According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-70-394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepanaceae.

Description of *Candidatus* Colepanaceae fam. nov.

Candidatus Colepanaceae (NL. fem. n. *Colepanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-70-394.* The type genus for the taxon is *Candidatus* Colepana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-70-394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colepanales.

Description of *Candidatus* Colepanales ord. nov.

Candidatus Colepanales (NL. fem. n. *Colepanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-70-394.* The type genus for the taxon is *Candidatus* Colepana .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG2-30-70-394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colepanae.

Description of *Candidatus* Colepanae class. nov.

Candidatus Colepanae (NL. fem. n. *c__Colepanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-70-394.* The type genus for the taxon is *Candidatus* Colepana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CG2-30-70-394*. According to the renamed version of GTDB R06-RS202, this

taxon belongs to the phylum *Candidatus* Colepanota.

Description of *Candidatus* Colepanota phyl. nov.

Candidatus Colepanota (NL. fem. n. *Colepanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-70-394.* The type genus for the taxon is *Candidatus* Colepana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Coleparia anamnibra sp. nov.

Candidatus Coleparia anamnibra (NL. fem. n. *anamnibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHBI01 sp006226565*. The type genome for the species is the GenBank assembly GCA_006226565.1. The GC content of the type genome is 72.26 % and the genome length is 7.71 Mbp.

Description of *Candidatus* Coleparia gen. nov.

Candidatus Coleparia (NL. fem. n. *Coleparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHBI01*. The type species for the genus is *Candidatus* Coleparia anamnibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepariaceae.

Description of *Candidatus* Colepariaceae fam. nov.

Candidatus Colepariaceae (NL. fem. n. *Colepariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHBI01.* The type genus for the taxon is *Candidatus* Coleparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *PHBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colepariales.

Description of *Candidatus* Colepariales ord. nov.

Candidatus Colepariales (NL. fem. n. *Colepariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHBI01*. The type genus for the taxon is *Candidatus* Coleparia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Coleparia delecugo sp. nov.

Candidatus Coleparia delecugo (NL. fem. n. *delecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHBI01 sp002841945*. The type genome for the species is the GenBank assembly GCA_002841945.1. The GC content of the type genome is 72.37 % and the genome length is 8.21 Mbp.

Description of *Candidatus* Colepida illapibra sp. nov.

Candidatus Colepida illapibra (NL. fem. n. *illapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-43-9 sp001798265*. The type genome for the species is the GenBank assembly GCA_001798265.1. The GC content of the type genome is 43.08 % and the genome length is 1.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Colepida gen. nov.

Candidatus Colepida (NL. fem. n. *Colepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-43-9*. The type species for the genus is *Candidatus* Colepida illapibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-12-FULL-43-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepidaceae.

Description of *Candidatus* Colepidaceae fam. nov.

Candidatus Colepidaceae (NL. fem. n. *Colepidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *O2-12-FULL-43-9.* The type genus for the taxon is *Candidatus* Colepida .

According to the original version of GTDB R06-RS202, this family belongs to the order *O2-12-FULL-43-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colepidales.

Description of *Candidatus* Colepidales ord. nov.

Candidatus Colepidales (NL. fem. n. *Colepidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *O2-12-FULL-43-9.* The type genus for the taxon is *Candidatus* Colepida .

According to the original version of GTDB R06-RS202, this family belongs to the class *O2-12-FULL-43-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colepidae.

Description of *Candidatus* Colepidae class. nov.

Candidatus Colepidae (NL. fem. n. *c__Colepidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *O2-12-FULL-43-9.* The type genus for the taxon is *Candidatus* Colepida .

According to GTDB R06-RS202, this class belongs to the phylum *Bdellovibrionota*.

Description of *Candidatus* Coleposa apporessa sp. nov.

Candidatus Coleposa apporessa (NL. fem. n. *apporessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730855 sp902532675*. The type genome for the species is the GenBank assembly GCA_902532675.1. The GC content of the type genome is 35.84 %

and the genome length is 1.34 Mbp.

Description of *Candidatus* Coleposa gen. nov.

Candidatus Coleposa (NL. fem. n. *Coleposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2730855*. The type species for the genus is *Candidatus* Coleposa apporessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimulaceae.

Description of *Candidatus* Coleposa decupatica sp. nov.

Candidatus Coleposa decupatica (NL. fem. n. *decupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730855 sp902554355*. The type genome for the species is the GenBank assembly GCA_902554355.1. The GC content of the type genome is 35.7 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Coleposa herinifica sp. nov.

Candidatus Coleposa herinifica (NL. fem. n. *herinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730855 sp902532015*. The type genome for the species is the GenBank assembly GCA_902532015.1. The GC content of the type genome is 35.33 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Coleposa homogimonas sp. nov.

Candidatus Coleposa homogimonas (NL. fem. n. *homogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730855 sp002730855*. The type genome for the species is the GenBank assembly GCA_002730855.1. The GC content of the type genome is 35.89 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Coleposa inconiforma sp. nov.

Candidatus Coleposa inconiforma (NL. fem. n. *inconiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730855 sp902514295*. The type genome for the species is the GenBank assembly GCA_902514295.1. The GC content of the type genome is 36.38 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Colepula depecibra sp. nov.

Candidatus Colepula depecibra (NL. fem. n. *depecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-75 sp005880445*. The type genome for the species is the GenBank assembly GCA_005889335.1. The GC content of the type genome is 67.67 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Colepula gen. nov.

Candidatus Colepula (NL. fem. n. *Colepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-75*. The type species for the genus is *Candidatus* Colepula depecibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Colimana cenacugo sp. nov.

Candidatus Colimana cenacugo (NL. fem. n. *cenacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTPJ01 sp011334435*. The type genome for the species is the GenBank assembly GCA_011334435.1. The GC content of the type genome is 37.44 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Colimana gen. nov.

Candidatus Colimana (NL. fem. n. *Colimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTPJ01*. The type species for the genus is *Candidatus* Colimana cenacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTPJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimanaceae.

Description of *Candidatus* Colimanaceae fam. nov.

Candidatus Colimanaceae (NL. fem. n. *Colimanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTPJ01.* The type genus for the taxon is *Candidatus* Colimana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTPJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colimanales.

Description of *Candidatus* Colimanales ord. nov.

Candidatus Colimanales (NL. fem. n. *Colimanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTPJ01.* The type genus for the taxon is *Candidatus* Colimana .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTPJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colimanae.

Description of *Candidatus* Colimanae class. nov.

Candidatus Colimanae (NL. fem. n. *c__Colimanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTPJ01.* The type genus for the taxon is *Candidatus* Colimana .

According to GTDB R06-RS202, this class belongs to the phylum *Poribacteria*.

Description of *Candidatus* Colimaria adessibula sp. nov.

Candidatus Colimaria adessibula (NL. fem. n. *adessibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp002309875*. The type genome for the species is the GenBank assembly GCA_002309875.1. The GC content of the type genome is 38.75 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Colimaria gen. nov.

Candidatus Colimaria (NL. fem. n. *Colimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-196*. The type species for the genus is *Candidatus* Colimaria adessibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colimaria adnunatica sp. nov.

Candidatus Colimaria adnunatica (NL. fem. n. *adnunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902760905*. The type genome for the species is the GenBank assembly GCA_902760905.1. The GC content of the type genome is 34.42 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Colimaria adrumitrix sp. nov.

Candidatus Colimaria adrumitrix (NL. fem. n. *adrumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902780525*. The type genome for the species is the GenBank assembly GCA_902780525.1. The GC content of the type genome is 34.68 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Colimaria ammuratica sp. nov.

Candidatus Colimaria ammuratica (NL. fem. n. *ammuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902798645*. The type genome for the species is the GenBank assembly GCA_902798645.1. The GC content of the type genome is 32.68 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Colimaria atrusifica sp. nov.

Candidatus Colimaria atrusifica (NL. fem. n. *atrusifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902782905*. The type genome for the species is the GenBank assembly GCA_902782905.1. The GC content of the type genome is 35.84 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Colimaria decomilega sp. nov.

Candidatus Colimaria decomilega (NL. fem. n. *decomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902777605*. The type genome for the species is the GenBank assembly GCA_902777605.1. The GC content of the type genome is 32.95 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Colimaria detunitura sp. nov.

Candidatus Colimaria detunitura (NL. fem. n. *detunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902803165*. The type genome for the species is the GenBank assembly GCA_902803165.1. The GC content of the type genome is 34.01 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Colimaria excucatio sp. nov.

Candidatus Colimaria excucatio (NL. fem. n. *excucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902797965*. The type genome for the species is the GenBank assembly GCA_902797965.1. The GC content of the type genome is 33.15 %

and the genome length is 2.08 Mbp.

Description of *Candidatus* Colimaria fusifitica sp. nov.

Candidatus Colimaria fusifitica (NL. fem. n. *fusifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902796585*. The type genome for the species is the GenBank assembly GCA_902796585.1. The GC content of the type genome is 32.48 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Colimaria horomiforma sp. nov.

Candidatus Colimaria horomiforma (NL. fem. n. *horomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902775025*. The type genome for the species is the GenBank assembly GCA_902775025.1. The GC content of the type genome is 32.62 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Colimaria ignifago sp. nov.

Candidatus Colimaria ignifago (NL. fem. n. *ignifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902797575*. The type genome for the species is the GenBank assembly GCA_902797575.1. The GC content of the type genome is 32.04 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Colimaria immemicula sp. nov.

Candidatus Colimaria immemicula (NL. fem. n. *immemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902779645*. The type genome for the species is the GenBank assembly GCA_902779645.1. The GC content of the type genome is 33.49 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Colimaria lametitica sp. nov.

Candidatus Colimaria lametitica (NL. fem. n. *lametitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp900553895*. The type genome for the species is the GenBank assembly GCA_900553895.1. The GC content of the type genome is 33.34 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Colimaria lapilugo sp. nov.

Candidatus Colimaria lapilugo (NL. fem. n. *lapilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902802935*. The type genome for the species is the GenBank assembly GCA_902802935.1. The GC content of the type genome is 32.93 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Colimaria levidago sp. nov.

Candidatus Colimaria levidago (NL. fem. n. *levidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp900321205*. The type genome for the species is the GenBank assembly GCA_902755385.1. The GC content of the type genome is 35.51 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Colimaria notacimonas sp. nov.

Candidatus Colimaria notacimonas (NL. fem. n. *notacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902788575*. The type genome for the species is the GenBank assembly GCA_902788575.1. The GC content of the type genome is 34.67 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Colimaria valefimonas sp. nov.

Candidatus Colimaria valefimonas (NL. fem. n. *valefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp902763805*. The type genome for the species is the GenBank assembly GCA_902763805.1. The GC content of the type genome is 35.63 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Colimaria vilipimonia sp. nov.

Candidatus Colimaria vilipimonia (NL. fem. n. *vilipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp900549855*. The type genome for the species is the GenBank assembly RS_GCF_900771885.1. The GC content of the type genome is 33.4 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Colimaria vinulilenta sp. nov.

Candidatus Colimaria vinulilenta (NL. fem. n. *vinulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-196 sp002102975*. The type genome for the species is the GenBank assembly GCA_001917235.1. The GC content of the type genome is 35.25 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Colimella altivimonas sp. nov.

Candidatus Colimella altivimonas (NL. fem. n. *altivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7883 sp002500605*. The type genome for the species is the GenBank assembly GCA_002500605.1. The GC content of the type genome is 40.99 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Colimella gen. nov.

Candidatus Colimella (NL. fem. n. *Colimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7883*. The type species for the genus is *Candidatus* Colimella altivimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimellaceae.

Description of *Candidatus* Colimellaceae fam. nov.

Candidatus Colimellaceae (NL. fem. n. *Colimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7883.* The type genus for the taxon is *Candidatus* Colimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colimellales.

Description of *Candidatus* Colimellales ord. nov.

Candidatus Colimellales (NL. fem. n. *Colimellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7883.* The type genus for the taxon is *Candidatus* Colimella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA7883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colimellae.

Description of *Candidatus* Colimellae class. nov.

Candidatus Colimellae (NL. fem. n. *c__Colimellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7883.* The type genus for the taxon is *Candidatus* Colimella .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospinota*.

Description of *Candidatus* Colimia taxilibra sp. nov.

Candidatus Colimia taxilibra (NL. fem. n. *taxilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTHC01 sp011334845*. The type genome for the species is the

GenBank assembly GCA_011334845.1. The GC content of the type genome is 45.33 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Colimia gen. nov.

Candidatus Colimia (NL. fem. n. *Colimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTHC01*. The type species for the genus is *Candidatus* Colimia taxilibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTHC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimiaceae.

Description of *Candidatus* Colimiaceae fam. nov.

Candidatus Colimiaceae (NL. fem. n. *Colimiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTHC01*. The type genus for the taxon is *Candidatus* Colimia .

According to GTDB R06-RS202, this family belongs to the order *Desulfatiglandales*.

Description of *Candidatus* Colimida revulitia sp. nov.

Candidatus Colimida revulitia (NL. fem. n. *revulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *42-11 sp001508835*. The type genome for the species is the GenBank assembly GCA_014360295.1. The GC content of the type genome is 42.43 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Colimida gen. nov.

Candidatus Colimida (NL. fem. n. *Colimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *42-11*. The type species for the genus is *Candidatus* Colimida revulitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Dehisanaceae.

Description of *Candidatus* Colimosa cobalifica sp. nov.

Candidatus Colimosa cobalifica (NL. fem. n. *cobalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005881175*. The type genome for the species is the GenBank assembly GCA_005881175.1. The GC content of the type genome is 65.12 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Colimosa gen. nov.

Candidatus Colimosa (NL. fem. n. *Colimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-13*. The type species for the genus is *Candidatus* Colimosa cobalifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-121*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haluculaceae.

Description of *Candidatus* Colimosa cocibicula sp. nov.

Candidatus Colimosa cocibicula (NL. fem. n. *cocibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005880395*. The type genome for the species is the GenBank assembly GCA_005882575.1. The GC content of the type genome is 64.77 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Colimosa cohoribra sp. nov.

Candidatus Colimosa cohoribra (NL. fem. n. *cohoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005881715*. The type genome for the species is the GenBank assembly GCA_005882725.1. The GC content of the type genome is 65.68 % and the

genome length is 2.76 Mbp.

Description of *Candidatus* Colimosa conopisca sp. nov.

Candidatus Colimosa conopisca (NL. fem. n. *conopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005882525*. The type genome for the species is the GenBank assembly GCA_005879715.1. The GC content of the type genome is 66.33 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Colimosa cucurimonas sp. nov.

Candidatus Colimosa cucurimonas (NL. fem. n. *cucurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005889395*. The type genome for the species is the GenBank assembly GCA_005889395.1. The GC content of the type genome is 65.95 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Colimosa epicrigena sp. nov.

Candidatus Colimosa epicrigena (NL. fem. n. *epicrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005881215*. The type genome for the species is the GenBank assembly GCA_005881215.1. The GC content of the type genome is 66.08 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Colimosa exturilenta sp. nov.

Candidatus Colimosa exturilenta (NL. fem. n. *exturilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005889225*. The type genome for the species is the GenBank assembly GCA_005889225.1. The GC content of the type genome is 65.63 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Colimosa inlibitudo sp. nov.

Candidatus Colimosa inlibitudo (NL. fem. n. *inlibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005889285*. The type genome for the species is the GenBank assembly GCA_005889285.1. The GC content of the type genome is 66.01 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Colimosa parocitudo sp. nov.

Candidatus Colimosa parocitudo (NL. fem. n. *parocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005882045*. The type genome for the species is the GenBank assembly GCA_005882045.1. The GC content of the type genome is 65.62 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Colimosa patibitas sp. nov.

Candidatus Colimosa patibitas (NL. fem. n. *patibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005889535*. The type genome for the species is the GenBank assembly GCA_005889535.1. The GC content of the type genome is 65.58 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Colimosa peropugo sp. nov.

Candidatus Colimosa peropugo (NL. fem. n. *peropugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005881235*. The type genome for the species is the GenBank assembly GCA_005881235.1. The GC content of the type genome is 65.99 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Colimosa redacitura sp. nov.

Candidatus Colimosa redacitura (NL. fem. n. *redacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005880875*. The type genome for the species is the GenBank assembly GCA_005887655.1. The GC content of the type genome is 66.24 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Colimosa resupilenta sp. nov.

Candidatus Colimosa resupilenta (NL. fem. n. *resupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005889345*. The type genome for the species is the GenBank assembly GCA_005889345.1. The GC content of the type genome is 65.78 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Colimosa vepalilenta sp. nov.

Candidatus Colimosa vepalilenta (NL. fem. n. *vepalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-13 sp005880605*. The type genome for the species is the GenBank assembly GCA_005889525.1. The GC content of the type genome is 65.62 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Colimula cadavitia sp. nov.

Candidatus Colimula cadavitia (NL. fem. n. *cadavitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2206 sp002772115*. The type genome for the species is the GenBank assembly GCA_002772115.1. The GC content of the type genome is 34.67 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Colimula gen. nov.

Candidatus Colimula (NL. fem. n. *Colimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2206*. The type species for the genus is *Candidatus* Colimula cadavitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Colimulaceae fam. nov.

Candidatus Colimulaceae (NL. fem. n. *Colimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2206.* The type genus for the taxon is *Candidatus* Colimula .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Colimula epistastra sp. nov.

Candidatus Colimula epistastra (NL. fem. n. *epistastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2206 sp002400405*. The type genome for the species is the GenBank assembly GCA_002400405.1. The GC content of the type genome is 35.48 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Colimula hirudisca sp. nov.

Candidatus Colimula hirudisca (NL. fem. n. *hirudisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2206 sp003483065*. The type genome for the species is the GenBank assembly GCA_003512165.1. The GC content of the type genome is 35.96 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Colimula refacessa sp. nov.

Candidatus Colimula refacessa (NL. fem. n. *refacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2206 sp002328565*. The type genome for the species is the GenBank assembly GCA_002328565.1. The GC content of the type genome is 35.68 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Colimula viripifica sp. nov.

Candidatus Colimula viripifica (NL. fem. n. *viripifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2206 sp001784805*. The type genome for the species is the GenBank assembly GCA_000990805.1. The GC content of the type genome is 34.98 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Colipana artocastra sp. nov.

Candidatus Colipana artocastra (NL. fem. n. *artocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JADDFT01 sp013152765*. The type genome for the species is the GenBank assembly GCA_013152765.1. The GC content of the type genome is 60.31 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Colipana gen. nov.

Candidatus Colipana (NL. fem. n. *Colipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JADDFT01*. The type species for the genus is *Candidatus* Colipana artocastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JADDFT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipanaceae.

Description of *Candidatus* Colipanaceae fam. nov.

Candidatus Colipanaceae (NL. fem. n. *Colipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JADDFT01.* The type genus for the taxon is *Candidatus* Colipana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACIZP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Telegellales.

Description of *Candidatus* Coliparia bucolimonia sp. nov.

Candidatus Coliparia bucolimonia (NL. fem. n. *bucolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-272 sp000433515*. The type genome for the species is the GenBank assembly GCA_000433515.1. The GC content of the type genome is 52.16 % and the genome length is 2.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Coliparia gen. nov.

Candidatus Coliparia (NL. fem. n. *Coliparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-272*. The type species for the genus is *Candidatus* Coliparia bucolimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Colipariaceae fam. nov.

Candidatus Colipariaceae (NL. fem. n. *Colipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-272.* The type genus for the taxon is *Candidatus* Coliparia .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Coliparia insomibula sp. nov.

Candidatus Coliparia insomibula (NL. fem. n. *insomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-272 sp900556615*. The type genome for the species is the GenBank assembly GCA_900556615.1. The GC content of the type genome is 43.08 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Colipella semimugo sp. nov.

Candidatus Colipella semimugo (NL. fem. n. *semimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACEG01 sp011682665*. The type genome for the species is the GenBank assembly GCA_011682665.1. The GC content of the type genome is 29.17 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Colipella gen. nov.

Candidatus Colipella (NL. fem. n. *Colipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACEG01*. The type species for the genus is *Candidatus* Colipella semimugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipellaceae.

Description of *Candidatus* Colipellaceae fam. nov.

Candidatus Colipellaceae (NL. fem. n. *Colipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACEG01.* The type genus for the taxon is *Candidatus* Colipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAACEG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipellales.

Description of *Candidatus* Colipellales ord. nov.

Candidatus Colipellales (NL. fem. n. *Colipellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACEG01.* The type genus for the taxon is *Candidatus* Colipella .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Colipia adsicitrix sp. nov.

Candidatus Colipia adsicitrix (NL. fem. n. *adsicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-26 sp003599815*. The type genome for the species is the GenBank assembly GCA_003599815.1. The GC content of the type genome is 44.62 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Colipia gen. nov.

Candidatus Colipia (NL. fem. n. *Colipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-26*. The type species for the genus is *Candidatus* Colipia adsicitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipiaceae.

Description of *Candidatus* Colipiaceae fam. nov.

Candidatus Colipiaceae (NL. fem. n. *Colipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-26.* The type genus for the taxon is *Candidatus* Colipia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipiales.

Description of *Candidatus* Colipiales ord. nov.

Candidatus Colipiales (NL. fem. n. *Colipiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-26.* The type genus for the taxon is *Candidatus* Colipia .

According to the original version of GTDB R06-RS202, this family belongs to the class *SURF-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colipiae.

Description of *Candidatus* Colipiae class. nov.

Candidatus Colipiae (NL. fem. n. *c__Colipiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-26.* The type genus for the taxon is *Candidatus* Colipia .

According to GTDB R06-RS202, this class belongs to the phylum *Aureabacteria*.

Description of *Candidatus* Colipida bicalicula sp. nov.

Candidatus Colipida bicalicula (NL. fem. n. *bicalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7971 sp002686885*. The type genome for the species is the GenBank assembly GCA_003500775.1. The GC content of the type genome is 53.53 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Colipida gen. nov.

Candidatus Colipida (NL. fem. n. *Colipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7971*. The type species for the genus is *Candidatus* Colipida bicalicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA164-E04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomosaceae.

Description of *Candidatus* Coliposa tenemessa sp. nov.

Candidatus Coliposa tenemessa (NL. fem. n. *tenemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NDHX01 sp013626165*. The type genome for the species is the GenBank assembly GCA_013626165.1. The GC content of the type genome is 37.82 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Coliposa gen. nov.

Candidatus Coliposa (NL. fem. n. *Coliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NDHX01*. The type species for the genus is *Candidatus* Coliposa tenemessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NDHX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coliposaceae.

Description of *Candidatus* Coliposaceae fam. nov.

Candidatus Coliposaceae (NL. fem. n. *Coliposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NDHX01.* The type genus for the taxon is *Candidatus* Coliposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *NDHX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Coliposales.

Description of *Candidatus* Coliposales ord. nov.

Candidatus Coliposales (NL. fem. n. *Coliposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NDHX01.* The type genus for the taxon is *Candidatus* Coliposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Colipula aciscilega sp. nov.

Candidatus Colipula aciscilega (NL. fem. n. *aciscilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW602-bin22 sp004297775*. The type genome for the species is the GenBank assembly GCA_004297775.1. The GC content of the type genome is 65.31 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Colipula gen. nov.

Candidatus Colipula (NL. fem. n. *Colipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW602-bin22*. The type species for the genus is *Candidatus* Colipula aciscilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipulaceae.

Description of *Candidatus* Colipulaceae fam. nov.

Candidatus Colipulaceae (NL. fem. n. *Colipulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW602-bin22.* The type genus for the taxon is *Candidatus* Colipula .

According to the original version of GTDB R06-RS202, this family belongs to the order *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipulales.

Description of *Candidatus* Colipulales ord. nov.

Candidatus Colipulales (NL. fem. n. *Colipulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW602-bin22.* The type genus for the taxon is *Candidatus* Colipula .

According to the original version of GTDB R06-RS202, this family belongs to the class *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Colipulae.

Description of *Candidatus* Colipulae class. nov.

Candidatus Colipulae (NL. fem. n. *c__Colipulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW602-bin22.* The type genus for the taxon is *Candidatus* Colipula .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Collimonas capilibula sp. nov.

Candidatus Collimonas capilibula (NL. fem. n. *capilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp900112135*. The type genome for the species is the GenBank assembly RS_GCF_007829005.1. The GC content of the type genome is 59.83 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Collimonas cerifivita sp. nov.

Candidatus Collimonas cerifivita (NL. fem. n. *cerifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp900111995*. The type genome for the species is the GenBank assembly RS_GCF_900111995.1. The GC content of the type genome is 56.02 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Collimonas feculastra sp. nov.

Candidatus Collimonas feculastra (NL. fem. n. *feculastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp002325825*. The type genome for the species is the GenBank assembly GCA_002325825.1. The GC content of the type genome is 52.59 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Collimonas negiditica sp. nov.

Candidatus Collimonas negiditica (NL. fem. n. *negiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp900113705*. The type genome for the species is the GenBank assembly RS_GCF_900113705.1. The GC content of the type genome is 55.99 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Collimonas risibedo sp. nov.

Candidatus Collimonas risibedo (NL. fem. n. *risibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp900107095*. The type genome for the species is the GenBank assembly RS_GCF_900107095.1. The GC content of the type genome is 57.04 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Collimonas uxorcedo sp. nov.

Candidatus Collimonas uxorcedo (NL. fem. n. *uxorcedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collimonas sp002564105*. The type genome for the species is the GenBank assembly RS_GCF_002564105.1. The GC content of the type genome is 58.73 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Collinsella abhinetta sp. nov.

Candidatus Collinsella abhinetta (NL. fem. n. *abhinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547805*. The type genome for the species is the GenBank assembly GCA_900547805.1. The GC content of the type genome is 60.54 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Collinsella abpatisca sp. nov.

Candidatus Collinsella abpatisca (NL. fem. n. *abpatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554325*. The type genome for the species is the GenBank assembly GCA_900554325.1. The GC content of the type genome is 59.75 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Collinsella acistibula sp. nov.

Candidatus Collinsella acistibula (NL. fem. n. *acistibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900549245*. The type genome for the species is the GenBank assembly GCA_900549245.1. The GC content of the type genome is 59.94 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella acrimitrix sp. nov.

Candidatus Collinsella acrimitrix (NL. fem. n. *acrimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900762345*. The type genome for the species is the GenBank assembly GCA_900762345.1. The GC content of the type genome is 59.87 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella acrobisca sp. nov.

Candidatus Collinsella acrobisca (NL. fem. n. *acrobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540875*. The type genome for the species is the GenBank assembly GCA_900540875.1. The GC content of the type genome is 59.93 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Collinsella acrobitia sp. nov.

Candidatus Collinsella acrobitia (NL. fem. n. *acrobitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547505*. The type genome for the species is the GenBank assembly GCA_900547505.1. The GC content of the type genome is 59.89 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Collinsella adcomitas sp. nov.

Candidatus Collinsella adcomitas (NL. fem. n. *adcomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544645*. The type genome for the species is the GenBank assembly GCA_900544645.1. The GC content of the type genome is 60.31 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Collinsella adessatio sp. nov.

Candidatus Collinsella adessatio (NL. fem. n. *adessatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547855*. The type genome for the species is the GenBank assembly GCA_900547855.1. The GC content of the type genome is 60.08 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Collinsella adfunatio sp. nov.

Candidatus Collinsella adfunatio (NL. fem. n. *adfunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900767675*. The type genome for the species is the GenBank assembly GCA_900767675.1. The GC content of the type genome is 60.01 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Collinsella adgubitica sp. nov.

Candidatus Collinsella adgubitica (NL. fem. n. *adgubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900760325*. The type genome for the species is the GenBank assembly GCA_900760325.1. The GC content of the type genome is 59.73 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella adhoritudo sp. nov.

Candidatus Collinsella adhoritudo (NL. fem. n. *adhoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555815*. The type genome for the species is the GenBank assembly GCA_900555815.1. The GC content of the type genome is 60.32 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Collinsella adhoritura sp. nov.

Candidatus Collinsella adhoritura (NL. fem. n. *adhoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552295*. The type genome for the species is the GenBank assembly GCA_900552295.1. The GC content of the type genome is 59.97 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Collinsella adlenibra sp. nov.

Candidatus Collinsella adlenibra (NL. fem. n. *adlenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556285*. The type genome for the species is the GenBank assembly GCA_900556285.1. The GC content of the type genome is 59.81 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Collinsella adlenitura sp. nov.

Candidatus Collinsella adlenitura (NL. fem. n. *adlenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757595*. The type genome for the species is the GenBank assembly GCA_900757595.1. The GC content of the type genome is 59.84 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella adluvago sp. nov.

Candidatus Collinsella adluvago (NL. fem. n. *adluvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551365*. The type genome for the species is the GenBank assembly GCA_900551365.1. The GC content of the type genome is 60.1 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella admuredo sp. nov.

Candidatus Collinsella admuredo (NL. fem. n. *admuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900762355*. The type genome for the species is the GenBank assembly GCA_900762355.1. The GC content of the type genome is 60.25 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Collinsella adnepitrix sp. nov.

Candidatus Collinsella adnepitrix (NL. fem. n. *adnepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900759435*. The type genome for the species is the GenBank assembly GCA_900759435.1. The GC content of the type genome is 60.43 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Collinsella adnilitia sp. nov.

Candidatus Collinsella adnilitia (NL. fem. n. *adnilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542555*. The type genome for the species is the GenBank assembly GCA_900542555.1. The GC content of the type genome is 59.88 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella adpagitas sp. nov.

Candidatus Collinsella adpagitas (NL. fem. n. *adpagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900557455*. The type genome for the species is the GenBank assembly GCA_900557455.1. The GC content of the type genome is 59.86 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Collinsella adpinastra sp. nov.

Candidatus Collinsella adpinastra (NL. fem. n. *adpinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900768265*. The type genome for the species is the GenBank assembly GCA_900768265.1. The GC content of the type genome is 60.27 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Collinsella adsecetta sp. nov.

Candidatus Collinsella adsecetta (NL. fem. n. *adsecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554495*. The type genome for the species is the GenBank assembly GCA_900554495.1. The GC content of the type genome is 60.29 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella adtagousia sp. nov.

Candidatus Collinsella adtagousia (NL. fem. n. *adtagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541135*. The type genome for the species is the GenBank assembly GCA_900541135.1. The GC content of the type genome is 60.01 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella adtemastra sp. nov.

Candidatus Collinsella adtemastra (NL. fem. n. *adtemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900764025*. The type genome for the species is the GenBank assembly GCA_900764025.1. The GC content of the type genome is 60.9 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella adtilitudo sp. nov.

Candidatus Collinsella adtilitudo (NL. fem. n. *adtilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757385*. The type genome for the species is the GenBank assembly GCA_900757385.1. The GC content of the type genome is 60.21 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Collinsella adtolicella sp. nov.

Candidatus Collinsella adtolicella (NL. fem. n. *adtolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555745*. The type genome for the species is the GenBank assembly GCA_900555745.1. The GC content of the type genome is 60.5 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Collinsella affamitica sp. nov.

Candidatus Collinsella affamitica (NL. fem. n. *affamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554255*. The type genome for the species is the GenBank assembly GCA_900554255.1. The GC content of the type genome is 60.56 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Collinsella aglasitio sp. nov.

Candidatus Collinsella aglasitio (NL. fem. n. *aglasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752275*. The type genome for the species is the GenBank assembly GCA_900752275.1. The GC content of the type genome is 60.22 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella agnicatica sp. nov.

Candidatus Collinsella agnicatica (NL. fem. n. *agnicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541025*. The type genome for the species is the GenBank assembly GCA_900541025.1. The GC content of the type genome is 60.15 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Collinsella agravibula sp. nov.

Candidatus Collinsella agravibula (NL. fem. n. *agravibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900541665*. The type genome for the species is the GenBank assembly GCA_900541665.1. The GC content of the type genome is 59.96 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Collinsella agricitio sp. nov.

Candidatus Collinsella agricitio (NL. fem. n. *agricitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551625*. The type genome for the species is the GenBank assembly GCA_900551625.1. The GC content of the type genome is 60.34 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Collinsella albogetta sp. nov.

Candidatus Collinsella albogetta (NL. fem. n. *albogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549535*. The type genome for the species is the GenBank assembly GCA_900549535.1. The GC content of the type genome is 60.25 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella alcedifica sp. nov.

Candidatus Collinsella alcedifica (NL. fem. n. *alcedifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556675*. The type genome for the species is the GenBank assembly GCA_900556675.1. The GC content of the type genome is 60.21 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Collinsella allobitudo sp. nov.

Candidatus Collinsella allobitudo (NL. fem. n. *allobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553935*. The type genome for the species is the GenBank assembly GCA_900553935.1. The GC content of the type genome is 59.56 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Collinsella allubibra sp. nov.

Candidatus Collinsella allubibra (NL. fem. n. *allubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900751695*. The type genome for the species is the GenBank assembly GCA_900751695.1. The GC content of the type genome is 60.0 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Collinsella alsisitura sp. nov.

Candidatus Collinsella alsisitura (NL. fem. n. *alsisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550785*. The type genome for the species is the GenBank assembly GCA_900550785.1. The GC content of the type genome is 60.07 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella amercibula sp. nov.

Candidatus Collinsella amercibula (NL. fem. n. *amercibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554585*. The type genome for the species is the GenBank assembly GCA_900554585.1. The GC content of the type genome is 60.16 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Collinsella ammurago sp. nov.

Candidatus Collinsella ammurago (NL. fem. n. *ammurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553345*. The type genome for the species is the GenBank assembly GCA_900553345.1. The GC content of the type genome is 59.73 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Collinsella ampenatio sp. nov.

Candidatus Collinsella ampenatio (NL. fem. n. *ampenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548075*. The type genome for the species is the GenBank assembly GCA_900548075.1. The GC content of the type genome is 60.35 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Collinsella ancepentia sp. nov.

Candidatus Collinsella ancepentia (NL. fem. n. *ancepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900768795*. The type genome for the species is the GenBank assembly GCA_900768795.1. The GC content of the type genome is 58.02 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Collinsella aneclitura sp. nov.

Candidatus Collinsella aneclitura (NL. fem. n. *aneclitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547025*. The type genome for the species is the GenBank assembly GCA_900547025.1. The GC content of the type genome is 60.11 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Collinsella anxifastra sp. nov.

Candidatus Collinsella anxifastra (NL. fem. n. *anxifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545745*. The type genome for the species is the GenBank assembly GCA_900545745.1. The GC content of the type genome is 60.35 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Collinsella apporitura sp. nov.

Candidatus Collinsella apporitura (NL. fem. n. *apporitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900757505*. The type genome for the species is the GenBank assembly GCA_900757505.1. The GC content of the type genome is 59.92 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella apposetta sp. nov.

Candidatus Collinsella apposetta (NL. fem. n. *apposetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542305*. The type genome for the species is the GenBank assembly GCA_900542305.1. The GC content of the type genome is 59.85 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Collinsella apposugo sp. nov.

Candidatus Collinsella apposugo (NL. fem. n. *apposugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761615*. The type genome for the species is the GenBank assembly GCA_900761615.1. The GC content of the type genome is 60.13 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Collinsella aprariforma sp. nov.

Candidatus Collinsella aprariforma (NL. fem. n. *aprariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542905*. The type genome for the species is the GenBank assembly GCA_900542905.1. The GC content of the type genome is 59.96 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Collinsella apsimibula sp. nov.

Candidatus Collinsella apsimibula (NL. fem. n. *apsimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900766165*. The type genome for the species is the GenBank assembly GCA_900766165.1. The GC content of the type genome is 59.8 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Collinsella arcelentia sp. nov.

Candidatus Collinsella arcelentia (NL. fem. n. *arcelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551975*. The type genome for the species is the GenBank assembly GCA_900551975.1. The GC content of the type genome is 59.91 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Collinsella armigicella sp. nov.

Candidatus Collinsella armigicella (NL. fem. n. *armigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900765115*. The type genome for the species is the GenBank assembly GCA_900765115.1. The GC content of the type genome is 60.08 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Collinsella arrugilenta sp. nov.

Candidatus Collinsella arrugilenta (NL. fem. n. *arrugilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900546825*. The type genome for the species is the GenBank assembly GCA_900546825.1. The GC content of the type genome is 60.21 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella aruspicula sp. nov.

Candidatus Collinsella aruspicula (NL. fem. n. *aruspicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545055*. The type genome for the species is the GenBank assembly GCA_900545055.1. The GC content of the type genome is 60.03 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Collinsella atrusugo sp. nov.

Candidatus Collinsella atrusugo (NL. fem. n. *atrusugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550355*. The type genome for the species is the GenBank assembly GCA_900550355.1. The GC content of the type genome is 59.96 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Collinsella baditiforma sp. nov.

Candidatus Collinsella baditiforma (NL. fem. n. *baditiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900557505*. The type genome for the species is the GenBank assembly GCA_900557505.1. The GC content of the type genome is 59.89 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Collinsella baropitas sp. nov.

Candidatus Collinsella baropitas (NL. fem. n. *baropitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556605*. The type genome for the species is the GenBank assembly GCA_900556605.1. The GC content of the type genome is 60.31 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Collinsella benemax sp. nov.

Candidatus Collinsella benemax (NL. fem. n. *benemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548515*. The type genome for the species is the GenBank assembly GCA_900548515.1. The GC content of the type genome is 60.29 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella benevibula sp. nov.

Candidatus Collinsella benevibula (NL. fem. n. *benevibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900544865*. The type genome for the species is the GenBank assembly GCA_900544865.1. The GC content of the type genome is 59.78 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella benifitio sp. nov.

Candidatus Collinsella benifitio (NL. fem. n. *benifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551205*. The type genome for the species is the GenBank assembly GCA_900542075.1. The GC content of the type genome is 59.59 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella bicaliforma sp. nov.

Candidatus Collinsella bicaliforma (NL. fem. n. *bicaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003469185*. The type genome for the species is the GenBank assembly RS_GCF_003469185.1. The GC content of the type genome is 59.5 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Collinsella bifisilega sp. nov.

Candidatus Collinsella bifisilega (NL. fem. n. *bifisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541205*. The type genome for the species is the GenBank assembly GCA_900541205.1. The GC content of the type genome is 59.87 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Collinsella bimetitica sp. nov.

Candidatus Collinsella bimetitica (NL. fem. n. *bimetitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550815*. The type genome for the species is the GenBank assembly GCA_900550815.1. The GC content of the type genome is 60.16 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Collinsella bimotatio sp. nov.

Candidatus Collinsella bimotatio (NL. fem. n. *bimotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554665*. The type genome for the species is the GenBank assembly GCA_900554665.1. The GC content of the type genome is 60.38 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Collinsella bimotitica sp. nov.

Candidatus Collinsella bimotitica (NL. fem. n. *bimotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003487125*. The type genome for the species is the GenBank assembly GCA_900550515.1. The GC content of the type genome is 60.16 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Collinsella binocivita sp. nov.

Candidatus Collinsella binocivita (NL. fem. n. *binocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551635*. The type genome for the species is the GenBank assembly GCA_900755395.1. The GC content of the type genome is 59.6 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Collinsella biparicella sp. nov.

Candidatus Collinsella biparicella (NL. fem. n. *biparicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552345*. The type genome for the species is the GenBank assembly GCA_900552345.1. The GC content of the type genome is 60.13 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Collinsella bipatitura sp. nov.

Candidatus Collinsella bipatitura (NL. fem. n. *bipatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555355*. The type genome for the species is the GenBank assembly GCA_900555355.1. The GC content of the type genome is 60.18 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Collinsella bipenetta sp. nov.

Candidatus Collinsella bipenetta (NL. fem. n. *bipenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp902364645*. The type genome for the species is the GenBank assembly RS_GCF_902364645.1. The GC content of the type genome is 59.95 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Collinsella bisacago sp. nov.

Candidatus Collinsella bisacago (NL. fem. n. *bisacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549185*. The type genome for the species is the GenBank assembly GCA_900549185.1. The GC content of the type genome is 60.1 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella bisulitica sp. nov.

Candidatus Collinsella bisulitica (NL. fem. n. *bisulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp002232035*. The type genome for the species is the GenBank assembly GCA_900544915.1. The GC content of the type genome is 59.93 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Collinsella bonifificа sp. nov.

Candidatus Collinsella bonifificа (NL. fem. n. *bonifificа* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900552875*. The type genome for the species is the GenBank assembly GCA_900552875.1. The GC content of the type genome is 60.08 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Collinsella buxifibra sp. nov.

Candidatus Collinsella buxifibra (NL. fem. n. *buxifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900759045*. The type genome for the species is the GenBank assembly GCA_900759045.1. The GC content of the type genome is 59.75 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella buxifilenta sp. nov.

Candidatus Collinsella buxifilenta (NL. fem. n. *buxifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549345*. The type genome for the species is the GenBank assembly GCA_900549345.1. The GC content of the type genome is 60.17 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella cacaletta sp. nov.

Candidatus Collinsella cacaletta (NL. fem. n. *cacaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549455*. The type genome for the species is the GenBank assembly GCA_900542685.1. The GC content of the type genome is 59.84 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella capilitura sp. nov.

Candidatus Collinsella capilitura (NL. fem. n. *capilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552385*. The type genome for the species is the GenBank assembly GCA_900552385.1. The GC content of the type genome is 60.04 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Collinsella casigedo sp. nov.

Candidatus Collinsella casigedo (NL. fem. n. *casigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541015*. The type genome for the species is the GenBank assembly GCA_900763515.1. The GC content of the type genome is 60.2 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Collinsella catabago sp. nov.

Candidatus Collinsella catabago (NL. fem. n. *catabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540995*. The type genome for the species is the GenBank assembly GCA_900540995.1. The GC content of the type genome is 60.17 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella catagigena sp. nov.

Candidatus Collinsella catagigena (NL. fem. n. *catagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541695*. The type genome for the species is the GenBank assembly GCA_900541695.1. The GC content of the type genome is 59.95 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella categago sp. nov.

Candidatus Collinsella categago (NL. fem. n. *categago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003436275*. The type genome for the species is the GenBank assembly RS_GCF_902399915.1. The GC content of the type genome is 60.05 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Collinsella catocatio sp. nov.

Candidatus Collinsella catocatio (NL. fem. n. *catocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp902388345*. The type genome for the species is the GenBank assembly RS_GCF_902364355.1. The GC content of the type genome is 59.82 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Collinsella ceracimonia sp. nov.

Candidatus Collinsella ceracimonia (NL. fem. n. *ceracimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551815*. The type genome for the species is the GenBank assembly GCA_900551815.1. The GC content of the type genome is 60.14 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella cerevugo sp. nov.

Candidatus Collinsella cerevugo (NL. fem. n. *cerevugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540855*. The type genome for the species is the GenBank assembly GCA_900548295.1. The GC content of the type genome is 60.13 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Collinsella cerimitudo sp. nov.

Candidatus Collinsella cerimitudo (NL. fem. n. *cerimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554985*. The type genome for the species is the GenBank assembly GCA_900554985.1. The GC content of the type genome is 60.81 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Collinsella cerucitoga sp. nov.

Candidatus Collinsella cerucitoga (NL. fem. n. *cerucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900554465*. The type genome for the species is the GenBank assembly GCA_900554465.1. The GC content of the type genome is 59.93 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Collinsella cibarentia sp. nov.

Candidatus Collinsella cibarentia (NL. fem. n. *cibarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900764415*. The type genome for the species is the GenBank assembly GCA_900764415.1. The GC content of the type genome is 59.6 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella cicatitrix sp. nov.

Candidatus Collinsella cicatitrix (NL. fem. n. *cicatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543515*. The type genome for the species is the GenBank assembly GCA_900548885.1. The GC content of the type genome is 59.94 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella cicilessa sp. nov.

Candidatus Collinsella cicilessa (NL. fem. n. *cicilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003471585*. The type genome for the species is the GenBank assembly RS_GCF_902364675.1. The GC content of the type genome is 59.66 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Collinsella ciminentia sp. nov.

Candidatus Collinsella ciminentia (NL. fem. n. *ciminentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547765*. The type genome for the species is the GenBank assembly GCA_900547765.1. The GC content of the type genome is 60.19 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Collinsella codifivita sp. nov.

Candidatus Collinsella codifivita (NL. fem. n. *codifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549025*. The type genome for the species is the GenBank assembly GCA_900549025.1. The GC content of the type genome is 60.02 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Collinsella cohorimonas sp. nov.

Candidatus Collinsella cohorimonas (NL. fem. n. *cohorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541645*. The type genome for the species is the GenBank assembly GCA_900544895.1. The GC content of the type genome is 59.7 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Collinsella colipastra sp. nov.

Candidatus Collinsella colipastra (NL. fem. n. *colipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542275*. The type genome for the species is the GenBank assembly GCA_900756965.1. The GC content of the type genome is 59.9 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella colipibula sp. nov.

Candidatus Collinsella colipibula (NL. fem. n. *colipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542125*. The type genome for the species is the GenBank assembly GCA_900542125.1. The GC content of the type genome is 60.07 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Collinsella colopatio sp. nov.

Candidatus Collinsella colopatio (NL. fem. n. *colopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556515*. The type genome for the species is the GenBank assembly GCA_900556515.1. The GC content of the type genome is 59.99 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Collinsella colopimonas sp. nov.

Candidatus Collinsella colopimonas (NL. fem. n. *colopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541055*. The type genome for the species is the GenBank assembly GCA_900541005.1. The GC content of the type genome is 60.07 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella conabimonia sp. nov.

Candidatus Collinsella conabimonia (NL. fem. n. *conabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553215*. The type genome for the species is the GenBank assembly GCA_902406275.1. The GC content of the type genome is 59.84 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Collinsella conifago sp. nov.

Candidatus Collinsella conifago (NL. fem. n. *conifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544755*. The type genome for the species is the GenBank assembly GCA_900544755.1. The GC content of the type genome is 60.0 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella conifigena sp. nov.

Candidatus Collinsella conifigena (NL. fem. n. *conifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900541185*. The type genome for the species is the GenBank assembly GCA_900541185.1. The GC content of the type genome is 59.98 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella conigitica sp. nov.

Candidatus Collinsella conigitica (NL. fem. n. *conigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900760245*. The type genome for the species is the GenBank assembly GCA_900760245.1. The GC content of the type genome is 60.26 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella conipitica sp. nov.

Candidatus Collinsella conipitica (NL. fem. n. *conipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003465825*. The type genome for the species is the GenBank assembly RS_GCF_003469085.1. The GC content of the type genome is 59.61 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Collinsella cosidilega sp. nov.

Candidatus Collinsella cosidilega (NL. fem. n. *cosidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752425*. The type genome for the species is the GenBank assembly GCA_900752425.1. The GC content of the type genome is 60.19 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Collinsella cotenimonas sp. nov.

Candidatus Collinsella cotenimonas (NL. fem. n. *cotenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900758475*. The type genome for the species is the GenBank assembly GCA_900754635.1. The GC content of the type genome is 59.97 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella culibousia sp. nov.

Candidatus Collinsella culibousia (NL. fem. n. *culibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556365*. The type genome for the species is the GenBank assembly GCA_900556365.1. The GC content of the type genome is 60.01 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Collinsella culilentia sp. nov.

Candidatus Collinsella culilentia (NL. fem. n. *culilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761145*. The type genome for the species is the GenBank assembly GCA_900761145.1. The GC content of the type genome is 59.87 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella culilimonia sp. nov.

Candidatus Collinsella culilimonia (NL. fem. n. *culilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757465*. The type genome for the species is the GenBank assembly GCA_900757465.1. The GC content of the type genome is 59.89 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella curacigena sp. nov.

Candidatus Collinsella curacigena (NL. fem. n. *curacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549275*. The type genome for the species is the GenBank assembly GCA_900752565.1. The GC content of the type genome is 59.88 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella decacitia sp. nov.

Candidatus Collinsella decacitia (NL. fem. n. *decacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541855*. The type genome for the species is the GenBank assembly GCA_900541855.1. The GC content of the type genome is 60.25 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella decacitica sp. nov.

Candidatus Collinsella decacitica (NL. fem. n. *decacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544465*. The type genome for the species is the GenBank assembly GCA_900544465.1. The GC content of the type genome is 60.06 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Collinsella decamivita sp. nov.

Candidatus Collinsella decamivita (NL. fem. n. *decamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544875*. The type genome for the species is the GenBank assembly GCA_900544875.1. The GC content of the type genome is 59.93 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Collinsella decapisca sp. nov.

Candidatus Collinsella decapisca (NL. fem. n. *decapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543945*. The type genome for the species is the GenBank assembly GCA_900543945.1. The GC content of the type genome is 59.89 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella dedigilenta sp. nov.

Candidatus Collinsella dedigilenta (NL. fem. n. *dedigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900541745*. The type genome for the species is the GenBank assembly GCA_900543595.1. The GC content of the type genome is 59.81 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella defosatio sp. nov.

Candidatus Collinsella defosatio (NL. fem. n. *defosatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp002391315*. The type genome for the species is the GenBank assembly GCA_003452675.1. The GC content of the type genome is 60.04 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Collinsella defosugo sp. nov.

Candidatus Collinsella defosugo (NL. fem. n. *defosugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754075*. The type genome for the species is the GenBank assembly GCA_900754075.1. The GC content of the type genome is 60.1 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella defulugo sp. nov.

Candidatus Collinsella defulugo (NL. fem. n. *defulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900758885*. The type genome for the species is the GenBank assembly GCA_900758885.1. The GC content of the type genome is 60.09 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella dehinitoga sp. nov.

Candidatus Collinsella dehinitoga (NL. fem. n. *dehinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003439125*. The type genome for the species is the GenBank assembly GCA_900539205.1. The GC content of the type genome is 59.78 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella delacitura sp. nov.

Candidatus Collinsella delacitura (NL. fem. n. *delacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551665*. The type genome for the species is the GenBank assembly GCA_900551665.1. The GC content of the type genome is 62.99 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Collinsella delecax sp. nov.

Candidatus Collinsella delecax (NL. fem. n. *delecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754445*. The type genome for the species is the GenBank assembly GCA_900754445.1. The GC content of the type genome is 59.8 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Collinsella delecigena sp. nov.

Candidatus Collinsella delecigena (NL. fem. n. *delecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552425*. The type genome for the species is the GenBank assembly GCA_900552425.1. The GC content of the type genome is 60.16 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Collinsella delubetta sp. nov.

Candidatus Collinsella delubetta (NL. fem. n. *delubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554595*. The type genome for the species is the GenBank assembly GCA_900554595.1. The GC content of the type genome is 60.51 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella demigicella sp. nov.

Candidatus Collinsella demigicella (NL. fem. n. *demigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544115*. The type genome for the species is the GenBank assembly RS_GCF_003473055.1. The GC content of the type genome is 59.8 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Collinsella democax sp. nov.

Candidatus Collinsella democax (NL. fem. n. *democax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752215*. The type genome for the species is the GenBank assembly GCA_900752215.1. The GC content of the type genome is 60.14 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella denorilenta sp. nov.

Candidatus Collinsella denorilenta (NL. fem. n. *denorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757705*. The type genome for the species is the GenBank assembly GCA_900757705.1. The GC content of the type genome is 60.1 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella denorimonas sp. nov.

Candidatus Collinsella denorimonas (NL. fem. n. *denorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541685*. The type genome for the species is the GenBank assembly GCA_900541685.1. The GC content of the type genome is 60.0 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Collinsella denupibra sp. nov.

Candidatus Collinsella denupibra (NL. fem. n. *denupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900545165*. The type genome for the species is the GenBank assembly GCA_900545165.1. The GC content of the type genome is 60.07 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Collinsella depacitica sp. nov.

Candidatus Collinsella depacitica (NL. fem. n. *depacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550835*. The type genome for the species is the GenBank assembly GCA_900550835.1. The GC content of the type genome is 59.88 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella depasivita sp. nov.

Candidatus Collinsella depasivita (NL. fem. n. *depasivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761945*. The type genome for the species is the GenBank assembly GCA_900761945.1. The GC content of the type genome is 59.6 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Collinsella depecitrix sp. nov.

Candidatus Collinsella depecitrix (NL. fem. n. *depecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556415*. The type genome for the species is the GenBank assembly GCA_900556415.1. The GC content of the type genome is 59.54 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Collinsella depicivita sp. nov.

Candidatus Collinsella depicivita (NL. fem. n. *depicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900756725*. The type genome for the species is the GenBank assembly GCA_900756725.1. The GC content of the type genome is 59.96 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella depopicula sp. nov.

Candidatus Collinsella depopicula (NL. fem. n. *depopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761155*. The type genome for the species is the GenBank assembly GCA_900761155.1. The GC content of the type genome is 60.15 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella derecetta sp. nov.

Candidatus Collinsella derecetta (NL. fem. n. *derecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003459245*. The type genome for the species is the GenBank assembly RS_GCF_009876325.1. The GC content of the type genome is 59.87 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Collinsella derunilenta sp. nov.

Candidatus Collinsella derunilenta (NL. fem. n. *derunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553165*. The type genome for the species is the GenBank assembly GCA_900553165.1. The GC content of the type genome is 59.35 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Collinsella desuciforma sp. nov.

Candidatus Collinsella desuciforma (NL. fem. n. *desuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541475*. The type genome for the species is the GenBank assembly GCA_900547245.1. The GC content of the type genome is 59.87 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella desuribula sp. nov.

Candidatus Collinsella desuribula (NL. fem. n. *desuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900760905*. The type genome for the species is the GenBank assembly GCA_900760905.1. The GC content of the type genome is 60.18 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Collinsella detenicella sp. nov.

Candidatus Collinsella detenicella (NL. fem. n. *detenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556495*. The type genome for the species is the GenBank assembly GCA_900556495.1. The GC content of the type genome is 65.54 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Collinsella dibucatio sp. nov.

Candidatus Collinsella dibucatio (NL. fem. n. *dibucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541195*. The type genome for the species is the GenBank assembly GCA_900541195.1. The GC content of the type genome is 59.79 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella dicabitio sp. nov.

Candidatus Collinsella dicabitio (NL. fem. n. *dicabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556705*. The type genome for the species is the GenBank assembly GCA_900556705.1. The GC content of the type genome is 60.26 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Collinsella dicimedo sp. nov.

Candidatus Collinsella dicimedo (NL. fem. n. *dicimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900754385*. The type genome for the species is the GenBank assembly GCA_900754385.1. The GC content of the type genome is 59.7 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Collinsella dicimibula sp. nov.

Candidatus Collinsella dicimibula (NL. fem. n. *dicimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555225*. The type genome for the species is the GenBank assembly GCA_900555225.1. The GC content of the type genome is 59.92 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Collinsella dilecitio sp. nov.

Candidatus Collinsella dilecitio (NL. fem. n. *dilecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754275*. The type genome for the species is the GenBank assembly GCA_900549575.1. The GC content of the type genome is 60.27 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella ecfacilenta sp. nov.

Candidatus Collinsella ecfacilenta (NL. fem. n. *ecfacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542825*. The type genome for the species is the GenBank assembly GCA_900542825.1. The GC content of the type genome is 59.83 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella echogifica sp. nov.

Candidatus Collinsella echogifica (NL. fem. n. *echogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554655*. The type genome for the species is the GenBank assembly GCA_900554655.1. The GC content of the type genome is 60.66 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Collinsella edulcisca sp. nov.

Candidatus Collinsella edulcisca (NL. fem. n. *edulcisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549655*. The type genome for the species is the GenBank assembly GCA_900549655.1. The GC content of the type genome is 60.17 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Collinsella energiforma sp. nov.

Candidatus Collinsella energiforma (NL. fem. n. *energiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549195*. The type genome for the species is the GenBank assembly GCA_900549195.1. The GC content of the type genome is 60.09 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Collinsella enimvax sp. nov.

Candidatus Collinsella enimvax (NL. fem. n. *enimvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541245*. The type genome for the species is the GenBank assembly GCA_900541245.1. The GC content of the type genome is 59.71 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella ensicitrix sp. nov.

Candidatus Collinsella ensicitrix (NL. fem. n. *ensicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544845*. The type genome for the species is the GenBank assembly GCA_900544845.1. The GC content of the type genome is 60.26 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella ensigitura sp. nov.

Candidatus Collinsella ensigitura (NL. fem. n. *ensigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552735*. The type genome for the species is the GenBank assembly GCA_900552735.1. The GC content of the type genome is 60.09 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella ephemifica sp. nov.

Candidatus Collinsella ephemifica (NL. fem. n. *ephemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551605*. The type genome for the species is the GenBank assembly GCA_900551605.1. The GC content of the type genome is 60.17 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Collinsella epigrousia sp. nov.

Candidatus Collinsella epigrousia (NL. fem. n. *epigrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548815*. The type genome for the species is the GenBank assembly GCA_900548815.1. The GC content of the type genome is 60.18 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Collinsella epistilenta sp. nov.

Candidatus Collinsella epistilenta (NL. fem. n. *epistilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752015*. The type genome for the species is the GenBank assembly GCA_900752015.1. The GC content of the type genome is 60.09 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Collinsella epitritudo sp. nov.

Candidatus Collinsella epitritudo (NL. fem. n. *epitritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp902363125*. The type genome for the species is the GenBank assembly RS_GCF_902363125.1. The GC content of the type genome is 60.06 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Collinsella eviscitura sp. nov.

Candidatus Collinsella eviscitura (NL. fem. n. *eviscitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761995*. The type genome for the species is the GenBank assembly GCA_900761995.1. The GC content of the type genome is 60.02 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Collinsella excanax sp. nov.

Candidatus Collinsella excanax (NL. fem. n. *excanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549715*. The type genome for the species is the GenBank assembly GCA_900549715.1. The GC content of the type genome is 59.84 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella excaressa sp. nov.

Candidatus Collinsella excaressa (NL. fem. n. *excaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757495*. The type genome for the species is the GenBank assembly GCA_900757495.1. The GC content of the type genome is 59.71 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Collinsella excocugo sp. nov.

Candidatus Collinsella excocugo (NL. fem. n. *excocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900755005*. The type genome for the species is the GenBank assembly GCA_900755005.1. The GC content of the type genome is 60.03 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella exorcimonas sp. nov.

Candidatus Collinsella exorcimonas (NL. fem. n. *exorcimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541795*. The type genome for the species is the GenBank assembly GCA_900541795.1. The GC content of the type genome is 60.05 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella exoscitrix sp. nov.

Candidatus Collinsella exoscitrix (NL. fem. n. *exoscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554135*. The type genome for the species is the GenBank assembly GCA_900554135.1. The GC content of the type genome is 60.54 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Collinsella expugedo sp. nov.

Candidatus Collinsella expugedo (NL. fem. n. *expugedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900762015*. The type genome for the species is the GenBank assembly GCA_900762015.1. The GC content of the type genome is 60.52 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella exturibra sp. nov.

Candidatus Collinsella exturibra (NL. fem. n. *exturibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555515*. The type genome for the species is the GenBank assembly GCA_900555515.1. The GC content of the type genome is 60.22 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Collinsella fetulilenta sp. nov.

Candidatus Collinsella fetulilenta (NL. fem. n. *fetulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552145*. The type genome for the species is the GenBank assembly GCA_900552145.1. The GC content of the type genome is 60.1 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella figiliforma sp. nov.

Candidatus Collinsella figiliforma (NL. fem. n. *figiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552705*. The type genome for the species is the GenBank assembly GCA_900552705.1. The GC content of the type genome is 60.29 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella futatilenta sp. nov.

Candidatus Collinsella futatilenta (NL. fem. n. *futatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554905*. The type genome for the species is the GenBank assembly GCA_900554905.1. The GC content of the type genome is 60.05 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Collinsella gabinastra sp. nov.

Candidatus Collinsella gabinastra (NL. fem. n. *gabinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540945*. The type genome for the species is the GenBank assembly GCA_900540975.1. The GC content of the type genome is 59.61 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Collinsella gerunitica sp. nov.

Candidatus Collinsella gerunitica (NL. fem. n. *gerunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900759335*. The type genome for the species is the GenBank assembly GCA_900758255.1. The GC content of the type genome is 60.43 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Collinsella giganilega sp. nov.

Candidatus Collinsella giganilega (NL. fem. n. *giganilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541285*. The type genome for the species is the GenBank assembly GCA_900545485.1. The GC content of the type genome is 59.9 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella hibisivita sp. nov.

Candidatus Collinsella hibisivita (NL. fem. n. *hibisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540845*. The type genome for the species is the GenBank assembly GCA_900540845.1. The GC content of the type genome is 62.35 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Collinsella hirudilenta sp. nov.

Candidatus Collinsella hirudilenta (NL. fem. n. *hirudilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544235*. The type genome for the species is the GenBank assembly GCA_900544235.1. The GC content of the type genome is 59.92 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella homulatio sp. nov.

Candidatus Collinsella homulatio (NL. fem. n. *homulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544995*. The type genome for the species is the GenBank assembly GCA_900544995.1. The GC content of the type genome is 60.0 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Collinsella homulousia sp. nov.

Candidatus Collinsella homulousia (NL. fem. n. *homulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900765185*. The type genome for the species is the GenBank assembly GCA_900765185.1. The GC content of the type genome is 59.97 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella homunilenta sp. nov.

Candidatus Collinsella homunilenta (NL. fem. n. *homunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548255*. The type genome for the species is the GenBank assembly GCA_900548255.1. The GC content of the type genome is 60.0 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella immadibra sp. nov.

Candidatus Collinsella immadibra (NL. fem. n. *immadibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547835*. The type genome for the species is the GenBank assembly GCA_900547835.1. The GC content of the type genome is 60.23 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella immadigena sp. nov.

Candidatus Collinsella immadigena (NL. fem. n. *immadigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545875*. The type genome for the species is the GenBank assembly GCA_900545875.1. The GC content of the type genome is 59.93 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Collinsella immedastra sp. nov.

Candidatus Collinsella immedastra (NL. fem. n. *immedastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552755*. The type genome for the species is the GenBank assembly GCA_900552755.1. The GC content of the type genome is 60.19 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella impinisca sp. nov.

Candidatus Collinsella impinisca (NL. fem. n. *impinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900546455*. The type genome for the species is the GenBank assembly GCA_900546455.1. The GC content of the type genome is 59.88 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella inargentia sp. nov.

Candidatus Collinsella inargentia (NL. fem. n. *inargentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544425*. The type genome for the species is the GenBank assembly GCA_900544425.1. The GC content of the type genome is 60.03 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella inaspitura sp. nov.

Candidatus Collinsella inaspitura (NL. fem. n. *inaspitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900759565*. The type genome for the species is the GenBank assembly GCA_900759565.1. The GC content of the type genome is 59.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella incunisca sp. nov.

Candidatus Collinsella incunisca (NL. fem. n. *incunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900752545*. The type genome for the species is the GenBank assembly GCA_900752545.1. The GC content of the type genome is 59.97 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Collinsella indipatica sp. nov.

Candidatus Collinsella indipatica (NL. fem. n. *indipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543025*. The type genome for the species is the GenBank assembly GCA_900543025.1. The GC content of the type genome is 60.06 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella indomatica sp. nov.

Candidatus Collinsella indomatica (NL. fem. n. *indomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541785*. The type genome for the species is the GenBank assembly GCA_900541785.1. The GC content of the type genome is 59.88 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Collinsella inexcedo sp. nov.

Candidatus Collinsella inexcedo (NL. fem. n. *inexcedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900756765*. The type genome for the species is the GenBank assembly GCA_900756765.1. The GC content of the type genome is 59.96 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Collinsella infenilenta sp. nov.

Candidatus Collinsella infenilenta (NL. fem. n. *infenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752475*. The type genome for the species is the GenBank assembly GCA_900752475.1. The GC content of the type genome is 60.06 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Collinsella inlusedo sp. nov.

Candidatus Collinsella inlusedo (NL. fem. n. *inlusedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757615*. The type genome for the species is the GenBank assembly GCA_900757615.1. The GC content of the type genome is 59.89 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella inmobiforma sp. nov.

Candidatus Collinsella inmobiforma (NL. fem. n. *inmobiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541715*. The type genome for the species is the GenBank assembly GCA_900541715.1. The GC content of the type genome is 59.93 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella inmodessa sp. nov.

Candidatus Collinsella inmodessa (NL. fem. n. *inmodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543615*. The type genome for the species is the GenBank assembly GCA_900543615.1. The GC content of the type genome is 60.2 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella inremibula sp. nov.

Candidatus Collinsella inremibula (NL. fem. n. *inremibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541045*. The type genome for the species is the GenBank assembly GCA_900541045.1. The GC content of the type genome is 59.87 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Collinsella insicifica sp. nov.

Candidatus Collinsella insicifica (NL. fem. n. *insicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544065*. The type genome for the species is the GenBank assembly GCA_900544065.1. The GC content of the type genome is 60.16 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella insopitudo sp. nov.

Candidatus Collinsella insopitudo (NL. fem. n. *insopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp008014645*. The type genome for the species is the GenBank assembly RS_GCF_008014645.1. The GC content of the type genome is 63.48 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Collinsella insubetta sp. nov.

Candidatus Collinsella insubetta (NL. fem. n. *insubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900751755*. The type genome for the species is the GenBank assembly GCA_900751755.1. The GC content of the type genome is 60.16 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Collinsella intementia sp. nov.

Candidatus Collinsella intementia (NL. fem. n. *intementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900751665*. The type genome for the species is the GenBank assembly GCA_900751665.1. The GC content of the type genome is 60.12 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Collinsella intemiforma sp. nov.

Candidatus Collinsella intemiforma (NL. fem. n. *intemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900541675*. The type genome for the species is the GenBank assembly GCA_900541675.1. The GC content of the type genome is 59.73 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella invicousia sp. nov.

Candidatus Collinsella invicousia (NL. fem. n. *invicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp002437815*. The type genome for the species is the GenBank assembly GCA_002437815.1. The GC content of the type genome is 60.6 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Collinsella irrefitica sp. nov.

Candidatus Collinsella irrefitica (NL. fem. n. *irrefitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp000434535*. The type genome for the species is the GenBank assembly GCA_000434535.1. The GC content of the type genome is 60.05 % and the genome length is 1.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Collinsella latibitas sp. nov.

Candidatus Collinsella latibitas (NL. fem. n. *latibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554455*. The type genome for the species is the GenBank assembly RS_GCF_009875935.1. The GC content of the type genome is 60.25 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Collinsella lenimastra sp. nov.

Candidatus Collinsella lenimastra (NL. fem. n. *lenimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551655*. The type genome for the species is the GenBank assembly GCA_900551655.1. The GC content of the type genome is 60.03 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella levifago sp. nov.

Candidatus Collinsella levifago (NL. fem. n. *levifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540905*. The type genome for the species is the GenBank assembly GCA_900755625.1. The GC content of the type genome is 60.21 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella lucifitoga sp. nov.

Candidatus Collinsella lucifitoga (NL. fem. n. *lucifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900758845*. The type genome for the species is the GenBank assembly GCA_900758845.1. The GC content of the type genome is 60.01 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella lupanitoga sp. nov.

Candidatus Collinsella lupanitoga (NL. fem. n. *lupanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544095*. The type genome for the species is the GenBank assembly GCA_900544095.1. The GC content of the type genome is 59.84 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Collinsella luxurivita sp. nov.

Candidatus Collinsella luxurivita (NL. fem. n. *luxurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541235*. The type genome for the species is the GenBank assembly GCA_900541235.1. The GC content of the type genome is 60.07 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Collinsella malivousia sp. nov.

Candidatus Collinsella malivousia (NL. fem. n. *malivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547345*. The type genome for the species is the GenBank assembly GCA_900541115.1. The GC content of the type genome is 60.07 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Collinsella malogousia sp. nov.

Candidatus Collinsella malogousia (NL. fem. n. *malogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542235*. The type genome for the species is the GenBank assembly GCA_900542235.1. The GC content of the type genome is 60.01 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella masocedo sp. nov.

Candidatus Collinsella masocedo (NL. fem. n. *masocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542085*. The type genome for the species is the GenBank assembly GCA_900542085.1. The GC content of the type genome is 59.96 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Collinsella maxilessa sp. nov.

Candidatus Collinsella maxilessa (NL. fem. n. *maxilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540895*. The type genome for the species is the GenBank assembly GCA_900540895.1. The GC content of the type genome is 60.27 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella megaliforma sp. nov.

Candidatus Collinsella megaliforma (NL. fem. n. *megaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp003458415*. The type genome for the species is the GenBank assembly GCA_900542915.1. The GC content of the type genome is 60.07 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella megalivita sp. nov.

Candidatus Collinsella megalivita (NL. fem. n. *megalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900760215*. The type genome for the species is the GenBank assembly GCA_900760215.1. The GC content of the type genome is 60.07 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella melopugo sp. nov.

Candidatus Collinsella melopugo (NL. fem. n. *melopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544725*. The type genome for the species is the GenBank assembly GCA_900544725.1. The GC content of the type genome is 60.24 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella metabilega sp. nov.

Candidatus Collinsella metabilega (NL. fem. n. *metabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545835*. The type genome for the species is the GenBank assembly GCA_900545835.1. The GC content of the type genome is 60.18 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella metucimonia sp. nov.

Candidatus Collinsella metucimonia (NL. fem. n. *metucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542165*. The type genome for the species is the GenBank assembly GCA_900542165.1. The GC content of the type genome is 60.07 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella mimogastra sp. nov.

Candidatus Collinsella mimogastra (NL. fem. n. *mimogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549355*. The type genome for the species is the GenBank assembly GCA_900755965.1. The GC content of the type genome is 59.37 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Collinsella mirabifica sp. nov.

Candidatus Collinsella mirabifica (NL. fem. n. *mirabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003469205*. The type genome for the species is the GenBank assembly GCA_900543635.1. The GC content of the type genome is 60.14 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella molecilega sp. nov.

Candidatus Collinsella molecilega (NL. fem. n. *molecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554645*. The type genome for the species is the GenBank assembly GCA_900554645.1. The GC content of the type genome is 60.36 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Collinsella monocugo sp. nov.

Candidatus Collinsella monocugo (NL. fem. n. *monocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555955*. The type genome for the species is the GenBank assembly GCA_900756005.1. The GC content of the type genome is 58.91 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella monodisca sp. nov.

Candidatus Collinsella monodisca (NL. fem. n. *monodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545615*. The type genome for the species is the GenBank assembly GCA_900545615.1. The GC content of the type genome is 59.85 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella monopiforma sp. nov.

Candidatus Collinsella monopiforma (NL. fem. n. *monopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541725*. The type genome for the species is the GenBank assembly GCA_900541725.1. The GC content of the type genome is 60.08 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella monumilenta sp. nov.

Candidatus Collinsella monumilenta (NL. fem. n. *monumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551555*. The type genome for the species is the GenBank assembly GCA_900551555.1. The GC content of the type genome is 59.91 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Collinsella munifastra sp. nov.

Candidatus Collinsella munifastra (NL. fem. n. *munifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900758375*. The type genome for the species is the GenBank assembly GCA_900540925.1. The GC content of the type genome is 59.78 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Collinsella myalgifica sp. nov.

Candidatus Collinsella myalgifica (NL. fem. n. *myalgifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900762325*. The type genome for the species is the GenBank assembly GCA_900762325.1. The GC content of the type genome is 60.18 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Collinsella navifedo sp. nov.

Candidatus Collinsella navifedo (NL. fem. n. *navifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754435*. The type genome for the species is the GenBank assembly GCA_900754435.1. The GC content of the type genome is 59.51 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Collinsella necopedo sp. nov.

Candidatus Collinsella necopedo (NL. fem. n. *necopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545605*. The type genome for the species is the GenBank assembly GCA_900545605.1. The GC content of the type genome is 59.93 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella nicotimonas sp. nov.

Candidatus Collinsella nicotimonas (NL. fem. n. *nicotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555585*. The type genome for the species is the GenBank assembly GCA_900555585.1. The GC content of the type genome is 65.43 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Collinsella nicotitia sp. nov.

Candidatus Collinsella nicotitia (NL. fem. n. *nicotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp002305035*. The type genome for the species is the GenBank assembly GCA_002305035.1. The GC content of the type genome is 64.53 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Collinsella nivomiforma sp. nov.

Candidatus Collinsella nivomiforma (NL. fem. n. *nivomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544225*. The type genome for the species is the GenBank assembly GCA_900544225.1. The GC content of the type genome is 59.86 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella nosocatica sp. nov.

Candidatus Collinsella nosocatica (NL. fem. n. *nosocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900755685*. The type genome for the species is the GenBank assembly GCA_900541765.1. The GC content of the type genome is 60.2 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella nutamitrix sp. nov.

Candidatus Collinsella nutamitrix (NL. fem. n. *nutamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549335*. The type genome for the species is the GenBank assembly GCA_900549335.1. The GC content of the type genome is 60.39 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Collinsella obfusitudo sp. nov.

Candidatus Collinsella obfusitudo (NL. fem. n. *obfusitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545075*. The type genome for the species is the GenBank assembly GCA_900545075.1. The GC content of the type genome is 59.83 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella oblucitica sp. nov.

Candidatus Collinsella oblucitica (NL. fem. n. *oblucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549215*. The type genome for the species is the GenBank assembly GCA_900549215.1. The GC content of the type genome is 59.81 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Collinsella obnupugo sp. nov.

Candidatus Collinsella obnupugo (NL. fem. n. *obnupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900752345*. The type genome for the species is the GenBank assembly GCA_900752345.1. The GC content of the type genome is 59.65 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Collinsella obsoligena sp. nov.

Candidatus Collinsella obsoligena (NL. fem. n. *obsoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542155*. The type genome for the species is the GenBank assembly GCA_900542155.1. The GC content of the type genome is 59.67 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Collinsella obsurimonia sp. nov.

Candidatus Collinsella obsurimonia (NL. fem. n. *obsurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555765*. The type genome for the species is the GenBank assembly GCA_900555765.1. The GC content of the type genome is 60.44 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Collinsella obtecimonas sp. nov.

Candidatus Collinsella obtecimonas (NL. fem. n. *obtecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900556445*. The type genome for the species is the GenBank assembly GCA_900556445.1. The GC content of the type genome is 58.84 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Collinsella obveratica sp. nov.

Candidatus Collinsella obveratica (NL. fem. n. *obveratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545505*. The type genome for the species is the GenBank assembly GCA_900545505.1. The GC content of the type genome is 59.85 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Collinsella omnipicula sp. nov.

Candidatus Collinsella omnipicula (NL. fem. n. *omnipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550415*. The type genome for the species is the GenBank assembly GCA_900550415.1. The GC content of the type genome is 60.26 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella opercilenta sp. nov.

Candidatus Collinsella opercilenta (NL. fem. n. *opercilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541885*. The type genome for the species is the GenBank assembly GCA_900541885.1. The GC content of the type genome is 59.86 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Collinsella ossaribula sp. nov.

Candidatus Collinsella ossaribula (NL. fem. n. *ossaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545995*. The type genome for the species is the GenBank assembly GCA_900545995.1. The GC content of the type genome is 60.16 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella pabilitudo sp. nov.

Candidatus Collinsella pabilitudo (NL. fem. n. *pabilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552685*. The type genome for the species is the GenBank assembly GCA_900552685.1. The GC content of the type genome is 59.87 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Collinsella papiliforma sp. nov.

Candidatus Collinsella papiliforma (NL. fem. n. *papiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761035*. The type genome for the species is the GenBank assembly GCA_900761035.1. The GC content of the type genome is 60.33 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Collinsella papilitrix sp. nov.

Candidatus Collinsella papilitrix (NL. fem. n. *papilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547285*. The type genome for the species is the GenBank assembly GCA_900547285.1. The GC content of the type genome is 60.18 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella papilivita sp. nov.

Candidatus Collinsella papilivita (NL. fem. n. *papilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553705*. The type genome for the species is the GenBank assembly GCA_900553705.1. The GC content of the type genome is 60.23 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Collinsella parocicula sp. nov.

Candidatus Collinsella parocicula (NL. fem. n. *parocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542325*. The type genome for the species is the GenBank assembly GCA_900542325.1. The GC content of the type genome is 60.06 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Collinsella parocilega sp. nov.

Candidatus Collinsella parocilega (NL. fem. n. *parocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900761085*. The type genome for the species is the GenBank assembly GCA_900761085.1. The GC content of the type genome is 60.09 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella parocisca sp. nov.

Candidatus Collinsella parocisca (NL. fem. n. *parocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900547125*. The type genome for the species is the GenBank assembly GCA_900547125.1. The GC content of the type genome is 59.89 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella parocitoga sp. nov.

Candidatus Collinsella parocitoga (NL. fem. n. *parocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550205*. The type genome for the species is the GenBank assembly GCA_900550205.1. The GC content of the type genome is 59.71 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Collinsella patibitrix sp. nov.

Candidatus Collinsella patibitrix (NL. fem. n. *patibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900546775*. The type genome for the species is the GenBank assembly GCA_900546775.1. The GC content of the type genome is 60.37 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Collinsella pavicimonia sp. nov.

Candidatus Collinsella pavicimonia (NL. fem. n. *pavicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540935*. The type genome for the species is the GenBank assembly GCA_900761805.1. The GC content of the type genome is 60.05 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Collinsella pavimitas sp. nov.

Candidatus Collinsella pavimitas (NL. fem. n. *pavimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900555555*. The type genome for the species is the GenBank assembly GCA_900555555.1. The GC content of the type genome is 60.86 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Collinsella pecunitas sp. nov.

Candidatus Collinsella pecunitas (NL. fem. n. *pecunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542965*. The type genome for the species is the GenBank assembly GCA_900542965.1. The GC content of the type genome is 60.01 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella pedepibra sp. nov.

Candidatus Collinsella pedepibra (NL. fem. n. *pedepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544205*. The type genome for the species is the GenBank assembly GCA_900544205.1. The GC content of the type genome is 60.21 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella penecousia sp. nov.

Candidatus Collinsella penecousia (NL. fem. n. *penecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900539035*. The type genome for the species is the GenBank assembly GCA_900539035.1. The GC content of the type genome is 60.31 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Collinsella peraditia sp. nov.

Candidatus Collinsella peraditia (NL. fem. n. *peraditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900539735*. The type genome for the species is the GenBank assembly GCA_900539735.1. The GC content of the type genome is 59.84 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella progrilenta sp. nov.

Candidatus Collinsella progrilenta (NL. fem. n. *progrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757265*. The type genome for the species is the GenBank assembly GCA_900757265.1. The GC content of the type genome is 60.07 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Collinsella protressa sp. nov.

Candidatus Collinsella protressa (NL. fem. n. *protressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900764955*. The type genome for the species is the GenBank assembly GCA_900764955.1. The GC content of the type genome is 60.41 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Collinsella rarefisca sp. nov.

Candidatus Collinsella rarefisca (NL. fem. n. *rarefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541875*. The type genome for the species is the GenBank assembly GCA_900541875.1. The GC content of the type genome is 60.07 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Collinsella recogastra sp. nov.

Candidatus Collinsella recogastra (NL. fem. n. *recogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754525*. The type genome for the species is the GenBank assembly GCA_900754525.1. The GC content of the type genome is 59.93 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella reduvatio sp. nov.

Candidatus Collinsella reduvatio (NL. fem. n. *reduvatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003437035*. The type genome for the species is the GenBank assembly RS_GCF_902364945.1. The GC content of the type genome is 59.74 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Collinsella refinitas sp. nov.

Candidatus Collinsella refinitas (NL. fem. n. *refinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540095*. The type genome for the species is the GenBank assembly GCA_900540095.1. The GC content of the type genome is 60.26 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Collinsella refocitudo sp. nov.

Candidatus Collinsella refocitudo (NL. fem. n. *refocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900548265*. The type genome for the species is the GenBank assembly GCA_900548265.1. The GC content of the type genome is 60.3 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Collinsella regigitica sp. nov.

Candidatus Collinsella regigitica (NL. fem. n. *regigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552155*. The type genome for the species is the GenBank assembly GCA_900552155.1. The GC content of the type genome is 60.3 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Collinsella relecivita sp. nov.

Candidatus Collinsella relecivita (NL. fem. n. *relecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900556205*. The type genome for the species is the GenBank assembly GCA_900556205.1. The GC content of the type genome is 59.92 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Collinsella relenetta sp. nov.

Candidatus Collinsella relenetta (NL. fem. n. *relenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900768435*. The type genome for the species is the GenBank assembly GCA_900768435.1. The GC content of the type genome is 60.27 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella renaventia sp. nov.

Candidatus Collinsella renaventia (NL. fem. n. *renaventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900546105*. The type genome for the species is the GenBank assembly GCA_900546105.1. The GC content of the type genome is 60.03 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Collinsella repepitrix sp. nov.

Candidatus Collinsella repepitrix (NL. fem. n. *repepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543605*. The type genome for the species is the GenBank assembly GCA_900543605.1. The GC content of the type genome is 60.14 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella retecetta sp. nov.

Candidatus Collinsella retecetta (NL. fem. n. *retecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549555*. The type genome for the species is the GenBank assembly GCA_900751935.1. The GC content of the type genome is 59.9 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Collinsella rinocitura sp. nov.

Candidatus Collinsella rinocitura (NL. fem. n. *rinocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003438495*. The type genome for the species is the GenBank assembly RS_GCF_003438495.1. The GC content of the type genome is 59.86 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Collinsella risibitas sp. nov.

Candidatus Collinsella risibitas (NL. fem. n. *risibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp902362275*. The type genome for the species is the GenBank assembly GCA_008671825.1. The GC content of the type genome is 60.04 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Collinsella rudecatio sp. nov.

Candidatus Collinsella rudecatio (NL. fem. n. *rudecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542315*. The type genome for the species is the GenBank assembly GCA_900542315.1. The GC content of the type genome is 59.87 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Collinsella rudecicella sp. nov.

Candidatus Collinsella rudecicella (NL. fem. n. *rudecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541035*. The type genome for the species is the GenBank assembly GCA_900541035.1. The GC content of the type genome is 60.03 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Collinsella rudicitia sp. nov.

Candidatus Collinsella rudicitia (NL. fem. n. *rudicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550185*. The type genome for the species is the GenBank assembly GCA_900550185.1. The GC content of the type genome is 60.04 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella rudicitica sp. nov.

Candidatus Collinsella rudicitica (NL. fem. n. *rudicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900754745*. The type genome for the species is the GenBank assembly GCA_900762405.1. The GC content of the type genome is 60.27 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella rudicousia sp. nov.

Candidatus Collinsella rudicousia (NL. fem. n. *rudicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp003459505*. The type genome for the species is the GenBank assembly RS_GCF_003459505.1. The GC content of the type genome is 59.81 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Collinsella rurigibula sp. nov.

Candidatus Collinsella rurigibula (NL. fem. n. *rurigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541065*. The type genome for the species is the GenBank assembly GCA_900541065.1. The GC content of the type genome is 59.98 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Collinsella saburitas sp. nov.

Candidatus Collinsella saburitas (NL. fem. n. *saburitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550825*. The type genome for the species is the GenBank assembly GCA_900550825.1. The GC content of the type genome is 60.01 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Collinsella sacopatica sp. nov.

Candidatus Collinsella sacopatica (NL. fem. n. *sacopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003470665*. The type genome for the species is the GenBank assembly RS_GCF_003470665.1. The GC content of the type genome is 59.96 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Collinsella satacitura sp. nov.

Candidatus Collinsella satacitura (NL. fem. n. *satacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900550595*. The type genome for the species is the GenBank assembly GCA_900550595.1. The GC content of the type genome is 60.11 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Collinsella saxifax sp. nov.

Candidatus Collinsella saxifax (NL. fem. n. *saxifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542635*. The type genome for the species is the GenBank assembly GCA_900755055.1. The GC content of the type genome is 60.14 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Collinsella sceptitura sp. nov.

Candidatus Collinsella sceptitura (NL. fem. n. *sceptitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900542945*. The type genome for the species is the GenBank assembly GCA_900542945.1. The GC content of the type genome is 59.83 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Collinsella semipisca sp. nov.

Candidatus Collinsella semipisca (NL. fem. n. *semipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541145*. The type genome for the species is the GenBank assembly GCA_900542885.1. The GC content of the type genome is 60.5 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella semunastra sp. nov.

Candidatus Collinsella semunastra (NL. fem. n. *semunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541125*. The type genome for the species is the GenBank assembly GCA_900541125.1. The GC content of the type genome is 59.9 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Collinsella serotugo sp. nov.

Candidatus Collinsella serotugo (NL. fem. n. *serotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900552995*. The type genome for the species is the GenBank assembly GCA_900756015.1. The GC content of the type genome is 59.85 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Collinsella sicubigena sp. nov.

Candidatus Collinsella sicubigena (NL. fem. n. *sicubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003462685*. The type genome for the species is the GenBank assembly RS_GCF_902364115.1. The GC content of the type genome is 59.84 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Collinsella sicubitio sp. nov.

Candidatus Collinsella sicubitio (NL. fem. n. *sicubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp000763055*. The type genome for the species is the GenBank assembly RS_GCF_902375365.1. The GC content of the type genome is 60.2 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Collinsella sonivibula sp. nov.

Candidatus Collinsella sonivibula (NL. fem. n. *sonivibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900551015*. The type genome for the species is the GenBank assembly GCA_900551015.1. The GC content of the type genome is 59.74 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Collinsella sotulago sp. nov.

Candidatus Collinsella sotulago (NL. fem. n. *sotulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900545555*. The type genome for the species is the GenBank assembly GCA_900545555.1. The GC content of the type genome is 60.22 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Collinsella subacilenta sp. nov.

Candidatus Collinsella subacilenta (NL. fem. n. *subacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548365*. The type genome for the species is the GenBank assembly GCA_900548365.1. The GC content of the type genome is 64.0 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Collinsella subadatica sp. nov.

Candidatus Collinsella subadatica (NL. fem. n. *subadatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900541175*. The type genome for the species is the GenBank assembly GCA_900541225.1. The GC content of the type genome is 60.09 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Collinsella subodessa sp. nov.

Candidatus Collinsella subodessa (NL. fem. n. *subodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003479805*. The type genome for the species is the GenBank assembly GCA_900756915.1. The GC content of the type genome is 61.61 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Collinsella tametousia sp. nov.

Candidatus Collinsella tametousia (NL. fem. n. *tametousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548935*. The type genome for the species is the GenBank assembly GCA_900548935.1. The GC content of the type genome is 59.94 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Collinsella taxilessa sp. nov.

Candidatus Collinsella taxilessa (NL. fem. n. *taxilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900540985*. The type genome for the species is the GenBank assembly GCA_900554065.1. The GC content of the type genome is 60.4 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Collinsella taxilisca sp. nov.

Candidatus Collinsella taxilisca (NL. fem. n. *taxilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900543845*. The type genome for the species is the GenBank assembly GCA_900758135.1. The GC content of the type genome is 60.21 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Collinsella tirunatica sp. nov.

Candidatus Collinsella tirunatica (NL. fem. n. *tirunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900554155*. The type genome for the species is the GenBank assembly GCA_902406155.1. The GC content of the type genome is 59.87 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Collinsella troclago sp. nov.

Candidatus Collinsella troclago (NL. fem. n. *troclago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545445*. The type genome for the species is the GenBank assembly GCA_900545445.1. The GC content of the type genome is 60.03 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Collinsella tumefigena sp. nov.

Candidatus Collinsella tumefigena (NL. fem. n. *tumefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757285*. The type genome for the species is the GenBank assembly GCA_900757285.1. The GC content of the type genome is 59.82 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Collinsella turicitia sp. nov.

Candidatus Collinsella turicitia (NL. fem. n. *turicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900546115*. The type genome for the species is the GenBank assembly RS_GCF_003475115.1. The GC content of the type genome is 59.72 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Collinsella venabimonia sp. nov.

Candidatus Collinsella venabimonia (NL. fem. n. *venabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900549085*. The type genome for the species is the GenBank assembly GCA_900763445.1. The GC content of the type genome is 60.26 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Collinsella viburitia sp. nov.

Candidatus Collinsella viburitia (NL. fem. n. *viburitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900553415*. The type genome for the species is the GenBank assembly GCA_900553415.1. The GC content of the type genome is 60.08 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Collinsella videlitio sp. nov.

Candidatus Collinsella videlitio (NL. fem. n. *videlitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Collinsella sp900551195*. The type genome for the species is the GenBank assembly GCA_900551195.1. The GC content of the type genome is 60.25 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Collinsella viripitica sp. nov.

Candidatus Collinsella viripitica (NL. fem. n. *viripitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp003466125*. The type genome for the species is the GenBank assembly RS_GCF_003438275.1. The GC content of the type genome is 59.83 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Collinsella visibifica sp. nov.

Candidatus Collinsella visibifica (NL. fem. n. *visibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757205*. The type genome for the species is the GenBank assembly GCA_900757205.1. The GC content of the type genome is 59.79 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Collinsella visifitas sp. nov.

Candidatus Collinsella visifitas (NL. fem. n. *visifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900544135*. The type genome for the species is the GenBank assembly GCA_008680765.1. The GC content of the type genome is 60.05 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Collinsella vocamitoga sp. nov.

Candidatus Collinsella vocamitoga (NL. fem. n. *vocamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900545905*. The type genome for the species is the GenBank assembly GCA_900545905.1. The GC content of the type genome is 60.12 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Collinsella vocifimonas sp. nov.

Candidatus Collinsella vocifimonas (NL. fem. n. *vocifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757185*. The type genome for the species is the GenBank assembly GCA_900757565.1. The GC content of the type genome is 59.79 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Collinsella xenoditia sp. nov.

Candidatus Collinsella xenoditia (NL. fem. n. *xenoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900548565*. The type genome for the species is the GenBank assembly GCA_900548565.1. The GC content of the type genome is 60.09 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Collinsella xeramousia sp. nov.

Candidatus Collinsella xeramousia (NL. fem. n. *xeramousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Collinsella sp900757235*. The type genome for the species is the GenBank assembly GCA_900757235.1. The GC content of the type genome is 60.13 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Colopana carucago sp. nov.

Candidatus Colopana carucago (NL. fem. n. *carucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZI01 sp902812405*. The type genome for the species is the GenBank assembly RS_GCF_902812325.1. The GC content of the type genome is 65.35 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Colopana gen. nov.

Candidatus Colopana (NL. fem. n. *Colopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZI01*. The type species for the genus is *Candidatus* Colopana carucago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coloparia funamax sp. nov.

Candidatus Coloparia funamax (NL. fem. n. *funamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-35-15 sp001784585*. The type genome for the species is the GenBank assembly GCA_001786505.1. The GC content of the type genome is 34.67 % and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Coloparia gen. nov.

Candidatus Coloparia (NL. fem. n. *Coloparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-35-15*. The type species for the genus is *Candidatus* Coloparia funamax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colopariaceae.

Description of *Candidatus* Colopariaceae fam. nov.

Candidatus Colopariaceae (NL. fem. n. *Colopariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-35-15.* The type genus for the taxon is *Candidatus* Coloparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colopariales.

Description of *Candidatus* Colopariales ord. nov.

Candidatus Colopariales (NL. fem. n. *Colopariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-35-15.* The type genus for the taxon is *Candidatus* Coloparia .

According to the GTDB R06-RS202, this order belongs to the class *Vampirovibrionia*.

Description of *Candidatus* Colopella documimonas sp. nov.

Candidatus Colopella documimonas (NL. fem. n. *documimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B33-G16 sp013375335*. The type genome for the species is the GenBank assembly GCA_013375335.1. The GC content of the type genome is 49.22 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Colopella gen. nov.

Candidatus Colopella (NL. fem. n. *Colopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B33-G16*. The type species for the genus is *Candidatus* Colopella documimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B25-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicodulaceae.

Description of *Candidatus* Colopella dupunivita sp. nov.

Candidatus Colopella dupunivita (NL. fem. n. *dupunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B33-G16 sp003646875*. The type genome for the species is the GenBank assembly GCA_011040805.1. The GC content of the type genome is 41.69 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Colopella obtenimonas sp. nov.

Candidatus Colopella obtenimonas (NL. fem. n. *obtenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B33-G16 sp013375385*. The type genome for the species is the GenBank assembly GCA_013375385.1. The GC content of the type genome is 48.05 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Colopia subinibra sp. nov.

Candidatus Colopia subinibra (NL. fem. n. *subinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEE01 sp013287205*. The type genome for the species is the GenBank assembly GCA_013287615.1. The GC content of the type genome is 48.67 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Colopia gen. nov.

Candidatus Colopia (NL. fem. n. *Colopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEE01*. The type species for the genus is *Candidatus* Colopia subinibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9655*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilellaceae.

Description of *Candidatus* Colopida pavicitas sp. nov.

Candidatus Colopida pavicitas (NL. fem. n. *pavicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10108 sp003545435*. The type genome for the species is the GenBank assembly GCA_003545435.1. The GC content of the type genome is 42.71 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Colopida gen. nov.

Candidatus Colopida (NL. fem. n. *Colopida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10108*. The type species for the genus is *Candidatus* Colopida pavicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Coloposa denorilega sp. nov.

Candidatus Coloposa denorilega (NL. fem. n. *denorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXGF01 sp012267605*. The type genome for the species is the GenBank assembly GCA_012267605.1. The GC content of the type genome is 56.08 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Coloposa gen. nov.

Candidatus Coloposa (NL. fem. n. *Coloposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXGF01*. The type species for the genus is *Candidatus* Coloposa denorilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXGF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coloposaceae.

Description of *Candidatus* Coloposaceae fam. nov.

Candidatus Coloposaceae (NL. fem. n. *Coloposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXGF01.* The type genus for the taxon is *Candidatus* Coloposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAXGF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Coloposales.

Description of *Candidatus* Coloposales ord. nov.

Candidatus Coloposales (NL. fem. n. *Coloposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXGF01.* The type genus for the taxon is *Candidatus* Coloposa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Colopula conopivita sp. nov.

Candidatus Colopula conopivita (NL. fem. n. *conopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZY01 sp903862935*. The type genome for the species is the GenBank assembly GCA_903854295.1. The GC content of the type genome is 65.89 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Colopula gen. nov.

Candidatus Colopula (NL. fem. n. *Colopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOZY01*. The type species for the genus is *Candidatus* Colopula conopivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colopula tirunitia sp. nov.

Candidatus Colopula tirunitia (NL. fem. n. *tirunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZY01 sp903834135*. The type genome for the species is the GenBank assembly GCA_903847815.1. The GC content of the type genome is 42.37 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Colubana cerebitoga sp. nov.

Candidatus Colubana cerebitoga (NL. fem. n. *cerebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2165 sp002327565*. The type genome for the species is the GenBank assembly GCA_002327565.1. The GC content of the type genome is 50.58 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Colubana gen. nov.

Candidatus Colubana (NL. fem. n. *Colubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2165*. The type species for the genus is *Candidatus* Colubana cerebitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Colubanaceae fam. nov.

Candidatus Colubanaceae (NL. fem. n. *Colubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2165.* The type genus for the taxon is *Candidatus* Colubana .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Colubaria detenilega sp. nov.

Candidatus Colubaria detenilega (NL. fem. n. *detenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-38-24 sp002792535*. The type genome for the species is the GenBank assembly GCA_002792535.1. The GC content of the type genome is 37.6 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Colubaria gen. nov.

Candidatus Colubaria (NL. fem. n. *Colubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-38-24*. The type species for the genus is *Candidatus* Colubaria detenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LOWO2-01-FULL-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifanaceae.

Description of *Candidatus* Colubella hemitimonas sp. nov.

Candidatus Colubella hemitimonas (NL. fem. n. *hemitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLA4 sp011525745*. The type genome for the species is the GenBank assembly GCA_011525745.1. The GC content of the type genome is 65.27 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Colubella gen. nov.

Candidatus Colubella (NL. fem. n. *Colubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLA4*. The type species for the genus is *Candidatus* Colubella hemitimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPLA1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumidaceae.

Description of *Candidatus* Colubia cicilitoga sp. nov.

Candidatus Colubia cicilitoga (NL. fem. n. *cicilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUI01 sp903837355*. The type genome for the species is the GenBank assembly GCA_903837355.1. The GC content of the type genome is 67.51 % and the genome length is 9.6 Mbp.

Description of *Candidatus* Colubia gen. nov.

Candidatus Colubia (NL. fem. n. *Colubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILUI01*. The type species for the genus is *Candidatus* Colubia cicilitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Lenti-02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicinosaceae.

Description of *Candidatus* Colubia lenunitas sp. nov.

Candidatus Colubia lenunitas (NL. fem. n. *lenunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUI01 sp903834675*. The type genome for the species is the GenBank assembly GCA_903961625.1. The GC content of the type genome is 66.13 % and the genome length is 8.04 Mbp.

Description of *Candidatus* Colubida detunibula sp. nov.

Candidatus Colubida detunibula (NL. fem. n. *detunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C00003060 sp001751085*. The type genome for the species is the GenBank assembly GCA_001751085.1. The GC content of the type genome is 48.93 % and the genome length is 2.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "combined push core samples #3730; #5133; and #5579 collected at Hydrate Ridge".

Description of *Candidatus* Colubida gen. nov.

Candidatus Colubida (NL. fem. n. *Colubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C00003060*. The type species for the genus is *Candidatus* Colubida detunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Colubidaceae fam. nov.

Candidatus Colubidaceae (NL. fem. n. *Colubidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *C00003060.* The type genus for the taxon is *Candidatus* Colubida .

According to the original version of GTDB R06-RS202, this family belongs to the order *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubidales.

Description of *Candidatus* Colubidales ord. nov.

Candidatus Colubidales (NL. fem. n. *Colubidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *C00003060.* The type genus for the taxon is *Candidatus* Colubida .

According to the GTDB R06-RS202, this order belongs to the class *Desulfobacteria*.

Description of *Candidatus* Colubosa fidenicella sp. nov.

Candidatus Colubosa fidenicella (NL. fem. n. *fidenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp900763035*. The type genome for the species is the GenBank assembly RS_GCF_900763035.1. The GC content of the type genome is 64.4 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Colubosa gen. nov.

Candidatus Colubosa (NL. fem. n. *Colubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5905*. The type species for the genus is *Candidatus* Colubosa fidenicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colubosa minagitudo sp. nov.

Candidatus Colubosa minagitudo (NL. fem. n. *minagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp900764115*. The type genome for the species is the GenBank assembly RS_GCF_900764115.1. The GC content of the type genome is 59.15 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Colubosa minurousia sp. nov.

Candidatus Colubosa minurousia (NL. fem. n. *minurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp900549155*. The type genome for the species is the GenBank assembly RS_GCF_900755075.1. The GC content of the type genome is 57.3 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Colubosa resupugo sp. nov.

Candidatus Colubosa resupugo (NL. fem. n. *resupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp002431285*. The type genome for the species is the GenBank assembly GCA_002431285.1. The GC content of the type genome is 60.0 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Colubosa taraxatio sp. nov.

Candidatus Colubosa taraxatio (NL. fem. n. *taraxatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp004558485*. The type genome for the species is the GenBank assembly RS_GCF_900763165.1. The GC content of the type genome is 57.42 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Colubosa telegitio sp. nov.

Candidatus Colubosa telegitio (NL. fem. n. *telegitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5905 sp002437905*. The type genome for the species is the GenBank assembly GCA_002437905.1. The GC content of the type genome is 59.23 %

and the genome length is 2.28 Mbp.

Description of *Candidatus* Colubula vehicigena sp. nov.

Candidatus Colubula vehicigena (NL. fem. n. *vehicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B4-G1 sp003648025*. The type genome for the species is the GenBank assembly GCA_011192155.1. The GC content of the type genome is 59.5 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Colubula gen. nov.

Candidatus Colubula (NL. fem. n. *Colubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B4-G1*. The type species for the genus is *Candidatus* Colubula vehicigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Colubulaceae fam. nov.

Candidatus Colubulaceae (NL. fem. n. *Colubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B4-G1*. The type genus for the taxon is *Candidatus* Colubula .

According to the original version of GTDB R06-RS202, this family belongs to the order *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubulales.

Description of *Candidatus* Colubulales ord. nov.

Candidatus Colubulales (NL. fem. n. *Colubulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B4-G1*. The type genus for the taxon is *Candidatus* Colubula .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Colubula viburessa sp. nov.

Candidatus Colubula viburessa (NL. fem. n. *viburessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B4-G1 sp003648125*. The type genome for the species is the GenBank assembly GCA_003648125.1. The GC content of the type genome is 60.08 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Colutana albogimonia sp. nov.

Candidatus Colutana albogimonia (NL. fem. n. *albogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp014379455*. The type genome for the species is the GenBank assembly GCA_014379455.1. The GC content of the type genome is 55.68 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Colutana gen. nov.

Candidatus Colutana (NL. fem. n. *Colutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1315*. The type species for the genus is *Candidatus* Colutana albogimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colutana antegitica sp. nov.

Candidatus Colutana antegitica (NL. fem. n. *antegitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp011391455*. The type genome for the species is the GenBank assembly GCA_011391455.1. The GC content of the type genome is 56.19 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Colutana apsuritrix sp. nov.

Candidatus Colutana apsuritrix (NL. fem. n. *apsuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005800255*. The type genome for the species is the GenBank assembly GCA_005800255.1. The GC content of the type genome is 59.34 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Colutana benevetta sp. nov.

Candidatus Colutana benevetta (NL. fem. n. *benevetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005877535*. The type genome for the species is the GenBank assembly GCA_005877535.1. The GC content of the type genome is 56.32 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Colutana catagilega sp. nov.

Candidatus Colutana catagilega (NL. fem. n. *catagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp013141215*. The type genome for the species is the GenBank assembly GCA_013141215.1. The GC content of the type genome is 56.73 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Colutana ceruciforma sp. nov.

Candidatus Colutana ceruciforma (NL. fem. n. *ceruciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005116945*. The type genome for the species is the GenBank assembly GCA_005116945.1. The GC content of the type genome is 55.49 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Colutana cibaritas sp. nov.

Candidatus Colutana cibaritas (NL. fem. n. *cibaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-1315 sp002869885*. The type genome for the species is the GenBank assembly GCA_002869885.2. The GC content of the type genome is 56.12 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Colutana decamax sp. nov.

Candidatus Colutana decamax (NL. fem. n. *decamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005239475*. The type genome for the species is the GenBank assembly GCA_005239475.1. The GC content of the type genome is 57.07 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Colutana decatiforma sp. nov.

Candidatus Colutana decatiforma (NL. fem. n. *decatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005116885*. The type genome for the species is the GenBank assembly GCA_005116885.1. The GC content of the type genome is 55.43 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Colutana duponitio sp. nov.

Candidatus Colutana duponitio (NL. fem. n. *duponitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005116815*. The type genome for the species is the GenBank assembly GCA_005116815.1. The GC content of the type genome is 57.33 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Colutana impavatica sp. nov.

Candidatus Colutana impavatica (NL. fem. n. *impavatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp013140715*. The type genome for the species is the GenBank assembly GCA_013140715.1. The GC content of the type genome is 55.46 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Colutana impuditio sp. nov.

Candidatus Colutana impuditio (NL. fem. n. *impuditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp009885705*. The type genome for the species is the GenBank assembly GCA_009885705.1. The GC content of the type genome is 57.25 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Colutana lapicimonia sp. nov.

Candidatus Colutana lapicimonia (NL. fem. n. *lapicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp002737345*. The type genome for the species is the GenBank assembly GCA_003569385.1. The GC content of the type genome is 57.56 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Colutana nivomitudo sp. nov.

Candidatus Colutana nivomitudo (NL. fem. n. *nivomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp013388555*. The type genome for the species is the GenBank assembly GCA_013388555.1. The GC content of the type genome is 56.02 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Colutana omnivisca sp. nov.

Candidatus Colutana omnivisca (NL. fem. n. *omnivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp002869895*. The type genome for the species is the GenBank assembly GCA_002869895.2. The GC content of the type genome is 55.84 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Colutana pinacivita sp. nov.

Candidatus Colutana pinacivita (NL. fem. n. *pinacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005887945*. The type genome for the species is the GenBank assembly GCA_005887945.1. The GC content of the type genome is 56.73 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Colutana recocastra sp. nov.

Candidatus Colutana recocastra (NL. fem. n. *recocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp003135435*. The type genome for the species is the GenBank assembly GCA_003135435.1. The GC content of the type genome is 56.94 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Colutana solacivita sp. nov.

Candidatus Colutana solacivita (NL. fem. n. *solacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp005116775*. The type genome for the species is the GenBank assembly GCA_005116775.1. The GC content of the type genome is 55.75 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Colutana utpotimonia sp. nov.

Candidatus Colutana utpotimonia (NL. fem. n. *utpotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1315 sp002869925*. The type genome for the species is the GenBank assembly GCA_002869925.2. The GC content of the type genome is 55.68 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Colutana vicaticella sp. nov.

Candidatus Colutana vicaticella (NL. fem. n. *vicaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-1315 sp005116835*. The type genome for the species is the GenBank assembly GCA_005116835.1. The GC content of the type genome is 55.56 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Colutaria vavasilega sp. nov.

Candidatus Colutaria vavasilega (NL. fem. n. *vavasilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UC5-1-2E3 sp001304875*. The type genome for the species is the GenBank assembly GCA_001304875.1. The GC content of the type genome is 54.61 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Colutaria gen. nov.

Candidatus Colutaria (NL. fem. n. *Colutaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UC5-1-2E3*. The type species for the genus is *Candidatus* Colutaria vavasilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colutella cocodatio sp. nov.

Candidatus Colutella cocodatio (NL. fem. n. *cocodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-510 sp900551115*. The type genome for the species is the GenBank assembly GCA_900551115.1. The GC content of the type genome is 43.75 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Colutella gen. nov.

Candidatus Colutella (NL. fem. n. *Colutella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-510*. The type species for the genus is *Candidatus* Colutella cocodatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Colutella corocilega sp. nov.

Candidatus Colutella corocilega (NL. fem. n. *corocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-510 sp002432425*. The type genome for the species is the GenBank assembly GCA_002477915.1. The GC content of the type genome is 46.82 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Colutella detenitia sp. nov.

Candidatus Colutella detenitia (NL. fem. n. *detenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-510 sp000434615*. The type genome for the species is the GenBank assembly GCA_000434615.1. The GC content of the type genome is 46.09 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Colutella gerunetta sp. nov.

Candidatus Colutella gerunetta (NL. fem. n. *gerunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-510 sp900550475*. The type genome for the species is the GenBank assembly RS_GCF_900753765.1. The GC content of the type genome is 51.27 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Colutella pacifivita sp. nov.

Candidatus Colutella pacifivita (NL. fem. n. *pacifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-510 sp003979355*. The type genome for the species is the GenBank assembly GCA_003979355.1. The GC content of the type genome is 47.54 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Colutida xenopisca sp. nov.

Candidatus Colutida xenopisca (NL. fem. n. *xenopisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2364 sp002344075*. The type genome for the species is the GenBank assembly GCA_002344075.1. The GC content of the type genome is 46.08 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Colutida gen. nov.

Candidatus Colutida (NL. fem. n. *Colutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2364*. The type species for the genus is *Candidatus* Colutida xenopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2364*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colutidaceae.

Description of *Candidatus* Colutidaceae fam. nov.

Candidatus Colutidaceae (NL. fem. n. *Colutidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2364.* The type genus for the taxon is *Candidatus* Colutida .

According to GTDB R06-RS202, this family belongs to the order *Rhodothermales*.

Description of *Candidatus* Colutula semimousia sp. nov.

Candidatus Colutula semimousia (NL. fem. n. *semimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1337 sp003151615*. The type genome for the species is the GenBank assembly GCA_003151615.1. The GC content of the type genome is 47.23 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Colutula gen. nov.

Candidatus Colutula (NL. fem. n. *Colutula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1337*. The type species for the genus is *Candidatus* Colutula semimousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colutulaceae.

Description of *Candidatus* Colutulaceae fam. nov.

Candidatus Colutulaceae (NL. fem. n. *Colutulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-1337*. The type genus for the taxon is *Candidatus* Colutula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Colutula tenebitura sp. nov.

Candidatus Colutula tenebitura (NL. fem. n. *tenebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1337 sp903893855*. The type genome for the species is the GenBank assembly GCA_903831125.1. The GC content of the type genome is 42.76 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Colwellia aruspilenta sp. nov.

Candidatus Colwellia aruspilenta (NL. fem. n. *aruspilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp002836255*. The type genome for the species is the GenBank assembly RS_GCF_002836255.1. The GC content of the type genome is 37.82 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Colwellia catobitura sp. nov.

Candidatus Colwellia catobitura (NL. fem. n. *catobitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp001440345*. The type genome for the species is the GenBank assembly RS_GCF_001440345.1. The GC content of the type genome is 39.53 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Colwellia decapitia sp. nov.

Candidatus Colwellia decapitia (NL. fem. n. *decapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp002733765*. The type genome for the species is the GenBank assembly GCA_002401605.1. The GC content of the type genome is 36.9 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Colwellia decunedo sp. nov.

Candidatus Colwellia decunedo (NL. fem. n. *decunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp003545415*. The type genome for the species is the GenBank assembly GCA_003545415.1. The GC content of the type genome is 36.58 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Colwellia genuficula sp. nov.

Candidatus Colwellia genuficula (NL. fem. n. *genuficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp009832865*. The type genome for the species is the GenBank assembly RS_GCF_009832865.1. The GC content of the type genome is 36.49 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Colwellia oblivicella sp. nov.

Candidatus Colwellia oblivicella (NL. fem. n. *oblivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp013215465*. The type genome for the species is the GenBank assembly GCA_013215465.1. The GC content of the type genome is 37.64 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Colwellia optabitas sp. nov.

Candidatus Colwellia optabitas (NL. fem. n. *optabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp002162675*. The type genome for the species is the GenBank assembly GCA_002162675.1. The GC content of the type genome is 38.62 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Colwellia redunilenta sp. nov.

Candidatus Colwellia redunilenta (NL. fem. n. *redunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp003521815*. The type genome for the species is the GenBank assembly GCA_003521815.1. The GC content of the type genome is 37.3 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Colwellia senipitica sp. nov.

Candidatus Colwellia senipitica (NL. fem. n. *senipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp013214175*. The type genome for the species is the GenBank assembly GCA_013214175.1. The GC content of the type genome is 38.87 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Colwellia visocousia sp. nov.

Candidatus Colwellia visocousia (NL. fem. n. *visocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia sp002836775*. The type genome for the species is the GenBank assembly RS_GCF_002836775.1. The GC content of the type genome is 37.88 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Colwellia cotenibra sp. nov.

Candidatus Colwellia cotenibra (NL. fem. n. *cotenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia_A sp001767295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014077515.1. The GC content of the type genome is 37.75 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Colwellia maligentia sp. nov.

Candidatus Colwellia maligentia (NL. fem. n. *maligentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia_A sp013215295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013215295.1. The GC content of the type genome is 37.0 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Colwellia manupitudo sp. nov.

Candidatus Colwellia manupitudo (NL. fem. n. *manupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia_A sp014076845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014076905.1. The GC content of the type genome is 37.33 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Colwellia novilitas sp. nov.

Candidatus Colwellia novilitas (NL. fem. n. *novilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia_A sp013215385*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013215385.1. The GC content of the type genome is 37.42 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Colwellia stercentia sp. nov.

Candidatus Colwellia stercentia (NL. fem. n. *stercentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Colwellia_A sp013215655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013215655.1. The GC content of the type genome is 36.71 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Comamonas agricastra sp. nov.

Candidatus Comamonas agricastra (NL. fem. n. *agricastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp013363755*. The type genome for the species is the GenBank assembly RS_GCF_013363755.1. The GC content of the type genome is 66.31 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Comamonas attemitas sp. nov.

Candidatus Comamonas attemitas (NL. fem. n. *attemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp002754475*. The type genome for the species is the GenBank assembly RS_GCF_002754475.1. The GC content of the type genome is 58.59 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Comamonas cerucimonas sp. nov.

Candidatus Comamonas cerucimonas (NL. fem. n. *cerucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp012844455*. The type genome for the species is the

GenBank assembly RS_GCF_012844455.1. The GC content of the type genome is 58.9 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Comamonas cuferitudo sp. nov.

Candidatus Comamonas cuferitudo (NL. fem. n. *cuferitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp002472915*. The type genome for the species is the GenBank assembly GCA_002358635.1. The GC content of the type genome is 63.95 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Comamonas defulicula sp. nov.

Candidatus Comamonas defulicula (NL. fem. n. *defulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp902706035*. The type genome for the species is the GenBank assembly RS_GCF_902706035.1. The GC content of the type genome is 65.42 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Comamonas inoffugo sp. nov.

Candidatus Comamonas inoffugo (NL. fem. n. *inoffugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp900564145*. The type genome for the species is the GenBank assembly RS_GCF_900564145.1. The GC content of the type genome is 60.9 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Comamonas obnunimonia sp. nov.

Candidatus Comamonas obnunimonia (NL. fem. n. *obnunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp009360615*. The type genome for the species is the GenBank assembly GCA_009360615.1. The GC content of the type genome is 61.7 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Comamonas progrimonas sp. nov.

Candidatus Comamonas progrimonas (NL. fem. n. *progrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas sp004364775*. The type genome for the species is the GenBank assembly RS_GCF_004364775.1. The GC content of the type genome is 63.07 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Comamonas alcibibra sp. nov.

Candidatus Comamonas alcibibra (NL. fem. n. *alcibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas_C sp001724135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001724135.1. The GC content of the type genome is 65.2 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Comamonas cotenax sp. nov.

Candidatus Comamonas cotenax (NL. fem. n. *cotenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas_C sp001725255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001898655.1. The GC content of the type genome is 66.44 % and the genome length is 3.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Comamonas navicitudo sp. nov.

Candidatus Comamonas navicitudo (NL. fem. n. *navicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas_C sp007954405*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007954405.1. The GC content of the type genome is 67.79 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Comamonas oblivisca sp. nov.

Candidatus Comamonas oblivisca (NL. fem. n. *oblivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Comamonas_C sp002894305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002894305.1. The GC content of the type genome is 67.15 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Commensalibacter cenotessa sp. nov.

Candidatus Commensalibacter cenotessa (NL. fem. n. *cenotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Commensalibacter sp000527695*. The type genome for the species is the GenBank assembly RS_GCF_000527695.1. The GC content of the type genome is 36.66 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut of an overwintering female monarch butterfly".

Description of *Candidatus* Commensalibacter desoritas sp. nov.

Candidatus Commensalibacter desoritas (NL. fem. n. *desoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Commensalibacter sp003202795*. The type genome for the species is the GenBank assembly RS_GCF_009725775.1. The GC content of the type genome is 37.64 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Companilactobacillus defarastra sp. nov.

Candidatus Companilactobacillus defarastra (NL. fem. n. *defarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946205*. The type genome for the species is the GenBank assembly RS_GCF_003946205.1. The GC content of the type genome is 35.56 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Companilactobacillus feditiforma sp. nov.

Candidatus Companilactobacillus feditiforma (NL. fem. n. *feditiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946555*. The type genome for the species is the GenBank assembly RS_GCF_003946555.1. The GC content of the type genome is 36.71 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Companilactobacillus infinessa sp. nov.

Candidatus Companilactobacillus infinessa (NL. fem. n. *infinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp005404815*. The type genome for the species is the GenBank assembly RS_GCF_005404815.1. The GC content of the type genome is 36.42 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Companilactobacillus minagivita sp. nov.

Candidatus Companilactobacillus minagivita (NL. fem. n. *minagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946575*. The type genome for the species is the GenBank assembly RS_GCF_003946575.1. The GC content of the type genome is 36.52 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Companilactobacillus navifimonia sp. nov.

Candidatus Companilactobacillus navifimonia (NL. fem. n. *navifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946605*. The type genome for the species is the GenBank assembly RS_GCF_003946605.1. The GC content of the type genome is 34.57 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Companilactobacillus tresvedo sp. nov.

Candidatus Companilactobacillus tresvedo (NL. fem. n. *tresvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946625*. The type genome for the species is the GenBank assembly RS_GCF_003946625.1. The GC content of the type genome is 36.16 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Companilactobacillus volubitoga sp. nov.

Candidatus Companilactobacillus volubitoga (NL. fem. n. *volubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Companilactobacillus sp003946515*. The type genome for the species is the GenBank assembly RS_GCF_003946515.1. The GC content of the type genome is 39.36 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Competibacter abluvisca sp. nov.

Candidatus Competibacter abluvisca (NL. fem. n. *abluvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Competibacter_A sp002352125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002352125.1. The GC content of the type genome is 59.87 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Competibacter capucivita sp. nov.

Candidatus Competibacter capucivita (NL. fem. n. *capucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Competibacter_A sp002391525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012840695.1. The GC content of the type genome is 63.51 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Competibacter enuntitica sp. nov.

Candidatus Competibacter enuntitica (NL. fem. n. *enuntitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Competibacter_A sp003527885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003527885.1. The GC content of the type genome is 62.53 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Competibacter indubatica sp. nov.

Candidatus Competibacter indubatica (NL. fem. n. *indubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Competibacter_A sp903882995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903882995.1. The GC content of the type genome is 42.24 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Competibacter melilitoga sp. nov.

Candidatus Competibacter melilitoga (NL. fem. n. *melilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Competibacter_A sp002433805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003455755.1. The GC content of the type genome is 61.96 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Conabana abambibra sp. nov.

Candidatus Conabana abambibra (NL. fem. n. *abambibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-6 sp001443385*. The type genome for the species is the

GenBank assembly GCA_001443385.1. The GC content of the type genome is 68.37 % and the genome length is 2.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Conabana gen. nov.

Candidatus Conabana (NL. fem. n. *Conabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-6*. The type species for the genus is *Candidatus* Conabana abambibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabanaceae.

Description of *Candidatus* Conabanaceae fam. nov.

Candidatus Conabanaceae (NL. fem. n. *Conabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-6.* The type genus for the taxon is *Candidatus* Conabana .

According to GTDB R06-RS202, this family belongs to the order *Rokubacteriales*.

Description of *Candidatus* Conabaria xeramicella sp. nov.

Candidatus Conabaria xeramicella (NL. fem. n. *xeramicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-3-62-11 sp001914955*. The type genome for the species is the GenBank assembly GCA_001918075.1. The GC content of the type genome is 61.79 % and the genome length is 1.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 2 days after first rain event (91mm)".

Description of *Candidatus* Conabaria gen. nov.

Candidatus Conabaria (NL. fem. n. *Conabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-3-62-11*. The type species for the genus is *Candidatus* Conabaria

xeramicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conabida dicabitura sp. nov.

Candidatus Conabida dicabitura (NL. fem. n. *dicabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGR01 sp013285985*. The type genome for the species is the GenBank assembly GCA_013285985.1. The GC content of the type genome is 59.5 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Conabida gen. nov.

Candidatus Conabida (NL. fem. n. *Conabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGR01*. The type species for the genus is *Candidatus* Conabida dicabitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDGR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabidaceae.

Description of *Candidatus* Conabidaceae fam. nov.

Candidatus Conabidaceae (NL. fem. n. *Conabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDGR01*. The type genus for the taxon is *Candidatus* Conabida .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Conabosa abasciforma sp. nov.

Candidatus Conabosa abasciforma (NL. fem. n. *abasciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900769835*. The type genome for the species is the GenBank assembly GCA_900769835.1. The GC content of the type genome is 53.21 %

and the genome length is 1.24 Mbp.

Description of *Candidatus* Conabosa gen. nov.

Candidatus Conabosa (NL. fem. n. *Conabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-110*. The type species for the genus is *Candidatus* Conabosa abasciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conabosa acculitura sp. nov.

Candidatus Conabosa acculitura (NL. fem. n. *acculitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900548795*. The type genome for the species is the GenBank assembly GCA_900548795.1. The GC content of the type genome is 61.22 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Conabosa admorastra sp. nov.

Candidatus Conabosa admorastra (NL. fem. n. *admorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900554625*. The type genome for the species is the GenBank assembly GCA_900554625.1. The GC content of the type genome is 53.45 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Conabosa cacomatica sp. nov.

Candidatus Conabosa cacomatica (NL. fem. n. *cacomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900752285*. The type genome for the species is the GenBank assembly GCA_900752285.1. The GC content of the type genome is 57.06 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Conabosa capucedo sp. nov.

Candidatus Conabosa capucedo (NL. fem. n. *capucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp004556205*. The type genome for the species is the GenBank assembly GCA_004556205.1. The GC content of the type genome is 55.54 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Conabosa catafimonia sp. nov.

Candidatus Conabosa catafimonia (NL. fem. n. *catafimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002493965*. The type genome for the species is the GenBank assembly GCA_002361975.1. The GC content of the type genome is 55.27 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Conabosa cetaredo sp. nov.

Candidatus Conabosa cetaredo (NL. fem. n. *cetaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900544975*. The type genome for the species is the GenBank assembly GCA_900544975.1. The GC content of the type genome is 57.3 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Conabosa cilicastra sp. nov.

Candidatus Conabosa cilicastra (NL. fem. n. *cilicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900544405*. The type genome for the species is the GenBank assembly GCA_900763335.1. The GC content of the type genome is 58.58 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Conabosa cimelentia sp. nov.

Candidatus Conabosa cimelentia (NL. fem. n. *cimelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002362145*. The type genome for the species is the GenBank assembly GCA_002491025.1. The GC content of the type genome is 58.92 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Conabosa conifivita sp. nov.

Candidatus Conabosa conifivita (NL. fem. n. *conifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900770015*. The type genome for the species is the GenBank assembly GCA_900770015.1. The GC content of the type genome is 56.3 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Conabosa coticitas sp. nov.

Candidatus Conabosa coticitas (NL. fem. n. *coticitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp000435995*. The type genome for the species is the GenBank assembly GCA_000435995.1. The GC content of the type genome is 56.92 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Conabosa decacicula sp. nov.

Candidatus Conabosa decacicula (NL. fem. n. *decacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900554705*. The type genome for the species is the GenBank assembly GCA_900554705.1. The GC content of the type genome is 59.13 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Conabosa defenitudo sp. nov.

Candidatus Conabosa defenitudo (NL. fem. n. *defenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp000434635*. The type genome for the species is the

GenBank assembly GCA_900538815.1. The GC content of the type genome is 56.17 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Conabosa denomitica sp. nov.

Candidatus Conabosa denomitica (NL. fem. n. *denomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900553805*. The type genome for the species is the GenBank assembly GCA_900553805.1. The GC content of the type genome is 59.57 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Conabosa hexapugo sp. nov.

Candidatus Conabosa hexapugo (NL. fem. n. *hexapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900546415*. The type genome for the species is the GenBank assembly GCA_900546415.1. The GC content of the type genome is 60.46 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Conabosa homagugo sp. nov.

Candidatus Conabosa homagugo (NL. fem. n. *homagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900546915*. The type genome for the species is the GenBank assembly GCA_900771735.1. The GC content of the type genome is 56.88 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Conabosa immodessa sp. nov.

Candidatus Conabosa immodessa (NL. fem. n. *immodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002372735*. The type genome for the species is the GenBank assembly GCA_002372735.1. The GC content of the type genome is 62.51 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Conabosa indecitio sp. nov.

Candidatus Conabosa indecitio (NL. fem. n. *indecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900762935*. The type genome for the species is the GenBank assembly GCA_900762935.1. The GC content of the type genome is 62.45 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Conabosa infabimonas sp. nov.

Candidatus Conabosa infabimonas (NL. fem. n. *infabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp004562395*. The type genome for the species is the GenBank assembly GCA_004562395.1. The GC content of the type genome is 58.57 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Conabosa lametatio sp. nov.

Candidatus Conabosa lametatio (NL. fem. n. *lametatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002437585*. The type genome for the species is the GenBank assembly GCA_002405885.1. The GC content of the type genome is 58.16 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Conabosa lametitoga sp. nov.

Candidatus Conabosa lametitoga (NL. fem. n. *lametitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900549495*. The type genome for the species is the GenBank assembly GCA_900549495.1. The GC content of the type genome is 56.85 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Conabosa malivitura sp. nov.

Candidatus Conabosa malivitura (NL. fem. n. *malivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900544705*. The type genome for the species is the GenBank assembly GCA_900756625.1. The GC content of the type genome is 57.78 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Conabosa malogugo sp. nov.

Candidatus Conabosa malogugo (NL. fem. n. *malogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900547405*. The type genome for the species is the GenBank assembly GCA_900547405.1. The GC content of the type genome is 56.78 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Conabosa megalisca sp. nov.

Candidatus Conabosa megalisca (NL. fem. n. *megalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900763965*. The type genome for the species is the GenBank assembly GCA_900763965.1. The GC content of the type genome is 55.8 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Conabosa miracitas sp. nov.

Candidatus Conabosa miracitas (NL. fem. n. *miracitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900546075*. The type genome for the species is the GenBank assembly GCA_900768955.1. The GC content of the type genome is 57.61 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Conabosa necubitoga sp. nov.

Candidatus Conabosa necubitoga (NL. fem. n. *necubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900544945*. The type genome for the species is the GenBank assembly GCA_900544945.1. The GC content of the type genome is 57.48 %

and the genome length is 2.13 Mbp.

Description of *Candidatus* Conabosa negotitio sp. nov.

Candidatus Conabosa negotitio (NL. fem. n. *negotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900315595*. The type genome for the species is the GenBank assembly GCA_002363535.1. The GC content of the type genome is 61.5 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Conabosa nocenitica sp. nov.

Candidatus Conabosa nocenitica (NL. fem. n. *nocenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp004555705*. The type genome for the species is the GenBank assembly GCA_004555705.1. The GC content of the type genome is 58.64 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Conabosa odontax sp. nov.

Candidatus Conabosa odontax (NL. fem. n. *odontax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002362625*. The type genome for the species is the GenBank assembly GCA_002362625.1. The GC content of the type genome is 55.47 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Conabosa onocritoga sp. nov.

Candidatus Conabosa onocritoga (NL. fem. n. *onocritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900762245*. The type genome for the species is the GenBank assembly GCA_900762245.1. The GC content of the type genome is 53.74 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Conabosa penicitoga sp. nov.

Candidatus Conabosa penicitoga (NL. fem. n. *penicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900540635*. The type genome for the species is the GenBank assembly GCA_900540635.1. The GC content of the type genome is 56.38 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Conabosa proclimonia sp. nov.

Candidatus Conabosa proclimonia (NL. fem. n. *proclimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900556935*. The type genome for the species is the GenBank assembly GCA_900556935.1. The GC content of the type genome is 56.8 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Conabosa remulisca sp. nov.

Candidatus Conabosa remulisca (NL. fem. n. *remulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900549705*. The type genome for the species is the GenBank assembly GCA_900549705.1. The GC content of the type genome is 55.14 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Conabosa rorifitio sp. nov.

Candidatus Conabosa rorifitio (NL. fem. n. *rorifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp002436765*. The type genome for the species is the GenBank assembly GCA_002436765.1. The GC content of the type genome is 58.49 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Conabosa rubefitas sp. nov.

Candidatus Conabosa rubefitas (NL. fem. n. *rubefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900769995*. The type genome for the species is the GenBank assembly GCA_900769995.1. The GC content of the type genome is 54.42 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Conabosa rubigimonia sp. nov.

Candidatus Conabosa rubigimonia (NL. fem. n. *rubigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900551495*. The type genome for the species is the GenBank assembly GCA_900758445.1. The GC content of the type genome is 58.49 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Conabosa subabatio sp. nov.

Candidatus Conabosa subabatio (NL. fem. n. *subabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp003525905*. The type genome for the species is the GenBank assembly GCA_900751905.1. The GC content of the type genome is 61.19 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Conabosa undevibula sp. nov.

Candidatus Conabosa undevibula (NL. fem. n. *undevibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900769845*. The type genome for the species is the GenBank assembly GCA_900769845.1. The GC content of the type genome is 52.78 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Conabosa utralitica sp. nov.

Candidatus Conabosa utralitica (NL. fem. n. *utralitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900762005*. The type genome for the species is the GenBank assembly GCA_900762005.1. The GC content of the type genome is 55.29 %

and the genome length is 2.14 Mbp.

Description of *Candidatus* Conabosa vitupentia sp. nov.

Candidatus Conabosa vitupentia (NL. fem. n. *vitupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-110 sp900316335*. The type genome for the species is the GenBank assembly GCA_002349985.1. The GC content of the type genome is 59.92 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Conabula hexapitia sp. nov.

Candidatus Conabula hexapitia (NL. fem. n. *hexapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1388 sp003170575*. The type genome for the species is the GenBank assembly GCA_003170575.1. The GC content of the type genome is 43.34 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Conabula gen. nov.

Candidatus Conabula (NL. fem. n. *Conabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1388*. The type species for the genus is *Candidatus* Conabula hexapitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1388*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conabulaceae.

Description of *Candidatus* Conabulaceae fam. nov.

Candidatus Conabulaceae (NL. fem. n. *Conabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1388.* The type genus for the taxon is *Candidatus* Conabula .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Conamana facunatio sp. nov.

Candidatus Conamana facunatio (NL. fem. n. *facunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1537 sp900552695*. The type genome for the species is the GenBank assembly GCA_900552695.1. The GC content of the type genome is 43.26 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Conamana gen. nov.

Candidatus Conamana (NL. fem. n. *Conamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1537*. The type species for the genus is *Candidatus* Conamana facunatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Butubariaceae.

Description of *Candidatus* Conamana malifitia sp. nov.

Candidatus Conamana malifitia (NL. fem. n. *malifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1537 sp900761045*. The type genome for the species is the GenBank assembly RS_GCF_900761045.1. The GC content of the type genome is 50.17 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Conamana tetenicula sp. nov.

Candidatus Conamana tetenicula (NL. fem. n. *tetenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1537 sp900543695*. The type genome for the species is the GenBank assembly GCA_003343475.1. The GC content of the type genome is 49.77 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Conamaria defanigena sp. nov.

Candidatus Conamaria defanigena (NL. fem. n. *defanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6940 sp002450655*. The type genome for the species is the GenBank assembly GCA_002450655.1. The GC content of the type genome is 39.99 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Conamaria gen. nov.

Candidatus Conamaria (NL. fem. n. *Conamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6940*. The type species for the genus is *Candidatus* Conamaria defanigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6940*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conamariaceae.

Description of *Candidatus* Conamariaceae fam. nov.

Candidatus Conamariaceae (NL. fem. n. *Conamariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6940.* The type genus for the taxon is *Candidatus* Conamaria .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Conamella conopago sp. nov.

Candidatus Conamella conopago (NL. fem. n. *conopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp007131845*. The type genome for the species is the GenBank assembly GCA_007131845.1. The GC content of the type genome is 55.22 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Conamella gen. nov.

Candidatus Conamella (NL. fem. n. *Conamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-16*. The type species for the genus is *Candidatus* Conamella conopago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarulaceae.

Description of *Candidatus* Conamella dimidatica sp. nov.

Candidatus Conamella dimidatica (NL. fem. n. *dimidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp011389515*. The type genome for the species is the GenBank assembly GCA_011389515.1. The GC content of the type genome is 51.58 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Conamella epitrago sp. nov.

Candidatus Conamella epitrago (NL. fem. n. *epitrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp007135795*. The type genome for the species is the GenBank assembly GCA_007135795.1. The GC content of the type genome is 48.63 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Conamella inexsedo sp. nov.

Candidatus Conamella inexsedo (NL. fem. n. *inexsedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp011389935*. The type genome for the species is the GenBank assembly GCA_011389935.1. The GC content of the type genome is 54.41 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Conamella inhumimonas sp. nov.

Candidatus Conamella inhumimonas (NL. fem. n. *inhumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp007136525*. The type genome for the species is the GenBank assembly GCA_007136525.1. The GC content of the type genome is 53.87 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Conamella insufessa sp. nov.

Candidatus Conamella insufessa (NL. fem. n. *insufessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp007134875*. The type genome for the species is the GenBank assembly GCA_007134875.1. The GC content of the type genome is 55.67 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Conamella obtesatio sp. nov.

Candidatus Conamella obtesatio (NL. fem. n. *obtesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp003551985*. The type genome for the species is the GenBank assembly GCA_003551985.1. The GC content of the type genome is 54.15 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Conamella vehicilenta sp. nov.

Candidatus Conamella vehicilenta (NL. fem. n. *vehicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-16 sp007127175*. The type genome for the species is the GenBank assembly GCA_007118435.1. The GC content of the type genome is 54.93 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Conamia genufatica sp. nov.

Candidatus Conamia genufatica (NL. fem. n. *genufatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp903898725*. The type genome for the species is the GenBank assembly GCA_903898725.1. The GC content of the type genome is 71.89 %

and the genome length is 4.99 Mbp.

Description of *Candidatus* Conamia gen. nov.

Candidatus Conamia (NL. fem. n. *Conamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4615*. The type species for the genus is *Candidatus* Conamia genufatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conamia inmoligena sp. nov.

Candidatus Conamia inmoligena (NL. fem. n. *inmoligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp003818495*. The type genome for the species is the GenBank assembly GCA_003818495.1. The GC content of the type genome is 70.37 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Conamia noninastra sp. nov.

Candidatus Conamia noninastra (NL. fem. n. *noninastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp903923345*. The type genome for the species is the GenBank assembly GCA_903923345.1. The GC content of the type genome is 63.39 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Conamia reduvatica sp. nov.

Candidatus Conamia reduvatica (NL. fem. n. *reduvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp903903975*. The type genome for the species is the GenBank assembly GCA_903876585.1. The GC content of the type genome is 63.44 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Conamia selecitica sp. nov.

Candidatus Conamia selecitica (NL. fem. n. *selecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp002386465*. The type genome for the species is the GenBank assembly GCA_002386465.1. The GC content of the type genome is 63.51 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Conamia venabousia sp. nov.

Candidatus Conamia venabousia (NL. fem. n. *venabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4615 sp903831925*. The type genome for the species is the GenBank assembly GCA_903831925.1. The GC content of the type genome is 63.95 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Conamida adrecicula sp. nov.

Candidatus Conamida adrecicula (NL. fem. n. *adrecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp009924185*. The type genome for the species is the GenBank assembly GCA_009924185.1. The GC content of the type genome is 47.15 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Conamida gen. nov.

Candidatus Conamida (NL. fem. n. *Conamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAG-120802*. The type species for the genus is *Candidatus* Conamida adrecicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conamida buxifisca sp. nov.

Candidatus Conamida buxifisca (NL. fem. n. *buxifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp010032085*. The type genome for the species is the GenBank assembly GCA_010029675.1. The GC content of the type genome is 45.9 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Conamida casabimonia sp. nov.

Candidatus Conamida casabimonia (NL. fem. n. *casabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp010023045*. The type genome for the species is the GenBank assembly GCA_010022285.1. The GC content of the type genome is 47.87 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Conamida manupitoga sp. nov.

Candidatus Conamida manupitoga (NL. fem. n. *manupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp005777515*. The type genome for the species is the GenBank assembly GCA_005777515.1. The GC content of the type genome is 44.85 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Conamida modifivita sp. nov.

Candidatus Conamida modifivita (NL. fem. n. *modifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp002347935*. The type genome for the species is the GenBank assembly GCA_010021875.1. The GC content of the type genome is 44.6 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Conamida nicomatio sp. nov.

Candidatus Conamida nicomatio (NL. fem. n. *nicomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp009927705*. The type genome for the species is the GenBank assembly GCA_009927705.1. The GC content of the type genome is 48.32 %

and the genome length is 1.12 Mbp.

Description of *Candidatus* Conamida sacomugo sp. nov.

Candidatus Conamida sacomugo (NL. fem. n. *sacomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp003569145*. The type genome for the species is the GenBank assembly GCA_014189935.1. The GC content of the type genome is 44.24 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Conamida vaniditas sp. nov.

Candidatus Conamida vaniditas (NL. fem. n. *vaniditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120802 sp010032125*. The type genome for the species is the GenBank assembly GCA_010032125.1. The GC content of the type genome is 48.33 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Conamosa nutamibra sp. nov.

Candidatus Conamosa nutamibra (NL. fem. n. *nutamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMY01 sp003567855*. The type genome for the species is the GenBank assembly GCA_003560115.1. The GC content of the type genome is 67.24 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Conamosa gen. nov.

Candidatus Conamosa (NL. fem. n. *Conamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWMY01*. The type species for the genus is *Candidatus* Conamosa nutamibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWYM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalellaceae.

Description of *Candidatus* Conamula carunibula sp. nov.

Candidatus Conamula carunibula (NL. fem. n. *carunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-42-14 sp000998135*. The type genome for the species is the GenBank assembly GCA_001822305.1. The GC content of the type genome is 40.95 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Conamula gen. nov.

Candidatus Conamula (NL. fem. n. *Conamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-42-14*. The type species for the genus is *Candidatus* Conamula carunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conamulaceae.

Description of *Candidatus* Conamulaceae fam. nov.

Candidatus Conamulaceae (NL. fem. n. *Conamulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-42-14.* The type genus for the taxon is *Candidatus* Conamula .

According to GTDB R06-RS202, this family belongs to the order *Sungbacterales*.

Description of *Candidatus* Conarana caduritura sp. nov.

Candidatus Conarana caduritura (NL. fem. n. *caduritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp001724855*. The type genome for the species is the GenBank assembly GCA_001724855.1. The GC content of the type genome is 69.04 % and the genome length is 3.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Conarana gen. nov.

Candidatus Conarana (NL. fem. n. *Conarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-69-89*. The type species for the genus is *Candidatus* Conarana caduritura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conarana cicatitio sp. nov.

Candidatus Conarana cicatitio (NL. fem. n. *cicatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp003577305*. The type genome for the species is the GenBank assembly GCA_003577305.1. The GC content of the type genome is 69.36 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Conarana exsufentia sp. nov.

Candidatus Conarana exsufentia (NL. fem. n. *exsufentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp003576795*. The type genome for the species is the GenBank assembly GCA_003576795.1. The GC content of the type genome is 70.12 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Conarana indipessa sp. nov.

Candidatus Conarana indipessa (NL. fem. n. *indipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp012513825*. The type genome for the species is the GenBank assembly GCA_012513825.1. The GC content of the type genome is 68.98 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Conarana indupivita sp. nov.

Candidatus Conarana indupivita (NL. fem. n. *indupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp008039575*. The type genome for the species is the GenBank assembly RS_GCF_008039575.1. The GC content of the type genome is 69.98 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Conarana lavacivita sp. nov.

Candidatus Conarana lavacivita (NL. fem. n. *lavacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp001898645*. The type genome for the species is the GenBank assembly GCA_001898645.1. The GC content of the type genome is 69.82 % and the genome length is 4.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Conarana obnunigena sp. nov.

Candidatus Conarana obnunigena (NL. fem. n. *obnunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-89 sp001724315*. The type genome for the species is the GenBank assembly GCA_001724315.1. The GC content of the type genome is 69.94 % and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Conararia lenocessa sp. nov.

Candidatus Conararia lenocessa (NL. fem. n. *lenocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXO01 sp009693245*. The type genome for the species is the GenBank assembly GCA_009693245.1. The GC content of the type genome is 59.78 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Conararia gen. nov.

Candidatus Conararia (NL. fem. n. *Conararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHXO01*. The type species for the genus is *Candidatus* Conararia lenocessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHXO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conarariaceae.

Description of *Candidatus* Conarariaceae fam. nov.

Candidatus Conarariaceae (NL. fem. n. *Conarariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHXO01*. The type genus for the taxon is *Candidatus* Conararia .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Conarella gen. nov.

Candidatus Conarella (NL. fem. n. *Conarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1417*. The type species for the genus is *Candidatus* Conarella bromii_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conarella camilitrix sp. nov.

Candidatus Conarella camilitrix (NL. fem. n. *camilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1417 sp900552925*. The type genome for the species is the GenBank assembly GCA_900552925.1. The GC content of the type genome is 61.33 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Conarella cotenivita sp. nov.

Candidatus Conarella cotenivita (NL. fem. n. *cotenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1417 sp002305575*. The type genome for the species is the GenBank assembly GCA_002305575.1. The GC content of the type genome is 56.2 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Conarella rudecibula sp. nov.

Candidatus Conarella rudecibula (NL. fem. n. *rudecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1417 sp003531055*. The type genome for the species is the GenBank assembly GCA_008681155.1. The GC content of the type genome is 52.13 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Conarella saxopigena sp. nov.

Candidatus Conarella saxopigena (NL. fem. n. *saxopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1417 sp900549945*. The type genome for the species is the GenBank assembly RS_GCF_900765145.1. The GC content of the type genome is 61.12 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Conaria addivugo sp. nov.

Candidatus Conaria addivugo (NL. fem. n. *addivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902593075*. The type genome for the species is the GenBank assembly GCA_902593075.1. The GC content of the type genome is 30.85 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Conaria gen. nov.

Candidatus Conaria (NL. fem. n. *Conaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED96*. The type species for the genus is *Candidatus* Conaria addivugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conaria anxifetta sp. nov.

Candidatus Conaria anxifetta (NL. fem. n. *anxifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902628605*. The type genome for the species is the GenBank assembly GCA_902628605.1. The GC content of the type genome is 31.57 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Conaria bipenitia sp. nov.

Candidatus Conaria bipenitia (NL. fem. n. *bipenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp002728075*. The type genome for the species is the GenBank assembly GCA_002728075.1. The GC content of the type genome is 30.68 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Conaria cosigitudo sp. nov.

Candidatus Conaria cosigitudo (NL. fem. n. *cosigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902598305*. The type genome for the species is the GenBank assembly GCA_902598305.1. The GC content of the type genome is 31.01 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Conaria dibucimonia sp. nov.

Candidatus Conaria dibucimonia (NL. fem. n. *dibucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902635965*. The type genome for the species is the GenBank assembly GCA_902618725.1. The GC content of the type genome is 31.22 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Conaria laculilenta sp. nov.

Candidatus Conaria laculilenta (NL. fem. n. *laculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902595825*. The type genome for the species is the GenBank assembly GCA_902595825.1. The GC content of the type genome is 31.2 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Conaria perabetta sp. nov.

Candidatus Conaria perabetta (NL. fem. n. *perabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp902582405*. The type genome for the species is the GenBank assembly GCA_902582405.1. The GC content of the type genome is 31.12 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Conaria podagatio sp. nov.

Candidatus Conaria podagatio (NL. fem. n. *podagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED96 sp002171475*. The type genome for the species is the GenBank assembly GCA_004214315.1. The GC content of the type genome is 30.56 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Conarida cerebatica sp. nov.

Candidatus Conarida cerebatica (NL. fem. n. *cerebatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B36-G15 sp003645615*. The type genome for the species is the GenBank assembly GCA_003645615.1. The GC content of the type genome is 51.27 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Conarida gen. nov.

Candidatus Conarida (NL. fem. n. *Conarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B36-G15*. The type species for the genus is *Candidatus* Conarida

cerebatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B36-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conaridaceae.

Description of *Candidatus* Conaridaceae fam. nov.

Candidatus Conaridaceae (NL. fem. n. *Conaridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B36-G15.* The type genus for the taxon is *Candidatus* Conarida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labeciales.

Description of *Candidatus* Conarosa domabedo sp. nov.

Candidatus Conarosa domabedo (NL. fem. n. *domabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717565 sp002717565*. The type genome for the species is the GenBank assembly GCA_002717565.1. The GC content of the type genome is 46.89 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Conarosa gen. nov.

Candidatus Conarosa (NL. fem. n. *Conarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717565*. The type species for the genus is *Candidatus* Conarosa domabedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2717565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conarosaceae.

Description of *Candidatus* Conarosaceae fam. nov.

Candidatus Conarosaceae (NL. fem. n. *Conarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2717565.* The type genus for the taxon is *Candidatus* Conarosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2717565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conarosales.

Description of *Candidatus* Conarosales ord. nov.

Candidatus Conarosales (NL. fem. n. *Conarosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2717565.* The type genus for the taxon is *Candidatus* Conarosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Conarula denaventia sp. nov.

Candidatus Conarula denaventia (NL. fem. n. *denaventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-1174 sp011046015*. The type genome for the species is the GenBank assembly GCA_011046015.1. The GC content of the type genome is 66.78 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Conarula gen. nov.

Candidatus Conarula (NL. fem. n. *Conarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-1174*. The type species for the genus is *Candidatus* Conarula denaventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-1174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conarulaceae.

Description of *Candidatus* Conarulaceae fam. nov.

Candidatus Conarulaceae (NL. fem. n. *Conarulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SpSt-1174.* The type genus for the taxon is *Candidatus* Conarula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-1174*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conarulales.

Description of *Candidatus* Conarulales ord. nov.

Candidatus Conarulales (NL. fem. n. *Conarulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-1174.* The type genus for the taxon is *Candidatus* Conarula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Conexibacter admulibra sp. nov.

Candidatus Conexibacter admulibra (NL. fem. n. *admulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Conexibacter_A sp000688095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000688095.1. The GC content of the type genome is 72.36 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Confluentibacter nubigiforma sp. nov.

Candidatus Confluentibacter nubigiforma (NL. fem. n. *nubigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Confluentibacter sp002280395*. The type genome for the species is the GenBank assembly GCA_002280395.1. The GC content of the type genome is 35.11 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Confluentibacter viginetta sp. nov.

Candidatus Confluentibacter viginetta (NL. fem. n. *viginetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Confluentibacter sp003258355*. The type genome for the species is the GenBank assembly RS_GCF_003258355.1. The GC content of the type genome is 33.31 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Congregibacter adobratio sp. nov.

Candidatus Congregibacter adobratio (NL. fem. n. *adobratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Congregibacter sp000158155*. The type genome for the species is the GenBank assembly RS_GCF_000158155.1. The GC content of the type genome is 56.34 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "top oxic layer of a muddy sediment core".

Description of *Candidatus* Congregibacter defacitoga sp. nov.

Candidatus Congregibacter defacitoga (NL. fem. n. *defacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Congregibacter sp002428935*. The type genome for the species is the GenBank assembly GCA_002428935.1. The GC content of the type genome is 58.34 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Conibana domipago sp. nov.

Candidatus Conibana domipago (NL. fem. n. *domipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCYS01 sp013290085*. The type genome for the species is the GenBank assembly GCA_013290085.1. The GC content of the type genome is 41.57 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Conibana gen. nov.

Candidatus Conibana (NL. fem. n. *Conibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCYS01*. The type species for the genus is *Candidatus* Conibana domipago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABCYS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conibanaceae.

Description of *Candidatus* Conibanaceae fam. nov.

Candidatus Conibanaceae (NL. fem. n. *Conibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABCYS01*. The type genus for the taxon is *Candidatus* Conibana .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Conibaria conubitio sp. nov.

Candidatus Conibaria conubitio (NL. fem. n. *conubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1474 sp900547105*. The type genome for the species is the GenBank assembly RS_GCF_900757275.1. The GC content of the type genome is 56.69 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Conibaria gen. nov.

Candidatus Conibaria (NL. fem. n. *Conibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1474*. The type species for the genus is *Candidatus* Conibaria conubitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conibaria rurigitoga sp. nov.

Candidatus Conibaria rurigitoga (NL. fem. n. *rurigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1474 sp900552115*. The type genome for the species is the GenBank assembly GCA_900552115.1. The GC content of the type genome is 54.97 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Conibella celamatio sp. nov.

Candidatus Conibella celamatio (NL. fem. n. *celamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9216 sp003245835*. The type genome for the species is the GenBank assembly GCA_003245835.1. The GC content of the type genome is 46.62 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Conibella gen. nov.

Candidatus Conibella (NL. fem. n. *Conibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9216*. The type species for the genus is *Candidatus* Conibella celamatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9216*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conibellaceae.

Description of *Candidatus* Conibellaceae fam. nov.

Candidatus Conibellaceae (NL. fem. n. *Conibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9216.* The type genus for the taxon is *Candidatus* Conibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JC444*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decatariales.

Description of *Candidatus* Conibella curacivita sp. nov.

Candidatus Conibella curacivita (NL. fem. n. *curacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9216 sp003454605*. The type genome for the species is the GenBank assembly GCA_003454605.1. The GC content of the type genome is 44.3 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Conibia semilitas sp. nov.

Candidatus Conibia semilitas (NL. fem. n. *semilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-24 sp003554185*. The type genome for the species is the GenBank assembly GCA_003554185.1. The GC content of the type genome is 36.16 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Conibia gen. nov.

Candidatus Conibia (NL. fem. n. *Conibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-24*. The type species for the genus is *Candidatus* Conibia semilitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T1SED10-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conibiaceae.

Description of *Candidatus* Conibiaceae fam. nov.

Candidatus Conibiaceae (NL. fem. n. *Conibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1SED10-24.* The type genus for the taxon is *Candidatus* Conibia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipenellales.

Description of *Candidatus* Conibida forinitia sp. nov.

Candidatus Conibida forinitia (NL. fem. n. *forinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13583 sp902790595*. The type genome for the species is the GenBank assembly GCA_902790595.1. The GC content of the type genome is 48.61 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Conibida gen. nov.

Candidatus Conibida (NL. fem. n. *Conibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13583*. The type species for the genus is *Candidatus* Conibida forinitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-534*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogariaceae.

Description of *Candidatus* Conibula affunugo sp. nov.

Candidatus Conibula affunugo (NL. fem. n. *affunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9076 sp012513225*. The type genome for the species is the GenBank assembly GCA_012513225.1. The GC content of the type genome is 28.06 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Conibula gen. nov.

Candidatus Conibula (NL. fem. n. *Conibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9076*. The type species for the genus is *Candidatus* Conibula affunugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conibula domipitoga sp. nov.

Candidatus Conibula domipitoga (NL. fem. n. *domipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9076 sp003537975*. The type genome for the species is the GenBank assembly GCA_012523895.1. The GC content of the type genome is 27.76 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Conifana acontitoga sp. nov.

Candidatus Conifana acontitoga (NL. fem. n. *acontitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp005789005*. The type genome for the species is the GenBank assembly GCA_005789005.1. The GC content of the type genome is 53.71 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Conifana gen. nov.

Candidatus Conifana (NL. fem. n. *Conifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYAC01*. The type species for the genus is *Candidatus* Conifana acontitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Conifana apoplatica sp. nov.

Candidatus Conifana apoplatica (NL. fem. n. *apoplatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903831295*. The type genome for the species is the GenBank assembly GCA_903831295.1. The GC content of the type genome is 53.16 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Conifana cucuritas sp. nov.

Candidatus Conifana cucuritas (NL. fem. n. *cucuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903938205*. The type genome for the species is the GenBank assembly GCA_903938205.1. The GC content of the type genome is 52.76 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Conifana disidimonas sp. nov.

Candidatus Conifana disidimonas (NL. fem. n. *disidimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903861235*. The type genome for the species is the GenBank assembly GCA_903861235.1. The GC content of the type genome is 69.58 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Conifana expasigena sp. nov.

Candidatus Conifana expasigena (NL. fem. n. *expasigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903867275*. The type genome for the species is the GenBank assembly GCA_903867275.1. The GC content of the type genome is 67.26 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Conifana gabinitudo sp. nov.

Candidatus Conifana gabinitudo (NL. fem. n. *gabinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp005787685*. The type genome for the species is the GenBank assembly GCA_005787685.1. The GC content of the type genome is 53.34 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Conifana panopedo sp. nov.

Candidatus Conifana panopedo (NL. fem. n. *panopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp009926815*. The type genome for the species is the GenBank assembly GCA_009926815.1. The GC content of the type genome is 69.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Conifana semiditia sp. nov.

Candidatus Conifana semiditia (NL. fem. n. *semiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp009691785*. The type genome for the species is the GenBank assembly GCA_009691785.1. The GC content of the type genome is 53.47 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Conifana semiditudo sp. nov.

Candidatus Conifana semiditudo (NL. fem. n. *semiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903898755*. The type genome for the species is the GenBank assembly GCA_903835615.1. The GC content of the type genome is 52.91 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Conifana tametitas sp. nov.

Candidatus Conifana tametitas (NL. fem. n. *tametitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp903914045*. The type genome for the species is the GenBank assembly GCA_903914045.1. The GC content of the type genome is 53.33 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Conifana utricitrix sp. nov.

Candidatus Conifana utricitrix (NL. fem. n. *utricitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAC01 sp009924765*. The type genome for the species is the GenBank assembly GCA_009924765.1. The GC content of the type genome is 66.86 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Conifaria levifessa sp. nov.

Candidatus Conifaria levifessa (NL. fem. n. *levifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2170 sp002772815*. The type genome for the species is the GenBank assembly GCA_002772815.1. The GC content of the type genome is 42.34 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Conifaria gen. nov.

Candidatus Conifaria (NL. fem. n. *Conifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2170*. The type species for the genus is *Candidatus* Conifaria levifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conifaria novilitura sp. nov.

Candidatus Conifaria novilitura (NL. fem. n. *novilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2170 sp002436205*. The type genome for the species is the GenBank assembly GCA_002687155.1. The GC content of the type genome is 44.37 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Conifella vivificella sp. nov.

Candidatus Conifella vivificella (NL. fem. n. *vivificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1144 sp002311855*. The type genome for the species is the GenBank assembly GCA_002311855.1. The GC content of the type genome is 33.27 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Conifella gen. nov.

Candidatus Conifella (NL. fem. n. *Conifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1144*. The type species for the genus is *Candidatus* Conifella vivificella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Conifellaceae fam. nov.

Candidatus Conifellaceae (NL. fem. n. *Conifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1144.* The type genus for the taxon is *Candidatus* Conifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conifellales.

Description of *Candidatus* Conifellales ord. nov.

Candidatus Conifellales (NL. fem. n. *Conifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1144.* The type genus for the taxon is *Candidatus* Conifella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Conifellae.

Description of *Candidatus* Conifellae class. nov.

Candidatus Conifellae (NL. fem. n. *c__Conifellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1144.* The type genus for the taxon is *Candidatus* Conifella .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota_D*.

Description of *Candidatus* Conifia latibessa sp. nov.

Candidatus Conifia latibessa (NL. fem. n. *latibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKY01 sp903821365*. The type genome for the species is the GenBank assembly GCA_903829825.1. The GC content of the type genome is 48.69 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Conifia gen. nov.

Candidatus Conifia (NL. fem. n. *Conifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJKY01*. The type species for the genus is *Candidatus* Conifia latibessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conifida delucatio sp. nov.

Candidatus Conifida delucatio (NL. fem. n. *delucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS403 sp900541565*. The type genome for the species is the GenBank assembly GCA_900541565.1. The GC content of the type genome is 46.69 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Conifida gen. nov.

Candidatus Conifida (NL. fem. n. *Conifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS403*. The type species for the genus is *Candidatus* Conifida delucatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conifida domabibula sp. nov.

Candidatus Conifida domabibula (NL. fem. n. *domabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS403 sp900540275*. The type genome for the species is the GenBank assembly RS_GCF_900762485.1. The GC content of the type genome is 50.36 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Conifida scorbugo sp. nov.

Candidatus Conifida scorbugo (NL. fem. n. *scorbugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UMGS403 sp900541975*. The type genome for the species is the GenBank assembly GCA_900541975.1. The GC content of the type genome is 45.84 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Conifida verecessa sp. nov.

Candidatus Conifida verecessa (NL. fem. n. *verecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS403 sp900540865*. The type genome for the species is the GenBank assembly GCA_902384005.1. The GC content of the type genome is 50.59 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Conifosa annicimonas sp. nov.

Candidatus Conifosa annicimonas (NL. fem. n. *annicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp002796045*. The type genome for the species is the GenBank assembly GCA_002796045.1. The GC content of the type genome is 36.09 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Conifosa gen. nov.

Candidatus Conifosa (NL. fem. n. *Conifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1450*. The type species for the genus is *Candidatus* Conifosa annicimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Conifosa inaspitio sp. nov.

Candidatus Conifosa inaspitio (NL. fem. n. *inaspitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp002329205*. The type genome for the species is the

GenBank assembly GCA_002329205.1. The GC content of the type genome is 41.04 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Conifosa lenunicella sp. nov.

Candidatus Conifosa lenunicella (NL. fem. n. *lenunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp000990445*. The type genome for the species is the GenBank assembly GCA_000990445.1. The GC content of the type genome is 37.33 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Conifosa ossarivita sp. nov.

Candidatus Conifosa ossarivita (NL. fem. n. *ossarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp002792315*. The type genome for the species is the GenBank assembly GCA_002792315.1. The GC content of the type genome is 38.79 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Conifosa rarefimonia sp. nov.

Candidatus Conifosa rarefimonia (NL. fem. n. *rarefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp001789555*. The type genome for the species is the GenBank assembly GCA_001789555.1. The GC content of the type genome is 37.51 % and the genome length is 1.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Conifosa rosacago sp. nov.

Candidatus Conifosa rosacago (NL. fem. n. *rosacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1450 sp002788865*. The type genome for the species is the GenBank assembly GCA_002792335.1. The GC content of the type genome is 38.76 %

and the genome length is 1.09 Mbp.

Description of *Candidatus* Conifula xenodimonas sp. nov.

Candidatus Conifula xenodimonas (NL. fem. n. *xenodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTYK01 sp012961925*. The type genome for the species is the GenBank assembly GCA_012961925.1. The GC content of the type genome is 51.39 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Conifula gen. nov.

Candidatus Conifula (NL. fem. n. *Conifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTYK01*. The type species for the genus is *Candidatus* Conifula xenodimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTYK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifulaceae.

Description of *Candidatus* Conifulaceae fam. nov.

Candidatus Conifulaceae (NL. fem. n. *Conifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTYK01.* The type genus for the taxon is *Candidatus* Conifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *MVCY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipenidales.

Description of *Candidatus* Conigana abhinedo sp. nov.

Candidatus Conigana abhinedo (NL. fem. n. *abhinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2156 sp011049715*. The type genome for the species is the GenBank assembly GCA_011049715.1. The GC content of the type genome is 45.65 %

and the genome length is 5.38 Mbp.

Description of *Candidatus* Conigana gen. nov.

Candidatus Conigana (NL. fem. n. *Conigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2156*. The type species for the genus is *Candidatus* Conigana abhinedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coniganaceae.

Description of *Candidatus* Coniganaceae fam. nov.

Candidatus Coniganaceae (NL. fem. n. *Coniganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2156.* The type genus for the taxon is *Candidatus* Conigana .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Conigana revulimonia sp. nov.

Candidatus Conigana revulimonia (NL. fem. n. *revulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2156 sp002328165*. The type genome for the species is the GenBank assembly GCA_002420525.1. The GC content of the type genome is 45.84 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Conigaria peribitia sp. nov.

Candidatus Conigaria peribitia (NL. fem. n. *peribitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-42-19 sp000994805*. The type genome for the species is the GenBank assembly GCA_001774195.1. The GC content of the type genome is 41.06 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1

micron filter at time point D".

Description of *Candidatus* Conigaria gen. nov.

Candidatus Conigaria (NL. fem. n. *Conigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-42-19*. The type species for the genus is *Candidatus* Conigaria peribitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10092*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monimellaceae.

Description of *Candidatus* Conigella cerevitura sp. nov.

Candidatus Conigella cerevitura (NL. fem. n. *cerevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1103 sp004136275*. The type genome for the species is the GenBank assembly GCA_004136275.1. The GC content of the type genome is 47.56 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Conigella gen. nov.

Candidatus Conigella (NL. fem. n. *Conigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1103*. The type species for the genus is *Candidatus* Conigella cerevitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conigella famelitica sp. nov.

Candidatus Conigella famelitica (NL. fem. n. *famelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1103 sp004138455*. The type genome for the species is the GenBank assembly RS_GCF_004138455.1. The GC content of the type genome is 50.8 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Conigella ignobiforma sp. nov.

Candidatus Conigella ignobiforma (NL. fem. n. *ignobiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1103 sp013333515*. The type genome for the species is the GenBank assembly GCA_013333515.2. The GC content of the type genome is 50.54 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Conigella veriditrix sp. nov.

Candidatus Conigella veriditrix (NL. fem. n. *veriditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1103 sp002313515*. The type genome for the species is the GenBank assembly GCA_002313515.1. The GC content of the type genome is 47.24 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Conigia panifentia sp. nov.

Candidatus Conigia panifentia (NL. fem. n. *panifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVRH01 sp903908285*. The type genome for the species is the GenBank assembly GCA_903837615.1. The GC content of the type genome is 45.26 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Conigia gen. nov.

Candidatus Conigia (NL. fem. n. *Conigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVRH01*. The type species for the genus is *Candidatus* Conigia panifentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depecosaceae.

Description of *Candidatus* Conigida subinibula sp. nov.

Candidatus Conigida subinibula (NL. fem. n. *subinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJAUT01 sp903945195*. The type genome for the species is the GenBank assembly GCA_903821655.1. The GC content of the type genome is 42.06 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Conigida gen. nov.

Candidatus Conigida (NL. fem. n. *Conigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJAUT01*. The type species for the genus is *Candidatus* Conigida subinibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunidaceae.

Description of *Candidatus* Conigosa attolicula sp. nov.

Candidatus Conigosa attolicula (NL. fem. n. *attolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B30-G16 sp003645115*. The type genome for the species is the GenBank assembly GCA_003645115.1. The GC content of the type genome is 41.29 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Conigosa gen. nov.

Candidatus Conigosa (NL. fem. n. *Conigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B30-G16*. The type species for the genus is *Candidatus* Conigosa attolicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B30-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conigosaceae.

Description of *Candidatus* Conigosaceae fam. nov.

Candidatus Conigosaceae (NL. fem. n. *Conigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B30-G16.* The type genus for the taxon is *Candidatus* Conigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vehemidales.

Description of *Candidatus* Conigula ecligatio sp. nov.

Candidatus Conigula ecligatio (NL. fem. n. *ecligatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-0-10-42-9 sp002773845*. The type genome for the species is the GenBank assembly GCA_002773845.1. The GC content of the type genome is 41.56 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Conigula gen. nov.

Candidatus Conigula (NL. fem. n. *Conigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-0-10-42-9*. The type species for the genus is *Candidatus* Conigula ecligatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-0-10-42-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conigulaceae.

Description of *Candidatus* Conigulaceae fam. nov.

Candidatus Conigulaceae (NL. fem. n. *Conigulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-14-0-10-42-9.* The type genus for the taxon is *Candidatus* Conigula .

According to GTDB R06-RS202, this family belongs to the order *Buchananbacterales*.

Description of *Candidatus* Coninana disidivita sp. nov.

Candidatus Coninana disidivita (NL. fem. n. *disidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-45-9 sp001771575*. The type genome for the species is the GenBank assembly GCA_001771425.1. The GC content of the type genome is 51.81 % and the genome length is 1.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Coninana gen. nov.

Candidatus Coninana (NL. fem. n. *Coninana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-45-9*. The type species for the genus is *Candidatus* Coninana disidivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-48-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogiaceae.

Description of *Candidatus* Coninaria buxifilega sp. nov.

Candidatus Coninaria buxifilega (NL. fem. n. *buxifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp013204455*. The type genome for the species is the GenBank assembly GCA_013204455.1. The GC content of the type genome is 50.22 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Coninaria gen. nov.

Candidatus Coninaria (NL. fem. n. *Coninaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BACL27*. The type species for the genus is *Candidatus* Coninaria buxifilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coninaria catilessa sp. nov.

Candidatus Coninaria catilessa (NL. fem. n. *catilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp014190295*. The type genome for the species is the GenBank assembly GCA_014190295.1. The GC content of the type genome is 48.71 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Coninaria cenacibra sp. nov.

Candidatus Coninaria cenacibra (NL. fem. n. *cenacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp003535455*. The type genome for the species is the GenBank assembly GCA_010021325.1. The GC content of the type genome is 51.66 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Coninaria conibitica sp. nov.

Candidatus Coninaria conibitica (NL. fem. n. *conibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp009927565*. The type genome for the species is the GenBank assembly GCA_009927565.1. The GC content of the type genome is 50.45 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Coninaria conipicella sp. nov.

Candidatus Coninaria conipicella (NL. fem. n. *conipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp009923685*. The type genome for the species is the GenBank assembly GCA_009923685.1. The GC content of the type genome is 51.55 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Coninaria curabastra sp. nov.

Candidatus Coninaria curabastra (NL. fem. n. *curabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp003569125*. The type genome for the species is the GenBank assembly GCA_003569125.1. The GC content of the type genome is 49.77 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Coninaria insufiforma sp. nov.

Candidatus Coninaria insufiforma (NL. fem. n. *insufiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp014190055*. The type genome for the species is the GenBank assembly GCA_014190055.1. The GC content of the type genome is 50.36 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Coninaria lupanago sp. nov.

Candidatus Coninaria lupanago (NL. fem. n. *lupanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp005805045*. The type genome for the species is the GenBank assembly GCA_005788095.1. The GC content of the type genome is 52.42 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Coninaria omnipitas sp. nov.

Candidatus Coninaria omnipitas (NL. fem. n. *omnipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL27 sp002737635*. The type genome for the species is the GenBank assembly GCA_002737635.1. The GC content of the type genome is 51.36 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Coninaria refulitio sp. nov.

Candidatus Coninaria refulitio (NL. fem. n. *refulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BACL27 sp009703975*. The type genome for the species is the GenBank assembly GCA_009700945.1. The GC content of the type genome is 47.32 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Coninella canacastra sp. nov.

Candidatus Coninella canacastra (NL. fem. n. *canacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HB2-32-21 sp002431545*. The type genome for the species is the GenBank assembly GCA_003497255.1. The GC content of the type genome is 55.77 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Coninella gen. nov.

Candidatus Coninella (NL. fem. n. *Coninella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HB2-32-21*. The type species for the genus is *Candidatus* Coninella canacastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coninella munimilega sp. nov.

Candidatus Coninella munimilega (NL. fem. n. *munimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HB2-32-21 sp003448675*. The type genome for the species is the GenBank assembly GCA_003448675.1. The GC content of the type genome is 54.91 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Coninella volunentia sp. nov.

Candidatus Coninella volunentia (NL. fem. n. *volunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HB2-32-21 sp003645535*. The type genome for the species is the GenBank assembly GCA_003646365.1. The GC content of the type genome is 48.5 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Coninia horomitrix sp. nov.

Candidatus Coninia horomitrix (NL. fem. n. *horomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBC034 sp902826835*. The type genome for the species is the GenBank assembly GCA_902826835.1. The GC content of the type genome is 64.18 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Coninia gen. nov.

Candidatus Coninia (NL. fem. n. *Coninia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBC034*. The type species for the genus is *Candidatus* Coninia horomitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobellaceae.

Description of *Candidatus* Coninida necopentia sp. nov.

Candidatus Coninida necopentia (NL. fem. n. *necopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QIAW01 sp003225655*. The type genome for the species is the GenBank assembly GCA_003225655.1. The GC content of the type genome is 56.26 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Coninida gen. nov.

Candidatus Coninida (NL. fem. n. *Coninida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QIAW01*. The type species for the genus is *Candidatus* Coninida necopentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QIAW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coninidaceae.

Description of *Candidatus* Coninidaceae fam. nov.

Candidatus Coninidaceae (NL. fem. n. *Coninidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QIAW01*. The type genus for the taxon is *Candidatus* Coninida .

According to GTDB R06-RS202, this family belongs to the order *Acidobacteriales*.

Description of *Candidatus* Coninosa mimogitoga sp. nov.

Candidatus Coninosa mimogitoga (NL. fem. n. *mimogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-39-17 sp001817425*. The type genome for the species is the GenBank assembly GCA_001817425.1. The GC content of the type genome is 38.98 % and the genome length is 1.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Coninosa gen. nov.

Candidatus Coninosa (NL. fem. n. *Coninosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-39-17*. The type species for the genus is *Candidatus* Coninosa mimogitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Coninula panifisca sp. nov.

Candidatus Coninula panifisca (NL. fem. n. *panifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2709665 sp002709665*. The type genome for the species is the GenBank assembly GCA_002346505.1. The GC content of the type genome is 53.07 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Coninula gen. nov.

Candidatus Coninula (NL. fem. n. *Coninula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2709665*. The type species for the genus is *Candidatus* Coninula panifisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2709665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coninulaceae.

Description of *Candidatus* Coninulaceae fam. nov.

Candidatus Coninulaceae (NL. fem. n. *Coninulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2709665.* The type genus for the taxon is *Candidatus* Coninula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Medimellales.

Description of *Candidatus* Conipana obsuredo sp. nov.

Candidatus Conipana obsuredo (NL. fem. n. *obsuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQX01 sp013203085*. The type genome for the species is the GenBank assembly GCA_013203085.1. The GC content of the type genome is 56.28 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Conipana gen. nov.

Candidatus Conipana (NL. fem. n. *Conipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQX01*. The type species for the genus is *Candidatus* Conipana obsuredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMQX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Conipanaceae.

Description of *Candidatus* Conipanaceae fam. nov.

Candidatus Conipanaceae (NL. fem. n. *Conipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQX01.* The type genus for the taxon is *Candidatus* Conipana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMQX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conipanales.

Description of *Candidatus* Conipanales ord. nov.

Candidatus Conipanales (NL. fem. n. *Conipanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQX01.* The type genus for the taxon is *Candidatus* Conipana .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABMQX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Conipanae.

Description of *Candidatus* Conipanae class. nov.

Candidatus Conipanae (NL. fem. n. *c__Conipanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQX01.* The type genus for the taxon is *Candidatus* Conipana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *JABMQX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Conipanota.

Description of *Candidatus* Conipanota phyl. nov.

Candidatus Conipanota (NL. fem. n. *Conipanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQX01.* The type genus for the taxon is *Candidatus* Conipana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Coniparia ininnimonas sp. nov.

Candidatus Coniparia ininnimonas (NL. fem. n. *ininnimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3002 sp002697725*. The type genome for the species is the GenBank assembly GCA_002697725.1. The GC content of the type genome is 51.63 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Coniparia gen. nov.

Candidatus Coniparia (NL. fem. n. *Coniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3002*. The type species for the genus is *Candidatus* Coniparia ininnimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipariaceae.

Description of *Candidatus* Conipariaceae fam. nov.

Candidatus Conipariaceae (NL. fem. n. *Conipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3002.* The type genus for the taxon is *Candidatus* Coniparia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Coniparia turibetta sp. nov.

Candidatus Coniparia turibetta (NL. fem. n. *turibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3002 sp002346425*. The type genome for the species is the GenBank assembly GCA_002346425.1. The GC content of the type genome is 52.38 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Conipella adcubastra sp. nov.

Candidatus Conipella adcubastra (NL. fem. n. *adcubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXIE01 sp012270525*. The type genome for the species is the GenBank assembly GCA_012270525.1. The GC content of the type genome is 61.9 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Conipella gen. nov.

Candidatus Conipella (NL. fem. n. *Conipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXIE01*. The type species for the genus is *Candidatus* Conipella adcubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXIE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipellaceae.

Description of *Candidatus* Conipellaceae fam. nov.

Candidatus Conipellaceae (NL. fem. n. *Conipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXIE01.* The type genus for the taxon is *Candidatus* Conipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicipellales.

Description of *Candidatus* Conipia cilotimonia sp. nov.

Candidatus Conipia cilotimonia (NL. fem. n. *cilotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707645 sp002693365*. The type genome for the species is the GenBank assembly GCA_002693365.1. The GC content of the type genome is 27.78 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Conipia gen. nov.

Candidatus Conipia (NL. fem. n. *Conipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002707645*. The type species for the genus is *Candidatus* Conipia cilotimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002707645*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipiaceae.

Description of *Candidatus* Conipiaceae fam. nov.

Candidatus Conipiaceae (NL. fem. n. *Conipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002707645.* The type genus for the taxon is *Candidatus* Conipia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Conipia inlecibra sp. nov.

Candidatus Conipia inlecibra (NL. fem. n. *inlecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707645 sp002704685*. The type genome for the species is the GenBank assembly GCA_002704685.1. The GC content of the type genome is 27.62 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Conipia irrevitura sp. nov.

Candidatus Conipia irrevitura (NL. fem. n. *irrevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707645 sp002707645*. The type genome for the species is the GenBank assembly GCA_002707645.1. The GC content of the type genome is 28.02 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Conipia seposimonas sp. nov.

Candidatus Conipia seposimonas (NL. fem. n. *seposimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707645 sp002705605*. The type genome for the species is the GenBank assembly GCA_002705605.1. The GC content of the type genome is 28.3 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Conipida remulivita sp. nov.

Candidatus Conipida remulivita (NL. fem. n. *remulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZJ141 sp011038965*. The type genome for the species is the GenBank assembly RS_GCF_011038965.1. The GC content of the type genome is 55.08 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Conipida gen. nov.

Candidatus Conipida (NL. fem. n. *Conipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZJ141*. The type species for the genus is *Candidatus* Conipida remulivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coniposa conifatio sp. nov.

Candidatus Coniposa conifatio (NL. fem. n. *conifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUPE01 sp903877935*. The type genome for the species is the GenBank assembly GCA_903897945.1. The GC content of the type genome is 53.13 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Coniposa gen. nov.

Candidatus Coniposa (NL. fem. n. *Coniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUPE01*. The type species for the genus is *Candidatus* Coniposa conifatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coniposa desurilenta sp. nov.

Candidatus Coniposa desurilenta (NL. fem. n. *desurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUPE01 sp903900975*. The type genome for the species is the GenBank assembly GCA_903900975.1. The GC content of the type genome is 54.75 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Coniposa fetificula sp. nov.

Candidatus Coniposa fetificula (NL. fem. n. *fetificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUPE01 sp009921785*. The type genome for the species is the GenBank assembly GCA_009921785.1. The GC content of the type genome is 52.85 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Coniposa semimibula sp. nov.

Candidatus Coniposa semimibula (NL. fem. n. *semimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUPE01 sp009920595*. The type genome for the species is the GenBank assembly GCA_009920595.1. The GC content of the type genome is 52.3 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Conipula cerofimonia sp. nov.

Candidatus Conipula cerofimonia (NL. fem. n. *cerofimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2400775 sp013151045*. The type genome for the species is the GenBank assembly GCA_013151045.1. The GC content of the type genome is 44.6 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Conipula gen. nov.

Candidatus Conipula (NL. fem. n. *Conipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2400775*. The type species for the genus is *Candidatus* Conipula cerofimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2400775*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conipulaceae.

Description of *Candidatus* Conipulaceae fam. nov.

Candidatus Conipulaceae (NL. fem. n. *Conipulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2400775.* The type genus for the taxon is *Candidatus* Conipula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2400775*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conipulales.

Description of *Candidatus* Conipulales ord. nov.

Candidatus Conipulales (NL. fem. n. *Conipulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2400775.* The type genus for the taxon is *Candidatus* Conipula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Conipula direcago sp. nov.

Candidatus Conipula direcago (NL. fem. n. *direcago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2400775 sp002400775*. The type genome for the species is the GenBank assembly GCA_002400775.1. The GC content of the type genome is 46.59 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Conopana brabrigena sp. nov.

Candidatus Conopana brabrigena (NL. fem. n. *brabrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003557805*. The type genome for the species is the GenBank assembly GCA_003557805.1. The GC content of the type genome is 46.76 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Conopana gen. nov.

Candidatus Conopana (NL. fem. n. *Conopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUPG01*. The type species for the genus is *Candidatus* Conopana brabrigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Conopana calipugo sp. nov.

Candidatus Conopana calipugo (NL. fem. n. *calipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003567205*. The type genome for the species is the GenBank assembly GCA_003567205.1. The GC content of the type genome is 47.73 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Conopana caravitudo sp. nov.

Candidatus Conopana caravitudo (NL. fem. n. *caravitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007124575*. The type genome for the species is the

GenBank assembly GCA_007118715.1. The GC content of the type genome is 47.78 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Conopana citivedo sp. nov.

Candidatus Conopana citivedo (NL. fem. n. *citivedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003553005*. The type genome for the species is the GenBank assembly GCA_003553005.1. The GC content of the type genome is 52.01 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Conopana dapifitura sp. nov.

Candidatus Conopana dapifitura (NL. fem. n. *dapifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007134525*. The type genome for the species is the GenBank assembly GCA_007134525.1. The GC content of the type genome is 46.23 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Conopana decinugo sp. nov.

Candidatus Conopana decinugo (NL. fem. n. *decinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003556325*. The type genome for the species is the GenBank assembly GCA_003556325.1. The GC content of the type genome is 49.32 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Conopana defarentia sp. nov.

Candidatus Conopana defarentia (NL. fem. n. *defarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003557765*. The type genome for the species is the GenBank assembly GCA_003557765.1. The GC content of the type genome is 48.45 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Conopana desupessa sp. nov.

Candidatus Conopana desupessa (NL. fem. n. *desupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007125585*. The type genome for the species is the GenBank assembly GCA_007123355.1. The GC content of the type genome is 50.48 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Conopana dicibessa sp. nov.

Candidatus Conopana dicibessa (NL. fem. n. *dicibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003557385*. The type genome for the species is the GenBank assembly GCA_003566175.1. The GC content of the type genome is 49.4 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Conopana divulivita sp. nov.

Candidatus Conopana divulivita (NL. fem. n. *divulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007120675*. The type genome for the species is the GenBank assembly GCA_007131985.1. The GC content of the type genome is 55.67 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Conopana feditítudo sp. nov.

Candidatus Conopana feditítudo (NL. fem. n. *feditítudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007122505*. The type genome for the species is the GenBank assembly GCA_007122505.1. The GC content of the type genome is 45.73 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Conopana genocitas sp. nov.

Candidatus Conopana genocitas (NL. fem. n. *genocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003552075*. The type genome for the species is the GenBank assembly GCA_003552075.1. The GC content of the type genome is 50.12 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Conopana immurivita sp. nov.

Candidatus Conopana immurivita (NL. fem. n. *immurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp007695305*. The type genome for the species is the GenBank assembly GCA_007695305.1. The GC content of the type genome is 46.24 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Conopana viginimonia sp. nov.

Candidatus Conopana viginimonia (NL. fem. n. *viginimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPG01 sp003559735*. The type genome for the species is the GenBank assembly GCA_003559735.1. The GC content of the type genome is 47.9 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Conopella derecibula sp. nov.

Candidatus Conopella derecibula (NL. fem. n. *derecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-7b sp001788095*. The type genome for the species is the GenBank assembly GCA_001788095.1. The GC content of the type genome is 37.6 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Conopella gen. nov.

Candidatus Conopella (NL. fem. n. *Conopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-37-7b*. The type species for the genus is *Candidatus*

Conopella derecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Conopida maxumigena sp. nov.

Candidatus Conopida maxumigena (NL. fem. n. *maxumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8363 sp013349385*. The type genome for the species is the GenBank assembly GCA_013349385.1. The GC content of the type genome is 52.41 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Conopida gen. nov.

Candidatus Conopida (NL. fem. n. *Conopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8363*. The type species for the genus is *Candidatus* Conopida maxumigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8363*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conopidaceae.

Description of *Candidatus* Conopidaceae fam. nov.

Candidatus Conopidaceae (NL. fem. n. *Conopidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8363.* The type genus for the taxon is *Candidatus* Conopida .

According to GTDB R06-RS202, this family belongs to the order *Magnetococcales*.

Description of *Candidatus* Conopida papilatica sp. nov.

Candidatus Conopida papilatica (NL. fem. n. *papilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8363 sp002753615*. The type genome for the species is the GenBank assembly GCA_002753615.1. The GC content of the type genome is 51.85 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Conopida peropastra sp. nov.

Candidatus Conopida peropastra (NL. fem. n. *peropastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8363 sp002753735*. The type genome for the species is the GenBank assembly GCA_002753215.1. The GC content of the type genome is 54.3 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Conopida sitelentia sp. nov.

Candidatus Conopida sitelentia (NL. fem. n. *sitelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8363 sp002753515*. The type genome for the species is the GenBank assembly GCA_002753595.1. The GC content of the type genome is 53.21 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Conopula lucifimonas sp. nov.

Candidatus Conopula lucifimonas (NL. fem. n. *lucifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGVZ01 sp010029825*. The type genome for the species is the GenBank assembly GCA_010029825.1. The GC content of the type genome is 58.38 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Conopula gen. nov.

Candidatus Conopula (NL. fem. n. *Conopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGVZ01*. The type species for the genus is *Candidatus* Conopula lucifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGVZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Conopulaceae.

Description of *Candidatus* Conopulaceae fam. nov.

Candidatus Conopulaceae (NL. fem. n. *Conopulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGVZ01.* The type genus for the taxon is *Candidatus* Conopula .

According to GTDB R06-RS202, this family belongs to the order *Oligoflexales*.

Description of *Candidatus* Contendobacter apsocitas sp. nov.

Candidatus Contendobacter apsocitas (NL. fem. n. *apsocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Contendobacter sp012031845*. The type genome for the species is the GenBank assembly GCA_012031845.1. The GC content of the type genome is 57.21 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Contendobacter immobibra sp. nov.

Candidatus Contendobacter immobibra (NL. fem. n. *immobibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Contendobacter sp008933795*. The type genome for the species is the GenBank assembly GCA_008933795.1. The GC content of the type genome is 62.73 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Contendobacter labecilenta sp. nov.

Candidatus Contendobacter labecilenta (NL. fem. n. *labecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Contendobacter sp002352185*. The type genome for the species is the GenBank assembly GCA_002352185.1. The GC content of the type genome is 60.6 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Conubana socagitudo sp. nov.

Candidatus Conubana socagitudo (NL. fem. n. *socagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXPW01 sp009839325*. The type genome for the species is the GenBank assembly GCA_009835595.1. The GC content of the type genome is 65.62 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Conubana gen. nov.

Candidatus Conubana (NL. fem. n. *Conubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXPW01*. The type species for the genus is *Candidatus* Conubana socagitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXPW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conubanaceae.

Description of *Candidatus* Conubanaceae fam. nov.

Candidatus Conubanaceae (NL. fem. n. *Conubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXPW01.* The type genus for the taxon is *Candidatus* Conubana .

According to the original version of GTDB R06-RS202, this family belongs to the order *VXPW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Conubanales.

Description of *Candidatus* Conubanales ord. nov.

Candidatus Conubanales (NL. fem. n. *Conubanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXPW01.* The type genus for the taxon is *Candidatus* Conubana .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Conubaria tetenimonas sp. nov.

Candidatus Conubaria tetenimonas (NL. fem. n. *tetenimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-63 sp014384805*. The type genome for the species is the GenBank assembly GCA_014384805.1. The GC content of the type genome is 53.27 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Conubaria gen. nov.

Candidatus Conubaria (NL. fem. n. *Conubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-63*. The type species for the genus is *Candidatus* Conubaria tetenimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conubella proscedo sp. nov.

Candidatus Conubella proscedo (NL. fem. n. *proscedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1752 sp902783535*. The type genome for the species is the GenBank assembly GCA_902783535.1. The GC content of the type genome is 56.36 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Conubella gen. nov.

Candidatus Conubella (NL. fem. n. *Conubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1752*. The type species for the genus is *Candidatus* Conubella proscedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Conubella utricivita sp. nov.

Candidatus Conubella utricivita (NL. fem. n. *utricivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1752 sp002314835*. The type genome for the species is the GenBank assembly GCA_002314835.1. The GC content of the type genome is 49.89 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Conubella vacilousia sp. nov.

Candidatus Conubella vacilousia (NL. fem. n. *vacilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1752 sp900554405*. The type genome for the species is the GenBank assembly GCA_900554405.1. The GC content of the type genome is 53.89 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Conubida peradentia sp. nov.

Candidatus Conubida peradentia (NL. fem. n. *peradentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-45-10 sp001783035*. The type genome for the species is the GenBank assembly GCA_001783035.1. The GC content of the type genome is 44.61 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Conubida gen. nov.

Candidatus Conubida (NL. fem. n. *Conubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-45-10*. The type species for the genus is *Candidatus* Conubida peradentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Conubosa bicipibra sp. nov.

Candidatus Conubosa bicipibra (NL. fem. n. *bicipibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp000318095*. The type genome for the species is the GenBank assembly RS_GCF_000318095.2. The GC content of the type genome is 46.13 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity".

Description of *Candidatus* Conubosa gen. nov.

Candidatus Conubosa (NL. fem. n. *Conubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F0040*. The type species for the genus is *Candidatus* Conubosa bicipibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Conubosa capilessa sp. nov.

Candidatus Conubosa capilessa (NL. fem. n. *capilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp900095835*. The type genome for the species is the GenBank assembly RS_GCF_900095835.1. The GC content of the type genome is 47.35 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Conubosa ceracitas sp. nov.

Candidatus Conubosa ceracitas (NL. fem. n. *ceracitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp002314875*. The type genome for the species is the GenBank assembly GCA_002314875.1. The GC content of the type genome is 46.88 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Conubosa cuferetta sp. nov.

Candidatus Conubosa cuferetta (NL. fem. n. *cuferetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp003639005*. The type genome for the species is the GenBank assembly GCA_003639005.1. The GC content of the type genome is 54.95 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Conubosa inarditrix sp. nov.

Candidatus Conubosa inarditrix (NL. fem. n. *inarditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp003859795*. The type genome for the species is the GenBank assembly RS_GCF_003859795.1. The GC content of the type genome is 49.75 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Conubosa solivugo sp. nov.

Candidatus Conubosa solivugo (NL. fem. n. *solivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0040 sp004555055*. The type genome for the species is the GenBank assembly GCA_004555055.1. The GC content of the type genome is 54.22 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Conubula benifimonas sp. nov.

Candidatus Conubula benifimonas (NL. fem. n. *benifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp001821395*. The type genome for the species is the GenBank assembly GCA_001821395.1. The GC content of the type genome is 49.16 % and the genome length is 1.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Conubula gen. nov.

Candidatus Conubula (NL. fem. n. *Conubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6899*. The type species for the genus is *Candidatus* Conubula

benifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6899*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conubulaceae.

Description of *Candidatus* Conubulaceae fam. nov.

Candidatus Conubulaceae (NL. fem. n. *Conubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6899.* The type genus for the taxon is *Candidatus* Conubula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Conubula lupanilenta sp. nov.

Candidatus Conubula lupanilenta (NL. fem. n. *lupanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp002451235*. The type genome for the species is the GenBank assembly GCA_002451235.1. The GC content of the type genome is 53.91 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Conubula nimirigena sp. nov.

Candidatus Conubula nimirigena (NL. fem. n. *nimirigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp001819095*. The type genome for the species is the GenBank assembly GCA_001819095.1. The GC content of the type genome is 54.32 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Conubula paracastra sp. nov.

Candidatus Conubula paracastra (NL. fem. n. *paracastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp001821435*. The type genome for the species is the GenBank assembly GCA_001821385.1. The GC content of the type genome is 50.2 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Conubula serotastra sp. nov.

Candidatus Conubula serotastra (NL. fem. n. *serotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp002429425*. The type genome for the species is the GenBank assembly GCA_002429425.1. The GC content of the type genome is 42.59 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Conubula tenilatio sp. nov.

Candidatus Conubula tenilatio (NL. fem. n. *tenilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6899 sp000999395*. The type genome for the species is the GenBank assembly GCA_000999395.1. The GC content of the type genome is 46.42 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Coprobacter desupibula sp. nov.

Candidatus Coprobacter desupibula (NL. fem. n. *desupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprobacter sp900545915*. The type genome for the species is the GenBank assembly GCA_900545915.1. The GC content of the type genome is 38.33 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Coprobacter lenimitoga sp. nov.

Candidatus Coprobacter lenimitoga (NL. fem. n. *lenimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprobacter sp900555475*. The type genome for the species is the GenBank assembly GCA_900555475.1. The GC content of the type genome is 37.68 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Coprococcus alsidastra sp. nov.

Candidatus Coprococcus alsidastra (NL. fem. n. *alsidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp002437435*. The type genome for the species is the GenBank assembly GCA_002437435.1. The GC content of the type genome is 40.95 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Coprococcus arcebicella sp. nov.

Candidatus Coprococcus arcebicella (NL. fem. n. *arcebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900548315*. The type genome for the species is the GenBank assembly GCA_900548315.1. The GC content of the type genome is 43.26 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Coprococcus casigicula sp. nov.

Candidatus Coprococcus casigicula (NL. fem. n. *casigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900761435*. The type genome for the species is the GenBank assembly GCA_900761435.1. The GC content of the type genome is 41.01 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Coprococcus cocoditia sp. nov.

Candidatus Coprococcus cocoditia (NL. fem. n. *cocoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp000433075*. The type genome for the species is the GenBank assembly GCA_000433075.1. The GC content of the type genome is 41.93 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Coprococcus favonigena sp. nov.

Candidatus Coprococcus favonigena (NL. fem. n. *favonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp000154245*. The type genome for the species is the GenBank assembly RS_GCF_009874105.1. The GC content of the type genome is 41.35 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Coprococcus lenocimonas sp. nov.

Candidatus Coprococcus lenocimonas (NL. fem. n. *lenocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900066115*. The type genome for the species is the GenBank assembly RS_GCF_014287735.1. The GC content of the type genome is 41.24 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Coprococcus ludimago sp. nov.

Candidatus Coprococcus ludimago (NL. fem. n. *ludimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900548215*. The type genome for the species is the GenBank assembly GCA_900752035.1. The GC content of the type genome is 42.77 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Coprococcus monocitrix sp. nov.

Candidatus Coprococcus monocitrix (NL. fem. n. *monocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900767685*. The type genome for the species is the GenBank assembly GCA_900767685.1. The GC content of the type genome is 42.98 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Coprococcus utputicella sp. nov.

Candidatus Coprococcus utputicella (NL. fem. n. *utputicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus sp900557435*. The type genome for the species is the GenBank assembly GCA_900557435.1. The GC content of the type genome is 42.95 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Coprococcus rorifessa sp. nov.

Candidatus Coprococcus rorifessa (NL. fem. n. *rorifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprococcus_A sp900548825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900548825.1. The GC content of the type genome is 43.74 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Coprothermobacter accumimonas sp. nov.

Candidatus Coprothermobacter accumimonas (NL. fem. n. *accumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprothermobacter sp003476705*. The type genome for the species is the GenBank assembly GCA_003476705.1. The GC content of the type genome is 44.53 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Coprothermobacter errabilenta sp. nov.

Candidatus Coprothermobacter errabilenta (NL. fem. n. *errabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coprothermobacter sp012842545*. The type genome for the species is the GenBank assembly GCA_012842545.1. The GC content of the type genome is 45.49 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Coraliomargarita vavasigena sp. nov.

Candidatus Coraliomargarita vavasigena (NL. fem. n. *vavasigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coraliomargarita sp002469895*. The type genome for the species is the GenBank assembly GCA_002338405.1. The GC content of the type genome is 51.94 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Corallococcus assibax sp. nov.

Candidatus Corallococcus assibax (NL. fem. n. *assibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corallococcus sp003611675*. The type genome for the species is the GenBank assembly RS_GCF_003611675.1. The GC content of the type genome is 70.15 % and the genome length is 10.5 Mbp.

Description of *Candidatus* Corallococcus hexamugo sp. nov.

Candidatus Corallococcus hexamugo (NL. fem. n. *hexamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corallococcus sp003600865*. The type genome for the species is the GenBank assembly RS_GCF_003600865.1. The GC content of the type genome is 69.51 % and the genome length is 9.07 Mbp.

Description of *Candidatus* Corallococcus lenunilenta sp. nov.

Candidatus Corallococcus lenunilenta (NL. fem. n. *lenunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corallococcus sp004173515*. The type genome for the species is the GenBank assembly GCA_004173515.1. The GC content of the type genome is 69.88 % and the genome length is 10.2 Mbp.

Description of *Candidatus* Corallococcus necubastra sp. nov.

Candidatus Corallococcus necubastra (NL. fem. n. *necubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Corallococcus sp009909145*. The type genome for the species is the GenBank assembly RS_GCF_009909145.1. The GC content of the type genome is 70.69 % and the genome length is 9.23 Mbp.

Description of *Candidatus* Corallococcus vinacastra sp. nov.

Candidatus Corallococcus vinacastra (NL. fem. n. *vinacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corallococcus sp003612115*. The type genome for the species is the GenBank assembly RS_GCF_003612115.1. The GC content of the type genome is 69.91 % and the genome length is 10.23 Mbp.

Description of *Candidatus* Corocana futatitica sp. nov.

Candidatus Corocana futatitica (NL. fem. n. *futatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS416 sp900542005*. The type genome for the species is the GenBank assembly GCA_900542005.1. The GC content of the type genome is 60.27 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Corocana gen. nov.

Candidatus Corocana (NL. fem. n. *Corocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS416*. The type species for the genus is *Candidatus* Corocana futatitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocanaceae.

Description of *Candidatus* Corocanaceae fam. nov.

Candidatus Corocanaceae (NL. fem. n. *Corocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS416.* The type genus for the taxon is *Candidatus* Corocana .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Corocaria laxiticula sp. nov.

Candidatus Corocaria laxiticula (NL. fem. n. *laxiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM004 sp002868955*. The type genome for the species is the GenBank assembly GCA_002868955.1. The GC content of the type genome is 47.45 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Corocaria gen. nov.

Candidatus Corocaria (NL. fem. n. *Corocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM004*. The type species for the genus is *Candidatus* Corocaria laxiticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM004*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocariaceae.

Description of *Candidatus* Corocariaceae fam. nov.

Candidatus Corocariaceae (NL. fem. n. *Corocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM004.* The type genus for the taxon is *Candidatus* Corocaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfobulbales*.

Description of *Candidatus* Corocaria monogibra sp. nov.

Candidatus Corocaria monogibra (NL. fem. n. *monogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM004 sp012974315*. The type genome for the species is the GenBank assembly GCA_013139195.1. The GC content of the type genome is 45.08 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Corocella necubedo sp. nov.

Candidatus Corocella necubedo (NL. fem. n. *necubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1201 sp900319565*. The type genome for the species is the GenBank assembly GCA_902759835.1. The GC content of the type genome is 51.59 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Corocella gen. nov.

Candidatus Corocella (NL. fem. n. *Corocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1201*. The type species for the genus is *Candidatus* Corocella necubedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Corocella uberribra sp. nov.

Candidatus Corocella uberribra (NL. fem. n. *uberribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1201 sp002309675*. The type genome for the species is the GenBank assembly GCA_002309675.1. The GC content of the type genome is 51.48 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Corocia advorentia sp. nov.

Candidatus Corocia advorentia (NL. fem. n. *advorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGGB01 sp007117235*. The type genome for the species is the GenBank assembly GCA_007117235.1. The GC content of the type genome is 41.47 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Corocia gen. nov.

Candidatus Corocia (NL. fem. n. *Corocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QGGB01*. The type species for the genus is *Candidatus* Corocia advorentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Corocia chernedo sp. nov.

Candidatus Corocia chernedo (NL. fem. n. *chernedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGGB01 sp007118525*. The type genome for the species is the GenBank assembly GCA_007118525.1. The GC content of the type genome is 44.39 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Corocia demigousia sp. nov.

Candidatus Corocia demigousia (NL. fem. n. *demigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGGB01 sp007693295*. The type genome for the species is the GenBank assembly GCA_007693295.1. The GC content of the type genome is 45.24 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Corocia denavetta sp. nov.

Candidatus Corocia denavetta (NL. fem. n. *denavetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGGB01 sp003150675*. The type genome for the species is the GenBank assembly RS_GCF_003150675.1. The GC content of the type genome is 47.72 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Corocia lucubitas sp. nov.

Candidatus Corocia lucubitas (NL. fem. n. *lucubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGGB01 sp003561515*. The type genome for the species is the

GenBank assembly GCA_003564615.1. The GC content of the type genome is 47.49 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Corocida categitura sp. nov.

Candidatus Corocida categitura (NL. fem. n. *categitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-41-14 sp002788755*. The type genome for the species is the GenBank assembly GCA_002788755.1. The GC content of the type genome is 41.02 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Corocida gen. nov.

Candidatus Corocida (NL. fem. n. *Corocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-41-14*. The type species for the genus is *Candidatus* Corocida categitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-41-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocidaceae.

Description of *Candidatus* Corocidaceae fam. nov.

Candidatus Corocidaceae (NL. fem. n. *Corocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-41-14.* The type genus for the taxon is *Candidatus* Corocida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Corocosa cnesticella sp. nov.

Candidatus Corocosa cnesticella (NL. fem. n. *cnesticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-161 sp004376205*. The type genome for the species is the GenBank assembly GCA_004376205.1. The GC content of the type genome is 54.37 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Corocosa gen. nov.

Candidatus Corocosa (NL. fem. n. *Corocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-161*. The type species for the genus is *Candidatus* Corocosa cnesticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocosaceae.

Description of *Candidatus* Corocosaceae fam. nov.

Candidatus Corocosaceae (NL. fem. n. *Corocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-161.* The type genus for the taxon is *Candidatus* Corocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Corocosales.

Description of *Candidatus* Corocosales ord. nov.

Candidatus Corocosales (NL. fem. n. *Corocosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-161.* The type genus for the taxon is *Candidatus* Corocosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Corocosa indiritica sp. nov.

Candidatus Corocosa indiritica (NL. fem. n. *indiritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-161 sp003229915*. The type genome for the species is the

GenBank assembly GCA_003229915.1. The GC content of the type genome is 54.07 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Corocula turifimonia sp. nov.

Candidatus Corocula turifimonia (NL. fem. n. *turifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED88 sp002171515*. The type genome for the species is the GenBank assembly GCA_002692125.1. The GC content of the type genome is 58.29 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Corocula gen. nov.

Candidatus Corocula (NL. fem. n. *Corocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED88*. The type species for the genus is *Candidatus* Corocula turifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4427*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapiaceae.

Description of *Candidatus* Corticibacterium apoplimonas sp. nov.

Candidatus Corticibacterium apoplimonas (NL. fem. n. *apoplimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corticibacterium sp002316345*. The type genome for the species is the GenBank assembly GCA_002316345.1. The GC content of the type genome is 61.26 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Corynebacterium absoritia sp. nov.

Candidatus Corynebacterium absoritia (NL. fem. n. *absoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp009734425*. The type genome for the species is the GenBank assembly RS_GCF_009734425.1. The GC content of the type genome is 62.66

% and the genome length is 3.22 Mbp.

Description of *Candidatus* Corynebacterium adcogago sp. nov.

Candidatus Corynebacterium adcogago (NL. fem. n. *adcogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001812805*. The type genome for the species is the GenBank assembly RS_GCF_001812805.1. The GC content of the type genome is 59.8 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Corynebacterium adpinilega sp. nov.

Candidatus Corynebacterium adpinilega (NL. fem. n. *adpinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp900618065*. The type genome for the species is the GenBank assembly GCA_900618065.1. The GC content of the type genome is 62.4 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Corynebacterium ammigousia sp. nov.

Candidatus Corynebacterium ammigousia (NL. fem. n. *ammigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp003955685*. The type genome for the species is the GenBank assembly RS_GCF_003955685.1. The GC content of the type genome is 66.37 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Corynebacterium annicilenta sp. nov.

Candidatus Corynebacterium annicilenta (NL. fem. n. *annicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp009734385*. The type genome for the species is the GenBank assembly RS_GCF_009734385.1. The GC content of the type genome is 58.55 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Corynebacterium aprugigena sp. nov.

Candidatus Corynebacterium aprugigena (NL. fem. n. *aprugigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp012837295*. The type genome for the species is the GenBank assembly GCA_012837295.1. The GC content of the type genome is 69.79 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Corynebacterium artilago sp. nov.

Candidatus Corynebacterium artilago (NL. fem. n. *artilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp009026825*. The type genome for the species is the GenBank assembly RS_GCF_009026825.1. The GC content of the type genome is 59.95 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Corynebacterium astipitas sp. nov.

Candidatus Corynebacterium astipitas (NL. fem. n. *astipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001815935*. The type genome for the species is the GenBank assembly RS_GCF_001815935.1. The GC content of the type genome is 65.41 % and the genome length is 2.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Urinary Tract".

Description of *Candidatus* Corynebacterium cacalimonas sp. nov.

Candidatus Corynebacterium cacalimonas (NL. fem. n. *cacalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001807485*. The type genome for the species is the GenBank assembly RS_GCF_000738355.1. The GC content of the type genome is 62.98 % and the genome length is 2.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vertebral disk space".

Description of *Candidatus* Corynebacterium canacousia sp. nov.

Candidatus Corynebacterium canacousia (NL. fem. n. *canacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp009734405*. The type genome for the species is the GenBank assembly RS_GCF_009734405.1. The GC content of the type genome is 66.3 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Corynebacterium catapousia sp. nov.

Candidatus Corynebacterium catapousia (NL. fem. n. *catapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001815985*. The type genome for the species is the GenBank assembly RS_GCF_008180085.1. The GC content of the type genome is 65.06 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Corynebacterium catecitrix sp. nov.

Candidatus Corynebacterium catecitrix (NL. fem. n. *catecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014490555*. The type genome for the species is the GenBank assembly RS_GCF_013051085.1. The GC content of the type genome is 64.53 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Corynebacterium cisalitia sp. nov.

Candidatus Corynebacterium cisalitia (NL. fem. n. *cisalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp003065405*. The type genome for the species is the GenBank assembly RS_GCF_003065405.1. The GC content of the type genome is 64.93 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Corynebacterium cisalitudo sp. nov.

Candidatus Corynebacterium cisalitudo (NL. fem. n. *cisalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Corynebacterium sp001767255*. The type genome for the species is the GenBank assembly RS_GCF_001807505.1. The GC content of the type genome is 60.73 % and the genome length is 2.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Urinary Tract".

Description of *Candidatus* Corynebacterium cohorilega sp. nov.

Candidatus Corynebacterium cohorilega (NL. fem. n. *cohorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp003070865*. The type genome for the species is the GenBank assembly RS_GCF_003113375.1. The GC content of the type genome is 66.22 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Corynebacterium colapisca sp. nov.

Candidatus Corynebacterium colapisca (NL. fem. n. *colapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001807265*. The type genome for the species is the GenBank assembly RS_GCF_001838175.1. The GC content of the type genome is 65.38 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine cvs".

Description of *Candidatus* Corynebacterium culigisca sp. nov.

Candidatus Corynebacterium culigisca (NL. fem. n. *culigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp000478175*. The type genome for the species is the GenBank assembly RS_GCF_000478075.1. The GC content of the type genome is 59.02 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Corynebacterium curabigena sp. nov.

Candidatus Corynebacterium curabigena (NL. fem. n. *curabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001831515*. The type genome for the species is the GenBank assembly RS_GCF_001814825.1. The GC content of the type genome is 64.38

% and the genome length is 2.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Corynebacterium debucicella sp. nov.

Candidatus Corynebacterium debucicella (NL. fem. n. *debucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014262665*. The type genome for the species is the GenBank assembly RS_GCF_014235805.1. The GC content of the type genome is 55.21 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Corynebacterium decenitia sp. nov.

Candidatus Corynebacterium decenitia (NL. fem. n. *decenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001806875*. The type genome for the species is the GenBank assembly RS_GCF_001806875.1. The GC content of the type genome is 60.06 % and the genome length is 2.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Urinary Tract".

Description of *Candidatus* Corynebacterium delecivita sp. nov.

Candidatus Corynebacterium delecivita (NL. fem. n. *delecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014490595*. The type genome for the species is the GenBank assembly RS_GCF_013601105.1. The GC content of the type genome is 64.73 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Corynebacterium denorago sp. nov.

Candidatus Corynebacterium denorago (NL. fem. n. *denorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp007904105*. The type genome for the species is the GenBank assembly RS_GCF_007904105.1. The GC content of the type genome is 47.55 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Corynebacterium dibapivita sp. nov.

Candidatus Corynebacterium dibapivita (NL. fem. n. *dibapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp002967075*. The type genome for the species is the GenBank assembly RS_GCF_002967075.1. The GC content of the type genome is 54.89 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Corynebacterium ensicitio sp. nov.

Candidatus Corynebacterium ensicitio (NL. fem. n. *ensicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001942345*. The type genome for the species is the GenBank assembly RS_GCF_001942345.1. The GC content of the type genome is 65.23 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Corynebacterium excocitio sp. nov.

Candidatus Corynebacterium excocitio (NL. fem. n. *excocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001875665*. The type genome for the species is the GenBank assembly RS_GCF_001875665.1. The GC content of the type genome is 60.14 % and the genome length is 2.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Corynebacterium exorcisca sp. nov.

Candidatus Corynebacterium exorcisca (NL. fem. n. *exorcisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp902782855*. The type genome for the species is the GenBank assembly GCA_902782855.1. The GC content of the type genome is 68.22 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Corynebacterium foricatio sp. nov.

Candidatus Corynebacterium foricatio (NL. fem. n. *foricatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp013978595*. The type genome for the species is the GenBank assembly RS_GCF_013978595.1. The GC content of the type genome is 65.28 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Corynebacterium fumacitudo sp. nov.

Candidatus Corynebacterium fumacitudo (NL. fem. n. *fumacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014490575*. The type genome for the species is the GenBank assembly RS_GCF_008830655.1. The GC content of the type genome is 61.27 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Corynebacterium gasomibula sp. nov.

Candidatus Corynebacterium gasomibula (NL. fem. n. *gasomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014117265*. The type genome for the species is the GenBank assembly RS_GCF_014117265.1. The GC content of the type genome is 58.81 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Corynebacterium hemititura sp. nov.

Candidatus Corynebacterium hemititura (NL. fem. n. *hemititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp002994655*. The type genome for the species is the GenBank assembly RS_GCF_002994655.1. The GC content of the type genome is 67.24 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Corynebacterium humecax sp. nov.

Candidatus Corynebacterium humecax (NL. fem. n. *humecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014267345*. The type genome for the species is the GenBank assembly RS_GCF_014267345.1. The GC content of the type genome is 66.0 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Corynebacterium lucubitura sp. nov.

Candidatus Corynebacterium lucubitura (NL. fem. n. *lucubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014522205*. The type genome for the species is the GenBank assembly RS_GCF_014522205.1. The GC content of the type genome is 52.55 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Corynebacterium lugubetta sp. nov.

Candidatus Corynebacterium lugubetta (NL. fem. n. *lugubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp900539985*. The type genome for the species is the GenBank assembly GCA_900539985.1. The GC content of the type genome is 60.02 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Corynebacterium meliletta sp. nov.

Candidatus Corynebacterium meliletta (NL. fem. n. *meliletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp008930665*. The type genome for the species is the GenBank assembly RS_GCF_008930855.1. The GC content of the type genome is 62.88 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Corynebacterium milipitudo sp. nov.

Candidatus Corynebacterium milipitudo (NL. fem. n. *milipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp014217255*. The type genome for the species is the GenBank assembly RS_GCF_014217255.1. The GC content of the type genome is 62.44 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Corynebacterium modifilenta sp. nov.

Candidatus Corynebacterium modifilenta (NL. fem. n. *modifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001807205*. The type genome for the species is the GenBank assembly RS_GCF_001807205.1. The GC content of the type genome is 60.64 % and the genome length is 2.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Urinary Tract".

Description of *Candidatus* Corynebacterium monacatio sp. nov.

Candidatus Corynebacterium monacatio (NL. fem. n. *monacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp002363255*. The type genome for the species is the GenBank assembly GCA_002363255.1. The GC content of the type genome is 65.98 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Corynebacterium nidifitia sp. nov.

Candidatus Corynebacterium nidifitia (NL. fem. n. *nidifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp003716585*. The type genome for the species is the GenBank assembly RS_GCF_003716585.1. The GC content of the type genome is 57.05 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Corynebacterium nocenisca sp. nov.

Candidatus Corynebacterium nocenisca (NL. fem. n. *nocenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001836165*. The type genome for the species is the GenBank assembly RS_GCF_001808885.1. The GC content of the type genome is 60.85 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Corynebacterium oblanugo sp. nov.

Candidatus Corynebacterium oblanugo (NL. fem. n. *oblanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp012838985*. The type genome for the species is the GenBank assembly GCA_012838985.1. The GC content of the type genome is 68.71 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Corynebacterium ornitilega sp. nov.

Candidatus Corynebacterium ornitilega (NL. fem. n. *ornitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp902373425*. The type genome for the species is the GenBank assembly GCA_902373425.1. The GC content of the type genome is 56.15 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Corynebacterium panopastra sp. nov.

Candidatus Corynebacterium panopastra (NL. fem. n. *panopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp011038735*. The type genome for the species is the GenBank assembly RS_GCF_011038655.1. The GC content of the type genome is 61.59 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Corynebacterium redacisca sp. nov.

Candidatus Corynebacterium redacisca (NL. fem. n. *redacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001764565*. The type genome for the species is the GenBank assembly RS_GCF_001764565.1. The GC content of the type genome is 61.95 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Corynebacterium saburimonia sp. nov.

Candidatus Corynebacterium saburimonia (NL. fem. n. *saburimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp001875725*. The type genome for the species is the GenBank assembly RS_GCF_001875725.1. The GC content of the type genome is 60.63 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Corynebacterium sifunibula sp. nov.

Candidatus Corynebacterium sifunibula (NL. fem. n. *sifunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp002339505*. The type genome for the species is the GenBank assembly GCA_002339505.1. The GC content of the type genome is 68.26 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Corynebacterium siticicula sp. nov.

Candidatus Corynebacterium siticicula (NL. fem. n. *siticicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp012838715*. The type genome for the species is the GenBank assembly GCA_012838715.1. The GC content of the type genome is 69.96 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Corynebacterium susicetta sp. nov.

Candidatus Corynebacterium susicetta (NL. fem. n. *susicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Corynebacterium sp011038645*. The type genome for the species is the GenBank assembly RS_GCF_011038635.1. The GC content of the type genome is 64.79 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cosidana ficedimonas sp. nov.

Candidatus Cosidana ficedimonas (NL. fem. n. *ficedimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13615 sp902790905*. The type genome for the species is the

GenBank assembly GCA_902787875.1. The GC content of the type genome is 57.28 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Cosidana gen. nov.

Candidatus Cosidana (NL. fem. n. *Cosidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13615*. The type species for the genus is *Candidatus* Cosidana ficedimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cosidaria exheditoga sp. nov.

Candidatus Cosidaria exheditoga (NL. fem. n. *exheditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZP01 sp007127275*. The type genome for the species is the GenBank assembly GCA_007127275.1. The GC content of the type genome is 65.12 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Cosidaria gen. nov.

Candidatus Cosidaria (NL. fem. n. *Cosidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZP01*. The type species for the genus is *Candidatus* Cosidaria exheditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKZP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosidariaceae.

Description of *Candidatus* Cosidariaceae fam. nov.

Candidatus Cosidariaceae (NL. fem. n. *Cosidariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKZP01.* The type genus for the taxon is *Candidatus* Cosidaria .

According to the original version of GTDB R06-RS202, this family belongs to the order

SKZP01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cosidariales.

Description of *Candidatus* Cosidariales ord. nov.

Candidatus Cosidariales (NL. fem. n. *Cosidariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKZP01*. The type genus for the taxon is *Candidatus* Cosidaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8742*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Pavicidae.

Description of *Candidatus* Cosidella xeramedo sp. nov.

Candidatus Cosidella xeramedo (NL. fem. n. *xeramedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *02-FULL-45-11b sp001817615*. The type genome for the species is the GenBank assembly GCA_001817465.1. The GC content of the type genome is 44.82 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cosidella gen. nov.

Candidatus Cosidella (NL. fem. n. *Cosidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *02-FULL-45-11b*. The type species for the genus is *Candidatus* Cosidella xeramedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Cosidia dinupousia sp. nov.

Candidatus Cosidia dinupousia (NL. fem. n. *dinupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-47-13 sp002789675*. The type genome for the species is the GenBank assembly GCA_002789675.1. The GC content of the type genome is 46.69 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Cosidia gen. nov.

Candidatus Cosidia (NL. fem. n. *Cosidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-47-13*. The type species for the genus is *Candidatus* Cosidia dinupousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cosidia obsurastra sp. nov.

Candidatus Cosidia obsurastra (NL. fem. n. *obsurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-47-13 sp012960155*. The type genome for the species is the GenBank assembly GCA_012960155.1. The GC content of the type genome is 48.14 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Cosidia rinocilenta sp. nov.

Candidatus Cosidia rinocilenta (NL. fem. n. *rinocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-47-13 sp007117665*. The type genome for the species is the GenBank assembly GCA_007117665.1. The GC content of the type genome is 53.36 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Cosidida regifitas sp. nov.

Candidatus Cosidida regifitas (NL. fem. n. *regifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXVQ01 sp013335425*. The type genome for the species is the

GenBank assembly GCA_013335425.1. The GC content of the type genome is 56.05 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Cosidida gen. nov.

Candidatus Cosidida (NL. fem. n. *Cosidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXVQ01*. The type species for the genus is *Candidatus* Cosidida regifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAXVQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosididaceae.

Description of *Candidatus* Cosididaceae fam. nov.

Candidatus Cosididaceae (NL. fem. n. *Cosididaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXVQ01.* The type genus for the taxon is *Candidatus* Cosidida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAXVQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cosididales.

Description of *Candidatus* Cosididales ord. nov.

Candidatus Cosididales (NL. fem. n. *Cosididales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXVQ01.* The type genus for the taxon is *Candidatus* Cosidida .

According to the original version of GTDB R06-RS202, this family belongs to the class *JAAXVQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cosididae.

Description of *Candidatus* Cosididae class. nov.

Candidatus Cosididae (NL. fem. n. *c__Cosididae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAXVQ01.* The type genus for the taxon is *Candidatus* Cosidida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *FCPU426*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Denecariota.

Description of *Candidatus* Cosidosa dilemivita sp. nov.

Candidatus Cosidosa dilemivita (NL. fem. n. *dilemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1877 sp002352945*. The type genome for the species is the GenBank assembly GCA_002352945.1. The GC content of the type genome is 37.18 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Cosidosa gen. nov.

Candidatus Cosidosa (NL. fem. n. *Cosidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1877*. The type species for the genus is *Candidatus* Cosidosa dilemivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosidosaceae.

Description of *Candidatus* Cosidosaceae fam. nov.

Candidatus Cosidosaceae (NL. fem. n. *Cosidosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1877.* The type genus for the taxon is *Candidatus* Cosidosa .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Cosidula cinefatica sp. nov.

Candidatus Cosidula cinefatica (NL. fem. n. *cinefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMLA01 sp903842085*. The type genome for the species is the

GenBank assembly GCA_903842085.1. The GC content of the type genome is 39.89 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Cosidula gen. nov.

Candidatus Cosidula (NL. fem. n. *Cosidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMLA01*. The type species for the genus is *Candidatus* Cosidula cinefatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIMLA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosidulaceae.

Description of *Candidatus* Cosidulaceae fam. nov.

Candidatus Cosidulaceae (NL. fem. n. *Cosidulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMLA01.* The type genus for the taxon is *Candidatus* Cosidula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tubicidales.

Description of *Candidatus* Cosigana thessilega sp. nov.

Candidatus Cosigana thessilega (NL. fem. n. *thessilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch109 sp013178275*. The type genome for the species is the GenBank assembly GCA_013178275.1. The GC content of the type genome is 55.84 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Cosigana gen. nov.

Candidatus Cosigana (NL. fem. n. *Cosigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch109*. The type species for the genus is *Candidatus* Cosigana thessilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosiganaceae.

Description of *Candidatus* Cosiganaceae fam. nov.

Candidatus Cosiganaceae (NL. fem. n. *Cosiganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch109.* The type genus for the taxon is *Candidatus* Cosigana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ch66*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cucurellales.

Description of *Candidatus* Cosigaria selecentia sp. nov.

Candidatus Cosigaria selecentia (NL. fem. n. *selecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-38-335 sp001769535*. The type genome for the species is the GenBank assembly GCA_001769705.1. The GC content of the type genome is 37.88 % and the genome length is 5.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Cosigaria gen. nov.

Candidatus Cosigaria (NL. fem. n. *Cosigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-38-335*. The type species for the genus is *Candidatus* Cosigaria selecentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-38-335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosigariaceae.

Description of *Candidatus* Cosigariaceae fam. nov.

Candidatus Cosigariaceae (NL. fem. n. *Cosigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-38-335.* The type genus for the taxon is *Candidatus* Cosigaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Cosigella obnupimonas sp. nov.

Candidatus Cosigella obnupimonas (NL. fem. n. *obnupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGC01 sp011338245*. The type genome for the species is the GenBank assembly GCA_011338245.1. The GC content of the type genome is 45.68 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Cosigella gen. nov.

Candidatus Cosigella (NL. fem. n. *Cosigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGC01*. The type species for the genus is *Candidatus* Cosigella obnupimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosigellaceae.

Description of *Candidatus* Cosigellaceae fam. nov.

Candidatus Cosigellaceae (NL. fem. n. *Cosigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGC01.* The type genus for the taxon is *Candidatus* Cosigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *PHAN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vavasidales.

Description of *Candidatus* Cosigida colapitoga sp. nov.

Candidatus Cosigida colapitoga (NL. fem. n. *colapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1340 sp003142075*. The type genome for the species is the GenBank assembly GCA_003142075.1. The GC content of the type genome is 35.34 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Cosigida gen. nov.

Candidatus Cosigida (NL. fem. n. *Cosigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-1340*. The type species for the genus is *Candidatus* Cosigida colapitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunariaceae.

Description of *Candidatus* Cosigida depacitoga sp. nov.

Candidatus Cosigida depacitoga (NL. fem. n. *depacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1340 sp903823865*. The type genome for the species is the GenBank assembly GCA_903823865.1. The GC content of the type genome is 33.04 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Cosigida dilogibula sp. nov.

Candidatus Cosigida dilogibula (NL. fem. n. *dilogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1340 sp903831595*. The type genome for the species is the GenBank assembly GCA_903954215.1. The GC content of the type genome is 32.9 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Cosigida hemitifica sp. nov.

Candidatus Cosigida hemitifica (NL. fem. n. *hemitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1340 sp903850545*. The type genome for the species is the GenBank assembly GCA_903850545.1. The GC content of the type genome is 33.07 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Cosigosa daducimonia sp. nov.

Candidatus Cosigosa daducimonia (NL. fem. n. *daducimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-128 sp002084355*. The type genome for the species is the GenBank assembly GCA_002084355.1. The GC content of the type genome is 23.17 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Cosigosa gen. nov.

Candidatus Cosigosa (NL. fem. n. *Cosigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-128*. The type species for the genus is *Candidatus* Cosigosa daducimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4572-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosigosaceae.

Description of *Candidatus* Cosigosaceae fam. nov.

Candidatus Cosigosaceae (NL. fem. n. *Cosigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-128.* The type genus for the taxon is *Candidatus* Cosigosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Cosigula depicicella sp. nov.

Candidatus Cosigula depicicella (NL. fem. n. *depicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002721295 sp002937995*. The type genome for the species is the

GenBank assembly GCA_002694925.1. The GC content of the type genome is 39.71 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Cosigula gen. nov.

Candidatus Cosigula (NL. fem. n. *Cosigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002721295*. The type species for the genus is *Candidatus* Cosigula depicicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Cotenana ascelifica sp. nov.

Candidatus Cotenana ascelifica (NL. fem. n. *ascelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-28 sp001794015*. The type genome for the species is the GenBank assembly GCA_001794015.1. The GC content of the type genome is 38.91 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cotenana gen. nov.

Candidatus Cotenana (NL. fem. n. *Cotenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-28*. The type species for the genus is *Candidatus* Cotenana ascelifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Cotenana conifitica sp. nov.

Candidatus Cotenana conifitica (NL. fem. n. *conifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-28 sp001794635*. The type genome for the species is the GenBank assembly GCA_001793985.1. The GC content of the type genome is 39.13 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cotenana totidiforma sp. nov.

Candidatus Cotenana totidiforma (NL. fem. n. *totidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-28 sp001795735*. The type genome for the species is the GenBank assembly GCA_001794095.1. The GC content of the type genome is 40.78 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Cotenaria mahemax sp. nov.

Candidatus Cotenaria mahemax (NL. fem. n. *mahemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5533 sp002426855*. The type genome for the species is the GenBank assembly GCA_002426855.1. The GC content of the type genome is 63.79 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Cotenaria gen. nov.

Candidatus Cotenaria (NL. fem. n. *Cotenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5533*. The type species for the genus is *Candidatus* Cotenaria mahemax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cotenella adgubilenta sp. nov.

Candidatus Cotenella adgubilenta (NL. fem. n. *adgubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902540805*. The type genome for the species is the GenBank assembly GCA_902540805.1. The GC content of the type genome is 29.8 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Cotenella gen. nov.

Candidatus Cotenella (NL. fem. n. *Cotenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2691245*. The type species for the genus is *Candidatus* Cotenella adgubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Cotenella bacifessa sp. nov.

Candidatus Cotenella bacifessa (NL. fem. n. *bacifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902613995*. The type genome for the species is the GenBank assembly GCA_902613995.1. The GC content of the type genome is 30.15 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cotenella desacugo sp. nov.

Candidatus Cotenella desacugo (NL. fem. n. *desacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp002167215*. The type genome for the species is the GenBank assembly GCA_002167215.1. The GC content of the type genome is 30.0 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Cotenella domigetta sp. nov.

Candidatus Cotenella domigetta (NL. fem. n. *domigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902563305*. The type genome for the species is the GenBank assembly GCA_902563305.1. The GC content of the type genome is 29.64 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Cotenella epogdetta sp. nov.

Candidatus Cotenella epogdetta (NL. fem. n. *epogdetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902625895*. The type genome for the species is the GenBank assembly GCA_902625895.1. The GC content of the type genome is 30.35 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Cotenella excorax sp. nov.

Candidatus Cotenella excorax (NL. fem. n. *excorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902579395*. The type genome for the species is the GenBank assembly GCA_902579395.1. The GC content of the type genome is 29.73 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Cotenella favonago sp. nov.

Candidatus Cotenella favonago (NL. fem. n. *favonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902530985*. The type genome for the species is the GenBank assembly GCA_902530985.1. The GC content of the type genome is 29.27 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Cotenella homulastra sp. nov.

Candidatus Cotenella homulastra (NL. fem. n. *homulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902526865*. The type genome for the species is the GenBank assembly GCA_902526865.1. The GC content of the type genome is 30.05 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Cotenella impiritas sp. nov.

Candidatus Cotenella impiritas (NL. fem. n. *impiritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902617375*. The type genome for the species is the GenBank assembly GCA_902617375.1. The GC content of the type genome is 30.22 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Cotenella peridifica sp. nov.

Candidatus Cotenella peridifica (NL. fem. n. *peridifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902536655*. The type genome for the species is the GenBank assembly GCA_902536655.1. The GC content of the type genome is 30.07 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Cotenella socagetta sp. nov.

Candidatus Cotenella socagetta (NL. fem. n. *socagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902522465*. The type genome for the species is the GenBank assembly GCA_902533395.1. The GC content of the type genome is 29.77 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Cotenella sonipitia sp. nov.

Candidatus Cotenella sonipitia (NL. fem. n. *sonipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902569095*. The type genome for the species is the GenBank assembly GCA_902569095.1. The GC content of the type genome is 30.42 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Cotenella tibicitica sp. nov.

Candidatus Cotenella tibicitica (NL. fem. n. *tibicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902550225*. The type genome for the species is the GenBank assembly GCA_902550225.1. The GC content of the type genome is 30.19 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Cotenella tigurentia sp. nov.

Candidatus Cotenella tigurentia (NL. fem. n. *tigurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902567145*. The type genome for the species is the GenBank assembly GCA_902567145.1. The GC content of the type genome is 29.75 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Cotenella vitupicella sp. nov.

Candidatus Cotenella vitupicella (NL. fem. n. *vitupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691245 sp902567115*. The type genome for the species is the GenBank assembly GCA_902567115.1. The GC content of the type genome is 30.36 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Cotenia inhabimonas sp. nov.

Candidatus Cotenia inhabimonas (NL. fem. n. *inhabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5352 sp012522765*. The type genome for the species is the GenBank assembly GCA_012522765.1. The GC content of the type genome is 65.39 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Cotenia gen. nov.

Candidatus Cotenia (NL. fem. n. *Cotenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5352*. The type species for the genus is *Candidatus* Cotenia

inhabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5352*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coteniaceae.

Description of *Candidatus* Coteniaceae fam. nov.

Candidatus Coteniaceae (NL. fem. n. *Coteniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5352.* The type genus for the taxon is *Candidatus* Cotenia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Cotenia reduvitura sp. nov.

Candidatus Cotenia reduvitura (NL. fem. n. *reduvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5352 sp002411015*. The type genome for the species is the GenBank assembly GCA_002411015.1. The GC content of the type genome is 67.08 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Cotenia tenilitudo sp. nov.

Candidatus Cotenia tenilitudo (NL. fem. n. *tenilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5352 sp003566775*. The type genome for the species is the GenBank assembly GCA_003566775.1. The GC content of the type genome is 61.85 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Cotenida conifilenta sp. nov.

Candidatus Cotenida conifilenta (NL. fem. n. *conifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SXHM01 sp005773695*. The type genome for the species is the GenBank assembly GCA_005773695.1. The GC content of the type genome is 39.28 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Cotenida gen. nov.

Candidatus Cotenida (NL. fem. n. *Cotenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXHM01*. The type species for the genus is *Candidatus* Cotenida conifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXHM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cotenidaceae.

Description of *Candidatus* Cotenidaceae fam. nov.

Candidatus Cotenidaceae (NL. fem. n. *Cotenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SXHM01.* The type genus for the taxon is *Candidatus* Cotenida .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Cotenosa hexapivita sp. nov.

Candidatus Cotenosa hexapivita (NL. fem. n. *hexapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6534 sp002687905*. The type genome for the species is the GenBank assembly GCA_002434765.1. The GC content of the type genome is 41.03 % and the genome length is 0.45 Mbp.

Description of *Candidatus* Cotenosa gen. nov.

Candidatus Cotenosa (NL. fem. n. *Cotenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6534*. The type species for the genus is *Candidatus* Cotenosa

hexapivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Cotenula dibapastra sp. nov.

Candidatus Cotenula dibapastra (NL. fem. n. *dibapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2965 sp002348385*. The type genome for the species is the GenBank assembly GCA_002717125.1. The GC content of the type genome is 61.27 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Cotenula gen. nov.

Candidatus Cotenula (NL. fem. n. *Cotenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2965*. The type species for the genus is *Candidatus* Cotenula dibapastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Cotenula utrinatica sp. nov.

Candidatus Cotenula utrinatica (NL. fem. n. *utrinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2965 sp002707325*. The type genome for the species is the GenBank assembly GCA_002707325.1. The GC content of the type genome is 43.77 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Coticana baropousia sp. nov.

Candidatus Coticana baropousia (NL. fem. n. *baropousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTU01 sp009923315*. The type genome for the species is the GenBank assembly GCA_009921965.1. The GC content of the type genome is 64.94 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Coticana gen. nov.

Candidatus Coticana (NL. fem. n. *Coticana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFTU01*. The type species for the genus is *Candidatus* Coticana baropousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coticana cadavago sp. nov.

Candidatus Coticana cadavago (NL. fem. n. *cadavago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTU01 sp009918225*. The type genome for the species is the GenBank assembly GCA_009918225.1. The GC content of the type genome is 65.34 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Coticana denecax sp. nov.

Candidatus Coticana denecax (NL. fem. n. *denecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFTU01 sp009925955*. The type genome for the species is the GenBank assembly GCA_009925955.1. The GC content of the type genome is 65.03 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Coticaria conipessa sp. nov.

Candidatus Coticaria conipessa (NL. fem. n. *conipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12395 sp001000065*. The type genome for the species is the GenBank assembly GCA_001000065.1. The GC content of the type genome is 42.29 %

and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Coticaria gen. nov.

Candidatus Coticaria (NL. fem. n. *Coticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12395*. The type species for the genus is *Candidatus* Coticaria conipessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coticaria levifitoga sp. nov.

Candidatus Coticaria levifitoga (NL. fem. n. *levifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12395 sp000996275*. The type genome for the species is the GenBank assembly GCA_000996275.1. The GC content of the type genome is 41.76 % and the genome length is 1.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Coticella apsorivita sp. nov.

Candidatus Coticella apsorivita (NL. fem. n. *apsorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp011390785*. The type genome for the species is the GenBank assembly GCA_011390785.1. The GC content of the type genome is 39.88 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Coticella gen. nov.

Candidatus Coticella (NL. fem. n. *Coticella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKVR01*. The type species for the genus is *Candidatus* Coticella apsorivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Detotosaceae.

Description of *Candidatus* Coticella ceraciforma sp. nov.

Candidatus Coticella ceraciforma (NL. fem. n. *ceraciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007118135*. The type genome for the species is the GenBank assembly GCA_007118135.1. The GC content of the type genome is 40.19 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Coticella defasicella sp. nov.

Candidatus Coticella defasicella (NL. fem. n. *defasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007135645*. The type genome for the species is the GenBank assembly GCA_007120525.1. The GC content of the type genome is 44.29 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Coticella delucilega sp. nov.

Candidatus Coticella delucilega (NL. fem. n. *delucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007129355*. The type genome for the species is the GenBank assembly GCA_007129355.1. The GC content of the type genome is 40.96 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Coticella domicisca sp. nov.

Candidatus Coticella domicisca (NL. fem. n. *domicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007132395*. The type genome for the species is the GenBank assembly GCA_007132395.1. The GC content of the type genome is 45.03 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Coticella inresivita sp. nov.

Candidatus Coticella inresivita (NL. fem. n. *inresivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007131245*. The type genome for the species is the GenBank assembly GCA_007131245.1. The GC content of the type genome is 43.17 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Coticella lanigibula sp. nov.

Candidatus Coticella lanigibula (NL. fem. n. *lanigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007693555*. The type genome for the species is the GenBank assembly GCA_007693555.1. The GC content of the type genome is 40.51 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Coticella lucelax sp. nov.

Candidatus Coticella lucelax (NL. fem. n. *lucelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp011390575*. The type genome for the species is the GenBank assembly GCA_011390575.1. The GC content of the type genome is 43.23 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Coticella metapetta sp. nov.

Candidatus Coticella metapetta (NL. fem. n. *metapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007131895*. The type genome for the species is the GenBank assembly GCA_007131895.1. The GC content of the type genome is 43.65 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Coticella tabititio sp. nov.

Candidatus Coticella tabititio (NL. fem. n. *tabititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007132585*. The type genome for the species is the GenBank assembly GCA_007128355.1. The GC content of the type genome is 40.03 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Coticella tenemimonas sp. nov.

Candidatus Coticella tenemimonas (NL. fem. n. *tenemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVR01 sp007694165*. The type genome for the species is the GenBank assembly GCA_007694165.1. The GC content of the type genome is 43.76 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Coticia cosidigena sp. nov.

Candidatus Coticia cosidigena (NL. fem. n. *cosidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXFI01 sp007121435*. The type genome for the species is the GenBank assembly GCA_007121435.1. The GC content of the type genome is 65.7 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Coticia gen. nov.

Candidatus Coticia (NL. fem. n. *Coticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXFI01*. The type species for the genus is *Candidatus* Coticia cosidigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Coticia obrigivita sp. nov.

Candidatus Coticia obrigivita (NL. fem. n. *obrigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXFI01 sp003564295*. The type genome for the species is the GenBank assembly GCA_003564295.1. The GC content of the type genome is 65.2 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Coticida adcucax sp. nov.

Candidatus Coticida adcucax (NL. fem. n. *adcucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp003331365*. The type genome for the species is the GenBank assembly GCA_003331365.1. The GC content of the type genome is 35.75 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Coticida gen. nov.

Candidatus Coticida (NL. fem. n. *Coticida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA952*. The type species for the genus is *Candidatus* Coticida adcucax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coticida adinvimonia sp. nov.

Candidatus Coticida adinvimonia (NL. fem. n. *adinvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002683585*. The type genome for the species is the GenBank assembly GCA_002683585.1. The GC content of the type genome is 38.27 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Coticida adtolicula sp. nov.

Candidatus Coticida adtolicula (NL. fem. n. *adtolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903901805*. The type genome for the species is the GenBank assembly GCA_903901805.1. The GC content of the type genome is 35.33 %

and the genome length is 2.87 Mbp.

Description of *Candidatus* Coticida benemilega sp. nov.

Candidatus Coticida benemilega (NL. fem. n. *benemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002293045*. The type genome for the species is the GenBank assembly GCA_002293045.1. The GC content of the type genome is 41.92 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Coticida bigemessa sp. nov.

Candidatus Coticida bigemessa (NL. fem. n. *bigemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp004295165*. The type genome for the species is the GenBank assembly GCA_004295165.1. The GC content of the type genome is 45.15 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Coticida bugilentia sp. nov.

Candidatus Coticida bugilentia (NL. fem. n. *bugilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp003512365*. The type genome for the species is the GenBank assembly GCA_009923545.1. The GC content of the type genome is 36.06 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Coticida decacibula sp. nov.

Candidatus Coticida decacibula (NL. fem. n. *decacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp011522905*. The type genome for the species is the GenBank assembly GCA_011522905.1. The GC content of the type genome is 36.21 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Coticida decatitio sp. nov.

Candidatus Coticida decatitio (NL. fem. n. *decatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903939755*. The type genome for the species is the GenBank assembly GCA_903922305.1. The GC content of the type genome is 36.66 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Coticida decititia sp. nov.

Candidatus Coticida decititia (NL. fem. n. *decititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002478565*. The type genome for the species is the GenBank assembly GCA_002454235.1. The GC content of the type genome is 41.48 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Coticida demigilega sp. nov.

Candidatus Coticida demigilega (NL. fem. n. *demigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002480215*. The type genome for the species is the GenBank assembly GCA_002380545.1. The GC content of the type genome is 37.55 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Coticida derelibula sp. nov.

Candidatus Coticida derelibula (NL. fem. n. *derelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp009925805*. The type genome for the species is the GenBank assembly GCA_009925805.1. The GC content of the type genome is 43.84 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Coticida derunimonia sp. nov.

Candidatus Coticida derunimonia (NL. fem. n. *derunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903860985*. The type genome for the species is the GenBank assembly GCA_903860985.1. The GC content of the type genome is 39.79 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Coticida eviscitas sp. nov.

Candidatus Coticida eviscitas (NL. fem. n. *eviscitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp009923965*. The type genome for the species is the GenBank assembly GCA_009923965.1. The GC content of the type genome is 34.09 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Coticida ficulugo sp. nov.

Candidatus Coticida ficulugo (NL. fem. n. *ficulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp009924735*. The type genome for the species is the GenBank assembly GCA_009927525.1. The GC content of the type genome is 41.02 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Coticida gasifilega sp. nov.

Candidatus Coticida gasifilega (NL. fem. n. *gasifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903879765*. The type genome for the species is the GenBank assembly GCA_903879765.1. The GC content of the type genome is 38.59 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Coticida indomitura sp. nov.

Candidatus Coticida indomitura (NL. fem. n. *indomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp009926905*. The type genome for the species is the GenBank assembly GCA_009926905.1. The GC content of the type genome is 35.31 %

and the genome length is 2.88 Mbp.

Description of *Candidatus* Coticida inmitago sp. nov.

Candidatus Coticida inmitago (NL. fem. n. *inmitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002167775*. The type genome for the species is the GenBank assembly GCA_002167775.1. The GC content of the type genome is 38.01 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Coticida letifax sp. nov.

Candidatus Coticida letifax (NL. fem. n. *letifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp009926125*. The type genome for the species is the GenBank assembly GCA_009926125.1. The GC content of the type genome is 33.72 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Coticida monimilenta sp. nov.

Candidatus Coticida monimilenta (NL. fem. n. *monimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903823565*. The type genome for the species is the GenBank assembly GCA_903823565.1. The GC content of the type genome is 41.87 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Coticida nubecivita sp. nov.

Candidatus Coticida nubecivita (NL. fem. n. *nubecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp903935095*. The type genome for the species is the GenBank assembly GCA_903935095.1. The GC content of the type genome is 39.51 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Coticida oratritrix sp. nov.

Candidatus Coticida oratritrix (NL. fem. n. *oratritrix* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp005798205*. The type genome for the species is the GenBank assembly GCA_005798205.1. The GC content of the type genome is 33.41 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Coticida smegmimonia sp. nov.

Candidatus Coticida smegmimonia (NL. fem. n. *smegmimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002696025*. The type genome for the species is the GenBank assembly GCA_002696025.1. The GC content of the type genome is 31.37 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Coticida tametentia sp. nov.

Candidatus Coticida tametentia (NL. fem. n. *tametentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA952 sp002293185*. The type genome for the species is the GenBank assembly GCA_002293185.1. The GC content of the type genome is 42.27 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Coticosa patibitio sp. nov.

Candidatus Coticosa patibitio (NL. fem. n. *patibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12044 sp000989675*. The type genome for the species is the GenBank assembly GCA_000990085.1. The GC content of the type genome is 32.87 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Coticosa gen. nov.

Candidatus Coticosa (NL. fem. n. *Coticosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12044*. The type species for the genus is *Candidatus* Coticosa patibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Coturana rudecifica sp. nov.

Candidatus Coturana rudecifica (NL. fem. n. *rudecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA816 sp002313635*. The type genome for the species is the GenBank assembly GCA_003519105.1. The GC content of the type genome is 33.27 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Coturana gen. nov.

Candidatus Coturana (NL. fem. n. *Coturana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA816*. The type species for the genus is *Candidatus* Coturana rudecifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA816*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturanaceae.

Description of *Candidatus* Coturanaceae fam. nov.

Candidatus Coturanaceae (NL. fem. n. *Coturanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA816.* The type genus for the taxon is *Candidatus* Coturana .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bac17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malagariales.

Description of *Candidatus* Coturaria incenitas sp. nov.

Candidatus Coturaria incenitas (NL. fem. n. *incenitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZYB01 sp902785275*. The type genome for the species is the GenBank assembly GCA_902785275.1. The GC content of the type genome is 31.9 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Coturaria gen. nov.

Candidatus Coturaria (NL. fem. n. *Coturaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZYB01*. The type species for the genus is *Candidatus* Coturaria incenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACZYB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturariaceae.

Description of *Candidatus* Coturariaceae fam. nov.

Candidatus Coturariaceae (NL. fem. n. *Coturariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACZYB01.* The type genus for the taxon is *Candidatus* Coturaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapiales.

Description of *Candidatus* Coturella dibapax sp. nov.

Candidatus Coturella dibapax (NL. fem. n. *dibapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9506 sp003506415*. The type genome for the species is the GenBank assembly GCA_900540615.1. The GC content of the type genome is 45.36 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Coturella gen. nov.

Candidatus Coturella (NL. fem. n. *Coturella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9506*. The type species for the genus is *Candidatus* Coturella dibapax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9506*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturellaceae.

Description of *Candidatus* Coturellaceae fam. nov.

Candidatus Coturellaceae (NL. fem. n. *Coturellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9506.* The type genus for the taxon is *Candidatus* Coturella .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales_A*.

Description of *Candidatus* Coturia paracessa sp. nov.

Candidatus Coturia paracessa (NL. fem. n. *paracessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BLZN01 sp014132315*. The type genome for the species is the GenBank assembly GCA_014132315.1. The GC content of the type genome is 41.08 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Coturia gen. nov.

Candidatus Coturia (NL. fem. n. *Coturia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BLZN01*. The type species for the genus is *Candidatus* Coturia paracessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BLZN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturiaceae.

Description of *Candidatus* Coturiaceae fam. nov.

Candidatus Coturiaceae (NL. fem. n. *Coturiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BLZN01*. The type genus for the taxon is *Candidatus* Coturia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Coturida megalax sp. nov.

Candidatus Coturida megalax (NL. fem. n. *megalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2013Ark19i sp001460935*. The type genome for the species is the GenBank assembly RS_GCF_900078725.1. The GC content of the type genome is 35.37 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Coturida gen. nov.

Candidatus Coturida (NL. fem. n. *Coturida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2013Ark19i*. The type species for the genus is *Candidatus* Coturida megalax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2013Ark19i*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturidaceae.

Description of *Candidatus* Coturidaceae fam. nov.

Candidatus Coturidaceae (NL. fem. n. *Coturidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2013Ark19i.* The type genus for the taxon is *Candidatus* Coturida .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Coturida socagessa sp. nov.

Candidatus Coturida socagessa (NL. fem. n. *socagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2013Ark19i sp900078745*. The type genome for the species is the GenBank assembly RS_GCF_900078745.1. The GC content of the type genome is 38.5 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Coturosa malifitica sp. nov.

Candidatus Coturosa malifitica (NL. fem. n. *malifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1279 sp900550315*. The type genome for the species is the GenBank assembly GCA_900550315.1. The GC content of the type genome is 49.31 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Coturosa gen. nov.

Candidatus Coturosa (NL. fem. n. *Coturosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1279*. The type species for the genus is *Candidatus* Coturosa malifitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Coturosa viburitrix sp. nov.

Candidatus Coturosa viburitrix (NL. fem. n. *viburitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1279 sp900761625*. The type genome for the species is the GenBank assembly RS_GCF_900761625.1. The GC content of the type genome is 45.74 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Coturula cohonatio sp. nov.

Candidatus Coturula cohonatio (NL. fem. n. *cohonatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAS01 sp012962155*. The type genome for the species is the

GenBank assembly GCA_012962155.1. The GC content of the type genome is 42.7 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Coturula gen. nov.

Candidatus Coturula (NL. fem. n. *Coturula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QOAS01*. The type species for the genus is *Candidatus* Coturula cohonatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QOAS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturulaceae.

Description of *Candidatus* Coturulaceae fam. nov.

Candidatus Coturulaceae (NL. fem. n. *Coturulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QOAS01.* The type genus for the taxon is *Candidatus* Coturula .

According to GTDB R06-RS202, this family belongs to the order *Aquificales*.

Description of *Candidatus* Coturula divulimonia sp. nov.

Candidatus Coturula divulimonia (NL. fem. n. *divulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAS01 sp013153315*. The type genome for the species is the GenBank assembly GCA_013153315.1. The GC content of the type genome is 41.59 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Coturula homicitia sp. nov.

Candidatus Coturula homicitia (NL. fem. n. *homicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAS01 sp013154305*. The type genome for the species is the GenBank assembly GCA_013154305.1. The GC content of the type genome is 56.53 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Coturula velivimonia sp. nov.

Candidatus Coturula velivimonia (NL. fem. n. *velivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAS01 sp003972855*. The type genome for the species is the GenBank assembly GCA_003972855.1. The GC content of the type genome is 42.72 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Coxiella celamimonas sp. nov.

Candidatus Coxiella celamimonas (NL. fem. n. *celamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coxiella sp000815025*. The type genome for the species is the GenBank assembly RS_GCF_000815025.1. The GC content of the type genome is 34.59 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Coxiella docibatio sp. nov.

Candidatus Coxiella docibatio (NL. fem. n. *docibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coxiella sp002871095*. The type genome for the species is the GenBank assembly RS_GCF_002871095.1. The GC content of the type genome is 32.65 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Coxiella episcax sp. nov.

Candidatus Coxiella episcax (NL. fem. n. *episcax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Coxiella sp009883795*. The type genome for the species is the GenBank assembly RS_GCF_009883795.1. The GC content of the type genome is 38.08 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Crabraria inadfilega sp. nov.

Candidatus Crabraria inadfilega (NL. fem. n. *inadfilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VAWY01 sp005888335*. The type genome for the species is the GenBank assembly GCA_005888335.1. The GC content of the type genome is 73.12 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Crabraria gen. nov.

Candidatus Crabraria (NL. fem. n. *Crabraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VAWY01*. The type species for the genus is *Candidatus* Crabraria inadfilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Crabrida ossicitio sp. nov.

Candidatus Crabrida ossicitio (NL. fem. n. *ossicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PBBK01 sp002717685*. The type genome for the species is the GenBank assembly GCA_002717685.1. The GC content of the type genome is 35.44 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Crabrida gen. nov.

Candidatus Crabrida (NL. fem. n. *Crabrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PBBK01*. The type species for the genus is *Candidatus* Crabrida ossicitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Crabrosa octopugo sp. nov.

Candidatus Crabrosa octopugo (NL. fem. n. *octopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-16 sp005884575*. The type genome for the species is the GenBank assembly GCA_005884575.1. The GC content of the type genome is 70.17 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Crabrosa gen. nov.

Candidatus Crabrosa (NL. fem. n. *Crabrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-16*. The type species for the genus is *Candidatus* Crabrosa octopugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Crabrula aspilitio sp. nov.

Candidatus Crabrula aspilitio (NL. fem. n. *aspilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRJJ01 sp011052255*. The type genome for the species is the GenBank assembly GCA_011052255.1. The GC content of the type genome is 49.45 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Crabrula gen. nov.

Candidatus Crabrula (NL. fem. n. *Crabrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRJJ01*. The type species for the genus is *Candidatus* Crabrula aspilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinipulaceae.

Description of *Candidatus* Crastana inpuressa sp. nov.

Candidatus Crastana inpuressa (NL. fem. n. *inpuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *BM501 sp002868845*. The type genome for the species is the GenBank assembly GCA_002868845.1. The GC content of the type genome is 62.33 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Crastana gen. nov.

Candidatus Crastana (NL. fem. n. *Crastana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM501*. The type species for the genus is *Candidatus* Crastana inpuressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Crastaria deculibra sp. nov.

Candidatus Crastaria deculibra (NL. fem. n. *deculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBQ01 sp012730035*. The type genome for the species is the GenBank assembly GCA_012730035.1. The GC content of the type genome is 44.89 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Crastaria gen. nov.

Candidatus Crastaria (NL. fem. n. *Crastaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBQ01*. The type species for the genus is *Candidatus* Crastaria deculibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Crastella albogilega sp. nov.

Candidatus Crastella albogilega (NL. fem. n. *albogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726415 sp002726415*. The type genome for the species is the

GenBank assembly GCA_002726415.1. The GC content of the type genome is 55.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Crastella gen. nov.

Candidatus Crastella (NL. fem. n. *Crastella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2726415*. The type species for the genus is *Candidatus* Crastella albogilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA868*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotanaceae.

Description of *Candidatus* Crastella chalbago sp. nov.

Candidatus Crastella chalbago (NL. fem. n. *chalbago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726415 sp014239255*. The type genome for the species is the GenBank assembly GCA_014239255.1. The GC content of the type genome is 53.03 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Crastella illuvitura sp. nov.

Candidatus Crastella illuvitura (NL. fem. n. *illuvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2726415 sp014239575*. The type genome for the species is the GenBank assembly GCA_014239575.1. The GC content of the type genome is 54.39 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Crastida ellipetta sp. nov.

Candidatus Crastida ellipetta (NL. fem. n. *ellipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla163 sp007750655*. The type genome for the species is the GenBank assembly RS_GCF_007750655.1. The GC content of the type genome is 70.52 % and the

genome length is 4.95 Mbp.

Description of *Candidatus* Crastida gen. nov.

Candidatus Crastida (NL. fem. n. *Crastida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pla163*. The type species for the genus is *Candidatus* Crastida ellipetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Crastosa armigentia sp. nov.

Candidatus Crastosa armigentia (NL. fem. n. *armigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQJ01 sp012026925*. The type genome for the species is the GenBank assembly GCA_012026925.1. The GC content of the type genome is 68.8 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Crastosa gen. nov.

Candidatus Crastosa (NL. fem. n. *Crastosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPQJ01*. The type species for the genus is *Candidatus* Crastosa armigentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Crastosa cohurago sp. nov.

Candidatus Crastosa cohurago (NL. fem. n. *cohurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQJ01 sp003819815*. The type genome for the species is the GenBank assembly GCA_003819815.1. The GC content of the type genome is 70.53 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Crastosa inordilega sp. nov.

Candidatus Crastosa inordilega (NL. fem. n. *inordilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQJ01 sp011391405*. The type genome for the species is the GenBank assembly GCA_011391405.1. The GC content of the type genome is 65.83 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Crastula inrelitrix sp. nov.

Candidatus Crastula inrelitrix (NL. fem. n. *inrelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2702065 sp002702065*. The type genome for the species is the GenBank assembly GCA_002702065.1. The GC content of the type genome is 57.06 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Crastula gen. nov.

Candidatus Crastula (NL. fem. n. *Crastula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2702065*. The type species for the genus is *Candidatus* Crastula inrelitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Crateriforma paracatio sp. nov.

Candidatus Crateriforma paracatio (NL. fem. n. *paracatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Crateriforma sp007860215*. The type genome for the species is the GenBank assembly RS_GCF_007860215.1. The GC content of the type genome is 57.72 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Crenothrix munimetta sp. nov.

Candidatus Crenothrix munimetta (NL. fem. n. *munimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Crenothrix sp005239965*. The type genome for the species is the GenBank assembly GCA_005239965.1. The GC content of the type genome is 45.97 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Croceibacterium acrififica sp. nov.

Candidatus Croceibacterium acrififica (NL. fem. n. *acrififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp001683845*. The type genome for the species is the GenBank assembly GCA_001683845.1. The GC content of the type genome is 66.62 % and the genome length is 2.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Antarctic Hypolithon".

Description of *Candidatus* Croceibacterium bulapibra sp. nov.

Candidatus Croceibacterium bulapibra (NL. fem. n. *bulapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp002279825*. The type genome for the species is the GenBank assembly GCA_002279825.1. The GC content of the type genome is 67.93 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Croceibacterium dehisitia sp. nov.

Candidatus Croceibacterium dehisitia (NL. fem. n. *dehisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp001427865*. The type genome for the species is the GenBank assembly RS_GCF_001427865.1. The GC content of the type genome is 63.9 % and the genome length is 3.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Croceibacterium inhericella sp. nov.

Candidatus Croceibacterium inhericella (NL. fem. n. *inhericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp011320115*. The type genome for the species is the GenBank assembly RS_GCF_011320115.1. The GC content of the type genome is 66.33 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Croceibacterium inurbentia sp. nov.

Candidatus Croceibacterium inurbentia (NL. fem. n. *inurbentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp014359685*. The type genome for the species is the GenBank assembly GCA_014359685.1. The GC content of the type genome is 70.08 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Croceibacterium lapilitio sp. nov.

Candidatus Croceibacterium lapilitio (NL. fem. n. *lapilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp001897135*. The type genome for the species is the GenBank assembly GCA_001897135.1. The GC content of the type genome is 66.4 % and the genome length is 2.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Croceibacterium obmutugo sp. nov.

Candidatus Croceibacterium obmutugo (NL. fem. n. *obmutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceibacterium sp003569745*. The type genome for the species is the GenBank assembly RS_GCF_003569745.1. The GC content of the type genome is 65.43 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Croceicoccus devecibula sp. nov.

Candidatus Croceicoccus devecibula (NL. fem. n. *devecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceicoccus sp002694745*. The type genome for the species is the GenBank assembly GCA_002694745.1. The GC content of the type genome is 63.83 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Croceicoccus inhoritudo sp. nov.

Candidatus Croceicoccus inhoritudo (NL. fem. n. *inhoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceicoccus sp001634625*. The type genome for the species is the GenBank assembly RS_GCF_001634625.1. The GC content of the type genome is 62.76 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Croceitalea fatilimonas sp. nov.

Candidatus Croceitalea fatilimonas (NL. fem. n. *fatilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceitalea sp013001145*. The type genome for the species is the GenBank assembly GCA_013043865.1. The GC content of the type genome is 39.78 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Croceivirga fetifitas sp. nov.

Candidatus Croceivirga fetifitas (NL. fem. n. *fetifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceivirga sp005144745*. The type genome for the species is the GenBank assembly RS_GCF_011882165.1. The GC content of the type genome is 36.9 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Croceivirga fumifimonia sp. nov.

Candidatus Croceivirga fumifimonia (NL. fem. n. *fumifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceivirga sp009797885*. The type genome for the species is the GenBank assembly RS_GCF_009797885.1. The GC content of the type genome is 43.18

% and the genome length is 5.28 Mbp.

Description of *Candidatus* Croceivirga inbecilega sp. nov.

Candidatus Croceivirga inbecilega (NL. fem. n. *inbecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Croceivirga sp012272815*. The type genome for the species is the GenBank assembly RS_GCF_012272815.1. The GC content of the type genome is 38.66 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Crocinitomix cisalatica sp. nov.

Candidatus Crocinitomix cisalatica (NL. fem. n. *cisalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Crocinitomix sp013138735*. The type genome for the species is the GenBank assembly GCA_013138735.1. The GC content of the type genome is 36.12 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Crocosphaera desomago sp. nov.

Candidatus Crocosphaera desomago (NL. fem. n. *desomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Crocosphaera sp002172675*. The type genome for the species is the GenBank assembly RS_GCF_002172675.1. The GC content of the type genome is 36.85 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Crocosphaera malifessa sp. nov.

Candidatus Crocosphaera malifessa (NL. fem. n. *malifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Crocosphaera sp003013815*. The type genome for the species is the GenBank assembly RS_GCF_003013815.1. The GC content of the type genome is 38.22 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Cruppana cepulisca sp. nov.

Candidatus Cruppana cepulisca (NL. fem. n. *cepulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRM01 sp014534415*. The type genome for the species is the GenBank assembly GCA_014534415.1. The GC content of the type genome is 71.19 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Cruppana gen. nov.

Candidatus Cruppana (NL. fem. n. *Cruppana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRM01*. The type species for the genus is *Candidatus* Cruppana cepulisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cruppella aspilatica sp. nov.

Candidatus Cruppella aspilatica (NL. fem. n. *aspilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYU01 sp902810705*. The type genome for the species is the GenBank assembly RS_GCF_902810705.1. The GC content of the type genome is 60.02 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Cruppella gen. nov.

Candidatus Cruppella (NL. fem. n. *Cruppella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYU01*. The type species for the genus is *Candidatus* Cruppella aspilatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cruppia insicitio sp. nov.

Candidatus Cruppia insicitio (NL. fem. n. *insicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXZE01 sp012720075*. The type genome for the species is the GenBank assembly GCA_012720075.1. The GC content of the type genome is 40.25 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Cruppia gen. nov.

Candidatus Cruppia (NL. fem. n. *Cruppia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXZE01*. The type species for the genus is *Candidatus* Cruppia insicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BICA1-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Novilosaceae.

Description of *Candidatus* Cruppida xenopatio sp. nov.

Candidatus Cruppida xenopatio (NL. fem. n. *xenopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRNP01 sp009776515*. The type genome for the species is the GenBank assembly GCA_009776515.1. The GC content of the type genome is 53.05 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Cruppida gen. nov.

Candidatus Cruppida (NL. fem. n. *Cruppida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRNP01*. The type species for the genus is *Candidatus* Cruppida xenopatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacidaceae.

Description of *Candidatus* Crupposa adfanibula sp. nov.

Candidatus Crupposa adfanibula (NL. fem. n. *adfanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTR01 sp011389755*. The type genome for the species is the GenBank assembly GCA_011389755.1. The GC content of the type genome is 61.83 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Crupposa gen. nov.

Candidatus Crupposa (NL. fem. n. *Crupposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTR01*. The type species for the genus is *Candidatus* Crupposa adfanibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYKL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulellaceae.

Description of *Candidatus* Cruppula smegmitio sp. nov.

Candidatus Cruppula smegmitio (NL. fem. n. *smegmitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M1803 sp006226595*. The type genome for the species is the GenBank assembly GCA_006226595.1. The GC content of the type genome is 69.79 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Cruppula gen. nov.

Candidatus Cruppula (NL. fem. n. *Cruppula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M1803*. The type species for the genus is *Candidatus* Cruppula smegmitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Crusmana telefiforma sp. nov.

Candidatus Crusmana telefiforma (NL. fem. n. *telefiforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11788 sp902772675*. The type genome for the species is the GenBank assembly GCA_902772675.1. The GC content of the type genome is 25.71 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Crusmana gen. nov.

Candidatus Crusmana (NL. fem. n. *Crusmana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11788*. The type species for the genus is *Candidatus* Crusmana telefiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Crusmaria assicibula sp. nov.

Candidatus Crusmaria assicibula (NL. fem. n. *assicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6103 sp002423545*. The type genome for the species is the GenBank assembly GCA_002423545.1. The GC content of the type genome is 69.46 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Crusmaria gen. nov.

Candidatus Crusmaria (NL. fem. n. *Crusmaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6103*. The type species for the genus is *Candidatus* Crusmaria assicibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Crusmella absoratica sp. nov.

Candidatus Crusmella absoratica (NL. fem. n. *absoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3210 sp900755065*. The type genome for the species is the GenBank assembly RS_GCF_900755065.1. The GC content of the type genome is 47.73 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Crusmella gen. nov.

Candidatus Crusmella (NL. fem. n. *Crusmella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3210*. The type species for the genus is *Candidatus* Crusmella absoratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-449*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacariaceae.

Description of *Candidatus* Crusmella rorarago sp. nov.

Candidatus Crusmella rorarago (NL. fem. n. *rorarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3210 sp002363635*. The type genome for the species is the GenBank assembly GCA_002363635.1. The GC content of the type genome is 29.94 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Crusmia innabilega sp. nov.

Candidatus Crusmia innabilega (NL. fem. n. *innabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAB01 sp012719595*. The type genome for the species is the GenBank assembly GCA_012719595.1. The GC content of the type genome is 57.7 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Crusmia gen. nov.

Candidatus Crusmia (NL. fem. n. *Crusmia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAB01*. The type species for the genus is *Candidatus* Crusmia innabilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU014*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugividaceae.

Description of *Candidatus* Crusmosa acricilega sp. nov.

Candidatus Crusmosa acricilega (NL. fem. n. *acricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYDC01 sp009843585*. The type genome for the species is the GenBank assembly GCA_009843585.1. The GC content of the type genome is 73.36 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Crusmosa gen. nov.

Candidatus Crusmosa (NL. fem. n. *Crusmosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VYDC01*. The type species for the genus is *Candidatus* Crusmosa acricilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Crusmula dehisastra sp. nov.

Candidatus Crusmula dehisastra (NL. fem. n. *dehisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTQ01 sp902805615*. The type genome for the species is the GenBank assembly GCA_902805615.1. The GC content of the type genome is 60.42 % and the genome length is 8.77 Mbp.

Description of *Candidatus* Crusmula gen. nov.

Candidatus Crusmula (NL. fem. n. *Crusmula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTQ01*. The type species for the genus is *Candidatus* Crusmula dehisastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *172606-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Horomosaceae.

Description of *Candidatus* Cryobacterium adgenitia sp. nov.

Candidatus Cryobacterium adgenitia (NL. fem. n. *adgenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403395*. The type genome for the species is the GenBank assembly RS_GCF_004403395.1. The GC content of the type genome is 67.75 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Cryobacterium adnaritica sp. nov.

Candidatus Cryobacterium adnaritica (NL. fem. n. *adnaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp014376815*. The type genome for the species is the GenBank assembly GCA_014376815.1. The GC content of the type genome is 68.8 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Cryobacterium adpecitio sp. nov.

Candidatus Cryobacterium adpecitio (NL. fem. n. *adpecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402215*. The type genome for the species is the GenBank assembly RS_GCF_004402215.1. The GC content of the type genome is 68.28 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Cryobacterium bicoribra sp. nov.

Candidatus Cryobacterium bicoribra (NL. fem. n. *bicoribra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403945*. The type genome for the species is the GenBank assembly RS_GCF_004403945.1. The GC content of the type genome is 67.55 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Cryobacterium bimotibra sp. nov.

Candidatus Cryobacterium bimotibra (NL. fem. n. *bimotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402485*. The type genome for the species is the GenBank assembly RS_GCF_004402485.1. The GC content of the type genome is 67.9 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Cryobacterium bipaledo sp. nov.

Candidatus Cryobacterium bipaledo (NL. fem. n. *bipaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402535*. The type genome for the species is the GenBank assembly RS_GCF_004402535.1. The GC content of the type genome is 65.39 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Cryobacterium celumilenta sp. nov.

Candidatus Cryobacterium celumilenta (NL. fem. n. *celumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402495*. The type genome for the species is the GenBank assembly RS_GCF_004402495.1. The GC content of the type genome is 68.46 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Cryobacterium cemenessa sp. nov.

Candidatus Cryobacterium cemenessa (NL. fem. n. *cemenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403185*. The type genome for the species is the GenBank assembly RS_GCF_004403185.1. The GC content of the type genome is 64.05 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Cryobacterium debucitudo sp. nov.

Candidatus Cryobacterium debucitudo (NL. fem. n. *debucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929825*. The type genome for the species is the GenBank assembly RS_GCF_004403345.1. The GC content of the type genome is 63.51 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Cryobacterium decamibra sp. nov.

Candidatus Cryobacterium decamibra (NL. fem. n. *decamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403305*. The type genome for the species is the GenBank assembly RS_GCF_004403305.1. The GC content of the type genome is 66.74 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Cryobacterium defenisca sp. nov.

Candidatus Cryobacterium defenisca (NL. fem. n. *defenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929495*. The type genome for the species is the GenBank assembly RS_GCF_004404025.1. The GC content of the type genome is 63.79 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Cryobacterium dehonitrix sp. nov.

Candidatus Cryobacterium dehonitrix (NL. fem. n. *dehonitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929845*. The type genome for the species is the GenBank assembly RS_GCF_004402575.1. The GC content of the type genome is 66.79 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Cryobacterium denigitudo sp. nov.

Candidatus Cryobacterium denigitudo (NL. fem. n. *denigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403465*. The type genome for the species is the GenBank assembly RS_GCF_004403465.1. The GC content of the type genome is 67.2 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Cryobacterium detotilega sp. nov.

Candidatus Cryobacterium detotilega (NL. fem. n. *detotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403065*. The type genome for the species is the GenBank assembly RS_GCF_004403065.1. The GC content of the type genome is 67.76 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Cryobacterium direcitudo sp. nov.

Candidatus Cryobacterium direcitudo (NL. fem. n. *direcitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929555*. The type genome for the species is the GenBank assembly RS_GCF_002929555.1. The GC content of the type genome is 68.32 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Cryobacterium funivousia sp. nov.

Candidatus Cryobacterium funivousia (NL. fem. n. *funivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402595*. The type genome for the species is the GenBank assembly RS_GCF_004402595.1. The GC content of the type genome is 68.14 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Cryobacterium maligetta sp. nov.

Candidatus Cryobacterium maligetta (NL. fem. n. *maligetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp000738085*. The type genome for the species is the GenBank assembly RS_GCF_000738085.1. The GC content of the type genome is 64.88 % and the genome length is 4.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Arctic: Vestre Broggerbreen (VB) glacier; Svalbard".

Description of *Candidatus* Cryobacterium mavorisca sp. nov.

Candidatus Cryobacterium mavorisca (NL. fem. n. *mavorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402785*. The type genome for the species is the GenBank assembly RS_GCF_004402785.1. The GC content of the type genome is 67.01 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Cryobacterium monacimonia sp. nov.

Candidatus Cryobacterium monacimonia (NL. fem. n. *monacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004210215*. The type genome for the species is the GenBank assembly RS_GCF_004210215.1. The GC content of the type genome is 67.55 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Cryobacterium musulitica sp. nov.

Candidatus Cryobacterium musulitica (NL. fem. n. *musulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929505*. The type genome for the species is the GenBank assembly RS_GCF_002929505.1. The GC content of the type genome is 63.17 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Cryobacterium obnupousia sp. nov.

Candidatus Cryobacterium obnupousia (NL. fem. n. *obnupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402695*. The type genome for the species is the GenBank assembly RS_GCF_004402695.1. The GC content of the type genome is 67.61 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Cryobacterium obtesitura sp. nov.

Candidatus Cryobacterium obtesitura (NL. fem. n. *obtesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403515*. The type genome for the species is the GenBank assembly RS_GCF_004403515.1. The GC content of the type genome is 68.04 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Cryobacterium pepenastra sp. nov.

Candidatus Cryobacterium pepenastra (NL. fem. n. *pepenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004402235*. The type genome for the species is the GenBank assembly RS_GCF_004402235.1. The GC content of the type genome is 67.68 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Cryobacterium redunax sp. nov.

Candidatus Cryobacterium redunax (NL. fem. n. *redunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929805*. The type genome for the species is the GenBank assembly RS_GCF_002929805.1. The GC content of the type genome is 63.22 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Cryobacterium rosaratio sp. nov.

Candidatus Cryobacterium rosaratio (NL. fem. n. *rosaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp003602235*. The type genome for the species is the GenBank assembly RS_GCF_003602235.1. The GC content of the type genome is 66.85

% and the genome length is 4.71 Mbp.

Description of *Candidatus* Cryobacterium secunitudo sp. nov.

Candidatus Cryobacterium secunitudo (NL. fem. n. *secunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp004403985*. The type genome for the species is the GenBank assembly RS_GCF_004402825.1. The GC content of the type genome is 64.43 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Cryobacterium solifitura sp. nov.

Candidatus Cryobacterium solifitura (NL. fem. n. *solifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002404115*. The type genome for the species is the GenBank assembly GCA_002404115.1. The GC content of the type genome is 68.54 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Cryobacterium xenodimonia sp. nov.

Candidatus Cryobacterium xenodimonia (NL. fem. n. *xenodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium sp002929535*. The type genome for the species is the GenBank assembly RS_GCF_002929535.1. The GC content of the type genome is 63.26 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Cryobacterium advigigena sp. nov.

Candidatus Cryobacterium advigigena (NL. fem. n. *advigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryobacterium_B sp012274275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012274275.1. The GC content of the type genome is 66.98 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Cryosericum arvecifica sp. nov.

Candidatus Cryosericum arvecifica (NL. fem. n. *arvecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryosericum sp013824685*. The type genome for the species is the GenBank assembly GCA_013824685.1. The GC content of the type genome is 59.29 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Cryosericum devecatica sp. nov.

Candidatus Cryosericum devecatica (NL. fem. n. *devecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryosericum sp903871855*. The type genome for the species is the GenBank assembly GCA_903870465.1. The GC content of the type genome is 57.48 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Cryosericum maligugo sp. nov.

Candidatus Cryosericum maligugo (NL. fem. n. *maligugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cryosericum sp002402295*. The type genome for the species is the GenBank assembly GCA_002402295.1. The GC content of the type genome is 57.69 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Cucurana gasomimonas sp. nov.

Candidatus Cucurana gasomimonas (NL. fem. n. *gasomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU067 sp012841865*. The type genome for the species is the GenBank assembly GCA_012841865.1. The GC content of the type genome is 36.2 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Cucurana gen. nov.

Candidatus Cucurana (NL. fem. n. *Cucurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU067*. The type species for the genus is *Candidatus* Cucurana gasomimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Cucurana hexagago sp. nov.

Candidatus Cucurana hexagago (NL. fem. n. *hexagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU067 sp001512995*. The type genome for the species is the GenBank assembly GCA_012516595.1. The GC content of the type genome is 47.26 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cucuraria defanimonia sp. nov.

Candidatus Cucuraria defanimonia (NL. fem. n. *defanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1398 sp002305165*. The type genome for the species is the GenBank assembly GCA_012522675.1. The GC content of the type genome is 66.74 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Cucuraria gen. nov.

Candidatus Cucuraria (NL. fem. n. *Cucuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1398*. The type species for the genus is *Candidatus* Cucuraria defanimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1398*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cucurariaceae.

Description of *Candidatus* Cucurariaceae fam. nov.

Candidatus Cucurariaceae (NL. fem. n. *Cucurariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1398.* The type genus for the taxon is *Candidatus* Cucuraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1398*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cucurariales.

Description of *Candidatus* Cucurariales ord. nov.

Candidatus Cucurariales (NL. fem. n. *Cucurariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1398.* The type genus for the taxon is *Candidatus* Cucuraria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Latibosae.

Description of *Candidatus* Cucurella assicilega sp. nov.

Candidatus Cucurella assicilega (NL. fem. n. *assicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch66 sp013178045*. The type genome for the species is the GenBank assembly GCA_013178045.1. The GC content of the type genome is 50.23 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Cucurella gen. nov.

Candidatus Cucurella (NL. fem. n. *Cucurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch66*. The type species for the genus is *Candidatus* Cucurella assicilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch66*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cucurellaceae.

Description of *Candidatus* Cucurellaceae fam. nov.

Candidatus Cucurellaceae (NL. fem. n. *Cucurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch66.* The type genus for the taxon is *Candidatus* Cucurella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ch66*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cucurellales.

Description of *Candidatus* Cucurellales ord. nov.

Candidatus Cucurellales (NL. fem. n. *Cucurellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch66.* The type genus for the taxon is *Candidatus* Cucurella .

According to the GTDB R06-RS202, this order belongs to the class *Syntrophomonadia*.

Description of *Candidatus* Cucuria solipitas sp. nov.

Candidatus Cucuria solipitas (NL. fem. n. *solipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-532 sp003164955*. The type genome for the species is the GenBank assembly GCA_003164955.1. The GC content of the type genome is 70.22 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Cucuria gen. nov.

Candidatus Cucuria (NL. fem. n. *Cucuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-532*. The type species for the genus is *Candidatus* Cucuria solipitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cucurida sicubitrix sp. nov.

Candidatus Cucurida sicubitrix (NL. fem. n. *sicubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OMPR01 sp900313015*. The type genome for the species is the GenBank assembly RS_GCF_003318155.1. The GC content of the type genome is 54.79 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Cucurida gen. nov.

Candidatus Cucurida (NL. fem. n. *Cucurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OMPR01*. The type species for the genus is *Candidatus* Cucurida sicubitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cucurosa butubentia sp. nov.

Candidatus Cucurosa butubentia (NL. fem. n. *butubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRSR01 sp903881315*. The type genome for the species is the GenBank assembly GCA_903881315.1. The GC content of the type genome is 54.87 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Cucurosa gen. nov.

Candidatus Cucurosa (NL. fem. n. *Cucurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRSR01*. The type species for the genus is *Candidatus* Cucurosa butubentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRSR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cucurosaceae.

Description of *Candidatus* Cucurosaceae fam. nov.

Candidatus Cucurosaceae (NL. fem. n. *Cucurosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAIRSR01*. The type genus for the taxon is *Candidatus* Cucurosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIRSR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cucurosales.

Description of *Candidatus* Cucurosales ord. nov.

Candidatus Cucurosales (NL. fem. n. *Cucurosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIRSR01*. The type genus for the taxon is *Candidatus* Cucurosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Cucurosa lucelitrix sp. nov.

Candidatus Cucurosa lucelitrix (NL. fem. n. *lucelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRSR01 sp903824965*. The type genome for the species is the GenBank assembly GCA_903824965.1. The GC content of the type genome is 53.28 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Cucurula direpivita sp. nov.

Candidatus Cucurula direpivita (NL. fem. n. *direpivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-67-57 sp001766965*. The type genome for the species is the GenBank assembly GCA_001766975.1. The GC content of the type genome is 67.47 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cucurula gen. nov.

Candidatus Cucurula (NL. fem. n. *Cucurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-02-FULL-67-57*. The type species for the genus is *Candidatus* Cucurula direpivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-67-57*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cucurulaceae.

Description of *Candidatus* Cucurulaceae fam. nov.

Candidatus Cucurulaceae (NL. fem. n. *Cucurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-67-57.* The type genus for the taxon is *Candidatus* Cucurula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilicellales.

Description of *Candidatus* Cucurula morigitica sp. nov.

Candidatus Cucurula morigitica (NL. fem. n. *morigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-67-57 sp011055645*. The type genome for the species is the GenBank assembly GCA_011055645.1. The GC content of the type genome is 68.15 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Cuferana bucelentia sp. nov.

Candidatus Cuferana bucelentia (NL. fem. n. *bucelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin76 sp012270885*. The type genome for the species is the GenBank assembly GCA_012270885.1. The GC content of the type genome is 63.76 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Cuferana gen. nov.

Candidatus Cuferana (NL. fem. n. *Cuferana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin76*. The type species for the genus is *Candidatus* Cuferana bucelentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuferanaceae.

Description of *Candidatus* Cuferanaceae fam. nov.

Candidatus Cuferanaceae (NL. fem. n. *Cuferanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin76.* The type genus for the taxon is *Candidatus* Cuferana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Cuferana buxanatio sp. nov.

Candidatus Cuferana buxanatio (NL. fem. n. *buxanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin76 sp009837815*. The type genome for the species is the GenBank assembly GCA_009838695.1. The GC content of the type genome is 64.42 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cuferana octacugo sp. nov.

Candidatus Cuferana octacugo (NL. fem. n. *octacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin76 sp002238785*. The type genome for the species is the GenBank assembly GCA_002238785.1. The GC content of the type genome is 61.59 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Cuferaria irregessa sp. nov.

Candidatus Cuferaria irregessa (NL. fem. n. *irregessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5368 sp002407865*. The type genome for the species is the GenBank assembly GCA_002407865.1. The GC content of the type genome is 51.3 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Cuferaria gen. nov.

Candidatus Cuferaria (NL. fem. n. *Cuferaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5368*. The type species for the genus is *Candidatus* Cuferaria irregessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5368*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuferariaceae.

Description of *Candidatus* Cuferariaceae fam. nov.

Candidatus Cuferariaceae (NL. fem. n. *Cuferariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5368.* The type genus for the taxon is *Candidatus* Cuferaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4802*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curabanales.

Description of *Candidatus* Cuferella benifago sp. nov.

Candidatus Cuferella benifago (NL. fem. n. *benifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AEGEAN-183 sp001628005*. The type genome for the species is the GenBank assembly GCA_001628185.1. The GC content of the type genome is 37.0 % and the genome length is 1.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 192 - depth 500m".

Description of *Candidatus* Cuferella gen. nov.

Candidatus Cuferella (NL. fem. n. *Cuferella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AEGEAN-183*. The type species for the genus is *Candidatus* Cuferella benifago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ludimulaceae.

Description of *Candidatus* Cuferella vinacitura sp. nov.

Candidatus Cuferella vinacitura (NL. fem. n. *vinacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AEGEAN-183 sp012965075*. The type genome for the species is the GenBank assembly GCA_012960705.1. The GC content of the type genome is 37.15 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Cuferia hirunibra sp. nov.

Candidatus Cuferia hirunibra (NL. fem. n. *hirunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-260 sp003566815*. The type genome for the species is the GenBank assembly GCA_007131135.1. The GC content of the type genome is 40.25 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Cuferia gen. nov.

Candidatus Cuferia (NL. fem. n. *Cuferia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3SED10-260*. The type species for the genus is *Candidatus* Cuferia hirunibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6126*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigemiaceae.

Description of *Candidatus* Cuferida vinulessa sp. nov.

Candidatus Cuferida vinulessa (NL. fem. n. *vinulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J094 sp003695005*. The type genome for the species is the GenBank assembly GCA_003695005.1. The GC content of the type genome is 38.24 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Cuferida gen. nov.

Candidatus Cuferida (NL. fem. n. *Cuferida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J094*. The type species for the genus is *Candidatus* Cuferida vinulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J094*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuferidaceae.

Description of *Candidatus* Cuferidaceae fam. nov.

Candidatus Cuferidaceae (NL. fem. n. *Cuferidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J094.* The type genus for the taxon is *Candidatus* Cuferida .

According to GTDB R06-RS202, this family belongs to the order *Turneriellales*.

Description of *Candidatus* Cuferosa rumifibra sp. nov.

Candidatus Cuferosa rumifibra (NL. fem. n. *rumifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-914 sp000437895*. The type genome for the species is the GenBank assembly GCA_900544005.1. The GC content of the type genome is 25.81 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Cuferosa gen. nov.

Candidatus Cuferosa (NL. fem. n. *Cuferosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-914*. The type species for the genus is *Candidatus* Cuferosa rumifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Cuferula bisacitio sp. nov.

Candidatus Cuferula bisacitio (NL. fem. n. *bisacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHAN690 sp002389645*. The type genome for the species is the GenBank assembly GCA_002389645.1. The GC content of the type genome is 39.76 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Cuferula gen. nov.

Candidatus Cuferula (NL. fem. n. *Cuferula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHAN690*. The type species for the genus is *Candidatus* Cuferula bisacitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cuferula inpenitia sp. nov.

Candidatus Cuferula inpenitia (NL. fem. n. *inpenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHAN690 sp013204105*. The type genome for the species is the GenBank assembly GCA_013204105.1. The GC content of the type genome is 48.21 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Cuferula pabilibra sp. nov.

Candidatus Cuferula pabilibra (NL. fem. n. *pabilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHAN690 sp009937235*. The type genome for the species is the GenBank assembly GCA_009937235.1. The GC content of the type genome is 43.77 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Cuferula satacetta sp. nov.

Candidatus Cuferula satacetta (NL. fem. n. *satacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHAN690 sp002336485*. The type genome for the species is the GenBank assembly GCA_002389565.1. The GC content of the type genome is 43.71 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Cuferula vanitisca sp. nov.

Candidatus Cuferula vanitisca (NL. fem. n. *vanitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHAN690 sp002390775*. The type genome for the species is the GenBank assembly GCA_002336185.1. The GC content of the type genome is 39.43 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Culibana inresentia sp. nov.

Candidatus Culibana inresentia (NL. fem. n. *inresentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRBW01 sp011042705*. The type genome for the species is the GenBank assembly GCA_011042705.1. The GC content of the type genome is 53.37 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Culibana gen. nov.

Candidatus Culibana (NL. fem. n. *Culibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRBW01*. The type species for the genus is *Candidatus* Culibana inresentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRBW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibanaceae.

Description of *Candidatus* Culibanaceae fam. nov.

Candidatus Culibanaceae (NL. fem. n. *Culibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRBW01.* The type genus for the taxon is *Candidatus* Culibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homicosales.

Description of *Candidatus* Culibaria hexagentia sp. nov.

Candidatus Culibaria hexagentia (NL. fem. n. *hexagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-504 sp003161205*. The type genome for the species is the GenBank assembly GCA_003161205.1. The GC content of the type genome is 69.61 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Culibaria gen. nov.

Candidatus Culibaria (NL. fem. n. *Culibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-504*. The type species for the genus is *Candidatus* Culibaria hexagentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Culibaria invesago sp. nov.

Candidatus Culibaria invesago (NL. fem. n. *invesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-504 sp003168295*. The type genome for the species is the

GenBank assembly GCA_003168295.1. The GC content of the type genome is 69.31 % and the genome length is 8.2 Mbp.

Description of *Candidatus* Culibaria penecimonia sp. nov.

Candidatus Culibaria penecimonia (NL. fem. n. *penecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-504 sp003140115*. The type genome for the species is the GenBank assembly GCA_003140115.1. The GC content of the type genome is 69.99 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Culibella vatililega sp. nov.

Candidatus Culibella vatililega (NL. fem. n. *vatililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6906 sp002451155*. The type genome for the species is the GenBank assembly GCA_002451155.1. The GC content of the type genome is 57.76 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Culibella gen. nov.

Candidatus Culibella (NL. fem. n. *Culibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6906*. The type species for the genus is *Candidatus* Culibella vatililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Culibellaceae fam. nov.

Candidatus Culibellaceae (NL. fem. n. *Culibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6906.* The type genus for the taxon is *Candidatus* Culibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Vagabanales.

Description of *Candidatus* Culibia adlecilenta sp. nov.

Candidatus Culibia adlecilenta (NL. fem. n. *adlecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp011960065*. The type genome for the species is the GenBank assembly RS_GCF_011960065.1. The GC content of the type genome is 44.61 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Culibia gen. nov.

Candidatus Culibia (NL. fem. n. *Culibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *14-2*. The type species for the genus is *Candidatus* Culibia adlecilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Culibia aggubedo sp. nov.

Candidatus Culibia aggubedo (NL. fem. n. *aggubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp000403255*. The type genome for the species is the GenBank assembly RS_GCF_000403255.1. The GC content of the type genome is 42.35 % and the genome length is 5.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Culibia agnicicella sp. nov.

Candidatus Culibia agnicicella (NL. fem. n. *agnicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp009911185*. The type genome for the species is the GenBank assembly RS_GCF_009911185.1. The GC content of the type genome is 43.69 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Culibia annicitica sp. nov.

Candidatus Culibia annicitica (NL. fem. n. *annicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp004793545*. The type genome for the species is the GenBank assembly RS_GCF_004793545.1. The GC content of the type genome is 43.98 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Culibia defasatica sp. nov.

Candidatus Culibia defasatica (NL. fem. n. *defasatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp000403845*. The type genome for the species is the GenBank assembly RS_GCF_000403845.2. The GC content of the type genome is 45.09 % and the genome length is 4.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Culibia defulitura sp. nov.

Candidatus Culibia defulitura (NL. fem. n. *defulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp000403315*. The type genome for the species is the GenBank assembly GCA_009774495.1. The GC content of the type genome is 48.24 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Culibia demadatica sp. nov.

Candidatus Culibia demadatica (NL. fem. n. *demadatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp012519695*. The type genome for the species is the GenBank assembly GCA_012519695.1. The GC content of the type genome is 37.39 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Culibia exaspibra sp. nov.

Candidatus Culibia exaspibra (NL. fem. n. *exaspibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp001940225*. The type genome for the species is the GenBank assembly RS_GCF_001940225.1. The GC content of the type genome is 38.19 % and the genome length is 3.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Culibia habacousia sp. nov.

Candidatus Culibia habacousia (NL. fem. n. *habacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *14-2 sp009774455*. The type genome for the species is the GenBank assembly GCA_009774455.1. The GC content of the type genome is 45.85 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Culibida acertitica sp. nov.

Candidatus Culibida acertitica (NL. fem. n. *acertitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B119-G9 sp003646715*. The type genome for the species is the GenBank assembly GCA_003646715.1. The GC content of the type genome is 43.47 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Culibida gen. nov.

Candidatus Culibida (NL. fem. n. *Culibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B119-G9*. The type species for the genus is *Candidatus* Culibida acertitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B119-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibidaceae.

Description of *Candidatus* Culibidaceae fam. nov.

Candidatus Culibidaceae (NL. fem. n. *Culibidaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B119-G9.* The type genus for the taxon is *Candidatus* Culibida .

According to the original version of GTDB R06-RS202, this family belongs to the order *B119-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Culibidales.

Description of *Candidatus* Culibidales ord. nov.

Candidatus Culibidales (NL. fem. n. *Culibidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B119-G9.* The type genus for the taxon is *Candidatus* Culibida .

According to the GTDB R06-RS202, this order belongs to the class *Syntrophobacteria*.

Description of *Candidatus* Culibosa adsibitia sp. nov.

Candidatus Culibosa adsibitia (NL. fem. n. *adsibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp900299045*. The type genome for the species is the GenBank assembly GCA_900299045.1. The GC content of the type genome is 41.41 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Culibosa gen. nov.

Candidatus Culibosa (NL. fem. n. *Culibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10906*. The type species for the genus is *Candidatus* Culibosa adsibitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Culibosa bicalessa sp. nov.

Candidatus Culibosa bicalessa (NL. fem. n. *bicalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903847275*. The type genome for the species is the GenBank assembly GCA_903885925.1. The GC content of the type genome is 39.68 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Culibosa cibicitia sp. nov.

Candidatus Culibosa cibicitia (NL. fem. n. *cibicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903904275*. The type genome for the species is the GenBank assembly GCA_903904275.1. The GC content of the type genome is 39.37 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Culibosa decatibula sp. nov.

Candidatus Culibosa decatibula (NL. fem. n. *decatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903867225*. The type genome for the species is the GenBank assembly GCA_903926885.1. The GC content of the type genome is 40.3 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Culibosa defosessa sp. nov.

Candidatus Culibosa defosessa (NL. fem. n. *defosessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903889445*. The type genome for the species is the GenBank assembly GCA_903889445.1. The GC content of the type genome is 42.96 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Culibosa depasentia sp. nov.

Candidatus Culibosa depasentia (NL. fem. n. *depasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903876445*. The type genome for the species is the GenBank assembly GCA_903876445.1. The GC content of the type genome is 39.42 %

and the genome length is 2.81 Mbp.

Description of *Candidatus* Culibosa diminivita sp. nov.

Candidatus Culibosa diminivita (NL. fem. n. *diminivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903848905*. The type genome for the species is the GenBank assembly GCA_903833635.1. The GC content of the type genome is 40.03 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Culibosa echiditio sp. nov.

Candidatus Culibosa echiditio (NL. fem. n. *echiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp003542275*. The type genome for the species is the GenBank assembly GCA_003542275.1. The GC content of the type genome is 45.4 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Culibosa galacibra sp. nov.

Candidatus Culibosa galacibra (NL. fem. n. *galacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903834465*. The type genome for the species is the GenBank assembly GCA_903834465.1. The GC content of the type genome is 41.26 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Culibosa infenifica sp. nov.

Candidatus Culibosa infenifica (NL. fem. n. *infenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903877065*. The type genome for the species is the GenBank assembly GCA_903877065.1. The GC content of the type genome is 40.28 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Culibosa lavacimonas sp. nov.

Candidatus Culibosa lavacimonas (NL. fem. n. *lavacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903953455*. The type genome for the species is the GenBank assembly GCA_903897525.1. The GC content of the type genome is 39.92 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Culibosa lucifetta sp. nov.

Candidatus Culibosa lucifetta (NL. fem. n. *lucifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903870545*. The type genome for the species is the GenBank assembly GCA_903878585.1. The GC content of the type genome is 43.18 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Culibosa monacentia sp. nov.

Candidatus Culibosa monacentia (NL. fem. n. *monacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp014191975*. The type genome for the species is the GenBank assembly GCA_014191975.1. The GC content of the type genome is 39.7 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Culibosa peridimonia sp. nov.

Candidatus Culibosa peridimonia (NL. fem. n. *peridimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10906 sp903848935*. The type genome for the species is the GenBank assembly GCA_903849505.1. The GC content of the type genome is 42.46 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Culibula rubecatio sp. nov.

Candidatus Culibula rubecatio (NL. fem. n. *rubecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3088 sp002367275*. The type genome for the species is the GenBank assembly GCA_002352625.1. The GC content of the type genome is 49.38 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Culibula gen. nov.

Candidatus Culibula (NL. fem. n. *Culibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3088*. The type species for the genus is *Candidatus* Culibula rubecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibulaceae.

Description of *Candidatus* Culibulaceae fam. nov.

Candidatus Culibulaceae (NL. fem. n. *Culibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3088.* The type genus for the taxon is *Candidatus* Culibula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Culibulales.

Description of *Candidatus* Culibulales ord. nov.

Candidatus Culibulales (NL. fem. n. *Culibulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3088.* The type genus for the taxon is *Candidatus* Culibula .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Culigana adessilenta sp. nov.

Candidatus Culigana adessilenta (NL. fem. n. *adessilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-07 sp900770145*. The type genome for the species is the GenBank assembly RS_GCF_900770145.1. The GC content of the type genome is 56.26 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Culigana gen. nov.

Candidatus Culigana (NL. fem. n. *Culigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-07*. The type species for the genus is *Candidatus* Culigana adessilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Culigana gasifetta sp. nov.

Candidatus Culigana gasifetta (NL. fem. n. *gasifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-07 sp900548735*. The type genome for the species is the GenBank assembly GCA_900548735.1. The GC content of the type genome is 55.96 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Culigana omnifibra sp. nov.

Candidatus Culigana omnifibra (NL. fem. n. *omnifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-07 sp001604005*. The type genome for the species is the GenBank assembly GCA_001604005.1. The GC content of the type genome is 55.49 % and the genome length is 1.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Culigaria bipenax sp. nov.

Candidatus Culigaria bipenax (NL. fem. n. *bipenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUS01 sp903845045*. The type genome for the species is the GenBank assembly GCA_903913725.1. The GC content of the type genome is 72.42 % and the genome length is 8.2 Mbp.

Description of *Candidatus* Culigaria gen. nov.

Candidatus Culigaria (NL. fem. n. *Culigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCUS01*. The type species for the genus is *Candidatus* Culigaria bipenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musuliaceae.

Description of *Candidatus* Culigaria nicomousia sp. nov.

Candidatus Culigaria nicomousia (NL. fem. n. *nicomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCUS01 sp004297725*. The type genome for the species is the GenBank assembly GCA_004297725.1. The GC content of the type genome is 72.43 % and the genome length is 9.39 Mbp.

Description of *Candidatus* Culigella videlousia sp. nov.

Candidatus Culigella videlousia (NL. fem. n. *videlousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-44-12b sp001823695*. The type genome for the species is the GenBank assembly GCA_001823895.1. The GC content of the type genome is 43.69 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Culigella gen. nov.

Candidatus Culigella (NL. fem. n. *Culigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *12-FULL-44-12b*. The type species for the genus is *Candidatus* Culigella videlousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Culigia decucousia sp. nov.

Candidatus Culigia decucousia (NL. fem. n. *decucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8498 sp000996895*. The type genome for the species is the GenBank assembly GCA_000995715.1. The GC content of the type genome is 41.58 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Culigia gen. nov.

Candidatus Culigia (NL. fem. n. *Culigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8498*. The type species for the genus is *Candidatus* Culigia decucousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Culigia letifitrix sp. nov.

Candidatus Culigia letifitrix (NL. fem. n. *letifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8498 sp001773135*. The type genome for the species is the GenBank assembly GCA_001773135.1. The GC content of the type genome is 41.56 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Culigia munifimonas sp. nov.

Candidatus Culigia munifimonas (NL. fem. n. *munifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8498 sp000503835*. The type genome for the species is the GenBank assembly GCA_000503835.1. The GC content of the type genome is 43.15 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Culigia paraligena sp. nov.

Candidatus Culigia paraligena (NL. fem. n. *paraligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8498 sp001773255*. The type genome for the species is the GenBank assembly GCA_001772795.1. The GC content of the type genome is 42.69 % and the genome length is 0.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Culigia remedimonas sp. nov.

Candidatus Culigia remedimonas (NL. fem. n. *remedimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8498 sp001773385*. The type genome for the species is the GenBank assembly GCA_000997745.1. The GC content of the type genome is 42.38 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Culigida locupessa sp. nov.

Candidatus Culigida locupessa (NL. fem. n. *locupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-42-19 sp002774705*. The type genome for the species is the GenBank assembly GCA_002774705.1. The GC content of the type genome is 41.99 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Culigida gen. nov.

Candidatus Culigida (NL. fem. n. *Culigida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-42-19*. The type species for the genus is *Candidatus* Culigida locupessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-42-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culigidaceae.

Description of *Candidatus* Culigidaceae fam. nov.

Candidatus Culigidaceae (NL. fem. n. *Culigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-42-19.* The type genus for the taxon is *Candidatus* Culigida .

According to the original version of GTDB R06-RS202, this family belongs to the order *WO2-41-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refulariales.

Description of *Candidatus* Culigosa caselivita sp. nov.

Candidatus Culigosa caselivita (NL. fem. n. *caselivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-877 sp003135035*. The type genome for the species is the GenBank assembly GCA_003135035.1. The GC content of the type genome is 65.76 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Culigosa gen. nov.

Candidatus Culigosa (NL. fem. n. *Culigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-877*. The type species for the genus is *Candidatus* Culigosa caselivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culigosaceae.

Description of *Candidatus* Culigosaceae fam. nov.

Candidatus Culigosaceae (NL. fem. n. *Culigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bog-877.* The type genus for the taxon is *Candidatus* Culigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Visibiales.

Description of *Candidatus* Culigosa catagimonas sp. nov.

Candidatus Culigosa catagimonas (NL. fem. n. *catagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-877 sp003133485*. The type genome for the species is the GenBank assembly GCA_003133485.1. The GC content of the type genome is 65.35 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Culigosa catalimonas sp. nov.

Candidatus Culigosa catalimonas (NL. fem. n. *catalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-877 sp003132265*. The type genome for the species is the GenBank assembly GCA_003132785.1. The GC content of the type genome is 67.85 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Culigosa conibifica sp. nov.

Candidatus Culigosa conibifica (NL. fem. n. *conibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-877 sp003164475*. The type genome for the species is the GenBank assembly GCA_003164475.1. The GC content of the type genome is 68.51 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Culigula ignomatio sp. nov.

Candidatus Culigula ignomatio (NL. fem. n. *ignomatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-47-16 sp002796325*. The type genome for the species is the GenBank assembly GCA_002796325.1. The GC content of the type genome is 47.29 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Culigula gen. nov.

Candidatus Culigula (NL. fem. n. *Culigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-47-16*. The type species for the genus is *Candidatus* Culigula ignomatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-47-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culigulaceae.

Description of *Candidatus* Culigulaceae fam. nov.

Candidatus Culigulaceae (NL. fem. n. *Culigulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-47-16.* The type genus for the taxon is *Candidatus* Culigula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-002796325*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Taraxanales.

Description of *Candidatus* Culilaria cepulitrix sp. nov.

Candidatus Culilaria cepulitrix (NL. fem. n. *cepulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8481 sp002780065*. The type genome for the species is the GenBank assembly GCA_001871695.1. The GC content of the type genome is 42.22 % and the genome length is 2.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Culilaria gen. nov.

Candidatus Culilaria (NL. fem. n. *Culilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8481*. The type species for the genus is *Candidatus* Culilaria cepulitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8481*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culilariaceae.

Description of *Candidatus* Culilariaceae fam. nov.

Candidatus Culilariaceae (NL. fem. n. *Culilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8481.* The type genus for the taxon is *Candidatus* Culilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8481*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Culilariales.

Description of *Candidatus* Culilariales ord. nov.

Candidatus Culilariales (NL. fem. n. *Culilariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8481.* The type genus for the taxon is *Candidatus* Culilaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8481*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Culilariae.

Description of *Candidatus* Culilariae class. nov.

Candidatus Culilariae (NL. fem. n. *c__Culilariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8481.* The type genus for the taxon is *Candidatus* Culilaria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA8481*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the phylum *Candidatus* Culilariota.

Description of *Candidatus* Culilariota phyl. nov.

Candidatus Culilariota (NL. fem. n. *Culilariota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8481.* The type genus for the taxon is *Candidatus* Culilaria .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Culilella bulapitudo sp. nov.

Candidatus Culilella bulapitudo (NL. fem. n. *bulapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1396 sp002305195*. The type genome for the species is the GenBank assembly GCA_002305195.1. The GC content of the type genome is 40.24 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Culilella gen. nov.

Candidatus Culilella (NL. fem. n. *Culilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1396*. The type species for the genus is *Candidatus* Culilella bulapitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1396*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culilellaceae.

Description of *Candidatus* Culilellaceae fam. nov.

Candidatus Culilellaceae (NL. fem. n. *Culilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1396.* The type genus for the taxon is *Candidatus* Culilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Culilia tomacetta sp. nov.

Candidatus Culilia tomacetta (NL. fem. n. *tomacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp6-AA56 sp003222395*. The type genome for the species is the GenBank assembly GCA_003222395.1. The GC content of the type genome is 65.11 % and the genome length is 7.74 Mbp.

Description of *Candidatus* Culilia gen. nov.

Candidatus Culilia (NL. fem. n. *Culilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp6-AA56*. The type species for the genus is *Candidatus* Culilia tomacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Culilida vitifugo sp. nov.

Candidatus Culilida vitifugo (NL. fem. n. *vitifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD0425bin51 sp002753225*. The type genome for the species is the GenBank assembly GCA_002753225.1. The GC content of the type genome is 32.23 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Culilida gen. nov.

Candidatus Culilida (NL. fem. n. *Culilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YD0425bin51*. The type species for the genus is *Candidatus* Culilida vitifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YD0425bin51*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culilidaceae.

Description of *Candidatus* Culilidaceae fam. nov.

Candidatus Culilidaceae (NL. fem. n. *Culilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YD0425bin51.* The type genus for the taxon is *Candidatus* Culilida .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Culilosa adtoratio sp. nov.

Candidatus Culilosa adtoratio (NL. fem. n. *adtoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8522 sp003524335*. The type genome for the species is the GenBank assembly GCA_003524335.1. The GC content of the type genome is 58.43 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Culilosa gen. nov.

Candidatus Culilosa (NL. fem. n. *Culilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8522*. The type species for the genus is *Candidatus* Culilosa adtoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culilosaceae.

Description of *Candidatus* Culilosaceae fam. nov.

Candidatus Culilosaceae (NL. fem. n. *Culilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8522.* The type genus for the taxon is *Candidatus* Culilosa .

According to GTDB R06-RS202, this family belongs to the order *Aminicenantales*.

Description of *Candidatus* Culilula codificula sp. nov.

Candidatus Culilula codificula (NL. fem. n. *codificula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900317985*. The type genome for the species is the GenBank assembly GCA_900320945.1. The GC content of the type genome is 58.35 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Culilula gen. nov.

Candidatus Culilula (NL. fem. n. *Culilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG420*. The type species for the genus is *Candidatus* Culilula codificula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Culilula genocicella sp. nov.

Candidatus Culilula genocicella (NL. fem. n. *genocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900317085*. The type genome for the species is the GenBank assembly GCA_900317135.1. The GC content of the type genome is 58.13 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Culilula maxumatio sp. nov.

Candidatus Culilula maxumatio (NL. fem. n. *maxumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900315285*. The type genome for the species is the GenBank assembly GCA_002350695.1. The GC content of the type genome is 53.51 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Culilula refulatio sp. nov.

Candidatus Culilula refulatio (NL. fem. n. *refulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900542575*. The type genome for the species is the GenBank assembly GCA_900542575.1. The GC content of the type genome is 54.29 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Culilula semimitas sp. nov.

Candidatus Culilula semimitas (NL. fem. n. *semimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900318715*. The type genome for the species is the GenBank assembly GCA_900318715.1. The GC content of the type genome is 57.87 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Culilula tirunitica sp. nov.

Candidatus Culilula tirunitica (NL. fem. n. *tirunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG420 sp900771085*. The type genome for the species is the GenBank assembly RS_GCF_900771085.1. The GC content of the type genome is 44.1 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Cululana intesatica sp. nov.

Candidatus Cululana intesatica (NL. fem. n. *intesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5301 sp002408345*. The type genome for the species is the GenBank assembly GCA_002408345.1. The GC content of the type genome is 44.83 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cululana gen. nov.

Candidatus Cululana (NL. fem. n. *Cululana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5301*. The type species for the genus is *Candidatus* Cululana intesatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA5301. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululanaceae.

Description of *Candidatus* Cululanaceae fam. nov.

Candidatus Cululanaceae (NL. fem. n. *Cululanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5301*. The type genus for the taxon is *Candidatus* Cululana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5301*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cululanales.

Description of *Candidatus* Cululanales ord. nov.

Candidatus Cululanales (NL. fem. n. *Cululanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5301*. The type genus for the taxon is *Candidatus* Cululana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5301*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cululanae.

Description of *Candidatus* Cululanae class. nov.

Candidatus Cululanae (NL. fem. n. *c__Cululanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5301*. The type genus for the taxon is *Candidatus* Cululana .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_G*.

Description of *Candidatus* Culularia aprugitudo sp. nov.

Candidatus Culularia aprugitudo (NL. fem. n. *aprugitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHND01 sp004295045*. The type genome for the species is the GenBank assembly GCA_004295045.1. The GC content of the type genome is 53.67 %

and the genome length is 4.95 Mbp.

Description of *Candidatus* Culularia gen. nov.

Candidatus Culularia (NL. fem. n. *Culularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHND01*. The type species for the genus is *Candidatus* Culularia aprugitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culularia ceae.

Description of *Candidatus* Culularia ceae fam. nov.

Candidatus Culularia ceae (NL. fem. n. *Culularia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHND01.* The type genus for the taxon is *Candidatus* Culularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4142*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenobellales.

Description of *Candidatus* Cululella arcatisca sp. nov.

Candidatus Cululella arcatisca (NL. fem. n. *arcatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXR01 sp014360495*. The type genome for the species is the GenBank assembly GCA_014360495.1. The GC content of the type genome is 45.96 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Cululella gen. nov.

Candidatus Cululella (NL. fem. n. *Cululella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIXR01*. The type species for the genus is *Candidatus* Cululella arcatisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIXR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululellaceae.

Description of *Candidatus* Cululellaceae fam. nov.

Candidatus Cululellaceae (NL. fem. n. *Cululellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIXR01*. The type genus for the taxon is *Candidatus* Cululella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACIXR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cululellales.

Description of *Candidatus* Cululellales ord. nov.

Candidatus Cululellales (NL. fem. n. *Cululellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIXR01*. The type genus for the taxon is *Candidatus* Cululella .

According to the original version of GTDB R06-RS202, this family belongs to the class *JACIXR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cululellae.

Description of *Candidatus* Cululellae class. nov.

Candidatus Cululellae (NL. fem. n. *c__Cululellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIXR01*. The type genus for the taxon is *Candidatus* Cululella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *JACIXR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Cululellota.

Description of *Candidatus* Cululellota phyl. nov.

Candidatus Cululellota (NL. fem. n. *Cululellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *JACIXR01*. The type genus for the taxon is *Candidatus* Cululella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Cululella incivitrix sp. nov.

Candidatus Cululella incivitrix (NL. fem. n. *incivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXR01 sp014360465*. The type genome for the species is the GenBank assembly GCA_014360465.1. The GC content of the type genome is 44.87 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Cululia dehinibra sp. nov.

Candidatus Cululia dehinibra (NL. fem. n. *dehinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2942 sp900321525*. The type genome for the species is the GenBank assembly GCA_900321525.1. The GC content of the type genome is 44.9 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Cululia gen. nov.

Candidatus Cululia (NL. fem. n. *Cululia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2942*. The type species for the genus is *Candidatus* Cululia dehinibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cululida nefaricella sp. nov.

Candidatus Cululida nefaricella (NL. fem. n. *nefaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQVD01 sp003388555*. The type genome for the species is the GenBank assembly GCA_003385675.1. The GC content of the type genome is 70.54 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Cululida gen. nov.

Candidatus Cululida (NL. fem. n. *Cululida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQVD01*. The type species for the genus is *Candidatus* Cululida nefaricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QQVD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululidaceae.

Description of *Candidatus* Cululidaceae fam. nov.

Candidatus Cululidaceae (NL. fem. n. *Cululidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QQVD01.* The type genus for the taxon is *Candidatus* Cululida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Holovidales.

Description of *Candidatus* Cululosa inturetta sp. nov.

Candidatus Cululosa inturetta (NL. fem. n. *inturetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1099 sp003170555*. The type genome for the species is the GenBank assembly GCA_003170555.1. The GC content of the type genome is 62.89 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Cululosa gen. nov.

Candidatus Cululosa (NL. fem. n. *Cululosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1099*. The type species for the genus is *Candidatus* Cululosa inturetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1099*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Cululosaceae.

Description of *Candidatus* Cululosaceae fam. nov.

Candidatus Cululosaceae (NL. fem. n. *Cululosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1099.* The type genus for the taxon is *Candidatus* Cululosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *FEN-1099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cululosales.

Description of *Candidatus* Cululosales ord. nov.

Candidatus Cululosales (NL. fem. n. *Cululosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1099.* The type genus for the taxon is *Candidatus* Cululosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *FEN-1099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cululosae.

Description of *Candidatus* Cululosae class. nov.

Candidatus Cululosae (NL. fem. n. *c__Cululosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1099.* The type genus for the taxon is *Candidatus* Cululosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *FEN-1099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Cululosota.

Description of *Candidatus* Cululosota phyl. nov.

Candidatus Cululosota (NL. fem. n. *Cululosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1099.* The type genus for the taxon is *Candidatus* Cululosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Culululla fecunitia sp. nov.

Candidatus Culululla fecunitia (NL. fem. n. *fecunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401445 sp002401445*. The type genome for the species is the GenBank assembly GCA_002401445.1. The GC content of the type genome is 39.84 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Culululla gen. nov.

Candidatus Culululla (NL. fem. n. *Culululla* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401445*. The type species for the genus is *Candidatus* Culululla fecunitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2401445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culululaceae.

Description of *Candidatus* Culululaceae fam. nov.

Candidatus Culululaceae (NL. fem. n. *Culululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2401445.* The type genus for the taxon is *Candidatus* Culululla .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Cumulibacter celamitio sp. nov.

Candidatus Cumulibacter celamitio (NL. fem. n. *celamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cumulibacter sp900292035*. The type genome for the species is the

GenBank assembly RS_GCF_900292035.1. The GC content of the type genome is 68.63 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Cunabana adcubibra sp. nov.

Candidatus Cunabana adcubibra (NL. fem. n. *adcubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12045 sp900770325*. The type genome for the species is the GenBank assembly RS_GCF_900770325.1. The GC content of the type genome is 47.4 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Cunabana gen. nov.

Candidatus Cunabana (NL. fem. n. *Cunabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12045*. The type species for the genus is *Candidatus* Cunabana adcubibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Cunabana bucolilega sp. nov.

Candidatus Cunabana bucolilega (NL. fem. n. *bucolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12045 sp902775185*. The type genome for the species is the GenBank assembly GCA_902775185.1. The GC content of the type genome is 47.04 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Cunabana siticentia sp. nov.

Candidatus Cunabana siticentia (NL. fem. n. *siticentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12045 sp902778245*. The type genome for the species is the GenBank assembly GCA_902778245.1. The GC content of the type genome is 47.01 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Cunabana timefitia sp. nov.

Candidatus Cunabana timefitia (NL. fem. n. *timefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12045 sp902802515*. The type genome for the species is the GenBank assembly GCA_902802515.1. The GC content of the type genome is 47.36 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Cunabaria adfanousia sp. nov.

Candidatus Cunabaria adfanousia (NL. fem. n. *adfanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSP01 sp012842575*. The type genome for the species is the GenBank assembly GCA_012842575.1. The GC content of the type genome is 55.04 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Cunabaria gen. nov.

Candidatus Cunabaria (NL. fem. n. *Cunabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSP01*. The type species for the genus is *Candidatus* Cunabaria adfanousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cunabariaceae.

Description of *Candidatus* Cunabariaceae fam. nov.

Candidatus Cunabariaceae (NL. fem. n. *Cunabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUSP01.* The type genus for the taxon is *Candidatus* Cunabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cunabariales.

Description of *Candidatus* Cunabariales ord. nov.

Candidatus Cunabariales (NL. fem. n. *Cunabariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUSP01*. The type genus for the taxon is *Candidatus* Cunabaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Cunabella cenodigena sp. nov.

Candidatus Cunabella cenodigena (NL. fem. n. *cenodigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMUM01 sp903929005*. The type genome for the species is the GenBank assembly GCA_903929005.1. The GC content of the type genome is 52.57 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Cunabella gen. nov.

Candidatus Cunabella (NL. fem. n. *Cunabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMUM01*. The type species for the genus is *Candidatus* Cunabella cenodigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deneciaceae.

Description of *Candidatus* Cunabella viripitia sp. nov.

Candidatus Cunabella viripitia (NL. fem. n. *viripitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMUM01 sp903844685*. The type genome for the species is the GenBank assembly GCA_903844685.1. The GC content of the type genome is 53.14 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Cunabia defetentia sp. nov.

Candidatus Cunabia defetentia (NL. fem. n. *defetentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLKG01 sp007134735*. The type genome for the species is the GenBank assembly GCA_007134735.1. The GC content of the type genome is 58.11 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Cunabia gen. nov.

Candidatus Cunabia (NL. fem. n. *Cunabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLKG01*. The type species for the genus is *Candidatus* Cunabia defetentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reveculaceae.

Description of *Candidatus* Cunabida adtolibula sp. nov.

Candidatus Cunabida adtolibula (NL. fem. n. *adtolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DC0425bin3 sp002753665*. The type genome for the species is the GenBank assembly GCA_002753665.1. The GC content of the type genome is 65.4 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Cunabida gen. nov.

Candidatus Cunabida (NL. fem. n. *Cunabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DC0425bin3*. The type species for the genus is *Candidatus* Cunabida adtolibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DC0425bin3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cunabidaceae.

Description of *Candidatus* Cunabidaceae fam. nov.

Candidatus Cunabidaceae (NL. fem. n. *Cunabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DC0425bin3.* The type genus for the taxon is *Candidatus* Cunabida .

According to GTDB R06-RS202, this family belongs to the order *Magnetococcales*.

Description of *Candidatus* Cunabosa attelitura sp. nov.

Candidatus Cunabosa attelitura (NL. fem. n. *attelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp002172535*. The type genome for the species is the GenBank assembly GCA_002172535.2. The GC content of the type genome is 35.95 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Cunabosa gen. nov.

Candidatus Cunabosa (NL. fem. n. *Cunabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G82*. The type species for the genus is *Candidatus* Cunabosa attelitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Cunabosa cohuressa sp. nov.

Candidatus Cunabosa cohuressa (NL. fem. n. *cohuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp902601475*. The type genome for the species is the GenBank assembly GCA_011525285.1. The GC content of the type genome is 35.99 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Cunabosa curacicella sp. nov.

Candidatus Cunabosa curacicella (NL. fem. n. *curacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp902628925*. The type genome for the species is the GenBank assembly GCA_902628925.1. The GC content of the type genome is 35.76 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cunabosa omnipigena sp. nov.

Candidatus Cunabosa omnipigena (NL. fem. n. *omnipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp003331565*. The type genome for the species is the GenBank assembly GCA_003331565.1. The GC content of the type genome is 35.25 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Cunabosa remulifica sp. nov.

Candidatus Cunabosa remulifica (NL. fem. n. *remulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp902600705*. The type genome for the species is the GenBank assembly GCA_902544465.1. The GC content of the type genome is 33.9 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Cunabosa tolutimonas sp. nov.

Candidatus Cunabosa tolutimonas (NL. fem. n. *tolutimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp902623535*. The type genome for the species is the GenBank assembly GCA_902623535.1. The GC content of the type genome is 35.57 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Cunabosa venabifica sp. nov.

Candidatus Cunabosa venabifica (NL. fem. n. *venabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G82 sp902594515*. The type genome for the species is the GenBank assembly GCA_902594515.1. The GC content of the type genome is 35.8 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Cupriavidus amnigibula sp. nov.

Candidatus Cupriavidus amnigibula (NL. fem. n. *amnigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp000379565*. The type genome for the species is the GenBank assembly RS_GCF_000379565.1. The GC content of the type genome is 65.25 % and the genome length is 7.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Native forest; Artigas; Uruguay".

Description of *Candidatus* Cupriavidus attelimonas sp. nov.

Candidatus Cupriavidus attelimonas (NL. fem. n. *attelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp001725945*. The type genome for the species is the GenBank assembly GCA_001725945.1. The GC content of the type genome is 64.06 % and the genome length is 8.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "nodules".

Description of *Candidatus* Cupriavidus conarastra sp. nov.

Candidatus Cupriavidus conarastra (NL. fem. n. *conarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp000292345*. The type genome for the species is the GenBank assembly RS_GCF_000292345.1. The GC content of the type genome is 63.85 % and the genome length is 5.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Cupriavidus cosigatica sp. nov.

Candidatus Cupriavidus cosigatica (NL. fem. n. *cosigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp000426345*. The type genome for the species is the GenBank assembly RS_GCF_000426345.1. The GC content of the type genome is 65.48 % and the genome length is 7.58 Mbp.

Description of *Candidatus* Cupriavidus dicanitudo sp. nov.

Candidatus Cupriavidus dicanitudo (NL. fem. n. *dicanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp003402535*. The type genome for the species is the GenBank assembly RS_GCF_003402535.1. The GC content of the type genome is 65.34 % and the genome length is 8.98 Mbp.

Description of *Candidatus* Cupriavidus excucax sp. nov.

Candidatus Cupriavidus excucax (NL. fem. n. *excucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp900104095*. The type genome for the species is the GenBank assembly RS_GCF_900104095.1. The GC content of the type genome is 65.59 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Cupriavidus lenunitia sp. nov.

Candidatus Cupriavidus lenunitia (NL. fem. n. *lenunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp001652915*. The type genome for the species is the GenBank assembly RS_GCF_001652915.1. The GC content of the type genome is 64.95 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Cupriavidus ludibedo sp. nov.

Candidatus Cupriavidus ludibedo (NL. fem. n. *ludibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp900101625*. The type genome for the species is the GenBank assembly RS_GCF_900101625.1. The GC content of the type genome is 64.81 % and the genome length is 6.96 Mbp.

Description of *Candidatus* Cupriavidus mavorago sp. nov.

Candidatus Cupriavidus mavorago (NL. fem. n. *mavorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp004217045*. The type genome for the species is the GenBank assembly RS_GCF_004217045.1. The GC content of the type genome is 66.63 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Cupriavidus mutabifica sp. nov.

Candidatus Cupriavidus mutabifica (NL. fem. n. *mutabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp000812465*. The type genome for the species is the GenBank assembly RS_GCF_000812465.1. The GC content of the type genome is 64.58 % and the genome length is 7.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil near the ocean".

Description of *Candidatus* Cupriavidus refocentia sp. nov.

Candidatus Cupriavidus refocentia (NL. fem. n. *refocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp000955785*. The type genome for the species is the GenBank assembly RS_GCF_000611145.1. The GC content of the type genome is 65.02 % and the genome length is 7.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "PCB-contaminated tertiary lagoon sludge".

Description of *Candidatus* Cupriavidus resupentia sp. nov.

Candidatus Cupriavidus resupentia (NL. fem. n. *resupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp005503625*. The type genome for the species is the GenBank assembly RS_GCF_005503625.1. The GC content of the type genome is 63.05 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Cupriavidus volunitoga sp. nov.

Candidatus Cupriavidus volunitoga (NL. fem. n. *volunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cupriavidus sp013361545*. The type genome for the species is the GenBank assembly GCA_013362725.1. The GC content of the type genome is 68.03 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Curabana infelisca sp. nov.

Candidatus Curabana infelisca (NL. fem. n. *infelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4802 sp011332585*. The type genome for the species is the GenBank assembly GCA_011332585.1. The GC content of the type genome is 37.04 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Curabana gen. nov.

Candidatus Curabana (NL. fem. n. *Curabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4802*. The type species for the genus is *Candidatus* Curabana infelisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UB4802*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penicariaceae.

Description of *Candidatus* Curabanales ord. nov.

Candidatus Curabanales (NL. fem. n. *Curabanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4802.* The type genus for the taxon is *Candidatus* Curabana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4802*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Curabanae.

Description of *Candidatus* Curabanae class. nov.

Candidatus Curabanae (NL. fem. n. *c__Curabanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4802.* The type genus for the taxon is *Candidatus* Curabana .

According to GTDB R06-RS202, this class belongs to the phylum *Spirochaetota*.

Description of *Candidatus* Curabana siticitica sp. nov.

Candidatus Curabana siticitica (NL. fem. n. *siticitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4802 sp002328585*. The type genome for the species is the GenBank assembly GCA_002402695.1. The GC content of the type genome is 36.77 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Curabaria bucelousia sp. nov.

Candidatus Curabaria bucelousia (NL. fem. n. *bucelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZS01 sp013289545*. The type genome for the species is the GenBank assembly GCA_013289545.1. The GC content of the type genome is 37.93 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Curabaria gen. nov.

Candidatus Curabaria (NL. fem. n. *Curabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCZS01*. The type species for the genus is *Candidatus* Curabaria bucelousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABCZS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curabariaceae.

Description of *Candidatus* Curabariaceae fam. nov.

Candidatus Curabariaceae (NL. fem. n. *Curabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABCZS01*. The type genus for the taxon is *Candidatus* Curabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABCZS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curabariales.

Description of *Candidatus* Curabariales ord. nov.

Candidatus Curabariales (NL. fem. n. *Curabariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABCZS01*. The type genus for the taxon is *Candidatus* Curabaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Curabaria figilitia sp. nov.

Candidatus Curabaria figilitia (NL. fem. n. *figilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZS01 sp013289605*. The type genome for the species is the GenBank assembly GCA_013289605.1. The GC content of the type genome is 42.32 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Curabaria vaciligena sp. nov.

Candidatus Curabaria vaciligena (NL. fem. n. *vaciligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCZS01 sp013289085*. The type genome for the species is the GenBank assembly GCA_013289085.1. The GC content of the type genome is 38.12 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Curabella conipentia sp. nov.

Candidatus Curabella conipentia (NL. fem. n. *conipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2017 sp002335425*. The type genome for the species is the GenBank assembly GCA_002425055.1. The GC content of the type genome is 58.8 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Curabella gen. nov.

Candidatus Curabella (NL. fem. n. *Curabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2017*. The type species for the genus is *Candidatus* Curabella conipentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curabia ridibitio sp. nov.

Candidatus Curabia ridibitio (NL. fem. n. *ridibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002785045 sp002781185*. The type genome for the species is the GenBank assembly GCA_002781185.1. The GC content of the type genome is 38.45 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Curabia gen. nov.

Candidatus Curabia (NL. fem. n. *Curabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002785045*. The type species for the genus is *Candidatus* Curabia ridibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002785045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curabiaceae.

Description of *Candidatus* Curabiaceae fam. nov.

Candidatus Curabiaceae (NL. fem. n. *Curabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002785045.* The type genus for the taxon is *Candidatus* Curabia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Curabida adcubiforma sp. nov.

Candidatus Curabida adcubiforma (NL. fem. n. *adcubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp007117575*. The type genome for the species is the GenBank assembly GCA_007117575.1. The GC content of the type genome is 39.81 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Curabida gen. nov.

Candidatus Curabida (NL. fem. n. *Curabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB19*. The type species for the genus is *Candidatus* Curabida adcubiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Curabida alticibra sp. nov.

Candidatus Curabida alticibra (NL. fem. n. *alticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp001783565*. The type genome for the species is the GenBank assembly GCA_001783565.1. The GC content of the type genome is 41.86 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Curabida cisoratica sp. nov.

Candidatus Curabida cisoratica (NL. fem. n. *cisoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp001567365*. The type genome for the species is the GenBank assembly GCA_001567365.1. The GC content of the type genome is 37.88 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Curabida dececimonia sp. nov.

Candidatus Curabida dececimonia (NL. fem. n. *dececimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp002710785*. The type genome for the species is the GenBank assembly GCA_002331125.1. The GC content of the type genome is 52.4 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Curabida dicimifica sp. nov.

Candidatus Curabida dicimifica (NL. fem. n. *dicimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp002299465*. The type genome for the species is the GenBank assembly GCA_002299465.1. The GC content of the type genome is 45.38 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Curabida docibessa sp. nov.

Candidatus Curabida docibessa (NL. fem. n. *docibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp007116965*. The type genome for the species is the GenBank assembly GCA_007116965.1. The GC content of the type genome is 49.82 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Curabida encepitica sp. nov.

Candidatus Curabida encepitica (NL. fem. n. *encepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp009995385*. The type genome for the species is the GenBank assembly GCA_009995385.1. The GC content of the type genome is 43.4 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Curabida enharugo sp. nov.

Candidatus Curabida enharugo (NL. fem. n. *enharugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp903839715*. The type genome for the species is the GenBank assembly GCA_903839715.1. The GC content of the type genome is 43.35 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Curabida fecunetta sp. nov.

Candidatus Curabida fecunetta (NL. fem. n. *fecunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp001781415*. The type genome for the species is the GenBank assembly GCA_001781415.1. The GC content of the type genome is 45.09 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Curabida pavicastra sp. nov.

Candidatus Curabida pavicastra (NL. fem. n. *pavicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp002477545*. The type genome for the species is the GenBank assembly GCA_002477545.1. The GC content of the type genome is 42.05 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Curabida repuricella sp. nov.

Candidatus Curabida repuricella (NL. fem. n. *repuricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp002378195*. The type genome for the species is the GenBank

assembly GCA_002320355.1. The GC content of the type genome is 44.47 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Curabida troclitio sp. nov.

Candidatus Curabida troclitio (NL. fem. n. *troclitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp002377025*. The type genome for the species is the GenBank assembly GCA_002377025.1. The GC content of the type genome is 43.94 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Curabida vinacedo sp. nov.

Candidatus Curabida vinacedo (NL. fem. n. *vinacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB19 sp003245875*. The type genome for the species is the GenBank assembly GCA_003245875.1. The GC content of the type genome is 47.4 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Curabosa ducilivita sp. nov.

Candidatus Curabosa ducilivita (NL. fem. n. *ducilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp002371495*. The type genome for the species is the GenBank assembly GCA_002371495.1. The GC content of the type genome is 59.5 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Curabosa gen. nov.

Candidatus Curabosa (NL. fem. n. *Curabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9715*. The type species for the genus is *Candidatus* Curabosa ducilivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curabosa lenimilenta sp. nov.

Candidatus Curabosa lenimilenta (NL. fem. n. *lenimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp902788545*. The type genome for the species is the GenBank assembly GCA_902788545.1. The GC content of the type genome is 61.31 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Curabosa omnipedo sp. nov.

Candidatus Curabosa omnipedo (NL. fem. n. *omnipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp902781245*. The type genome for the species is the GenBank assembly GCA_902781245.1. The GC content of the type genome is 57.14 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Curabosa oppanatio sp. nov.

Candidatus Curabosa oppanatio (NL. fem. n. *oppanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp902796815*. The type genome for the species is the GenBank assembly GCA_902796815.1. The GC content of the type genome is 56.67 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Curabosa pedifibula sp. nov.

Candidatus Curabosa pedifibula (NL. fem. n. *pedifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp003452695*. The type genome for the species is the GenBank assembly GCA_003452695.1. The GC content of the type genome is 61.54 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Curabosa stercimonia sp. nov.

Candidatus Curabosa stercimonia (NL. fem. n. *stercimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp902764575*. The type genome for the species is the GenBank assembly GCA_902764575.1. The GC content of the type genome is 63.03 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Curabosa xenoditas sp. nov.

Candidatus Curabosa xenoditas (NL. fem. n. *xenoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9715 sp902779135*. The type genome for the species is the GenBank assembly GCA_902780685.1. The GC content of the type genome is 57.46 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Curabula recoritia sp. nov.

Candidatus Curabula recoritia (NL. fem. n. *recoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3747 sp002394025*. The type genome for the species is the GenBank assembly GCA_003520485.1. The GC content of the type genome is 46.41 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Curabula gen. nov.

Candidatus Curabula (NL. fem. n. *Curabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3747*. The type species for the genus is *Candidatus* Curabula recoritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curacana bulapilenta sp. nov.

Candidatus Curacana bulapilenta (NL. fem. n. *bulapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADDZG01 sp902812355*. The type genome for the species is the GenBank assembly RS_GCF_902812355.1. The GC content of the type genome is 70.69 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Curacana gen. nov.

Candidatus Curacana (NL. fem. n. *Curacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZG01*. The type species for the genus is *Candidatus* Curacana bulapilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADDZG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacanaceae.

Description of *Candidatus* Curacanaceae fam. nov.

Candidatus Curacanaceae (NL. fem. n. *Curacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADDZG01.* The type genus for the taxon is *Candidatus* Curacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADDZG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacanales.

Description of *Candidatus* Curacanales ord. nov.

Candidatus Curacanales (NL. fem. n. *Curacanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADDZG01.* The type genus for the taxon is *Candidatus* Curacana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bisacosae.

Description of *Candidatus* Curacaria cocodisca sp. nov.

Candidatus Curacaria cocodisca (NL. fem. n. *cocodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066495 sp902362365*. The type genome for the species is the GenBank assembly RS_GCF_902362365.1. The GC content of the type genome is 28.26 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Curacaria gen. nov.

Candidatus Curacaria (NL. fem. n. *Curacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-900066495*. The type species for the genus is *Candidatus* Curacaria cocodisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curacaria saburisca sp. nov.

Candidatus Curacaria saburisca (NL. fem. n. *saburisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066495 sp900545985*. The type genome for the species is the GenBank assembly GCA_900545985.1. The GC content of the type genome is 27.53 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Curacaria semapiforma sp. nov.

Candidatus Curacaria semapiforma (NL. fem. n. *semapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066495 sp900066495*. The type genome for the species is the GenBank assembly GCA_900604495.1. The GC content of the type genome is 27.72 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Curacella buxifica sp. nov.

Candidatus Curacella buxifica (NL. fem. n. *buxifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGW-17 sp002841905*. The type genome for the species is the GenBank assembly GCA_002841905.1. The GC content of the type genome is 64.97 %

and the genome length is 3.06 Mbp.

Description of *Candidatus* Curacella gen. nov.

Candidatus Curacella (NL. fem. n. *Curacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGW-17*. The type species for the genus is *Candidatus* Curacella buxifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacellaceae.

Description of *Candidatus* Curacellaceae fam. nov.

Candidatus Curacellaceae (NL. fem. n. *Curacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGW-17.* The type genus for the taxon is *Candidatus* Curacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *HGW-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacellales.

Description of *Candidatus* Curacellales ord. nov.

Candidatus Curacellales (NL. fem. n. *Curacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGW-17.* The type genus for the taxon is *Candidatus* Curacella .

According to the GTDB R06-RS202, this order belongs to the class *Polyangia*.

Description of *Candidatus* Curacella echogicula sp. nov.

Candidatus Curacella echogicula (NL. fem. n. *echogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGW-17 sp002841825*. The type genome for the species is the GenBank assembly GCA_002841825.1. The GC content of the type genome is 63.88 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Curacia homilivita sp. nov.

Candidatus Curacia homilivita (NL. fem. n. *homilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-66-41 sp002779825*. The type genome for the species is the GenBank assembly GCA_002779825.1. The GC content of the type genome is 66.09 % and the genome length is 8.29 Mbp.

Description of *Candidatus* Curacia gen. nov.

Candidatus Curacia (NL. fem. n. *Curacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-66-41*. The type species for the genus is *Candidatus* Curacia homilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-66-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curaciaceae.

Description of *Candidatus* Curaciaceae fam. nov.

Candidatus Curaciaceae (NL. fem. n. *Curaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-66-41.* The type genus for the taxon is *Candidatus* Curacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-59-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Verecellales.

Description of *Candidatus* Curacida illunitio sp. nov.

Candidatus Curacida illunitio (NL. fem. n. *illunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *54-19 sp902812345*. The type genome for the species is the GenBank assembly RS_GCF_902812345.1. The GC content of the type genome is 53.88 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Curacida gen. nov.

Candidatus Curacida (NL. fem. n. *Curacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *54-19*. The type species for the genus is *Candidatus* Curacida illunitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *54-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacidaceae.

Description of *Candidatus* Curacidaceae fam. nov.

Candidatus Curacidaceae (NL. fem. n. *Curacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *54-19.* The type genus for the taxon is *Candidatus* Curacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *54-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacidales.

Description of *Candidatus* Curacidales ord. nov.

Candidatus Curacidales (NL. fem. n. *Curacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *54-19.* The type genus for the taxon is *Candidatus* Curacida .

According to the GTDB R06-RS202, this order belongs to the class *Chloroflexia*.

Description of *Candidatus* Curacida mutabentia sp. nov.

Candidatus Curacida mutabentia (NL. fem. n. *mutabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *54-19 sp001898225*. The type genome for the species is the GenBank assembly GCA_001898225.1. The GC content of the type genome is 53.72 % and the genome length is 9.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Curacosa totidatica sp. nov.

Candidatus Curacosa totidatica (NL. fem. n. *totidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2169 sp002687895*. The type genome for the species is the GenBank assembly GCA_002434745.1. The GC content of the type genome is 39.28 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Curacosa gen. nov.

Candidatus Curacosa (NL. fem. n. *Curacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2169*. The type species for the genus is *Candidatus* Curacosa totidatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacosaceae.

Description of *Candidatus* Curacosaceae fam. nov.

Candidatus Curacosaceae (NL. fem. n. *Curacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2169.* The type genus for the taxon is *Candidatus* Curacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2169*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacosales.

Description of *Candidatus* Curacosales ord. nov.

Candidatus Curacosales (NL. fem. n. *Curacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2169.* The type genus for the taxon is *Candidatus* Curacosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Curacula deparifica sp. nov.

Candidatus Curacula deparifica (NL. fem. n. *deparifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED23 sp012960465*. The type genome for the species is the GenBank assembly GCA_012960465.1. The GC content of the type genome is 41.52 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Curacula gen. nov.

Candidatus Curacula (NL. fem. n. *Curacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED23*. The type species for the genus is *Candidatus* Curacula deparifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Curacula remuligena sp. nov.

Candidatus Curacula remuligena (NL. fem. n. *remuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED23 sp002168115*. The type genome for the species is the GenBank assembly GCA_002704405.1. The GC content of the type genome is 37.82 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Curotana cucuribula sp. nov.

Candidatus Curotana cucuribula (NL. fem. n. *cucuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYFD01 sp903925425*. The type genome for the species is the GenBank assembly GCA_903929255.1. The GC content of the type genome is 66.01 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Curotana gen. nov.

Candidatus Curotana (NL. fem. n. *Curotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYFD01*. The type species for the genus is *Candidatus* Curotana cucuribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curotana exsupilenta sp. nov.

Candidatus Curotana exsupilenta (NL. fem. n. *exsupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYFD01 sp900299415*. The type genome for the species is the GenBank assembly GCA_900299415.1. The GC content of the type genome is 67.21 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Curotaria fatificella sp. nov.

Candidatus Curotaria fatificella (NL. fem. n. *fatificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *70-18 sp001899585*. The type genome for the species is the GenBank assembly GCA_001899585.1. The GC content of the type genome is 70.07 % and the genome length is 5.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Curotaria gen. nov.

Candidatus Curotaria (NL. fem. n. *Curotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *70-18*. The type species for the genus is *Candidatus* Curotaria fatificella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curotella catocitrix sp. nov.

Candidatus Curotella catocitrix (NL. fem. n. *catocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-50-142 sp001871795*. The type genome for the species is the GenBank assembly GCA_002782845.1. The GC content of the type genome is 50.2 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Curotella gen. nov.

Candidatus Curotella (NL. fem. n. *Curotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-50-142*. The type species for the genus is *Candidatus* Curotella catocitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifidaceae.

Description of *Candidatus* Curotia inobsitoga sp. nov.

Candidatus Curotia inobsitoga (NL. fem. n. *inobsitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-140 sp003230085*. The type genome for the species is the GenBank assembly GCA_003230085.1. The GC content of the type genome is 48.01 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Curotia gen. nov.

Candidatus Curotia (NL. fem. n. *Curotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-140*. The type species for the genus is *Candidatus* Curotia inobsitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-140*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotiaceae.

Description of *Candidatus* Curotiaceae fam. nov.

Candidatus Curotiaceae (NL. fem. n. *Curotiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-140.* The type genus for the taxon is *Candidatus* Curotia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-140*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curotiales.

Description of *Candidatus* Curotiales ord. nov.

Candidatus Curotiales (NL. fem. n. *Curotiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-140.* The type genus for the taxon is *Candidatus* Curotia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Curotida ambecibra sp. nov.

Candidatus Curotida ambecibra (NL. fem. n. *ambecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp005789825*. The type genome for the species is the GenBank assembly GCA_005789825.1. The GC content of the type genome is 54.52 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Curotida gen. nov.

Candidatus Curotida (NL. fem. n. *Curotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINMN01*. The type species for the genus is *Candidatus* Curotida ambecibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Curotida apercitudo sp. nov.

Candidatus Curotida apercitudo (NL. fem. n. *apercitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009921465*. The type genome for the species is the GenBank assembly GCA_009921465.1. The GC content of the type genome is 56.52 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Curotida benemedo sp. nov.

Candidatus Curotida benemedo (NL. fem. n. *benemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903887325*. The type genome for the species is the GenBank assembly GCA_903860555.1. The GC content of the type genome is 55.41 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Curotida benemitura sp. nov.

Candidatus Curotida benemitura (NL. fem. n. *benemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903861115*. The type genome for the species is the GenBank assembly GCA_903920235.1. The GC content of the type genome is 51.89 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Curotida bigemimonia sp. nov.

Candidatus Curotida bigemimonia (NL. fem. n. *bigemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903865035*. The type genome for the species is the GenBank assembly GCA_903865035.1. The GC content of the type genome is 50.75 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Curotida catafilega sp. nov.

Candidatus Curotida catafilega (NL. fem. n. *catafilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009927495*. The type genome for the species is the GenBank assembly GCA_009921935.1. The GC content of the type genome is 53.0 %

and the genome length is 2.11 Mbp.

Description of *Candidatus* Curotida cimitigena sp. nov.

Candidatus Curotida cimitigena (NL. fem. n. *cimitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903864315*. The type genome for the species is the GenBank assembly GCA_903864315.1. The GC content of the type genome is 52.98 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Curotida citipibula sp. nov.

Candidatus Curotida citipibula (NL. fem. n. *citipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903828695*. The type genome for the species is the GenBank assembly GCA_903826115.1. The GC content of the type genome is 47.19 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Curotida colutastra sp. nov.

Candidatus Curotida colutastra (NL. fem. n. *colutastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903933115*. The type genome for the species is the GenBank assembly GCA_903896695.1. The GC content of the type genome is 52.25 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Curotida dapificella sp. nov.

Candidatus Curotida dapificella (NL. fem. n. *dapificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009919175*. The type genome for the species is the GenBank assembly GCA_009918305.1. The GC content of the type genome is 60.67 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Curotida dimadimonia sp. nov.

Candidatus Curotida dimadimonia (NL. fem. n. *dimadimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903850735*. The type genome for the species is the GenBank assembly GCA_903850735.1. The GC content of the type genome is 60.42 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Curotida doxoliforma sp. nov.

Candidatus Curotida doxoliforma (NL. fem. n. *doxoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903871545*. The type genome for the species is the GenBank assembly GCA_903871545.1. The GC content of the type genome is 45.19 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Curotida expanax sp. nov.

Candidatus Curotida expanax (NL. fem. n. *expanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009925585*. The type genome for the species is the GenBank assembly GCA_009925585.1. The GC content of the type genome is 54.51 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Curotida inhabastra sp. nov.

Candidatus Curotida inhabastra (NL. fem. n. *inhabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903876885*. The type genome for the species is the GenBank assembly GCA_903876885.1. The GC content of the type genome is 43.94 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Curotida intolisca sp. nov.

Candidatus Curotida intolisca (NL. fem. n. *intolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903831655*. The type genome for the species is the GenBank assembly GCA_903831655.1. The GC content of the type genome is 48.6 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Curotida lanugatica sp. nov.

Candidatus Curotida lanugatica (NL. fem. n. *lanugatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903830725*. The type genome for the species is the GenBank assembly GCA_903830725.1. The GC content of the type genome is 45.11 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Curotida notabugo sp. nov.

Candidatus Curotida notabugo (NL. fem. n. *notabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903842945*. The type genome for the species is the GenBank assembly GCA_903842945.1. The GC content of the type genome is 49.05 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Curotida pacifilega sp. nov.

Candidatus Curotida pacifilega (NL. fem. n. *pacifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903949285*. The type genome for the species is the GenBank assembly GCA_903829115.1. The GC content of the type genome is 46.86 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Curotida patibibula sp. nov.

Candidatus Curotida patibibula (NL. fem. n. *patibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903838355*. The type genome for the species is the GenBank assembly GCA_903880305.1. The GC content of the type genome is 53.94 %

and the genome length is 3.44 Mbp.

Description of *Candidatus* Curotida perexastra sp. nov.

Candidatus Curotida perexastra (NL. fem. n. *perexastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903844385*. The type genome for the species is the GenBank assembly GCA_903844385.1. The GC content of the type genome is 54.69 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Curotida perexivita sp. nov.

Candidatus Curotida perexivita (NL. fem. n. *perexivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903896615*. The type genome for the species is the GenBank assembly GCA_903896725.1. The GC content of the type genome is 44.43 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Curotida pinigitas sp. nov.

Candidatus Curotida pinigitas (NL. fem. n. *pinigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009927195*. The type genome for the species is the GenBank assembly GCA_009927195.1. The GC content of the type genome is 57.58 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Curotida repecibula sp. nov.

Candidatus Curotida repecibula (NL. fem. n. *repecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903887655*. The type genome for the species is the GenBank assembly GCA_903857475.1. The GC content of the type genome is 54.92 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Curotida rudecimonia sp. nov.

Candidatus Curotida rudecimonia (NL. fem. n. *rudecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009693305*. The type genome for the species is the GenBank assembly GCA_009693305.1. The GC content of the type genome is 46.75 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Curotida sotulitia sp. nov.

Candidatus Curotida sotulitia (NL. fem. n. *sotulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009921265*. The type genome for the species is the GenBank assembly GCA_009927155.1. The GC content of the type genome is 45.97 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Curotida sugiletta sp. nov.

Candidatus Curotida sugiletta (NL. fem. n. *sugiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903956845*. The type genome for the species is the GenBank assembly GCA_903956845.1. The GC content of the type genome is 57.03 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Curotida tegumitudo sp. nov.

Candidatus Curotida tegumitudo (NL. fem. n. *tegumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp013205525*. The type genome for the species is the GenBank assembly GCA_013205525.1. The GC content of the type genome is 54.02 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Curotida tenilitrix sp. nov.

Candidatus Curotida tenilitrix (NL. fem. n. *tenilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009923505*. The type genome for the species is the GenBank assembly GCA_009923505.1. The GC content of the type genome is 60.92 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Curotida virecibra sp. nov.

Candidatus Curotida virecibra (NL. fem. n. *virecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp009693225*. The type genome for the species is the GenBank assembly GCA_009693225.1. The GC content of the type genome is 56.92 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Curotida vocifastra sp. nov.

Candidatus Curotida vocifastra (NL. fem. n. *vocifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMN01 sp903910745*. The type genome for the species is the GenBank assembly GCA_903859985.1. The GC content of the type genome is 43.23 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Curotula lavabibra sp. nov.

Candidatus Curotula lavabibra (NL. fem. n. *lavabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6264 sp002452615*. The type genome for the species is the GenBank assembly GCA_002452615.1. The GC content of the type genome is 32.08 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Curotula gen. nov.

Candidatus Curotula (NL. fem. n. *Curotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6264*. The type species for the genus is *Candidatus* Curotula lavabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6264*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotulaceae.

Description of *Candidatus* Curotulaceae fam. nov.

Candidatus Curotulaceae (NL. fem. n. *Curotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6264.* The type genus for the taxon is *Candidatus* Curotula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2591*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peribosales.

Description of *Candidatus* Curtobacterium abnocago sp. nov.

Candidatus Curtobacterium abnocago (NL. fem. n. *abnocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003989515*. The type genome for the species is the GenBank assembly RS_GCF_003989515.1. The GC content of the type genome is 71.55 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Curtobacterium abverastra sp. nov.

Candidatus Curtobacterium abverastra (NL. fem. n. *abverastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001865065*. The type genome for the species is the GenBank assembly RS_GCF_001865065.1. The GC content of the type genome is 71.18 % and the genome length is 4.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium annicitudo sp. nov.

Candidatus Curtobacterium annicitudo (NL. fem. n. *annicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Curtobacterium sp000772085*. The type genome for the species is the GenBank assembly RS_GCF_000772085.1. The GC content of the type genome is 71.95 % and the genome length is 3.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Curtobacterium carunimonia sp. nov.

Candidatus Curtobacterium carunimonia (NL. fem. n. *carunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp900086645*. The type genome for the species is the GenBank assembly GCA_900086645.1. The GC content of the type genome is 70.57 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Curtobacterium curacitio sp. nov.

Candidatus Curtobacterium curacitio (NL. fem. n. *curacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001422205*. The type genome for the species is the GenBank assembly RS_GCF_001422205.1. The GC content of the type genome is 70.54 % and the genome length is 3.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Curtobacterium defetitas sp. nov.

Candidatus Curtobacterium defetitas (NL. fem. n. *defetitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003755065*. The type genome for the species is the GenBank assembly RS_GCF_003755065.1. The GC content of the type genome is 70.95 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Curtobacterium detumitudo sp. nov.

Candidatus Curtobacterium detumitudo (NL. fem. n. *detumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234265*. The type genome for the species is the GenBank assembly RS_GCF_003234265.1. The GC content of the type genome is 71.32

% and the genome length is 3.31 Mbp.

Description of *Candidatus* Curtobacterium extinibra sp. nov.

Candidatus Curtobacterium extinibra (NL. fem. n. *extinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003752025*. The type genome for the species is the GenBank assembly RS_GCF_003752025.1. The GC content of the type genome is 70.94 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Curtobacterium faticitrix sp. nov.

Candidatus Curtobacterium faticitrix (NL. fem. n. *faticitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001864835*. The type genome for the species is the GenBank assembly RS_GCF_001864835.1. The GC content of the type genome is 71.09 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium fibicousia sp. nov.

Candidatus Curtobacterium fibicousia (NL. fem. n. *fibicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003224335*. The type genome for the species is the GenBank assembly RS_GCF_003224375.1. The GC content of the type genome is 71.72 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Curtobacterium illibousia sp. nov.

Candidatus Curtobacterium illibousia (NL. fem. n. *illibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234115*. The type genome for the species is the GenBank assembly RS_GCF_003234115.1. The GC content of the type genome is 71.09 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Curtobacterium inrelatica sp. nov.

Candidatus Curtobacterium inrelatica (NL. fem. n. *inrelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234795*. The type genome for the species is the GenBank assembly RS_GCF_003234795.1. The GC content of the type genome is 71.04 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Curtobacterium lenimessa sp. nov.

Candidatus Curtobacterium lenimessa (NL. fem. n. *lenimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp007673775*. The type genome for the species is the GenBank assembly RS_GCF_007673775.1. The GC content of the type genome is 71.35 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Curtobacterium lenimibra sp. nov.

Candidatus Curtobacterium lenimibra (NL. fem. n. *lenimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001742745*. The type genome for the species is the GenBank assembly RS_GCF_001742745.1. The GC content of the type genome is 72.21 % and the genome length is 3.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "endophytic".

Description of *Candidatus* Curtobacterium ludibitio sp. nov.

Candidatus Curtobacterium ludibitio (NL. fem. n. *ludibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234855*. The type genome for the species is the GenBank assembly RS_GCF_003234855.1. The GC content of the type genome is 71.76 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Curtobacterium melopicula sp. nov.

Candidatus Curtobacterium melopicula (NL. fem. n. *melopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp900101675*. The type genome for the species is the GenBank assembly RS_GCF_900101675.1. The GC content of the type genome is 71.15 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Curtobacterium monocicella sp. nov.

Candidatus Curtobacterium monocicella (NL. fem. n. *monocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001705035*. The type genome for the species is the GenBank assembly RS_GCF_001864935.1. The GC content of the type genome is 72.26 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium mutabivita sp. nov.

Candidatus Curtobacterium mutabivita (NL. fem. n. *mutabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234365*. The type genome for the species is the GenBank assembly RS_GCF_003751685.1. The GC content of the type genome is 70.63 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Curtobacterium nivomedo sp. nov.

Candidatus Curtobacterium nivomedo (NL. fem. n. *nivomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234185*. The type genome for the species is the GenBank assembly RS_GCF_003234185.1. The GC content of the type genome is 71.75 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Curtobacterium octobitio sp. nov.

Candidatus Curtobacterium octobitio (NL. fem. n. *octobitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp002412165*. The type genome for the species is the

GenBank assembly RS_GCF_002412165.1. The GC content of the type genome is 71.58 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Curtobacterium pimenicula sp. nov.

Candidatus Curtobacterium pimenicula (NL. fem. n. *pimenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234565*. The type genome for the species is the GenBank assembly RS_GCF_003234555.1. The GC content of the type genome is 71.78 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Curtobacterium remulimonas sp. nov.

Candidatus Curtobacterium remulimonas (NL. fem. n. *remulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001865015*. The type genome for the species is the GenBank assembly RS_GCF_001865015.1. The GC content of the type genome is 71.3 % and the genome length is 3.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium resupatica sp. nov.

Candidatus Curtobacterium resupatica (NL. fem. n. *resupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234085*. The type genome for the species is the GenBank assembly RS_GCF_003234035.1. The GC content of the type genome is 70.89 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Curtobacterium revuliforma sp. nov.

Candidatus Curtobacterium revuliforma (NL. fem. n. *revuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001864895*. The type genome for the species is the GenBank assembly RS_GCF_001864845.1. The GC content of the type genome is 72.0 % and the genome length is 3.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium rorifago sp. nov.

Candidatus Curtobacterium rorifago (NL. fem. n. *rorifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001424385*. The type genome for the species is the GenBank assembly RS_GCF_001424385.1. The GC content of the type genome is 71.28 % and the genome length is 3.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Curtobacterium selecibula sp. nov.

Candidatus Curtobacterium selecibula (NL. fem. n. *selecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003234175*. The type genome for the species is the GenBank assembly RS_GCF_003234175.1. The GC content of the type genome is 71.69 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Curtobacterium siligentia sp. nov.

Candidatus Curtobacterium siligentia (NL. fem. n. *siligentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp001806325*. The type genome for the species is the GenBank assembly RS_GCF_001865095.1. The GC content of the type genome is 71.45 % and the genome length is 3.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Leaf Litter".

Description of *Candidatus* Curtobacterium valefentia sp. nov.

Candidatus Curtobacterium valefentia (NL. fem. n. *valefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp000333375*. The type genome for the species is the GenBank assembly RS_GCF_000333375.1. The GC content of the type genome is 71.44 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Curtobacterium vocamilenta sp. nov.

Candidatus Curtobacterium vocamilenta (NL. fem. n. *vocamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curtobacterium sp003762905*. The type genome for the species is the GenBank assembly RS_GCF_003755165.1. The GC content of the type genome is 70.85 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Curvibacter macilousia sp. nov.

Candidatus Curvibacter macilousia (NL. fem. n. *macilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curvibacter sp903834975*. The type genome for the species is the GenBank assembly GCA_903834975.1. The GC content of the type genome is 56.72 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Curvibacter menapicula sp. nov.

Candidatus Curvibacter menapicula (NL. fem. n. *menapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curvibacter sp903902035*. The type genome for the species is the GenBank assembly GCA_903945445.1. The GC content of the type genome is 59.31 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Curvibacter nehalessa sp. nov.

Candidatus Curvibacter nehalessa (NL. fem. n. *nehalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curvibacter sp003987795*. The type genome for the species is the GenBank assembly GCA_003987795.1. The GC content of the type genome is 64.51 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Curvibacter viginax sp. nov.

Candidatus Curvibacter viginax (NL. fem. n. *viginax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Curvibacter sp903828535*. The type genome for the species is the GenBank assembly GCA_903868085.1. The GC content of the type genome is 56.75 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cutibacterium asporigena sp. nov.

Candidatus Cutibacterium asporigena (NL. fem. n. *asporigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cutibacterium sp009696315*. The type genome for the species is the GenBank assembly RS_GCF_009696315.1. The GC content of the type genome is 59.32 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Cuticana parocitio sp. nov.

Candidatus Cuticana parocitio (NL. fem. n. *parocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002780085 sp002791435*. The type genome for the species is the GenBank assembly GCA_002780085.1. The GC content of the type genome is 42.29 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Cuticana gen. nov.

Candidatus Cuticana (NL. fem. n. *Cuticana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002780085*. The type species for the genus is *Candidatus* Cuticana parocitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002780085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticanaceae.

Description of *Candidatus* Cuticanaceae fam. nov.

Candidatus Cuticanaceae (NL. fem. n. *Cuticanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GCA-002780085.* The type genus for the taxon is *Candidatus* Cuticana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CPR3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tolutellales.

Description of *Candidatus* Cuticaria arcatentia sp. nov.

Candidatus Cuticaria arcatentia (NL. fem. n. *arcatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10450 sp003219995*. The type genome for the species is the GenBank assembly GCA_003219995.1. The GC content of the type genome is 55.32 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Cuticaria gen. nov.

Candidatus Cuticaria (NL. fem. n. *Cuticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10450*. The type species for the genus is *Candidatus* Cuticaria arcatentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Cuticariaceae fam. nov.

Candidatus Cuticariaceae (NL. fem. n. *Cuticariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10450.* The type genus for the taxon is *Candidatus* Cuticaria .

According to GTDB R06-RS202, this family belongs to the order *Chthoniobacterales*.

Description of *Candidatus* Cuticaria recogetta sp. nov.

Candidatus Cuticaria recogetta (NL. fem. n. *recogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10450 sp003219195*. The type genome for the species is the GenBank assembly GCA_003221255.1. The GC content of the type genome is 55.7 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Cuticaria tomogentia sp. nov.

Candidatus Cuticaria tomogentia (NL. fem. n. *tomogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10450 sp003445855*. The type genome for the species is the GenBank assembly GCA_003445855.1. The GC content of the type genome is 55.85 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Cuticella repuressa sp. nov.

Candidatus Cuticella repuressa (NL. fem. n. *repuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-39-14 sp000996245*. The type genome for the species is the GenBank assembly GCA_000993485.1. The GC content of the type genome is 39.22 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Cuticella gen. nov.

Candidatus Cuticella (NL. fem. n. *Cuticella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-39-14*. The type species for the genus is *Candidatus* Cuticella repuressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenanaceae.

Description of *Candidatus* Cuticia oblanitica sp. nov.

Candidatus Cuticia oblanitica (NL. fem. n. *oblanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACMRI01 sp014376525*. The type genome for the species is the GenBank assembly GCA_014376525.1. The GC content of the type genome is 35.38 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Cuticia gen. nov.

Candidatus Cuticia (NL. fem. n. *Cuticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMRI01*. The type species for the genus is *Candidatus* Cuticia oblanitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMRI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticiaceae.

Description of *Candidatus* Cuticiaceae fam. nov.

Candidatus Cuticiaceae (NL. fem. n. *Cuticiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMRI01.* The type genus for the taxon is *Candidatus* Cuticia .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Cuticida casigitrix sp. nov.

Candidatus Cuticida casigitrix (NL. fem. n. *casigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-47 sp003231925*. The type genome for the species is the GenBank assembly GCA_003231925.1. The GC content of the type genome is 38.13 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Cuticida gen. nov.

Candidatus Cuticida (NL. fem. n. *Cuticida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-47*. The type species for the genus is *Candidatus* Cuticida

casigitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticidaceae.

Description of *Candidatus* Cuticidaceae fam. nov.

Candidatus Cuticidaceae (NL. fem. n. *Cuticidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-47.* The type genus for the taxon is *Candidatus* Cuticida .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Cuticosa bicodetta sp. nov.

Candidatus Cuticosa bicodetta (NL. fem. n. *bicodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-33-10 sp001788835*. The type genome for the species is the GenBank assembly GCA_000989585.1. The GC content of the type genome is 33.15 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Cuticosa gen. nov.

Candidatus Cuticosa (NL. fem. n. *Cuticosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-33-10*. The type species for the genus is *Candidatus* Cuticosa bicodetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-33-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticosaceae.

Description of *Candidatus* Cuticosaceae fam. nov.

Candidatus Cuticosaceae (NL. fem. n. *Cuticosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GWF2-33-10.* The type genus for the taxon is *Candidatus* Cuticosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Cyanobacterium acistugo sp. nov.

Candidatus Cyanobacterium acistugo (NL. fem. n. *acistugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobacterium sp003566215*. The type genome for the species is the GenBank assembly GCA_003566215.1. The GC content of the type genome is 36.01 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Cyanobacterium cicatitudo sp. nov.

Candidatus Cyanobacterium cicatitudo (NL. fem. n. *cicatitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobacterium sp002813895*. The type genome for the species is the GenBank assembly GCA_002813895.1. The GC content of the type genome is 37.66 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Cyanobium alsisifica sp. nov.

Candidatus Cyanobium alsisifica (NL. fem. n. *alsisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp002252675*. The type genome for the species is the GenBank assembly RS_GCF_002252675.1. The GC content of the type genome is 69.16 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Cyanobium celumigena sp. nov.

Candidatus Cyanobium celumigena (NL. fem. n. *celumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903935205*. The type genome for the species is the

GenBank assembly GCA_903935205.1. The GC content of the type genome is 66.84 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Cyanobium cepulastra sp. nov.

Candidatus Cyanobium cepulastra (NL. fem. n. *cepulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903823115*. The type genome for the species is the GenBank assembly GCA_903823115.1. The GC content of the type genome is 65.32 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Cyanobium ceracax sp. nov.

Candidatus Cyanobium ceracax (NL. fem. n. *ceracax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903882285*. The type genome for the species is the GenBank assembly GCA_903882285.1. The GC content of the type genome is 68.67 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Cyanobium cunabivita sp. nov.

Candidatus Cyanobium cunabivita (NL. fem. n. *cunabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903907855*. The type genome for the species is the GenBank assembly GCA_903907855.1. The GC content of the type genome is 68.9 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Cyanobium demulicella sp. nov.

Candidatus Cyanobium demulicella (NL. fem. n. *demulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903934745*. The type genome for the species is the GenBank assembly GCA_903934745.1. The GC content of the type genome is 65.7 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Cyanobium domicugo sp. nov.

Candidatus Cyanobium domicugo (NL. fem. n. *domicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903831165*. The type genome for the species is the GenBank assembly GCA_903845285.1. The GC content of the type genome is 66.43 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Cyanobium lapilimonia sp. nov.

Candidatus Cyanobium lapilimonia (NL. fem. n. *lapilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp014191755*. The type genome for the species is the GenBank assembly GCA_014191755.1. The GC content of the type genome is 65.85 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Cyanobium turibitica sp. nov.

Candidatus Cyanobium turibitica (NL. fem. n. *turibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903856805*. The type genome for the species is the GenBank assembly GCA_903928665.1. The GC content of the type genome is 65.0 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Cyanobium utrolilega sp. nov.

Candidatus Cyanobium utrolilega (NL. fem. n. *utrolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp000708525*. The type genome for the species is the GenBank assembly GCA_000708525.1. The GC content of the type genome is 68.56 % and the genome length is 3.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "5 liters of water from the Tucurui Power Plant Reservoir; point M5 collected 50cm beneath the lake surface; then filtered by negative pressure for posterior culture in BG-11 medium".

Description of *Candidatus* Cyanobium venucugo sp. nov.

Candidatus Cyanobium venucugo (NL. fem. n. *venucugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903917565*. The type genome for the species is the GenBank assembly GCA_903853865.1. The GC content of the type genome is 67.67 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Cyanobium vilititas sp. nov.

Candidatus Cyanobium vilititas (NL. fem. n. *vilititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium sp903858015*. The type genome for the species is the GenBank assembly GCA_903858015.1. The GC content of the type genome is 64.31 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Cyanobium hexapilega sp. nov.

Candidatus Cyanobium hexapilega (NL. fem. n. *hexapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium_A sp002252665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002252665.1. The GC content of the type genome is 65.83 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Cyanobium incenitia sp. nov.

Candidatus Cyanobium incenitia (NL. fem. n. *incenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium_A sp903928835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903928835.1. The GC content of the type genome is 62.96 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Cyanobium indupago sp. nov.

Candidatus Cyanobium indupago (NL. fem. n. *indupago* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanobium_A sp013205255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013205255.1. The GC content of the type genome is 64.56 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Cyanothece defetitoga sp. nov.

Candidatus Cyanothece defetitoga (NL. fem. n. *defetitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyanothece sp000022045*. The type genome for the species is the GenBank assembly RS_GCF_000022045.1. The GC content of the type genome is 50.65 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Cybelea pinacigena sp. nov.

Candidatus Cybelea pinacigena (NL. fem. n. *pinacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cybelea sp013289785*. The type genome for the species is the GenBank assembly GCA_013289785.1. The GC content of the type genome is 62.82 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Cyclobacterium adnulitica sp. nov.

Candidatus Cyclobacterium adnulitica (NL. fem. n. *adnulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyclobacterium sp010993705*. The type genome for the species is the GenBank assembly RS_GCF_010993705.1. The GC content of the type genome is 43.73 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Cyclobacterium didacicella sp. nov.

Candidatus Cyclobacterium didacicella (NL. fem. n. *didacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyclobacterium sp010119245*. The type genome for the species is the GenBank assembly RS_GCF_010119245.1. The GC content of the type genome is 44.87 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Cyclobacterium purulessa sp. nov.

Candidatus Cyclobacterium purulessa (NL. fem. n. *purulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyclobacterium sp010119225*. The type genome for the species is the GenBank assembly RS_GCF_010119225.1. The GC content of the type genome is 44.98 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Cycloclasticus abnoritio sp. nov.

Candidatus Cycloclasticus abnoritio (NL. fem. n. *abnoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002401365*. The type genome for the species is the GenBank assembly GCA_002401365.1. The GC content of the type genome is 41.64 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Cycloclasticus adgenitoga sp. nov.

Candidatus Cycloclasticus adgenitoga (NL. fem. n. *adgenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp012960055*. The type genome for the species is the GenBank assembly GCA_012960055.1. The GC content of the type genome is 44.51 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Cycloclasticus adperessa sp. nov.

Candidatus Cycloclasticus adperessa (NL. fem. n. *adperessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002162705*. The type genome for the species is the GenBank assembly GCA_002162705.1. The GC content of the type genome is 43.58 %

and the genome length is 1.8 Mbp.

Description of *Candidatus* Cycloclasticus cerucilenta sp. nov.

Candidatus Cycloclasticus cerucilenta (NL. fem. n. *cerucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002292375*. The type genome for the species is the GenBank assembly GCA_002292375.1. The GC content of the type genome is 44.76 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Cycloclasticus domipigena sp. nov.

Candidatus Cycloclasticus domipigena (NL. fem. n. *domipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002733135*. The type genome for the species is the GenBank assembly GCA_002733135.1. The GC content of the type genome is 42.22 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Cycloclasticus eccilago sp. nov.

Candidatus Cycloclasticus eccilago (NL. fem. n. *eccilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp001566825*. The type genome for the species is the GenBank assembly GCA_001566825.1. The GC content of the type genome is 42.36 % and the genome length is 1.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water sample from Deepwater horizon oil spill sea surface treated with treated with phenanthrene in a stable-isotope probing (SIP) experiment".

Description of *Candidatus* Cycloclasticus encolitica sp. nov.

Candidatus Cycloclasticus encolitica (NL. fem. n. *encolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002101225*. The type genome for the species is the GenBank assembly GCA_002101225.1. The GC content of the type genome is 43.72 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Cycloclasticus hibisugo sp. nov.

Candidatus Cycloclasticus hibisugo (NL. fem. n. *hibisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002162695*. The type genome for the species is the GenBank assembly GCA_002163215.1. The GC content of the type genome is 46.37 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Cycloclasticus lavacetta sp. nov.

Candidatus Cycloclasticus lavacetta (NL. fem. n. *lavacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002700385*. The type genome for the species is the GenBank assembly GCA_002700385.1. The GC content of the type genome is 43.4 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Cycloclasticus peradatica sp. nov.

Candidatus Cycloclasticus peradatica (NL. fem. n. *peradatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp012959695*. The type genome for the species is the GenBank assembly GCA_012959695.1. The GC content of the type genome is 43.4 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Cycloclasticus peradicella sp. nov.

Candidatus Cycloclasticus peradicella (NL. fem. n. *peradicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002101205*. The type genome for the species is the GenBank assembly GCA_002101205.1. The GC content of the type genome is 42.74 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Cycloclasticus tibicicula sp. nov.

Candidatus Cycloclasticus tibicicula (NL. fem. n. *tibicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cycloclasticus sp002101235*. The type genome for the species is the GenBank assembly GCA_002101235.1. The GC content of the type genome is 42.21 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Cyclonatronum homicilenta sp. nov.

Candidatus Cyclonatronum homicilenta (NL. fem. n. *homicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyclonatronum sp003566395*. The type genome for the species is the GenBank assembly GCA_003566395.1. The GC content of the type genome is 48.92 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Cyclonatronum xenopastra sp. nov.

Candidatus Cyclonatronum xenopastra (NL. fem. n. *xenopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cyclonatronum sp003555145*. The type genome for the species is the GenBank assembly GCA_003567795.1. The GC content of the type genome is 47.27 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Cylindrospermum triclibra sp. nov.

Candidatus Cylindrospermum triclibra (NL. fem. n. *triclibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cylindrospermum sp003994795*. The type genome for the species is the GenBank assembly GCA_003994795.1. The GC content of the type genome is 42.02 % and the genome length is 7.7 Mbp.

Description of *Candidatus* Cypionkella catocisca sp. nov.

Candidatus Cypionkella catocisca (NL. fem. n. *catocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Cypionkella sp001828855*. The type genome for the species is the GenBank assembly GCA_001828855.1. The GC content of the type genome is 62.11 % and the genome length is 4.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Cypionkella culibilega sp. nov.

Candidatus Cypionkella culibilega (NL. fem. n. *culibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cypionkella sp009773375*. The type genome for the species is the GenBank assembly GCA_009773375.1. The GC content of the type genome is 62.43 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Cypionkella ermelugo sp. nov.

Candidatus Cypionkella ermelugo (NL. fem. n. *ermelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cypionkella sp002256245*. The type genome for the species is the GenBank assembly GCA_002256245.1. The GC content of the type genome is 61.8 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Cysteiniphilum illepitrix sp. nov.

Candidatus Cysteiniphilum illepitrix (NL. fem. n. *illepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cysteiniphilum sp008711525*. The type genome for the species is the GenBank assembly RS_GCF_008711525.1. The GC content of the type genome is 38.75 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Cysteiniphilum peracedo sp. nov.

Candidatus Cysteiniphilum peracedo (NL. fem. n. *peracedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cysteiniphilum sp003574425*. The type genome for the species is the GenBank assembly RS_GCF_003574425.1. The GC content of the type genome is 37.59

% and the genome length is 2.44 Mbp.

Description of *Candidatus* Cytobacillus altipax sp. nov.

Candidatus Cytobacillus altipax (NL. fem. n. *altipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cytobacillus sp009849585*. The type genome for the species is the GenBank assembly RS_GCF_009849585.1. The GC content of the type genome is 41.17 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Cytobacillus bisacimonia sp. nov.

Candidatus Cytobacillus bisacimonia (NL. fem. n. *bisacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cytobacillus sp000518885*. The type genome for the species is the GenBank assembly RS_GCF_000518885.1. The GC content of the type genome is 40.63 % and the genome length is 5.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Cytobacillus denicax sp. nov.

Candidatus Cytobacillus denicax (NL. fem. n. *denicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cytobacillus sp001509555*. The type genome for the species is the GenBank assembly RS_GCF_001509555.1. The GC content of the type genome is 38.28 % and the genome length is 4.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Cytobacillus epogdigena sp. nov.

Candidatus Cytobacillus epogdigena (NL. fem. n. *epogdigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cytobacillus sp001956215*. The type genome for the species is the GenBank assembly RS_GCF_001956215.1. The GC content of the type genome is 41.96 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Cytobacillus opercisca sp. nov.

Candidatus Cytobacillus opercisca (NL. fem. n. *opercisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Cytobacillus sp002272225*. The type genome for the species is the GenBank assembly RS_GCF_002272225.1. The GC content of the type genome is 42.02 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Daducana deforitia sp. nov.

Candidatus Daducana deforitia (NL. fem. n. *deforitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSZL01 sp011367125*. The type genome for the species is the GenBank assembly GCA_011364045.1. The GC content of the type genome is 51.31 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Daducana gen. nov.

Candidatus Daducana (NL. fem. n. *Daducana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSZL01*. The type species for the genus is *Candidatus* Daducana deforitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B13-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panifiaceae.

Description of *Candidatus* Daducaria benemilenta sp. nov.

Candidatus Daducaria benemilenta (NL. fem. n. *benemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-119 sp007117675*. The type genome for the species is the GenBank assembly GCA_007117675.1. The GC content of the type genome is 37.41 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Daducaria gen. nov.

Candidatus Daducaria (NL. fem. n. *Daducaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-119*. The type species for the genus is *Candidatus* Daducaria benemilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSBR16-119*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Daducariaceae.

Description of *Candidatus* Daducariaceae fam. nov.

Candidatus Daducariaceae (NL. fem. n. *Daducariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSBR16-119.* The type genus for the taxon is *Candidatus* Daducaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Daducella culibentia sp. nov.

Candidatus Daducella culibentia (NL. fem. n. *culibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp000435055*. The type genome for the species is the GenBank assembly GCA_008667735.1. The GC content of the type genome is 49.37 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Daducella gen. nov.

Candidatus Daducella (NL. fem. n. *Daducella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PeH17*. The type species for the genus is *Candidatus* Daducella culibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Daducella delucitura sp. nov.

Candidatus Daducella delucitura (NL. fem. n. *delucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp900542285*. The type genome for the species is the GenBank assembly GCA_004557415.1. The GC content of the type genome is 49.85 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Daducella depecilega sp. nov.

Candidatus Daducella depecilega (NL. fem. n. *depecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp004556165*. The type genome for the species is the GenBank assembly GCA_004563475.1. The GC content of the type genome is 50.73 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Daducella depicedo sp. nov.

Candidatus Daducella depicedo (NL. fem. n. *depicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp002309375*. The type genome for the species is the GenBank assembly GCA_002309375.1. The GC content of the type genome is 56.43 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Daducella insurimonas sp. nov.

Candidatus Daducella insurimonas (NL. fem. n. *insurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp001940845*. The type genome for the species is the GenBank assembly GCA_001940845.1. The GC content of the type genome is 46.21 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Daducella xeropatio sp. nov.

Candidatus Daducella xeropatio (NL. fem. n. *xeropatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PeH17 sp902794055*. The type genome for the species is the GenBank assembly GCA_902794055.1. The GC content of the type genome is 52.9 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Daducia nivomimonia sp. nov.

Candidatus Daducia nivomimonia (NL. fem. n. *nivomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2365 sp002344345*. The type genome for the species is the GenBank assembly GCA_002344345.1. The GC content of the type genome is 39.12 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Daducia gen. nov.

Candidatus Daducia (NL. fem. n. *Daducia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2365*. The type species for the genus is *Candidatus* Daducia nivomimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Daducida adtubilenta sp. nov.

Candidatus Daducida adtubilenta (NL. fem. n. *adtubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFLK01 sp009885085*. The type genome for the species is the GenBank assembly GCA_009885085.1. The GC content of the type genome is 34.44 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Daducida gen. nov.

Candidatus Daducida (NL. fem. n. *Daducida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *VFLK01*. The type species for the genus is *Candidatus* Daducida adtubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Daducida bonitago sp. nov.

Candidatus Daducida bonitago (NL. fem. n. *bonitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFLK01 sp002783105*. The type genome for the species is the GenBank assembly GCA_009992315.1. The GC content of the type genome is 34.04 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Daducosa famelentia sp. nov.

Candidatus Daducosa famelentia (NL. fem. n. *famelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBW01 sp009784345*. The type genome for the species is the GenBank assembly GCA_009784345.1. The GC content of the type genome is 53.31 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Daducosa gen. nov.

Candidatus Daducosa (NL. fem. n. *Daducosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBW01*. The type species for the genus is *Candidatus* Daducosa famelentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQUG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecidaceae.

Description of *Candidatus* Daducosa giganitrix sp. nov.

Candidatus Daducosa giganitrix (NL. fem. n. *giganitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBW01 sp009785705*. The type genome for the species is the GenBank assembly GCA_009785705.1. The GC content of the type genome is 46.9 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Daducosa maxilitia sp. nov.

Candidatus Daducosa maxilitia (NL. fem. n. *maxilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBW01 sp009779855*. The type genome for the species is the GenBank assembly GCA_009779855.1. The GC content of the type genome is 46.74 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Daducula defesicula sp. nov.

Candidatus Daducula defesicula (NL. fem. n. *defesicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-43-63 sp001769275*. The type genome for the species is the GenBank assembly GCA_001769115.1. The GC content of the type genome is 42.62 % and the genome length is 3.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m depth; 0.2 filter".

Description of *Candidatus* Daducula gen. nov.

Candidatus Daducula (NL. fem. n. *Daducula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-43-63*. The type species for the genus is *Candidatus* Daducula defesicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domipanaceae.

Description of *Candidatus* Daducula masocibula sp. nov.

Candidatus Daducula masocibula (NL. fem. n. *masocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-43-63 sp012520175*. The type genome for the species is the GenBank assembly GCA_012520175.1. The GC content of the type genome is 32.54 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Daducula ocissibra sp. nov.

Candidatus Daducula ocissibra (NL. fem. n. *ocissibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-43-63 sp002842495*. The type genome for the species is the GenBank assembly GCA_002842495.1. The GC content of the type genome is 40.8 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Daejeonella divoritoga sp. nov.

Candidatus Daejeonella divoritoga (NL. fem. n. *divoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Daejeonella sp014378705*. The type genome for the species is the GenBank assembly GCA_014378705.1. The GC content of the type genome is 37.64 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Daejeonella luxuricula sp. nov.

Candidatus Daejeonella luxuricula (NL. fem. n. *luxuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Daejeonella sp002257025*. The type genome for the species is the GenBank assembly GCA_002257025.1. The GC content of the type genome is 39.37 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Daejeonella selibitudo sp. nov.

Candidatus Daejeonella selibitudo (NL. fem. n. *selibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Daejeonella sp903821625*. The type genome for the species is the GenBank assembly GCA_903821625.1. The GC content of the type genome is 37.42 %

and the genome length is 2.77 Mbp.

Description of *Candidatus* Dapifana vehicax sp. nov.

Candidatus Dapifana vehicax (NL. fem. n. *vehicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVWN01 sp011773985*. The type genome for the species is the GenBank assembly GCA_011773985.1. The GC content of the type genome is 62.36 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Dapifana gen. nov.

Candidatus Dapifana (NL. fem. n. *Dapifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVWN01*. The type species for the genus is *Candidatus* Dapifana vehicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WVWN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifanaceae.

Description of *Candidatus* Dapifanaceae fam. nov.

Candidatus Dapifanaceae (NL. fem. n. *Dapifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVWN01.* The type genus for the taxon is *Candidatus* Dapifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *WVWN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dapifanales.

Description of *Candidatus* Dapifanales ord. nov.

Candidatus Dapifanales (NL. fem. n. *Dapifanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVWN01.* The type genus for the taxon is *Candidatus* Dapifana .

According to the original version of GTDB R06-RS202, this family belongs to the class

B26-G2. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fuligosae.

Description of *Candidatus* Dapifaria denigedo sp. nov.

Candidatus Dapifaria denigedo (NL. fem. n. *denigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-12 sp001819875*. The type genome for the species is the GenBank assembly GCA_001819875.1. The GC content of the type genome is 48.32 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Dapifaria gen. nov.

Candidatus Dapifaria (NL. fem. n. *Dapifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-48-12*. The type species for the genus is *Candidatus* Dapifaria denigedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-48-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifariaceae.

Description of *Candidatus* Dapifariaceae fam. nov.

Candidatus Dapifariaceae (NL. fem. n. *Dapifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-48-12.* The type genus for the taxon is *Candidatus* Dapifaria .

According to GTDB R06-RS202, this family belongs to the order *Ryanbacterales*.

Description of *Candidatus* Dapifella cenodibula sp. nov.

Candidatus Dapifella cenodibula (NL. fem. n. *cenodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QANG01 sp003150145*. The type genome for the species is the GenBank assembly GCA_003150145.1. The GC content of the type genome is 49.62 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Dapifella gen. nov.

Candidatus Dapifella (NL. fem. n. *Dapifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QANG01*. The type species for the genus is *Candidatus* Dapifella cenodibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dapifia fefelitura sp. nov.

Candidatus Dapifia fefelitura (NL. fem. n. *fefelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQQB01 sp903873805*. The type genome for the species is the GenBank assembly GCA_903873805.1. The GC content of the type genome is 66.11 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Dapifia gen. nov.

Candidatus Dapifia (NL. fem. n. *Dapifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQQB01*. The type species for the genus is *Candidatus* Dapifia fefelitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dapifida cicatedo sp. nov.

Candidatus Dapifida cicatedo (NL. fem. n. *cicatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AK92 sp003399765*. The type genome for the species is the GenBank assembly RS_GCF_003399715.1. The GC content of the type genome is 58.58 % and the

genome length is 4.84 Mbp.

Description of *Candidatus* Dapifida gen. nov.

Candidatus Dapifida (NL. fem. n. *Dapifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AK92*. The type species for the genus is *Candidatus* Dapifida cicatedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AK92*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifidaceae.

Description of *Candidatus* Dapifidaceae fam. nov.

Candidatus Dapifidaceae (NL. fem. n. *Dapifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AK92.* The type genus for the taxon is *Candidatus* Dapifida .

According to GTDB R06-RS202, this family belongs to the order *Nitrococcales*.

Description of *Candidatus* Dapifosa caraviforma sp. nov.

Candidatus Dapifosa caraviforma (NL. fem. n. *caraviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5453 sp002427375*. The type genome for the species is the GenBank assembly GCA_002427375.1. The GC content of the type genome is 31.11 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Dapifosa gen. nov.

Candidatus Dapifosa (NL. fem. n. *Dapifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5453*. The type species for the genus is *Candidatus* Dapifosa caraviforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5453*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifosaceae.

Description of *Candidatus* Dapifosaceae fam. nov.

Candidatus Dapifosaceae (NL. fem. n. *Dapifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5453.* The type genus for the taxon is *Candidatus* Dapifosa .

According to GTDB R06-RS202, this family belongs to the order *Acholeplasmatales*.

Description of *Candidatus* Dapifosa coturessa sp. nov.

Candidatus Dapifosa coturessa (NL. fem. n. *coturessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5453 sp012522345*. The type genome for the species is the GenBank assembly GCA_012522345.1. The GC content of the type genome is 32.7 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Dapifula lugubicella sp. nov.

Candidatus Dapifula lugubicella (NL. fem. n. *lugubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGW-15 sp002840535*. The type genome for the species is the GenBank assembly GCA_002840495.1. The GC content of the type genome is 54.49 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Dapifula gen. nov.

Candidatus Dapifula (NL. fem. n. *Dapifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGW-15*. The type species for the genus is *Candidatus* Dapifula lugubicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifulaceae.

Description of *Candidatus* Dapifulaceae fam. nov.

Candidatus Dapifulaceae (NL. fem. n. *Dapifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HGW-15.* The type genus for the taxon is *Candidatus* Dapifula .

According to GTDB R06-RS202, this family belongs to the order *Desulfatiglandales*.

Description of *Candidatus* Debucana camiliforma sp. nov.

Candidatus Debucana camiliforma (NL. fem. n. *camiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1-2R sp903877395*. The type genome for the species is the GenBank assembly GCA_903877395.1. The GC content of the type genome is 59.27 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Debucana gen. nov.

Candidatus Debucana (NL. fem. n. *Debucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BAIKAL-G1-2R*. The type species for the genus is *Candidatus* Debucana camiliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Debucana desomitura sp. nov.

Candidatus Debucana desomitura (NL. fem. n. *desomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1-2R sp002737405*. The type genome for the species is the GenBank assembly GCA_002737405.1. The GC content of the type genome is 57.49 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Debucana ignomitrix sp. nov.

Candidatus Debucana ignomitrix (NL. fem. n. *ignomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1-2R sp003670865*. The type genome for the species is the GenBank assembly GCA_003670865.1. The GC content of the type genome is 56.81 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Debucana rarefitudo sp. nov.

Candidatus Debucana rarefitudo (NL. fem. n. *rarefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BAIKAL-G1-2R sp003670915*. The type genome for the species is the GenBank assembly GCA_003670915.1. The GC content of the type genome is 59.42 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Debucaria carunitio sp. nov.

Candidatus Debucaria carunitio (NL. fem. n. *carunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REDH01 sp007693585*. The type genome for the species is the GenBank assembly GCA_007693585.1. The GC content of the type genome is 69.74 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Debucaria gen. nov.

Candidatus Debucaria (NL. fem. n. *Debucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REDH01*. The type species for the genus is *Candidatus* Debucaria carunitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *REDH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Debucariaceae.

Description of *Candidatus* Debucariaceae fam. nov.

Candidatus Debucariaceae (NL. fem. n. *Debucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *REDH01.* The type genus for the taxon is *Candidatus* Debucaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *REDH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Debucariales.

Description of *Candidatus* Debucariales ord. nov.

Candidatus Debucariales (NL. fem. n. *Debucariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *REDH01.* The type genus for the taxon is *Candidatus* Debucaria .

According to the GTDB R06-RS202, this order belongs to the class *Bradymonadia*.

Description of *Candidatus* Debucia adtubivita sp. nov.

Candidatus Debucia adtubivita (NL. fem. n. *adtubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKVZ01 sp903844215*. The type genome for the species is the GenBank assembly GCA_903844215.1. The GC content of the type genome is 63.95 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Debucia gen. nov.

Candidatus Debucia (NL. fem. n. *Debucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKVZ01*. The type species for the genus is *Candidatus* Debucia adtubivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Debucia desuritas sp. nov.

Candidatus Debucia desuritas (NL. fem. n. *desuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKVZ01 sp903909815*. The type genome for the species is the

GenBank assembly GCA_903873745.1. The GC content of the type genome is 61.51 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Debucia homagastra sp. nov.

Candidatus Debucia homagastra (NL. fem. n. *homagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKVZ01 sp903832285*. The type genome for the species is the GenBank assembly GCA_903911775.1. The GC content of the type genome is 60.97 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Debucia lutulicella sp. nov.

Candidatus Debucia lutulicella (NL. fem. n. *lutulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKVZ01 sp903838565*. The type genome for the species is the GenBank assembly GCA_903938435.1. The GC content of the type genome is 63.86 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Debucia mirabilenta sp. nov.

Candidatus Debucia mirabilenta (NL. fem. n. *mirabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKVZ01 sp903830985*. The type genome for the species is the GenBank assembly GCA_903830985.1. The GC content of the type genome is 63.45 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Debucida divorugo sp. nov.

Candidatus Debucida divorugo (NL. fem. n. *divorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1362 sp002306085*. The type genome for the species is the GenBank assembly GCA_012797475.1. The GC content of the type genome is 40.96 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Debucida gen. nov.

Candidatus Debucida (NL. fem. n. *Debucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1362*. The type species for the genus is *Candidatus* Debucida divorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Debucosa pulegousia sp. nov.

Candidatus Debucosa pulegousia (NL. fem. n. *pulegousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11612 sp002712165*. The type genome for the species is the GenBank assembly GCA_002712165.1. The GC content of the type genome is 43.62 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Debucosa gen. nov.

Candidatus Debucosa (NL. fem. n. *Debucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11612*. The type species for the genus is *Candidatus* Debucosa pulegousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Debucula colepicella sp. nov.

Candidatus Debucula colepicella (NL. fem. n. *colepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRNR01 sp903879985*. The type genome for the species is the GenBank assembly GCA_903822705.1. The GC content of the type genome is 37.45 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Debucula gen. nov.

Candidatus Debucula (NL. fem. n. *Debucula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRNR01*. The type species for the genus is *Candidatus* Debucula colepicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Decacana galacentia sp. nov.

Candidatus Decacana galacentia (NL. fem. n. *galacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUXX01 sp009659895*. The type genome for the species is the GenBank assembly GCA_009659895.1. The GC content of the type genome is 48.96 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Decacana gen. nov.

Candidatus Decacana (NL. fem. n. *Decacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUXX01*. The type species for the genus is *Candidatus* Decacana galacentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decacaria murilitoga sp. nov.

Candidatus Decacaria murilitoga (NL. fem. n. *murilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPBP01 sp004525935*. The type genome for the species is the GenBank assembly GCA_004525935.1. The GC content of the type genome is 56.04 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Decacaria gen. nov.

Candidatus Decacaria (NL. fem. n. *Decacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPBP01*. The type species for the genus is *Candidatus* Decacaria murilitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPBP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decacariaceae.

Description of *Candidatus* Decacariaceae fam. nov.

Candidatus Decacariaceae (NL. fem. n. *Decacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPBP01.* The type genus for the taxon is *Candidatus* Decacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loraridales.

Description of *Candidatus* Decacella antegimonia sp. nov.

Candidatus Decacella antegimonia (NL. fem. n. *antegimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UphvI-Ar2 sp002162075*. The type genome for the species is the GenBank assembly RS_GCF_002162075.1. The GC content of the type genome is 52.48 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Decacella gen. nov.

Candidatus Decacella (NL. fem. n. *Decacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UphvI-Ar2*. The type species for the genus is *Candidatus* Decacella antegimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decacella effinimonas sp. nov.

Candidatus Decacella effinimonas (NL. fem. n. *effinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UphvI-Ar2 sp013823945*. The type genome for the species is the GenBank assembly GCA_013823945.1. The GC content of the type genome is 52.01 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Decacella famelessa sp. nov.

Candidatus Decacella famelessa (NL. fem. n. *famelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UphvI-Ar2 sp002162095*. The type genome for the species is the GenBank assembly RS_GCF_002162095.1. The GC content of the type genome is 62.07 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Decacella tomaciforma sp. nov.

Candidatus Decacella tomaciforma (NL. fem. n. *tomaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UphvI-Ar2 sp002352215*. The type genome for the species is the GenBank assembly GCA_002455365.1. The GC content of the type genome is 62.33 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Decacia armipago sp. nov.

Candidatus Decacia armipago (NL. fem. n. *armipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA941 sp002293365*. The type genome for the species is the GenBank assembly GCA_002293365.1. The GC content of the type genome is 52.36 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Decacia gen. nov.

Candidatus Decacia (NL. fem. n. *Decacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA941*. The type species for the genus is *Candidatus* Decacia

armipago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA941*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decaciaceae.

Description of *Candidatus* Decaciaceae fam. nov.

Candidatus Decaciaceae (NL. fem. n. *Decaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA941.* The type genus for the taxon is *Candidatus* Decacia .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Decacida infucago sp. nov.

Candidatus Decacida infucago (NL. fem. n. *infucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1388 sp900551345*. The type genome for the species is the GenBank assembly GCA_900551345.1. The GC content of the type genome is 39.51 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Decacida gen. nov.

Candidatus Decacida (NL. fem. n. *Decacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1388*. The type species for the genus is *Candidatus* Decacida infucago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1388*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decacidaceae.

Description of *Candidatus* Decacidaceae fam. nov.

Candidatus Decacidaceae (NL. fem. n. *Decacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1388.* The type genus for the taxon is *Candidatus* Decacida .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales*.

Description of *Candidatus* Decacosa semivousia sp. nov.

Candidatus Decacosa semivousia (NL. fem. n. *semivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747255 sp002747255*. The type genome for the species is the GenBank assembly GCA_002747255.1. The GC content of the type genome is 46.46 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Decacosa gen. nov.

Candidatus Decacosa (NL. fem. n. *Decacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747255*. The type species for the genus is *Candidatus* Decacosa semivousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2747255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decacosaceae.

Description of *Candidatus* Decacosaceae fam. nov.

Candidatus Decacosaceae (NL. fem. n. *Decacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747255.* The type genus for the taxon is *Candidatus* Decacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2747255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decacosales.

Description of *Candidatus* Decacosales ord. nov.

Candidatus Decacosales (NL. fem. n. *Decacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2747255.* The type genus for the taxon is *Candidatus* Decacosa .

According to the GTDB R06-RS202, this order belongs to the class *Holophagae*.

Description of *Candidatus* Decacula conopetta sp. nov.

Candidatus Decacula conopetta (NL. fem. n. *conopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-50-93 sp001804815*. The type genome for the species is the GenBank assembly GCA_003516325.1. The GC content of the type genome is 50.15 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Decacula gen. nov.

Candidatus Decacula (NL. fem. n. *Decacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-50-93*. The type species for the genus is *Candidatus* Decacula conopetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-50-93*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decaculaceae.

Description of *Candidatus* Decaculaceae fam. nov.

Candidatus Decaculaceae (NL. fem. n. *Decaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-50-93.* The type genus for the taxon is *Candidatus* Decacula .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Decacula palifousia sp. nov.

Candidatus Decacula palifousia (NL. fem. n. *palifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-50-93 sp001804805*. The type genome for the species is the GenBank assembly GCA_001804805.1. The GC content of the type genome is 49.12 % and the genome length is 5.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Decamana cosidatica sp. nov.

Candidatus Decamana cosidatica (NL. fem. n. *cosidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp903824505*. The type genome for the species is the GenBank assembly GCA_903862515.1. The GC content of the type genome is 53.76 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Decamana gen. nov.

Candidatus Decamana (NL. fem. n. *Decamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDFY01*. The type species for the genus is *Candidatus* Decamana cosidatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luticidaceae.

Description of *Candidatus* Decamana evisciforma sp. nov.

Candidatus Decamana evisciforma (NL. fem. n. *evisciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp013286365*. The type genome for the species is the GenBank assembly GCA_013286365.1. The GC content of the type genome is 47.94 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Decamana locupitura sp. nov.

Candidatus Decamana locupitura (NL. fem. n. *locupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp013289265*. The type genome for the species is the GenBank assembly GCA_013289265.1. The GC content of the type genome is 50.72 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Decamana manufitio sp. nov.

Candidatus Decamana manufitio (NL. fem. n. *manufitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp903920205*. The type genome for the species is the GenBank assembly GCA_903920205.1. The GC content of the type genome is 53.44 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Decamana meriditio sp. nov.

Candidatus Decamana meriditio (NL. fem. n. *meriditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp009779745*. The type genome for the species is the GenBank assembly GCA_009779165.1. The GC content of the type genome is 43.43 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Decamana tetenastra sp. nov.

Candidatus Decamana tetenastra (NL. fem. n. *tetenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDFY01 sp903875345*. The type genome for the species is the GenBank assembly GCA_903875345.1. The GC content of the type genome is 54.87 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Decamaria encomibula sp. nov.

Candidatus Decamaria encomibula (NL. fem. n. *encomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEGL01 sp902826885*. The type genome for the species is the GenBank assembly GCA_902826885.1. The GC content of the type genome is 65.23 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Decamaria gen. nov.

Candidatus Decamaria (NL. fem. n. *Decamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEGL01*. The type species for the genus is *Candidatus* Decamaria encomibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADEGL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamariaceae.

Description of *Candidatus* Decamariaceae fam. nov.

Candidatus Decamariaceae (NL. fem. n. *Decamariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADEGL01*. The type genus for the taxon is *Candidatus* Decamaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADEGL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decamariales.

Description of *Candidatus* Decamariales ord. nov.

Candidatus Decamariales (NL. fem. n. *Decamariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADEGL01*. The type genus for the taxon is *Candidatus* Decamaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Decamia dehonicella sp. nov.

Candidatus Decamia dehonicella (NL. fem. n. *dehonicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-513 sp003138355*. The type genome for the species is the GenBank assembly GCA_003138355.1. The GC content of the type genome is 68.88 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Decamia gen. nov.

Candidatus Decamia (NL. fem. n. *Decamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Palsa-513*. The type species for the genus is *Candidatus* Decamia dehonicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decamia documax sp. nov.

Candidatus Decamia documax (NL. fem. n. *documax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-513 sp003132505*. The type genome for the species is the GenBank assembly GCA_003132565.1. The GC content of the type genome is 68.14 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Decamia turifedo sp. nov.

Candidatus Decamia turifedo (NL. fem. n. *turifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-513 sp003133565*. The type genome for the species is the GenBank assembly GCA_003156915.1. The GC content of the type genome is 67.53 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Decamia vehemago sp. nov.

Candidatus Decamia vehemago (NL. fem. n. *vehemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-513 sp003157595*. The type genome for the species is the GenBank assembly GCA_003157595.1. The GC content of the type genome is 69.76 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Decamida adtesilenta sp. nov.

Candidatus Decamida adtesilenta (NL. fem. n. *adtesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1975 sp900556815*. The type genome for the species is the GenBank assembly GCA_900556815.1. The GC content of the type genome is 50.61 %

and the genome length is 0.91 Mbp.

Description of *Candidatus* Decamida gen. nov.

Candidatus Decamida (NL. fem. n. *Decamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1975*. The type species for the genus is *Candidatus* Decamida adtesilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinupanaceae.

Description of *Candidatus* Decamida cinipedo sp. nov.

Candidatus Decamida cinipedo (NL. fem. n. *cinipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1975 sp900751745*. The type genome for the species is the GenBank assembly RS_GCF_900751745.1. The GC content of the type genome is 51.72 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Decamida navifilenta sp. nov.

Candidatus Decamida navifilenta (NL. fem. n. *navifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1975 sp900546685*. The type genome for the species is the GenBank assembly GCA_900546685.1. The GC content of the type genome is 52.31 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Decamosa ranunedo sp. nov.

Candidatus Decamosa ranunedo (NL. fem. n. *ranunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSP01 sp007130345*. The type genome for the species is the GenBank assembly GCA_007119705.1. The GC content of the type genome is 61.71 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Decamosa gen. nov.

Candidatus Decamosa (NL. fem. n. *Decamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSP01*. The type species for the genus is *Candidatus* Decamosa ranunedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Decamosaceae fam. nov.

Candidatus Decamosaceae (NL. fem. n. *Decamosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLSP01*. The type genus for the taxon is *Candidatus* Decamosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubulales.

Description of *Candidatus* Decamula repagivita sp. nov.

Candidatus Decamula repagivita (NL. fem. n. *repagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYZJ01 sp903930675*. The type genome for the species is the GenBank assembly GCA_903930675.1. The GC content of the type genome is 58.47 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Decamula gen. nov.

Candidatus Decamula (NL. fem. n. *Decamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYZJ01*. The type species for the genus is *Candidatus* Decamula repagivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decamula tomacitas sp. nov.

Candidatus Decamula tomacitas (NL. fem. n. *tomacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYZJ01 sp903824185*. The type genome for the species is the GenBank assembly GCA_903876495.1. The GC content of the type genome is 54.62 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Decapana offunigena sp. nov.

Candidatus Decapana offunigena (NL. fem. n. *offunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DREG01 sp011040895*. The type genome for the species is the GenBank assembly GCA_011040895.1. The GC content of the type genome is 44.14 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Decapana gen. nov.

Candidatus Decapana (NL. fem. n. *Decapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DREG01*. The type species for the genus is *Candidatus* Decapana offunigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DREG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapanaceae.

Description of *Candidatus* Decapanaceae fam. nov.

Candidatus Decapanaceae (NL. fem. n. *Decapanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DREG01.* The type genus for the taxon is *Candidatus* Decapana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogidales.

Description of *Candidatus* Decaparia homulago sp. nov.

Candidatus Decaparia homulago (NL. fem. n. *homulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC34051 sp003605175*. The type genome for the species is the GenBank assembly RS_GCF_003605175.1. The GC content of the type genome is 67.58 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Decaparia gen. nov.

Candidatus Decaparia (NL. fem. n. *Decaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC34051*. The type species for the genus is *Candidatus* Decaparia homulago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decaparia indificella sp. nov.

Candidatus Decaparia indificella (NL. fem. n. *indificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC34051 sp013003075*. The type genome for the species is the GenBank assembly GCA_013003075.1. The GC content of the type genome is 63.68 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Decaparia vitigetta sp. nov.

Candidatus Decaparia vitigetta (NL. fem. n. *vitigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC34051 sp013042605*. The type genome for the species is the GenBank assembly GCA_013042605.1. The GC content of the type genome is 62.6 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Decapella lanifedo sp. nov.

Candidatus Decapella lanifedo (NL. fem. n. *lanifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGI01 sp903857825*. The type genome for the species is the GenBank assembly GCA_903939045.1. The GC content of the type genome is 35.86 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Decapella gen. nov.

Candidatus Decapella (NL. fem. n. *Decapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOGI01*. The type species for the genus is *Candidatus* Decapella lanifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colutulaceae.

Description of *Candidatus* Decapella sugilitudo sp. nov.

Candidatus Decapella sugilitudo (NL. fem. n. *sugilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGI01 sp903839695*. The type genome for the species is the GenBank assembly GCA_903839695.1. The GC content of the type genome is 32.95 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Decapia favonessa sp. nov.

Candidatus Decapia favonessa (NL. fem. n. *favonessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1997 sp002335845*. The type genome for the species is the GenBank assembly GCA_002335845.1. The GC content of the type genome is 32.76 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Decapia gen. nov.

Candidatus Decapia (NL. fem. n. *Decapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1997*. The type species for the genus is *Candidatus* Decapia favonessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Decapiaceae fam. nov.

Candidatus Decapiaceae (NL. fem. n. *Decapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1997*. The type genus for the taxon is *Candidatus* Decapia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Decapida furibivita sp. nov.

Candidatus Decapida furibivita (NL. fem. n. *furibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYC01 sp009693005*. The type genome for the species is the GenBank assembly GCA_009693005.1. The GC content of the type genome is 54.09 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Decapida gen. nov.

Candidatus Decapida (NL. fem. n. *Decapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYC01*. The type species for the genus is *Candidatus* Decapida furibivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapidaceae.

Description of *Candidatus* Decapidaceae fam. nov.

Candidatus Decapidaceae (NL. fem. n. *Decapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYC01*. The type genus for the taxon is *Candidatus* Decapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Manomiales.

Description of *Candidatus* Decaposa cituvimonas sp. nov.

Candidatus Decaposa cituvimonas (NL. fem. n. *cituvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VULX01 sp009696465*. The type genome for the species is the GenBank assembly RS_GCF_009696465.1. The GC content of the type genome is 31.42 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Decaposa gen. nov.

Candidatus Decaposa (NL. fem. n. *Decaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VULX01*. The type species for the genus is *Candidatus* Decaposa cituvimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decapula adrenitudo sp. nov.

Candidatus Decapula adrenitudo (NL. fem. n. *adrenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-13 sp003599485*. The type genome for the species is the GenBank assembly GCA_003599485.1. The GC content of the type genome is 61.5 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Decapula gen. nov.

Candidatus Decapula (NL. fem. n. *Decapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-13*. The type species for the genus is *Candidatus* Decapula

adrenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapulaceae.

Description of *Candidatus* Decapulaceae fam. nov.

Candidatus Decapulaceae (NL. fem. n. *Decapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-13.* The type genus for the taxon is *Candidatus* Decapula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decapulales.

Description of *Candidatus* Decapulales ord. nov.

Candidatus Decapulales (NL. fem. n. *Decapulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-13.* The type genus for the taxon is *Candidatus* Decapula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Decatana verifatica sp. nov.

Candidatus Decatana verifatica (NL. fem. n. *verifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDG01 sp007125355*. The type genome for the species is the GenBank assembly GCA_003566645.1. The GC content of the type genome is 42.47 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Decatana gen. nov.

Candidatus Decatana (NL. fem. n. *Decatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDG01*. The type species for the genus is *Candidatus* Decatana

verifatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXAI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapicellaceae.

Description of *Candidatus* Decatella dececigena sp. nov.

Candidatus Decatella dececigena (NL. fem. n. *dececigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs023 sp005773635*. The type genome for the species is the GenBank assembly GCA_005798085.1. The GC content of the type genome is 58.81 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Decatella gen. nov.

Candidatus Decatella (NL. fem. n. *Decatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-120-MAGs023*. The type species for the genus is *Candidatus* Decatella dececigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-610*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpellaceae.

Description of *Candidatus* Decatia adrenugo sp. nov.

Candidatus Decatia adrenugo (NL. fem. n. *adrenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003131625*. The type genome for the species is the GenBank assembly GCA_003131625.1. The GC content of the type genome is 61.85 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Decatia gen. nov.

Candidatus Decatia (NL. fem. n. *Decatia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Palsa-343*. The type species for the genus is *Candidatus* Decatia adrenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decatia apsoritudo sp. nov.

Candidatus Decatia apsoritudo (NL. fem. n. *apsoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003152595*. The type genome for the species is the GenBank assembly GCA_003152595.1. The GC content of the type genome is 61.77 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Decatia cohurousia sp. nov.

Candidatus Decatia cohurousia (NL. fem. n. *cohurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003166955*. The type genome for the species is the GenBank assembly GCA_003140775.1. The GC content of the type genome is 61.66 % and the genome length is 5.43 Mbp.

Description of *Candidatus* Decatia conifatica sp. nov.

Candidatus Decatia conifatica (NL. fem. n. *conifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003167515*. The type genome for the species is the GenBank assembly GCA_003167515.1. The GC content of the type genome is 60.74 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Decatia inordicula sp. nov.

Candidatus Decatia inordicula (NL. fem. n. *inordicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003428625*. The type genome for the species is the GenBank assembly RS_GCF_003428625.1. The GC content of the type genome is 60.47

% and the genome length is 5.0 Mbp.

Description of *Candidatus* Decatia maciligena sp. nov.

Candidatus Decatia maciligena (NL. fem. n. *maciligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-343 sp003152415*. The type genome for the species is the GenBank assembly GCA_003140635.1. The GC content of the type genome is 62.23 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Decatida effemetta sp. nov.

Candidatus Decatida effemetta (NL. fem. n. *effemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B39-G9 sp003648455*. The type genome for the species is the GenBank assembly GCA_003648455.1. The GC content of the type genome is 30.23 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Decatida gen. nov.

Candidatus Decatida (NL. fem. n. *Decatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B39-G9*. The type species for the genus is *Candidatus* Decatida effemetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B39-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decatidaceae.

Description of *Candidatus* Decatidaceae fam. nov.

Candidatus Decatidaceae (NL. fem. n. *Decatidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B39-G9.* The type genus for the taxon is *Candidatus* Decatida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Decatosa atricitrix sp. nov.

Candidatus Decatosa atricitrix (NL. fem. n. *atricitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLY01 sp902825945*. The type genome for the species is the GenBank assembly GCA_902825945.1. The GC content of the type genome is 62.95 % and the genome length is 10.15 Mbp.

Description of *Candidatus* Decatosa gen. nov.

Candidatus Decatosa (NL. fem. n. *Decatosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYLY01*. The type species for the genus is *Candidatus* Decatosa atricitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decatosa pulegessa sp. nov.

Candidatus Decatosa pulegessa (NL. fem. n. *pulegessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLY01 sp005808475*. The type genome for the species is the GenBank assembly GCA_005777455.1. The GC content of the type genome is 65.35 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Decatula impinicella sp. nov.

Candidatus Decatula impinicella (NL. fem. n. *impinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW-6-46-9 sp003022255*. The type genome for the species is the GenBank assembly GCA_003022255.1. The GC content of the type genome is 46.46 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Decatula gen. nov.

Candidatus Decatula (NL. fem. n. *Decatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW-6-46-9*. The type species for the genus is *Candidatus* Decatula impinicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SW-6-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decatulaceae.

Description of *Candidatus* Decatulaceae fam. nov.

Candidatus Decatulaceae (NL. fem. n. *Decatulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SW-6-46-9.* The type genus for the taxon is *Candidatus* Decatula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Dececana artilitio sp. nov.

Candidatus Dececana artilitio (NL. fem. n. *artilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXOZ01 sp012270555*. The type genome for the species is the GenBank assembly GCA_012270555.1. The GC content of the type genome is 59.93 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Dececana gen. nov.

Candidatus Dececana (NL. fem. n. *Dececana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXOZ01*. The type species for the genus is *Candidatus* Dececana artilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXOZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dececanaceae.

Description of *Candidatus* Dececanaceae fam. nov.

Candidatus Dececanaceae (NL. fem. n. *Dececanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXOZ01*. The type genus for the taxon is *Candidatus* Dececana .

According to the original version of GTDB R06-RS202, this family belongs to the order *VXOZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dececanales.

Description of *Candidatus* Dececanales ord. nov.

Candidatus Dececanales (NL. fem. n. *Dececanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXOZ01*. The type genus for the taxon is *Candidatus* Dececana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA11872*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rosacidae.

Description of *Candidatus* Dececana senacetta sp. nov.

Candidatus Dececana senacetta (NL. fem. n. *senacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXOZ01 sp009839775*. The type genome for the species is the GenBank assembly GCA_009839775.1. The GC content of the type genome is 59.57 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Dececaria ridibentia sp. nov.

Candidatus Dececaria ridibentia (NL. fem. n. *ridibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-43-52 sp001805445*. The type genome for the species is the GenBank assembly GCA_001804385.1. The GC content of the type genome is 43.82 % and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Dececaria gen. nov.

Candidatus Dececaria (NL. fem. n. *Dececaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-43-52*. The type species for the genus is *Candidatus* Dececaria ridibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabellaceae.

Description of *Candidatus* Dececella subucentia sp. nov.

Candidatus Dececella subucentia (NL. fem. n. *subucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-40-25 sp001872305*. The type genome for the species is the GenBank assembly GCA_001872305.1. The GC content of the type genome is 39.51 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Dececella gen. nov.

Candidatus Dececella (NL. fem. n. *Dececella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-40-25*. The type species for the genus is *Candidatus* Dececella subucentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-40-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dececellaceae.

Description of *Candidatus* Dececellaceae fam. nov.

Candidatus Dececellaceae (NL. fem. n. *Dececellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-40-25.* The type genus for the taxon is *Candidatus* Dececella .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Dececia inlocibra sp. nov.

Candidatus Dececia inlocibra (NL. fem. n. *inlocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEL01 sp011192125*. The type genome for the species is the GenBank assembly GCA_011192125.1. The GC content of the type genome is 65.44 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Dececia gen. nov.

Candidatus Dececia (NL. fem. n. *Dececia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUEL01*. The type species for the genus is *Candidatus* Dececia inlocibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUEL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dececiaceae.

Description of *Candidatus* Dececiaceae fam. nov.

Candidatus Dececiaceae (NL. fem. n. *Dececiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUEL01*. The type genus for the taxon is *Candidatus* Dececia .

According to the original version of GTDB R06-RS202, this family belongs to the order *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colubulales.

Description of *Candidatus* Dececia inoblousia sp. nov.

Candidatus Dececia inoblousia (NL. fem. n. *inoblousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEL01 sp011388675*. The type genome for the species is the

GenBank assembly GCA_011388675.1. The GC content of the type genome is 66.11 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Dececida bonifessa sp. nov.

Candidatus Dececida bonifessa (NL. fem. n. *bonifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp900771305*. The type genome for the species is the GenBank assembly RS_GCF_900771305.1. The GC content of the type genome is 62.02 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Dececida gen. nov.

Candidatus Dececida (NL. fem. n. *Dececida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG572*. The type species for the genus is *Candidatus* Dececida bonifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Dececida capudivita sp. nov.

Candidatus Dececida capudivita (NL. fem. n. *capudivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902802945*. The type genome for the species is the GenBank assembly GCA_902802945.1. The GC content of the type genome is 60.28 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Dececida denixicula sp. nov.

Candidatus Dececida denixicula (NL. fem. n. *denixicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902761035*. The type genome for the species is the GenBank assembly GCA_902761035.1. The GC content of the type genome is 59.75 %

and the genome length is 6.14 Mbp.

Description of *Candidatus* Dececida ficulilenta sp. nov.

Candidatus Dececida ficulilenta (NL. fem. n. *ficulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902763655*. The type genome for the species is the GenBank assembly GCA_902763655.1. The GC content of the type genome is 63.85 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Dececida lucubousia sp. nov.

Candidatus Dececida lucubousia (NL. fem. n. *lucubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902803135*. The type genome for the species is the GenBank assembly GCA_902803135.1. The GC content of the type genome is 64.33 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Dececida minagitoga sp. nov.

Candidatus Dececida minagitoga (NL. fem. n. *minagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902779865*. The type genome for the species is the GenBank assembly GCA_902793025.1. The GC content of the type genome is 59.96 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Dececida necubicula sp. nov.

Candidatus Dececida necubicula (NL. fem. n. *necubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902779075*. The type genome for the species is the GenBank assembly GCA_902779075.1. The GC content of the type genome is 59.8 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Dececida offuliforma sp. nov.

Candidatus Dececida offuliforma (NL. fem. n. *offuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp902769585*. The type genome for the species is the GenBank assembly GCA_902769585.1. The GC content of the type genome is 62.78 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Dececida pedepitura sp. nov.

Candidatus Dececida pedepitura (NL. fem. n. *pedepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp900547945*. The type genome for the species is the GenBank assembly RS_GCF_900763375.1. The GC content of the type genome is 67.02 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Dececida refulatica sp. nov.

Candidatus Dececida refulatica (NL. fem. n. *refulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp900320225*. The type genome for the species is the GenBank assembly GCA_902772315.1. The GC content of the type genome is 65.1 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Dececida televimonas sp. nov.

Candidatus Dececida televimonas (NL. fem. n. *televimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG572 sp002373695*. The type genome for the species is the GenBank assembly GCA_002373695.1. The GC content of the type genome is 60.57 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Dececosa hirunitoga sp. nov.

Candidatus Dececosa hirunitoga (NL. fem. n. *hirunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXS01 sp004356955*. The type genome for the species is the GenBank assembly GCA_004356955.1. The GC content of the type genome is 54.79 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Dececosa gen. nov.

Candidatus Dececosa (NL. fem. n. *Dececosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXS01*. The type species for the genus is *Candidatus* Dececosa hirunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dececosaceae.

Description of *Candidatus* Dececosaceae fam. nov.

Candidatus Dececosaceae (NL. fem. n. *Dececosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXS01*. The type genus for the taxon is *Candidatus* Dececosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SMXS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dececosales.

Description of *Candidatus* Dececosales ord. nov.

Candidatus Dececosales (NL. fem. n. *Dececosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXS01*. The type genus for the taxon is *Candidatus* Dececosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Dececula lubenentia sp. nov.

Candidatus Dececula lubenentia (NL. fem. n. *lubenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFH01 sp007694925*. The type genome for the species is the GenBank assembly GCA_007694925.1. The GC content of the type genome is 68.13 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Dececula gen. nov.

Candidatus Dececula (NL. fem. n. *Dececula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLFH01*. The type species for the genus is *Candidatus* Dececula lubenentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Dececula necopisca sp. nov.

Candidatus Dececula necopisca (NL. fem. n. *necopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFH01 sp007124345*. The type genome for the species is the GenBank assembly GCA_007122795.1. The GC content of the type genome is 68.05 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Decenana cohuritio sp. nov.

Candidatus Decenana cohuritio (NL. fem. n. *cohuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZPE01 sp903934295*. The type genome for the species is the GenBank assembly GCA_903926325.1. The GC content of the type genome is 68.77 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Decenana gen. nov.

Candidatus Decenana (NL. fem. n. *Decenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZPE01*. The type species for the genus is *Candidatus* Decenana

cohuritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decenana decacitas sp. nov.

Candidatus Decenana decacitas (NL. fem. n. *decacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZPE01 sp903934795*. The type genome for the species is the GenBank assembly GCA_903930215.1. The GC content of the type genome is 70.43 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Decenaria defenedo sp. nov.

Candidatus Decenaria defenedo (NL. fem. n. *defenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFJ001 sp004555865*. The type genome for the species is the GenBank assembly GCA_900548715.1. The GC content of the type genome is 61.14 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Decenaria gen. nov.

Candidatus Decenaria (NL. fem. n. *Decenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFJ001*. The type species for the genus is *Candidatus* Decenaria defenedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decenella innulentia sp. nov.

Candidatus Decenella innulentia (NL. fem. n. *innulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8366 sp002711555*. The type genome for the species is the GenBank assembly GCA_002711555.1. The GC content of the type genome is 45.15 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Decenella gen. nov.

Candidatus Decenella (NL. fem. n. *Decenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8366*. The type species for the genus is *Candidatus* Decenella innulentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenellaceae.

Description of *Candidatus* Decenellaceae fam. nov.

Candidatus Decenellaceae (NL. fem. n. *Decenellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8366.* The type genus for the taxon is *Candidatus* Decenella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decenellales.

Description of *Candidatus* Decenellales ord. nov.

Candidatus Decenellales (NL. fem. n. *Decenellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8366.* The type genus for the taxon is *Candidatus* Decenella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Decenella nivomilenta sp. nov.

Candidatus Decenella nivomilenta (NL. fem. n. *nivomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8366 sp002722095*. The type genome for the species is the GenBank assembly GCA_002722095.1. The GC content of the type genome is 55.83 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Decenella serotitrix sp. nov.

Candidatus Decenella serotitrix (NL. fem. n. *serotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8366 sp002718015*. The type genome for the species is the GenBank assembly GCA_002718015.1. The GC content of the type genome is 45.14 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Decenida bigarigena sp. nov.

Candidatus Decenida bigarigena (NL. fem. n. *bigarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHU01 sp009781535*. The type genome for the species is the GenBank assembly GCA_009781535.1. The GC content of the type genome is 52.61 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Decenida gen. nov.

Candidatus Decenida (NL. fem. n. *Decenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRHU01*. The type species for the genus is *Candidatus* Decenida bigarigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nocumanaceae.

Description of *Candidatus* Decenida filifedo sp. nov.

Candidatus Decenida filifedo (NL. fem. n. *filifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRHU01 sp009783085*. The type genome for the species is the GenBank assembly GCA_009783085.1. The GC content of the type genome is 49.85 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Decenosa exinditrix sp. nov.

Candidatus Decenosa exinditrix (NL. fem. n. *exinditrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8346 sp003501365*. The type genome for the species is the GenBank assembly GCA_003501365.1. The GC content of the type genome is 42.74 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Decenosa gen. nov.

Candidatus Decenosa (NL. fem. n. *Decenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8346*. The type species for the genus is *Candidatus* Decenosa exinditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenosaceae.

Description of *Candidatus* Decenosaceae fam. nov.

Candidatus Decenosaceae (NL. fem. n. *Decenosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8346.* The type genus for the taxon is *Candidatus* Decenosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decenosales.

Description of *Candidatus* Decenosales ord. nov.

Candidatus Decenosales (NL. fem. n. *Decenosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8346.* The type genus for the taxon is *Candidatus* Decenosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4882*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Lacinanae.

Description of *Candidatus* Decenosa salubatica sp. nov.

Candidatus Decenosa salubatica (NL. fem. n. *salubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8346 sp003501335*. The type genome for the species is the GenBank assembly GCA_003501335.1. The GC content of the type genome is 41.87 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Decenula modifastra sp. nov.

Candidatus Decenula modifastra (NL. fem. n. *modifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-564 sp003139255*. The type genome for the species is the GenBank assembly GCA_003160015.1. The GC content of the type genome is 65.61 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Decenula gen. nov.

Candidatus Decenula (NL. fem. n. *Decenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-564*. The type species for the genus is *Candidatus* Decenula modifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegosaceae.

Description of *Candidatus* Decinana dibucitura sp. nov.

Candidatus Decinana dibucitura (NL. fem. n. *dibucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil1 sp004558525*. The type genome for the species is the GenBank assembly GCA_004558525.1. The GC content of the type genome is 51.69 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Decinana gen. nov.

Candidatus Decinana (NL. fem. n. *Decinana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Phil1*. The type species for the genus is *Candidatus* Decinana dibucitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Decinana ludibousia sp. nov.

Candidatus Decinana ludibousia (NL. fem. n. *ludibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil1 sp001940855*. The type genome for the species is the GenBank assembly GCA_004555375.1. The GC content of the type genome is 53.35 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Decinana prospago sp. nov.

Candidatus Decinana prospago (NL. fem. n. *prospago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Phil1 sp002069725*. The type genome for the species is the GenBank assembly GCA_002069725.1. The GC content of the type genome is 62.08 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Decinaria demulastra sp. nov.

Candidatus Decinaria demulastra (NL. fem. n. *demulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6244 sp002771745*. The type genome for the species is the GenBank assembly GCA_002771745.1. The GC content of the type genome is 41.27 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Decinaria gen. nov.

Candidatus Decinaria (NL. fem. n. *Decinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6244*. The type species for the genus is *Candidatus* Decinaria demulastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Decinaria intematio sp. nov.

Candidatus Decinaria intematio (NL. fem. n. *intematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6244 sp002840975*. The type genome for the species is the GenBank assembly GCA_002840975.1. The GC content of the type genome is 41.53 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Decinaria pedepax sp. nov.

Candidatus Decinaria pedepax (NL. fem. n. *pedepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6244 sp002440885*. The type genome for the species is the GenBank assembly GCA_002440885.1. The GC content of the type genome is 42.9 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Decinaria tomogugo sp. nov.

Candidatus Decinaria tomogugo (NL. fem. n. *tomogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6244 sp001769215*. The type genome for the species is the GenBank assembly GCA_001769215.1. The GC content of the type genome is 41.19 % and the genome length is 4.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Decinella deniximonia sp. nov.

Candidatus Decinella deniximonia (NL. fem. n. *deniximonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUG01 sp903853385*. The type genome for the species is the GenBank assembly GCA_903832185.1. The GC content of the type genome is 55.76 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Decinella gen. nov.

Candidatus Decinella (NL. fem. n. *Decinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILUG01*. The type species for the genus is *Candidatus* Decinella deniximonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decinella genocitia sp. nov.

Candidatus Decinella genocitia (NL. fem. n. *genocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUG01 sp903837345*. The type genome for the species is the GenBank assembly GCA_903886995.1. The GC content of the type genome is 56.18 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Decinella inmemitoga sp. nov.

Candidatus Decinella inmemitoga (NL. fem. n. *inmemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUG01 sp903926285*. The type genome for the species is the GenBank assembly GCA_903926285.1. The GC content of the type genome is 52.32 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Decinella nocenitura sp. nov.

Candidatus Decinella nocenitura (NL. fem. n. *nocenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAILUG01 sp903887045*. The type genome for the species is the GenBank assembly GCA_903887045.1. The GC content of the type genome is 58.09 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Decinella nugivivita sp. nov.

Candidatus Decinella nugivivita (NL. fem. n. *nugivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUG01 sp903844415*. The type genome for the species is the GenBank assembly GCA_903844415.1. The GC content of the type genome is 46.84 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Decinia vilitessa sp. nov.

Candidatus Decinia vilitessa (NL. fem. n. *vilitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTRM01 sp012965975*. The type genome for the species is the GenBank assembly GCA_012965975.1. The GC content of the type genome is 53.72 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Decinia gen. nov.

Candidatus Decinia (NL. fem. n. *Decinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTRM01*. The type species for the genus is *Candidatus* Decinia vilitessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTRM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deciniaceae.

Description of *Candidatus* Deciniaceae fam. nov.

Candidatus Deciniaceae (NL. fem. n. *Deciniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTRM01.* The type genus for the taxon is *Candidatus* Decinia .

According to the original version of GTDB R06-RS202, this family belongs to the order

DTRM01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deciniales.

Description of *Candidatus* Deciniales ord. nov.

Candidatus Deciniales (NL. fem. n. *Deciniales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTRM01.* The type genus for the taxon is *Candidatus* Decinia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Decinida infunicella sp. nov.

Candidatus Decinida infunicella (NL. fem. n. *infunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2689605 sp013214245*. The type genome for the species is the GenBank assembly GCA_013214245.1. The GC content of the type genome is 39.1 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Decinida gen. nov.

Candidatus Decinida (NL. fem. n. *Decinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2689605*. The type species for the genus is *Candidatus* Decinida infunicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decinida lucififica sp. nov.

Candidatus Decinida lucififica (NL. fem. n. *lucififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2689605 sp002689605*. The type genome for the species is the GenBank assembly GCA_002170445.2. The GC content of the type genome is 53.63 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Decinosa lucubicula sp. nov.

Candidatus Decinosa lucubicula (NL. fem. n. *lucubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-38-13 sp000992395*. The type genome for the species is the GenBank assembly GCA_000992395.1. The GC content of the type genome is 38.2 % and the genome length is 1.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Decinosa gen. nov.

Candidatus Decinosa (NL. fem. n. *Decinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-38-13*. The type species for the genus is *Candidatus* Decinosa lucubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decinosaceae.

Description of *Candidatus* Decinosaceae fam. nov.

Candidatus Decinosaceae (NL. fem. n. *Decinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-13.* The type genus for the taxon is *Candidatus* Decinosa .

According to GTDB R06-RS202, this family belongs to the order *Buchananbacterales*.

Description of *Candidatus* Decinula procrifica sp. nov.

Candidatus Decinula procrifica (NL. fem. n. *procrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PGYV01 sp002839855*. The type genome for the species is the GenBank assembly GCA_002839855.1. The GC content of the type genome is 42.2 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Decinula gen. nov.

Candidatus Decinula (NL. fem. n. *Decinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PGYV01*. The type species for the genus is *Candidatus* Decinula procrifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decinulaceae.

Description of *Candidatus* Decinulaceae fam. nov.

Candidatus Decinulaceae (NL. fem. n. *Decinulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PGYV01.* The type genus for the taxon is *Candidatus* Decinula .

According to the original version of GTDB R06-RS202, this family belongs to the order *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decinulales.

Description of *Candidatus* Decinulales ord. nov.

Candidatus Decinulales (NL. fem. n. *Decinulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PGYV01.* The type genus for the taxon is *Candidatus* Decinula .

According to the original version of GTDB R06-RS202, this family belongs to the class *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decinulae.

Description of *Candidatus* Decinulae class. nov.

Candidatus Decinulae (NL. fem. n. *c__Decinulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PGYV01.* The type genus for the taxon is *Candidatus* Decinula .

According to GTDB R06-RS202, this class belongs to the phylum *Goldbacteria*.

Description of *Candidatus* Decitana monimedo sp. nov.

Candidatus Decitana monimedo (NL. fem. n. *monimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WM-3-3 sp002928495*. The type genome for the species is the GenBank assembly GCA_002928495.1. The GC content of the type genome is 49.39 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Decitana gen. nov.

Candidatus Decitana (NL. fem. n. *Decitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WM-3-3*. The type species for the genus is *Candidatus* Decitana monimedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decitana refacitas sp. nov.

Candidatus Decitana refacitas (NL. fem. n. *refacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WM-3-3 sp002928995*. The type genome for the species is the GenBank assembly GCA_002928915.1. The GC content of the type genome is 48.79 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Decitaria fefelitio sp. nov.

Candidatus Decitaria fefelitio (NL. fem. n. *fefelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7888 sp002500505*. The type genome for the species is the GenBank assembly GCA_002500505.1. The GC content of the type genome is 51.71 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Decitaria gen. nov.

Candidatus Decitaria (NL. fem. n. *Decitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7888*. The type species for the genus is *Candidatus* Decitaria fefelitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Decitella nosocessa sp. nov.

Candidatus Decitella nosocessa (NL. fem. n. *nosocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Kazan-3B-28 sp001771185*. The type genome for the species is the GenBank assembly GCA_001771215.1. The GC content of the type genome is 45.58 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Decitella gen. nov.

Candidatus Decitella (NL. fem. n. *Decitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Kazan-3B-28*. The type species for the genus is *Candidatus* Decitella nosocessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kazan-3B-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decitellaceae.

Description of *Candidatus* Decitellaceae fam. nov.

Candidatus Decitellaceae (NL. fem. n. *Decitellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Kazan-3B-28.* The type genus for the taxon is *Candidatus* Decitella .

According to the original version of GTDB R06-RS202, this family belongs to the order *Kazan-3B-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decitellales.

Description of *Candidatus* Decitellales ord. nov.

Candidatus Decitellales (NL. fem. n. *Decitellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Kazan-3B-28.* The type genus for the taxon is *Candidatus* Decitella .

According to the original version of GTDB R06-RS202, this family belongs to the class *Kazan-3B-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decitellae.

Description of *Candidatus* Decitellae class. nov.

Candidatus Decitellae (NL. fem. n. *c__Decitellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Kazan-3B-28.* The type genus for the taxon is *Candidatus* Decitella .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Decitella teleficula sp. nov.

Candidatus Decitella teleficula (NL. fem. n. *teleficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Kazan-3B-28 sp001029795*. The type genome for the species is the GenBank assembly GCA_001004375.1. The GC content of the type genome is 51.7 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Decitia abveribra sp. nov.

Candidatus Decitia abveribra (NL. fem. n. *abveribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-003244245 sp003244055*. The type genome for the species is the GenBank assembly GCA_003244055.1. The GC content of the type genome is 67.38 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Decitia gen. nov.

Candidatus Decitia (NL. fem. n. *Decitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-003244245*. The type species for the genus is *Candidatus* Decitia abveribra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decitia delecitudo sp. nov.

Candidatus Decitia delecitudo (NL. fem. n. *delecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-003244245 sp003244245*. The type genome for the species is the GenBank assembly GCA_003244245.1. The GC content of the type genome is 67.5 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Decitida octacentia sp. nov.

Candidatus Decitida octacentia (NL. fem. n. *octacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AB1-6 sp001730065*. The type genome for the species is the GenBank assembly GCA_001730065.1. The GC content of the type genome is 21.61 % and the genome length is 0.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ovicells".

Description of *Candidatus* Decitida gen. nov.

Candidatus Decitida (NL. fem. n. *Decitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AB1-6*. The type species for the genus is *Candidatus* Decitida octacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB1-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decitidaceae.

Description of *Candidatus* Decitidaceae fam. nov.

Candidatus Decitidaceae (NL. fem. n. *Decitidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AB1-6.* The type genus for the taxon is *Candidatus* Decitida .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales_B*.

Description of *Candidatus* Decitosa nutamax sp. nov.

Candidatus Decitosa nutamax (NL. fem. n. *nutamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J103 sp003694875*. The type genome for the species is the GenBank assembly GCA_003694875.1. The GC content of the type genome is 72.3 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Decitosa gen. nov.

Candidatus Decitosa (NL. fem. n. *Decitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J103*. The type species for the genus is *Candidatus* Decitosa nutamax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decitosaceae.

Description of *Candidatus* Decitosaceae fam. nov.

Candidatus Decitosaceae (NL. fem. n. *Decitosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J103.* The type genus for the taxon is *Candidatus* Decitosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *J103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decitosales.

Description of *Candidatus* Decitosales ord. nov.

Candidatus Decitosales (NL. fem. n. *Decitosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J103*. The type genus for the taxon is *Candidatus* Decitosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *J058*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siticiae.

Description of *Candidatus* Decitula fetifitoga sp. nov.

Candidatus Decitula fetifitoga (NL. fem. n. *fetifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066755 sp900066755*. The type genome for the species is the GenBank assembly GCA_900066755.1. The GC content of the type genome is 48.78 % and the genome length is 5.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Decitula gen. nov.

Candidatus Decitula (NL. fem. n. *Decitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-900066755*. The type species for the genus is *Candidatus* Decitula fetifitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decitula turilimonia sp. nov.

Candidatus Decitula turilimonia (NL. fem. n. *turilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066755 sp902363085*. The type genome for the species is the GenBank assembly RS_GCF_902363085.1. The GC content of the type genome is 48.25 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Decomana domigilega sp. nov.

Candidatus Decomana domigilega (NL. fem. n. *domigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA854 sp002364485*. The type genome for the species is the GenBank assembly GCA_002683275.1. The GC content of the type genome is 62.7 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Decomana gen. nov.

Candidatus Decomana (NL. fem. n. *Decomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA854*. The type species for the genus is *Candidatus* Decomana domigilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Decomana remedugo sp. nov.

Candidatus Decomana remedugo (NL. fem. n. *remedugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA854 sp002295885*. The type genome for the species is the GenBank assembly GCA_002480205.1. The GC content of the type genome is 65.12 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Decomana tomogibra sp. nov.

Candidatus Decomana tomogibra (NL. fem. n. *tomogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA854 sp002591705*. The type genome for the species is the GenBank assembly GCA_002591705.1. The GC content of the type genome is 59.62 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Decomaria anancicula sp. nov.

Candidatus Decomaria anancicula (NL. fem. n. *anancicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8108 sp002320775*. The type genome for the species is the GenBank assembly GCA_002320775.1. The GC content of the type genome is 59.84 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Decomaria gen. nov.

Candidatus Decomaria (NL. fem. n. *Decomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8108*. The type species for the genus is *Candidatus* Decomaria anancicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomariaceae.

Description of *Candidatus* Decomariaceae fam. nov.

Candidatus Decomariaceae (NL. fem. n. *Decomariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8108.* The type genus for the taxon is *Candidatus* Decomaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decomariales.

Description of *Candidatus* Decomariales ord. nov.

Candidatus Decomariales (NL. fem. n. *Decomariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8108.* The type genus for the taxon is *Candidatus* Decomaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomariae.

Description of *Candidatus* Decomariae class. nov.

Candidatus Decomariae (NL. fem. n. *c__Decomariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8108.* The type genus for the taxon is *Candidatus* Decomaria .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Decomaria cimitentia sp. nov.

Candidatus Decomaria cimitentia (NL. fem. n. *cimitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8108 sp002695115*. The type genome for the species is the GenBank assembly GCA_002695115.1. The GC content of the type genome is 61.47 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Decomaria exentifica sp. nov.

Candidatus Decomaria exentifica (NL. fem. n. *exentifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8108 sp003509045*. The type genome for the species is the GenBank assembly GCA_003509045.1. The GC content of the type genome is 60.12 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Decomaria lorarastra sp. nov.

Candidatus Decomaria lorarastra (NL. fem. n. *lorarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8108 sp002708465*. The type genome for the species is the GenBank assembly GCA_002708465.1. The GC content of the type genome is 60.16 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Decomella dilacisca sp. nov.

Candidatus Decomella dilacisca (NL. fem. n. *dilacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG40 sp003242475*. The type genome for the species is the GenBank assembly GCA_003242475.1. The GC content of the type genome is 69.08 %

and the genome length is 2.73 Mbp.

Description of *Candidatus* Decomella gen. nov.

Candidatus Decomella (NL. fem. n. *Decomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG40*. The type species for the genus is *Candidatus* Decomella dilacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decomida decacatio sp. nov.

Candidatus Decomida decacatio (NL. fem. n. *decacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AZRK01 sp002895485*. The type genome for the species is the GenBank assembly RS_GCF_002895485.1. The GC content of the type genome is 30.57 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Decomida gen. nov.

Candidatus Decomida (NL. fem. n. *Decomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AZRK01*. The type species for the genus is *Candidatus* Decomida decacatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decomosa ceromitoga sp. nov.

Candidatus Decomosa ceromitoga (NL. fem. n. *ceromitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU019 sp002402575*. The type genome for the species is the GenBank assembly GCA_002402575.1. The GC content of the type genome is 50.96 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Decomosa gen. nov.

Candidatus Decomosa (NL. fem. n. *Decomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU019*. The type species for the genus is *Candidatus* Decomosa ceromitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decomosa lenimitia sp. nov.

Candidatus Decomosa lenimitia (NL. fem. n. *lenimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU019 sp002398825*. The type genome for the species is the GenBank assembly GCA_002398825.1. The GC content of the type genome is 50.21 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Decomosa recocigena sp. nov.

Candidatus Decomosa recocigena (NL. fem. n. *recocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU019 sp001512785*. The type genome for the species is the GenBank assembly GCA_001512785.1. The GC content of the type genome is 50.54 % and the genome length is 2.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Decomula acistentia sp. nov.

Candidatus Decomula acistentia (NL. fem. n. *acistentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6911 sp002451015*. The type genome for the species is the GenBank assembly GCA_002451015.1. The GC content of the type genome is 51.61 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Decomula gen. nov.

Candidatus Decomula (NL. fem. n. *Decomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6911*. The type species for the genus is *Candidatus* Decomula acistentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomulaceae.

Description of *Candidatus* Decomulaceae fam. nov.

Candidatus Decomulaceae (NL. fem. n. *Decomulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6911.* The type genus for the taxon is *Candidatus* Decomula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decomulales.

Description of *Candidatus* Decomulales ord. nov.

Candidatus Decomulales (NL. fem. n. *Decomulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6911.* The type genus for the taxon is *Candidatus* Decomula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomulae.

Description of *Candidatus* Decomulae class. nov.

Candidatus Decomulae (NL. fem. n. *c__Decomulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6911.* The type genus for the taxon is *Candidatus* Decomula .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Decucana vepalitrix sp. nov.

Candidatus Decucana vepalitrix (NL. fem. n. *vepalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBAX01 sp005240095*. The type genome for the species is the GenBank assembly GCA_005240095.1. The GC content of the type genome is 63.56 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Decucana gen. nov.

Candidatus Decucana (NL. fem. n. *Decucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBAX01*. The type species for the genus is *Candidatus* Decucana vepalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Decucaria tirocitica sp. nov.

Candidatus Decucaria tirocitica (NL. fem. n. *tirocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEGR01 sp902826935*. The type genome for the species is the GenBank assembly GCA_902827075.1. The GC content of the type genome is 68.93 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Decucaria gen. nov.

Candidatus Decucaria (NL. fem. n. *Decucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEGR01*. The type species for the genus is *Candidatus* Decucaria tirocitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decucella adcesentia sp. nov.

Candidatus Decucella adcesentia (NL. fem. n. *adcesentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp003635185*. The type genome for the species is the GenBank assembly GCA_003635185.1. The GC content of the type genome is 43.02 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Decucella gen. nov.

Candidatus Decucella (NL. fem. n. *Decucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MSPOR6*. The type species for the genus is *Candidatus* Decucella adcesentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WGA-3G*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebosaceae.

Description of *Candidatus* Decucella immadax sp. nov.

Candidatus Decucella immadax (NL. fem. n. *immadax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp012270795*. The type genome for the species is the GenBank assembly GCA_012270795.1. The GC content of the type genome is 41.53 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Decucella impirisca sp. nov.

Candidatus Decucella impirisca (NL. fem. n. *impirisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp012267415*. The type genome for the species is the GenBank assembly GCA_012267415.1. The GC content of the type genome is 41.87 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Decucella lanifimonas sp. nov.

Candidatus Decucella lanifimonas (NL. fem. n. *lanifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp003635315*. The type genome for the species is the GenBank assembly GCA_003635315.1. The GC content of the type genome is 38.16 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Decucella sonivicella sp. nov.

Candidatus Decucella sonivicella (NL. fem. n. *sonivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp009839975*. The type genome for the species is the GenBank assembly GCA_009839975.1. The GC content of the type genome is 41.97 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Decucella tirunilenta sp. nov.

Candidatus Decucella tirunilenta (NL. fem. n. *tirunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MSPOR6 sp009842375*. The type genome for the species is the GenBank assembly GCA_009842375.1. The GC content of the type genome is 42.78 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Decucia advicigena sp. nov.

Candidatus Decucia advicigena (NL. fem. n. *advicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRYI01 sp011380295*. The type genome for the species is the GenBank assembly GCA_011380295.1. The GC content of the type genome is 47.41 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Decucia gen. nov.

Candidatus Decucia (NL. fem. n. *Decucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRYI01*. The type species for the genus is *Candidatus* Decucia

advicigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decuciaceae.

Description of *Candidatus* Decuciaceae fam. nov.

Candidatus Decuciaceae (NL. fem. n. *Decuciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRYI01.* The type genus for the taxon is *Candidatus* Decucia .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baropanales.

Description of *Candidatus* Decucida cululifica sp. nov.

Candidatus Decucida cululifica (NL. fem. n. *cululifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILUR01 sp903837445*. The type genome for the species is the GenBank assembly GCA_903837445.1. The GC content of the type genome is 39.08 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Decucida gen. nov.

Candidatus Decucida (NL. fem. n. *Decucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILUR01*. The type species for the genus is *Candidatus* Decucida cululifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILUR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decucidaceae.

Description of *Candidatus* Decucidaceae fam. nov.

Candidatus Decucidaceae (NL. fem. n. *Decucidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILUR01*. The type genus for the taxon is *Candidatus* Decucida .

According to the original version of GTDB R06-RS202, this family belongs to the order *PGYV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decinulales.

Description of *Candidatus* Decucosa semigatio sp. nov.

Candidatus Decucosa semigatio (NL. fem. n. *semigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG25 sp003221005*. The type genome for the species is the GenBank assembly GCA_003221975.1. The GC content of the type genome is 69.0 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Decucosa gen. nov.

Candidatus Decucosa (NL. fem. n. *Decucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG25*. The type species for the genus is *Candidatus* Decucosa semigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Decucula pinififorma sp. nov.

Candidatus Decucula pinififorma (NL. fem. n. *pinififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-3 sp005888095*. The type genome for the species is the GenBank assembly GCA_005888095.1. The GC content of the type genome is 71.09 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Decucula gen. nov.

Candidatus Decucula (NL. fem. n. *Decucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DP-3*. The type species for the genus is *Candidatus* Decucula pinififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DP-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Betacariaceae.

Description of *Candidatus* Decucula progriforma sp. nov.

Candidatus Decucula progriforma (NL. fem. n. *progriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-3 sp005879585*. The type genome for the species is the GenBank assembly GCA_005879585.1. The GC content of the type genome is 70.46 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Decucula semipentia sp. nov.

Candidatus Decucula semipentia (NL. fem. n. *semipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DP-3 sp005879205*. The type genome for the species is the GenBank assembly GCA_005879205.1. The GC content of the type genome is 71.13 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Deculana pecunitoga sp. nov.

Candidatus Deculana pecunitoga (NL. fem. n. *pecunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2710765 sp002710765*. The type genome for the species is the GenBank assembly GCA_002690595.1. The GC content of the type genome is 28.05 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Deculana gen. nov.

Candidatus Deculana (NL. fem. n. *Deculana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2710765*. The type species for the genus is *Candidatus* Deculana pecunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Decularia calipilenta sp. nov.

Candidatus Decularia calipilenta (NL. fem. n. *calipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-104 sp007117885*. The type genome for the species is the GenBank assembly GCA_007117885.1. The GC content of the type genome is 39.96 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Decularia gen. nov.

Candidatus Decularia (NL. fem. n. *Decularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-104*. The type species for the genus is *Candidatus* Decularia calipilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decularia cepuribra sp. nov.

Candidatus Decularia cepuribra (NL. fem. n. *cepuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-104 sp007116245*. The type genome for the species is the GenBank assembly GCA_007124145.1. The GC content of the type genome is 36.64 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Deculia vitigimonia sp. nov.

Candidatus Deculia vitigimonia (NL. fem. n. *vitigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SFEB01 sp004558105*. The type genome for the species is the GenBank assembly GCA_004558105.1. The GC content of the type genome is 45.06 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Deculia gen. nov.

Candidatus Deculia (NL. fem. n. *Deculia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFEB01*. The type species for the genus is *Candidatus* Deculia vitigimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-314*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cohurariaceae.

Description of *Candidatus* Deculida ridibax sp. nov.

Candidatus Deculida ridibax (NL. fem. n. *ridibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLJO01 sp009701715*. The type genome for the species is the GenBank assembly GCA_009705765.1. The GC content of the type genome is 65.89 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Deculida gen. nov.

Candidatus Deculida (NL. fem. n. *Deculida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLJO01*. The type species for the genus is *Candidatus* Deculida ridibax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Deculosa macilitrix sp. nov.

Candidatus Deculosa macilitrix (NL. fem. n. *macilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2638 sp002359735*. The type genome for the species is the

GenBank assembly GCA_002299145.1. The GC content of the type genome is 47.57 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Deculosa gen. nov.

Candidatus Deculosa (NL. fem. n. *Deculosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2638*. The type species for the genus is *Candidatus* Deculosa macilitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Deculula bicipax sp. nov.

Candidatus Deculula bicipax (NL. fem. n. *bicipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3125 sp002726315*. The type genome for the species is the GenBank assembly GCA_003542135.1. The GC content of the type genome is 58.99 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Deculula gen. nov.

Candidatus Deculula (NL. fem. n. *Deculula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3125*. The type species for the genus is *Candidatus* Deculula bicipax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MedAcidi-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funamidaceae.

Description of *Candidatus* Deculula capucibula sp. nov.

Candidatus Deculula capucibula (NL. fem. n. *capucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3125 sp002687745*. The type genome for the species is the GenBank assembly GCA_002420625.1. The GC content of the type genome is 65.48 %

and the genome length is 1.99 Mbp.

Description of *Candidatus* Deculula expasago sp. nov.

Candidatus Deculula expasago (NL. fem. n. *expasago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3125 sp014381745*. The type genome for the species is the GenBank assembly GCA_014381745.1. The GC content of the type genome is 64.21 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Deculula penecilega sp. nov.

Candidatus Deculula penecilega (NL. fem. n. *penecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3125 sp002365325*. The type genome for the species is the GenBank assembly GCA_002365325.1. The GC content of the type genome is 64.62 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Deculula viburugo sp. nov.

Candidatus Deculula viburugo (NL. fem. n. *viburugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3125 sp002501135*. The type genome for the species is the GenBank assembly GCA_002731435.1. The GC content of the type genome is 64.46 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Decunana fetutivita sp. nov.

Candidatus Decunana fetutivita (NL. fem. n. *fetutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS775 sp900545325*. The type genome for the species is the GenBank assembly GCA_900545325.1. The GC content of the type genome is 53.27 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Decunana gen. nov.

Candidatus Decunana (NL. fem. n. *Decunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS775*. The type species for the genus is *Candidatus* Decunana fetutivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decunana homilicella sp. nov.

Candidatus Decunana homilicella (NL. fem. n. *homilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS775 sp003343995*. The type genome for the species is the GenBank assembly GCA_003343995.1. The GC content of the type genome is 51.86 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Decunella abrepibula sp. nov.

Candidatus Decunella abrepibula (NL. fem. n. *abrepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902578495*. The type genome for the species is the GenBank assembly GCA_902578495.1. The GC content of the type genome is 35.4 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Decunella gen. nov.

Candidatus Decunella (NL. fem. n. *Decunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACNYO01*. The type species for the genus is *Candidatus* Decunella abrepibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-339-G14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposariaceae.

Description of *Candidatus* Decunella daducifica sp. nov.

Candidatus Decunella daducifica (NL. fem. n. *daducifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902589965*. The type genome for the species is the GenBank assembly GCA_902566955.1. The GC content of the type genome is 35.25 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Decunella funamiforma sp. nov.

Candidatus Decunella funamiforma (NL. fem. n. *funamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902528485*. The type genome for the species is the GenBank assembly GCA_902604535.1. The GC content of the type genome is 34.98 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Decunella irradessa sp. nov.

Candidatus Decunella irradessa (NL. fem. n. *irradessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902624765*. The type genome for the species is the GenBank assembly GCA_902624765.1. The GC content of the type genome is 35.04 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Decunella momoredo sp. nov.

Candidatus Decunella momoredo (NL. fem. n. *momoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902594855*. The type genome for the species is the GenBank assembly GCA_902525435.1. The GC content of the type genome is 35.3 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Decunella pomifitia sp. nov.

Candidatus Decunella pomifitia (NL. fem. n. *pomifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902570035*. The type genome for the species is the GenBank assembly GCA_902594105.1. The GC content of the type genome is 35.42 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Decunella resalisca sp. nov.

Candidatus Decunella resalisca (NL. fem. n. *resalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902526045*. The type genome for the species is the GenBank assembly GCA_902526045.1. The GC content of the type genome is 34.93 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Decunella videlibula sp. nov.

Candidatus Decunella videlibula (NL. fem. n. *videlibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNYO01 sp902596665*. The type genome for the species is the GenBank assembly GCA_902526465.1. The GC content of the type genome is 35.51 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Decunia dilibitio sp. nov.

Candidatus Decunia dilibitio (NL. fem. n. *dilibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMH01 sp003149935*. The type genome for the species is the GenBank assembly GCA_003149935.1. The GC content of the type genome is 59.12 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Decunia gen. nov.

Candidatus Decunia (NL. fem. n. *Decunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAMH01*. The type species for the genus is *Candidatus* Decunia dilibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

QAMH01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decuniaceae.

Description of *Candidatus* Decuniaceae fam. nov.

Candidatus Decuniaceae (NL. fem. n. *Decuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QAMH01*. The type genus for the taxon is *Candidatus* Decunia .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Decunia encolitudo sp. nov.

Candidatus Decunia encolitudo (NL. fem. n. *encolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMH01 sp900756605*. The type genome for the species is the GenBank assembly RS_GCF_900756605.1. The GC content of the type genome is 58.68 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Decunia lacinessa sp. nov.

Candidatus Decunia lacinessa (NL. fem. n. *lacinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMH01 sp900556425*. The type genome for the species is the GenBank assembly GCA_900556425.1. The GC content of the type genome is 59.11 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Decunia levifetta sp. nov.

Candidatus Decunia levifetta (NL. fem. n. *levifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMH01 sp902783925*. The type genome for the species is the GenBank assembly GCA_902783925.1. The GC content of the type genome is 55.65 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Decunia masocitas sp. nov.

Candidatus Decunia masocitas (NL. fem. n. *masocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMH01 sp900544245*. The type genome for the species is the GenBank assembly RS_GCF_900758595.1. The GC content of the type genome is 60.71 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Decunida adalgitas sp. nov.

Candidatus Decunida adalgitas (NL. fem. n. *adalgitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1364 sp003154555*. The type genome for the species is the GenBank assembly GCA_003154555.1. The GC content of the type genome is 63.19 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Decunida gen. nov.

Candidatus Decunida (NL. fem. n. *Decunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1364*. The type species for the genus is *Candidatus* Decunida adalgitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1364*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunidaceae.

Description of *Candidatus* Decunidaceae fam. nov.

Candidatus Decunidaceae (NL. fem. n. *Decunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1364.* The type genus for the taxon is *Candidatus* Decunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volucanales.

Description of *Candidatus* Decunida bonifitrix sp. nov.

Candidatus Decunida bonifitrix (NL. fem. n. *bonifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1364 sp003141795*. The type genome for the species is the GenBank assembly GCA_003141795.1. The GC content of the type genome is 62.63 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Decunida velifibula sp. nov.

Candidatus Decunida velifibula (NL. fem. n. *velifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1364 sp003170115*. The type genome for the species is the GenBank assembly GCA_003170115.1. The GC content of the type genome is 61.92 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Decunosa abmatitica sp. nov.

Candidatus Decunosa abmatitica (NL. fem. n. *abmatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STGJ01 sp010435965*. The type genome for the species is the GenBank assembly RS_GCF_010435965.1. The GC content of the type genome is 66.2 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Decunosa gen. nov.

Candidatus Decunosa (NL. fem. n. *Decunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *STGJ01*. The type species for the genus is *Candidatus* Decunosa abmatitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decunosa denomicula sp. nov.

Candidatus Decunosa denomicula (NL. fem. n. *denomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STGJ01 sp003856275*. The type genome for the species is the GenBank assembly RS_GCF_009831765.1. The GC content of the type genome is 59.35 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Decunosa vehemitia sp. nov.

Candidatus Decunosa vehemitia (NL. fem. n. *vehemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STGJ01 sp004919095*. The type genome for the species is the GenBank assembly RS_GCF_004919095.1. The GC content of the type genome is 66.29 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Decunula indivax sp. nov.

Candidatus Decunula indivax (NL. fem. n. *indivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNDG01 sp003645915*. The type genome for the species is the GenBank assembly GCA_003645915.1. The GC content of the type genome is 36.88 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Decunula gen. nov.

Candidatus Decunula (NL. fem. n. *Decunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNDG01*. The type species for the genus is *Candidatus* Decunula indivax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunulaceae.

Description of *Candidatus* Decunulaceae fam. nov.

Candidatus Decunulaceae (NL. fem. n. *Decunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNDG01.* The type genus for the taxon is *Candidatus* Decunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decunulales.

Description of *Candidatus* Decunulales ord. nov.

Candidatus Decunulales (NL. fem. n. *Decunulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNDG01.* The type genus for the taxon is *Candidatus* Decunula .

According to the original version of GTDB R06-RS202, this family belongs to the class *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decunulae.

Description of *Candidatus* Decunulae class. nov.

Candidatus Decunulae (NL. fem. n. *c__Decunulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNDG01.* The type genus for the taxon is *Candidatus* Decunula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Decunulota.

Description of *Candidatus* Decunulota phyl. nov.

Candidatus Decunulota (NL. fem. n. *Decunulota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNDG01.* The type genus for the taxon is *Candidatus* Decunula .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Decupana resupitia sp. nov.

Candidatus Decupana resupitia (NL. fem. n. *resupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5680 sp002420425*. The type genome for the species is the GenBank assembly GCA_002420425.1. The GC content of the type genome is 50.8 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Decupana gen. nov.

Candidatus Decupana (NL. fem. n. *Decupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5680*. The type species for the genus is *Candidatus* Decupana resupitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5680*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decupanaceae.

Description of *Candidatus* Decupanaceae fam. nov.

Candidatus Decupanaceae (NL. fem. n. *Decupanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5680.* The type genus for the taxon is *Candidatus* Decupana .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Decuparia cenodimonas sp. nov.

Candidatus Decuparia cenodimonas (NL. fem. n. *cenodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QBMD01 sp003249115*. The type genome for the species is the GenBank assembly GCA_003249115.1. The GC content of the type genome is 65.45 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Decuparia gen. nov.

Candidatus Decuparia (NL. fem. n. *Decuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QBMD01*. The type species for the genus is *Candidatus* Decuparia

cenodimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decuparia progretta sp. nov.

Candidatus Decuparia progretta (NL. fem. n. *progretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QBMD01 sp013203655*. The type genome for the species is the GenBank assembly GCA_013203655.1. The GC content of the type genome is 65.14 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Decuparia volubitia sp. nov.

Candidatus Decuparia volubitia (NL. fem. n. *volubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QBMD01 sp001885215*. The type genome for the species is the GenBank assembly RS_GCF_007828135.1. The GC content of the type genome is 63.92 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Decupella novilousia sp. nov.

Candidatus Decupella novilousia (NL. fem. n. *novilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J022 sp008363215*. The type genome for the species is the GenBank assembly GCA_011525725.1. The GC content of the type genome is 65.88 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Decupella gen. nov.

Candidatus Decupella (NL. fem. n. *Decupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J022*. The type species for the genus is *Candidatus* Decupella novilousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Decupella oblanessa sp. nov.

Candidatus Decupella oblanessa (NL. fem. n. *oblanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J022 sp003697045*. The type genome for the species is the GenBank assembly GCA_003697045.1. The GC content of the type genome is 62.34 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Decupia monacatica sp. nov.

Candidatus Decupia monacatica (NL. fem. n. *monacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-33-13 sp002782675*. The type genome for the species is the GenBank assembly GCA_001873345.1. The GC content of the type genome is 33.45 % and the genome length is 1.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Decupia gen. nov.

Candidatus Decupia (NL. fem. n. *Decupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-33-13*. The type species for the genus is *Candidatus* Decupia monacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *34-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefosaceae.

Description of *Candidatus* Decupida allibastra sp. nov.

Candidatus Decupida allibastra (NL. fem. n. *allibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *ASTD01 sp011960625*. The type genome for the species is the GenBank assembly RS_GCF_011960625.1. The GC content of the type genome is 44.12 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Decupida gen. nov.

Candidatus Decupida (NL. fem. n. *Decupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ASTD01*. The type species for the genus is *Candidatus* Decupida allibastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Decupida arnacetta sp. nov.

Candidatus Decupida arnacetta (NL. fem. n. *arnacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASTD01 sp009830285*. The type genome for the species is the GenBank assembly RS_GCF_009830285.1. The GC content of the type genome is 44.44 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Decupida bisulitas sp. nov.

Candidatus Decupida bisulitas (NL. fem. n. *bisulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASTD01 sp009774295*. The type genome for the species is the GenBank assembly GCA_009774295.1. The GC content of the type genome is 47.95 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Decupida esculicella sp. nov.

Candidatus Decupida esculicella (NL. fem. n. *esculicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASTD01 sp000403455*. The type genome for the species is the GenBank assembly RS_GCF_000403455.2. The GC content of the type genome is 46.03 % and the genome length is 6.15 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Decuposa citivilega sp. nov.

Candidatus Decuposa citivilega (NL. fem. n. *citivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11426 sp003448375*. The type genome for the species is the GenBank assembly GCA_003448375.1. The GC content of the type genome is 48.71 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Decuposa gen. nov.

Candidatus Decuposa (NL. fem. n. *Decuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11426*. The type species for the genus is *Candidatus* Decuposa citivilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecellaceae.

Description of *Candidatus* Decuposa metabibula sp. nov.

Candidatus Decuposa metabibula (NL. fem. n. *metabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11426 sp002346225*. The type genome for the species is the GenBank assembly GCA_001438265.1. The GC content of the type genome is 47.35 % and the genome length is 2.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Decupula decinitudo sp. nov.

Candidatus Decupula decinitudo (NL. fem. n. *decinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pan216 sp007748055*. The type genome for the species is the

GenBank assembly RS_GCF_007748055.1. The GC content of the type genome is 61.97 % and the genome length is 7.61 Mbp.

Description of *Candidatus* Decupula gen. nov.

Candidatus Decupula (NL. fem. n. *Decupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pan216*. The type species for the genus is *Candidatus* Decupula decinitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Pan216*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decupulaceae.

Description of *Candidatus* Decupulaceae fam. nov.

Candidatus Decupulaceae (NL. fem. n. *Decupulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Pan216.* The type genus for the taxon is *Candidatus* Decupula .

According to the original version of GTDB R06-RS202, this family belongs to the order *Pan216*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decupulales.

Description of *Candidatus* Decupulales ord. nov.

Candidatus Decupulales (NL. fem. n. *Decupulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Pan216.* The type genus for the taxon is *Candidatus* Decupula .

According to the GTDB R06-RS202, this order belongs to the class *Planctomycetes*.

Description of *Candidatus* Dedigana adsocugo sp. nov.

Candidatus Dedigana adsocugo (NL. fem. n. *adsocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4073 sp902523675*. The type genome for the species is the GenBank assembly GCA_902523675.1. The GC content of the type genome is 28.96 %

and the genome length is 1.1 Mbp.

Description of *Candidatus* Dedigana gen. nov.

Candidatus Dedigana (NL. fem. n. *Dedigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP4073*. The type species for the genus is *Candidatus* Dedigana adsocugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Dedigana catobibula sp. nov.

Candidatus Dedigana catobibula (NL. fem. n. *catobibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4073 sp002717855*. The type genome for the species is the GenBank assembly GCA_002717855.1. The GC content of the type genome is 28.73 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Dedigana lacinitio sp. nov.

Candidatus Dedigana lacinitio (NL. fem. n. *lacinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4073 sp902524895*. The type genome for the species is the GenBank assembly GCA_902524895.1. The GC content of the type genome is 28.93 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Dedigaria devecitica sp. nov.

Candidatus Dedigaria devecitica (NL. fem. n. *devecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBT01 sp005239595*. The type genome for the species is the GenBank assembly GCA_005239595.1. The GC content of the type genome is 50.25 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Dedigaria gen. nov.

Candidatus Dedigaria (NL. fem. n. *Dedigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBT01*. The type species for the genus is *Candidatus* Dedigaria devecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dedigariaceae.

Description of *Candidatus* Dedigariaceae fam. nov.

Candidatus Dedigariaceae (NL. fem. n. *Dedigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBT01.* The type genus for the taxon is *Candidatus* Dedigaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceraridales.

Description of *Candidatus* Dedigella ablepifica sp. nov.

Candidatus Dedigella ablepifica (NL. fem. n. *ablepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-32 sp001795235*. The type genome for the species is the GenBank assembly GCA_001795235.1. The GC content of the type genome is 65.56 % and the genome length is 1.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Dedigella gen. nov.

Candidatus Dedigella (NL. fem. n. *Dedigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-64-32*. The type species for the genus is *Candidatus* Dedigella ablepifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dedigellaceae.

Description of *Candidatus* Dedigellaceae fam. nov.

Candidatus Dedigellaceae (NL. fem. n. *Dedigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-32.* The type genus for the taxon is *Candidatus* Dedigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-28-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatosales.

Description of *Candidatus* Dedigida arvecitoga sp. nov.

Candidatus Dedigida arvecitoga (NL. fem. n. *arvecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFMI01 sp902761825*. The type genome for the species is the GenBank assembly GCA_902761825.1. The GC content of the type genome is 60.2 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Dedigida gen. nov.

Candidatus Dedigida (NL. fem. n. *Dedigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFMI01*. The type species for the genus is *Candidatus* Dedigida arvecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Dedigida badititudo sp. nov.

Candidatus Dedigida badititudo (NL. fem. n. *badititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFMI01 sp004556155*. The type genome for the species is the GenBank assembly GCA_004553565.1. The GC content of the type genome is 58.7 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Dedigida bimotatica sp. nov.

Candidatus Dedigida bimotatica (NL. fem. n. *bimotatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFMI01 sp902764185*. The type genome for the species is the GenBank assembly GCA_902764185.1. The GC content of the type genome is 59.84 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Dedigida inexpago sp. nov.

Candidatus Dedigida inexpago (NL. fem. n. *inexpago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFMI01 sp902781945*. The type genome for the species is the GenBank assembly GCA_902781945.1. The GC content of the type genome is 59.74 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Dedigida inregitura sp. nov.

Candidatus Dedigida inregitura (NL. fem. n. *inregitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFMI01 sp902787835*. The type genome for the species is the GenBank assembly GCA_902787835.1. The GC content of the type genome is 61.56 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Dedigosa coninitica sp. nov.

Candidatus Dedigosa coninitica (NL. fem. n. *coninitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4729 sp002413865*. The type genome for the species is the GenBank assembly GCA_002427855.1. The GC content of the type genome is 52.7 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Dedigosa gen. nov.

Candidatus Dedigosa (NL. fem. n. *Dedigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4729*. The type species for the genus is *Candidatus* Dedigosa coninitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Dedigosa fetutatica sp. nov.

Candidatus Dedigosa fetutatica (NL. fem. n. *fetutatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4729 sp014378615*. The type genome for the species is the GenBank assembly GCA_014378615.1. The GC content of the type genome is 48.63 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Dedigosa inmutetta sp. nov.

Candidatus Dedigosa inmutetta (NL. fem. n. *inmutetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4729 sp014377525*. The type genome for the species is the GenBank assembly GCA_014377525.1. The GC content of the type genome is 47.17 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Dedigula decititura sp. nov.

Candidatus Dedigula decititura (NL. fem. n. *decititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-37-12b sp000993115*. The type genome for the species is the GenBank assembly GCA_000992155.1. The GC content of the type genome is 37.28 % and the genome length is 0.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Dedigula gen. nov.

Candidatus Dedigula (NL. fem. n. *Dedigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-37-12b*. The type species for the genus is *Candidatus* Dedigula decititura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Deefgea venunitas sp. nov.

Candidatus Deefgea venunitas (NL. fem. n. *venunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deefgea sp013284055*. The type genome for the species is the GenBank assembly RS_GCF_014042245.1. The GC content of the type genome is 48.15 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Defacana homunessa sp. nov.

Candidatus Defacana homunessa (NL. fem. n. *homunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKKV01 sp903828035*. The type genome for the species is the GenBank assembly GCA_903828035.1. The GC content of the type genome is 64.92 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Defacana gen. nov.

Candidatus Defacana (NL. fem. n. *Defacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKKV01*. The type species for the genus is *Candidatus* Defacana homunessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacanaceae.

Description of *Candidatus* Defacanaceae fam. nov.

Candidatus Defacanaceae (NL. fem. n. *Defacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIKKV01.* The type genus for the taxon is *Candidatus* Defacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIKKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defacanales.

Description of *Candidatus* Defacanales ord. nov.

Candidatus Defacanales (NL. fem. n. *Defacanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIKKV01.* The type genus for the taxon is *Candidatus* Defacana .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Defacaria deculatio sp. nov.

Candidatus Defacaria deculatio (NL. fem. n. *deculatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp903919545*. The type genome for the species is the GenBank assembly GCA_903919545.1. The GC content of the type genome is 38.27 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Defacaria gen. nov.

Candidatus Defacaria (NL. fem. n. *Defacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2212*. The type species for the genus is *Candidatus* Defacaria deculatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defacaria divoratica sp. nov.

Candidatus Defacaria divoratica (NL. fem. n. *divoratica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp903847945*. The type genome for the species is the GenBank assembly GCA_903847945.1. The GC content of the type genome is 50.95 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Defacaria incenicula sp. nov.

Candidatus Defacaria incenicula (NL. fem. n. *incenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp013334325*. The type genome for the species is the GenBank assembly GCA_013334325.1. The GC content of the type genome is 38.57 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Defacaria munifitas sp. nov.

Candidatus Defacaria munifitas (NL. fem. n. *munifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp002402585*. The type genome for the species is the GenBank assembly GCA_002421625.1. The GC content of the type genome is 41.24 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Defacaria ossarastra sp. nov.

Candidatus Defacaria ossarastra (NL. fem. n. *ossarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp003543215*. The type genome for the species is the GenBank assembly GCA_003543215.1. The GC content of the type genome is 39.84 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Defacaria senipimonia sp. nov.

Candidatus Defacaria senipimonia (NL. fem. n. *senipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2212 sp009773735*. The type genome for the species is the GenBank assembly GCA_008080535.1. The GC content of the type genome is 38.6 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Defacella mavoritica sp. nov.

Candidatus Defacella mavoritica (NL. fem. n. *mavoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-47-12 sp001778285*. The type genome for the species is the GenBank assembly GCA_001778085.1. The GC content of the type genome is 46.8 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Defacella gen. nov.

Candidatus Defacella (NL. fem. n. *Defacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-47-12*. The type species for the genus is *Candidatus* Defacella mavoritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-47-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacellaceae.

Description of *Candidatus* Defacellaceae fam. nov.

Candidatus Defacellaceae (NL. fem. n. *Defacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYC2-FULL-47-12.* The type genus for the taxon is *Candidatus* Defacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Defacia xenopibra sp. nov.

Candidatus Defacia xenopibra (NL. fem. n. *xenopibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU056 sp001512985*. The type genome for the species is the GenBank assembly GCA_012521255.1. The GC content of the type genome is 30.0 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Defacia gen. nov.

Candidatus Defacia (NL. fem. n. *Defacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU056*. The type species for the genus is *Candidatus* Defacia xenopibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Defacida conigugo sp. nov.

Candidatus Defacida conigugo (NL. fem. n. *conigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CLD3 sp008501735*. The type genome for the species is the GenBank assembly GCA_008501735.1. The GC content of the type genome is 34.08 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Defacida gen. nov.

Candidatus Defacida (NL. fem. n. *Defacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CLD3*. The type species for the genus is *Candidatus* Defacida conigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CLD3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacidaceae.

Description of *Candidatus* Defacidaceae fam. nov.

Candidatus Defacidaceae (NL. fem. n. *Defacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CLD3.* The type genus for the taxon is *Candidatus* Defacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CLD3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defacidales.

Description of *Candidatus* Defacidales ord. nov.

Candidatus Defacidales (NL. fem. n. *Defacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CLD3.* The type genus for the taxon is *Candidatus* Defacida .

According to the original version of GTDB R06-RS202, this family belongs to the class *CLD3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defacidae.

Description of *Candidatus* Defacidae class. nov.

Candidatus Defacidae (NL. fem. n. *c__Defacidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CLD3.* The type genus for the taxon is *Candidatus* Defacida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CLD3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Defacidota.

Description of *Candidatus* Defacidota phyl. nov.

Candidatus Defacidota (NL. fem. n. *Defacidota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CLD3.* The type genus for the taxon is *Candidatus* Defacida .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Defacosa reduvimonia sp. nov.

Candidatus Defacosa reduvimonia (NL. fem. n. *reduvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXN01 sp013696965*. The type genome for the species is the GenBank assembly GCA_013696965.1. The GC content of the type genome is 34.04 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Defacosa gen. nov.

Candidatus Defacosa (NL. fem. n. *Defacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXN01*. The type species for the genus is *Candidatus* Defacosa reduvimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCXN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defacosaceae.

Description of *Candidatus* Defacosaceae fam. nov.

Candidatus Defacosaceae (NL. fem. n. *Defacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCXN01.* The type genus for the taxon is *Candidatus* Defacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Defacula cerevessa sp. nov.

Candidatus Defacula cerevessa (NL. fem. n. *cerevessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-39-127 sp003242895*. The type genome for the species is the GenBank assembly GCA_001784515.1. The GC content of the type genome is 38.56 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Defacula gen. nov.

Candidatus Defacula (NL. fem. n. *Defacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-39-127*. The type species for the genus is *Candidatus* Defacula cerevessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-39-127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defaculaceae.

Description of *Candidatus* Defaculaceae fam. nov.

Candidatus Defaculaceae (NL. fem. n. *Defaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-39-127.* The type genus for the taxon is *Candidatus* Defacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWF2-39-127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defaculales.

Description of *Candidatus* Defaculales ord. nov.

Candidatus Defaculales (NL. fem. n. *Defaculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-39-127.* The type genus for the taxon is *Candidatus* Defacula .

According to the GTDB R06-RS202, this order belongs to the class *Riflemargulisbacteria*.

Description of *Candidatus* Defalana gen. nov.

Candidatus Defalana (NL. fem. n. *Defalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11795*. The type species for the genus is *Candidatus* Defalana rhusiopathiae_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defalaria desurousia sp. nov.

Candidatus Defalaria desurousia (NL. fem. n. *desurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVZB01 sp002068205*. The type genome for the species is the GenBank assembly GCA_002068205.1. The GC content of the type genome is 66.62 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Defalaria gen. nov.

Candidatus Defalaria (NL. fem. n. *Defalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVZB01*. The type species for the genus is *Candidatus* Defalaria desurousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MVZB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defalariaceae.

Description of *Candidatus* Defalariaceae fam. nov.

Candidatus Defalariaceae (NL. fem. n. *Defalariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVZB01.* The type genus for the taxon is *Candidatus* Defalaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *MVZB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defalariales.

Description of *Candidatus* Defalariales ord. nov.

Candidatus Defalariales (NL. fem. n. *Defalariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVZB01.* The type genus for the taxon is *Candidatus* Defalaria .

According to the GTDB R06-RS202, this order belongs to the class *Sumerlaeia*.

Description of *Candidatus* Defalella abnocifica sp. nov.

Candidatus Defalella abnocifica (NL. fem. n. *abnocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002704325*. The type genome for the species is the GenBank assembly GCA_002704325.1. The GC content of the type genome is 51.88 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Defalella gen. nov.

Candidatus Defalella (NL. fem. n. *Defalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4421*. The type species for the genus is *Candidatus* Defalella abnocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Defalella absuredo sp. nov.

Candidatus Defalella absuredo (NL. fem. n. *absuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002389675*. The type genome for the species is the GenBank assembly GCA_002389675.1. The GC content of the type genome is 51.7 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Defalella adhinitoga sp. nov.

Candidatus Defalella adhinitoga (NL. fem. n. *adhinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902631405*. The type genome for the species is the GenBank assembly RS_GCF_902631405.1. The GC content of the type genome is 46.82 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Defalella adobrentia sp. nov.

Candidatus Defalella adobrentia (NL. fem. n. *adobrentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902535955*. The type genome for the species is the GenBank assembly RS_GCF_902535955.1. The GC content of the type genome is 52.36 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Defalella attesifica sp. nov.

Candidatus Defalella attesifica (NL. fem. n. *attesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp009936775*. The type genome for the species is the GenBank assembly GCA_009936775.1. The GC content of the type genome is 55.59 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Defalella baropimonia sp. nov.

Candidatus Defalella baropimonia (NL. fem. n. *baropimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp004213835*. The type genome for the species is the GenBank assembly GCA_004213835.1. The GC content of the type genome is 56.14 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Defalella brasmimonia sp. nov.

Candidatus Defalella brasmimonia (NL. fem. n. *brasmimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902528515*. The type genome for the species is the GenBank assembly RS_GCF_902528515.1. The GC content of the type genome is 52.39 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Defalella carecicella sp. nov.

Candidatus Defalella carecicella (NL. fem. n. *carecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902537145*. The type genome for the species is the GenBank assembly RS_GCF_902537145.1. The GC content of the type genome is 55.06 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Defalella carunitoga sp. nov.

Candidatus Defalella carunitoga (NL. fem. n. *carunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002690405*. The type genome for the species is the GenBank assembly GCA_003505675.1. The GC content of the type genome is 52.96 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Defalella decacitoga sp. nov.

Candidatus Defalella decacitoga (NL. fem. n. *decacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902613475*. The type genome for the species is the GenBank assembly RS_GCF_902613475.1. The GC content of the type genome is 53.88 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Defalella deparastra sp. nov.

Candidatus Defalella deparastra (NL. fem. n. *deparastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp902565895*. The type genome for the species is the GenBank assembly RS_GCF_902565895.1. The GC content of the type genome is 52.14 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Defalella docibicella sp. nov.

Candidatus Defalella docibicella (NL. fem. n. *docibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002336645*. The type genome for the species is the GenBank assembly GCA_002336645.1. The GC content of the type genome is 47.67 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Defalella echidousia sp. nov.

Candidatus Defalella echidousia (NL. fem. n. *echidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002390555*. The type genome for the species is the GenBank assembly GCA_002390555.1. The GC content of the type genome is 47.99 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Defalella fatifilenta sp. nov.

Candidatus Defalella fatifilenta (NL. fem. n. *fatifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002470275*. The type genome for the species is the GenBank assembly GCA_003453875.1. The GC content of the type genome is 56.53 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Defalella hexagilega sp. nov.

Candidatus Defalella hexagilega (NL. fem. n. *hexagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002704225*. The type genome for the species is the GenBank assembly GCA_002168875.2. The GC content of the type genome is 55.12 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Defalella homicibra sp. nov.

Candidatus Defalella homicibra (NL. fem. n. *homicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002726925*. The type genome for the species is the GenBank assembly GCA_002726925.1. The GC content of the type genome is 54.92 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Defalella immodentia sp. nov.

Candidatus Defalella immodentia (NL. fem. n. *immodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp003230835*. The type genome for the species is the GenBank assembly GCA_003230835.1. The GC content of the type genome is 49.43 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Defalella impudedo sp. nov.

Candidatus Defalella impudedo (NL. fem. n. *impudedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp012103505*. The type genome for the species is the GenBank assembly GCA_012103505.1. The GC content of the type genome is 50.77 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Defalella inmoditrix sp. nov.

Candidatus Defalella inmoditrix (NL. fem. n. *inmoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002450255*. The type genome for the species is the GenBank assembly GCA_002450255.1. The GC content of the type genome is 52.59 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Defalella inpelicella sp. nov.

Candidatus Defalella inpelicella (NL. fem. n. *inpelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002684495*. The type genome for the species is the GenBank assembly GCA_002684495.1. The GC content of the type genome is 52.63 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Defalella insorimonas sp. nov.

Candidatus Defalella insorimonas (NL. fem. n. *insorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4421 sp009936895*. The type genome for the species is the GenBank assembly GCA_009936895.1. The GC content of the type genome is 54.91 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Defalella invinatica sp. nov.

Candidatus Defalella invinatica (NL. fem. n. *invinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002170355*. The type genome for the species is the GenBank assembly GCA_002170355.2. The GC content of the type genome is 53.41 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Defalella legifitio sp. nov.

Candidatus Defalella legifitio (NL. fem. n. *legifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002348825*. The type genome for the species is the GenBank assembly GCA_002336595.1. The GC content of the type genome is 54.25 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Defalella malagastra sp. nov.

Candidatus Defalella malagastra (NL. fem. n. *malagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp009886205*. The type genome for the species is the GenBank assembly GCA_009886205.1. The GC content of the type genome is 49.53 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Defalella panopitura sp. nov.

Candidatus Defalella panopitura (NL. fem. n. *panopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002731575*. The type genome for the species is the GenBank assembly GCA_003521885.1. The GC content of the type genome is 54.83 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Defalella pinigastra sp. nov.

Candidatus Defalella pinigastra (NL. fem. n. *pinigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002725095*. The type genome for the species is the GenBank assembly GCA_003538025.1. The GC content of the type genome is 53.4 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Defalella serotifica sp. nov.

Candidatus Defalella serotifica (NL. fem. n. *serotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp012269545*. The type genome for the species is the GenBank assembly GCA_012269545.1. The GC content of the type genome is 54.66 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Defalella subabifica sp. nov.

Candidatus Defalella subabifica (NL. fem. n. *subabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp002727775*. The type genome for the species is the GenBank assembly GCA_002727775.1. The GC content of the type genome is 46.27 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Defalella uxorcilenta sp. nov.

Candidatus Defalella uxorcilenta (NL. fem. n. *uxorcilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4421 sp013151695*. The type genome for the species is the GenBank assembly GCA_013151695.1. The GC content of the type genome is 49.08 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Defalia cemenitudo sp. nov.

Candidatus Defalia cemenitudo (NL. fem. n. *cemenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG760 sp900322165*. The type genome for the species is the GenBank assembly GCA_900322165.1. The GC content of the type genome is 54.31 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Defalia gen. nov.

Candidatus Defalia (NL. fem. n. *Defalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG760*. The type species for the genus is *Candidatus* Defalia cemenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1390*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibiaceae.

Description of *Candidatus* Defalia rinocessa sp. nov.

Candidatus Defalia rinocessa (NL. fem. n. *rinocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG760 sp900315265*. The type genome for the species is the GenBank assembly GCA_900314205.1. The GC content of the type genome is 50.61 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Defalia sacopitia sp. nov.

Candidatus Defalia sacopitia (NL. fem. n. *sacopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG760 sp902783575*. The type genome for the species is the GenBank assembly GCA_902783575.1. The GC content of the type genome is 53.69 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Defalida resupibra sp. nov.

Candidatus Defalida resupibra (NL. fem. n. *resupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-47-53 sp001800315*. The type genome for the species is the GenBank assembly GCA_001800315.1. The GC content of the type genome is 47.77 % and the genome length is 2.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Defalida gen. nov.

Candidatus Defalida (NL. fem. n. *Defalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-47-53*. The type species for the genus is *Candidatus* Defalida resupibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA2-FULL-47-53*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defalidaceae.

Description of *Candidatus* Defalidaceae fam. nov.

Candidatus Defalidaceae (NL. fem. n. *Defalidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA2-FULL-47-53.* The type genus for the taxon is *Candidatus* Defalida .

According to GTDB R06-RS202, this family belongs to the order *Endomicrobiales*.

Description of *Candidatus* Defalosa advinicula sp. nov.

Candidatus Defalosa advinicula (NL. fem. n. *advinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUOA01 sp007123625*. The type genome for the species is the GenBank assembly GCA_007123625.1. The GC content of the type genome is 65.48 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Defalosa gen. nov.

Candidatus Defalosa (NL. fem. n. *Defalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUOA01*. The type species for the genus is *Candidatus* Defalosa advinicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defalosa lenocitudo sp. nov.

Candidatus Defalosa lenocitudo (NL. fem. n. *lenocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUOA01 sp007121115*. The type genome for the species is the GenBank assembly GCA_003561435.1. The GC content of the type genome is 67.6 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Defalosa luticetta sp. nov.

Candidatus Defalosa luticetta (NL. fem. n. *luticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUOA01 sp003551925*. The type genome for the species is the GenBank assembly GCA_003551925.1. The GC content of the type genome is 69.62 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Defalosa peradetta sp. nov.

Candidatus Defalosa peradetta (NL. fem. n. *peradetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUOA01 sp003567395*. The type genome for the species is the GenBank assembly GCA_003567395.1. The GC content of the type genome is 66.7 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Defalula rubefedo sp. nov.

Candidatus Defalula rubefedo (NL. fem. n. *rubefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-12-FULL-52-36 sp001828545*. The type genome for the species is the GenBank assembly GCA_001828545.1. The GC content of the type genome is 52.33 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Defalula gen. nov.

Candidatus Defalula (NL. fem. n. *Defalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-52-36*. The type species for the genus is *Candidatus* Defalula rubefedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-50-16-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funebiaceae.

Description of *Candidatus* Defanana inhonigena sp. nov.

Candidatus Defanana inhonigena (NL. fem. n. *inhonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEHE01 sp902826775*. The type genome for the species is the GenBank assembly GCA_902826775.1. The GC content of the type genome is 59.86 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Defanana gen. nov.

Candidatus Defanana (NL. fem. n. *Defanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEHE01*. The type species for the genus is *Candidatus* Defanana inhonigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADEHE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defananaceae.

Description of *Candidatus* Defananaceae fam. nov.

Candidatus Defananaceae (NL. fem. n. *Defananaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADEHE01.* The type genus for the taxon is *Candidatus* Defanana .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Defanaria voragitas sp. nov.

Candidatus Defanaria voragitas (NL. fem. n. *voragitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721815 sp002721815*. The type genome for the species is the GenBank assembly GCA_002298025.1. The GC content of the type genome is 51.56 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Defanaria gen. nov.

Candidatus Defanaria (NL. fem. n. *Defanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721815*. The type species for the genus is *Candidatus* Defanaria voragitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2721815*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defanariaceae.

Description of *Candidatus* Defanariaceae fam. nov.

Candidatus Defanariaceae (NL. fem. n. *Defanariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2721815.* The type genus for the taxon is *Candidatus* Defanaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA727*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minurellales.

Description of *Candidatus* Defanella decupitudo sp. nov.

Candidatus Defanella decupitudo (NL. fem. n. *decupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-105 sp005881155*. The type genome for the species is the GenBank assembly GCA_005880895.1. The GC content of the type genome is 69.58 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Defanella gen. nov.

Candidatus Defanella (NL. fem. n. *Defanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-105*. The type species for the genus is *Candidatus* Defanella decupitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defania adobricula sp. nov.

Candidatus Defania adobricula (NL. fem. n. *adobricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002721375*. The type genome for the species is the GenBank assembly GCA_002721375.1. The GC content of the type genome is 50.23 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Defania gen. nov.

Candidatus Defania (NL. fem. n. *Defania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1096*. The type species for the genus is *Candidatus* Defania adobricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1096*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defaniaceae.

Description of *Candidatus* Defaniaceae fam. nov.

Candidatus Defaniaceae (NL. fem. n. *Defaniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA1096.* The type genus for the taxon is *Candidatus* Defania .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Defania altipimonia sp. nov.

Candidatus Defania altipimonia (NL. fem. n. *altipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp003972865*. The type genome for the species is the GenBank assembly GCA_003972865.1. The GC content of the type genome is 60.15 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Defania capilimonas sp. nov.

Candidatus Defania capilimonas (NL. fem. n. *capilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002708005*. The type genome for the species is the GenBank assembly GCA_002702495.1. The GC content of the type genome is 41.19 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Defania defulibra sp. nov.

Candidatus Defania defulibra (NL. fem. n. *defulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp902589265*. The type genome for the species is the GenBank assembly GCA_902589265.1. The GC content of the type genome is 48.8 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Defania dibucigena sp. nov.

Candidatus Defania dibucigena (NL. fem. n. *dibucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002689335*. The type genome for the species is the GenBank assembly GCA_002689335.1. The GC content of the type genome is 55.52 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Defania ficulitio sp. nov.

Candidatus Defania ficulitio (NL. fem. n. *ficulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002684915*. The type genome for the species is the GenBank assembly GCA_002684915.1. The GC content of the type genome is 41.4 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Defania lucifentia sp. nov.

Candidatus Defania lucifentia (NL. fem. n. *lucifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002686755*. The type genome for the species is the GenBank assembly GCA_002686755.1. The GC content of the type genome is 61.23 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Defania menapibra sp. nov.

Candidatus Defania menapibra (NL. fem. n. *menapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002453165*. The type genome for the species is the GenBank assembly GCA_002306635.1. The GC content of the type genome is 57.03 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Defania nidifatica sp. nov.

Candidatus Defania nidifatica (NL. fem. n. *nidifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002170545*. The type genome for the species is the GenBank assembly GCA_004213515.1. The GC content of the type genome is 40.45 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Defania scammimonas sp. nov.

Candidatus Defania scammimonas (NL. fem. n. *scammimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp002299785*. The type genome for the species is the GenBank assembly GCA_002299785.1. The GC content of the type genome is 57.46 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Defania subaditio sp. nov.

Candidatus Defania subaditio (NL. fem. n. *subaditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp902593035*. The type genome for the species is the GenBank assembly GCA_902593035.1. The GC content of the type genome is 39.98 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Defania vavasousia sp. nov.

Candidatus Defania vavasousia (NL. fem. n. *vavasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp014382705*. The type genome for the species is the GenBank assembly GCA_014382705.1. The GC content of the type genome is 61.29 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Defania venefousia sp. nov.

Candidatus Defania venefousia (NL. fem. n. *venefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1096 sp011523195*. The type genome for the species is the GenBank assembly GCA_011523195.1. The GC content of the type genome is 57.81 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Defanida cinefilenta sp. nov.

Candidatus Defanida cinefilenta (NL. fem. n. *cinefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-12-FULL-41-17 sp001774945*. The type genome for the species is the GenBank assembly GCA_001774945.1. The GC content of the type genome is 40.1 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Defanida gen. nov.

Candidatus Defanida (NL. fem. n. *Defanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-41-17*. The type species for the genus is *Candidatus* Defanida cinefilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-41-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Defarana carecitica sp. nov.

Candidatus Defarana carecitica (NL. fem. n. *carecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1544 sp002774425*. The type genome for the species is the GenBank assembly GCA_002323135.1. The GC content of the type genome is 48.54 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Defarana gen. nov.

Candidatus Defarana (NL. fem. n. *Defarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1544*. The type species for the genus is *Candidatus* Defarana carecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1544*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defaranaceae.

Description of *Candidatus* Defaranaceae fam. nov.

Candidatus Defaranaceae (NL. fem. n. *Defaranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1544.* The type genus for the taxon is *Candidatus* Defarana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1544*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defaranales.

Description of *Candidatus* Defaranales ord. nov.

Candidatus Defaranales (NL. fem. n. *Defaranales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1544.* The type genus for the taxon is *Candidatus* Defarana .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Defararia gralledo sp. nov.

Candidatus Defararia gralledo (NL. fem. n. *gralledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEI01 sp013153515*. The type genome for the species is the GenBank assembly GCA_013153515.1. The GC content of the type genome is 42.08 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Defararia gen. nov.

Candidatus Defararia (NL. fem. n. *Defararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEI01*. The type species for the genus is *Candidatus* Defararia gralledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADEI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defarariaceae.

Description of *Candidatus* Defarariaceae fam. nov.

Candidatus Defarariaceae (NL. fem. n. *Defarariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADEI01*. The type genus for the taxon is *Candidatus* Defararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-205*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tiruniales.

Description of *Candidatus* Defarella fibicitas sp. nov.

Candidatus Defarella fibicitas (NL. fem. n. *fibicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFV01 sp009861545*. The type genome for the species is the GenBank assembly GCA_009861545.1. The GC content of the type genome is 69.3 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Defarella gen. nov.

Candidatus Defarella (NL. fem. n. *Defarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTFV01*. The type species for the genus is *Candidatus* Defarella fibicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8438*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiposaceae.

Description of *Candidatus* Defarella meridax sp. nov.

Candidatus Defarella meridax (NL. fem. n. *meridax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFV01 sp011523485*. The type genome for the species is the GenBank assembly GCA_011523485.1. The GC content of the type genome is 69.41 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Defarella secunisca sp. nov.

Candidatus Defarella secunisca (NL. fem. n. *secunisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTFV01 sp011523845*. The type genome for the species is the GenBank assembly GCA_011523845.1. The GC content of the type genome is 69.3 % and the genome length is 7.59 Mbp.

Description of *Candidatus* Defaria panifitoga sp. nov.

Candidatus Defaria panifitoga (NL. fem. n. *panifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKRM01 sp007118495*. The type genome for the species is the GenBank assembly GCA_007118495.1. The GC content of the type genome is 44.73 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Defaria gen. nov.

Candidatus Defaria (NL. fem. n. *Defaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKRM01*. The type species for the genus is *Candidatus* Defaria panifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Defarida pecunigena sp. nov.

Candidatus Defarida pecunigena (NL. fem. n. *pecunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNFC01 sp003645395*. The type genome for the species is the GenBank assembly GCA_003645395.1. The GC content of the type genome is 53.35 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Defarida gen. nov.

Candidatus Defarida (NL. fem. n. *Defarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNFC01*. The type species for the genus is *Candidatus* Defarida pecunigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defarosa idciricella sp. nov.

Candidatus Defarosa idciricella (NL. fem. n. *idciricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU030 sp012842325*. The type genome for the species is the GenBank assembly GCA_012842325.1. The GC content of the type genome is 56.9 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Defarosa gen. nov.

Candidatus Defarosa (NL. fem. n. *Defarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU030*. The type species for the genus is *Candidatus* Defarosa idciricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defarosaceae.

Description of *Candidatus* Defarosaceae fam. nov.

Candidatus Defarosaceae (NL. fem. n. *Defarosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU030.* The type genus for the taxon is *Candidatus* Defarosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defarosales.

Description of *Candidatus* Defarosales ord. nov.

Candidatus Defarosales (NL. fem. n. *Defarosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU030.* The type genus for the taxon is *Candidatus* Defarosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defarosae.

Description of *Candidatus* Defarosae class. nov.

Candidatus Defarosae (NL. fem. n. *c__Defarosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU030.* The type genus for the taxon is *Candidatus* Defarosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Defarosota.

Description of *Candidatus* Defarosota phyl. nov.

Candidatus Defarosota (NL. fem. n. *Defarosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU030.* The type genus for the taxon is *Candidatus* Defarosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Defarosa pomifica sp. nov.

Candidatus Defarosa pomifica (NL. fem. n. *pomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU030 sp001513125*. The type genome for the species is the GenBank assembly GCA_002391605.1. The GC content of the type genome is 56.14 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Defarosa velifessa sp. nov.

Candidatus Defarosa velifessa (NL. fem. n. *velifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU030 sp012841005*. The type genome for the species is the GenBank assembly GCA_012841005.1. The GC content of the type genome is 52.79 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Defarula astapitia sp. nov.

Candidatus Defarula astapitia (NL. fem. n. *astapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACESI01 sp013911885*. The type genome for the species is the GenBank assembly GCA_013911885.1. The GC content of the type genome is 58.2 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Defarula gen. nov.

Candidatus Defarula (NL. fem. n. *Defarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACESI01*. The type species for the genus is *Candidatus* Defarula astapitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACESI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defarulaceae.

Description of *Candidatus* Defarulaceae fam. nov.

Candidatus Defarulaceae (NL. fem. n. *Defarulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACESI01.* The type genus for the taxon is *Candidatus* Defarula .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Defasana cerimentia sp. nov.

Candidatus Defasana cerimentia (NL. fem. n. *cerimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5202 sp002412795*. The type genome for the species is the

GenBank assembly GCA_002345865.1. The GC content of the type genome is 54.91 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Defasana gen. nov.

Candidatus Defasana (NL. fem. n. *Defasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5202*. The type species for the genus is *Candidatus* Defasana cerimentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EtOH8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cepuranaceae.

Description of *Candidatus* Defasaria dilematica sp. nov.

Candidatus Defasaria dilematica (NL. fem. n. *dilematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1224 sp900549775*. The type genome for the species is the GenBank assembly RS_GCF_900772065.1. The GC content of the type genome is 35.1 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Defasaria gen. nov.

Candidatus Defasaria (NL. fem. n. *Defasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1224*. The type species for the genus is *Candidatus* Defasaria dilematica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defasella pavicitica sp. nov.

Candidatus Defasella pavicitica (NL. fem. n. *pavicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6626 sp002716625*. The type genome for the species is the GenBank assembly GCA_002716625.1. The GC content of the type genome is 50.89 %

and the genome length is 3.35 Mbp.

Description of *Candidatus* Defasella gen. nov.

Candidatus Defasella (NL. fem. n. *Defasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6626*. The type species for the genus is *Candidatus* Defasella pavicitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defasia benifitrix sp. nov.

Candidatus Defasia benifitrix (NL. fem. n. *benifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1883 sp900555935*. The type genome for the species is the GenBank assembly GCA_900555935.1. The GC content of the type genome is 47.62 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Defasia gen. nov.

Candidatus Defasia (NL. fem. n. *Defasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1883*. The type species for the genus is *Candidatus* Defasia benifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defasiaceae.

Description of *Candidatus* Defasiaceae fam. nov.

Candidatus Defasiaceae (NL. fem. n. *Defasiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1883.* The type genus for the taxon is *Candidatus* Defasia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1883*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Defasiales.

Description of *Candidatus* Defasiales ord. nov.

Candidatus Defasiales (NL. fem. n. *Defasiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1883.* The type genus for the taxon is *Candidatus* Defasia .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Defasia encepessa sp. nov.

Candidatus Defasia encepessa (NL. fem. n. *encepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1883 sp900763305*. The type genome for the species is the GenBank assembly RS_GCF_900763305.1. The GC content of the type genome is 48.96 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Defasia occenicella sp. nov.

Candidatus Defasia occenicella (NL. fem. n. *occenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1883 sp900768005*. The type genome for the species is the GenBank assembly RS_GCF_900768005.1. The GC content of the type genome is 41.96 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Defasida holovedo sp. nov.

Candidatus Defasida holovedo (NL. fem. n. *holovedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1024 sp004554165*. The type genome for the species is the GenBank assembly GCA_004563445.1. The GC content of the type genome is 60.7 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Defasida gen. nov.

Candidatus Defasida (NL. fem. n. *Defasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1024*. The type species for the genus is *Candidatus* Defasida holovedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Defasida palifivita sp. nov.

Candidatus Defasida palifivita (NL. fem. n. *palifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1024 sp000432015*. The type genome for the species is the GenBank assembly GCA_900543745.1. The GC content of the type genome is 57.68 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Defasosa bicipago sp. nov.

Candidatus Defasosa bicipago (NL. fem. n. *bicipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1326 sp900550775*. The type genome for the species is the GenBank assembly RS_GCF_900758295.1. The GC content of the type genome is 50.46 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Defasosa gen. nov.

Candidatus Defasosa (NL. fem. n. *Defasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1326*. The type species for the genus is *Candidatus* Defasosa bicipago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defasula solipago sp. nov.

Candidatus Defasula solipago (NL. fem. n. *solipago* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKON01 sp007120035*. The type genome for the species is the GenBank assembly GCA_007120035.1. The GC content of the type genome is 65.31 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Defasula gen. nov.

Candidatus Defasula (NL. fem. n. *Defasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKON01*. The type species for the genus is *Candidatus* Defasula solipago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defenana delebifica sp. nov.

Candidatus Defenana delebifica (NL. fem. n. *delebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2336 sp002344065*. The type genome for the species is the GenBank assembly GCA_002344485.1. The GC content of the type genome is 42.68 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Defenana gen. nov.

Candidatus Defenana (NL. fem. n. *Defenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2336*. The type species for the genus is *Candidatus* Defenana delebifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defenana venucentia sp. nov.

Candidatus Defenana venucentia (NL. fem. n. *venucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2336 sp002425185*. The type genome for the species is the GenBank assembly GCA_002425185.1. The GC content of the type genome is 43.42 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Defenaria abpatitrix sp. nov.

Candidatus Defenaria abpatitrix (NL. fem. n. *abpatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005882235*. The type genome for the species is the GenBank assembly GCA_005882235.1. The GC content of the type genome is 64.4 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Defenaria gen. nov.

Candidatus Defenaria (NL. fem. n. *Defenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBDM01*. The type species for the genus is *Candidatus* Defenaria abpatitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Defenaria bipinugo sp. nov.

Candidatus Defenaria bipinugo (NL. fem. n. *bipinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005883665*. The type genome for the species is the GenBank assembly GCA_005883665.1. The GC content of the type genome is 64.12 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Defenaria catobitrix sp. nov.

Candidatus Defenaria catobitrix (NL. fem. n. *catobitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005884335*. The type genome for the species is the GenBank assembly GCA_005884335.1. The GC content of the type genome is 64.33 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Defenaria dimadousia sp. nov.

Candidatus Defenaria dimadousia (NL. fem. n. *dimadousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005888845*. The type genome for the species is the GenBank assembly GCA_005888845.1. The GC content of the type genome is 64.17 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Defenaria feficivita sp. nov.

Candidatus Defenaria feficivita (NL. fem. n. *feficivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005888995*. The type genome for the species is the GenBank assembly GCA_005888995.1. The GC content of the type genome is 64.45 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Defenaria foricugo sp. nov.

Candidatus Defenaria foricugo (NL. fem. n. *foricugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005881575*. The type genome for the species is the GenBank assembly GCA_005881935.1. The GC content of the type genome is 64.61 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Defenaria palifitoga sp. nov.

Candidatus Defenaria palifitoga (NL. fem. n. *palifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005884455*. The type genome for the species is the GenBank assembly GCA_005884455.1. The GC content of the type genome is 64.65 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Defenaria penuritio sp. nov.

Candidatus Defenaria penuritio (NL. fem. n. *penuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDM01 sp005881355*. The type genome for the species is the GenBank assembly GCA_005883015.1. The GC content of the type genome is 65.13 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Defenella locelitrix sp. nov.

Candidatus Defenella locelitrix (NL. fem. n. *locelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8828 sp903929325*. The type genome for the species is the GenBank assembly GCA_903929325.1. The GC content of the type genome is 53.98 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Defenella gen. nov.

Candidatus Defenella (NL. fem. n. *Defenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8828*. The type species for the genus is *Candidatus* Defenella locelitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA953*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capucanaceae.

Description of *Candidatus* Defenella reveciforma sp. nov.

Candidatus Defenella reveciforma (NL. fem. n. *reveciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8828 sp903957465*. The type genome for the species is the GenBank assembly GCA_903949215.1. The GC content of the type genome is 53.96 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Defenella vagabedo sp. nov.

Candidatus Defenella vagabedo (NL. fem. n. *vagabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8828 sp003485955*. The type genome for the species is the GenBank assembly GCA_003485955.1. The GC content of the type genome is 53.58 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Defenella venabitia sp. nov.

Candidatus Defenella venabitia (NL. fem. n. *venabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8828 sp903868455*. The type genome for the species is the GenBank assembly GCA_903830885.1. The GC content of the type genome is 72.09 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Defenida defetousia sp. nov.

Candidatus Defenida defetousia (NL. fem. n. *defetousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN06 sp002897895*. The type genome for the species is the GenBank assembly GCA_011040195.1. The GC content of the type genome is 43.19 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Defenida gen. nov.

Candidatus Defenida (NL. fem. n. *Defenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN06*. The type species for the genus is *Candidatus* Defenida defetousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6902*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodosaceae.

Description of *Candidatus* Defenida denorastra sp. nov.

Candidatus Defenida denorastra (NL. fem. n. *denorastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN06 sp011040095*. The type genome for the species is the GenBank assembly GCA_011040095.1. The GC content of the type genome is 44.03 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Defenula adnubisca sp. nov.

Candidatus Defenula adnubisca (NL. fem. n. *adnubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-68-14 sp005883955*. The type genome for the species is the GenBank assembly GCA_005883955.1. The GC content of the type genome is 68.21 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Defenula gen. nov.

Candidatus Defenula (NL. fem. n. *Defenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *13-2-20CM-68-14*. The type species for the genus is *Candidatus* Defenula adnubisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defenula bugilugo sp. nov.

Candidatus Defenula bugilugo (NL. fem. n. *bugilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-68-14 sp005888315*. The type genome for the species is the GenBank assembly GCA_005885195.1. The GC content of the type genome is 68.81 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Defenula figilousia sp. nov.

Candidatus Defenula figilousia (NL. fem. n. *figilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-68-14 sp005884005*. The type genome for the species is the GenBank assembly GCA_005883875.1. The GC content of the type genome is 68.06 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Defenula recogago sp. nov.

Candidatus Defenula recogago (NL. fem. n. *recogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-68-14 sp001914705*. The type genome for the species is the GenBank assembly GCA_001914705.1. The GC content of the type genome is 68.32 % and the genome length is 1.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 6 days after first rain event (27mm)".

Description of *Candidatus* Deferrisoma aglasitoga sp. nov.

Candidatus Deferrisoma aglasitoga (NL. fem. n. *aglasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deferrisoma sp013152215*. The type genome for the species is the GenBank assembly GCA_013152215.1. The GC content of the type genome is 69.31 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Defesana repecessa sp. nov.

Candidatus Defesana repecessa (NL. fem. n. *repecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSGC01 sp011056285*. The type genome for the species is the GenBank assembly GCA_011057245.1. The GC content of the type genome is 63.54 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Defesana gen. nov.

Candidatus Defesana (NL. fem. n. *Defesana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSGC01*. The type species for the genus is *Candidatus* Defesana repecessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Defesaria telefitas sp. nov.

Candidatus Defesaria telefitas (NL. fem. n. *telefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707905 sp002707905*. The type genome for the species is the GenBank assembly GCA_002707905.1. The GC content of the type genome is 27.81 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Defesaria gen. nov.

Candidatus Defesaria (NL. fem. n. *Defesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002707905*. The type species for the genus is *Candidatus* Defesaria telefitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S15-B10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagulaceae.

Description of *Candidatus* Defesaria tumefiforma sp. nov.

Candidatus Defesaria tumefiforma (NL. fem. n. *tumefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707905 sp002691365*. The type genome for the species is the GenBank assembly GCA_002169785.1. The GC content of the type genome is 27.79 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Defesella inrelifica sp. nov.

Candidatus Defesella inrelifica (NL. fem. n. *inrelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-381 sp003247185*. The type genome for the species is the GenBank assembly GCA_003247185.1. The GC content of the type genome is 40.96 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Defesella gen. nov.

Candidatus Defesella (NL. fem. n. *Defesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-381*. The type species for the genus is *Candidatus* Defesella inrelifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defesella tenematio sp. nov.

Candidatus Defesella tenematio (NL. fem. n. *tenematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-381 sp006226555*. The type genome for the species is the GenBank assembly GCA_006226695.1. The GC content of the type genome is 40.69 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Defesia dehinago sp. nov.

Candidatus Defesia dehinago (NL. fem. n. *dehinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPHK01 sp903864835*. The type genome for the species is the GenBank assembly GCA_903877905.1. The GC content of the type genome is 48.16 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Defesia gen. nov.

Candidatus Defesia (NL. fem. n. *Defesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPHK01*. The type species for the genus is *Candidatus* Defesia dehinago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXXA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Cisalanaceae.

Description of *Candidatus* Defesosa parocentia sp. nov.

Candidatus Defesosa parocentia (NL. fem. n. *parocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4588 sp002387605*. The type genome for the species is the GenBank assembly GCA_002378945.1. The GC content of the type genome is 48.63 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Defesosa gen. nov.

Candidatus Defesosa (NL. fem. n. *Defesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4588*. The type species for the genus is *Candidatus* Defesosa parocentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defesula anagnitrix sp. nov.

Candidatus Defesula anagnitrix (NL. fem. n. *anagnitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009785665*. The type genome for the species is the GenBank assembly GCA_009785665.1. The GC content of the type genome is 44.14 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Defesula gen. nov.

Candidatus Defesula (NL. fem. n. *Defesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQVC01*. The type species for the genus is *Candidatus* Defesula anagnitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Defesula benificula sp. nov.

Candidatus Defesula benificula (NL. fem. n. *benificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009777845*. The type genome for the species is the GenBank assembly GCA_009777845.1. The GC content of the type genome is 47.51 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Defesula cerevax sp. nov.

Candidatus Defesula cerevax (NL. fem. n. *cerevax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009781765*. The type genome for the species is the GenBank assembly GCA_009781765.1. The GC content of the type genome is 49.48 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Defesula depocimonia sp. nov.

Candidatus Defesula depocimonia (NL. fem. n. *depocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009786925*. The type genome for the species is the GenBank assembly GCA_009786925.1. The GC content of the type genome is 44.8 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Defesula ellebitia sp. nov.

Candidatus Defesula ellebitia (NL. fem. n. *ellebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009786975*. The type genome for the species is the GenBank assembly GCA_009786975.1. The GC content of the type genome is 50.67 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Defesula hecatisca sp. nov.

Candidatus Defesula hecatisca (NL. fem. n. *hecatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009783395*. The type genome for the species is the GenBank assembly GCA_009783395.1. The GC content of the type genome is 47.91 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Defesula subinatio sp. nov.

Candidatus Defesula subinatio (NL. fem. n. *subinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009786685*. The type genome for the species is the GenBank assembly GCA_009786685.1. The GC content of the type genome is 46.85 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Defesula utrolibula sp. nov.

Candidatus Defesula utrolibula (NL. fem. n. *utrolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009779835*. The type genome for the species is the GenBank assembly GCA_009779835.1. The GC content of the type genome is 43.67 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Defesula xenodibula sp. nov.

Candidatus Defesula xenodibula (NL. fem. n. *xenodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQVC01 sp009788055*. The type genome for the species is the GenBank assembly GCA_009787735.1. The GC content of the type genome is 47.62 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Defetana reforago sp. nov.

Candidatus Defetana reforago (NL. fem. n. *reforago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIMWO01 sp903845195*. The type genome for the species is the GenBank assembly GCA_903845195.1. The GC content of the type genome is 59.25 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Defetana gen. nov.

Candidatus Defetana (NL. fem. n. *Defetana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMWO01*. The type species for the genus is *Candidatus* Defetana reforago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludidaceae.

Description of *Candidatus* Defetaria aterratio sp. nov.

Candidatus Defetaria aterratio (NL. fem. n. *aterratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003553305*. The type genome for the species is the GenBank assembly GCA_003553305.1. The GC content of the type genome is 45.07 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Defetaria gen. nov.

Candidatus Defetaria (NL. fem. n. *Defetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-74M*. The type species for the genus is *Candidatus* Defetaria aterratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Defetaria bifisifica sp. nov.

Candidatus Defetaria bifisifica (NL. fem. n. *bifisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp007128625*. The type genome for the species is the GenBank assembly GCA_003551585.1. The GC content of the type genome is 44.99 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Defetaria decunitudo sp. nov.

Candidatus Defetaria decunitudo (NL. fem. n. *decunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003553895*. The type genome for the species is the GenBank assembly GCA_003550865.1. The GC content of the type genome is 50.98 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Defetaria dilecicula sp. nov.

Candidatus Defetaria dilecicula (NL. fem. n. *dilecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp007121075*. The type genome for the species is the GenBank assembly GCA_007126875.1. The GC content of the type genome is 49.83 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Defetaria expalatio sp. nov.

Candidatus Defetaria expalatio (NL. fem. n. *expalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003558195*. The type genome for the species is the GenBank assembly GCA_003558195.1. The GC content of the type genome is 43.9 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Defetaria inlacatio sp. nov.

Candidatus Defetaria inlacatio (NL. fem. n. *inlacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003554615*. The type genome for the species is the GenBank assembly GCA_003554615.1. The GC content of the type genome is 49.04 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Defetaria loraressa sp. nov.

Candidatus Defetaria loraressa (NL. fem. n. *loraressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003554395*. The type genome for the species is the GenBank assembly GCA_003554395.1. The GC content of the type genome is 50.76 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Defetaria lubenilenta sp. nov.

Candidatus Defetaria lubenilenta (NL. fem. n. *lubenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003550645*. The type genome for the species is the GenBank assembly GCA_003550645.1. The GC content of the type genome is 49.4 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Defetaria masocousia sp. nov.

Candidatus Defetaria masocousia (NL. fem. n. *masocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003567725*. The type genome for the species is the GenBank assembly GCA_007135065.1. The GC content of the type genome is 44.84 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Defetaria noviliforma sp. nov.

Candidatus Defetaria noviliforma (NL. fem. n. *noviliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp007130825*. The type genome for the species is the GenBank assembly GCA_007120945.1. The GC content of the type genome is 47.31 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Defetaria semidessa sp. nov.

Candidatus Defetaria semidessa (NL. fem. n. *semidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp007119335*. The type genome for the species is the GenBank assembly GCA_007119335.1. The GC content of the type genome is 45.81 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Defetaria volucilenta sp. nov.

Candidatus Defetaria volucilenta (NL. fem. n. *volucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-74M sp003552365*. The type genome for the species is the GenBank assembly GCA_003553605.1. The GC content of the type genome is 47.47 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Defetella effigatica sp. nov.

Candidatus Defetella effigatica (NL. fem. n. *effigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM103 sp002869725*. The type genome for the species is the GenBank assembly GCA_002869725.1. The GC content of the type genome is 56.52 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Defetella gen. nov.

Candidatus Defetella (NL. fem. n. *Defetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM103*. The type species for the genus is *Candidatus* Defetella effigatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM103*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetellaceae.

Description of *Candidatus* Defetellaceae fam. nov.

Candidatus Defetellaceae (NL. fem. n. *Defetellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM103.* The type genus for the taxon is *Candidatus* Defetella .

According to GTDB R06-RS202, this family belongs to the order *Desulfuromonadales*.

Description of *Candidatus* Defetia habacago sp. nov.

Candidatus Defetia habacago (NL. fem. n. *habacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM002 sp002899795*. The type genome for the species is the GenBank assembly GCA_013619085.1. The GC content of the type genome is 50.27 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Defetia gen. nov.

Candidatus Defetia (NL. fem. n. *Defetia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM002*. The type species for the genus is *Candidatus* Defetia habacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetiaceae.

Description of *Candidatus* Defetiaceae fam. nov.

Candidatus Defetiaceae (NL. fem. n. *Defetiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM002.* The type genus for the taxon is *Candidatus* Defetia .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defetiales.

Description of *Candidatus* Defetiales ord. nov.

Candidatus Defetiales (NL. fem. n. *Defetiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM002.* The type genus for the taxon is *Candidatus* Defetia .

According to the GTDB R06-RS202, this order belongs to the class *Syntrophobacteria*.

Description of *Candidatus* Defetida inmobastra sp. nov.

Candidatus Defetida inmobastra (NL. fem. n. *inmobastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRN01 sp013202515*. The type genome for the species is the GenBank assembly GCA_013202515.1. The GC content of the type genome is 40.21 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Defetida gen. nov.

Candidatus Defetida (NL. fem. n. *Defetida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRN01*. The type species for the genus is *Candidatus* Defetida inmobastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetidaceae.

Description of *Candidatus* Defetidaceae fam. nov.

Candidatus Defetidaceae (NL. fem. n. *Defetidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRN01.* The type genus for the taxon is *Candidatus* Defetida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vacilellales.

Description of *Candidatus* Defetosa reduvitudo sp. nov.

Candidatus Defetosa reduvitudo (NL. fem. n. *reduvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNMQ01 sp013823725*. The type genome for the species is the

GenBank assembly GCA_013823905.1. The GC content of the type genome is 33.88 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Defetosa gen. nov.

Candidatus Defetosa (NL. fem. n. *Defetosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNMQ01*. The type species for the genus is *Candidatus* Defetosa reduvitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11393*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatifanaceae.

Description of *Candidatus* Defetula infirimonia sp. nov.

Candidatus Defetula infirimonia (NL. fem. n. *infirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKL01 sp007121465*. The type genome for the species is the GenBank assembly GCA_007121465.1. The GC content of the type genome is 69.55 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Defetula gen. nov.

Candidatus Defetula (NL. fem. n. *Defetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKL01*. The type species for the genus is *Candidatus* Defetula infirimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defetulaceae.

Description of *Candidatus* Defetulaceae fam. nov.

Candidatus Defetulaceae (NL. fem. n. *Defetulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKKL01.* The type genus for the taxon is *Candidatus* Defetula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Defluviitalea apharisca sp. nov.

Candidatus Defluviitalea apharisca (NL. fem. n. *apharisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Defluviitalea_A sp012519955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012519955.1. The GC content of the type genome is 35.48 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Defluviitalea solipiforma sp. nov.

Candidatus Defluviitalea solipiforma (NL. fem. n. *solipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Defluviitalea_A sp012521175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012521175.1. The GC content of the type genome is 34.84 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Deforana revecibra sp. nov.

Candidatus Deforana revecibra (NL. fem. n. *revecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJMQ01 sp903821905*. The type genome for the species is the GenBank assembly GCA_903821905.1. The GC content of the type genome is 36.88 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Deforana gen. nov.

Candidatus Deforana (NL. fem. n. *Deforana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJMQ01*. The type species for the genus is *Candidatus* Deforana revecibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deforanaceae.

Description of *Candidatus* Deforanaceae fam. nov.

Candidatus Deforanaceae (NL. fem. n. *Deforanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJMQ01.* The type genus for the taxon is *Candidatus* Deforana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIJMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deforanales.

Description of *Candidatus* Deforanales ord. nov.

Candidatus Deforanales (NL. fem. n. *Deforanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJMQ01.* The type genus for the taxon is *Candidatus* Deforana .

According to the original version of GTDB R06-RS202, this family belongs to the class *CAIJMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Deforanae.

Description of *Candidatus* Deforanae class. nov.

Candidatus Deforanae (NL. fem. n. *c__Deforanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJMQ01.* The type genus for the taxon is *Candidatus* Deforana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *CAIJMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Deforanota.

Description of *Candidatus* Deforanota phyl. nov.

Candidatus Deforanota (NL. fem. n. *Deforanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAIJMQ01*. The type genus for the taxon is *Candidatus* Deforana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Deforaria denavicula sp. nov.

Candidatus Deforaria denavicula (NL. fem. n. *denavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5272 sp002408565*. The type genome for the species is the GenBank assembly GCA_002409245.1. The GC content of the type genome is 31.81 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Deforaria gen. nov.

Candidatus Deforaria (NL. fem. n. *Deforaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5272*. The type species for the genus is *Candidatus* Deforaria denavicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deforariaceae.

Description of *Candidatus* Deforariaceae fam. nov.

Candidatus Deforariaceae (NL. fem. n. *Deforariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5272*. The type genus for the taxon is *Candidatus* Deforaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Deforella adsicitura sp. nov.

Candidatus Deforella adsicitura (NL. fem. n. *adsicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bin87 sp009840165*. The type genome for the species is the GenBank assembly GCA_009840165.1. The GC content of the type genome is 61.35 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Deforella gen. nov.

Candidatus Deforella (NL. fem. n. *Deforella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin87*. The type species for the genus is *Candidatus* Deforella adsicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Deforella bucolitura sp. nov.

Candidatus Deforella bucolitura (NL. fem. n. *bucolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin87 sp002238825*. The type genome for the species is the GenBank assembly GCA_002238825.1. The GC content of the type genome is 62.79 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Deforella cicatisca sp. nov.

Candidatus Deforella cicatisca (NL. fem. n. *cicatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin87 sp009837355*. The type genome for the species is the GenBank assembly GCA_009841575.1. The GC content of the type genome is 62.9 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Deforia vecoribula sp. nov.

Candidatus Deforia vecoribula (NL. fem. n. *vecoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B23-G16 sp003647435*. The type genome for the species is the

GenBank assembly GCA_003647435.1. The GC content of the type genome is 48.84 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Deforia gen. nov.

Candidatus Deforia (NL. fem. n. *Deforia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B23-G16*. The type species for the genus is *Candidatus* Deforia vecoribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *C00003060*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubidaceae.

Description of *Candidatus* Deforida adtenatica sp. nov.

Candidatus Deforida adtenatica (NL. fem. n. *adtenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKMS01 sp903839465*. The type genome for the species is the GenBank assembly GCA_903839465.1. The GC content of the type genome is 68.87 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Deforida gen. nov.

Candidatus Deforida (NL. fem. n. *Deforida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKMS01*. The type species for the genus is *Candidatus* Deforida adtenatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Deforida ardifitrix sp. nov.

Candidatus Deforida ardifitrix (NL. fem. n. *ardifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKMS01 sp903890265*. The type genome for the species is the GenBank assembly GCA_903890265.1. The GC content of the type genome is 68.37 %

and the genome length is 3.44 Mbp.

Description of *Candidatus* Deforida sacopago sp. nov.

Candidatus Deforida sacopago (NL. fem. n. *sacopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKMS01 sp903828595*. The type genome for the species is the GenBank assembly GCA_903821425.1. The GC content of the type genome is 56.09 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Deforosa desuratica sp. nov.

Candidatus Deforosa desuratica (NL. fem. n. *desuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZAB01 sp012514555*. The type genome for the species is the GenBank assembly GCA_012514555.1. The GC content of the type genome is 63.26 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Deforosa gen. nov.

Candidatus Deforosa (NL. fem. n. *Deforosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZAB01*. The type species for the genus is *Candidatus* Deforosa desuratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZAB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deforosaceae.

Description of *Candidatus* Deforosaceae fam. nov.

Candidatus Deforosaceae (NL. fem. n. *Deforosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZAB01*. The type genus for the taxon is *Candidatus* Deforosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAZAB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deforosales.

Description of *Candidatus* Deforosales ord. nov.

Candidatus Deforosales (NL. fem. n. *Deforosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZAB01*. The type genus for the taxon is *Candidatus* Deforosa .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Deforula citocisca sp. nov.

Candidatus Deforula citocisca (NL. fem. n. *citocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXNL01 sp005777185*. The type genome for the species is the GenBank assembly GCA_005777185.1. The GC content of the type genome is 71.26 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Deforula gen. nov.

Candidatus Deforula (NL. fem. n. *Deforula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXNL01*. The type species for the genus is *Candidatus* Deforula citocisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defosana homogago sp. nov.

Candidatus Defosana homogago (NL. fem. n. *homogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXIX01 sp903859705*. The type genome for the species is the GenBank assembly GCA_903867455.1. The GC content of the type genome is 52.98 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Defosana gen. nov.

Candidatus Defosana (NL. fem. n. *Defosana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXIX01*. The type species for the genus is *Candidatus* Defosana homogago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defosana ludibimonia sp. nov.

Candidatus Defosana ludibimonia (NL. fem. n. *ludibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXIX01 sp903919615*. The type genome for the species is the GenBank assembly GCA_903909455.1. The GC content of the type genome is 53.68 % and the genome length is 7.36 Mbp.

Description of *Candidatus* Defosaria acratifica sp. nov.

Candidatus Defosaria acratifica (NL. fem. n. *acratifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQH01 sp013203355*. The type genome for the species is the GenBank assembly GCA_013203355.1. The GC content of the type genome is 42.1 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Defosaria gen. nov.

Candidatus Defosaria (NL. fem. n. *Defosaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQH01*. The type species for the genus is *Candidatus* Defosaria acratifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMQH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosariaceae.

Description of *Candidatus* Defosariaceae fam. nov.

Candidatus Defosariaceae (NL. fem. n. *Defosariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQH01.* The type genus for the taxon is *Candidatus* Defosaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMQH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defosariales.

Description of *Candidatus* Defosariales ord. nov.

Candidatus Defosariales (NL. fem. n. *Defosariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQH01.* The type genus for the taxon is *Candidatus* Defosaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Defosella diluvatica sp. nov.

Candidatus Defosella diluvatica (NL. fem. n. *diluvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU080 sp001513395*. The type genome for the species is the GenBank assembly GCA_001513395.1. The GC content of the type genome is 56.16 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Defosella gen. nov.

Candidatus Defosella (NL. fem. n. *Defosella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU080*. The type species for the genus is *Candidatus* Defosella diluvatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosellaceae.

Description of *Candidatus* Defosellaceae fam. nov.

Candidatus Defosellaceae (NL. fem. n. *Defosellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU080.* The type genus for the taxon is *Candidatus* Defosella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defosellales.

Description of *Candidatus* Defosellales ord. nov.

Candidatus Defosellales (NL. fem. n. *Defosellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU080.* The type genus for the taxon is *Candidatus* Defosella .

According to the GTDB R06-RS202, this order belongs to the class *Limnochordia*.

Description of *Candidatus* Defosia rubefitura sp. nov.

Candidatus Defosia rubefitura (NL. fem. n. *rubefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXBB01 sp003565735*. The type genome for the species is the GenBank assembly GCA_003565735.1. The GC content of the type genome is 38.21 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Defosia gen. nov.

Candidatus Defosia (NL. fem. n. *Defosia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXBB01*. The type species for the genus is *Candidatus* Defosia rubefitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXBB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosiaceae.

Description of *Candidatus* Defosiaceae fam. nov.

Candidatus Defosiaceae (NL. fem. n. *Defosiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXBB01.* The type genus for the taxon is *Candidatus* Defosia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Defosida bicodastra sp. nov.

Candidatus Defosida bicodastra (NL. fem. n. *bicodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU086 sp001513335*. The type genome for the species is the GenBank assembly GCA_012841895.1. The GC content of the type genome is 45.77 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Defosida gen. nov.

Candidatus Defosida (NL. fem. n. *Defosida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU086*. The type species for the genus is *Candidatus* Defosida bicodastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosidaceae.

Description of *Candidatus* Defosidaceae fam. nov.

Candidatus Defosidaceae (NL. fem. n. *Defosidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU086.* The type genus for the taxon is *Candidatus* Defosida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defosidales.

Description of *Candidatus* Defosidales ord. nov.

Candidatus Defosidales (NL. fem. n. *Defosidales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU086.* The type genus for the taxon is *Candidatus* Defosida .

According to the GTDB R06-RS202, this order belongs to the class *Moorellia*.

Description of *Candidatus* Defososa cerucitrix sp. nov.

Candidatus Defososa cerucitrix (NL. fem. n. *cerucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp001644455*. The type genome for the species is the GenBank assembly GCA_001644455.1. The GC content of the type genome is 66.56 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Single cell amplified by WGA-X; soil".

Description of *Candidatus* Defososa gen. nov.

Candidatus Defososa (NL. fem. n. *Defososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AG-212-J23*. The type species for the genus is *Candidatus* Defososa cerucitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Defososa cuferentia sp. nov.

Candidatus Defososa cuferentia (NL. fem. n. *cuferentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp005888925*. The type genome for the species is the GenBank assembly GCA_005888925.1. The GC content of the type genome is 67.19 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Defososa decunago sp. nov.

Candidatus Defososa decunago (NL. fem. n. *decunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp005883675*. The type genome for the species is the GenBank assembly GCA_005881875.1. The GC content of the type genome is 67.48 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Defososa inoccitura sp. nov.

Candidatus Defososa inoccitura (NL. fem. n. *inoccitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp001772055*. The type genome for the species is the GenBank assembly GCA_001772055.1. The GC content of the type genome is 68.56 % and the genome length is 1.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Defososa mimogigena sp. nov.

Candidatus Defososa mimogigena (NL. fem. n. *mimogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp005881595*. The type genome for the species is the GenBank assembly GCA_005888805.1. The GC content of the type genome is 66.59 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Defososa necopitudo sp. nov.

Candidatus Defososa necopitudo (NL. fem. n. *necopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AG-212-J23 sp004297625*. The type genome for the species is the GenBank assembly GCA_004297625.1. The GC content of the type genome is 65.86 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Defosula adinvastra sp. nov.

Candidatus Defosula adinvastra (NL. fem. n. *adinvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp002369155*. The type genome for the species is the GenBank assembly GCA_002369155.1. The GC content of the type genome is 39.65 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Defosula gen. nov.

Candidatus Defosula (NL. fem. n. *Defosula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3766*. The type species for the genus is *Candidatus* Defosula adinvastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defosula baropitura sp. nov.

Candidatus Defosula baropitura (NL. fem. n. *baropitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902783455*. The type genome for the species is the GenBank assembly GCA_902783455.1. The GC content of the type genome is 43.22 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Defosula colopousia sp. nov.

Candidatus Defosula colopousia (NL. fem. n. *colopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902790275*. The type genome for the species is the GenBank assembly GCA_902790275.1. The GC content of the type genome is 41.85 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Defosula dehinitrix sp. nov.

Candidatus Defosula dehinitrix (NL. fem. n. *dehinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902803015*. The type genome for the species is the

GenBank assembly GCA_902803015.1. The GC content of the type genome is 46.06 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Defosula democivita sp. nov.

Candidatus Defosula democivita (NL. fem. n. *democivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902765365*. The type genome for the species is the GenBank assembly GCA_902784935.1. The GC content of the type genome is 41.24 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Defosula epogditoga sp. nov.

Candidatus Defosula epogditoga (NL. fem. n. *epogditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902789665*. The type genome for the species is the GenBank assembly GCA_902789665.1. The GC content of the type genome is 38.23 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Defosula fumifitrix sp. nov.

Candidatus Defosula fumifitrix (NL. fem. n. *fumifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp900769175*. The type genome for the species is the GenBank assembly RS_GCF_900769175.1. The GC content of the type genome is 40.67 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Defosula hexapimonas sp. nov.

Candidatus Defosula hexapimonas (NL. fem. n. *hexapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp002368665*. The type genome for the species is the GenBank assembly GCA_002368665.1. The GC content of the type genome is 45.09 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Defosula linigousia sp. nov.

Candidatus Defosula linigousia (NL. fem. n. *linigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp900313265*. The type genome for the species is the GenBank assembly GCA_900313265.1. The GC content of the type genome is 44.9 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Defosula retecilega sp. nov.

Candidatus Defosula retecilega (NL. fem. n. *retecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp002393735*. The type genome for the species is the GenBank assembly GCA_002393735.1. The GC content of the type genome is 38.07 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Defosula roraressa sp. nov.

Candidatus Defosula roraressa (NL. fem. n. *roraressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902782715*. The type genome for the species is the GenBank assembly GCA_902782715.1. The GC content of the type genome is 41.13 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Defosula siticitio sp. nov.

Candidatus Defosula siticitio (NL. fem. n. *siticitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp002494135*. The type genome for the species is the GenBank assembly GCA_002494135.1. The GC content of the type genome is 46.07 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Defosula terebago sp. nov.

Candidatus Defosula terebago (NL. fem. n. *terebago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp900100245*. The type genome for the species is the GenBank assembly RS_GCF_900100245.1. The GC content of the type genome is 39.75 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Defosula tibicicella sp. nov.

Candidatus Defosula tibicicella (NL. fem. n. *tibicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3766 sp902789265*. The type genome for the species is the GenBank assembly GCA_902790125.1. The GC content of the type genome is 43.27 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Defulana domigastra sp. nov.

Candidatus Defulana domigastra (NL. fem. n. *domigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9775 sp003520145*. The type genome for the species is the GenBank assembly GCA_003520145.1. The GC content of the type genome is 40.78 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Defulana gen. nov.

Candidatus Defulana (NL. fem. n. *Defulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9775*. The type species for the genus is *Candidatus* Defulana domigastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defularia deparicula sp. nov.

Candidatus Defularia deparicula (NL. fem. n. *deparicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVK01 sp013044245*. The type genome for the species is the

GenBank assembly GCA_013044245.1. The GC content of the type genome is 50.39 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Defularia gen. nov.

Candidatus Defularia (NL. fem. n. *Defularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVK01*. The type species for the genus is *Candidatus* Defularia deparicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABEVK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defulariaceae.

Description of *Candidatus* Defulariaceae fam. nov.

Candidatus Defulariaceae (NL. fem. n. *Defulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABEVK01.* The type genus for the taxon is *Candidatus* Defularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABEVK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulariales.

Description of *Candidatus* Defulariales ord. nov.

Candidatus Defulariales (NL. fem. n. *Defulariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABEVK01.* The type genus for the taxon is *Candidatus* Defularia .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Defularia herinitio sp. nov.

Candidatus Defularia herinitio (NL. fem. n. *herinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVK01 sp013043995*. The type genome for the species is the GenBank assembly GCA_013043995.1. The GC content of the type genome is 53.89 %

and the genome length is 1.95 Mbp.

Description of *Candidatus* Defulella lucifibula sp. nov.

Candidatus Defulella lucifibula (NL. fem. n. *lucifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOS01 sp002070025*. The type genome for the species is the GenBank assembly GCA_002070025.1. The GC content of the type genome is 53.2 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Defulella gen. nov.

Candidatus Defulella (NL. fem. n. *Defulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOS01*. The type species for the genus is *Candidatus* Defulella lucifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defulella navicitas sp. nov.

Candidatus Defulella navicitas (NL. fem. n. *navicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOS01 sp012838745*. The type genome for the species is the GenBank assembly GCA_012838745.1. The GC content of the type genome is 42.1 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Defulia adpagatio sp. nov.

Candidatus Defulia adpagatio (NL. fem. n. *adpagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12178 sp003641795*. The type genome for the species is the GenBank assembly GCA_003641795.1. The GC content of the type genome is 47.92 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Defulia gen. nov.

Candidatus Defulia (NL. fem. n. *Defulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12178*. The type species for the genus is *Candidatus* Defulia adpagatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12178*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defuliaceae.

Description of *Candidatus* Defuliaceae fam. nov.

Candidatus Defuliaceae (NL. fem. n. *Defuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12178.* The type genus for the taxon is *Candidatus* Defulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12178*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defuliales.

Description of *Candidatus* Defuliales ord. nov.

Candidatus Defuliales (NL. fem. n. *Defuliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12178.* The type genus for the taxon is *Candidatus* Defulia .

According to the GTDB R06-RS202, this order belongs to the class *Thermotogae*.

Description of *Candidatus* Defulia bicubilega sp. nov.

Candidatus Defulia bicubilega (NL. fem. n. *bicubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12178 sp003538775*. The type genome for the species is the GenBank assembly GCA_003538775.1. The GC content of the type genome is 46.12 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Defulosa desepitas sp. nov.

Candidatus Defulosa desepitas (NL. fem. n. *desepitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-36-10 sp001821375*. The type genome for the species is the GenBank assembly GCA_001821375.1. The GC content of the type genome is 36.14 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Defulosa gen. nov.

Candidatus Defulosa (NL. fem. n. *Defulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-36-10*. The type species for the genus is *Candidatus* Defulosa desepitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB1-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defulosaceae.

Description of *Candidatus* Defulosaceae fam. nov.

Candidatus Defulosaceae (NL. fem. n. *Defulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYB1-36-10.* The type genus for the taxon is *Candidatus* Defulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Defunaria hemidentia sp. nov.

Candidatus Defunaria hemidentia (NL. fem. n. *hemidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCU01 sp012729595*. The type genome for the species is the GenBank assembly GCA_012729595.1. The GC content of the type genome is 57.36 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Defunaria gen. nov.

Candidatus Defunaria (NL. fem. n. *Defunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCU01*. The type species for the genus is *Candidatus* Defunaria hemidentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pomifidaceae.

Description of *Candidatus* Defunella repurilega sp. nov.

Candidatus Defunella repurilega (NL. fem. n. *repurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-50-11 sp001774395*. The type genome for the species is the GenBank assembly GCA_001774395.1. The GC content of the type genome is 49.85 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Defunella gen. nov.

Candidatus Defunella (NL. fem. n. *Defunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-50-11*. The type species for the genus is *Candidatus* Defunella repurilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defunellaceae.

Description of *Candidatus* Defunellaceae fam. nov.

Candidatus Defunellaceae (NL. fem. n. *Defunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-50-11.* The type genus for the taxon is *Candidatus* Defunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defunellales.

Description of *Candidatus* Defunellales ord. nov.

Candidatus Defunellales (NL. fem. n. *Defunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-50-11.* The type genus for the taxon is *Candidatus* Defunella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Defunia exsisimonas sp. nov.

Candidatus Defunia exsisimonas (NL. fem. n. *exsisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAU-1492 sp002210165*. The type genome for the species is the GenBank assembly RS_GCF_002210165.1. The GC content of the type genome is 60.31 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Defunia gen. nov.

Candidatus Defunia (NL. fem. n. *Defunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAU-1492*. The type species for the genus is *Candidatus* Defunia exsisimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defunia rorifibra sp. nov.

Candidatus Defunia rorifibra (NL. fem. n. *rorifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAU-1492 sp002706905*. The type genome for the species is the GenBank assembly RS_GCF_005938225.1. The GC content of the type genome is 63.12 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Defunida feditisca sp. nov.

Candidatus Defunida feditisca (NL. fem. n. *feditisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLIM01 sp007135625*. The type genome for the species is the GenBank assembly GCA_003563135.1. The GC content of the type genome is 58.92 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Defunida gen. nov.

Candidatus Defunida (NL. fem. n. *Defunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLIM01*. The type species for the genus is *Candidatus* Defunida feditisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defunida hexamivita sp. nov.

Candidatus Defunida hexamivita (NL. fem. n. *hexamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLIM01 sp011390365*. The type genome for the species is the GenBank assembly GCA_011390365.1. The GC content of the type genome is 62.59 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Defunosa adaggitas sp. nov.

Candidatus Defunosa adaggitas (NL. fem. n. *adaggitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp002478265*. The type genome for the species is the GenBank assembly GCA_002478265.1. The GC content of the type genome is 47.73 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Defunosa gen. nov.

Candidatus Defunosa (NL. fem. n. *Defunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4810*. The type species for the genus is *Candidatus* Defunosa adaggitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Defunosa echogitura sp. nov.

Candidatus Defunosa echogitura (NL. fem. n. *echogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp002402545*. The type genome for the species is the GenBank assembly GCA_002402545.1. The GC content of the type genome is 44.61 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Defunosa funivitudo sp. nov.

Candidatus Defunosa funivitudo (NL. fem. n. *funivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp011046295*. The type genome for the species is the GenBank assembly GCA_011046295.1. The GC content of the type genome is 45.89 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Defunosa rurigitia sp. nov.

Candidatus Defunosa rurigitia (NL. fem. n. *rurigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp002479215*. The type genome for the species is the GenBank assembly GCA_002312915.1. The GC content of the type genome is 43.47 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Defunosa semiditio sp. nov.

Candidatus Defunosa semiditio (NL. fem. n. *semiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp002418825*. The type genome for the species is the GenBank assembly GCA_012797395.1. The GC content of the type genome is 45.22 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Defunosa tomacessa sp. nov.

Candidatus Defunosa tomacessa (NL. fem. n. *tomacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4810 sp001797845*. The type genome for the species is the GenBank assembly GCA_001797845.1. The GC content of the type genome is 43.54 % and the genome length is 2.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Defunula bipinisca sp. nov.

Candidatus Defunula bipinisca (NL. fem. n. *bipinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-37-9 sp002772495*. The type genome for the species is the GenBank assembly GCA_002772495.1. The GC content of the type genome is 37.43 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Defunula gen. nov.

Candidatus Defunula (NL. fem. n. *Defunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-37-9*. The type species for the genus is *Candidatus* Defunula bipinisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Dehalobacter estovitas sp. nov.

Candidatus Dehalobacter estovitas (NL. fem. n. *estovitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dehalobacter sp009910795*. The type genome for the species is the GenBank assembly GCA_009910795.1. The GC content of the type genome is 45.26 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Dehalobacter monacessa sp. nov.

Candidatus Dehalobacter monacessa (NL. fem. n. *monacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dehalobacter sp004343605*. The type genome for the species is the GenBank assembly RS_GCF_004343605.1. The GC content of the type genome is 44.38 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Dehalogenimonas innumago sp. nov.

Candidatus Dehalogenimonas innumago (NL. fem. n. *innumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dehalogenimonas sp002878295*. The type genome for the species is the GenBank assembly RS_GCF_002878295.2. The GC content of the type genome is 52.04 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dehalogenimonas lenunitudo sp. nov.

Candidatus Dehalogenimonas lenunitudo (NL. fem. n. *lenunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dehalogenimonas sp001005265*. The type genome for the species is the GenBank assembly GCA_001005265.1. The GC content of the type genome is 49.19 % and the genome length is 1.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Dehinana redunicella sp. nov.

Candidatus Dehinana redunicella (NL. fem. n. *redunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB16 sp001567115*. The type genome for the species is the GenBank assembly GCA_001567115.1. The GC content of the type genome is 54.59 % and the genome length is 4.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Dehinana gen. nov.

Candidatus Dehinana (NL. fem. n. *Dehinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB16*. The type species for the genus is *Candidatus* Dehinana redunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinanaceae.

Description of *Candidatus* Dehinanaceae fam. nov.

Candidatus Dehinanaceae (NL. fem. n. *Dehinanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB16.* The type genus for the taxon is *Candidatus* Dehinana .

According to the original version of GTDB R06-RS202, this family belongs to the order *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehinanales.

Description of *Candidatus* Dehinanales ord. nov.

Candidatus Dehinanales (NL. fem. n. *Dehinanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB16.* The type genus for the taxon is *Candidatus* Dehinana .

According to the original version of GTDB R06-RS202, this family belongs to the class *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehinanae.

Description of *Candidatus* Dehinanae class. nov.

Candidatus Dehinanae (NL. fem. n. *c__Dehinanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB16.* The type genus for the taxon is *Candidatus* Dehinana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *OLB16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Dehinanota.

Description of *Candidatus* Dehinanota phyl. nov.

Candidatus Dehinanota (NL. fem. n. *Dehinanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB16.* The type genus for the taxon is *Candidatus* Dehinana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Dehinaria giganimonia sp. nov.

Candidatus Dehinaria giganimonia (NL. fem. n. *giganimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP154 sp002401055*. The type genome for the species is the GenBank assembly GCA_002401055.1. The GC content of the type genome is 40.81 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Dehinaria gen. nov.

Candidatus Dehinaria (NL. fem. n. *Dehinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NORP154*. The type species for the genus is *Candidatus* Dehinaria giganimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NORP154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinariaceae.

Description of *Candidatus* Dehinariaceae fam. nov.

Candidatus Dehinariaceae (NL. fem. n. *Dehinariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NORP154.* The type genus for the taxon is *Candidatus* Dehinaria .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Dehinaria monumetta sp. nov.

Candidatus Dehinaria monumetta (NL. fem. n. *monumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NORP154 sp012966015*. The type genome for the species is the GenBank assembly GCA_012966015.1. The GC content of the type genome is 42.09 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Dehinella duciliforma sp. nov.

Candidatus Dehinella duciliforma (NL. fem. n. *duciliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4647 sp002438625*. The type genome for the species is the GenBank assembly GCA_002405695.1. The GC content of the type genome is 31.35 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Dehinella gen. nov.

Candidatus Dehinella (NL. fem. n. *Dehinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4647*. The type species for the genus is *Candidatus* Dehinella duciliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Dehinia biparedo sp. nov.

Candidatus Dehinia biparedo (NL. fem. n. *biparedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-01-FULL-48-27b sp001824915*. The type genome for the species is the GenBank assembly GCA_001824915.1. The GC content of the type genome is 47.69 % and the genome length is 0.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Dehinia gen. nov.

Candidatus Dehinia (NL. fem. n. *Dehinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-01-FULL-48-27b*. The type species for the genus is *Candidatus* Dehinia biparedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxilidaceae.

Description of *Candidatus* Dehinida codifedo sp. nov.

Candidatus Dehinida codifedo (NL. fem. n. *codifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4763 sp002403455*. The type genome for the species is the GenBank assembly GCA_002299045.1. The GC content of the type genome is 61.61 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Dehinida gen. nov.

Candidatus Dehinida (NL. fem. n. *Dehinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4763*. The type species for the genus is *Candidatus* Dehinida codifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dehinosa pociligena sp. nov.

Candidatus Dehinosa pociligena (NL. fem. n. *pociligena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRO5 sp003577275*. The type genome for the species is the GenBank assembly GCA_003577275.1. The GC content of the type genome is 60.98 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Dehinosa gen. nov.

Candidatus Dehinosa (NL. fem. n. *Dehinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRO5*. The type species for the genus is *Candidatus* Dehinosa pociligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufidaceae.

Description of *Candidatus* Dehinula cacomilega sp. nov.

Candidatus Dehinula cacomilega (NL. fem. n. *cacomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007128855*. The type genome for the species is the GenBank assembly GCA_007121885.1. The GC content of the type genome is 55.11 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Dehinula gen. nov.

Candidatus Dehinula (NL. fem. n. *Dehinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKNL01*. The type species for the genus is *Candidatus* Dehinula cacomilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Dehinulaceae fam. nov.

Candidatus Dehinulaceae (NL. fem. n. *Dehinulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKNL01*. The type genus for the taxon is *Candidatus* Dehinula .

According to GTDB R06-RS202, this family belongs to the order *Balneolales*.

Description of *Candidatus* Dehinula conabigena sp. nov.

Candidatus Dehinula conabigena (NL. fem. n. *conabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007120385*. The type genome for the species is the GenBank assembly GCA_007124435.1. The GC content of the type genome is 54.81 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Dehinula demulousia sp. nov.

Candidatus Dehinula demulousia (NL. fem. n. *demulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007120555*. The type genome for the species is the GenBank assembly GCA_003567355.1. The GC content of the type genome is 54.35 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Dehinula depecicella sp. nov.

Candidatus Dehinula depecicella (NL. fem. n. *depecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007133995*. The type genome for the species is the GenBank assembly GCA_003560895.1. The GC content of the type genome is 49.58 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Dehinula desacitudo sp. nov.

Candidatus Dehinula desacitudo (NL. fem. n. *desacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007127665*. The type genome for the species is the GenBank assembly GCA_007118935.1. The GC content of the type genome is 52.98 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Dehinula ducilatica sp. nov.

Candidatus Dehinula ducilatica (NL. fem. n. *ducilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007134845*. The type genome for the species is the GenBank assembly GCA_007134845.1. The GC content of the type genome is 50.76 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Dehinula fidenitica sp. nov.

Candidatus Dehinula fidenitica (NL. fem. n. *fidenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007128425*. The type genome for the species is the GenBank assembly GCA_003559715.1. The GC content of the type genome is 49.2 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Dehinula offunitia sp. nov.

Candidatus Dehinula offunitia (NL. fem. n. *offunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007693825*. The type genome for the species is the GenBank assembly GCA_007693825.1. The GC content of the type genome is 54.75 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Dehinula pericitas sp. nov.

Candidatus Dehinula pericitas (NL. fem. n. *pericitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007132975*. The type genome for the species is the GenBank assembly GCA_007132975.1. The GC content of the type genome is 55.04 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Dehinula remedigena sp. nov.

Candidatus Dehinula remedigena (NL. fem. n. *remedigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007127695*. The type genome for the species is the GenBank assembly GCA_007127695.1. The GC content of the type genome is 54.14 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Dehinula umbilentia sp. nov.

Candidatus Dehinula umbilentia (NL. fem. n. *umbilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNL01 sp007122185*. The type genome for the species is the GenBank assembly GCA_007122185.1. The GC content of the type genome is 53.61 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Dehisana munifilenta sp. nov.

Candidatus Dehisana munifilenta (NL. fem. n. *munifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-1 sp001443005*. The type genome for the species is the GenBank assembly GCA_011367565.1. The GC content of the type genome is 44.81 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Dehisana gen. nov.

Candidatus Dehisana (NL. fem. n. *Dehisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GBS-1*. The type species for the genus is *Candidatus* Dehisana munifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehisanaceae.

Description of *Candidatus* Dehisanaceae fam. nov.

Candidatus Dehisanaceae (NL. fem. n. *Dehisanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GBS-1*. The type genus for the taxon is *Candidatus* Dehisana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GBS-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehisanales.

Description of *Candidatus* Dehisanales ord. nov.

Candidatus Dehisanales (NL. fem. n. *Dehisanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GBS-1*. The type genus for the taxon is *Candidatus* Dehisana .

According to the original version of GTDB R06-RS202, this family belongs to the class *GBS-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehisanae.

Description of *Candidatus* Dehisanae class. nov.

Candidatus Dehisanae (NL. fem. n. *c__Dehisanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GBS-1*. The type genus for the taxon is *Candidatus* Dehisana .

According to GTDB R06-RS202, this class belongs to the phylum *Synergistota*.

Description of *Candidatus* Dehisaria metapibra sp. nov.

Candidatus Dehisaria metapibra (NL. fem. n. *metapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKOH01 sp903829075*. The type genome for the species is the GenBank assembly GCA_903829075.1. The GC content of the type genome is 51.14 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Dehisaria gen. nov.

Candidatus Dehisaria (NL. fem. n. *Dehisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKOH01*. The type species for the genus is *Candidatus* Dehisaria metapibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-60-25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugigulaceae.

Description of *Candidatus* Dehisaria thessivita sp. nov.

Candidatus Dehisaria thessivita (NL. fem. n. *thessivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKOH01 sp009691315*. The type genome for the species is the GenBank assembly GCA_009691315.1. The GC content of the type genome is 47.21 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Dehisella favilibula sp. nov.

Candidatus Dehisella favilibula (NL. fem. n. *favilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Barb7 sp010500925*. The type genome for the species is the GenBank assembly RS_GCF_010500925.1. The GC content of the type genome is 43.04 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Dehisella gen. nov.

Candidatus Dehisella (NL. fem. n. *Dehisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Barb7*. The type species for the genus is *Candidatus* Dehisella favilibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dehisella levifatica sp. nov.

Candidatus Dehisella levifatica (NL. fem. n. *levifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Barb7 sp001657575*. The type genome for the species is the GenBank assembly RS_GCF_001657575.1. The GC content of the type genome is 47.88 % and the genome length is 3.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hindgut of Cryptocercus punctulatus".

Description of *Candidatus* Dehisia bicorilega sp. nov.

Candidatus Dehisia bicorilega (NL. fem. n. *bicorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILNX01 sp903835685*. The type genome for the species is the GenBank assembly GCA_903879295.1. The GC content of the type genome is 63.75 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Dehisia gen. nov.

Candidatus Dehisia (NL. fem. n. *Dehisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILNX01*. The type species for the genus is *Candidatus* Dehisia bicorilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dehisida gasomugo sp. nov.

Candidatus Dehisida gasomugo (NL. fem. n. *gasomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMF01 sp009841225*. The type genome for the species is the GenBank assembly GCA_009839945.1. The GC content of the type genome is 63.68 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Dehisida gen. nov.

Candidatus Dehisida (NL. fem. n. *Dehisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXMF01*. The type species for the genus is *Candidatus* Dehisida

gasomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6623*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimosaceae.

Description of *Candidatus* Dehisida megaligena sp. nov.

Candidatus Dehisida megaligena (NL. fem. n. *megaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMF01 sp009838515*. The type genome for the species is the GenBank assembly GCA_009843165.1. The GC content of the type genome is 63.62 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Dehisosa regigiforma sp. nov.

Candidatus Dehisosa regigiforma (NL. fem. n. *regigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7867 sp002405615*. The type genome for the species is the GenBank assembly GCA_002501295.1. The GC content of the type genome is 40.42 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Dehisosa gen. nov.

Candidatus Dehisosa (NL. fem. n. *Dehisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7867*. The type species for the genus is *Candidatus* Dehisosa regigiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Dehisula adsulitrix sp. nov.

Candidatus Dehisula adsulitrix (NL. fem. n. *adsulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-269 sp012523575*. The type genome for the species is the GenBank assembly GCA_012523575.1. The GC content of the type genome is 43.6 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Dehisula gen. nov.

Candidatus Dehisula (NL. fem. n. *Dehisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *41-269*. The type species for the genus is *Candidatus* Dehisula adsulitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosidaceae.

Description of *Candidatus* Dehisula categetta sp. nov.

Candidatus Dehisula categetta (NL. fem. n. *categetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *41-269 sp001508005*. The type genome for the species is the GenBank assembly GCA_001508005.1. The GC content of the type genome is 40.67 % and the genome length is 1.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample K2".

Description of *Candidatus* Dehonana arremicula sp. nov.

Candidatus Dehonana arremicula (NL. fem. n. *arremicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12225 sp009693165*. The type genome for the species is the GenBank assembly GCA_009693165.1. The GC content of the type genome is 62.12 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Dehonana gen. nov.

Candidatus Dehonana (NL. fem. n. *Dehonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA12225*. The type species for the genus is *Candidatus* Dehonana arremicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonanaceae.

Description of *Candidatus* Dehonanaceae fam. nov.

Candidatus Dehonanaceae (NL. fem. n. *Dehonanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12225.* The type genus for the taxon is *Candidatus* Dehonana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehonanales.

Description of *Candidatus* Dehonanales ord. nov.

Candidatus Dehonanales (NL. fem. n. *Dehonanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12225.* The type genus for the taxon is *Candidatus* Dehonana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2235*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nocumosae.

Description of *Candidatus* Dehonana vocifitica sp. nov.

Candidatus Dehonana vocifitica (NL. fem. n. *vocifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12225 sp002347925*. The type genome for the species is the GenBank assembly GCA_003670395.1. The GC content of the type genome is 61.79 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Dehonaria eclipigena sp. nov.

Candidatus Dehonaria eclipigena (NL. fem. n. *eclipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1810 sp900555295*. The type genome for the species is the GenBank assembly GCA_900555295.1. The GC content of the type genome is 38.42 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Dehonaria gen. nov.

Candidatus Dehonaria (NL. fem. n. *Dehonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1810*. The type species for the genus is *Candidatus* Dehonaria eclipigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1810*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonariaceae.

Description of *Candidatus* Dehonariaceae fam. nov.

Candidatus Dehonariaceae (NL. fem. n. *Dehonariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1810.* The type genus for the taxon is *Candidatus* Dehonaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1810*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehonariales.

Description of *Candidatus* Dehonariales ord. nov.

Candidatus Dehonariales (NL. fem. n. *Dehonariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1810.* The type genus for the taxon is *Candidatus* Dehonaria .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Dehonella inpudiforma sp. nov.

Candidatus Dehonella inpudiforma (NL. fem. n. *inpudiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA994 sp002292025*. The type genome for the species is the GenBank assembly GCA_002292025.1. The GC content of the type genome is 54.59 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Dehonella gen. nov.

Candidatus Dehonella (NL. fem. n. *Dehonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA994*. The type species for the genus is *Candidatus* Dehonella inpudiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonellaceae.

Description of *Candidatus* Dehonellaceae fam. nov.

Candidatus Dehonellaceae (NL. fem. n. *Dehonellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA994.* The type genus for the taxon is *Candidatus* Dehonella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehonellales.

Description of *Candidatus* Dehonellales ord. nov.

Candidatus Dehonellales (NL. fem. n. *Dehonellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA994.* The type genus for the taxon is *Candidatus* Dehonella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehonellae.

Description of *Candidatus* Dehonellae class. nov.

Candidatus Dehonellae (NL. fem. n. *c__Dehonellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA994.* The type genus for the taxon is *Candidatus* Dehonella .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_H*.

Description of *Candidatus* Dehonia rudicax sp. nov.

Candidatus Dehonia rudicax (NL. fem. n. *rudicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12395 sp902778725*. The type genome for the species is the GenBank assembly GCA_902778395.1. The GC content of the type genome is 60.96 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dehonia gen. nov.

Candidatus Dehonia (NL. fem. n. *Dehonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12395*. The type species for the genus is *Candidatus* Dehonia rudicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Dehonida bicinitas sp. nov.

Candidatus Dehonida bicinitas (NL. fem. n. *bicinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8403 sp002325615*. The type genome for the species is the GenBank assembly GCA_003456065.1. The GC content of the type genome is 45.28 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Dehonida gen. nov.

Candidatus Dehonida (NL. fem. n. *Dehonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8403*. The type species for the genus is *Candidatus* Dehonida

bicinitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dehonida opporicella sp. nov.

Candidatus Dehonida opporicella (NL. fem. n. *opporicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8403 sp011524725*. The type genome for the species is the GenBank assembly GCA_011524725.1. The GC content of the type genome is 44.96 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Dehonosa altifitoga sp. nov.

Candidatus Dehonosa altifitoga (NL. fem. n. *altifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPQ01 sp013202585*. The type genome for the species is the GenBank assembly GCA_013202585.1. The GC content of the type genome is 42.82 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Dehonosa gen. nov.

Candidatus Dehonosa (NL. fem. n. *Dehonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPQ01*. The type species for the genus is *Candidatus* Dehonosa altifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehonosaceae.

Description of *Candidatus* Dehonosaceae fam. nov.

Candidatus Dehonosaceae (NL. fem. n. *Dehonosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMPQ01*. The type genus for the taxon is *Candidatus* Dehonosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehonosales.

Description of *Candidatus* Dehonosales ord. nov.

Candidatus Dehonosales (NL. fem. n. *Dehonosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMPQ01.* The type genus for the taxon is *Candidatus* Dehonosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABMPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehonosae.

Description of *Candidatus* Dehonosae class. nov.

Candidatus Dehonosae (NL. fem. n. *c__Dehonosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMPQ01.* The type genus for the taxon is *Candidatus* Dehonosa .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Dehonula cibarilenta sp. nov.

Candidatus Dehonula cibarilenta (NL. fem. n. *cibarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7050 sp002493905*. The type genome for the species is the GenBank assembly GCA_002491645.1. The GC content of the type genome is 47.99 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Dehonula gen. nov.

Candidatus Dehonula (NL. fem. n. *Dehonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7050*. The type species for the genus is *Candidatus* Dehonula cibarilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dehonula penicentia sp. nov.

Candidatus Dehonula penicentia (NL. fem. n. *penicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7050 sp003979345*. The type genome for the species is the GenBank assembly GCA_013316925.1. The GC content of the type genome is 47.88 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Deinococcus adtumousia sp. nov.

Candidatus Deinococcus adtumousia (NL. fem. n. *adtumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp002953415*. The type genome for the species is the GenBank assembly RS_GCF_002953415.1. The GC content of the type genome is 69.71 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Deinococcus amnenisca sp. nov.

Candidatus Deinococcus amnenisca (NL. fem. n. *amnenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp004801315*. The type genome for the species is the GenBank assembly RS_GCF_004801315.1. The GC content of the type genome is 61.81 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Deinococcus arrugugo sp. nov.

Candidatus Deinococcus arrugugo (NL. fem. n. *arrugugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp007280555*. The type genome for the species is the GenBank assembly RS_GCF_007280555.1. The GC content of the type genome is 61.32 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Deinococcus cuticitia sp. nov.

Candidatus Deinococcus cuticitia (NL. fem. n. *cuticitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp002017875*. The type genome for the species is the GenBank assembly RS_GCF_001413985.2. The GC content of the type genome is 69.37 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Deinococcus expopilega sp. nov.

Candidatus Deinococcus expopilega (NL. fem. n. *expopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp009017495*. The type genome for the species is the GenBank assembly RS_GCF_009017495.1. The GC content of the type genome is 64.01 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Deinococcus extipetta sp. nov.

Candidatus Deinococcus extipetta (NL. fem. n. *extipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp001424185*. The type genome for the species is the GenBank assembly RS_GCF_001424185.1. The GC content of the type genome is 67.4 % and the genome length is 4.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Deinococcus galacax sp. nov.

Candidatus Deinococcus galacax (NL. fem. n. *galacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp003860465*. The type genome for the species is the GenBank assembly RS_GCF_003860465.1. The GC content of the type genome is 61.09 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Deinococcus inpenitica sp. nov.

Candidatus Deinococcus inpenitica (NL. fem. n. *inpenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp003028415*. The type genome for the species is the GenBank assembly RS_GCF_003028415.1. The GC content of the type genome is 68.12 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Deinococcus oppanivita sp. nov.

Candidatus Deinococcus oppanivita (NL. fem. n. *oppanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp000745175*. The type genome for the species is the GenBank assembly RS_GCF_000745175.1. The GC content of the type genome is 67.46 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Deinococcus scintiforma sp. nov.

Candidatus Deinococcus scintiforma (NL. fem. n. *scintiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp009377345*. The type genome for the species is the GenBank assembly RS_GCF_009377345.1. The GC content of the type genome is 69.21 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Deinococcus sonipousia sp. nov.

Candidatus Deinococcus sonipousia (NL. fem. n. *sonipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp013337115*. The type genome for the species is the GenBank assembly RS_GCF_013337115.1. The GC content of the type genome is 69.75 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Deinococcus turibitas sp. nov.

Candidatus Deinococcus turibitas (NL. fem. n. *turibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp004801415*. The type genome for the species is the GenBank assembly RS_GCF_004801415.1. The GC content of the type genome is 68.23 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Deinococcus verecitrix sp. nov.

Candidatus Deinococcus verecitrix (NL. fem. n. *verecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Deinococcus sp009755355*. The type genome for the species is the GenBank assembly RS_GCF_009755355.1. The GC content of the type genome is 65.73 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Delacana favonitura sp. nov.

Candidatus Delacana favonitura (NL. fem. n. *favonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-12-A sp001776905*. The type genome for the species is the GenBank assembly GCA_001776905.1. The GC content of the type genome is 38.69 % and the genome length is 1.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Delacana gen. nov.

Candidatus Delacana (NL. fem. n. *Delacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-12-A*. The type species for the genus is *Candidatus* Delacana favonitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Delacella aterrousia sp. nov.

Candidatus Delacella aterrousia (NL. fem. n. *aterrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDFO01 sp013815785*. The type genome for the species is the GenBank assembly GCA_013815785.1. The GC content of the type genome is 44.44 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Delacella gen. nov.

Candidatus Delacella (NL. fem. n. *Delacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDFO01*. The type species for the genus is *Candidatus* Delacella aterrousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDFO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delacellaceae.

Description of *Candidatus* Delacellaceae fam. nov.

Candidatus Delacellaceae (NL. fem. n. *Delacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDFO01.* The type genus for the taxon is *Candidatus* Delacella .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Delacia cerimitas sp. nov.

Candidatus Delacia cerimitas (NL. fem. n. *cerimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7378 sp002469805*. The type genome for the species is the GenBank assembly GCA_002469805.1. The GC content of the type genome is 54.13 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Delacia gen. nov.

Candidatus Delacia (NL. fem. n. *Delacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7378*. The type species for the genus is *Candidatus* Delacia cerimitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RS24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venuciaceae.

Description of *Candidatus* Delacia conubitica sp. nov.

Candidatus Delacia conubitica (NL. fem. n. *conubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7378 sp002689195*. The type genome for the species is the GenBank assembly GCA_002308375.1. The GC content of the type genome is 56.5 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Delacia monopicula sp. nov.

Candidatus Delacia monopicula (NL. fem. n. *monopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7378 sp902624095*. The type genome for the species is the GenBank assembly GCA_902624095.1. The GC content of the type genome is 52.91 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Delacida decunastra sp. nov.

Candidatus Delacida decunastra (NL. fem. n. *decunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSAB01 sp011388275*. The type genome for the species is the GenBank assembly GCA_011388275.1. The GC content of the type genome is 52.19 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Delacida gen. nov.

Candidatus Delacida (NL. fem. n. *Delacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSAB01*. The type species for the genus is *Candidatus* Delacida decunastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSAB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delacidaceae.

Description of *Candidatus* Delacidaceae fam. nov.

Candidatus Delacidaceae (NL. fem. n. *Delacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSAB01*. The type genus for the taxon is *Candidatus* Delacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decunulales.

Description of *Candidatus* Delacosa baditisca sp. nov.

Candidatus Delacosa baditisca (NL. fem. n. *baditisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU032 sp002427505*. The type genome for the species is the GenBank assembly GCA_002409095.1. The GC content of the type genome is 47.87 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Delacosa gen. nov.

Candidatus Delacosa (NL. fem. n. *Delacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU032*. The type species for the genus is *Candidatus* Delacosa baditisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Delacosa coninimonia sp. nov.

Candidatus Delacosa coninimonia (NL. fem. n. *coninimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU032 sp001512745*. The type genome for the species is the GenBank assembly GCA_001512745.1. The GC content of the type genome is 46.47 % and the genome length is 1.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors

for biogas production (methane)".

Description of *Candidatus* Delacosa venefimonas sp. nov.

Candidatus Delacosa venefimonas (NL. fem. n. *venefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU032 sp002427475*. The type genome for the species is the GenBank assembly GCA_012838025.1. The GC content of the type genome is 47.08 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Delacosa vilipisca sp. nov.

Candidatus Delacosa vilipisca (NL. fem. n. *vilipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU032 sp012728535*. The type genome for the species is the GenBank assembly GCA_012728535.1. The GC content of the type genome is 46.74 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Delacula astapicella sp. nov.

Candidatus Delacula astapicella (NL. fem. n. *astapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMRT01 sp013202295*. The type genome for the species is the GenBank assembly GCA_013202295.1. The GC content of the type genome is 44.06 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Delacula gen. nov.

Candidatus Delacula (NL. fem. n. *Delacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMRT01*. The type species for the genus is *Candidatus* Delacula astapicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMRT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delaculaceae.

Description of *Candidatus* Delaculaceae fam. nov.

Candidatus Delaculaceae (NL. fem. n. *Delaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMRT01.* The type genus for the taxon is *Candidatus* Delacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNDG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decunulales.

Description of *Candidatus* Delapana disidibra sp. nov.

Candidatus Delapana disidibra (NL. fem. n. *disidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12532 sp003445475*. The type genome for the species is the GenBank assembly GCA_003445475.1. The GC content of the type genome is 61.46 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Delapana gen. nov.

Candidatus Delapana (NL. fem. n. *Delapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12532*. The type species for the genus is *Candidatus* Delapana disidibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapanaceae.

Description of *Candidatus* Delapanaceae fam. nov.

Candidatus Delapanaceae (NL. fem. n. *Delapanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12532.* The type genus for the taxon is *Candidatus* Delapana .

According to GTDB R06-RS202, this family belongs to the order *Ammonifexales*.

Description of *Candidatus* Delapana pacifetta sp. nov.

Candidatus Delapana pacifetta (NL. fem. n. *pacifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12532 sp011048115*. The type genome for the species is the GenBank assembly GCA_011048115.1. The GC content of the type genome is 59.93 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Delaparia domigibra sp. nov.

Candidatus Delaparia domigibra (NL. fem. n. *domigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQIQ01 sp903871935*. The type genome for the species is the GenBank assembly GCA_903925855.1. The GC content of the type genome is 60.46 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Delaparia gen. nov.

Candidatus Delaparia (NL. fem. n. *Delaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQIQ01*. The type species for the genus is *Candidatus* Delaparia domigibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hariciaceae.

Description of *Candidatus* Delapella visibitica sp. nov.

Candidatus Delapella visibitica (NL. fem. n. *visibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-211 sp002084955*. The type genome for the species is the GenBank assembly GCA_002084955.1. The GC content of the type genome is 44.38 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Delapella gen. nov.

Candidatus Delapella (NL. fem. n. *Delapella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-211*. The type species for the genus is *Candidatus* Delapella visibitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-211*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapellaceae.

Description of *Candidatus* Delapellaceae fam. nov.

Candidatus Delapellaceae (NL. fem. n. *Delapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-211.* The type genus for the taxon is *Candidatus* Delapella .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-211*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapellales.

Description of *Candidatus* Delapellales ord. nov.

Candidatus Delapellales (NL. fem. n. *Delapellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-211.* The type genus for the taxon is *Candidatus* Delapella .

According to the original version of GTDB R06-RS202, this family belongs to the class *4484-211*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Delapellae.

Description of *Candidatus* Delapellae class. nov.

Candidatus Delapellae (NL. fem. n. *c__Delapellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-211.* The type genus for the taxon is *Candidatus* Delapella .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Delapia admoditrix sp. nov.

Candidatus Delapia admoditrix (NL. fem. n. *admoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002373935*. The type genome for the species is the GenBank assembly GCA_002373935.1. The GC content of the type genome is 42.8 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Delapia gen. nov.

Candidatus Delapia (NL. fem. n. *Delapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Rs-D84*. The type species for the genus is *Candidatus* Delapia admoditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delapiaceae.

Description of *Candidatus* Delapiaceae fam. nov.

Candidatus Delapiaceae (NL. fem. n. *Delapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Rs-D84.* The type genus for the taxon is *Candidatus* Delapia .

According to the original version of GTDB R06-RS202, this family belongs to the order *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapiales.

Description of *Candidatus* Delapiales ord. nov.

Candidatus Delapiales (NL. fem. n. *Delapiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Rs-D84.* The type genus for the taxon is *Candidatus* Delapia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Delapia adpinibula sp. nov.

Candidatus Delapia adpinibula (NL. fem. n. *adpinibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902802115*. The type genome for the species is the GenBank assembly GCA_902802115.1. The GC content of the type genome is 39.0 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Delapia ambusitoga sp. nov.

Candidatus Delapia ambusitoga (NL. fem. n. *ambusitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902788485*. The type genome for the species is the GenBank assembly GCA_902788485.1. The GC content of the type genome is 41.49 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Delapia amnenitica sp. nov.

Candidatus Delapia amnenitica (NL. fem. n. *amnenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902799285*. The type genome for the species is the GenBank assembly GCA_902799285.1. The GC content of the type genome is 41.93 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Delapia armidedo sp. nov.

Candidatus Delapia armidedo (NL. fem. n. *armidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902801125*. The type genome for the species is the GenBank assembly GCA_902801125.1. The GC content of the type genome is 44.01 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Delapia assicitio sp. nov.

Candidatus Delapia assicitio (NL. fem. n. *assicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902784345*. The type genome for the species is the GenBank assembly GCA_902784345.1. The GC content of the type genome is 37.82 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Delapia bicalicella sp. nov.

Candidatus Delapia bicalicella (NL. fem. n. *bicalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900546225*. The type genome for the species is the GenBank assembly RS_GCF_900771925.1. The GC content of the type genome is 46.8 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Delapia casigimonia sp. nov.

Candidatus Delapia casigimonia (NL. fem. n. *casigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902781465*. The type genome for the species is the GenBank assembly GCA_902781465.1. The GC content of the type genome is 37.24 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Delapia conabiforma sp. nov.

Candidatus Delapia conabiforma (NL. fem. n. *conabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900550495*. The type genome for the species is the GenBank assembly GCA_900550495.1. The GC content of the type genome is 45.26 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Delapia deculatica sp. nov.

Candidatus Delapia deculatica (NL. fem. n. *deculatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900549365*. The type genome for the species is the GenBank assembly GCA_900549365.1. The GC content of the type genome is 45.82 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Delapia dicibisca sp. nov.

Candidatus Delapia dicibisca (NL. fem. n. *dicibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900546185*. The type genome for the species is the GenBank assembly RS_GCF_900753475.1. The GC content of the type genome is 45.11 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Delapia diludilega sp. nov.

Candidatus Delapia diludilega (NL. fem. n. *diludilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902784285*. The type genome for the species is the GenBank assembly GCA_902776865.1. The GC content of the type genome is 41.69 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Delapia disidilega sp. nov.

Candidatus Delapia disidilega (NL. fem. n. *disidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902793435*. The type genome for the species is the GenBank assembly GCA_902793435.1. The GC content of the type genome is 38.91 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Delapia epiclago sp. nov.

Candidatus Delapia epiclago (NL. fem. n. *epiclago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902795435*. The type genome for the species is the GenBank assembly GCA_902795435.1. The GC content of the type genome is 35.48 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Delapia exculitudo sp. nov.

Candidatus Delapia exculitudo (NL. fem. n. *exculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902798205*. The type genome for the species is the GenBank assembly GCA_902798205.1. The GC content of the type genome is 36.28 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Delapia expurivita sp. nov.

Candidatus Delapia expurivita (NL. fem. n. *expurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002309215*. The type genome for the species is the GenBank assembly GCA_002309215.1. The GC content of the type genome is 37.68 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Delapia impugentia sp. nov.

Candidatus Delapia impugentia (NL. fem. n. *impugentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902787665*. The type genome for the species is the GenBank assembly GCA_902787665.1. The GC content of the type genome is 40.38 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Delapia licenicula sp. nov.

Candidatus Delapia licenicula (NL. fem. n. *licenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002310415*. The type genome for the species is the GenBank assembly GCA_002310415.1. The GC content of the type genome is 35.67 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Delapia lorarilenta sp. nov.

Candidatus Delapia lorarilenta (NL. fem. n. *lorarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Rs-D84 sp013316395*. The type genome for the species is the GenBank assembly GCA_013316395.1. The GC content of the type genome is 48.18 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Delapia lucelousia sp. nov.

Candidatus Delapia lucelousia (NL. fem. n. *lucelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902793005*. The type genome for the species is the GenBank assembly GCA_902795465.1. The GC content of the type genome is 41.95 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Delapia luculetta sp. nov.

Candidatus Delapia luculetta (NL. fem. n. *luculetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002348925*. The type genome for the species is the GenBank assembly GCA_002348925.1. The GC content of the type genome is 37.66 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Delapia manomitudo sp. nov.

Candidatus Delapia manomitudo (NL. fem. n. *manomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900321105*. The type genome for the species is the GenBank assembly GCA_900321105.1. The GC content of the type genome is 36.76 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Delapia momoritrix sp. nov.

Candidatus Delapia momoritrix (NL. fem. n. *momoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902774285*. The type genome for the species is the GenBank assembly GCA_902774285.1. The GC content of the type genome is 36.25 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Delapia paracitoga sp. nov.

Candidatus Delapia paracitoga (NL. fem. n. *paracitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902774305*. The type genome for the species is the GenBank assembly GCA_902774305.1. The GC content of the type genome is 37.47 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Delapia penuritrix sp. nov.

Candidatus Delapia penuritrix (NL. fem. n. *penuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002437665*. The type genome for the species is the GenBank assembly GCA_002452175.1. The GC content of the type genome is 47.31 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Delapia reforifica sp. nov.

Candidatus Delapia reforifica (NL. fem. n. *reforifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900313285*. The type genome for the species is the GenBank assembly GCA_902755675.1. The GC content of the type genome is 35.6 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Delapia refunitio sp. nov.

Candidatus Delapia refunitio (NL. fem. n. *refunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900313105*. The type genome for the species is the GenBank assembly GCA_902799545.1. The GC content of the type genome is 43.97 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Delapia rinocedo sp. nov.

Candidatus Delapia rinocedo (NL. fem. n. *rinocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900550565*. The type genome for the species is the GenBank assembly RS_GCF_900771825.1. The GC content of the type genome is 46.53 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Delapia saburigena sp. nov.

Candidatus Delapia saburigena (NL. fem. n. *saburigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902771095*. The type genome for the species is the GenBank assembly GCA_902771095.1. The GC content of the type genome is 37.33 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Delapia sarabousia sp. nov.

Candidatus Delapia sarabousia (NL. fem. n. *sarabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp900320405*. The type genome for the species is the GenBank assembly GCA_902756645.1. The GC content of the type genome is 43.23 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Delapia scombessa sp. nov.

Candidatus Delapia scombessa (NL. fem. n. *scombessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902787305*. The type genome for the species is the GenBank assembly GCA_902787305.1. The GC content of the type genome is 43.96 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Delapia solacisca sp. nov.

Candidatus Delapia solacisca (NL. fem. n. *solacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Rs-D84 sp902776515*. The type genome for the species is the GenBank assembly GCA_902776515.1. The GC content of the type genome is 39.38 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Delapia solivilega sp. nov.

Candidatus Delapia solivilega (NL. fem. n. *solivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp002371155*. The type genome for the species is the GenBank assembly GCA_902776925.1. The GC content of the type genome is 41.34 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Delapia tegimitura sp. nov.

Candidatus Delapia tegimitura (NL. fem. n. *tegimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902771695*. The type genome for the species is the GenBank assembly GCA_902771695.1. The GC content of the type genome is 40.97 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Delapia tiguriforma sp. nov.

Candidatus Delapia tiguriforma (NL. fem. n. *tiguriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902790415*. The type genome for the species is the GenBank assembly GCA_902790415.1. The GC content of the type genome is 40.27 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Delapia urbicitio sp. nov.

Candidatus Delapia urbicitio (NL. fem. n. *urbicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Rs-D84 sp902762295*. The type genome for the species is the GenBank assembly GCA_902762295.1. The GC content of the type genome is 41.81 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Delaposa calipimonas sp. nov.

Candidatus Delaposa calipimonas (NL. fem. n. *calipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-140-MAGs142 sp003671055*. The type genome for the species is the GenBank assembly GCA_903894775.1. The GC content of the type genome is 58.24 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Delaposa gen. nov.

Candidatus Delaposa (NL. fem. n. *Delaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-140-MAGs142*. The type species for the genus is *Candidatus* Delaposa calipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Delaposa cobalitia sp. nov.

Candidatus Delaposa cobalitia (NL. fem. n. *cobalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-140-MAGs142 sp009691805*. The type genome for the species is the GenBank assembly GCA_009691805.1. The GC content of the type genome is 58.65 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Delaposa denorugo sp. nov.

Candidatus Delaposa denorugo (NL. fem. n. *denorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-140-MAGs142 sp005790605*. The type genome for the species is the GenBank assembly GCA_005790605.1. The GC content of the type genome is 59.91 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Delaposa depicitas sp. nov.

Candidatus Delaposa depicitas (NL. fem. n. *depicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-140-MAGs142 sp005790565*. The type genome for the species is the GenBank assembly GCA_005808685.1. The GC content of the type genome is 60.63 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Delapula ammixifica sp. nov.

Candidatus Delapula ammixifica (NL. fem. n. *ammixifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2259 sp002328465*. The type genome for the species is the GenBank assembly GCA_002328465.1. The GC content of the type genome is 33.73 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Delapula gen. nov.

Candidatus Delapula (NL. fem. n. *Delapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2259*. The type species for the genus is *Candidatus* Delapula ammixifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Delapula bigaratio sp. nov.

Candidatus Delapula bigaratio (NL. fem. n. *bigaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2259 sp002419125*. The type genome for the species is the GenBank assembly GCA_002419125.1. The GC content of the type genome is 32.84 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Delapula obnoxitia sp. nov.

Candidatus Delapula obnoxitia (NL. fem. n. *obnoxitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2259 sp012514355*. The type genome for the species is the GenBank assembly GCA_012514355.1. The GC content of the type genome is 33.74 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Delapula semodax sp. nov.

Candidatus Delapula semodax (NL. fem. n. *semodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2259 sp002347605*. The type genome for the species is the GenBank assembly GCA_002381925.1. The GC content of the type genome is 33.29 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Delebana xeropivita sp. nov.

Candidatus Delebana xeropivita (NL. fem. n. *xeropivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAU01 sp903903925*. The type genome for the species is the GenBank assembly GCA_903933625.1. The GC content of the type genome is 42.91 % and the genome length is 7.4 Mbp.

Description of *Candidatus* Delebana gen. nov.

Candidatus Delebana (NL. fem. n. *Delebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVAU01*. The type species for the genus is *Candidatus* Delebana xeropivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delebaria masocitio sp. nov.

Candidatus Delebaria masocitio (NL. fem. n. *masocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11512 sp003522145*. The type genome for the species is the GenBank assembly GCA_003522145.1. The GC content of the type genome is 50.96 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Delebaria gen. nov.

Candidatus Delebaria (NL. fem. n. *Delebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11512*. The type species for the genus is *Candidatus* Delebaria masocitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Delebella vagabitura sp. nov.

Candidatus Delebella vagabitura (NL. fem. n. *vagabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPG01 sp903928055*. The type genome for the species is the GenBank assembly GCA_903902085.1. The GC content of the type genome is 61.8 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Delebella gen. nov.

Candidatus Delebella (NL. fem. n. *Delebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYPG01*. The type species for the genus is *Candidatus* Delebella vagabitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Delebia rubicatica sp. nov.

Candidatus Delebia rubicatica (NL. fem. n. *rubicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M10-OD1-1 sp003056145*. The type genome for the species is the GenBank assembly GCA_003056095.1. The GC content of the type genome is 30.39 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Delebia gen. nov.

Candidatus Delebia (NL. fem. n. *Delebia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M10-OD1-1*. The type species for the genus is *Candidatus* Delebia rubicatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Delebida derecitia sp. nov.

Candidatus Delebida derecitia (NL. fem. n. *derecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077536 sp001464935*. The type genome for the species is the GenBank assembly GCA_001464935.1. The GC content of the type genome is 66.76 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Delebida gen. nov.

Candidatus Delebida (NL. fem. n. *Delebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077536*. The type species for the genus is *Candidatus* Delebida derecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delebidaceae.

Description of *Candidatus* Delebidaceae fam. nov.

Candidatus Delebidaceae (NL. fem. n. *Delebidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077536.* The type genus for the taxon is *Candidatus* Delebida .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delebidales.

Description of *Candidatus* Delebidales ord. nov.

Candidatus Delebidales (NL. fem. n. *Delebidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077536.* The type genus for the taxon is *Candidatus* Delebida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Delebida omninigena sp. nov.

Candidatus Delebida omninigena (NL. fem. n. *omninigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077536 sp009692365*. The type genome for the species is the GenBank assembly GCA_009692365.1. The GC content of the type genome is 63.73 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Delebida scintitudo sp. nov.

Candidatus Delebida scintitudo (NL. fem. n. *scintitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077536 sp903866355*. The type genome for the species is the GenBank assembly GCA_903866355.1. The GC content of the type genome is 60.5 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Delebosa dececitudo sp. nov.

Candidatus Delebosa dececitudo (NL. fem. n. *dececitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-21 sp903830625*. The type genome for the species is the GenBank assembly GCA_903830625.1. The GC content of the type genome is 44.78 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Delebosa gen. nov.

Candidatus Delebosa (NL. fem. n. *Delebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-21*. The type species for the genus is *Candidatus* Delebosa dececitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Delebosa entomugo sp. nov.

Candidatus Delebosa entomugo (NL. fem. n. *entomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-21 sp003151795*. The type genome for the species is the GenBank assembly GCA_003151795.1. The GC content of the type genome is 47.17 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Delebosa funamilenta sp. nov.

Candidatus Delebosa funamilenta (NL. fem. n. *funamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-21 sp001794025*. The type genome for the species is the GenBank assembly GCA_001794025.1. The GC content of the type genome is 41.35 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Delebula mahemimonia sp. nov.

Candidatus Delebula mahemimonia (NL. fem. n. *mahemimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1449 sp902797995*. The type genome for the species is the GenBank assembly GCA_902798515.1. The GC content of the type genome is 27.45 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Delebula gen. nov.

Candidatus Delebula (NL. fem. n. *Delebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1449*. The type species for the genus is *Candidatus* Delebula mahemimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Delebula remedifica sp. nov.

Candidatus Delebula remedifica (NL. fem. n. *remedifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1449 sp900551925*. The type genome for the species is the GenBank assembly GCA_900551925.1. The GC content of the type genome is 27.26 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Delecana metabatio sp. nov.

Candidatus Delecana metabatio (NL. fem. n. *metabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2207 sp002418885*. The type genome for the species is the GenBank assembly GCA_002382565.1. The GC content of the type genome is 56.11 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Delecana gen. nov.

Candidatus Delecana (NL. fem. n. *Delecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2207*. The type species for the genus is *Candidatus* Delecana metabatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4778*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biverosaceae.

Description of *Candidatus* Delecaria adobricella sp. nov.

Candidatus Delecaria adobricella (NL. fem. n. *adobricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7445 sp009937095*. The type genome for the species is the GenBank assembly GCA_009937095.1. The GC content of the type genome is 53.4 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Delecaria gen. nov.

Candidatus Delecaria (NL. fem. n. *Delecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7445*. The type species for the genus is *Candidatus* Delecaria adobricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Delecaria medimentia sp. nov.

Candidatus Delecaria medimentia (NL. fem. n. *medimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7445 sp002470925*. The type genome for the species is the GenBank assembly GCA_002479935.1. The GC content of the type genome is 55.1 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Delecella tenebitrix sp. nov.

Candidatus Delecella tenebitrix (NL. fem. n. *tenebitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-40-9 sp001818015*. The type genome for the species is the GenBank assembly GCA_001818015.1. The GC content of the type genome is 39.99 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Delecella gen. nov.

Candidatus Delecella (NL. fem. n. *Delecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-40-9*. The type species for the genus is *Candidatus* Delecella tenebitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-40-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delecellaceae.

Description of *Candidatus* Delecellaceae fam. nov.

Candidatus Delecellaceae (NL. fem. n. *Delecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYD1-FULL-40-9.* The type genus for the taxon is *Candidatus* Delecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Delecia manupimonas sp. nov.

Candidatus Delecia manupimonas (NL. fem. n. *manupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2463 sp002342295*. The type genome for the species is the GenBank assembly GCA_002359615.1. The GC content of the type genome is 59.81 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Delecia gen. nov.

Candidatus Delecia (NL. fem. n. *Delecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2463*. The type species for the genus is *Candidatus* Delecia manupimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delecia remeditura sp. nov.

Candidatus Delecia remeditura (NL. fem. n. *remeditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2463 sp009646425*. The type genome for the species is the GenBank assembly GCA_009922195.1. The GC content of the type genome is 59.82 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Delecida denicitio sp. nov.

Candidatus Delecida denicitio (NL. fem. n. *denicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2256 sp002383375*. The type genome for the species is the GenBank assembly GCA_002347545.1. The GC content of the type genome is 55.58 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Delecida gen. nov.

Candidatus Delecida (NL. fem. n. *Delecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2256*. The type species for the genus is *Candidatus* Delecida denicitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponosaceae.

Description of *Candidatus* Delecida retuniforma sp. nov.

Candidatus Delecida retuniforma (NL. fem. n. *retuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2256 sp002428725*. The type genome for the species is the GenBank assembly GCA_002428725.1. The GC content of the type genome is 52.33 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Delecida valefetta sp. nov.

Candidatus Delecida valefetta (NL. fem. n. *valefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2256 sp001603165*. The type genome for the species is the GenBank assembly GCA_002410215.1. The GC content of the type genome is 56.68 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Delecosa gen. nov.

Candidatus Delecosa (NL. fem. n. *Delecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14284*. The type species for the genus is *Candidatus* Delecosa rhusiopathiae_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delecula arrugitudo sp. nov.

Candidatus Delecula arrugitudo (NL. fem. n. *arrugitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLND01 sp009726075*. The type genome for the species is the GenBank assembly GCA_009726075.1. The GC content of the type genome is 67.03 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Delecula gen. nov.

Candidatus Delecula (NL. fem. n. *Delecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLND01*. The type species for the genus is *Candidatus* Delecula arrugitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Delecula lucifedo sp. nov.

Candidatus Delecula lucifedo (NL. fem. n. *lucifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLND01 sp009699015*. The type genome for the species is the GenBank assembly GCA_903902785.1. The GC content of the type genome is 66.16 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Delubana lorarilega sp. nov.

Candidatus Delubana lorarilega (NL. fem. n. *lorarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5859 sp002432655*. The type genome for the species is the GenBank assembly GCA_002432655.1. The GC content of the type genome is 45.81 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Delubana gen. nov.

Candidatus Delubana (NL. fem. n. *Delubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5859*. The type species for the genus is *Candidatus* Delubana lorarilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5859*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delubanaceae.

Description of *Candidatus* Delubanaceae fam. nov.

Candidatus Delubanaceae (NL. fem. n. *Delubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5859.* The type genus for the taxon is *Candidatus* Delubana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5859*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delubanales.

Description of *Candidatus* Delubanales ord. nov.

Candidatus Delubanales (NL. fem. n. *Delubanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5859.* The type genus for the taxon is *Candidatus* Delubana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Delubaria insemitrix sp. nov.

Candidatus Delubaria insemitrix (NL. fem. n. *insemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *02-FULL-45-10c sp001818705*. The type genome for the species is the GenBank assembly GCA_001818705.1. The GC content of the type genome is 45.28 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Delubaria gen. nov.

Candidatus Delubaria (NL. fem. n. *Delubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *02-FULL-45-10c*. The type species for the genus is *Candidatus* Delubaria insemitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *02-FULL-45-10c*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delubariaceae.

Description of *Candidatus* Delubariaceae fam. nov.

Candidatus Delubariaceae (NL. fem. n. *Delubariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *02-FULL-45-10c.* The type genus for the taxon is *Candidatus* Delubaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Delubella ammixitia sp. nov.

Candidatus Delubella ammixitia (NL. fem. n. *ammixitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBF01 sp005240075*. The type genome for the species is the GenBank assembly GCA_005240075.1. The GC content of the type genome is 47.34 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Delubella gen. nov.

Candidatus Delubella (NL. fem. n. *Delubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBF01*. The type species for the genus is *Candidatus* Delubella ammixitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delubellaceae.

Description of *Candidatus* Delubellaceae fam. nov.

Candidatus Delubellaceae (NL. fem. n. *Delubellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBF01.* The type genus for the taxon is *Candidatus* Delubella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domigosales.

Description of *Candidatus* Delubia apporibula sp. nov.

Candidatus Delubia apporibula (NL. fem. n. *apporibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-345 sp003497225*. The type genome for the species is the GenBank assembly GCA_003497225.1. The GC content of the type genome is 32.42 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Delubia gen. nov.

Candidatus Delubia (NL. fem. n. *Delubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-345*. The type species for the genus is *Candidatus* Delubia apporibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Delubia semigetta sp. nov.

Candidatus Delubia semigetta (NL. fem. n. *semigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-345 sp000433315*. The type genome for the species is the GenBank assembly GCA_000433315.1. The GC content of the type genome is 29.55 % and the genome length is 1.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Delubida benifisca sp. nov.

Candidatus Delubida benifisca (NL. fem. n. *benifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp002348545*. The type genome for the species is the GenBank assembly GCA_002348545.1. The GC content of the type genome is 38.15 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Delubida gen. nov.

Candidatus Delubida (NL. fem. n. *Delubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1275*. The type species for the genus is *Candidatus* Delubida benifisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delubida bisulax sp. nov.

Candidatus Delubida bisulax (NL. fem. n. *bisulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp009926145*. The type genome for the species is the GenBank assembly GCA_009926145.1. The GC content of the type genome is 39.72 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Delubida casigitudo sp. nov.

Candidatus Delubida casigitudo (NL. fem. n. *casigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp902529365*. The type genome for the species is the GenBank assembly GCA_902529365.1. The GC content of the type genome is 40.0 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Delubida exsufivita sp. nov.

Candidatus Delubida exsufivita (NL. fem. n. *exsufivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp002323515*. The type genome for the species is the GenBank assembly GCA_002323515.1. The GC content of the type genome is 40.2 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Delubida pabiletta sp. nov.

Candidatus Delubida pabiletta (NL. fem. n. *pabiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp002720745*. The type genome for the species is the GenBank assembly GCA_002720745.1. The GC content of the type genome is 37.79 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Delubida resupisca sp. nov.

Candidatus Delubida resupisca (NL. fem. n. *resupisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp002457365*. The type genome for the species is the GenBank assembly GCA_002169235.1. The GC content of the type genome is 40.46 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Delubida vanitimonia sp. nov.

Candidatus Delubida vanitimonia (NL. fem. n. *vanitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp902529115*. The type genome for the species is the GenBank assembly GCA_902529115.1. The GC content of the type genome is 37.82 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Delubida xenodetta sp. nov.

Candidatus Delubida xenodetta (NL. fem. n. *xenodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1275 sp002730655*. The type genome for the species is the GenBank assembly GCA_002730655.1. The GC content of the type genome is 37.98 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Delubosa inlacibra sp. nov.

Candidatus Delubosa inlacibra (NL. fem. n. *inlacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4844 sp012729715*. The type genome for the species is the GenBank assembly GCA_012729715.1. The GC content of the type genome is 43.22 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Delubosa gen. nov.

Candidatus Delubosa (NL. fem. n. *Delubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4844*. The type species for the genus is *Candidatus* Delubosa inlacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delubosa practilega sp. nov.

Candidatus Delubosa practilega (NL. fem. n. *practilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4844 sp012839665*. The type genome for the species is the GenBank assembly GCA_012839665.1. The GC content of the type genome is 42.68 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Delubosa repepousia sp. nov.

Candidatus Delubosa repepousia (NL. fem. n. *repepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4844 sp002398105*. The type genome for the species is the GenBank assembly GCA_002408935.1. The GC content of the type genome is 47.78 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Delubosa rubicifica sp. nov.

Candidatus Delubosa rubicifica (NL. fem. n. *rubicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4844 sp002424365*. The type genome for the species is the GenBank assembly GCA_002410745.1. The GC content of the type genome is 42.79 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Delubula coticousia sp. nov.

Candidatus Delubula coticousia (NL. fem. n. *coticousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26207 sp001025035*. The type genome for the species is the GenBank assembly RS_GCF_001025035.1. The GC content of the type genome is 57.26 % and the genome length is 3.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Delubula gen. nov.

Candidatus Delubula (NL. fem. n. *Delubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC26207*. The type species for the genus is *Candidatus* Delubula coticousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delubula dilibifica sp. nov.

Candidatus Delubula dilibifica (NL. fem. n. *dilibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26207 sp009700815*. The type genome for the species is the GenBank assembly GCA_009700815.1. The GC content of the type genome is 57.25 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Delubula domabatica sp. nov.

Candidatus Delubula domabatica (NL. fem. n. *domabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26207 sp009701845*. The type genome for the species is the GenBank assembly GCA_009705265.1. The GC content of the type genome is 57.08 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Delucana aclasitia sp. nov.

Candidatus Delucana aclasitia (NL. fem. n. *aclasitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002841655 sp002841655*. The type genome for the species is the GenBank assembly GCA_002841655.1. The GC content of the type genome is 42.95 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Delucana gen. nov.

Candidatus Delucana (NL. fem. n. *Delucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002841655*. The type species for the genus is *Candidatus* Delucana aclasitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Delucana dilacitudo sp. nov.

Candidatus Delucana dilacitudo (NL. fem. n. *dilacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002841655 sp903937325*. The type genome for the species is the GenBank assembly GCA_903937325.1. The GC content of the type genome is 39.01 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Delucana excetibra sp. nov.

Candidatus Delucana excetibra (NL. fem. n. *excetibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002841655 sp002070735*. The type genome for the species is the GenBank assembly GCA_002070735.1. The GC content of the type genome is 39.86 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Delucaria depecitudo sp. nov.

Candidatus Delucaria depecitudo (NL. fem. n. *depecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-39-19 sp001800285*. The type genome for the species is the GenBank assembly GCA_001800285.1. The GC content of the type genome is 38.47 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Delucaria gen. nov.

Candidatus Delucaria (NL. fem. n. *Delucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-39-19*. The type species for the genus is *Candidatus* Delucaria depecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA2-FULL-39-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delucariaceae.

Description of *Candidatus* Delucariaceae fam. nov.

Candidatus Delucariaceae (NL. fem. n. *Delucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA2-FULL-39-19.* The type genus for the taxon is *Candidatus* Delucaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG1-02-37-114*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Videlulales.

Description of *Candidatus* Delucella adaggastra sp. nov.

Candidatus Delucella adaggastra (NL. fem. n. *adaggastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp000424365*. The type genome for the species is the GenBank assembly RS_GCF_000424365.1. The GC content of the type genome is 41.62 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Delucella gen. nov.

Candidatus Delucella (NL. fem. n. *Delucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NK4A144*. The type species for the genus is *Candidatus* Delucella adaggastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delucella adcubedo sp. nov.

Candidatus Delucella adcubedo (NL. fem. n. *adcubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp900168235*. The type genome for the species is the GenBank assembly RS_GCF_900168235.1. The GC content of the type genome is 43.53 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Delucella allobetta sp. nov.

Candidatus Delucella allobetta (NL. fem. n. *allobetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902797705*. The type genome for the species is the GenBank assembly GCA_902797705.1. The GC content of the type genome is 48.47 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Delucella almucitoga sp. nov.

Candidatus Delucella almucitoga (NL. fem. n. *almucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902803625*. The type genome for the species is the GenBank assembly GCA_902803625.1. The GC content of the type genome is 47.19 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Delucella butubimonas sp. nov.

Candidatus Delucella butubimonas (NL. fem. n. *butubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp000622025*. The type genome for the species is the GenBank assembly RS_GCF_000622025.1. The GC content of the type genome is 45.66 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Delucella cepuritas sp. nov.

Candidatus Delucella cepuritas (NL. fem. n. *cepuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp003488445*. The type genome for the species is the GenBank assembly GCA_003488445.1. The GC content of the type genome is 52.09 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Delucella conubessa sp. nov.

Candidatus Delucella conubessa (NL. fem. n. *conubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp900114405*. The type genome for the species is the GenBank assembly RS_GCF_900114405.1. The GC content of the type genome is 39.43 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Delucella dupunigena sp. nov.

Candidatus Delucella dupunigena (NL. fem. n. *dupunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902803745*. The type genome for the species is the GenBank assembly GCA_902803745.1. The GC content of the type genome is 45.52 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Delucella gasifago sp. nov.

Candidatus Delucella gasifago (NL. fem. n. *gasifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NK4A144 sp000746015*. The type genome for the species is the GenBank assembly RS_GCF_000746015.1. The GC content of the type genome is 39.93 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Delucella mirabitrix sp. nov.

Candidatus Delucella mirabitrix (NL. fem. n. *mirabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp000701625*. The type genome for the species is the GenBank assembly RS_GCF_000701625.1. The GC content of the type genome is 41.42 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Delucella petuligena sp. nov.

Candidatus Delucella petuligena (NL. fem. n. *petuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902782575*. The type genome for the species is the GenBank assembly GCA_902782575.1. The GC content of the type genome is 51.95 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Delucella pinigifica sp. nov.

Candidatus Delucella pinigifica (NL. fem. n. *pinigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902783395*. The type genome for the species is the GenBank assembly GCA_902783395.1. The GC content of the type genome is 48.16 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Delucella sotulilenta sp. nov.

Candidatus Delucella sotulilenta (NL. fem. n. *sotulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902779445*. The type genome for the species is the GenBank assembly GCA_902779445.1. The GC content of the type genome is 44.55 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Delucella viripago sp. nov.

Candidatus Delucella viripago (NL. fem. n. *viripago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp000621405*. The type genome for the species is the GenBank assembly RS_GCF_000621405.1. The GC content of the type genome is 47.63 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Delucella xeropitica sp. nov.

Candidatus Delucella xeropitica (NL. fem. n. *xeropitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A144 sp902782655*. The type genome for the species is the GenBank assembly GCA_902782655.1. The GC content of the type genome is 48.32 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Delucosa abmatedo sp. nov.

Candidatus Delucosa abmatedo (NL. fem. n. *abmatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMU01 sp012839805*. The type genome for the species is the GenBank assembly GCA_012839805.1. The GC content of the type genome is 63.58 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Delucosa gen. nov.

Candidatus Delucosa (NL. fem. n. *Delucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMU01*. The type species for the genus is *Candidatus* Delucosa abmatedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delucosaceae.

Description of *Candidatus* Delucosaceae fam. nov.

Candidatus Delucosaceae (NL. fem. n. *Delucosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMU01*. The type genus for the taxon is *Candidatus* Delucosa .

According to GTDB R06-RS202, this family belongs to the order *Limnochordales*.

Description of *Candidatus* Delucula arnogivita sp. nov.

Candidatus Delucula arnogivita (NL. fem. n. *arnogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp003153475*. The type genome for the species is the GenBank assembly GCA_003153475.1. The GC content of the type genome is 65.09 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Delucula gen. nov.

Candidatus Delucula (NL. fem. n. *Delucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1003*. The type species for the genus is *Candidatus* Delucula arnogivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Delucula catabibra sp. nov.

Candidatus Delucula catabibra (NL. fem. n. *catabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp005882995*. The type genome for the species is the GenBank assembly GCA_005882995.1. The GC content of the type genome is 61.69 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Delucula incivibra sp. nov.

Candidatus Delucula incivibra (NL. fem. n. *incivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp005888865*. The type genome for the species is the GenBank assembly GCA_005888865.1. The GC content of the type genome is 65.19 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Delucula reduvicula sp. nov.

Candidatus Delucula reduvicula (NL. fem. n. *reduvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp005883655*. The type genome for the species is the GenBank assembly GCA_005882865.1. The GC content of the type genome is 62.64 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Delucula ruricilega sp. nov.

Candidatus Delucula ruricilega (NL. fem. n. *ruricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp005888955*. The type genome for the species is the GenBank assembly GCA_005888955.1. The GC content of the type genome is 64.98 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Delucula vatilicula sp. nov.

Candidatus Delucula vatilicula (NL. fem. n. *vatilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1003 sp005889025*. The type genome for the species is the GenBank assembly GCA_005881305.1. The GC content of the type genome is 62.73 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Demadaria excucitio sp. nov.

Candidatus Demadaria excucitio (NL. fem. n. *excucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-43-13 sp002773985*. The type genome for the species is the GenBank assembly GCA_002773985.1. The GC content of the type genome is 43.23 %

and the genome length is 0.84 Mbp.

Description of *Candidatus* Demadaria gen. nov.

Candidatus Demadaria (NL. fem. n. *Demadaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-43-13*. The type species for the genus is *Candidatus* Demadaria excucitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-43-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demadariaceae.

Description of *Candidatus* Demadariaceae fam. nov.

Candidatus Demadariaceae (NL. fem. n. *Demadariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-43-13.* The type genus for the taxon is *Candidatus* Demadaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYA2-FULL-43-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denavulales.

Description of *Candidatus* Demadella cerofigena sp. nov.

Candidatus Demadella cerofigena (NL. fem. n. *cerofigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2993 sp002721705*. The type genome for the species is the GenBank assembly GCA_002721705.1. The GC content of the type genome is 53.99 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Demadella gen. nov.

Candidatus Demadella (NL. fem. n. *Demadella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2993*. The type species for the genus is *Candidatus* Demadella cerofigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MB11C04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumiaceae.

Description of *Candidatus* Demadella visibimonia sp. nov.

Candidatus Demadella visibimonia (NL. fem. n. *visibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2993 sp002716045*. The type genome for the species is the GenBank assembly GCA_002716045.1. The GC content of the type genome is 51.46 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Demadia melopimonas sp. nov.

Candidatus Demadia melopimonas (NL. fem. n. *melopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTT01 sp903915615*. The type genome for the species is the GenBank assembly GCA_903915615.1. The GC content of the type genome is 54.4 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Demadia gen. nov.

Candidatus Demadia (NL. fem. n. *Demadia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRTT01*. The type species for the genus is *Candidatus* Demadia melopimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demadia solipivita sp. nov.

Candidatus Demadia solipivita (NL. fem. n. *solipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTT01 sp903881535*. The type genome for the species is the GenBank assembly GCA_903926105.1. The GC content of the type genome is 53.67 %

and the genome length is 3.58 Mbp.

Description of *Candidatus* Demadia vanitousia sp. nov.

Candidatus Demadia vanitousia (NL. fem. n. *vanitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTT01 sp903924445*. The type genome for the species is the GenBank assembly GCA_903924445.1. The GC content of the type genome is 54.23 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Demadida vanidimonas sp. nov.

Candidatus Demadida vanidimonas (NL. fem. n. *vanidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YB12-FULL-65-16 sp001803235*. The type genome for the species is the GenBank assembly GCA_001803305.1. The GC content of the type genome is 65.04 % and the genome length is 10.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Demadida gen. nov.

Candidatus Demadida (NL. fem. n. *Demadida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YB12-FULL-65-16*. The type species for the genus is *Candidatus* Demadida vanidimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YB12-FULL-65-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demadidaceae.

Description of *Candidatus* Demadidaceae fam. nov.

Candidatus Demadidaceae (NL. fem. n. *Demadidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YB12-FULL-65-16.* The type genus for the taxon is *Candidatus* Demadida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Demadosa cemenibra sp. nov.

Candidatus Demadosa cemenibra (NL. fem. n. *cemenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA852 sp002295925*. The type genome for the species is the GenBank assembly GCA_003525265.1. The GC content of the type genome is 35.36 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Demadosa gen. nov.

Candidatus Demadosa (NL. fem. n. *Demadosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA852*. The type species for the genus is *Candidatus* Demadosa cemenibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demadula intamastra sp. nov.

Candidatus Demadula intamastra (NL. fem. n. *intamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-51-36 sp001796515*. The type genome for the species is the GenBank assembly GCA_001796515.1. The GC content of the type genome is 50.77 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Demadula gen. nov.

Candidatus Demadula (NL. fem. n. *Demadula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-51-36*. The type species for the genus is *Candidatus* Demadula

intamastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Demadula nubifatica sp. nov.

Candidatus Demadula nubifatica (NL. fem. n. *nubifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-51-36 sp903884455*. The type genome for the species is the GenBank assembly GCA_903925085.1. The GC content of the type genome is 47.72 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Demagaria inaccetta sp. nov.

Candidatus Demagaria inaccetta (NL. fem. n. *inaccetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1449 sp002335355*. The type genome for the species is the GenBank assembly GCA_002335355.1. The GC content of the type genome is 40.54 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Demagaria gen. nov.

Candidatus Demagaria (NL. fem. n. *Demagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1449*. The type species for the genus is *Candidatus* Demagaria inaccetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1449*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagariaceae.

Description of *Candidatus* Demagariaceae fam. nov.

Candidatus Demagariaceae (NL. fem. n. *Demagariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA1449*. The type genus for the taxon is *Candidatus* Demagaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Demagella mavoritura sp. nov.

Candidatus Demagella mavoritura (NL. fem. n. *mavoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR37 sp003220345*. The type genome for the species is the GenBank assembly GCA_003220385.1. The GC content of the type genome is 68.29 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Demagella gen. nov.

Candidatus Demagella (NL. fem. n. *Demagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR37*. The type species for the genus is *Candidatus* Demagella mavoritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Demagia decucitura sp. nov.

Candidatus Demagia decucitura (NL. fem. n. *decucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRCD01 sp009784185*. The type genome for the species is the GenBank assembly GCA_009784185.1. The GC content of the type genome is 44.29 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Demagia gen. nov.

Candidatus Demagia (NL. fem. n. *Demagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *WRCD01*. The type species for the genus is *Candidatus* Demagia decucitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Demagida cemenousia sp. nov.

Candidatus Demagida cemenousia (NL. fem. n. *cemenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2995 sp014529615*. The type genome for the species is the GenBank assembly GCA_014529615.1. The GC content of the type genome is 54.12 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Demagida gen. nov.

Candidatus Demagida (NL. fem. n. *Demagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2995*. The type species for the genus is *Candidatus* Demagida cemenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2995*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagidaceae.

Description of *Candidatus* Demagidaceae fam. nov.

Candidatus Demagidaceae (NL. fem. n. *Demagidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2995.* The type genus for the taxon is *Candidatus* Demagida .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Demagida dilecimonia sp. nov.

Candidatus Demagida dilecimonia (NL. fem. n. *dilecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2995 sp014529675*. The type genome for the species is the GenBank assembly GCA_014529665.1. The GC content of the type genome is 48.6 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Demagida forinibula sp. nov.

Candidatus Demagida forinibula (NL. fem. n. *forinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2995 sp002346535*. The type genome for the species is the GenBank assembly GCA_002346535.1. The GC content of the type genome is 47.43 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Demagosa blactigena sp. nov.

Candidatus Demagosa blactigena (NL. fem. n. *blactigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748055 sp002748055*. The type genome for the species is the GenBank assembly GCA_002748055.1. The GC content of the type genome is 51.38 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Demagosa gen. nov.

Candidatus Demagosa (NL. fem. n. *Demagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2748055*. The type species for the genus is *Candidatus* Demagosa blactigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2748055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagosaceae.

Description of *Candidatus* Demagosaceae fam. nov.

Candidatus Demagosaceae (NL. fem. n. *Demagosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2748055.* The type genus for the taxon is *Candidatus* Demagosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Demagosa excomicula sp. nov.

Candidatus Demagosa excomicula (NL. fem. n. *excomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748055 sp004525825*. The type genome for the species is the GenBank assembly GCA_004525825.1. The GC content of the type genome is 48.25 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Demagosa expisitudo sp. nov.

Candidatus Demagosa expisitudo (NL. fem. n. *expisitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748055 sp003648635*. The type genome for the species is the GenBank assembly GCA_003648635.1. The GC content of the type genome is 45.88 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Demagosa hegumatio sp. nov.

Candidatus Demagosa hegumatio (NL. fem. n. *hegumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748055 sp011056635*. The type genome for the species is the GenBank assembly GCA_011056635.1. The GC content of the type genome is 52.37 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Demagosa homogitia sp. nov.

Candidatus Demagosa homogitia (NL. fem. n. *homogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2748055 sp011048475*. The type genome for the species is the GenBank assembly GCA_011048475.1. The GC content of the type genome is 53.53 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Demagula octupibula sp. nov.

Candidatus Demagula octupibula (NL. fem. n. *octupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABV01 sp014238055*. The type genome for the species is the GenBank assembly GCA_014238055.1. The GC content of the type genome is 27.25 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Demagula gen. nov.

Candidatus Demagula (NL. fem. n. *Demagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABV01*. The type species for the genus is *Candidatus* Demagula octupibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABABV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demagulaceae.

Description of *Candidatus* Demagulaceae fam. nov.

Candidatus Demagulaceae (NL. fem. n. *Demagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABABV01.* The type genus for the taxon is *Candidatus* Demagula .

According to GTDB R06-RS202, this family belongs to the order *Mycoplasmatales*.

Description of *Candidatus* Demequina adhositia sp. nov.

Candidatus Demequina adhositia (NL. fem. n. *adhositia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090055*. The type genome for the species is the GenBank assembly RS_GCF_002090055.1. The GC content of the type genome is 69.15 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Demequina ambadiforma sp. nov.

Candidatus Demequina ambadiforma (NL. fem. n. *ambadiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090135*. The type genome for the species is the GenBank assembly RS_GCF_002090135.1. The GC content of the type genome is 68.93 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Demequina bovicitura sp. nov.

Candidatus Demequina bovicitura (NL. fem. n. *bovicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002384765*. The type genome for the species is the GenBank assembly GCA_002384765.1. The GC content of the type genome is 66.82 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Demequina catafigena sp. nov.

Candidatus Demequina catafigena (NL. fem. n. *catafigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002841315*. The type genome for the species is the GenBank assembly GCA_002841315.1. The GC content of the type genome is 64.7 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Demequina chernatica sp. nov.

Candidatus Demequina chernatica (NL. fem. n. *chernatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090155*. The type genome for the species is the GenBank assembly RS_GCF_002090155.1. The GC content of the type genome is 71.06 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Demequina deculitoga sp. nov.

Candidatus Demequina deculitoga (NL. fem. n. *deculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Demequina sp002090175*. The type genome for the species is the GenBank assembly RS_GCF_002090175.1. The GC content of the type genome is 70.38 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Demequina impavigena sp. nov.

Candidatus Demequina impavigena (NL. fem. n. *impavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090095*. The type genome for the species is the GenBank assembly RS_GCF_002090095.1. The GC content of the type genome is 70.48 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Demequina remulax sp. nov.

Candidatus Demequina remulax (NL. fem. n. *remulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090075*. The type genome for the species is the GenBank assembly RS_GCF_002090075.1. The GC content of the type genome is 69.62 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Demequina veridago sp. nov.

Candidatus Demequina veridago (NL. fem. n. *veridago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Demequina sp002090115*. The type genome for the species is the GenBank assembly RS_GCF_002090115.1. The GC content of the type genome is 70.04 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Demigana tametetta sp. nov.

Candidatus Demigana tametetta (NL. fem. n. *tametetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-42-39 sp003506435*. The type genome for the species is the GenBank assembly GCA_003506435.1. The GC content of the type genome is 42.05 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Demigana gen. nov.

Candidatus Demigana (NL. fem. n. *Demigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-42-39*. The type species for the genus is *Candidatus* Demigana tametetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demigaria adculimonia sp. nov.

Candidatus Demigaria adculimonia (NL. fem. n. *adculimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp002730675*. The type genome for the species is the GenBank assembly GCA_002730675.1. The GC content of the type genome is 42.23 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Demigaria gen. nov.

Candidatus Demigaria (NL. fem. n. *Demigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002701455*. The type species for the genus is *Candidatus* Demigaria adculimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demigaria mahelatica sp. nov.

Candidatus Demigaria mahelatica (NL. fem. n. *mahelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp002690995*. The type genome for the species is the GenBank assembly GCA_002690995.1. The GC content of the type genome is 41.61 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Demigaria mutabicula sp. nov.

Candidatus Demigaria mutabicula (NL. fem. n. *mutabicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp902578675*. The type genome for the species is the GenBank assembly GCA_011523095.1. The GC content of the type genome is 42.61 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Demigaria omnipitura sp. nov.

Candidatus Demigaria omnipitura (NL. fem. n. *omnipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp902589475*. The type genome for the species is the GenBank assembly GCA_902589475.1. The GC content of the type genome is 42.18 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Demigaria rubefibula sp. nov.

Candidatus Demigaria rubefibula (NL. fem. n. *rubefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp902629125*. The type genome for the species is the GenBank assembly GCA_902623435.1. The GC content of the type genome is 42.14 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Demigaria subabetta sp. nov.

Candidatus Demigaria subabetta (NL. fem. n. *subabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701455 sp002701455*. The type genome for the species is the GenBank assembly GCA_002725415.1. The GC content of the type genome is 42.82 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Demigella inmemitrix sp. nov.

Candidatus Demigella inmemitrix (NL. fem. n. *inmemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYGS01 sp009839585*. The type genome for the species is the GenBank assembly GCA_009839585.1. The GC content of the type genome is 50.14 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Demigella gen. nov.

Candidatus Demigella (NL. fem. n. *Demigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VYGS01*. The type species for the genus is *Candidatus* Demigella inmemitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LS-SOB*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeciaceae.

Description of *Candidatus* Demigella metucousia sp. nov.

Candidatus Demigella metucousia (NL. fem. n. *metucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYGS01 sp009841725*. The type genome for the species is the GenBank assembly GCA_009844755.1. The GC content of the type genome is 59.79 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Demigia adverisca sp. nov.

Candidatus Demigia adverisca (NL. fem. n. *adverisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACOND01 sp014323935*. The type genome for the species is the GenBank assembly GCA_014323935.1. The GC content of the type genome is 29.37 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Demigia gen. nov.

Candidatus Demigia (NL. fem. n. *Demigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACOND01*. The type species for the genus is *Candidatus* Demigia

adverisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACOND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demigiaceae.

Description of *Candidatus* Demigiaceae fam. nov.

Candidatus Demigiaceae (NL. fem. n. *Demigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACOND01.* The type genus for the taxon is *Candidatus* Demigia .

According to GTDB R06-RS202, this family belongs to the order *Bdellovibrionales*.

Description of *Candidatus* Demigida cohonibra sp. nov.

Candidatus Demigida cohonibra (NL. fem. n. *cohonibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1172 sp002457135*. The type genome for the species is the GenBank assembly GCA_003538355.1. The GC content of the type genome is 57.54 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Demigida gen. nov.

Candidatus Demigida (NL. fem. n. *Demigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1172*. The type species for the genus is *Candidatus* Demigida cohonibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1172*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demigidaceae.

Description of *Candidatus* Demigidaceae fam. nov.

Candidatus Demigidaceae (NL. fem. n. *Demigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1172.* The type genus for the taxon is *Candidatus* Demigida .

According to GTDB R06-RS202, this family belongs to the order *Puniceispirillales*.

Description of *Candidatus* Demigida sifunitas sp. nov.

Candidatus Demigida sifunitas (NL. fem. n. *sifunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1172 sp011522975*. The type genome for the species is the GenBank assembly GCA_011522975.1. The GC content of the type genome is 49.67 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Demigosa betacugo sp. nov.

Candidatus Demigosa betacugo (NL. fem. n. *betacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4881 sp002399235*. The type genome for the species is the GenBank assembly GCA_002399235.1. The GC content of the type genome is 37.96 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Demigosa gen. nov.

Candidatus Demigosa (NL. fem. n. *Demigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4881*. The type species for the genus is *Candidatus* Demigosa betacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU065*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cerarariaceae.

Description of *Candidatus* Demigosa rubicisca sp. nov.

Candidatus Demigosa rubicisca (NL. fem. n. *rubicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4881 sp012842235*. The type genome for the species is the GenBank assembly GCA_012842235.1. The GC content of the type genome is 37.46 %

and the genome length is 1.96 Mbp.

Description of *Candidatus* Demigula catafitica sp. nov.

Candidatus Demigula catafitica (NL. fem. n. *catafitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-04 sp003446315*. The type genome for the species is the GenBank assembly GCA_003446315.1. The GC content of the type genome is 50.47 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Demigula gen. nov.

Candidatus Demigula (NL. fem. n. *Demigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-04*. The type species for the genus is *Candidatus* Demigula catafitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demigula cerevitas sp. nov.

Candidatus Demigula cerevitas (NL. fem. n. *cerevitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-04 sp002394125*. The type genome for the species is the GenBank assembly GCA_902769125.1. The GC content of the type genome is 56.42 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Demigula depupatica sp. nov.

Candidatus Demigula depupatica (NL. fem. n. *depupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-04 sp001940925*. The type genome for the species is the GenBank assembly GCA_001940925.1. The GC content of the type genome is 54.85 % and the genome length is 3.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Demigula maligatica sp. nov.

Candidatus Demigula maligatica (NL. fem. n. *maligatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-04 sp001603005*. The type genome for the species is the GenBank assembly GCA_001603005.1. The GC content of the type genome is 54.1 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Demigula vehicentia sp. nov.

Candidatus Demigula vehicentia (NL. fem. n. *vehicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-04 sp002395085*. The type genome for the species is the GenBank assembly GCA_002395085.1. The GC content of the type genome is 53.77 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Democana vacilentia sp. nov.

Candidatus Democana vacilentia (NL. fem. n. *vacilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZZT01 sp010014525*. The type genome for the species is the GenBank assembly GCA_010014525.1. The GC content of the type genome is 42.05 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Democana gen. nov.

Candidatus Democana (NL. fem. n. *Democana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZZT01*. The type species for the genus is *Candidatus* Democana vacilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Democaria giganastra sp. nov.

Candidatus Democaria giganastra (NL. fem. n. *giganastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-46-9 sp001791325*. The type genome for the species is the GenBank assembly GCA_001791385.1. The GC content of the type genome is 45.99 % and the genome length is 1.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Democaria gen. nov.

Candidatus Democaria (NL. fem. n. *Democaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-46-9*. The type species for the genus is *Candidatus* Democaria giganastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democariaceae.

Description of *Candidatus* Democariaceae fam. nov.

Candidatus Democariaceae (NL. fem. n. *Democariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-46-9.* The type genus for the taxon is *Candidatus* Democaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Democariales.

Description of *Candidatus* Democariales ord. nov.

Candidatus Democariales (NL. fem. n. *Democariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-46-9.* The type genus for the taxon is *Candidatus* Democaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Democaria puruletta sp. nov.

Candidatus Democaria puruletta (NL. fem. n. *puruletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-46-9 sp001791425*. The type genome for the species is the GenBank assembly GCA_001791425.1. The GC content of the type genome is 47.63 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Democella bucolibra sp. nov.

Candidatus Democella bucolibra (NL. fem. n. *bucolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1532 sp002731825*. The type genome for the species is the GenBank assembly GCA_002323315.1. The GC content of the type genome is 52.77 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Democella gen. nov.

Candidatus Democella (NL. fem. n. *Democella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1532*. The type species for the genus is *Candidatus* Democella bucolibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democellaceae.

Description of *Candidatus* Democellaceae fam. nov.

Candidatus Democellaceae (NL. fem. n. *Democellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1532.* The type genus for the taxon is *Candidatus* Democella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7976*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domabanales.

Description of *Candidatus* Democida adsulitas sp. nov.

Candidatus Democida adsulitas (NL. fem. n. *adsulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013044305*. The type genome for the species is the GenBank assembly GCA_013044305.1. The GC content of the type genome is 46.59 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Democida gen. nov.

Candidatus Democida (NL. fem. n. *Democida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEUT01*. The type species for the genus is *Candidatus* Democida adsulitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-948*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposiaceae.

Description of *Candidatus* Democida defenitoga sp. nov.

Candidatus Democida defenitoga (NL. fem. n. *defenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp903863935*. The type genome for the species is the GenBank assembly GCA_903863935.1. The GC content of the type genome is 39.06 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Democida homulifica sp. nov.

Candidatus Democida homulifica (NL. fem. n. *homulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013289475*. The type genome for the species is the GenBank assembly GCA_013289475.1. The GC content of the type genome is 39.29 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Democida incesitudo sp. nov.

Candidatus Democida incesitudo (NL. fem. n. *incesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013285805*. The type genome for the species is the GenBank assembly GCA_013285805.1. The GC content of the type genome is 41.24 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Democida manomicula sp. nov.

Candidatus Democida manomicula (NL. fem. n. *manomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013285655*. The type genome for the species is the GenBank assembly GCA_013285655.1. The GC content of the type genome is 39.41 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Democida pulegitrix sp. nov.

Candidatus Democida pulegitrix (NL. fem. n. *pulegitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013288345*. The type genome for the species is the GenBank assembly GCA_013288345.1. The GC content of the type genome is 39.35 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Democida revulilenta sp. nov.

Candidatus Democida revulilenta (NL. fem. n. *revulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp903901055*. The type genome for the species is the GenBank assembly GCA_903891685.1. The GC content of the type genome is 38.84 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Democida sarabiforma sp. nov.

Candidatus Democida sarabiforma (NL. fem. n. *sarabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp903916255*. The type genome for the species is the GenBank assembly GCA_903916255.1. The GC content of the type genome is 40.62 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Democida sarabitoga sp. nov.

Candidatus Democida sarabitoga (NL. fem. n. *sarabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013289395*. The type genome for the species is the GenBank assembly GCA_013289395.1. The GC content of the type genome is 39.42 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Democida telefatica sp. nov.

Candidatus Democida telefatica (NL. fem. n. *telefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013289165*. The type genome for the species is the GenBank assembly GCA_013289165.1. The GC content of the type genome is 39.7 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Democida telegimonia sp. nov.

Candidatus Democida telegimonia (NL. fem. n. *telegimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUT01 sp013288205*. The type genome for the species is the GenBank assembly GCA_013288205.1. The GC content of the type genome is 39.78 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Democosa cepulilega sp. nov.

Candidatus Democosa cepulilega (NL. fem. n. *cepulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKC01 sp011337995*. The type genome for the species is the GenBank assembly GCA_011337995.1. The GC content of the type genome is 62.72 %

and the genome length is 5.27 Mbp.

Description of *Candidatus* Democosa gen. nov.

Candidatus Democosa (NL. fem. n. *Democosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKC01*. The type species for the genus is *Candidatus* Democosa cepulilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTKC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democosaceae.

Description of *Candidatus* Democosaceae fam. nov.

Candidatus Democosaceae (NL. fem. n. *Democosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKC01.* The type genus for the taxon is *Candidatus* Democosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Democula adlicastra sp. nov.

Candidatus Democula adlicastra (NL. fem. n. *adlicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-37 sp003242705*. The type genome for the species is the GenBank assembly GCA_003242705.1. The GC content of the type genome is 69.42 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Democula gen. nov.

Candidatus Democula (NL. fem. n. *Democula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-69-37*. The type species for the genus is *Candidatus* Democula adlicastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCN-69-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Democulaceae.

Description of *Candidatus* Democulaceae fam. nov.

Candidatus Democulaceae (NL. fem. n. *Democulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCN-69-37.* The type genus for the taxon is *Candidatus* Democula .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Democula conibitia sp. nov.

Candidatus Democula conibitia (NL. fem. n. *conibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-69-37 sp001724025*. The type genome for the species is the GenBank assembly GCA_001724025.1. The GC content of the type genome is 68.48 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Demogana solacilenta sp. nov.

Candidatus Demogana solacilenta (NL. fem. n. *solacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQLG01 sp903872565*. The type genome for the species is the GenBank assembly GCA_903837735.1. The GC content of the type genome is 47.4 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Demogana gen. nov.

Candidatus Demogana (NL. fem. n. *Demogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQLG01*. The type species for the genus is *Candidatus* Demogana solacilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-50-93*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decaculaceae.

Description of *Candidatus* Demogida adnulisca sp. nov.

Candidatus Demogida adnulisca (NL. fem. n. *adnulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1783 sp012520255*. The type genome for the species is the GenBank assembly GCA_012520255.1. The GC content of the type genome is 32.03 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Demogida gen. nov.

Candidatus Demogida (NL. fem. n. *Demogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1783*. The type species for the genus is *Candidatus* Demogida adnulisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Demogida figilibra sp. nov.

Candidatus Demogida figilibra (NL. fem. n. *figilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1783 sp012800355*. The type genome for the species is the GenBank assembly GCA_012800355.1. The GC content of the type genome is 30.26 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Demogida recocitoga sp. nov.

Candidatus Demogida recocitoga (NL. fem. n. *recocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1783 sp012799935*. The type genome for the species is the GenBank assembly GCA_012799935.1. The GC content of the type genome is 30.94 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Demogida scammitio sp. nov.

Candidatus Demogida scammitio (NL. fem. n. *scammitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1783 sp002315205*. The type genome for the species is the GenBank assembly GCA_002315205.1. The GC content of the type genome is 34.98 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Demogosa capabugo sp. nov.

Candidatus Demogosa capabugo (NL. fem. n. *capabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8477 sp001872685*. The type genome for the species is the GenBank assembly GCA_001872685.1. The GC content of the type genome is 47.83 % and the genome length is 3.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Demogosa gen. nov.

Candidatus Demogosa (NL. fem. n. *Demogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8477*. The type species for the genus is *Candidatus* Demogosa capabugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8477*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogosaceae.

Description of *Candidatus* Demogosaceae fam. nov.

Candidatus Demogosaceae (NL. fem. n. *Demogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8477*. The type genus for the taxon is *Candidatus* Demogosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8477*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demogosales.

Description of *Candidatus* Demogosales ord. nov.

Candidatus Demogosales (NL. fem. n. *Demogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8477*. The type genus for the taxon is *Candidatus* Demogosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8477*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Demogosae.

Description of *Candidatus* Demogosae class. nov.

Candidatus Demogosae (NL. fem. n. *c__Demogosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8477*. The type genus for the taxon is *Candidatus* Demogosa .

According to GTDB R06-RS202, this class belongs to the phylum *Marinisomatota*.

Description of *Candidatus* Demogula gasomicula sp. nov.

Candidatus Demogula gasomicula (NL. fem. n. *gasomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYIR01 sp012523355*. The type genome for the species is the GenBank assembly GCA_012523355.1. The GC content of the type genome is 64.27 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Demogula gen. nov.

Candidatus Demogula (NL. fem. n. *Demogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYIR01*. The type species for the genus is *Candidatus* Demogula gasomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYIR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demogulaceae.

Description of *Candidatus* Demogulaceae fam. nov.

Candidatus Demogulaceae (NL. fem. n. *Demogulaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYIR01.* The type genus for the taxon is *Candidatus* Demogula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Demulana nocumifica sp. nov.

Candidatus Demulana nocumifica (NL. fem. n. *nocumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12409 sp000991575*. The type genome for the species is the GenBank assembly GCA_000991965.1. The GC content of the type genome is 35.98 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Demulana gen. nov.

Candidatus Demulana (NL. fem. n. *Demulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12409*. The type species for the genus is *Candidatus* Demulana nocumifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12409*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulanaceae.

Description of *Candidatus* Demulanaceae fam. nov.

Candidatus Demulanaceae (NL. fem. n. *Demulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12409.* The type genus for the taxon is *Candidatus* Demulana .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Demularia obsecibula sp. nov.

Candidatus Demularia obsecibula (NL. fem. n. *obsecibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7887 sp002501105*. The type genome for the species is the GenBank assembly GCA_002501105.1. The GC content of the type genome is 61.51 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Demularia gen. nov.

Candidatus Demularia (NL. fem. n. *Demularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7887*. The type species for the genus is *Candidatus* Demularia obsecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulariaceae.

Description of *Candidatus* Demulariaceae fam. nov.

Candidatus Demulariaceae (NL. fem. n. *Demulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7887.* The type genus for the taxon is *Candidatus* Demularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demulariales.

Description of *Candidatus* Demulariales ord. nov.

Candidatus Demulariales (NL. fem. n. *Demulariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7887.* The type genus for the taxon is *Candidatus* Demularia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Demulella citocicula sp. nov.

Candidatus Demulella citocicula (NL. fem. n. *citocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7455 sp003452295*. The type genome for the species is the GenBank assembly GCA_002477425.1. The GC content of the type genome is 50.88 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Demulella gen. nov.

Candidatus Demulella (NL. fem. n. *Demulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7455*. The type species for the genus is *Candidatus* Demulella citocicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Demulella errabibra sp. nov.

Candidatus Demulella errabibra (NL. fem. n. *errabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7455 sp002167855*. The type genome for the species is the GenBank assembly GCA_002167855.2. The GC content of the type genome is 43.86 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Demulella nidificula sp. nov.

Candidatus Demulella nidificula (NL. fem. n. *nidificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7455 sp002712135*. The type genome for the species is the GenBank assembly GCA_002712135.1. The GC content of the type genome is 48.84 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Demulella sicubitas sp. nov.

Candidatus Demulella sicubitas (NL. fem. n. *sicubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7455 sp002690865*. The type genome for the species is the GenBank assembly GCA_002690865.1. The GC content of the type genome is 43.43 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Demulida almucessa sp. nov.

Candidatus Demulida almucessa (NL. fem. n. *almucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2729495 sp002729495*. The type genome for the species is the GenBank assembly GCA_002729495.1. The GC content of the type genome is 55.29 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Demulida gen. nov.

Candidatus Demulida (NL. fem. n. *Demulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2729495*. The type species for the genus is *Candidatus* Demulida almucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulidaceae.

Description of *Candidatus* Demulidaceae fam. nov.

Candidatus Demulidaceae (NL. fem. n. *Demulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2729495.* The type genus for the taxon is *Candidatus* Demulida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2729495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demulidales.

Description of *Candidatus* Demulidales ord. nov.

Candidatus Demulidales (NL. fem. n. *Demulidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2729495.* The type genus for the taxon is *Candidatus* Demulida .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Demulida irroticula sp. nov.

Candidatus Demulida irroticula (NL. fem. n. *irroticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2729495 sp013001905*. The type genome for the species is the GenBank assembly GCA_013001905.1. The GC content of the type genome is 59.09 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Demulosa dinupigena sp. nov.

Candidatus Demulosa dinupigena (NL. fem. n. *dinupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4246 sp002391225*. The type genome for the species is the GenBank assembly GCA_902795155.1. The GC content of the type genome is 59.31 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Demulosa gen. nov.

Candidatus Demulosa (NL. fem. n. *Demulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4246*. The type species for the genus is *Candidatus* Demulosa dinupigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Demulosa impugitrix sp. nov.

Candidatus Demulosa impugitrix (NL. fem. n. *impugitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4246 sp902789795*. The type genome for the species is the GenBank assembly GCA_902789795.1. The GC content of the type genome is 60.13 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Demulosa inpuratica sp. nov.

Candidatus Demulosa inpuratica (NL. fem. n. *inpuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4246 sp902760595*. The type genome for the species is the GenBank assembly GCA_902760595.1. The GC content of the type genome is 60.53 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Demulosa semidatica sp. nov.

Candidatus Demulosa semidatica (NL. fem. n. *semidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4246 sp902766515*. The type genome for the species is the GenBank assembly GCA_902766515.1. The GC content of the type genome is 62.74 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Demulosa thessitio sp. nov.

Candidatus Demulosa thessitio (NL. fem. n. *thessitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4246 sp902790015*. The type genome for the species is the GenBank assembly GCA_902790015.1. The GC content of the type genome is 60.09 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Demulula apogritio sp. nov.

Candidatus Demulula apogritio (NL. fem. n. *apogritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-13 sp003157225*. The type genome for the species is the GenBank assembly GCA_003157225.1. The GC content of the type genome is 63.53 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Demulula gen. nov.

Candidatus Demulula (NL. fem. n. *Demulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-64-13*. The type species for the genus is *Candidatus* Demulula apogritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demululaceae.

Description of *Candidatus* Demululaceae fam. nov.

Candidatus Demululaceae (NL. fem. n. *Demululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-13.* The type genus for the taxon is *Candidatus* Demulula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demululales.

Description of *Candidatus* Demululales ord. nov.

Candidatus Demululales (NL. fem. n. *Demululales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-13.* The type genus for the taxon is *Candidatus* Demulula .

According to the GTDB R06-RS202, this order belongs to the class *Thermoleophilia*.

Description of *Candidatus* Demulula dilacitas sp. nov.

Candidatus Demulula dilacitas (NL. fem. n. *dilacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-13 sp001768675*. The type genome for the species is the GenBank assembly GCA_001768675.1. The GC content of the type genome is 63.86 % and the genome length is 2.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at

16ft depth".

Description of *Candidatus* Demulula exheditura sp. nov.

Candidatus Demulula exheditura (NL. fem. n. *exheditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-13 sp012523095*. The type genome for the species is the GenBank assembly GCA_012523095.1. The GC content of the type genome is 62.68 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Demulula xenodivita sp. nov.

Candidatus Demulula xenodivita (NL. fem. n. *xenodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-13 sp012729575*. The type genome for the species is the GenBank assembly GCA_012729575.1. The GC content of the type genome is 62.2 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Denavana categifica sp. nov.

Candidatus Denavana categifica (NL. fem. n. *categifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAEKA01 sp014155705*. The type genome for the species is the GenBank assembly GCA_014155705.1. The GC content of the type genome is 62.48 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Denavana gen. nov.

Candidatus Denavana (NL. fem. n. *Denavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAEKA01*. The type species for the genus is *Candidatus* Denavana categifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAEKA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denavanaceae.

Description of *Candidatus* Denavanaceae fam. nov.

Candidatus Denavanaceae (NL. fem. n. *Denavanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAEKA01.* The type genus for the taxon is *Candidatus* Denavana .

According to GTDB R06-RS202, this family belongs to the order *Caldilineales*.

Description of *Candidatus* Denavaria serotiforma sp. nov.

Candidatus Denavaria serotiforma (NL. fem. n. *serotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUEQ01 sp903898215*. The type genome for the species is the GenBank assembly GCA_903928165.1. The GC content of the type genome is 33.23 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Denavaria gen. nov.

Candidatus Denavaria (NL. fem. n. *Denavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUEQ01*. The type species for the genus is *Candidatus* Denavaria serotiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefananaceae.

Description of *Candidatus* Denavella adlocatica sp. nov.

Candidatus Denavella adlocatica (NL. fem. n. *adlocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp002424295*. The type genome for the species is the GenBank assembly GCA_002424295.1. The GC content of the type genome is 43.36 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Denavella gen. nov.

Candidatus Denavella (NL. fem. n. *Denavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4871*. The type species for the genus is *Candidatus* Denavella adlocatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denavella adobressa sp. nov.

Candidatus Denavella adobressa (NL. fem. n. *adobressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp014467055*. The type genome for the species is the GenBank assembly GCA_014467055.1. The GC content of the type genome is 48.48 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Denavella cosidiforma sp. nov.

Candidatus Denavella cosidiforma (NL. fem. n. *cosidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp002119605*. The type genome for the species is the GenBank assembly GCA_002397555.1. The GC content of the type genome is 51.07 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Denavella effigastra sp. nov.

Candidatus Denavella effigastra (NL. fem. n. *effigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp902809935*. The type genome for the species is the GenBank assembly RS_GCF_902809935.1. The GC content of the type genome is 42.75 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Denavella fatifatica sp. nov.

Candidatus Denavella fatifatica (NL. fem. n. *fatifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp002399445*. The type genome for the species is the GenBank assembly GCA_002398045.1. The GC content of the type genome is 45.54 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Denavella hexamibula sp. nov.

Candidatus Denavella hexamibula (NL. fem. n. *hexamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp002411615*. The type genome for the species is the GenBank assembly GCA_002411615.1. The GC content of the type genome is 43.59 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Denavella petulugo sp. nov.

Candidatus Denavella petulugo (NL. fem. n. *petulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4871 sp900554535*. The type genome for the species is the GenBank assembly RS_GCF_900755425.1. The GC content of the type genome is 53.64 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Denavia camilessa sp. nov.

Candidatus Denavia camilessa (NL. fem. n. *camilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2428 sp002343545*. The type genome for the species is the GenBank assembly GCA_002343545.1. The GC content of the type genome is 63.81 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Denavia gen. nov.

Candidatus Denavia (NL. fem. n. *Denavia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2428*. The type species for the genus is *Candidatus* Denavia camilessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denaviaceae.

Description of *Candidatus* Denaviaceae fam. nov.

Candidatus Denaviaceae (NL. fem. n. *Denaviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2428.* The type genus for the taxon is *Candidatus* Denavia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denaviales.

Description of *Candidatus* Denaviales ord. nov.

Candidatus Denaviales (NL. fem. n. *Denaviales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2428.* The type genus for the taxon is *Candidatus* Denavia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Denaviae.

Description of *Candidatus* Denaviae class. nov.

Candidatus Denaviae (NL. fem. n. *c__Denaviae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2428.* The type genus for the taxon is *Candidatus* Denavia .

According to GTDB R06-RS202, this class belongs to the phylum *Bdellovibrionota*.

Description of *Candidatus* Denavida admoritoga sp. nov.

Candidatus Denavida admoritoga (NL. fem. n. *admoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLA01 sp014360805*. The type genome for the species is the

GenBank assembly GCA_014360805.1. The GC content of the type genome is 65.45 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Denavida gen. nov.

Candidatus Denavida (NL. fem. n. *Denavida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLA01*. The type species for the genus is *Candidatus* Denavida admoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denavidaceae.

Description of *Candidatus* Denavidaceae fam. nov.

Candidatus Denavidaceae (NL. fem. n. *Denavidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLA01*. The type genus for the taxon is *Candidatus* Denavida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTPP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogosales.

Description of *Candidatus* Denavida allapimonas sp. nov.

Candidatus Denavida allapimonas (NL. fem. n. *allapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLA01 sp011333425*. The type genome for the species is the GenBank assembly GCA_011333425.1. The GC content of the type genome is 65.59 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Denavosa nutamitio sp. nov.

Candidatus Denavosa nutamitio (NL. fem. n. *nutamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLG01 sp007123335*. The type genome for the species is the

GenBank assembly GCA_007128385.1. The GC content of the type genome is 62.72 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Denavosa gen. nov.

Candidatus Denavosa (NL. fem. n. *Denavosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLG01*. The type species for the genus is *Candidatus* Denavosa nutamitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Denavula epitribula sp. nov.

Candidatus Denavula epitribula (NL. fem. n. *epitribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-43-10 sp001776195*. The type genome for the species is the GenBank assembly GCA_001776195.1. The GC content of the type genome is 43.45 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Denavula gen. nov.

Candidatus Denavula (NL. fem. n. *Denavula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-43-10*. The type species for the genus is *Candidatus* Denavula epitribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA2-FULL-43-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denavulaceae.

Description of *Candidatus* Denavulaceae fam. nov.

Candidatus Denavulaceae (NL. fem. n. *Denavulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA2-FULL-43-10.* The type genus for the taxon is *Candidatus* Denavula .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYA2-FULL-43-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denavulales.

Description of *Candidatus* Denavulales ord. nov.

Candidatus Denavulales (NL. fem. n. *Denavulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYA2-FULL-43-10.* The type genus for the taxon is *Candidatus* Denavula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Dendrosporobacter turibitia sp. nov.

Candidatus Dendrosporobacter turibitia (NL. fem. n. *turibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dendrosporobacter sp003990955*. The type genome for the species is the GenBank assembly RS_GCF_003990955.1. The GC content of the type genome is 42.18 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Denecana affiriforma sp. nov.

Candidatus Denecana affiriforma (NL. fem. n. *affiriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pb10988 sp009664345*. The type genome for the species is the GenBank assembly RS_GCF_009664345.1. The GC content of the type genome is 50.39 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Denecana gen. nov.

Candidatus Denecana (NL. fem. n. *Denecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pb10988*. The type species for the genus is *Candidatus* Denecana affiriforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Pb10988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denecanaceae.

Description of *Candidatus* Denecanaceae fam. nov.

Candidatus Denecanaceae (NL. fem. n. *Denecanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Pb10988.* The type genus for the taxon is *Candidatus* Denecana .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Denecella cinefugo sp. nov.

Candidatus Denecella cinefugo (NL. fem. n. *cinefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1546 sp003535475*. The type genome for the species is the GenBank assembly GCA_003535475.1. The GC content of the type genome is 42.87 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Denecella gen. nov.

Candidatus Denecella (NL. fem. n. *Denecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1546*. The type species for the genus is *Candidatus* Denecella cinefugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1546*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denecellaceae.

Description of *Candidatus* Denecellaceae fam. nov.

Candidatus Denecellaceae (NL. fem. n. *Denecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1546.* The type genus for the taxon is *Candidatus* Denecella .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Denecella incucicula sp. nov.

Candidatus Denecella incucicula (NL. fem. n. *incucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1546 sp003599795*. The type genome for the species is the GenBank assembly GCA_003599795.1. The GC content of the type genome is 44.25 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Denecella saxifitoga sp. nov.

Candidatus Denecella saxifitoga (NL. fem. n. *saxifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1546 sp001805105*. The type genome for the species is the GenBank assembly GCA_001803715.1. The GC content of the type genome is 43.71 % and the genome length is 1.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.2 filter".

Description of *Candidatus* Denecella sugilitrix sp. nov.

Candidatus Denecella sugilitrix (NL. fem. n. *sugilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1546 sp001871685*. The type genome for the species is the GenBank assembly GCA_002781345.1. The GC content of the type genome is 43.87 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Denecia impoliforma sp. nov.

Candidatus Denecia impoliforma (NL. fem. n. *impoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5629 sp002421445*. The type genome for the species is the GenBank assembly GCA_002421445.1. The GC content of the type genome is 47.48 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Denecia gen. nov.

Candidatus Denecia (NL. fem. n. *Denecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5629*. The type species for the genus is *Candidatus* Denecia impoliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deneciaceae.

Description of *Candidatus* Deneciaceae fam. nov.

Candidatus Deneciaceae (NL. fem. n. *Deneciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5629.* The type genus for the taxon is *Candidatus* Denecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *GIF9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dedigiales.

Description of *Candidatus* Denecia minurifica sp. nov.

Candidatus Denecia minurifica (NL. fem. n. *minurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5629 sp003484395*. The type genome for the species is the GenBank assembly GCA_003484395.1. The GC content of the type genome is 46.88 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Denecida femelitica sp. nov.

Candidatus Denecida femelitica (NL. fem. n. *femelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEH01 sp012799455*. The type genome for the species is the GenBank assembly GCA_012799455.1. The GC content of the type genome is 35.27 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Denecida gen. nov.

Candidatus Denecida (NL. fem. n. *Denecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWEH01*. The type species for the genus is *Candidatus* Denecida femelitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Denecida homogedo sp. nov.

Candidatus Denecida homogedo (NL. fem. n. *homogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEH01 sp002070965*. The type genome for the species is the GenBank assembly GCA_012718845.1. The GC content of the type genome is 36.48 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Denecosa capabitura sp. nov.

Candidatus Denecosa capabitura (NL. fem. n. *capabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUML01 sp007131125*. The type genome for the species is the GenBank assembly GCA_007131125.1. The GC content of the type genome is 46.18 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Denecosa gen. nov.

Candidatus Denecosa (NL. fem. n. *Denecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PUML01*. The type species for the genus is *Candidatus* Denecosa capabitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Denecosa ellipilenta sp. nov.

Candidatus Denecosa ellipilenta (NL. fem. n. *ellipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUML01 sp003551345*. The type genome for the species is the GenBank assembly GCA_003551345.1. The GC content of the type genome is 46.38 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Denecosa refacilenta sp. nov.

Candidatus Denecosa refacilenta (NL. fem. n. *refacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUML01 sp007129255*. The type genome for the species is the GenBank assembly GCA_003566495.1. The GC content of the type genome is 45.56 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Denecula denicilega sp. nov.

Candidatus Denecula denicilega (NL. fem. n. *denicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGON01 sp003349915*. The type genome for the species is the GenBank assembly GCA_003349915.1. The GC content of the type genome is 54.18 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Denecula gen. nov.

Candidatus Denecula (NL. fem. n. *Denecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QGON01*. The type species for the genus is *Candidatus* Denecula

denicilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denecula detosicula sp. nov.

Candidatus Denecula detosicula (NL. fem. n. *detosicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGON01 sp003660235*. The type genome for the species is the GenBank assembly GCA_003660225.1. The GC content of the type genome is 54.47 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Denecula forinousia sp. nov.

Candidatus Denecula forinousia (NL. fem. n. *forinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGON01 sp003934985*. The type genome for the species is the GenBank assembly GCA_003934985.1. The GC content of the type genome is 54.12 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Denecula rutabimonia sp. nov.

Candidatus Denecula rutabimonia (NL. fem. n. *rutabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QGON01 sp011947365*. The type genome for the species is the GenBank assembly GCA_008642435.1. The GC content of the type genome is 54.78 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Denicana cetaricella sp. nov.

Candidatus Denicana cetaricella (NL. fem. n. *cetaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6614 sp002721895*. The type genome for the species is the GenBank assembly GCA_002721895.1. The GC content of the type genome is 57.06 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Denicana gen. nov.

Candidatus Denicana (NL. fem. n. *Denicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6614*. The type species for the genus is *Candidatus* Denicana cetaricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1100*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilanaceae.

Description of *Candidatus* Denicana inredilenta sp. nov.

Candidatus Denicana inredilenta (NL. fem. n. *inredilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6614 sp002724615*. The type genome for the species is the GenBank assembly GCA_002724615.1. The GC content of the type genome is 57.16 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Denicaria cobalatica sp. nov.

Candidatus Denicaria cobalatica (NL. fem. n. *cobalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1443 sp002068945*. The type genome for the species is the GenBank assembly GCA_002068945.1. The GC content of the type genome is 57.15 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Denicaria gen. nov.

Candidatus Denicaria (NL. fem. n. *Denicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1443*. The type species for the genus is *Candidatus* Denicaria cobalatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panopellaceae.

Description of *Candidatus* Denicaria peropitura sp. nov.

Candidatus Denicaria peropitura (NL. fem. n. *peropitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1443 sp002329545*. The type genome for the species is the GenBank assembly GCA_002329545.1. The GC content of the type genome is 50.25 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Denicella catafatica sp. nov.

Candidatus Denicella catafatica (NL. fem. n. *catafatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-58-16 sp001830425*. The type genome for the species is the GenBank assembly GCA_001830425.1. The GC content of the type genome is 58.25 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Denicella gen. nov.

Candidatus Denicella (NL. fem. n. *Denicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-58-16*. The type species for the genus is *Candidatus* Denicella catafatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-58-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicellaceae.

Description of *Candidatus* Denicellaceae fam. nov.

Candidatus Denicellaceae (NL. fem. n. *Denicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-58-16.* The type genus for the taxon is *Candidatus* Denicella .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Denicia semipicula sp. nov.

Candidatus Denicia semipicula (NL. fem. n. *semipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AP-16 sp005884745*. The type genome for the species is the GenBank assembly GCA_005882425.1. The GC content of the type genome is 66.3 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Denicia gen. nov.

Candidatus Denicia (NL. fem. n. *Denicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AP-16*. The type species for the genus is *Candidatus* Denicia semipicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denicida inlacastra sp. nov.

Candidatus Denicida inlacastra (NL. fem. n. *inlacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6624 sp002501535*. The type genome for the species is the GenBank assembly GCA_002501535.1. The GC content of the type genome is 36.29 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Denicida gen. nov.

Candidatus Denicida (NL. fem. n. *Denicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6624*. The type species for the genus is *Candidatus* Denicida inlacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6624*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicidaceae.

Description of *Candidatus* Denicidaceae fam. nov.

Candidatus Denicidaceae (NL. fem. n. *Denicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6624.* The type genus for the taxon is *Candidatus* Denicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6624*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicidales.

Description of *Candidatus* Denicidales ord. nov.

Candidatus Denicidales (NL. fem. n. *Denicidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6624.* The type genus for the taxon is *Candidatus* Denicida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6624*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Denicidae.

Description of *Candidatus* Denicidae class. nov.

Candidatus Denicidae (NL. fem. n. *c__Denicidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6624.* The type genus for the taxon is *Candidatus* Denicida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Metapanota.

Description of *Candidatus* Denicida vacilimonas sp. nov.

Candidatus Denicida vacilimonas (NL. fem. n. *vacilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6624 sp002716355*. The type genome for the species is the GenBank assembly GCA_002716355.1. The GC content of the type genome is 35.88 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Denicosa necubousia sp. nov.

Candidatus Denicosa necubousia (NL. fem. n. *necubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA920 sp002293685*. The type genome for the species is the GenBank assembly GCA_002293795.1. The GC content of the type genome is 40.57 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Denicosa gen. nov.

Candidatus Denicosa (NL. fem. n. *Denicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA920*. The type species for the genus is *Candidatus* Denicosa necubousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicosaceae.

Description of *Candidatus* Denicosaceae fam. nov.

Candidatus Denicosaceae (NL. fem. n. *Denicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA920.* The type genus for the taxon is *Candidatus* Denicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Denicosales ord. nov.

Candidatus Denicosales (NL. fem. n. *Denicosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA920.* The type genus for the taxon is *Candidatus* Denicosa .

According to the GTDB R06-RS202, this order belongs to the class *Doudnabacteria*.

Description of *Candidatus* Denicula inexcicula sp. nov.

Candidatus Denicula inexcicula (NL. fem. n. *inexcicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYT01 sp009692665*. The type genome for the species is the GenBank assembly GCA_009692665.1. The GC content of the type genome is 59.29 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Denicula gen. nov.

Candidatus Denicula (NL. fem. n. *Denicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYT01*. The type species for the genus is *Candidatus* Denicula inexcicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deniculaceae.

Description of *Candidatus* Deniculaceae fam. nov.

Candidatus Deniculaceae (NL. fem. n. *Deniculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYT01.* The type genus for the taxon is *Candidatus* Denicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nivomellales.

Description of *Candidatus* Denigana subabiforma sp. nov.

Candidatus Denigana subabiforma (NL. fem. n. *subabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRYL01 sp903882825*. The type genome for the species is the GenBank assembly GCA_903882825.1. The GC content of the type genome is 35.75 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Denigana gen. nov.

Candidatus Denigana (NL. fem. n. *Denigana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRYL01*. The type species for the genus is *Candidatus* Denigana subabiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deniganaceae.

Description of *Candidatus* Deniganaceae fam. nov.

Candidatus Deniganaceae (NL. fem. n. *Deniganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIRYL01*. The type genus for the taxon is *Candidatus* Denigana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIRYL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deniganales.

Description of *Candidatus* Deniganales ord. nov.

Candidatus Deniganales (NL. fem. n. *Deniganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIRYL01*. The type genus for the taxon is *Candidatus* Denigana .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Denigaria miracatica sp. nov.

Candidatus Denigaria miracatica (NL. fem. n. *miracatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1562 sp002322525*. The type genome for the species is the GenBank assembly GCA_002322525.1. The GC content of the type genome is 40.13 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Denigaria gen. nov.

Candidatus Denigaria (NL. fem. n. *Denigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1562*. The type species for the genus is *Candidatus* Denigaria miracatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Denigella genufibula sp. nov.

Candidatus Denigella genufibula (NL. fem. n. *genufibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWXX01 sp903916735*. The type genome for the species is the GenBank assembly GCA_903888855.1. The GC content of the type genome is 53.92 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Denigella gen. nov.

Candidatus Denigella (NL. fem. n. *Denigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWXX01*. The type species for the genus is *Candidatus* Denigella genufibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIWXX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denigellaceae.

Description of *Candidatus* Denigellaceae fam. nov.

Candidatus Denigellaceae (NL. fem. n. *Denigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWXX01.* The type genus for the taxon is *Candidatus* Denigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIWXX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denigellales.

Description of *Candidatus* Denigellales ord. nov.

Candidatus Denigellales (NL. fem. n. *Denigellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWXX01.* The type genus for the taxon is *Candidatus* Denigella .

According to the original version of GTDB R06-RS202, this family belongs to the class *CAIWXX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Denigellae.

Description of *Candidatus* Denigellae class. nov.

Candidatus Denigellae (NL. fem. n. *c__Denigellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWXX01.* The type genus for the taxon is *Candidatus* Denigella .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Denigia masocilenta sp. nov.

Candidatus Denigia masocilenta (NL. fem. n. *masocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VTZT01 sp008367275*. The type genome for the species is the GenBank assembly RS_GCF_008367275.1. The GC content of the type genome is 41.45 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Denigia gen. nov.

Candidatus Denigia (NL. fem. n. *Denigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VTZT01*. The type species for the genus is *Candidatus* Denigia masocilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denigida resupitura sp. nov.

Candidatus Denigida resupitura (NL. fem. n. *resupitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-43-11-A sp002791035*. The type genome for the species is the GenBank assembly GCA_002791035.1. The GC content of the type genome is 43.54 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Denigida gen. nov.

Candidatus Denigida (NL. fem. n. *Denigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-43-11-A*. The type species for the genus is *Candidatus* Denigida resupitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2143*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatulaceae.

Description of *Candidatus* Denigosa acrimisca sp. nov.

Candidatus Denigosa acrimisca (NL. fem. n. *acrimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABPS01 sp011391835*. The type genome for the species is the GenBank assembly GCA_011391835.1. The GC content of the type genome is 42.95 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Denigosa gen. nov.

Candidatus Denigosa (NL. fem. n. *Denigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABPS01*. The type species for the genus is *Candidatus* Denigosa acrimisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABPS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denigosaceae.

Description of *Candidatus* Denigosaceae fam. nov.

Candidatus Denigosaceae (NL. fem. n. *Denigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABPS01*. The type genus for the taxon is *Candidatus* Denigosa .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Denigula decatisca sp. nov.

Candidatus Denigula decatisca (NL. fem. n. *decatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1014 sp002683785*. The type genome for the species is the GenBank assembly GCA_002291585.1. The GC content of the type genome is 46.64 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Denigula gen. nov.

Candidatus Denigula (NL. fem. n. *Denigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1014*. The type species for the genus is *Candidatus* Denigula decatisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAC60-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peripidaceae.

Description of *Candidatus* Denigula sonabago sp. nov.

Candidatus Denigula sonabago (NL. fem. n. *sonabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1014 sp001469005*. The type genome for the species is the GenBank assembly GCA_011522785.1. The GC content of the type genome is 47.54 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Denitratisoma obvalatica sp. nov.

Candidatus Denitratisoma obvalatica (NL. fem. n. *obvalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Denitratisoma sp007833355*. The type genome for the species is the GenBank assembly RS_GCF_007833355.1. The GC content of the type genome is 64.89 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Denitromonas acratimonas sp. nov.

Candidatus Denitromonas acratimonas (NL. fem. n. *acratimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Denitromonas sp010983895*. The type genome for the species is the GenBank assembly RS_GCF_010983895.1. The GC content of the type genome is 67.13 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Denitromonas defasimonas sp. nov.

Candidatus Denitromonas defasimonas (NL. fem. n. *defasimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Denitromonas sp008501585*. The type genome for the species is the GenBank assembly GCA_008501585.1. The GC content of the type genome is 66.96 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Denitrovibrio adlapousia sp. nov.

Candidatus Denitrovibrio adlapousia (NL. fem. n. *adlapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Denitrovibrio sp002869145*. The type genome for the species is the GenBank assembly GCA_002869145.1. The GC content of the type genome is 41.07 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Denitrovibrio chancitica sp. nov.

Candidatus Denitrovibrio chancitica (NL. fem. n. *chancitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Denitrovibrio sp002869185*. The type genome for the species is the GenBank assembly GCA_002869185.1. The GC content of the type genome is 38.86 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Denixana culigousia sp. nov.

Candidatus Denixana culigousia (NL. fem. n. *culigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp002362065*. The type genome for the species is the GenBank assembly GCA_002362065.1. The GC content of the type genome is 46.06 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Denixana gen. nov.

Candidatus Denixana (NL. fem. n. *Denixana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA636*. The type species for the genus is *Candidatus* Denixana culigousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denixana cunabitrix sp. nov.

Candidatus Denixana cunabitrix (NL. fem. n. *cunabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp902795865*. The type genome for the species is the GenBank assembly GCA_902795865.1. The GC content of the type genome is 28.64 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Denixana delacitas sp. nov.

Candidatus Denixana delacitas (NL. fem. n. *delacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp900546285*. The type genome for the species is the GenBank assembly GCA_900546285.1. The GC content of the type genome is 32.52 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Denixana desepilega sp. nov.

Candidatus Denixana desepilega (NL. fem. n. *desepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp002299675*. The type genome for the species is the GenBank assembly GCA_002299675.1. The GC content of the type genome is 37.74 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Denixana detepitura sp. nov.

Candidatus Denixana detepitura (NL. fem. n. *detepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp902803275*. The type genome for the species is the GenBank assembly GCA_902803275.1. The GC content of the type genome is 44.06 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Denixana detesitio sp. nov.

Candidatus Denixana detesitio (NL. fem. n. *detesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp002315565*. The type genome for the species is the GenBank assembly GCA_002315565.1. The GC content of the type genome is 37.28 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Denixana episcugo sp. nov.

Candidatus Denixana episcugo (NL. fem. n. *episcugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp002314515*. The type genome for the species is the GenBank assembly GCA_002314515.1. The GC content of the type genome is 36.45 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Denixana infiritura sp. nov.

Candidatus Denixana infiritura (NL. fem. n. *infiritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA636 sp902795875*. The type genome for the species is the GenBank assembly GCA_902795875.1. The GC content of the type genome is 45.75 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Denixana inurbivita sp. nov.

Candidatus Denixana inurbivita (NL. fem. n. *inurbivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp902803055*. The type genome for the species is the GenBank assembly GCA_902803055.1. The GC content of the type genome is 43.22 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Denixana peripimonas sp. nov.

Candidatus Denixana peripimonas (NL. fem. n. *peripimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp902796525*. The type genome for the species is the GenBank assembly GCA_902796525.1. The GC content of the type genome is 48.87 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Denixana sifunimonia sp. nov.

Candidatus Denixana sifunimonia (NL. fem. n. *sifunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp900321955*. The type genome for the species is the GenBank assembly GCA_902758715.1. The GC content of the type genome is 47.1 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Denixana tiguritoga sp. nov.

Candidatus Denixana tiguritoga (NL. fem. n. *tiguritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA636 sp902803785*. The type genome for the species is the GenBank assembly GCA_902803785.1. The GC content of the type genome is 49.05 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Denixaria risibitica sp. nov.

Candidatus Denixaria risibitica (NL. fem. n. *risibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5072 sp002415855*. The type genome for the species is the GenBank assembly GCA_002380925.1. The GC content of the type genome is 46.05 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Denixaria gen. nov.

Candidatus Denixaria (NL. fem. n. *Denixaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5072*. The type species for the genus is *Candidatus* Denixaria risibitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10428*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifellaceae.

Description of *Candidatus* Denixella remulimonia sp. nov.

Candidatus Denixella remulimonia (NL. fem. n. *remulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG033 sp900314665*. The type genome for the species is the GenBank assembly GCA_902797245.1. The GC content of the type genome is 64.45 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Denixella gen. nov.

Candidatus Denixella (NL. fem. n. *Denixella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG033*. The type species for the genus is *Candidatus* Denixella remulimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG033*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denixellaceae.

Description of *Candidatus* Denixellaceae fam. nov.

Candidatus Denixellaceae (NL. fem. n. *Denixellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG033.* The type genus for the taxon is *Candidatus* Denixella .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Denixia defanatica sp. nov.

Candidatus Denixia defanatica (NL. fem. n. *defanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA228 sp002402635*. The type genome for the species is the GenBank assembly GCA_002348105.1. The GC content of the type genome is 30.1 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Denixia gen. nov.

Candidatus Denixia (NL. fem. n. *Denixia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA228*. The type species for the genus is *Candidatus* Denixia defanatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA228*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denixiaceae.

Description of *Candidatus* Denixiaceae fam. nov.

Candidatus Denixiaceae (NL. fem. n. *Denixiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA228.* The type genus for the taxon is *Candidatus* Denixia .

According to GTDB R06-RS202, this family belongs to the order *Deferribacterales*.

Description of *Candidatus* Denixida scellilenta sp. nov.

Candidatus Denixida scellilenta (NL. fem. n. *scellilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-59-12 sp001800075*. The type genome for the species is the GenBank assembly GCA_001800075.1. The GC content of the type genome is 59.15 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Denixida gen. nov.

Candidatus Denixida (NL. fem. n. *Denixida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-59-12*. The type species for the genus is *Candidatus* Denixida scellilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-59-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denixidaceae.

Description of *Candidatus* Denixidaceae fam. nov.

Candidatus Denixidaceae (NL. fem. n. *Denixidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-59-12.* The type genus for the taxon is *Candidatus* Denixida .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-01-FULL-59-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denixidales.

Description of *Candidatus* Denixidales ord. nov.

Candidatus Denixidales (NL. fem. n. *Denixidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-59-12.* The type genus for the taxon is *Candidatus* Denixida .

According to the GTDB R06-RS202, this order belongs to the class *Elusimicrobia*.

Description of *Candidatus* Denixosa lanifitas sp. nov.

Candidatus Denixosa lanifitas (NL. fem. n. *lanifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8296 sp002338335*. The type genome for the species is the GenBank assembly GCA_003331845.1. The GC content of the type genome is 47.53 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Denixosa gen. nov.

Candidatus Denixosa (NL. fem. n. *Denixosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8296*. The type species for the genus is *Candidatus* Denixosa lanifitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denixula attubetta sp. nov.

Candidatus Denixula attubetta (NL. fem. n. *attubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYCJ01 sp012729815*. The type genome for the species is the GenBank assembly GCA_012729815.1. The GC content of the type genome is 64.0 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Denixula gen. nov.

Candidatus Denixula (NL. fem. n. *Denixula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYCJ01*. The type species for the genus is *Candidatus* Denixula attubetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYCJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denixulaceae.

Description of *Candidatus* Denixulaceae fam. nov.

Candidatus Denixulaceae (NL. fem. n. *Denixulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYCJ01*. The type genus for the taxon is *Candidatus* Denixula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYCJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denixulales.

Description of *Candidatus* Denixulales ord. nov.

Candidatus Denixulales (NL. fem. n. *Denixulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYCJ01*. The type genus for the taxon is *Candidatus* Denixula .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Denomana carunax sp. nov.

Candidatus Denomana carunax (NL. fem. n. *carunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CYK-10 sp903845215*. The type genome for the species is the GenBank assembly GCA_903845215.1. The GC content of the type genome is 59.53 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Denomana gen. nov.

Candidatus Denomana (NL. fem. n. *Denomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CYK-10*. The type species for the genus is *Candidatus* Denomana carunax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denomana omnipilega sp. nov.

Candidatus Denomana omnipilega (NL. fem. n. *omnipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CYK-10 sp009925085*. The type genome for the species is the GenBank assembly RS_GCF_009925085.1. The GC content of the type genome is 66.04 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Denomana papavedo sp. nov.

Candidatus Denomana papavedo (NL. fem. n. *papavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CYK-10 sp903873585*. The type genome for the species is the GenBank assembly GCA_903873585.1. The GC content of the type genome is 60.09 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Denomaria nocumousia sp. nov.

Candidatus Denomaria nocumousia (NL. fem. n. *nocumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAF01 sp903825395*. The type genome for the species is the GenBank assembly GCA_903871795.1. The GC content of the type genome is 46.4 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Denomaria gen. nov.

Candidatus Denomaria (NL. fem. n. *Denomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKAF01*. The type species for the genus is *Candidatus* Denomaria nocumousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKAF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomariaceae.

Description of *Candidatus* Denomariaceae fam. nov.

Candidatus Denomariaceae (NL. fem. n. *Denomariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CAIKAF01*. The type genus for the taxon is *Candidatus* Denomaria .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Denomaria terebimonia sp. nov.

Candidatus Denomaria terebimonia (NL. fem. n. *terebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAF01 sp903837495*. The type genome for the species is the GenBank assembly GCA_903837495.1. The GC content of the type genome is 48.77 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Denomella benemitas sp. nov.

Candidatus Denomella benemitas (NL. fem. n. *benemitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFR01 sp005800325*. The type genome for the species is the GenBank assembly GCA_005805165.1. The GC content of the type genome is 70.38 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Denomella gen. nov.

Candidatus Denomella (NL. fem. n. *Denomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYFR01*. The type species for the genus is *Candidatus* Denomella benemitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denomella domipitas sp. nov.

Candidatus Denomella domipitas (NL. fem. n. *domipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFR01 sp009692485*. The type genome for the species is the GenBank assembly GCA_009692485.1. The GC content of the type genome is 66.76 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Denomia homolitas sp. nov.

Candidatus Denomia homolitas (NL. fem. n. *homolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDB01 sp013154135*. The type genome for the species is the GenBank assembly GCA_013154135.1. The GC content of the type genome is 61.92 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Denomia gen. nov.

Candidatus Denomia (NL. fem. n. *Denomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDB01*. The type species for the genus is *Candidatus* Denomia homolitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADDB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomiaceae.

Description of *Candidatus* Denomiaceae fam. nov.

Candidatus Denomiaceae (NL. fem. n. *Denomiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADDB01*. The type genus for the taxon is *Candidatus* Denomia .

According to GTDB R06-RS202, this family belongs to the order *Caldilineales*.

Description of *Candidatus* Denomida solaciforma sp. nov.

Candidatus Denomida solaciforma (NL. fem. n. *solaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-38-15-A sp001797335*. The type genome for the species is the GenBank assembly GCA_001798085.1. The GC content of the type genome is 37.78 % and the genome length is 2.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Denomida gen. nov.

Candidatus Denomida (NL. fem. n. *Denomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-38-15-A*. The type species for the genus is *Candidatus* Denomida solaciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-40-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favilellaceae.

Description of *Candidatus* Denomosa brasmiforma sp. nov.

Candidatus Denomosa brasmiforma (NL. fem. n. *brasmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDQB01 sp013042495*. The type genome for the species is the GenBank assembly GCA_013042495.1. The GC content of the type genome is 65.22 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Denomosa gen. nov.

Candidatus Denomosa (NL. fem. n. *Denomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDQB01*. The type species for the genus is *Candidatus* Denomosa brasmiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDQB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomosaceae.

Description of *Candidatus* Denomosaceae fam. nov.

Candidatus Denomosaceae (NL. fem. n. *Denomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDQB01*. The type genus for the taxon is *Candidatus* Denomosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *KS3-K002*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Reforellales.

Description of *Candidatus* Denomula bipenimonas sp. nov.

Candidatus Denomula bipenimonas (NL. fem. n. *bipenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6257 sp002440845*. The type genome for the species is the GenBank assembly GCA_002440845.1. The GC content of the type genome is 34.26 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Denomula gen. nov.

Candidatus Denomula (NL. fem. n. *Denomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6257*. The type species for the genus is *Candidatus* Denomula bipenimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomulaceae.

Description of *Candidatus* Denomulaceae fam. nov.

Candidatus Denomulaceae (NL. fem. n. *Denomulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6257.* The type genus for the taxon is *Candidatus* Denomula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Denomulales ord. nov.

Candidatus Denomulales (NL. fem. n. *Denomulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6257.* The type genus for the taxon is *Candidatus* Denomula .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Denorana casigugo sp. nov.

Candidatus Denorana casigugo (NL. fem. n. *casigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Abin12 sp002897735*. The type genome for the species is the GenBank assembly GCA_002897735.1. The GC content of the type genome is 66.57 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Denorana gen. nov.

Candidatus Denorana (NL. fem. n. *Denorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Abin12*. The type species for the genus is *Candidatus* Denorana casigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-64-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Baditanaceae.

Description of *Candidatus* Denoraria vinacessa sp. nov.

Candidatus Denoraria vinacessa (NL. fem. n. *vinacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2774365 sp002774365*. The type genome for the species is the GenBank assembly GCA_002774365.1. The GC content of the type genome is 44.7 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Denoraria gen. nov.

Candidatus Denoraria (NL. fem. n. *Denoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2774365*. The type species for the genus is *Candidatus* Denoraria vinacessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-12-FULL-45-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligariaceae.

Description of *Candidatus* Denorella alsidetta sp. nov.

Candidatus Denorella alsidetta (NL. fem. n. *alsidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J014 sp003697135*. The type genome for the species is the GenBank assembly GCA_003697135.1. The GC content of the type genome is 42.89 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Denorella gen. nov.

Candidatus Denorella (NL. fem. n. *Denorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J014*. The type species for the genus is *Candidatus* Denorella alsidetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denorella cocodimonas sp. nov.

Candidatus Denorella cocodimonas (NL. fem. n. *cocodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J014 sp011058355*. The type genome for the species is the GenBank assembly GCA_011058355.1. The GC content of the type genome is 41.24 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Denoria halucitudo sp. nov.

Candidatus Denoria halucitudo (NL. fem. n. *halucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12327 sp003529305*. The type genome for the species is the GenBank assembly GCA_003529305.1. The GC content of the type genome is 61.97 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Denoria gen. nov.

Candidatus Denoria (NL. fem. n. *Denoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12327*. The type species for the genus is *Candidatus* Denoria halucitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12327*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denoriaceae.

Description of *Candidatus* Denoriaceae fam. nov.

Candidatus Denoriaceae (NL. fem. n. *Denoriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12327.* The type genus for the taxon is *Candidatus* Denoria .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Denorida betacitrix sp. nov.

Candidatus Denorida betacitrix (NL. fem. n. *betacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-10 sp003105185*. The type genome for the species is the GenBank assembly GCA_003105185.1. The GC content of the type genome is 69.85 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Denorida gen. nov.

Candidatus Denorida (NL. fem. n. *Denorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-10*. The type species for the genus is *Candidatus* Denorida betacitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denoridaceae.

Description of *Candidatus* Denoridaceae fam. nov.

Candidatus Denoridaceae (NL. fem. n. *Denoridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEB-10.* The type genus for the taxon is *Candidatus* Denorida .

According to GTDB R06-RS202, this family belongs to the order *Thermoanaerobaculales*.

Description of *Candidatus* Denorosa rubecitica sp. nov.

Candidatus Denorosa rubecitica (NL. fem. n. *rubecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM523 sp002869425*. The type genome for the species is the GenBank assembly GCA_002869425.1. The GC content of the type genome is 35.51 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Denorosa gen. nov.

Candidatus Denorosa (NL. fem. n. *Denorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM523*. The type species for the genus is *Candidatus* Denorosa rubecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM523*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denorosaceae.

Description of *Candidatus* Denorosaceae fam. nov.

Candidatus Denorosaceae (NL. fem. n. *Denorosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM523.* The type genus for the taxon is *Candidatus* Denorosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Denorula demagago sp. nov.

Candidatus Denorula demagago (NL. fem. n. *demagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066135 sp900543575*. The type genome for the species is the GenBank assembly RS_GCF_900765005.1. The GC content of the type genome is 49.44 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Denorula gen. nov.

Candidatus Denorula (NL. fem. n. *Denorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-900066135*. The type species for the genus is *Candidatus* Denorula demagago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denorula vepalatio sp. nov.

Candidatus Denorula vepalatio (NL. fem. n. *vepalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-900066135 sp900066135*. The type genome for the species is the GenBank assembly RS_GCF_003463065.1. The GC content of the type genome is 46.16 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Denunana cinipisca sp. nov.

Candidatus Denunana cinipisca (NL. fem. n. *cinipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9865 sp003444375*. The type genome for the species is the GenBank assembly GCA_012522335.1. The GC content of the type genome is 47.25 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Denunana gen. nov.

Candidatus Denunana (NL. fem. n. *Denunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9865*. The type species for the genus is *Candidatus* Denunana cinipisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denunaria hemitibra sp. nov.

Candidatus Denunaria hemitibra (NL. fem. n. *hemitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTXA01 sp009773805*. The type genome for the species is the GenBank assembly GCA_009772615.1. The GC content of the type genome is 33.05 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Denunaria gen. nov.

Candidatus Denunaria (NL. fem. n. *Denunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTXA01*. The type species for the genus is *Candidatus* Denunaria hemitibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitifariaceae.

Description of *Candidatus* Denunella irrematio sp. nov.

Candidatus Denunella irrematio (NL. fem. n. *irrematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1783 sp900555065*. The type genome for the species is the GenBank assembly GCA_900555065.1. The GC content of the type genome is 57.11 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Denunella gen. nov.

Candidatus Denunella (NL. fem. n. *Denunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1783*. The type species for the genus is *Candidatus* Denunella irrematio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1783*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denunellaceae.

Description of *Candidatus* Denunellaceae fam. nov.

Candidatus Denunellaceae (NL. fem. n. *Denunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1783.* The type genus for the taxon is *Candidatus* Denunella .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Denunia locelatio sp. nov.

Candidatus Denunia locelatio (NL. fem. n. *locelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FeB-14 sp003104995*. The type genome for the species is the GenBank assembly GCA_012027015.1. The GC content of the type genome is 66.43 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Denunia gen. nov.

Candidatus Denunia (NL. fem. n. *Denunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FeB-14*. The type species for the genus is *Candidatus* Denunia locelatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Denunia resulitica sp. nov.

Candidatus Denunia resulitica (NL. fem. n. *resulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FeB-14 sp011055725*. The type genome for the species is the GenBank assembly GCA_011055725.1. The GC content of the type genome is 67.5 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Denunida subadentia sp. nov.

Candidatus Denunida subadentia (NL. fem. n. *subadentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-107 sp005881435*. The type genome for the species is the GenBank assembly GCA_005881435.1. The GC content of the type genome is 67.63 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Denunida gen. nov.

Candidatus Denunida (NL. fem. n. *Denunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-107*. The type species for the genus is *Candidatus* Denunida subadentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-107*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denunidaceae.

Description of *Candidatus* Denunidaceae fam. nov.

Candidatus Denunidaceae (NL. fem. n. *Denunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CF-107.* The type genus for the taxon is *Candidatus* Denunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curotosales.

Description of *Candidatus* Denunosa pomifentia sp. nov.

Candidatus Denunosa pomifentia (NL. fem. n. *pomifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB12-FULL-38-5 sp001803165*. The type genome for the species is the GenBank assembly GCA_001802805.1. The GC content of the type genome is 37.76 % and the genome length is 3.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Denunosa gen. nov.

Candidatus Denunosa (NL. fem. n. *Denunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB12-FULL-38-5*. The type species for the genus is *Candidatus* Denunosa pomifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denunosa tubicax sp. nov.

Candidatus Denunosa tubicax (NL. fem. n. *tubicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB12-FULL-38-5 sp009773205*. The type genome for the species is the GenBank assembly GCA_009773245.1. The GC content of the type genome is 36.0 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Denunula adlubatio sp. nov.

Candidatus Denunula adlubatio (NL. fem. n. *adlubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-7 sp013824585*. The type genome for the species is the GenBank assembly GCA_013824585.1. The GC content of the type genome is 43.48 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Denunula gen. nov.

Candidatus Denunula (NL. fem. n. *Denunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-7*. The type species for the genus is *Candidatus* Denunula adlubatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denunulaceae.

Description of *Candidatus* Denunulaceae fam. nov.

Candidatus Denunulaceae (NL. fem. n. *Denunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-7.* The type genus for the taxon is *Candidatus* Denunula .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Denunula hibisitrix sp. nov.

Candidatus Denunula hibisitrix (NL. fem. n. *hibisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-7 sp003599865*. The type genome for the species is the GenBank assembly GCA_003599865.1. The GC content of the type genome is 47.47 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Denupana ecfacetta sp. nov.

Candidatus Denupana ecfacetta (NL. fem. n. *ecfacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICC01 sp009694835*. The type genome for the species is the GenBank assembly GCA_009694835.1. The GC content of the type genome is 53.39 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Denupana gen. nov.

Candidatus Denupana (NL. fem. n. *Denupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICC01*. The type species for the genus is *Candidatus* Denupana ecfacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SICC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denupanaceae.

Description of *Candidatus* Denupanaceae fam. nov.

Candidatus Denupanaceae (NL. fem. n. *Denupanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SICC01.* The type genus for the taxon is *Candidatus* Denupana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SICC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denupanales.

Description of *Candidatus* Denupanales ord. nov.

Candidatus Denupanales (NL. fem. n. *Denupanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SICC01.* The type genus for the taxon is *Candidatus* Denupana .

According to the original version of GTDB R06-RS202, this family belongs to the class *SICC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Denupanae.

Description of *Candidatus* Denupanae class. nov.

Candidatus Denupanae (NL. fem. n. *c__Denupanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SICC01.* The type genus for the taxon is *Candidatus* Denupana .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Denuparia antevifica sp. nov.

Candidatus Denuparia antevifica (NL. fem. n. *antevifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-465 sp009785395*. The type genome for the species is the GenBank assembly GCA_009785395.1. The GC content of the type genome is 69.59 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Denuparia gen. nov.

Candidatus Denuparia (NL. fem. n. *Denuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Palsa-465*. The type species for the genus is *Candidatus* Denuparia antevifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denuparia decenicella sp. nov.

Candidatus Denuparia decenicella (NL. fem. n. *decenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-465 sp005883415*. The type genome for the species is the GenBank assembly GCA_005883415.1. The GC content of the type genome is 67.74 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Denuparia inturugo sp. nov.

Candidatus Denuparia inturugo (NL. fem. n. *inturugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-465 sp003244035*. The type genome for the species is the GenBank assembly GCA_003244035.1. The GC content of the type genome is 70.11 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Denuparia nocumatio sp. nov.

Candidatus Denuparia nocumatio (NL. fem. n. *nocumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-465 sp003165655*. The type genome for the species is the GenBank assembly GCA_003156855.1. The GC content of the type genome is 68.29 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Denuparia ridibigena sp. nov.

Candidatus Denuparia ridibigena (NL. fem. n. *ridibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-465 sp003137075*. The type genome for the species is the GenBank assembly GCA_003137075.1. The GC content of the type genome is 65.89 %

and the genome length is 3.86 Mbp.

Description of *Candidatus* Denupella dapifitoga sp. nov.

Candidatus Denupella dapifitoga (NL. fem. n. *dapifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWF01 sp009693795*. The type genome for the species is the GenBank assembly GCA_009693795.1. The GC content of the type genome is 61.39 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Denupella gen. nov.

Candidatus Denupella (NL. fem. n. *Denupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHWF01*. The type species for the genus is *Candidatus* Denupella dapifitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denupella venefifica sp. nov.

Candidatus Denupella venefifica (NL. fem. n. *venefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWF01 sp009693935*. The type genome for the species is the GenBank assembly GCA_009693935.1. The GC content of the type genome is 61.93 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Denupia arcatatica sp. nov.

Candidatus Denupia arcatatica (NL. fem. n. *arcatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDC01 sp003565135*. The type genome for the species is the GenBank assembly GCA_003565135.1. The GC content of the type genome is 61.57 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Denupia gen. nov.

Candidatus Denupia (NL. fem. n. *Denupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXDC01*. The type species for the genus is *Candidatus* Denupia arcatatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T3Sed10-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupariaceae.

Description of *Candidatus* Denupia laxitiforma sp. nov.

Candidatus Denupia laxitiforma (NL. fem. n. *laxitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDC01 sp007130045*. The type genome for the species is the GenBank assembly GCA_003559525.1. The GC content of the type genome is 58.25 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Denupia taxilitura sp. nov.

Candidatus Denupia taxilitura (NL. fem. n. *taxilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDC01 sp003558065*. The type genome for the species is the GenBank assembly GCA_007130315.1. The GC content of the type genome is 60.38 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Denupida dehinifica sp. nov.

Candidatus Denupida dehinifica (NL. fem. n. *dehinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDE01 sp007125455*. The type genome for the species is the GenBank assembly GCA_007135785.1. The GC content of the type genome is 60.93 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Denupida gen. nov.

Candidatus Denupida (NL. fem. n. *Denupida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDE01*. The type species for the genus is *Candidatus* Denupida dehinifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Denupula appagilenta sp. nov.

Candidatus Denupula appagilenta (NL. fem. n. *appagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOMD01 sp903880655*. The type genome for the species is the GenBank assembly GCA_903880655.1. The GC content of the type genome is 40.21 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Denupula gen. nov.

Candidatus Denupula (NL. fem. n. *Denupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOMD01*. The type species for the genus is *Candidatus* Denupula appagilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIOMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denupulaceae.

Description of *Candidatus* Denupulaceae fam. nov.

Candidatus Denupulaceae (NL. fem. n. *Denupulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIOMD01.* The type genus for the taxon is *Candidatus* Denupula .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Denupula fatifentia sp. nov.

Candidatus Denupula fatifentia (NL. fem. n. *fatifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOMD01 sp903853925*. The type genome for the species is the GenBank assembly GCA_903853925.1. The GC content of the type genome is 40.23 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Denupula genufastra sp. nov.

Candidatus Denupula genufastra (NL. fem. n. *genufastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOMD01 sp903859365*. The type genome for the species is the GenBank assembly GCA_903821315.1. The GC content of the type genome is 39.59 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Denupula nehalitica sp. nov.

Candidatus Denupula nehalitica (NL. fem. n. *nehalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOMD01 sp903920345*. The type genome for the species is the GenBank assembly GCA_903920345.1. The GC content of the type genome is 39.47 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Depacana annifitia sp. nov.

Candidatus Depacana annifitia (NL. fem. n. *annifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1545 sp001873165*. The type genome for the species is the GenBank assembly GCA_001873165.1. The GC content of the type genome is 37.29 % and the genome length is 0.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Depacana gen. nov.

Candidatus Depacana (NL. fem. n. *Depacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1545*. The type species for the genus is *Candidatus* Depacana

annifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Depacana defanastra sp. nov.

Candidatus Depacana defanastra (NL. fem. n. *defanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1545 sp002771035*. The type genome for the species is the GenBank assembly GCA_002323075.1. The GC content of the type genome is 38.02 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Depacana peracitoga sp. nov.

Candidatus Depacana peracitoga (NL. fem. n. *peracitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1545 sp003488655*. The type genome for the species is the GenBank assembly GCA_003488655.1. The GC content of the type genome is 42.14 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Depacaria dilemax sp. nov.

Candidatus Depacaria dilemax (NL. fem. n. *dilemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-232 sp002084985*. The type genome for the species is the GenBank assembly GCA_003641585.1. The GC content of the type genome is 42.5 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Depacaria gen. nov.

Candidatus Depacaria (NL. fem. n. *Depacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-232*. The type species for the genus is *Candidatus* Depacaria dilemax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depacella adrumitia sp. nov.

Candidatus Depacella adrumitia (NL. fem. n. *adrumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABYT01 sp009937425*. The type genome for the species is the GenBank assembly GCA_009937425.1. The GC content of the type genome is 60.48 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Depacella gen. nov.

Candidatus Depacella (NL. fem. n. *Depacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABYT01*. The type species for the genus is *Candidatus* Depacella adrumitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HK1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rumifiaceae.

Description of *Candidatus* Depacella colepitudo sp. nov.

Candidatus Depacella colepitudo (NL. fem. n. *colepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABYT01 sp011775625*. The type genome for the species is the GenBank assembly GCA_011772935.1. The GC content of the type genome is 65.17 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Depacia tabitastra sp. nov.

Candidatus Depacia tabitastra (NL. fem. n. *tabitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LCOC01 sp001000545*. The type genome for the species is the GenBank assembly GCA_001000545.1. The GC content of the type genome is 46.77 %

and the genome length is 0.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Depacia gen. nov.

Candidatus Depacia (NL. fem. n. *Depacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LCOC01*. The type species for the genus is *Candidatus* Depacia tabitastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Depacida obsorimonas sp. nov.

Candidatus Depacida obsorimonas (NL. fem. n. *obsorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1429 sp007118555*. The type genome for the species is the GenBank assembly GCA_007118555.1. The GC content of the type genome is 64.42 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Depacida gen. nov.

Candidatus Depacida (NL. fem. n. *Depacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1429*. The type species for the genus is *Candidatus* Depacida obsorimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depacidaceae.

Description of *Candidatus* Depacidaceae fam. nov.

Candidatus Depacidaceae (NL. fem. n. *Depacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1429.* The type genus for the taxon is *Candidatus* Depacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depacidales.

Description of *Candidatus* Depacidales ord. nov.

Candidatus Depacidales (NL. fem. n. *Depacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1429.* The type genus for the taxon is *Candidatus* Depacida .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Depacida repecatica sp. nov.

Candidatus Depacida repecatica (NL. fem. n. *repecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1429 sp007132185*. The type genome for the species is the GenBank assembly GCA_007132185.1. The GC content of the type genome is 61.92 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Depacida tegimifica sp. nov.

Candidatus Depacida tegimifica (NL. fem. n. *tegimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1429 sp002329325*. The type genome for the species is the GenBank assembly GCA_002329325.1. The GC content of the type genome is 67.18 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Depacosa attubugo sp. nov.

Candidatus Depacosa attubugo (NL. fem. n. *attubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1071 sp900548305*. The type genome for the species is the GenBank assembly GCA_900548305.1. The GC content of the type genome is 37.36 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Depacosa gen. nov.

Candidatus Depacosa (NL. fem. n. *Depacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1071*. The type species for the genus is *Candidatus* Depacosa attubugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depacosa decatitura sp. nov.

Candidatus Depacosa decatitura (NL. fem. n. *decatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1071 sp900542375*. The type genome for the species is the GenBank assembly GCA_900542375.1. The GC content of the type genome is 38.59 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Depacosa laculitoga sp. nov.

Candidatus Depacosa laculitoga (NL. fem. n. *laculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1071 sp900541905*. The type genome for the species is the GenBank assembly GCA_900541905.1. The GC content of the type genome is 38.51 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Depacula delacitica sp. nov.

Candidatus Depacula delacitica (NL. fem. n. *delacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SEOHO-28 sp902806205*. The type genome for the species is the GenBank assembly GCA_902806205.1. The GC content of the type genome is 72.24 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Depacula gen. nov.

Candidatus Depacula (NL. fem. n. *Depacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SEOHO-28*. The type species for the genus is *Candidatus* Depacula delacitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depacula mureledo sp. nov.

Candidatus Depacula mureledo (NL. fem. n. *mureledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SEOHO-28 sp003044185*. The type genome for the species is the GenBank assembly RS_GCF_009707605.1. The GC content of the type genome is 73.68 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Depacula subodastra sp. nov.

Candidatus Depacula subodastra (NL. fem. n. *subodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SEOHO-28 sp013695395*. The type genome for the species is the GenBank assembly GCA_013695395.1. The GC content of the type genome is 70.88 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Deparana bimetugo sp. nov.

Candidatus Deparana bimetugo (NL. fem. n. *bimetugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7800 sp002704825*. The type genome for the species is the GenBank assembly GCA_002704825.1. The GC content of the type genome is 51.77 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Deparana gen. nov.

Candidatus Deparana (NL. fem. n. *Deparana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7800*. The type species for the genus is *Candidatus* Deparana

bimetugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Deparana seposicula sp. nov.

Candidatus Deparana seposicula (NL. fem. n. *seposicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7800 sp002480565*. The type genome for the species is the GenBank assembly GCA_002295795.1. The GC content of the type genome is 49.97 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Deparella utrolago sp. nov.

Candidatus Deparella utrolago (NL. fem. n. *utrolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-59 sp013215865*. The type genome for the species is the GenBank assembly GCA_013215865.1. The GC content of the type genome is 38.37 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Deparella gen. nov.

Candidatus Deparella (NL. fem. n. *Deparella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-59*. The type species for the genus is *Candidatus* Deparella utrolago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DT-59*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparellaceae.

Description of *Candidatus* Deparellaceae fam. nov.

Candidatus Deparellaceae (NL. fem. n. *Deparellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DT-59*. The type genus for the taxon is *Candidatus* Deparella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DT-59*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deparellales.

Description of *Candidatus* Deparellales ord. nov.

Candidatus Deparellales (NL. fem. n. *Deparellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DT-59.* The type genus for the taxon is *Candidatus* Deparella .

According to the GTDB R06-RS202, this order belongs to the class *Marinamargulisbacteria*.

Description of *Candidatus* Deparida detotetta sp. nov.

Candidatus Deparida detotetta (NL. fem. n. *detotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1260 sp900550105*. The type genome for the species is the GenBank assembly GCA_900550105.1. The GC content of the type genome is 43.06 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Deparida gen. nov.

Candidatus Deparida (NL. fem. n. *Deparida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1260*. The type species for the genus is *Candidatus* Deparida detotetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparidaceae.

Description of *Candidatus* Deparidaceae fam. nov.

Candidatus Deparidaceae (NL. fem. n. *Deparidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1260.* The type genus for the taxon is *Candidatus* Deparida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deparidales.

Description of *Candidatus* Deparidales ord. nov.

Candidatus Deparidales (NL. fem. n. *Deparidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1260.* The type genus for the taxon is *Candidatus* Deparida .

According to the GTDB R06-RS202, this order belongs to the class *Negativicutes*.

Description of *Candidatus* Deparosa nugigitoga sp. nov.

Candidatus Deparosa nugigitoga (NL. fem. n. *nugigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J102 sp003694905*. The type genome for the species is the GenBank assembly GCA_003694905.1. The GC content of the type genome is 62.49 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Deparosa gen. nov.

Candidatus Deparosa (NL. fem. n. *Deparosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J102*. The type species for the genus is *Candidatus* Deparosa nugigitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Deparosaceae fam. nov.

Candidatus Deparosaceae (NL. fem. n. *Deparosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J102.* The type genus for the taxon is *Candidatus* Deparosa .

According to GTDB R06-RS202, this family belongs to the order *Caldilineales*.

Description of *Candidatus* Deparula abrepimonas sp. nov.

Candidatus Deparula abrepimonas (NL. fem. n. *abrepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11774 sp900556645*. The type genome for the species is the GenBank assembly GCA_900556645.1. The GC content of the type genome is 42.4 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Deparula gen. nov.

Candidatus Deparula (NL. fem. n. *Deparula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11774*. The type species for the genus is *Candidatus* Deparula abrepimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Deparula velivitio sp. nov.

Candidatus Deparula velivitio (NL. fem. n. *velivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11774 sp003507655*. The type genome for the species is the GenBank assembly RS_GCF_900763635.1. The GC content of the type genome is 42.16 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Depasana sicinetta sp. nov.

Candidatus Depasana sicinetta (NL. fem. n. *sicinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1248 sp003152485*. The type genome for the species is the GenBank assembly GCA_003141175.1. The GC content of the type genome is 66.32 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Depasana gen. nov.

Candidatus Depasana (NL. fem. n. *Depasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1248*. The type species for the genus is *Candidatus* Depasana sicinetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depasaria novililega sp. nov.

Candidatus Depasaria novililega (NL. fem. n. *novililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCP01 sp007121015*. The type genome for the species is the GenBank assembly GCA_007125935.1. The GC content of the type genome is 66.67 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Depasaria gen. nov.

Candidatus Depasaria (NL. fem. n. *Depasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLCP01*. The type species for the genus is *Candidatus* Depasaria novililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLCP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depasariaceae.

Description of *Candidatus* Depasariaceae fam. nov.

Candidatus Depasariaceae (NL. fem. n. *Depasariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLCP01.* The type genus for the taxon is *Candidatus* Depasaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Depasaria semipimonia sp. nov.

Candidatus Depasaria semipimonia (NL. fem. n. *semipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCP01 sp007125735*. The type genome for the species is the GenBank assembly GCA_007132805.1. The GC content of the type genome is 66.73 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Depasella melilifica sp. nov.

Candidatus Depasella melilifica (NL. fem. n. *melilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNJ01 sp007133065*. The type genome for the species is the GenBank assembly GCA_007133065.1. The GC content of the type genome is 61.71 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Depasella gen. nov.

Candidatus Depasella (NL. fem. n. *Depasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNJ01*. The type species for the genus is *Candidatus* Depasella melilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Verruco-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigidaceae.

Description of *Candidatus* Depasia cadavicula sp. nov.

Candidatus Depasia cadavicula (NL. fem. n. *cadavicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp005878835*. The type genome for the species is the GenBank assembly GCA_005878315.1. The GC content of the type genome is 66.95 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Depasia gen. nov.

Candidatus Depasia (NL. fem. n. *Depasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *13-2-20CM-66-19*. The type species for the genus is *Candidatus* Depasia cadavicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depasia democitas sp. nov.

Candidatus Depasia democitas (NL. fem. n. *democitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp005877965*. The type genome for the species is the GenBank assembly GCA_005877965.1. The GC content of the type genome is 67.78 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Depasia denixago sp. nov.

Candidatus Depasia denixago (NL. fem. n. *denixago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp005877705*. The type genome for the species is the GenBank assembly GCA_005877705.1. The GC content of the type genome is 65.57 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Depasia herinatica sp. nov.

Candidatus Depasia herinatica (NL. fem. n. *herinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp003156695*. The type genome for the species is the GenBank assembly GCA_003156695.1. The GC content of the type genome is 65.38 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Depasia notabetta sp. nov.

Candidatus Depasia notabetta (NL. fem. n. *notabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp001914695*. The type genome for the species is

the GenBank assembly GCA_005878065.1. The GC content of the type genome is 68.56 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Depasia paropicula sp. nov.

Candidatus Depasia paropicula (NL. fem. n. *paropicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp005878095*. The type genome for the species is the GenBank assembly GCA_005878735.1. The GC content of the type genome is 67.59 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Depasia volucilega sp. nov.

Candidatus Depasia volucilega (NL. fem. n. *volucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-2-20CM-66-19 sp003136935*. The type genome for the species is the GenBank assembly GCA_003136935.1. The GC content of the type genome is 65.5 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Depasida retecicella sp. nov.

Candidatus Depasida retecicella (NL. fem. n. *retecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTBG01 sp013139225*. The type genome for the species is the GenBank assembly GCA_013139225.1. The GC content of the type genome is 40.88 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Depasida gen. nov.

Candidatus Depasida (NL. fem. n. *Depasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTBG01*. The type species for the genus is *Candidatus* Depasida retecicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WTBG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depasidaceae.

Description of *Candidatus* Depasidaceae fam. nov.

Candidatus Depasidaceae (NL. fem. n. *Depasidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTBG01.* The type genus for the taxon is *Candidatus* Depasida .

According to the original version of GTDB R06-RS202, this family belongs to the order *WTBG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depasidales.

Description of *Candidatus* Depasidales ord. nov.

Candidatus Depasidales (NL. fem. n. *Depasidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WTBG01.* The type genus for the taxon is *Candidatus* Depasida .

According to the original version of GTDB R06-RS202, this family belongs to the class *SM23-61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Forinosae.

Description of *Candidatus* Depasosa tenebitio sp. nov.

Candidatus Depasosa tenebitio (NL. fem. n. *tenebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXZF01 sp903923925*. The type genome for the species is the GenBank assembly GCA_903825805.1. The GC content of the type genome is 39.04 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Depasosa gen. nov.

Candidatus Depasosa (NL. fem. n. *Depasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXZF01*. The type species for the genus is *Candidatus* Depasosa tenebitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXZF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depasosaceae.

Description of *Candidatus* Depasosaceae fam. nov.

Candidatus Depasosaceae (NL. fem. n. *Depasosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXZF01*. The type genus for the taxon is *Candidatus* Depasosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Depasula cocolatio sp. nov.

Candidatus Depasula cocolatio (NL. fem. n. *cocolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10646 sp003456175*. The type genome for the species is the GenBank assembly GCA_003456175.1. The GC content of the type genome is 39.83 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Depasula gen. nov.

Candidatus Depasula (NL. fem. n. *Depasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10646*. The type species for the genus is *Candidatus* Depasula cocolatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depasula latibax sp. nov.

Candidatus Depasula latibax (NL. fem. n. *latibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10646 sp004292605*. The type genome for the species is the GenBank assembly GCA_004292605.1. The GC content of the type genome is 40.63 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Depecaria attelicula sp. nov.

Candidatus Depecaria attelicula (NL. fem. n. *attelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLR01 sp009777515*. The type genome for the species is the GenBank assembly GCA_009777515.1. The GC content of the type genome is 54.32 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Depecaria gen. nov.

Candidatus Depecaria (NL. fem. n. *Depecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLR01*. The type species for the genus is *Candidatus* Depecaria attelicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRLR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depecariaceae.

Description of *Candidatus* Depecariaceae fam. nov.

Candidatus Depecariaceae (NL. fem. n. *Depecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRLR01.* The type genus for the taxon is *Candidatus* Depecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRLR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depecariales.

Description of *Candidatus* Depecariales ord. nov.

Candidatus Depecariales (NL. fem. n. *Depecariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRLR01.* The type genus for the taxon is *Candidatus* Depecaria .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Depecella pocilago sp. nov.

Candidatus Depecella pocilago (NL. fem. n. *pocilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFSG01 sp009924095*. The type genome for the species is the GenBank assembly GCA_009924095.1. The GC content of the type genome is 37.79 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Depecella gen. nov.

Candidatus Depecella (NL. fem. n. *Depecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFSG01*. The type species for the genus is *Candidatus* Depecella pocilago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RFSG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depecellaceae.

Description of *Candidatus* Depecellaceae fam. nov.

Candidatus Depecellaceae (NL. fem. n. *Depecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RFSG01*. The type genus for the taxon is *Candidatus* Depecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *J057*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desepiales.

Description of *Candidatus* Depecia prodrilega sp. nov.

Candidatus Depecia prodrilega (NL. fem. n. *prodrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2279 sp002347365*. The type genome for the species is the GenBank assembly GCA_002347365.1. The GC content of the type genome is 62.86 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Depecia gen. nov.

Candidatus Depecia (NL. fem. n. *Depecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2279*. The type species for the genus is *Candidatus* Depecia prodrilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2279*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depeciaceae.

Description of *Candidatus* Depeciaceae fam. nov.

Candidatus Depeciaceae (NL. fem. n. *Depeciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2279.* The type genus for the taxon is *Candidatus* Depecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Depecida abluventia sp. nov.

Candidatus Depecida abluventia (NL. fem. n. *abluventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp012744435*. The type genome for the species is the GenBank assembly GCA_012744435.1. The GC content of the type genome is 60.69 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depecida gen. nov.

Candidatus Depecida (NL. fem. n. *Depecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RC9*. The type species for the genus is *Candidatus* Depecida abluventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Depecida abmatitrix sp. nov.

Candidatus Depecida abmatitrix (NL. fem. n. *abmatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902784435*. The type genome for the species is the GenBank assembly GCA_902784435.1. The GC content of the type genome is 57.84 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Depecida adhorousia sp. nov.

Candidatus Depecida adhorousia (NL. fem. n. *adhorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902774345*. The type genome for the species is the GenBank assembly GCA_902774345.1. The GC content of the type genome is 57.9 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Depecida admorifica sp. nov.

Candidatus Depecida admorifica (NL. fem. n. *admorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902767465*. The type genome for the species is the GenBank assembly GCA_902767465.1. The GC content of the type genome is 51.33 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Depecida admutousia sp. nov.

Candidatus Depecida admutousia (NL. fem. n. *admutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902796555*. The type genome for the species is the GenBank assembly GCA_902796555.1. The GC content of the type genome is 57.7 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Depecida adsibousia sp. nov.

Candidatus Depecida adsibousia (NL. fem. n. *adsibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RC9 sp002395925*. The type genome for the species is the GenBank assembly GCA_002395925.1. The GC content of the type genome is 55.43 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Depecida adtilibra sp. nov.

Candidatus Depecida adtilibra (NL. fem. n. *adtilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp001602865*. The type genome for the species is the GenBank assembly GCA_001602865.1. The GC content of the type genome is 61.5 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Depecida almucitas sp. nov.

Candidatus Depecida almucitas (NL. fem. n. *almucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900769905*. The type genome for the species is the GenBank assembly RS_GCF_900769905.1. The GC content of the type genome is 54.65 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Depecida amfititura sp. nov.

Candidatus Depecida amfititura (NL. fem. n. *amfititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902787255*. The type genome for the species is the GenBank assembly GCA_902787255.1. The GC content of the type genome is 54.36 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Depecida anactiforma sp. nov.

Candidatus Depecida anactiforma (NL. fem. n. *anactiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004552615*. The type genome for the species is the GenBank assembly GCA_004552615.1. The GC content of the type genome is 52.57 % and the

genome length is 2.04 Mbp.

Description of *Candidatus* Depecida ancepitia sp. nov.

Candidatus Depecida ancepitia (NL. fem. n. *ancepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902797035*. The type genome for the species is the GenBank assembly GCA_902797035.1. The GC content of the type genome is 55.23 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Depecida apoplisca sp. nov.

Candidatus Depecida apoplisca (NL. fem. n. *apoplisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002438905*. The type genome for the species is the GenBank assembly GCA_002438905.1. The GC content of the type genome is 51.43 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Depecida apraritudo sp. nov.

Candidatus Depecida apraritudo (NL. fem. n. *apraritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900767405*. The type genome for the species is the GenBank assembly RS_GCF_900767405.1. The GC content of the type genome is 51.06 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Depecida argimitas sp. nov.

Candidatus Depecida argimitas (NL. fem. n. *argimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900769145*. The type genome for the species is the GenBank assembly RS_GCF_900769145.1. The GC content of the type genome is 51.14 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Depecida argitastra sp. nov.

Candidatus Depecida argitastra (NL. fem. n. *argitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902795445*. The type genome for the species is the GenBank assembly GCA_902795445.1. The GC content of the type genome is 57.49 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Depecida baropicella sp. nov.

Candidatus Depecida baropicella (NL. fem. n. *baropicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900316955*. The type genome for the species is the GenBank assembly GCA_900316955.1. The GC content of the type genome is 60.85 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Depecida baropicula sp. nov.

Candidatus Depecida baropicula (NL. fem. n. *baropicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320185*. The type genome for the species is the GenBank assembly GCA_902787945.1. The GC content of the type genome is 56.3 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Depecida bicipimonas sp. nov.

Candidatus Depecida bicipimonas (NL. fem. n. *bicipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004552965*. The type genome for the species is the GenBank assembly GCA_004552285.1. The GC content of the type genome is 54.23 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Depecida bicoritio sp. nov.

Candidatus Depecida bicoritio (NL. fem. n. *bicoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900167895*. The type genome for the species is the GenBank assembly RS_GCF_900167895.1. The GC content of the type genome is 61.54 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Depecida bigarousia sp. nov.

Candidatus Depecida bigarousia (NL. fem. n. *bigarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900541925*. The type genome for the species is the GenBank assembly RS_GCF_900767275.1. The GC content of the type genome is 56.13 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Depecida bimetitrix sp. nov.

Candidatus Depecida bimetitrix (NL. fem. n. *bimetitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002472565*. The type genome for the species is the GenBank assembly GCA_002472185.1. The GC content of the type genome is 52.66 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Depecida bimotimonas sp. nov.

Candidatus Depecida bimotimonas (NL. fem. n. *bimotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002439805*. The type genome for the species is the GenBank assembly GCA_002404975.1. The GC content of the type genome is 54.78 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Depecida bimotitoga sp. nov.

Candidatus Depecida bimotitoga (NL. fem. n. *bimotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902801885*. The type genome for the species is the GenBank assembly GCA_902785505.1. The GC content of the type genome is 51.96 % and the

genome length is 2.24 Mbp.

Description of *Candidatus* Depecida bipenago sp. nov.

Candidatus Depecida bipenago (NL. fem. n. *bipenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900316245*. The type genome for the species is the GenBank assembly GCA_902756065.1. The GC content of the type genome is 56.16 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Depecida bisulilega sp. nov.

Candidatus Depecida bisulilega (NL. fem. n. *bisulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902768665*. The type genome for the species is the GenBank assembly GCA_902768665.1. The GC content of the type genome is 59.03 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Depecida bovicetta sp. nov.

Candidatus Depecida bovicetta (NL. fem. n. *bovicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902778105*. The type genome for the species is the GenBank assembly GCA_902801095.1. The GC content of the type genome is 58.65 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Depecida bugilastra sp. nov.

Candidatus Depecida bugilastra (NL. fem. n. *bugilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902774045*. The type genome for the species is the GenBank assembly GCA_902774045.1. The GC content of the type genome is 49.77 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Depecida bulapitica sp. nov.

Candidatus Depecida bulapitica (NL. fem. n. *bulapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002438635*. The type genome for the species is the GenBank assembly GCA_002438655.1. The GC content of the type genome is 41.0 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Depecida caduritia sp. nov.

Candidatus Depecida caduritia (NL. fem. n. *caduritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002393945*. The type genome for the species is the GenBank assembly GCA_902795165.1. The GC content of the type genome is 53.58 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Depecida casabentia sp. nov.

Candidatus Depecida casabentia (NL. fem. n. *casabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900316045*. The type genome for the species is the GenBank assembly GCA_902790745.1. The GC content of the type genome is 48.99 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Depecida catagessa sp. nov.

Candidatus Depecida catagessa (NL. fem. n. *catagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320385*. The type genome for the species is the GenBank assembly GCA_900320385.1. The GC content of the type genome is 56.89 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Depecida categedo sp. nov.

Candidatus Depecida categedo (NL. fem. n. *categedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319685*. The type genome for the species is the GenBank assembly GCA_902770075.1. The GC content of the type genome is 53.71 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Depecida cenobugo sp. nov.

Candidatus Depecida cenobugo (NL. fem. n. *cenobugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902785065*. The type genome for the species is the GenBank assembly GCA_902785065.1. The GC content of the type genome is 59.94 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Depecida cerucifica sp. nov.

Candidatus Depecida cerucifica (NL. fem. n. *cerucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902794005*. The type genome for the species is the GenBank assembly GCA_902786935.1. The GC content of the type genome is 56.78 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Depecida cetaribula sp. nov.

Candidatus Depecida cetaribula (NL. fem. n. *cetaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002361625*. The type genome for the species is the GenBank assembly GCA_002361625.1. The GC content of the type genome is 58.69 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Depecida cilibilenta sp. nov.

Candidatus Depecida cilibilenta (NL. fem. n. *cilibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002314195*. The type genome for the species is the GenBank assembly GCA_002313435.1. The GC content of the type genome is 50.93 % and the

genome length is 2.85 Mbp.

Description of *Candidatus* Depecida cilotitura sp. nov.

Candidatus Depecida cilotitura (NL. fem. n. *cilotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002392525*. The type genome for the species is the GenBank assembly GCA_002392525.1. The GC content of the type genome is 56.97 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Depecida citipousia sp. nov.

Candidatus Depecida citipousia (NL. fem. n. *citipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000431015*. The type genome for the species is the GenBank assembly GCA_000431015.1. The GC content of the type genome is 53.44 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Depecida cohonentia sp. nov.

Candidatus Depecida cohonentia (NL. fem. n. *cohonentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002308935*. The type genome for the species is the GenBank assembly GCA_002308935.1. The GC content of the type genome is 50.69 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Depecida coluticula sp. nov.

Candidatus Depecida coluticula (NL. fem. n. *coluticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902787295*. The type genome for the species is the GenBank assembly GCA_902781065.1. The GC content of the type genome is 59.47 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Depecida cosigisca sp. nov.

Candidatus Depecida cosigisca (NL. fem. n. *cosigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002314885*. The type genome for the species is the GenBank assembly GCA_002314885.1. The GC content of the type genome is 53.85 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Depecida curacedo sp. nov.

Candidatus Depecida curacedo (NL. fem. n. *curacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319375*. The type genome for the species is the GenBank assembly GCA_900319375.1. The GC content of the type genome is 53.56 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Depecida curacitrix sp. nov.

Candidatus Depecida curacitrix (NL. fem. n. *curacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000433355*. The type genome for the species is the GenBank assembly GCA_004556785.1. The GC content of the type genome is 51.98 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Depecida cuticitura sp. nov.

Candidatus Depecida cuticitura (NL. fem. n. *cuticitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319405*. The type genome for the species is the GenBank assembly GCA_900319405.1. The GC content of the type genome is 56.24 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Depecida decacago sp. nov.

Candidatus Depecida decacago (NL. fem. n. *decacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902779495*. The type genome for the species is the GenBank assembly GCA_902779495.1. The GC content of the type genome is 56.75 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Depecida decomitica sp. nov.

Candidatus Depecida decomitica (NL. fem. n. *decomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319485*. The type genome for the species is the GenBank assembly GCA_902772575.1. The GC content of the type genome is 53.39 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Depecida defasimonia sp. nov.

Candidatus Depecida defasimonia (NL. fem. n. *defasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000434935*. The type genome for the species is the GenBank assembly GCA_000434935.1. The GC content of the type genome is 49.37 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Depecida defetivita sp. nov.

Candidatus Depecida defetivita (NL. fem. n. *defetivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004552115*. The type genome for the species is the GenBank assembly GCA_004553505.1. The GC content of the type genome is 53.88 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Depecida delacilega sp. nov.

Candidatus Depecida delacilega (NL. fem. n. *delacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp012800665*. The type genome for the species is the GenBank

assembly GCA_012800665.1. The GC content of the type genome is 47.06 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Depecida delebitio sp. nov.

Candidatus Depecida delebitio (NL. fem. n. *delebitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900546445*. The type genome for the species is the GenBank assembly GCA_004554845.1. The GC content of the type genome is 49.6 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Depecida denicitrix sp. nov.

Candidatus Depecida denicitrix (NL. fem. n. *denicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902780935*. The type genome for the species is the GenBank assembly GCA_902786755.1. The GC content of the type genome is 53.03 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Depecida denixessa sp. nov.

Candidatus Depecida denixessa (NL. fem. n. *denixessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004554455*. The type genome for the species is the GenBank assembly GCA_004552065.1. The GC content of the type genome is 55.73 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Depecida depecax sp. nov.

Candidatus Depecida depecax (NL. fem. n. *depecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900316525*. The type genome for the species is the GenBank assembly GCA_902758675.1. The GC content of the type genome is 61.33 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Depecida depelessa sp. nov.

Candidatus Depecida depelessa (NL. fem. n. *depelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp001915575*. The type genome for the species is the GenBank assembly GCA_001915575.1. The GC content of the type genome is 57.1 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Depecida depocitudo sp. nov.

Candidatus Depecida depocitudo (NL. fem. n. *depocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902761655*. The type genome for the species is the GenBank assembly GCA_902761655.1. The GC content of the type genome is 53.11 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Depecida derunax sp. nov.

Candidatus Depecida derunax (NL. fem. n. *derunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902785575*. The type genome for the species is the GenBank assembly GCA_902768695.1. The GC content of the type genome is 50.87 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Depecida desuressa sp. nov.

Candidatus Depecida desuressa (NL. fem. n. *desuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902803715*. The type genome for the species is the GenBank assembly GCA_902803715.1. The GC content of the type genome is 59.26 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Depecida detorastra sp. nov.

Candidatus Depecida detorastra (NL. fem. n. *detorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900321655*. The type genome for the species is the GenBank assembly GCA_902758375.1. The GC content of the type genome is 56.24 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depecida detotibula sp. nov.

Candidatus Depecida detotibula (NL. fem. n. *detotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002439585*. The type genome for the species is the GenBank assembly GCA_002314015.1. The GC content of the type genome is 46.81 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Depecida detumitoga sp. nov.

Candidatus Depecida detumitoga (NL. fem. n. *detumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902789395*. The type genome for the species is the GenBank assembly GCA_902800895.1. The GC content of the type genome is 53.94 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Depecida dicanitio sp. nov.

Candidatus Depecida dicanitio (NL. fem. n. *dicanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002439095*. The type genome for the species is the GenBank assembly GCA_002404525.1. The GC content of the type genome is 54.82 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Depecida dicibibula sp. nov.

Candidatus Depecida dicibibula (NL. fem. n. *dicibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900544195*. The type genome for the species is the GenBank assembly GCA_900544195.1. The GC content of the type genome is 51.9 % and the

genome length is 2.92 Mbp.

Description of *Candidatus* Depecida dicimax sp. nov.

Candidatus Depecida dicimax (NL. fem. n. *dicimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002437305*. The type genome for the species is the GenBank assembly GCA_002451455.1. The GC content of the type genome is 51.81 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Depecida didacifica sp. nov.

Candidatus Depecida didacifica (NL. fem. n. *didacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902789245*. The type genome for the species is the GenBank assembly GCA_902774235.1. The GC content of the type genome is 60.06 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Depecida dilemicula sp. nov.

Candidatus Depecida dilemicula (NL. fem. n. *dilemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320545*. The type genome for the species is the GenBank assembly GCA_900320545.1. The GC content of the type genome is 57.7 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Depecida dimidimonia sp. nov.

Candidatus Depecida dimidimonia (NL. fem. n. *dimidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320365*. The type genome for the species is the GenBank assembly GCA_902755235.1. The GC content of the type genome is 51.17 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Depecida dinupiforma sp. nov.

Candidatus Depecida dinupiforma (NL. fem. n. *dinupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900314395*. The type genome for the species is the GenBank assembly GCA_900314395.1. The GC content of the type genome is 50.71 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Depecida domigimonia sp. nov.

Candidatus Depecida domigimonia (NL. fem. n. *domigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320795*. The type genome for the species is the GenBank assembly GCA_900320795.1. The GC content of the type genome is 55.63 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Depecida eccisicula sp. nov.

Candidatus Depecida eccisicula (NL. fem. n. *eccisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002309995*. The type genome for the species is the GenBank assembly GCA_002309995.1. The GC content of the type genome is 56.15 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Depecida effacitia sp. nov.

Candidatus Depecida effacitia (NL. fem. n. *effacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902796455*. The type genome for the species is the GenBank assembly GCA_902796455.1. The GC content of the type genome is 56.42 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Depecida exsomax sp. nov.

Candidatus Depecida exsomax (NL. fem. n. *exsomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902790635*. The type genome for the species is the GenBank assembly GCA_902790635.1. The GC content of the type genome is 60.04 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Depecida exsupicella sp. nov.

Candidatus Depecida exsupicella (NL. fem. n. *exsupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902784785*. The type genome for the species is the GenBank assembly GCA_902784785.1. The GC content of the type genome is 53.25 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Depecida facunilenta sp. nov.

Candidatus Depecida facunilenta (NL. fem. n. *facunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002297815*. The type genome for the species is the GenBank assembly GCA_002297815.1. The GC content of the type genome is 48.46 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Depecida ficedatio sp. nov.

Candidatus Depecida ficedatio (NL. fem. n. *ficedatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002438805*. The type genome for the species is the GenBank assembly GCA_002449105.1. The GC content of the type genome is 54.69 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Depecida ficulitura sp. nov.

Candidatus Depecida ficulitura (NL. fem. n. *ficulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000432655*. The type genome for the species is the GenBank assembly GCA_004553345.1. The GC content of the type genome is 49.65 % and the

genome length is 1.54 Mbp.

Description of *Candidatus* Depecida filifetta sp. nov.

Candidatus Depecida filifetta (NL. fem. n. *filifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902780175*. The type genome for the species is the GenBank assembly GCA_902780175.1. The GC content of the type genome is 57.2 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Depecida filifousia sp. nov.

Candidatus Depecida filifousia (NL. fem. n. *filifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900760425*. The type genome for the species is the GenBank assembly RS_GCF_900760425.1. The GC content of the type genome is 48.57 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Depecida funivitura sp. nov.

Candidatus Depecida funivitura (NL. fem. n. *funivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002298075*. The type genome for the species is the GenBank assembly GCA_009774805.1. The GC content of the type genome is 48.4 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Depecida gabinilega sp. nov.

Candidatus Depecida gabinilega (NL. fem. n. *gabinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900313205*. The type genome for the species is the GenBank assembly GCA_902780965.1. The GC content of the type genome is 52.76 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Depecida hegumitura sp. nov.

Candidatus Depecida hegumitura (NL. fem. n. *hegumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900317065*. The type genome for the species is the GenBank assembly GCA_902763545.1. The GC content of the type genome is 54.23 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Depecida hemiditoga sp. nov.

Candidatus Depecida hemiditoga (NL. fem. n. *hemiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902768985*. The type genome for the species is the GenBank assembly GCA_902793265.1. The GC content of the type genome is 60.75 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depecida hirudastra sp. nov.

Candidatus Depecida hirudastra (NL. fem. n. *hirudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900321245*. The type genome for the species is the GenBank assembly GCA_902761405.1. The GC content of the type genome is 55.78 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Depecida holisigena sp. nov.

Candidatus Depecida holisigena (NL. fem. n. *holisigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902774155*. The type genome for the species is the GenBank assembly GCA_902786655.1. The GC content of the type genome is 56.67 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Depecida holovimonia sp. nov.

Candidatus Depecida holovimonia (NL. fem. n. *holovimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900546925*. The type genome for the species is the GenBank assembly GCA_900546925.1. The GC content of the type genome is 47.38 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Depecida holovitica sp. nov.

Candidatus Depecida holovitica (NL. fem. n. *holovitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900546395*. The type genome for the species is the GenBank assembly GCA_900546395.1. The GC content of the type genome is 43.37 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Depecida illuvicella sp. nov.

Candidatus Depecida illuvicella (NL. fem. n. *illuvicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902774145*. The type genome for the species is the GenBank assembly GCA_902774145.1. The GC content of the type genome is 57.95 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Depecida inargilega sp. nov.

Candidatus Depecida inargilega (NL. fem. n. *inargilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902766255*. The type genome for the species is the GenBank assembly GCA_902766255.1. The GC content of the type genome is 54.11 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Depecida incucentia sp. nov.

Candidatus Depecida incucentia (NL. fem. n. *incucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902788175*. The type genome for the species is the GenBank assembly GCA_902788175.1. The GC content of the type genome is 56.8 % and the

genome length is 2.09 Mbp.

Description of *Candidatus* Depecida indevedo sp. nov.

Candidatus Depecida indevedo (NL. fem. n. *indevedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900771005*. The type genome for the species is the GenBank assembly RS_GCF_900771005.1. The GC content of the type genome is 48.83 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Depecida infabatica sp. nov.

Candidatus Depecida infabatica (NL. fem. n. *infabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp001602885*. The type genome for the species is the GenBank assembly GCA_001602885.1. The GC content of the type genome is 62.71 % and the genome length is 1.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Depecida inforilega sp. nov.

Candidatus Depecida inforilega (NL. fem. n. *inforilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp012522855*. The type genome for the species is the GenBank assembly GCA_012522855.1. The GC content of the type genome is 53.54 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Depecida ininnicella sp. nov.

Candidatus Depecida ininnicella (NL. fem. n. *ininnicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002320605*. The type genome for the species is the GenBank assembly GCA_002320605.1. The GC content of the type genome is 48.48 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Depecida lametousia sp. nov.

Candidatus Depecida lametousia (NL. fem. n. *lametousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902782225*. The type genome for the species is the GenBank assembly GCA_902782225.1. The GC content of the type genome is 56.92 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Depecida lanifitica sp. nov.

Candidatus Depecida lanifitica (NL. fem. n. *lanifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900318015*. The type genome for the species is the GenBank assembly GCA_902787045.1. The GC content of the type genome is 60.16 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Depecida lanugitas sp. nov.

Candidatus Depecida lanugitas (NL. fem. n. *lanugitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900167925*. The type genome for the species is the GenBank assembly RS_GCF_900167925.1. The GC content of the type genome is 51.08 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Depecida lenimicella sp. nov.

Candidatus Depecida lenimicella (NL. fem. n. *lenimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000432515*. The type genome for the species is the GenBank assembly GCA_000432515.1. The GC content of the type genome is 49.16 % and the genome length is 2.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Depecida luculugo sp. nov.

Candidatus Depecida luculugo (NL. fem. n. *luculugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002396335*. The type genome for the species is the GenBank assembly GCA_002396335.1. The GC content of the type genome is 57.54 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Depecida luxuritas sp. nov.

Candidatus Depecida luxuritas (NL. fem. n. *luxuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902803535*. The type genome for the species is the GenBank assembly GCA_902803535.1. The GC content of the type genome is 54.45 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Depecida manomiforma sp. nov.

Candidatus Depecida manomiforma (NL. fem. n. *manomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002438845*. The type genome for the species is the GenBank assembly GCA_002297165.1. The GC content of the type genome is 51.89 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Depecida maxumastra sp. nov.

Candidatus Depecida maxumastra (NL. fem. n. *maxumastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902768955*. The type genome for the species is the GenBank assembly GCA_902768955.1. The GC content of the type genome is 52.75 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Depecida meliledo sp. nov.

Candidatus Depecida meliledo (NL. fem. n. *meliledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900318565*. The type genome for the species is the GenBank assembly GCA_900318565.1. The GC content of the type genome is 56.93 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Depecida milipago sp. nov.

Candidatus Depecida milipago (NL. fem. n. *milipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004555145*. The type genome for the species is the GenBank assembly GCA_004555145.1. The GC content of the type genome is 53.6 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Depecida minuritia sp. nov.

Candidatus Depecida minuritia (NL. fem. n. *minuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002395605*. The type genome for the species is the GenBank assembly GCA_002395605.1. The GC content of the type genome is 53.68 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Depecida molecicula sp. nov.

Candidatus Depecida molecicula (NL. fem. n. *molecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319855*. The type genome for the species is the GenBank assembly GCA_902764115.1. The GC content of the type genome is 58.36 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Depecida navicentia sp. nov.

Candidatus Depecida navicentia (NL. fem. n. *navicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902788095*. The type genome for the species is the GenBank assembly GCA_902788095.1. The GC content of the type genome is 55.75 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depecida nicomitura sp. nov.

Candidatus Depecida nicomitura (NL. fem. n. *nicomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900543205*. The type genome for the species is the GenBank assembly GCA_900543205.1. The GC content of the type genome is 56.9 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Depecida nicotilenta sp. nov.

Candidatus Depecida nicotilenta (NL. fem. n. *nicotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319185*. The type genome for the species is the GenBank assembly GCA_900319185.1. The GC content of the type genome is 57.07 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Depecida nidifentia sp. nov.

Candidatus Depecida nidifentia (NL. fem. n. *nidifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp009774765*. The type genome for the species is the GenBank assembly GCA_009774765.1. The GC content of the type genome is 46.54 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Depecida nidifica sp. nov.

Candidatus Depecida nidifica (NL. fem. n. *nidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002439875*. The type genome for the species is the GenBank assembly GCA_002439875.1. The GC content of the type genome is 50.74 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Depecida nucifousia sp. nov.

Candidatus Depecida nucifousia (NL. fem. n. *nucifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902779785*. The type genome for the species is the GenBank assembly GCA_902787315.1. The GC content of the type genome is 53.78 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Depecida nutabiforma sp. nov.

Candidatus Depecida nutabiforma (NL. fem. n. *nutabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902781705*. The type genome for the species is the GenBank assembly GCA_902781705.1. The GC content of the type genome is 59.03 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Depecida obnupigena sp. nov.

Candidatus Depecida obnupigena (NL. fem. n. *obnupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902798975*. The type genome for the species is the GenBank assembly GCA_902798975.1. The GC content of the type genome is 59.77 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Depecida pacififica sp. nov.

Candidatus Depecida pacififica (NL. fem. n. *pacififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902795735*. The type genome for the species is the GenBank assembly GCA_902795735.1. The GC content of the type genome is 51.99 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Depecida pimenatica sp. nov.

Candidatus Depecida pimenatica (NL. fem. n. *pimenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RC9 sp002354005*. The type genome for the species is the GenBank assembly GCA_902772135.1. The GC content of the type genome is 56.2 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Depecida pinigilenta sp. nov.

Candidatus Depecida pinigilenta (NL. fem. n. *pinigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902762435*. The type genome for the species is the GenBank assembly GCA_902762435.1. The GC content of the type genome is 61.87 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Depecida pocilimonas sp. nov.

Candidatus Depecida pocilimonas (NL. fem. n. *pocilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900320965*. The type genome for the species is the GenBank assembly GCA_902767705.1. The GC content of the type genome is 51.93 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Depecida procrilenta sp. nov.

Candidatus Depecida procrilenta (NL. fem. n. *procrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002315815*. The type genome for the species is the GenBank assembly GCA_002315815.1. The GC content of the type genome is 49.29 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Depecida procrousia sp. nov.

Candidatus Depecida procrousia (NL. fem. n. *procrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902779765*. The type genome for the species is the GenBank assembly GCA_902779765.1. The GC content of the type genome is 53.17 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Depecida recogicella sp. nov.

Candidatus Depecida recogicella (NL. fem. n. *recogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900319975*. The type genome for the species is the GenBank assembly GCA_900319975.1. The GC content of the type genome is 62.25 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Depecida recorisca sp. nov.

Candidatus Depecida recorisca (NL. fem. n. *recorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002451795*. The type genome for the species is the GenBank assembly GCA_002478105.1. The GC content of the type genome is 46.51 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Depecida recumimonia sp. nov.

Candidatus Depecida recumimonia (NL. fem. n. *recumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902766985*. The type genome for the species is the GenBank assembly GCA_902766985.1. The GC content of the type genome is 54.08 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Depecida refinicella sp. nov.

Candidatus Depecida refinicella (NL. fem. n. *refinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002350615*. The type genome for the species is the GenBank assembly GCA_002350615.1. The GC content of the type genome is 54.09 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Depecida resaligena sp. nov.

Candidatus Depecida resaligena (NL. fem. n. *resaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900317925*. The type genome for the species is the GenBank assembly GCA_902760445.1. The GC content of the type genome is 56.81 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Depecida retunimonia sp. nov.

Candidatus Depecida retunimonia (NL. fem. n. *retunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902791945*. The type genome for the species is the GenBank assembly GCA_902791945.1. The GC content of the type genome is 56.53 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Depecida saxifatica sp. nov.

Candidatus Depecida saxifatica (NL. fem. n. *saxifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900767375*. The type genome for the species is the GenBank assembly RS_GCF_900767375.1. The GC content of the type genome is 54.97 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Depecida semapitio sp. nov.

Candidatus Depecida semapitio (NL. fem. n. *semapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp004556005*. The type genome for the species is the GenBank assembly RS_GCF_900769135.1. The GC content of the type genome is 51.73 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Depecida semapitoga sp. nov.

Candidatus Depecida semapitoga (NL. fem. n. *semapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RC9 sp002321335*. The type genome for the species is the GenBank assembly GCA_003500085.1. The GC content of the type genome is 50.85 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Depecida sicunastra sp. nov.

Candidatus Depecida sicunastra (NL. fem. n. *sicunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002371115*. The type genome for the species is the GenBank assembly GCA_002395125.1. The GC content of the type genome is 56.18 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Depecida solipilenta sp. nov.

Candidatus Depecida solipilenta (NL. fem. n. *solipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900318355*. The type genome for the species is the GenBank assembly GCA_902759845.1. The GC content of the type genome is 57.36 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Depecida sotulastra sp. nov.

Candidatus Depecida sotulastra (NL. fem. n. *sotulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002393895*. The type genome for the species is the GenBank assembly GCA_002393895.1. The GC content of the type genome is 54.89 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Depecida subodibula sp. nov.

Candidatus Depecida subodibula (NL. fem. n. *subodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902799895*. The type genome for the species is the GenBank assembly GCA_902780675.1. The GC content of the type genome is 56.81 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Depecida subodousia sp. nov.

Candidatus Depecida subodousia (NL. fem. n. *subodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
