *Codifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-47-10*. The type species for the genus is *Candidatus* Codifana homolousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-47-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Codifanaceae.

Description of *Candidatus* Codifanaceae fam. nov.

Candidatus Codifanaceae (NL. fem. n. *Codifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-47-10.* The type genus for the taxon is *Candidatus* Codifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-01-FULL-47-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Codifanales.

Description of *Candidatus* Codifanales ord. nov.

Candidatus Codifanales (NL. fem. n. *Codifanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-47-10.* The type genus for the taxon is *Candidatus* Codifana .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Codifaria bipenatica sp. nov.

Candidatus Codifaria bipenatica (NL. fem. n. *bipenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-455 sp003166375*. The type genome for the species is the GenBank assembly GCA_003139075.1. The GC content of the type genome is 65.58 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Codifaria gen. nov.

Candidatus Codifaria (NL. fem. n. *Codifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-455*. The type species for the genus is *Candidatus* Codifaria bipenatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-793*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibidaceae.

Description of *Candidatus* Codifaria casabitica sp. nov.

Candidatus Codifaria casabitica (NL. fem. n. *casabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-455 sp003140595*. The type genome for the species is the GenBank assembly GCA_003155305.1. The GC content of the type genome is 65.17 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Codifaria decupessa sp. nov.

Candidatus Codifaria decupessa (NL. fem. n. *decupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-455 sp003170375*. The type genome for the species is the GenBank assembly GCA_003169335.1. The GC content of the type genome is 66.18 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Codifaria recocetta sp. nov.

Candidatus Codifaria recocetta (NL. fem. n. *recocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Fen-455 sp003139355*. The type genome for the species is the GenBank assembly GCA_003155815.1. The GC content of the type genome is 66.35 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Codifella brasmessa sp. nov.

Candidatus Codifella brasmessa (NL. fem. n. *brasmessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3071 sp002366755*. The type genome for the species is the GenBank assembly GCA_002366755.1. The GC content of the type genome is 61.27 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Codifella gen. nov.

Candidatus Codifella (NL. fem. n. *Codifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3071*. The type species for the genus is *Candidatus* Codifella brasmessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3071*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Codifellaceae.

Description of *Candidatus* Codifellaceae fam. nov.

Candidatus Codifellaceae (NL. fem. n. *Codifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3071.* The type genus for the taxon is *Candidatus* Codifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3071*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Codifellales.

Description of *Candidatus* Codifellales ord. nov.

Candidatus Codifellales (NL. fem. n. *Codifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3071.* The type genus for the taxon is *Candidatus* Codifella .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Codifida dilogessa sp. nov.

Candidatus Codifida dilogessa (NL. fem. n. *dilogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQP01 sp004299485*. The type genome for the species is the GenBank assembly GCA_004299485.1. The GC content of the type genome is 64.61 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Codifida gen. nov.

Candidatus Codifida (NL. fem. n. *Codifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCQP01*. The type species for the genus is *Candidatus* Codifida dilogessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCQP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Codifidaceae.

Description of *Candidatus* Codifidaceae fam. nov.

Candidatus Codifidaceae (NL. fem. n. *Codifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCQP01*. The type genus for the taxon is *Candidatus* Codifida .

According to GTDB R06-RS202, this family belongs to the order *Acidobacteriales*.

Description of *Candidatus* Codifosa diminifica sp. nov.

Candidatus Codifosa diminifica (NL. fem. n. *diminifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5809 sp002417965*. The type genome for the species is the GenBank assembly GCA_002417965.1. The GC content of the type genome is 48.12 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Codifosa gen. nov.

Candidatus Codifosa (NL. fem. n. *Codifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5809*. The type species for the genus is *Candidatus* Codifosa diminifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Codifula siminicula sp. nov.

Candidatus Codifula siminicula (NL. fem. n. *siminicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYKL01 sp005797785*. The type genome for the species is the GenBank assembly GCA_005799695.1. The GC content of the type genome is 60.41 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Codifula gen. nov.

Candidatus Codifula (NL. fem. n. *Codifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYKL01*. The type species for the genus is *Candidatus* Codifula siminicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Cognaticolwellia canacilega sp. nov.

Candidatus Cognaticolwellia canacilega (NL. fem. n. *canacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp002077175*. The type genome for the species is the GenBank assembly RS_GCF_002077175.1. The GC content of the type genome is 38.56 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Cognaticolwellia decucitia sp. nov.

Candidatus Cognaticolwellia decucitia (NL. fem. n. *decucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp014077005*. The type genome for the species is the GenBank assembly RS_GCF_014077065.1. The GC content of the type genome is 39.08 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Cognaticolwellia dedigousia sp. nov.

Candidatus Cognaticolwellia dedigousia (NL. fem. n. *dedigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp003354085*. The type genome for the species is the GenBank assembly GCA_003354085.1. The GC content of the type genome is 38.99 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Cognaticolwellia disidiforma sp. nov.

Candidatus Cognaticolwellia disidiforma (NL. fem. n. *disidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp007954265*. The type genome for the species is the GenBank assembly RS_GCF_007954265.1. The GC content of the type genome is 38.83 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Cognaticolwellia funebedo sp. nov.

Candidatus Cognaticolwellia funebedo (NL. fem. n. *funebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp014077095*. The type genome for the species is the GenBank assembly RS_GCF_014077095.1. The GC content of the type genome is 38.7 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Cognaticolwellia furibilenta sp. nov.

Candidatus Cognaticolwellia furibilenta (NL. fem. n. *furibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp014077505*. The type genome for the species is the GenBank assembly RS_GCF_014077505.1. The GC content of the type genome is 38.18 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Cognaticolwellia myalgicula sp. nov.

Candidatus Cognaticolwellia myalgicula (NL. fem. n. *myalgicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp003971255*. The type genome for the species is the GenBank assembly RS_GCF_003971255.1. The GC content of the type genome is 38.41 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Cognaticolwellia nehaligena sp. nov.

Candidatus Cognaticolwellia nehaligena (NL. fem. n. *nehaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognaticolwellia sp003061515*. The type genome for the species is the GenBank assembly RS_GCF_003061515.1. The GC content of the type genome is 37.67 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Cognatishimia denupimonas sp. nov.

Candidatus Cognatishimia denupimonas (NL. fem. n. *denupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cognatishimia sp013215215*. The type genome for the species is the GenBank assembly GCA_013215215.1. The GC content of the type genome is 56.0 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Cohaesibacter lucifitrix sp. nov.

Candidatus Cohaesibacter lucifitrix (NL. fem. n. *lucifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohaesibacter sp900215505*. The type genome for the species is the GenBank assembly RS_GCF_900215505.1. The GC content of the type genome is 55.52

% and the genome length is 5.11 Mbp.

Description of *Candidatus* Cohnella absocilega sp. nov.

Candidatus Cohnella absocilega (NL. fem. n. *absocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp004801405*. The type genome for the species is the GenBank assembly RS_GCF_004801405.1. The GC content of the type genome is 58.52 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Cohnella adsenifica sp. nov.

Candidatus Cohnella adsenifica (NL. fem. n. *adsenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp003570905*. The type genome for the species is the GenBank assembly RS_GCF_003570905.1. The GC content of the type genome is 53.32 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Cohnella bucelitio sp. nov.

Candidatus Cohnella bucelitio (NL. fem. n. *bucelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp003990975*. The type genome for the species is the GenBank assembly RS_GCF_003990975.1. The GC content of the type genome is 55.98 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Cohnella dehinisca sp. nov.

Candidatus Cohnella dehinisca (NL. fem. n. *dehinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp003628305*. The type genome for the species is the GenBank assembly RS_GCF_003628305.1. The GC content of the type genome is 51.53 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Cohnella depacifica sp. nov.

Candidatus Cohnella depacifica (NL. fem. n. *depacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp014107495*. The type genome for the species is the GenBank assembly RS_GCF_014107495.1. The GC content of the type genome is 51.24 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Cohnella inaccastra sp. nov.

Candidatus Cohnella inaccastra (NL. fem. n. *inaccastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp007786475*. The type genome for the species is the GenBank assembly RS_GCF_007786475.1. The GC content of the type genome is 51.3 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Cohnella navifisca sp. nov.

Candidatus Cohnella navifisca (NL. fem. n. *navifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp900169535*. The type genome for the species is the GenBank assembly RS_GCF_900169535.1. The GC content of the type genome is 57.24 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Cohnella sceptisca sp. nov.

Candidatus Cohnella sceptisca (NL. fem. n. *sceptisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp005049045*. The type genome for the species is the GenBank assembly RS_GCF_005049045.1. The GC content of the type genome is 53.7 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Cohnella socagago sp. nov.

Candidatus Cohnella socagago (NL. fem. n. *socagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp012849095*. The type genome for the species is the GenBank assembly RS_GCF_012849095.1. The GC content of the type genome is 50.55 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Cohnella tumefax sp. nov.

Candidatus Cohnella tumefax (NL. fem. n. *tumefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp003001675*. The type genome for the species is the GenBank assembly RS_GCF_002237815.1. The GC content of the type genome is 56.69 % and the genome length is 8.24 Mbp.

Description of *Candidatus* Cohnella vocamifica sp. nov.

Candidatus Cohnella vocamifica (NL. fem. n. *vocamifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp014212055*. The type genome for the species is the GenBank assembly RS_GCF_014212055.1. The GC content of the type genome is 58.71 % and the genome length is 7.92 Mbp.

Description of *Candidatus* Cohnella vocifago sp. nov.

Candidatus Cohnella vocifago (NL. fem. n. *vocifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cohnella sp003208555*. The type genome for the species is the GenBank assembly RS_GCF_900112065.1. The GC content of the type genome is 59.34 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Cohonana delapilega sp. nov.

Candidatus Cohonana delapilega (NL. fem. n. *delapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-505 sp011368345*. The type genome for the species is the GenBank assembly GCA_011389325.1. The GC content of the type genome is 43.8 %

and the genome length is 2.01 Mbp.

Description of *Candidatus* Cohonana gen. nov.

Candidatus Cohonana (NL. fem. n. *Cohonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-505*. The type species for the genus is *Candidatus* Cohonana delapilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monumanaceae.

Description of *Candidatus* Cohonaria defosicella sp. nov.

Candidatus Cohonaria defosicella (NL. fem. n. *defosicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5938 sp002414865*. The type genome for the species is the GenBank assembly GCA_002363235.1. The GC content of the type genome is 65.92 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Cohonaria gen. nov.

Candidatus Cohonaria (NL. fem. n. *Cohonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5938*. The type species for the genus is *Candidatus* Cohonaria defosicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohonella cacomifica sp. nov.

Candidatus Cohonella cacomifica (NL. fem. n. *cacomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWN01 sp003645215*. The type genome for the species is the GenBank assembly GCA_003645215.1. The GC content of the type genome is 43.99 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Cohonella gen. nov.

Candidatus Cohonella (NL. fem. n. *Cohonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWN01*. The type species for the genus is *Candidatus* Cohonella cacomifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Cohonella tresvifica sp. nov.

Candidatus Cohonella tresvifica (NL. fem. n. *tresvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWN01 sp004356415*. The type genome for the species is the GenBank assembly GCA_004356415.1. The GC content of the type genome is 43.41 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Cohonia laculitica sp. nov.

Candidatus Cohonia laculitica (NL. fem. n. *laculitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-36-16 sp001873185*. The type genome for the species is the GenBank assembly GCA_001873185.1. The GC content of the type genome is 36.48 % and the genome length is 3.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Cohonia gen. nov.

Candidatus Cohonia (NL. fem. n. *Cohonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-36-16*. The type species for the genus is *Candidatus* Cohonia laculitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohonida obsatentia sp. nov.

Candidatus Cohonida obsatentia (NL. fem. n. *obsatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTJX01 sp011524675*. The type genome for the species is the GenBank assembly GCA_011524675.1. The GC content of the type genome is 36.23 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Cohonida gen. nov.

Candidatus Cohonida (NL. fem. n. *Cohonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTJX01*. The type species for the genus is *Candidatus* Cohonida obsatentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WTJX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohonidaceae.

Description of *Candidatus* Cohonidaceae fam. nov.

Candidatus Cohonidaceae (NL. fem. n. *Cohonidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTJX01*. The type genus for the taxon is *Candidatus* Cohonida .

According to GTDB R06-RS202, this family belongs to the order *Cytophagales*.

Description of *Candidatus* Cohonosa depupilega sp. nov.

Candidatus Cohonosa depupilega (NL. fem. n. *depupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC3088 sp000204315*. The type genome for the species is the GenBank assembly RS_GCF_000204315.1. The GC content of the type genome is 51.64 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Cohonosa gen. nov.

Candidatus Cohonosa (NL. fem. n. *Cohonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC3088*. The type species for the genus is *Candidatus* Cohonosa depupilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohonosa resuribula sp. nov.

Candidatus Cohonosa resuribula (NL. fem. n. *resuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC3088 sp003520285*. The type genome for the species is the GenBank assembly GCA_002384045.1. The GC content of the type genome is 51.69 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Cohonula plascimonia sp. nov.

Candidatus Cohonula plascimonia (NL. fem. n. *plascimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADIA01 sp013151555*. The type genome for the species is the GenBank assembly GCA_013151555.1. The GC content of the type genome is 45.48 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cohonula gen. nov.

Candidatus Cohonula (NL. fem. n. *Cohonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADIA01*. The type species for the genus is *Candidatus* Cohonula plascimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADIA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohonulaceae.

Description of *Candidatus* Cohonulaceae fam. nov.

Candidatus Cohonulaceae (NL. fem. n. *Cohonulaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADIA01*. The type genus for the taxon is *Candidatus* Cohonula .

According to the original version of GTDB R06-RS202, this family belongs to the order *NPL-UPA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cohoranales.

Description of *Candidatus* Cohorana aminnentia sp. nov.

Candidatus Cohorana aminnentia (NL. fem. n. *aminnentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NPL-UPA2 sp003574845*. The type genome for the species is the GenBank assembly GCA_003574845.1. The GC content of the type genome is 43.74 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Cohorana gen. nov.

Candidatus Cohorana (NL. fem. n. *Cohorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NPL-UPA2*. The type species for the genus is *Candidatus* Cohorana aminnentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NPL-UPA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohoranaceae.

Description of *Candidatus* Cohoranaceae fam. nov.

Candidatus Cohoranaceae (NL. fem. n. *Cohoranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NPL-UPA2*. The type genus for the taxon is *Candidatus* Cohorana .

According to the original version of GTDB R06-RS202, this family belongs to the order *NPL-UPA2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cohoranales.

Description of *Candidatus* Cohoraria cadavitoga sp. nov.

Candidatus Cohoraria cadavitoga (NL. fem. n. *cadavitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002457745*. The type genome for the species is the GenBank assembly GCA_002457745.1. The GC content of the type genome is 61.17 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Cohoraria gen. nov.

Candidatus Cohoraria (NL. fem. n. *Cohoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8309*. The type species for the genus is *Candidatus* Cohoraria cadavitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohoraria dapifitio sp. nov.

Candidatus Cohoraria dapifitio (NL. fem. n. *dapifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp902526635*. The type genome for the species is the GenBank assembly GCA_902526635.1. The GC content of the type genome is 54.73 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Cohoraria delapitudo sp. nov.

Candidatus Cohoraria delapitudo (NL. fem. n. *delapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp009936825*. The type genome for the species is the GenBank assembly GCA_009936825.1. The GC content of the type genome is 52.99 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cohoraria galaciforma sp. nov.

Candidatus Cohoraria galaciforma (NL. fem. n. *galaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp009920665*. The type genome for the species is the GenBank assembly GCA_009920665.1. The GC content of the type genome is 61.31 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Cohoraria genocessa sp. nov.

Candidatus Cohoraria genocessa (NL. fem. n. *genocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002683535*. The type genome for the species is the GenBank assembly GCA_002683535.1. The GC content of the type genome is 57.24 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Cohoraria genufifica sp. nov.

Candidatus Cohoraria genufifica (NL. fem. n. *genufifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002731315*. The type genome for the species is the GenBank assembly GCA_002731315.1. The GC content of the type genome is 54.62 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cohoraria inabsimonas sp. nov.

Candidatus Cohoraria inabsimonas (NL. fem. n. *inabsimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp011524735*. The type genome for the species is the GenBank assembly GCA_011524735.1. The GC content of the type genome is 55.36 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Cohoraria nocumugo sp. nov.

Candidatus Cohoraria nocumugo (NL. fem. n. *nocumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002689625*. The type genome for the species is the GenBank assembly GCA_002689625.1. The GC content of the type genome is 56.64 %

and the genome length is 1.73 Mbp.

Description of *Candidatus* Cohoraria nutabousia sp. nov.

Candidatus Cohoraria nutabousia (NL. fem. n. *nutabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp902528605*. The type genome for the species is the GenBank assembly GCA_902528605.1. The GC content of the type genome is 54.36 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Cohoraria pacifibula sp. nov.

Candidatus Cohoraria pacifibula (NL. fem. n. *pacifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002457765*. The type genome for the species is the GenBank assembly GCA_002722835.1. The GC content of the type genome is 56.9 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Cohoraria penurastra sp. nov.

Candidatus Cohoraria penurastra (NL. fem. n. *penurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002686685*. The type genome for the species is the GenBank assembly GCA_002323575.1. The GC content of the type genome is 58.46 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Cohoraria saxopastra sp. nov.

Candidatus Cohoraria saxopastra (NL. fem. n. *saxopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp004213025*. The type genome for the species is the GenBank assembly GCA_004213025.1. The GC content of the type genome is 61.6 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Cohoraria venunitica sp. nov.

Candidatus Cohoraria venunitica (NL. fem. n. *venunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp002695585*. The type genome for the species is the GenBank assembly GCA_002695585.1. The GC content of the type genome is 63.25 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Cohoraria vepalitudo sp. nov.

Candidatus Cohoraria vepalitudo (NL. fem. n. *vepalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8309 sp001627655*. The type genome for the species is the GenBank assembly GCA_002686815.1. The GC content of the type genome is 62.9 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Cohorella nicotitudo sp. nov.

Candidatus Cohorella nicotitudo (NL. fem. n. *nicotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUI01 sp012517765*. The type genome for the species is the GenBank assembly GCA_012517765.1. The GC content of the type genome is 46.9 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Cohorella gen. nov.

Candidatus Cohorella (NL. fem. n. *Cohorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUI01*. The type species for the genus is *Candidatus* Cohorella nicotitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYUI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohorellaceae.

Description of *Candidatus* Cohorellaceae fam. nov.

Candidatus Cohorellaceae (NL. fem. n. *Cohorellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUI01*. The type genus for the taxon is *Candidatus* Cohorella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYUI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cohorellales.

Description of *Candidatus* Cohorellales ord. nov.

Candidatus Cohorellales (NL. fem. n. *Cohorellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUI01*. The type genus for the taxon is *Candidatus* Cohorella .

According to the GTDB R06-RS202, this order belongs to the class *Caldisericia*.

Description of *Candidatus* Cohorella renavugo sp. nov.

Candidatus Cohorella renavugo (NL. fem. n. *renavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUI01 sp002070635*. The type genome for the species is the GenBank assembly GCA_002070635.1. The GC content of the type genome is 44.96 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cohoria decatago sp. nov.

Candidatus Cohoria decatago (NL. fem. n. *decatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3933 sp002385805*. The type genome for the species is the GenBank assembly GCA_012728695.1. The GC content of the type genome is 37.66 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Cohoria gen. nov.

Candidatus Cohoria (NL. fem. n. *Cohoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3933*. The type species for the genus is *Candidatus* Cohoria decatago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BICA1-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Novilosaceae.

Description of *Candidatus* Cohorida benifitura sp. nov.

Candidatus Cohorida benifitura (NL. fem. n. *benifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEO01 sp013388805*. The type genome for the species is the GenBank assembly GCA_013388805.1. The GC content of the type genome is 67.71 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Cohorida gen. nov.

Candidatus Cohorida (NL. fem. n. *Cohorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEO01*. The type species for the genus is *Candidatus* Cohorida benifitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohorosa conabago sp. nov.

Candidatus Cohorosa conabago (NL. fem. n. *conabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin103 sp002238925*. The type genome for the species is the GenBank assembly GCA_002238925.1. The GC content of the type genome is 67.36 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Cohorosa gen. nov.

Candidatus Cohorosa (NL. fem. n. *Cohorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Bin103*. The type species for the genus is *Candidatus* Cohorosa conabago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohorosaceae.

Description of *Candidatus* Cohorosaceae fam. nov.

Candidatus Cohorosaceae (NL. fem. n. *Cohorosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin103.* The type genus for the taxon is *Candidatus* Cohorosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volucanales.

Description of *Candidatus* Cohorula bonificella sp. nov.

Candidatus Cohorula bonificella (NL. fem. n. *bonificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-433 sp000433675*. The type genome for the species is the GenBank assembly GCA_003530005.1. The GC content of the type genome is 24.78 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Cohorula gen. nov.

Candidatus Cohorula (NL. fem. n. *Cohorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-433*. The type species for the genus is *Candidatus* Cohorula bonificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cohorula facunetta sp. nov.

Candidatus Cohorula facunetta (NL. fem. n. *facunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-433 sp900546245*. The type genome for the species is the GenBank assembly GCA_900546245.1. The GC content of the type genome is 24.73 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Cohorula ludibimonas sp. nov.

Candidatus Cohorula ludibimonas (NL. fem. n. *ludibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-433 sp900320735*. The type genome for the species is the GenBank assembly GCA_900320735.1. The GC content of the type genome is 25.53 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Cohurana refocigena sp. nov.

Candidatus Cohurana refocigena (NL. fem. n. *refocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11475 sp003538975*. The type genome for the species is the GenBank assembly GCA_003538975.1. The GC content of the type genome is 42.69 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Cohurana gen. nov.

Candidatus Cohurana (NL. fem. n. *Cohurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11475*. The type species for the genus is *Candidatus* Cohurana refocigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohuraria bigemilenta sp. nov.

Candidatus Cohuraria bigemilenta (NL. fem. n. *bigemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-314 sp900551395*. The type genome for the species is the GenBank assembly GCA_900551395.1. The GC content of the type genome is 49.31 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Cohuraria gen. nov.

Candidatus Cohuraria (NL. fem. n. *Cohuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-314*. The type species for the genus is *Candidatus* Cohuraria bigemilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Cohurariaceae fam. nov.

Candidatus Cohurariaceae (NL. fem. n. *Cohurariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-314.* The type genus for the taxon is *Candidatus* Cohuraria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Cohuraria desomivita sp. nov.

Candidatus Cohuraria desomivita (NL. fem. n. *desomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-314 sp000437915*. The type genome for the species is the GenBank assembly GCA_900542655.1. The GC content of the type genome is 48.69 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Cohurella acontessa sp. nov.

Candidatus Cohurella acontessa (NL. fem. n. *acontessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-31 sp003962975*. The type genome for the species is the GenBank assembly GCA_003962975.1. The GC content of the type genome is 46.68 %

and the genome length is 1.21 Mbp.

Description of *Candidatus* Cohurella gen. nov.

Candidatus Cohurella (NL. fem. n. *Cohurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-31*. The type species for the genus is *Candidatus* Cohurella acontessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AWTP1-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurellaceae.

Description of *Candidatus* Cohurellaceae fam. nov.

Candidatus Cohurellaceae (NL. fem. n. *Cohurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AWTP1-31.* The type genus for the taxon is *Candidatus* Cohurella .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Cohurella carucibra sp. nov.

Candidatus Cohurella carucibra (NL. fem. n. *carucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-31 sp903946795*. The type genome for the species is the GenBank assembly GCA_903937695.1. The GC content of the type genome is 41.43 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Cohuria bipinitrix sp. nov.

Candidatus Cohuria bipinitrix (NL. fem. n. *bipinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD12-FULL-61-37 sp009497875*. The type genome for the species is the GenBank assembly RS_GCF_009497875.1. The GC content of the type genome is 61.65 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Cohuria gen. nov.

Candidatus Cohuria (NL. fem. n. *Cohuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YD12-FULL-61-37*. The type species for the genus is *Candidatus* Cohuria bipinitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cohuria redunifica sp. nov.

Candidatus Cohuria redunifica (NL. fem. n. *redunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD12-FULL-61-37 sp001801995*. The type genome for the species is the GenBank assembly GCA_001801965.1. The GC content of the type genome is 61.26 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Cohurida funebitica sp. nov.

Candidatus Cohurida funebitica (NL. fem. n. *funebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M2005 sp011371305*. The type genome for the species is the GenBank assembly GCA_011371305.1. The GC content of the type genome is 59.73 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Cohurida gen. nov.

Candidatus Cohurida (NL. fem. n. *Cohurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M2005*. The type species for the genus is *Candidatus* Cohurida funebitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Cohurida milipimonia sp. nov.

Candidatus Cohurida milipimonia (NL. fem. n. *milipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M2005 sp011192085*. The type genome for the species is the GenBank assembly GCA_012962505.1. The GC content of the type genome is 61.45 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Cohurosa ammixousia sp. nov.

Candidatus Cohurosa ammixousia (NL. fem. n. *ammixousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPPD01 sp003818675*. The type genome for the species is the GenBank assembly GCA_003818675.1. The GC content of the type genome is 48.13 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Cohurosa gen. nov.

Candidatus Cohurosa (NL. fem. n. *Cohurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPPD01*. The type species for the genus is *Candidatus* Cohurosa ammixousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RPPD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurosaceae.

Description of *Candidatus* Cohurosaceae fam. nov.

Candidatus Cohurosaceae (NL. fem. n. *Cohurosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPPD01.* The type genus for the taxon is *Candidatus* Cohurosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volucanales.

Description of *Candidatus* Cohurula pedifastra sp. nov.

Candidatus Cohurula pedifastra (NL. fem. n. *pedifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX8 sp003577355*. The type genome for the species is the GenBank assembly GCA_003577355.1. The GC content of the type genome is 63.96 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Cohurula gen. nov.

Candidatus Cohurula (NL. fem. n. *Cohurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFX8*. The type species for the genus is *Candidatus* Cohurula pedifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CFX8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurulaceae.

Description of *Candidatus* Cohurulaceae fam. nov.

Candidatus Cohurulaceae (NL. fem. n. *Cohurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CFX8.* The type genus for the taxon is *Candidatus* Cohurula .

According to GTDB R06-RS202, this family belongs to the order *Thermomicrobiales*.

Description of *Candidatus* Colapana dehinivita sp. nov.

Candidatus Colapana dehinivita (NL. fem. n. *dehinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-38-13 sp001782165*. The type genome for the species is the GenBank assembly GCA_001782165.1. The GC content of the type genome is 38.04 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Colapana gen. nov.

Candidatus Colapana (NL. fem. n. *Colapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-38-13*. The type species for the genus is *Candidatus* Colapana dehinivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Colaparia lapicetta sp. nov.

Candidatus Colaparia lapicetta (NL. fem. n. *lapicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HCHbin5 sp903913345*. The type genome for the species is the GenBank assembly GCA_903913345.1. The GC content of the type genome is 57.49 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Colaparia gen. nov.

Candidatus Colaparia (NL. fem. n. *Colaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HCHbin5*. The type species for the genus is *Candidatus* Colaparia lapicetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colaparia mavorax sp. nov.

Candidatus Colaparia mavorax (NL. fem. n. *mavorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HCHbin5 sp002753505*. The type genome for the species is the GenBank assembly GCA_002753505.1. The GC content of the type genome is 56.97 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Colapella siticugo sp. nov.

Candidatus Colapella siticugo (NL. fem. n. *siticugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1343 sp003171335*. The type genome for the species is the GenBank assembly GCA_003171335.1. The GC content of the type genome is 64.37 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Colapella gen. nov.

Candidatus Colapella (NL. fem. n. *Colapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1343*. The type species for the genus is *Candidatus* Colapella siticugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1343*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapellaceae.

Description of *Candidatus* Colapellaceae fam. nov.

Candidatus Colapellaceae (NL. fem. n. *Colapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1343.* The type genus for the taxon is *Candidatus* Colapella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalanales.

Description of *Candidatus* Colapia necubilenta sp. nov.

Candidatus Colapia necubilenta (NL. fem. n. *necubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWQF01 sp003556865*. The type genome for the species is the GenBank assembly GCA_003556865.1. The GC content of the type genome is 44.95 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Colapia gen. nov.

Candidatus Colapia (NL. fem. n. *Colapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWQF01*. The type species for the genus is *Candidatus* Colapia necubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWQF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapiaceae.

Description of *Candidatus* Colapiaceae fam. nov.

Candidatus Colapiaceae (NL. fem. n. *Colapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWQF01.* The type genus for the taxon is *Candidatus* Colapia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceruciales.

Description of *Candidatus* Colapida nubificula sp. nov.

Candidatus Colapida nubificula (NL. fem. n. *nubificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLI01 sp003559415*. The type genome for the species is the GenBank assembly GCA_003559415.1. The GC content of the type genome is 54.11 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Colapida gen. nov.

Candidatus Colapida (NL. fem. n. *Colapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWLI01*. The type species for the genus is *Candidatus* Colapida nubificula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWLI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapidaceae.

Description of *Candidatus* Colapidaceae fam. nov.

Candidatus Colapidaceae (NL. fem. n. *Colapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWLI01*. The type genus for the taxon is *Candidatus* Colapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Saxopellales.

Description of *Candidatus* Colaposa fibicugo sp. nov.

Candidatus Colaposa fibicugo (NL. fem. n. *fibicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRY01 sp003552765*. The type genome for the species is the GenBank assembly GCA_003552765.1. The GC content of the type genome is 60.75 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Colaposa gen. nov.

Candidatus Colaposa (NL. fem. n. *Colaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKRY01*. The type species for the genus is *Candidatus* Colaposa fibicugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Colaposa licenimonia sp. nov.

Candidatus Colaposa licenimonia (NL. fem. n. *licenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRY01 sp007118235*. The type genome for the species is the GenBank assembly GCA_007126205.1. The GC content of the type genome is 61.31 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Colapula vilipago sp. nov.

Candidatus Colapula vilipago (NL. fem. n. *vilipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZCA01 sp012513515*. The type genome for the species is the GenBank assembly GCA_002069625.1. The GC content of the type genome is 50.34 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Colapula gen. nov.

Candidatus Colapula (NL. fem. n. *Colapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZCA01*. The type species for the genus is *Candidatus* Colapula vilipago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZCA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colapulaceae.

Description of *Candidatus* Colapulaceae fam. nov.

Candidatus Colapulaceae (NL. fem. n. *Colapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZCA01.* The type genus for the taxon is *Candidatus* Colapula .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-44-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Duponariales.

Description of *Candidatus* Colepana ludifax sp. nov.

Candidatus Colepana ludifax (NL. fem. n. *ludifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-70-394 sp001873295*. The type genome for the species is the GenBank assembly GCA_009994935.1. The GC content of the type genome is 70.36 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Colepana gen. nov.

Candidatus Colepana (NL. fem. n. *Colepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-70-394*. The type species for the genus is *Candidatus* Colepana ludifax .
