A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002440085*. The type genome for the species is the GenBank assembly GCA_002440085.1. The GC content of the type genome is 52.74 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Depecida sugilifica sp. nov.

Candidatus Depecida sugilifica (NL. fem. n. *sugilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900316675*. The type genome for the species is the GenBank assembly GCA_902785225.1. The GC content of the type genome is 50.15 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Depecida sugilitas sp. nov.

Candidatus Depecida sugilitas (NL. fem. n. *sugilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902795785*. The type genome for the species is the GenBank assembly GCA_902795785.1. The GC content of the type genome is 50.15 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Depecida supelousia sp. nov.

Candidatus Depecida supelousia (NL. fem. n. *supelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900318445*. The type genome for the species is the GenBank assembly GCA_902756035.1. The GC content of the type genome is 57.03 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Depecida susicitrix sp. nov.

Candidatus Depecida susicitrix (NL. fem. n. *susicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900317845*. The type genome for the species is the GenBank assembly GCA_902759455.1. The GC content of the type genome is 56.47 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Depecida tegimago sp. nov.

Candidatus Depecida tegimago (NL. fem. n. *tegimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900318955*. The type genome for the species is the GenBank assembly GCA_902764365.1. The GC content of the type genome is 48.69 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Depecida televitura sp. nov.

Candidatus Depecida televitura (NL. fem. n. *televitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902792815*. The type genome for the species is the GenBank assembly GCA_902770455.1. The GC content of the type genome is 54.38 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Depecida tenemitia sp. nov.

Candidatus Depecida tenemitia (NL. fem. n. *tenemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900321715*. The type genome for the species is the GenBank assembly GCA_902758725.1. The GC content of the type genome is 53.34 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Depecida tetenitia sp. nov.

Candidatus Depecida tetenitia (NL. fem. n. *tetenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RC9 sp902772985*. The type genome for the species is the GenBank assembly GCA_902772985.1. The GC content of the type genome is 53.11 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Depecida tibicigena sp. nov.

Candidatus Depecida tibicigena (NL. fem. n. *tibicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002373715*. The type genome for the species is the GenBank assembly GCA_002373715.1. The GC content of the type genome is 55.1 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Depecida timefastra sp. nov.

Candidatus Depecida timefastra (NL. fem. n. *timefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902794615*. The type genome for the species is the GenBank assembly GCA_902794615.1. The GC content of the type genome is 57.37 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Depecida turilitica sp. nov.

Candidatus Depecida turilitica (NL. fem. n. *turilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp000435075*. The type genome for the species is the GenBank assembly GCA_900542105.1. The GC content of the type genome is 47.73 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Depecida vatilicella sp. nov.

Candidatus Depecida vatilicella (NL. fem. n. *vatilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902801205*. The type genome for the species is the GenBank assembly GCA_902801205.1. The GC content of the type genome is 60.24 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Depecida vatilitia sp. nov.

Candidatus Depecida vatilitia (NL. fem. n. *vatilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902797435*. The type genome for the species is the GenBank assembly GCA_902797435.1. The GC content of the type genome is 54.84 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Depecida velivimonas sp. nov.

Candidatus Depecida velivimonas (NL. fem. n. *velivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900545245*. The type genome for the species is the GenBank assembly GCA_900545245.1. The GC content of the type genome is 49.93 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Depecida venucibula sp. nov.

Candidatus Depecida venucibula (NL. fem. n. *venucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp900313275*. The type genome for the species is the GenBank assembly GCA_902758995.1. The GC content of the type genome is 51.55 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Depecida viginitura sp. nov.

Candidatus Depecida viginitura (NL. fem. n. *viginitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp002315825*. The type genome for the species is the GenBank assembly GCA_002315825.1. The GC content of the type genome is 47.16 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Depecida vinulivita sp. nov.

Candidatus Depecida vinulivita (NL. fem. n. *vinulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902762655*. The type genome for the species is the GenBank assembly GCA_902762655.1. The GC content of the type genome is 52.74 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Depecida virecibula sp. nov.

Candidatus Depecida virecibula (NL. fem. n. *virecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RC9 sp902785825*. The type genome for the species is the GenBank assembly GCA_902789355.1. The GC content of the type genome is 52.23 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Depecosa modifimonia sp. nov.

Candidatus Depecosa modifimonia (NL. fem. n. *modifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM1-73 sp001304225*. The type genome for the species is the GenBank assembly GCA_001304225.1. The GC content of the type genome is 44.13 % and the genome length is 2.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Depecosa gen. nov.

Candidatus Depecosa (NL. fem. n. *Depecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM1-73*. The type species for the genus is *Candidatus* Depecosa modifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depecosaceae.

Description of *Candidatus* Depecosaceae fam. nov.

Candidatus Depecosaceae (NL. fem. n. *Depecosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM1-73*. The type genus for the taxon is *Candidatus* Depecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripellales.

Description of *Candidatus* Depecula crastitudo sp. nov.

Candidatus Depecula crastitudo (NL. fem. n. *crastitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1316 sp004321925*. The type genome for the species is the GenBank assembly GCA_004321925.1. The GC content of the type genome is 54.48 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Depecula gen. nov.

Candidatus Depecula (NL. fem. n. *Depecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1316*. The type species for the genus is *Candidatus* Depecula crastitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6898*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fecunellaceae.

Description of *Candidatus* Depecula culiledo sp. nov.

Candidatus Depecula culiledo (NL. fem. n. *culiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1316 sp013824615*. The type genome for the species is the GenBank assembly GCA_013824615.1. The GC content of the type genome is 51.73 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Depecula excalugo sp. nov.

Candidatus Depecula excalugo (NL. fem. n. *excalugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1316 sp003153275*. The type genome for the species is the GenBank assembly GCA_003153275.1. The GC content of the type genome is 49.59 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Depelana adtemitica sp. nov.

Candidatus Depelana adtemitica (NL. fem. n. *adtemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN30871 sp002483605*. The type genome for the species is the GenBank assembly GCA_002483605.1. The GC content of the type genome is 37.16 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Depelana gen. nov.

Candidatus Depelana (NL. fem. n. *Depelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BN30871*. The type species for the genus is *Candidatus* Depelana adtemitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depelana cululitas sp. nov.

Candidatus Depelana cululitas (NL. fem. n. *cululitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN30871 sp002424475*. The type genome for the species is the GenBank assembly GCA_002424475.1. The GC content of the type genome is 36.02 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Depelana herinibula sp. nov.

Candidatus Depelana herinibula (NL. fem. n. *herinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN30871 sp001493195*. The type genome for the species is the GenBank assembly GCA_001493195.1. The GC content of the type genome is 32.71 % and the genome length is 1.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hydrocarbon-contaminated sulfidic aquifer".

Description of *Candidatus* Depelana luceritudo sp. nov.

Candidatus Depelana luceritudo (NL. fem. n. *luceritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN30871 sp002412865*. The type genome for the species is the GenBank assembly GCA_002345465.1. The GC content of the type genome is 34.93 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Depelana solacifica sp. nov.

Candidatus Depelana solacifica (NL. fem. n. *solacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN30871 sp011372825*. The type genome for the species is the GenBank assembly GCA_011372825.1. The GC content of the type genome is 37.46 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Depelaria advinitica sp. nov.

Candidatus Depelaria advinitica (NL. fem. n. *advinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA027-K21 sp003058465*. The type genome for the species is the GenBank assembly RS_GCF_003058465.1. The GC content of the type genome is 55.54 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Depelaria gen. nov.

Candidatus Depelaria (NL. fem. n. *Depelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AAA027-K21*. The type species for the genus is *Candidatus* Depelaria advinitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depelaria pecunetta sp. nov.

Candidatus Depelaria pecunetta (NL. fem. n. *pecunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA027-K21 sp002422175*. The type genome for the species is the GenBank assembly GCA_002422175.1. The GC content of the type genome is 45.98 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depelaria rubicitica sp. nov.

Candidatus Depelaria rubicitica (NL. fem. n. *rubicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA027-K21 sp007116135*. The type genome for the species is the GenBank assembly GCA_007116135.1. The GC content of the type genome is 55.95 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Depelella dibapitura sp. nov.

Candidatus Depelella dibapitura (NL. fem. n. *dibapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STC3 sp009742725*. The type genome for the species is the GenBank assembly RS_GCF_009742725.1. The GC content of the type genome is 64.73 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Depelella gen. nov.

Candidatus Depelella (NL. fem. n. *Depelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *STC3*. The type species for the genus is *Candidatus* Depelella dibapitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depelella futatetta sp. nov.

Candidatus Depelella futatetta (NL. fem. n. *futatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STC3 sp003015025*. The type genome for the species is the GenBank assembly RS_GCF_003015025.1. The GC content of the type genome is 65.52 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Depelella revulatica sp. nov.

Candidatus Depelella revulatica (NL. fem. n. *revulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *STC3 sp007922615*. The type genome for the species is the GenBank assembly RS_GCF_007922615.2. The GC content of the type genome is 64.89 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Depelia lanugastra sp. nov.

Candidatus Depelia lanugastra (NL. fem. n. *lanugastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8518 sp903841185*. The type genome for the species is the GenBank assembly GCA_903885935.1. The GC content of the type genome is 41.4 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Depelia gen. nov.

Candidatus Depelia (NL. fem. n. *Depelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8518*. The type species for the genus is *Candidatus* Depelia lanugastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colimulaceae.

Description of *Candidatus* Depelia octacitudo sp. nov.

Candidatus Depelia octacitudo (NL. fem. n. *octacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8518 sp003543115*. The type genome for the species is the GenBank assembly GCA_003543115.1. The GC content of the type genome is 37.98 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Depelida futatatio sp. nov.

Candidatus Depelida futatatio (NL. fem. n. *futatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU022 sp001512835*. The type genome for the species is the GenBank assembly GCA_012521155.1. The GC content of the type genome is 58.18 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Depelida gen. nov.

Candidatus Depelida (NL. fem. n. *Depelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU022*. The type species for the genus is *Candidatus* Depelida futatatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Depelidaceae fam. nov.

Candidatus Depelidaceae (NL. fem. n. *Depelidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU022.* The type genus for the taxon is *Candidatus* Depelida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depelidales.

Description of *Candidatus* Depelidales ord. nov.

Candidatus Depelidales (NL. fem. n. *Depelidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU022.* The type genus for the taxon is *Candidatus* Depelida .

According to the GTDB R06-RS202, this order belongs to the class *Dethiobacteria*.

Description of *Candidatus* Depelosa melilimonia sp. nov.

Candidatus Depelosa melilimonia (NL. fem. n. *melilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-75507 sp003594875*. The type genome for the species is the GenBank assembly RS_GCF_003594875.1. The GC content of the type genome is 73.83 % and the genome length is 8.99 Mbp.

Description of *Candidatus* Depelosa gen. nov.

Candidatus Depelosa (NL. fem. n. *Depelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-75507*. The type species for the genus is *Candidatus* Depelosa melilimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depelula laxititura sp. nov.

Candidatus Depelula laxititura (NL. fem. n. *laxititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-49-35 sp001789205*. The type genome for the species is the GenBank assembly GCA_001789245.1. The GC content of the type genome is 49.55 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point C".

Description of *Candidatus* Depelula gen. nov.

Candidatus Depelula (NL. fem. n. *Depelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-49-35*. The type species for the genus is *Candidatus* Depelula laxititura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-49-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelulaceae.

Description of *Candidatus* Depelulaceae fam. nov.

Candidatus Depelulaceae (NL. fem. n. *Depelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYB2-FULL-49-35.* The type genus for the taxon is *Candidatus* Depelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *OXYB2-FULL-49-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodiales.

Description of *Candidatus* Depetaria siciniforma sp. nov.

Candidatus Depetaria siciniforma (NL. fem. n. *siciniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9649 sp001804415*. The type genome for the species is the GenBank assembly GCA_001805685.1. The GC content of the type genome is 63.46 % and the genome length is 1.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Depetaria gen. nov.

Candidatus Depetaria (NL. fem. n. *Depetaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9649*. The type species for the genus is *Candidatus* Depetaria siciniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetariaceae.

Description of *Candidatus* Depetariaceae fam. nov.

Candidatus Depetariaceae (NL. fem. n. *Depetariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9649.* The type genus for the taxon is *Candidatus* Depetaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9649*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depetariales.

Description of *Candidatus* Depetariales ord. nov.

Candidatus Depetariales (NL. fem. n. *Depetariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9649.* The type genus for the taxon is *Candidatus* Depetaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Depetella aggeniforma sp. nov.

Candidatus Depetella aggeniforma (NL. fem. n. *aggeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp902775895*. The type genome for the species is the GenBank assembly GCA_902775895.1. The GC content of the type genome is 43.14 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Depetella gen. nov.

Candidatus Depetella (NL. fem. n. *Depetella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4285*. The type species for the genus is *Candidatus* Depetella aggeniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depetella anatritio sp. nov.

Candidatus Depetella anatritio (NL. fem. n. *anatritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp902784165*. The type genome for the species is the GenBank assembly GCA_902784165.1. The GC content of the type genome is 43.98 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Depetella demogitudo sp. nov.

Candidatus Depetella demogitudo (NL. fem. n. *demogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp900542465*. The type genome for the species is the GenBank assembly GCA_900542465.1. The GC content of the type genome is 40.94 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Depetella depupilenta sp. nov.

Candidatus Depetella depupilenta (NL. fem. n. *depupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp902764045*. The type genome for the species is the GenBank assembly GCA_902764045.1. The GC content of the type genome is 44.55 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Depetella dimidastra sp. nov.

Candidatus Depetella dimidastra (NL. fem. n. *dimidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp900314255*. The type genome for the species is the GenBank assembly GCA_900314255.1. The GC content of the type genome is 53.82 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Depetella illibibra sp. nov.

Candidatus Depetella illibibra (NL. fem. n. *illibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp902784025*. The type genome for the species is the GenBank assembly GCA_902784025.1. The GC content of the type genome is 41.32 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Depetella nugivibra sp. nov.

Candidatus Depetella nugivibra (NL. fem. n. *nugivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp002394965*. The type genome for the species is the GenBank assembly GCA_902796655.1. The GC content of the type genome is 56.0 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Depetella relapivita sp. nov.

Candidatus Depetella relapivita (NL. fem. n. *relapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp900545225*. The type genome for the species is the GenBank assembly RS_GCF_900758125.1. The GC content of the type genome is 36.88 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Depetella relenitrix sp. nov.

Candidatus Depetella relenitrix (NL. fem. n. *relenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp902781505*. The type genome for the species is the GenBank assembly GCA_902781505.1. The GC content of the type genome is 44.19 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Depetella vitabicula sp. nov.

Candidatus Depetella vitabicula (NL. fem. n. *vitabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4285 sp903789615*. The type genome for the species is the GenBank assembly GCA_903789615.1. The GC content of the type genome is 54.93 %

and the genome length is 2.45 Mbp.

Description of *Candidatus* Depetia cenacicula sp. nov.

Candidatus Depetia cenacicula (NL. fem. n. *cenacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12078 sp000991805*. The type genome for the species is the GenBank assembly GCA_003453845.1. The GC content of the type genome is 35.68 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Depetia gen. nov.

Candidatus Depetia (NL. fem. n. *Depetia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12078*. The type species for the genus is *Candidatus* Depetia cenacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Depetia immobisca sp. nov.

Candidatus Depetia immobisca (NL. fem. n. *immobisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12078 sp903906305*. The type genome for the species is the GenBank assembly GCA_903906305.1. The GC content of the type genome is 35.48 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Depetida redacimonas sp. nov.

Candidatus Depetida redacimonas (NL. fem. n. *redacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXRD01 sp009838845*. The type genome for the species is the GenBank assembly GCA_009841665.1. The GC content of the type genome is 51.03 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Depetida gen. nov.

Candidatus Depetida (NL. fem. n. *Depetida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXRD01*. The type species for the genus is *Candidatus* Depetida redacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Medimellaceae.

Description of *Candidatus* Depetosa conipago sp. nov.

Candidatus Depetosa conipago (NL. fem. n. *conipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-349 sp001940895*. The type genome for the species is the GenBank assembly GCA_001940895.1. The GC content of the type genome is 46.78 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Depetosa gen. nov.

Candidatus Depetosa (NL. fem. n. *Depetosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-349*. The type species for the genus is *Candidatus* Depetosa conipago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Depetosa gabinousia sp. nov.

Candidatus Depetosa gabinousia (NL. fem. n. *gabinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-349 sp003539515*. The type genome for the species is the GenBank assembly GCA_004555415.1. The GC content of the type genome is 47.88 %

and the genome length is 1.27 Mbp.

Description of *Candidatus* Depetula bigaribra sp. nov.

Candidatus Depetula bigaribra (NL. fem. n. *bigaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730975 sp002730975*. The type genome for the species is the GenBank assembly GCA_002341135.1. The GC content of the type genome is 50.0 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Depetula gen. nov.

Candidatus Depetula (NL. fem. n. *Depetula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2730975*. The type species for the genus is *Candidatus* Depetula bigaribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MB11C04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumiaceae.

Description of *Candidatus* Depetula lametitura sp. nov.

Candidatus Depetula lametitura (NL. fem. n. *lametitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730975 sp014382645*. The type genome for the species is the GenBank assembly GCA_014382645.1. The GC content of the type genome is 52.13 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Depicana turicitudo sp. nov.

Candidatus Depicana turicitudo (NL. fem. n. *turicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-36-11 sp001871575*. The type genome for the species is the GenBank assembly GCA_002781085.1. The GC content of the type genome is 35.62 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Depicana gen. nov.

Candidatus Depicana (NL. fem. n. *Depicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-36-11*. The type species for the genus is *Candidatus* Depicana turicitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depicaria volunousia sp. nov.

Candidatus Depicaria volunousia (NL. fem. n. *volunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2792135 sp002792135*. The type genome for the species is the GenBank assembly GCA_002792135.1. The GC content of the type genome is 34.64 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Depicaria gen. nov.

Candidatus Depicaria (NL. fem. n. *Depicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2792135*. The type species for the genus is *Candidatus* Depicaria volunousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2792135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depicariaceae.

Description of *Candidatus* Depicariaceae fam. nov.

Candidatus Depicariaceae (NL. fem. n. *Depicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2792135.* The type genus for the taxon is *Candidatus* Depicaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2792135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depicariales.

Description of *Candidatus* Depicariales ord. nov.

Candidatus Depicariales (NL. fem. n. *Depicariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2792135.* The type genus for the taxon is *Candidatus* Depicaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *GCA-2792135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Depicariae.

Description of *Candidatus* Depicariae class. nov.

Candidatus Depicariae (NL. fem. n. *c__Depicariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2792135.* The type genus for the taxon is *Candidatus* Depicaria .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Depicella denoribula sp. nov.

Candidatus Depicella denoribula (NL. fem. n. *denoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-11 sp001805615*. The type genome for the species is the GenBank assembly GCA_001805525.1. The GC content of the type genome is 47.65 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Depicella gen. nov.

Candidatus Depicella (NL. fem. n. *Depicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-48-11*. The type species for the genus is *Candidatus* Depicella denoribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Depicia cerucitia sp. nov.

Candidatus Depicia cerucitia (NL. fem. n. *cerucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-68-42 sp001872285*. The type genome for the species is the GenBank assembly GCA_002791095.1. The GC content of the type genome is 68.27 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Depicia gen. nov.

Candidatus Depicia (NL. fem. n. *Depicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-68-42*. The type species for the genus is *Candidatus* Depicia cerucitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depicida cenacivita sp. nov.

Candidatus Depicida cenacivita (NL. fem. n. *cenacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMPN01 sp014377495*. The type genome for the species is the GenBank assembly GCA_014377495.1. The GC content of the type genome is 64.44 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Depicida gen. nov.

Candidatus Depicida (NL. fem. n. *Depicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMPN01*. The type species for the genus is *Candidatus* Depicida cenacivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depicidaceae.

Description of *Candidatus* Depicidaceae fam. nov.

Candidatus Depicidaceae (NL. fem. n. *Depicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMPN01.* The type genus for the taxon is *Candidatus* Depicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACMPN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depicidales.

Description of *Candidatus* Depicidales ord. nov.

Candidatus Depicidales (NL. fem. n. *Depicidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMPN01.* The type genus for the taxon is *Candidatus* Depicida .

According to the GTDB R06-RS202, this order belongs to the class *Sericytochromatia*.

Description of *Candidatus* Depicosa ambecatio sp. nov.

Candidatus Depicosa ambecatio (NL. fem. n. *ambecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902618025*. The type genome for the species is the GenBank assembly GCA_902618025.1. The GC content of the type genome is 30.59 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Depicosa gen. nov.

Candidatus Depicosa (NL. fem. n. *Depicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA536-G10*. The type species for the genus is *Candidatus* Depicosa ambecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA536-G10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depicosaceae.

Description of *Candidatus* Depicosaceae fam. nov.

Candidatus Depicosaceae (NL. fem. n. *Depicosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AAA536-G10.* The type genus for the taxon is *Candidatus* Depicosa .

According to GTDB R06-RS202, this family belongs to the order *Puniceispirillales*.

Description of *Candidatus* Depicosa anactatio sp. nov.

Candidatus Depicosa anactatio (NL. fem. n. *anactatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902622875*. The type genome for the species is the GenBank assembly GCA_902622875.1. The GC content of the type genome is 30.99 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Depicosa annifatio sp. nov.

Candidatus Depicosa annifatio (NL. fem. n. *annifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp000421325*. The type genome for the species is the GenBank assembly GCA_000421325.1. The GC content of the type genome is 31.04 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Depicosa attegousia sp. nov.

Candidatus Depicosa attegousia (NL. fem. n. *attegousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp002691185*. The type genome for the species is the GenBank assembly GCA_002691185.1. The GC content of the type genome is 31.74 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Depicosa attoliforma sp. nov.

Candidatus Depicosa attoliforma (NL. fem. n. *attoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AAA536-G10 sp902619615*. The type genome for the species is the GenBank assembly GCA_902619615.1. The GC content of the type genome is 30.62 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depicosa bicalilenta sp. nov.

Candidatus Depicosa bicalilenta (NL. fem. n. *bicalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902543145*. The type genome for the species is the GenBank assembly GCA_902543145.1. The GC content of the type genome is 30.94 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Depicosa caduratio sp. nov.

Candidatus Depicosa caduratio (NL. fem. n. *caduratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902542765*. The type genome for the species is the GenBank assembly GCA_902542765.1. The GC content of the type genome is 30.86 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Depicosa casabitura sp. nov.

Candidatus Depicosa casabitura (NL. fem. n. *casabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902616615*. The type genome for the species is the GenBank assembly GCA_902616615.1. The GC content of the type genome is 30.69 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Depicosa cilicatica sp. nov.

Candidatus Depicosa cilicatica (NL. fem. n. *cilicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902619485*. The type genome for the species is the GenBank assembly GCA_902619485.1. The GC content of the type genome is 30.72 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Depicosa colubitudo sp. nov.

Candidatus Depicosa colubitudo (NL. fem. n. *colubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003283875*. The type genome for the species is the GenBank assembly GCA_003283875.1. The GC content of the type genome is 31.43 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Depicosa defacilega sp. nov.

Candidatus Depicosa defacilega (NL. fem. n. *defacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003282435*. The type genome for the species is the GenBank assembly GCA_003282435.1. The GC content of the type genome is 31.08 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Depicosa delucifica sp. nov.

Candidatus Depicosa delucifica (NL. fem. n. *delucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902514865*. The type genome for the species is the GenBank assembly GCA_902514865.1. The GC content of the type genome is 31.45 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Depicosa detotitio sp. nov.

Candidatus Depicosa detotitio (NL. fem. n. *detotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902528415*. The type genome for the species is the GenBank assembly GCA_902528415.1. The GC content of the type genome is 31.16 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Depicosa entomessa sp. nov.

Candidatus Depicosa entomessa (NL. fem. n. *entomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp000383115*. The type genome for the species is the GenBank assembly GCA_000383115.1. The GC content of the type genome is 30.61 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Depicosa episcisca sp. nov.

Candidatus Depicosa episcisca (NL. fem. n. *episcisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902595515*. The type genome for the species is the GenBank assembly GCA_902595515.1. The GC content of the type genome is 30.76 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Depicosa gabinibula sp. nov.

Candidatus Depicosa gabinibula (NL. fem. n. *gabinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003278095*. The type genome for the species is the GenBank assembly GCA_902558615.1. The GC content of the type genome is 30.94 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Depicosa humecisca sp. nov.

Candidatus Depicosa humecisca (NL. fem. n. *humecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp000384615*. The type genome for the species is the GenBank assembly GCA_000384615.1. The GC content of the type genome is 30.96 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depicosa ingigastra sp. nov.

Candidatus Depicosa ingigastra (NL. fem. n. *ingigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AAA536-G10 sp902517275*. The type genome for the species is the GenBank assembly GCA_902517275.1. The GC content of the type genome is 31.32 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Depicosa ingurivita sp. nov.

Candidatus Depicosa ingurivita (NL. fem. n. *ingurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003284565*. The type genome for the species is the GenBank assembly GCA_003284565.1. The GC content of the type genome is 30.87 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Depicosa inlepicella sp. nov.

Candidatus Depicosa inlepicella (NL. fem. n. *inlepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902593735*. The type genome for the species is the GenBank assembly GCA_902593735.1. The GC content of the type genome is 30.49 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Depicosa minurimonas sp. nov.

Candidatus Depicosa minurimonas (NL. fem. n. *minurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902598805*. The type genome for the species is the GenBank assembly GCA_902598805.1. The GC content of the type genome is 31.11 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Depicosa obfusitica sp. nov.

Candidatus Depicosa obfusitica (NL. fem. n. *obfusitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902589185*. The type genome for the species is the GenBank assembly GCA_902589185.1. The GC content of the type genome is 30.86 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Depicosa papililenta sp. nov.

Candidatus Depicosa papililenta (NL. fem. n. *papililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902592615*. The type genome for the species is the GenBank assembly GCA_902592615.1. The GC content of the type genome is 30.82 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Depicosa pimenimonas sp. nov.

Candidatus Depicosa pimenimonas (NL. fem. n. *pimenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902583415*. The type genome for the species is the GenBank assembly GCA_902583415.1. The GC content of the type genome is 30.85 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Depicosa regifitrix sp. nov.

Candidatus Depicosa regifitrix (NL. fem. n. *regifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902539895*. The type genome for the species is the GenBank assembly GCA_902539895.1. The GC content of the type genome is 30.89 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Depicosa repuriforma sp. nov.

Candidatus Depicosa repuriforma (NL. fem. n. *repuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902517815*. The type genome for the species is the GenBank assembly GCA_902517815.1. The GC content of the type genome is 30.84 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depicosa rosaritudo sp. nov.

Candidatus Depicosa rosaritudo (NL. fem. n. *rosaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902623995*. The type genome for the species is the GenBank assembly GCA_902540885.1. The GC content of the type genome is 30.91 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Depicosa ruricicella sp. nov.

Candidatus Depicosa ruricicella (NL. fem. n. *ruricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902625215*. The type genome for the species is the GenBank assembly GCA_902625215.1. The GC content of the type genome is 30.91 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Depicosa sanabitas sp. nov.

Candidatus Depicosa sanabitas (NL. fem. n. *sanabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902558885*. The type genome for the species is the GenBank assembly GCA_902558885.1. The GC content of the type genome is 30.51 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Depicosa semigimonas sp. nov.

Candidatus Depicosa semigimonas (NL. fem. n. *semigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902578805*. The type genome for the species is the GenBank assembly GCA_902578805.1. The GC content of the type genome is 30.86 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Depicosa subofousia sp. nov.

Candidatus Depicosa subofousia (NL. fem. n. *subofousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AAA536-G10 sp902529515*. The type genome for the species is the GenBank assembly GCA_902529515.1. The GC content of the type genome is 31.3 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Depicosa telefitoga sp. nov.

Candidatus Depicosa telefitoga (NL. fem. n. *telefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902619805*. The type genome for the species is the GenBank assembly GCA_902619805.1. The GC content of the type genome is 30.65 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Depicosa timeficula sp. nov.

Candidatus Depicosa timeficula (NL. fem. n. *timeficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902537945*. The type genome for the species is the GenBank assembly GCA_902537945.1. The GC content of the type genome is 30.46 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Depicosa vagabilenta sp. nov.

Candidatus Depicosa vagabilenta (NL. fem. n. *vagabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902530325*. The type genome for the species is the GenBank assembly GCA_902530325.1. The GC content of the type genome is 31.07 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Depicosa visocitio sp. nov.

Candidatus Depicosa visocitio (NL. fem. n. *visocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp902595145*. The type genome for the species is the GenBank assembly GCA_902595145.1. The GC content of the type genome is 30.53 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Depicosa vitifimonia sp. nov.

Candidatus Depicosa vitifimonia (NL. fem. n. *vitifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003282885*. The type genome for the species is the GenBank assembly GCA_902552975.1. The GC content of the type genome is 31.07 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Depicosa vitupitas sp. nov.

Candidatus Depicosa vitupitas (NL. fem. n. *vitupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003282145*. The type genome for the species is the GenBank assembly GCA_003282145.1. The GC content of the type genome is 31.06 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depicosa vivifisca sp. nov.

Candidatus Depicosa vivifisca (NL. fem. n. *vivifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA536-G10 sp003279355*. The type genome for the species is the GenBank assembly GCA_003279355.1. The GC content of the type genome is 31.41 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Depicula atropilega sp. nov.

Candidatus Depicula atropilega (NL. fem. n. *atropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp900752335*. The type genome for the species is the GenBank assembly RS_GCF_900752335.1. The GC content of the type genome is 29.51 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Depicula gen. nov.

Candidatus Depicula (NL. fem. n. *Depicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-273*. The type species for the genus is *Candidatus* Depicula atropilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Depicula baditigena sp. nov.

Candidatus Depicula baditigena (NL. fem. n. *baditigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp000438355*. The type genome for the species is the GenBank assembly GCA_900551795.1. The GC content of the type genome is 26.78 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Depicula defanatio sp. nov.

Candidatus Depicula defanatio (NL. fem. n. *defanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp003507395*. The type genome for the species is the GenBank assembly GCA_003507395.1. The GC content of the type genome is 27.53 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Depicula munimatica sp. nov.

Candidatus Depicula munimatica (NL. fem. n. *munimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp000437855*. The type genome for the species is the GenBank assembly GCA_900550535.1. The GC content of the type genome is 27.69 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Depicula risibilenta sp. nov.

Candidatus Depicula risibilenta (NL. fem. n. *risibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp902406115*. The type genome for the species is the GenBank assembly GCA_902406115.1. The GC content of the type genome is 27.91 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Depicula scellimonas sp. nov.

Candidatus Depicula scellimonas (NL. fem. n. *scellimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp900752095*. The type genome for the species is the GenBank assembly RS_GCF_900752095.1. The GC content of the type genome is 28.07 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Depicula subabago sp. nov.

Candidatus Depicula subabago (NL. fem. n. *subabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp000435755*. The type genome for the species is the GenBank assembly GCA_000435755.1. The GC content of the type genome is 28.95 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Depicula tegimisca sp. nov.

Candidatus Depicula tegimisca (NL. fem. n. *tegimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-273 sp003534295*. The type genome for the species is the GenBank assembly GCA_003534295.1. The GC content of the type genome is 27.94 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Depocana vitifimonas sp. nov.

Candidatus Depocana vitifimonas (NL. fem. n. *vitifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZO01 sp902812395*. The type genome for the species is the

GenBank assembly RS_GCF_902812395.1. The GC content of the type genome is 69.62 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Depocana gen. nov.

Candidatus Depocana (NL. fem. n. *Depocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZO01*. The type species for the genus is *Candidatus* Depocana vitifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depocaria pecunatio sp. nov.

Candidatus Depocaria pecunatio (NL. fem. n. *pecunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FD2005 sp000702525*. The type genome for the species is the GenBank assembly RS_GCF_000702525.1. The GC content of the type genome is 41.29 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Depocaria gen. nov.

Candidatus Depocaria (NL. fem. n. *Depocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FD2005*. The type species for the genus is *Candidatus* Depocaria pecunatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depocella oblanetta sp. nov.

Candidatus Depocella oblanetta (NL. fem. n. *oblanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-73-2 sp001304315*. The type genome for the species is the GenBank assembly GCA_001304315.1. The GC content of the type genome is 42.5 % and the genome length is 2.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary

sediments 16-26 cm".

Description of *Candidatus* Depocella gen. nov.

Candidatus Depocella (NL. fem. n. *Depocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-73-2*. The type species for the genus is *Candidatus* Depocella oblanetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-73-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depocellaceae.

Description of *Candidatus* Depocellaceae fam. nov.

Candidatus Depocellaceae (NL. fem. n. *Depocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-73-2.* The type genus for the taxon is *Candidatus* Depocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripellales.

Description of *Candidatus* Depocia meridedo sp. nov.

Candidatus Depocia meridedo (NL. fem. n. *meridedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp18-AA60 sp003225335*. The type genome for the species is the GenBank assembly GCA_003225335.1. The GC content of the type genome is 58.7 % and the genome length is 7.54 Mbp.

Description of *Candidatus* Depocia gen. nov.

Candidatus Depocia (NL. fem. n. *Depocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp18-AA60*. The type species for the genus is *Candidatus* Depocia meridedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomulaceae.

Description of *Candidatus* Depocida delubimonas sp. nov.

Candidatus Depocida delubimonas (NL. fem. n. *delubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPVR01 sp903868545*. The type genome for the species is the GenBank assembly GCA_903896735.1. The GC content of the type genome is 73.24 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Depocida gen. nov.

Candidatus Depocida (NL. fem. n. *Depocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPVR01*. The type species for the genus is *Candidatus* Depocida delubimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depocosa abinvetta sp. nov.

Candidatus Depocosa abinvetta (NL. fem. n. *abinvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4473 sp002389285*. The type genome for the species is the GenBank assembly GCA_002389285.1. The GC content of the type genome is 44.1 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Depocosa gen. nov.

Candidatus Depocosa (NL. fem. n. *Depocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4473*. The type species for the genus is *Candidatus* Depocosa abinvetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA4473. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depocosaceae.

Description of *Candidatus* Depocosaceae fam. nov.

Candidatus Depocosaceae (NL. fem. n. *Depocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4473.* The type genus for the taxon is *Candidatus* Depocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depocosales.

Description of *Candidatus* Depocosales ord. nov.

Candidatus Depocosales (NL. fem. n. *Depocosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4473.* The type genus for the taxon is *Candidatus* Depocosa .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Depocula milifitio sp. nov.

Candidatus Depocula milifitio (NL. fem. n. *milifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD12-FULL-39-22 sp001770205*. The type genome for the species is the GenBank assembly GCA_001771845.1. The GC content of the type genome is 39.2 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Depocula gen. nov.

Candidatus Depocula (NL. fem. n. *Depocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YD12-FULL-39-22*. The type species for the genus is *Candidatus* Depocula milifitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depopana affabousia sp. nov.

Candidatus Depopana affabousia (NL. fem. n. *affabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900754145*. The type genome for the species is the GenBank assembly RS_GCF_900754145.1. The GC content of the type genome is 45.97 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Depopana gen. nov.

Candidatus Depopana (NL. fem. n. *Depopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA737*. The type species for the genus is *Candidatus* Depopana affabousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depopana attegedo sp. nov.

Candidatus Depopana attegedo (NL. fem. n. *attegedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002315765*. The type genome for the species is the GenBank assembly GCA_002315765.1. The GC content of the type genome is 37.71 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Depopana cenotetta sp. nov.

Candidatus Depopana cenotetta (NL. fem. n. *cenotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900769375*. The type genome for the species is the GenBank assembly RS_GCF_900769375.1. The GC content of the type genome is 41.07 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Depopana cerevitrix sp. nov.

Candidatus Depopana cerevitrix (NL. fem. n. *cerevitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002297415*. The type genome for the species is the GenBank assembly GCA_002437145.1. The GC content of the type genome is 41.51 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Depopana derunitrix sp. nov.

Candidatus Depopana derunitrix (NL. fem. n. *derunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900547305*. The type genome for the species is the GenBank assembly RS_GCF_900772245.1. The GC content of the type genome is 46.35 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Depopana diluvitrix sp. nov.

Candidatus Depopana diluvitrix (NL. fem. n. *diluvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900549755*. The type genome for the species is the GenBank assembly RS_GCF_900757365.1. The GC content of the type genome is 46.02 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Depopana divulugo sp. nov.

Candidatus Depopana divulugo (NL. fem. n. *divulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002371985*. The type genome for the species is the GenBank assembly GCA_002371985.1. The GC content of the type genome is 37.66 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Depopana fiducitoga sp. nov.

Candidatus Depopana fiducitoga (NL. fem. n. *fiducitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900554525*. The type genome for the species is the GenBank assembly GCA_900554525.1. The GC content of the type genome is 47.29 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Depopana homicugo sp. nov.

Candidatus Depopana homicugo (NL. fem. n. *homicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900543215*. The type genome for the species is the GenBank assembly GCA_900543215.1. The GC content of the type genome is 43.92 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Depopana irrotitudo sp. nov.

Candidatus Depopana irrotitudo (NL. fem. n. *irrotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002451855*. The type genome for the species is the GenBank assembly GCA_002451855.1. The GC content of the type genome is 44.66 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Depopana molecisca sp. nov.

Candidatus Depopana molecisca (NL. fem. n. *molecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002363095*. The type genome for the species is the GenBank assembly GCA_003521945.1. The GC content of the type genome is 42.61 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Depopana occenibula sp. nov.

Candidatus Depopana occenibula (NL. fem. n. *occenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA737 sp002315685*. The type genome for the species is the GenBank assembly GCA_002315685.1. The GC content of the type genome is 38.56 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Depopana omnipibra sp. nov.

Candidatus Depopana omnipibra (NL. fem. n. *omnipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900768035*. The type genome for the species is the GenBank assembly RS_GCF_900768035.1. The GC content of the type genome is 38.08 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Depopana rubicilenta sp. nov.

Candidatus Depopana rubicilenta (NL. fem. n. *rubicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900549055*. The type genome for the species is the GenBank assembly GCA_004554955.1. The GC content of the type genome is 47.74 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Depopana sarabisca sp. nov.

Candidatus Depopana sarabisca (NL. fem. n. *sarabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900547445*. The type genome for the species is the GenBank assembly RS_GCF_900756075.1. The GC content of the type genome is 44.85 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Depopana subofatio sp. nov.

Candidatus Depopana subofatio (NL. fem. n. *subofatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp900547095*. The type genome for the species is the GenBank assembly GCA_900547095.1. The GC content of the type genome is 40.49 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Depopana turilatica sp. nov.

Candidatus Depopana turilatica (NL. fem. n. *turilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA737 sp002431945*. The type genome for the species is the GenBank assembly GCA_900545045.1. The GC content of the type genome is 45.22 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Depoparia assififorma sp. nov.

Candidatus Depoparia assififorma (NL. fem. n. *assififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG643 sp902782705*. The type genome for the species is the GenBank assembly GCA_902782705.1. The GC content of the type genome is 55.82 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Depoparia gen. nov.

Candidatus Depoparia (NL. fem. n. *Depoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG643*. The type species for the genus is *Candidatus* Depoparia assififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depoparia obrigibula sp. nov.

Candidatus Depoparia obrigibula (NL. fem. n. *obrigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG643 sp902778455*. The type genome for the species is the GenBank assembly GCA_902778455.1. The GC content of the type genome is 54.6 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Depoparia semapilenta sp. nov.

Candidatus Depoparia semapilenta (NL. fem. n. *semapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG643 sp900321035*. The type genome for the species is the GenBank assembly GCA_902762255.1. The GC content of the type genome is 56.75 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Depoparia tirunitura sp. nov.

Candidatus Depoparia tirunitura (NL. fem. n. *tirunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG643 sp902777615*. The type genome for the species is the GenBank assembly GCA_902777615.1. The GC content of the type genome is 55.58 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Depopia exsatitoga sp. nov.

Candidatus Depopia exsatitoga (NL. fem. n. *exsatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPD01 sp903928075*. The type genome for the species is the GenBank assembly GCA_903928075.1. The GC content of the type genome is 43.29 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Depopia gen. nov.

Candidatus Depopia (NL. fem. n. *Depopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYPD01*. The type species for the genus is *Candidatus* Depopia exsatitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2-FULL-39-29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilanaceae.

Description of *Candidatus* Depopia videlisca sp. nov.

Candidatus Depopia videlisca (NL. fem. n. *videlisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYPD01 sp903891415*. The type genome for the species is the GenBank assembly GCA_903891415.1. The GC content of the type genome is 44.71 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Depopida arundilenta sp. nov.

Candidatus Depopida arundilenta (NL. fem. n. *arundilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp004211905*. The type genome for the species is the GenBank assembly GCA_004211905.1. The GC content of the type genome is 44.28 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Depopida gen. nov.

Candidatus Depopida (NL. fem. n. *Depopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HTCC2207*. The type species for the genus is *Candidatus* Depopida arundilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depopida avoncicula sp. nov.

Candidatus Depopida avoncicula (NL. fem. n. *avoncicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002313335*. The type genome for the species is the GenBank assembly GCA_002313335.1. The GC content of the type genome is 44.44 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Depopida cerevatio sp. nov.

Candidatus Depopida cerevatio (NL. fem. n. *cerevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002382445*. The type genome for the species is the

GenBank assembly GCA_002382445.1. The GC content of the type genome is 46.02 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Depopida colipetta sp. nov.

Candidatus Depopida colipetta (NL. fem. n. *colipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp001438605*. The type genome for the species is the GenBank assembly GCA_002340805.1. The GC content of the type genome is 51.64 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Depopida decamugo sp. nov.

Candidatus Depopida decamugo (NL. fem. n. *decamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002334915*. The type genome for the species is the GenBank assembly GCA_002334915.1. The GC content of the type genome is 51.02 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depopida decititio sp. nov.

Candidatus Depopida decititio (NL. fem. n. *decititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp000153445*. The type genome for the species is the GenBank assembly RS_GCF_000153445.1. The GC content of the type genome is 49.39 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Depopida depasibula sp. nov.

Candidatus Depopida depasibula (NL. fem. n. *depasibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002335945*. The type genome for the species is the GenBank assembly GCA_002480055.1. The GC content of the type genome is 49.08 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Depopida ficulessa sp. nov.

Candidatus Depopida ficulessa (NL. fem. n. *ficulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp003491845*. The type genome for the species is the GenBank assembly GCA_003491845.1. The GC content of the type genome is 43.42 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Depopida indiratica sp. nov.

Candidatus Depopida indiratica (NL. fem. n. *indiratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp000511875*. The type genome for the species is the GenBank assembly RS_GCF_000511875.1. The GC content of the type genome is 50.03 % and the genome length is 2.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mediterranean seawater".

Description of *Candidatus* Depopida inrepitura sp. nov.

Candidatus Depopida inrepitura (NL. fem. n. *inrepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002685715*. The type genome for the species is the GenBank assembly GCA_002685715.1. The GC content of the type genome is 47.66 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Depopida lavacitica sp. nov.

Candidatus Depopida lavacitica (NL. fem. n. *lavacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002457245*. The type genome for the species is the GenBank assembly GCA_002457245.1. The GC content of the type genome is 42.44 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Depopida nefanicula sp. nov.

Candidatus Depopida nefanicula (NL. fem. n. *nefanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp014381985*. The type genome for the species is the GenBank assembly GCA_014381985.1. The GC content of the type genome is 45.88 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Depopida refocax sp. nov.

Candidatus Depopida refocax (NL. fem. n. *refocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002378645*. The type genome for the species is the GenBank assembly GCA_002378645.1. The GC content of the type genome is 51.06 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Depopida relapifica sp. nov.

Candidatus Depopida relapifica (NL. fem. n. *relapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002469845*. The type genome for the species is the GenBank assembly GCA_002469845.1. The GC content of the type genome is 42.18 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Depopida utputigena sp. nov.

Candidatus Depopida utputigena (NL. fem. n. *utputigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp012960115*. The type genome for the species is the GenBank assembly GCA_012960115.1. The GC content of the type genome is 46.11 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Depopida xenopitica sp. nov.

Candidatus Depopida xenopitica (NL. fem. n. *xenopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2207 sp002685195*. The type genome for the species is the GenBank assembly GCA_002685195.1. The GC content of the type genome is 44.32 %

and the genome length is 1.9 Mbp.

Description of *Candidatus* Depoposa unetvousia sp. nov.

Candidatus Depoposa unetvousia (NL. fem. n. *unetvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PH28-bin88 sp000987045*. The type genome for the species is the GenBank assembly GCA_000987045.1. The GC content of the type genome is 54.58 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "anaerobic enrichment culture derived from coal bed methane formation water".

Description of *Candidatus* Depoposa gen. nov.

Candidatus Depoposa (NL. fem. n. *Depoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PH28-bin88*. The type species for the genus is *Candidatus* Depoposa unetvousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PH28-bin88*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depoposaceae.

Description of *Candidatus* Depoposaceae fam. nov.

Candidatus Depoposaceae (NL. fem. n. *Depoposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PH28-bin88.* The type genus for the taxon is *Candidatus* Depoposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *PH28-bin88*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depoposales.

Description of *Candidatus* Depoposales ord. nov.

Candidatus Depoposales (NL. fem. n. *Depoposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PH28-bin88.* The type genus for the taxon is *Candidatus* Depoposa .

According to the GTDB R06-RS202, this order belongs to the class *Moorellia*.

Description of *Candidatus* Depubana secunilenta sp. nov.

Candidatus Depubana secunilenta (NL. fem. n. *secunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-80-60-11 sp002779455*. The type genome for the species is the GenBank assembly GCA_002779455.1. The GC content of the type genome is 59.82 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Depubana gen. nov.

Candidatus Depubana (NL. fem. n. *Depubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-80-60-11*. The type species for the genus is *Candidatus* Depubana secunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-60-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubanaceae.

Description of *Candidatus* Depubanaceae fam. nov.

Candidatus Depubanaceae (NL. fem. n. *Depubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-80-60-11.* The type genus for the taxon is *Candidatus* Depubana .

According to GTDB R06-RS202, this family belongs to the order *Desulfobaccales*.

Description of *Candidatus* Depubaria nubigetta sp. nov.

Candidatus Depubaria nubigetta (NL. fem. n. *nubigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2202 sp002327905*. The type genome for the species is the GenBank assembly GCA_002327905.1. The GC content of the type genome is 38.09 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Depubaria gen. nov.

Candidatus Depubaria (NL. fem. n. *Depubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2202*. The type species for the genus is *Candidatus* Depubaria nubigetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *32-111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gasifiaceae.

Description of *Candidatus* Depubella fetulatio sp. nov.

Candidatus Depubella fetulatio (NL. fem. n. *fetulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *N075bin58 sp004356825*. The type genome for the species is the GenBank assembly GCA_004356135.1. The GC content of the type genome is 44.26 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Depubella gen. nov.

Candidatus Depubella (NL. fem. n. *Depubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *N075bin58*. The type species for the genus is *Candidatus* Depubella fetulatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CR04bin15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cinefosaceae.

Description of *Candidatus* Depubia depocilenta sp. nov.

Candidatus Depubia depocilenta (NL. fem. n. *depocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8154 sp003456095*. The type genome for the species is the GenBank assembly GCA_003456095.1. The GC content of the type genome is 51.93 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Depubia gen. nov.

Candidatus Depubia (NL. fem. n. *Depubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8154*. The type species for the genus is *Candidatus* Depubia depocilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Depubiaceae fam. nov.

Candidatus Depubiaceae (NL. fem. n. *Depubiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8154.* The type genus for the taxon is *Candidatus* Depubia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depelidales.

Description of *Candidatus* Depubia negidousia sp. nov.

Candidatus Depubia negidousia (NL. fem. n. *negidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8154 sp007122565*. The type genome for the species is the GenBank assembly GCA_007122565.1. The GC content of the type genome is 48.29 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Depubia ossaricella sp. nov.

Candidatus Depubia ossaricella (NL. fem. n. *ossaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8154 sp007131175*. The type genome for the species is the GenBank assembly GCA_007131175.1. The GC content of the type genome is 46.41 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Depubida monocitio sp. nov.

Candidatus Depubida monocitio (NL. fem. n. *monocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMX01 sp004555605*. The type genome for the species is the GenBank assembly GCA_004555605.1. The GC content of the type genome is 57.75 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Depubida gen. nov.

Candidatus Depubida (NL. fem. n. *Depubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAMX01*. The type species for the genus is *Candidatus* Depubida monocitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAMX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubidaceae.

Description of *Candidatus* Depubidaceae fam. nov.

Candidatus Depubidaceae (NL. fem. n. *Depubidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QAMX01.* The type genus for the taxon is *Candidatus* Depubida .

According to GTDB R06-RS202, this family belongs to the order *Oscillospirales*.

Description of *Candidatus* Depubida mutabedo sp. nov.

Candidatus Depubida mutabedo (NL. fem. n. *mutabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMX01 sp003149835*. The type genome for the species is the GenBank assembly GCA_003149835.1. The GC content of the type genome is 58.11 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Depubosa peniciforma sp. nov.

Candidatus Depubosa peniciforma (NL. fem. n. *peniciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNGX01 sp013334825*. The type genome for the species is the GenBank assembly GCA_013334825.1. The GC content of the type genome is 43.3 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Depubosa gen. nov.

Candidatus Depubosa (NL. fem. n. *Depubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNGX01*. The type species for the genus is *Candidatus* Depubosa peniciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACNGX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubosaceae.

Description of *Candidatus* Depubosaceae fam. nov.

Candidatus Depubosaceae (NL. fem. n. *Depubosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACNGX01.* The type genus for the taxon is *Candidatus* Depubosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Depubosa resalax sp. nov.

Candidatus Depubosa resalax (NL. fem. n. *resalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNGX01 sp014383885*. The type genome for the species is the GenBank assembly GCA_014383885.1. The GC content of the type genome is 46.08 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Depupana ammodax sp. nov.

Candidatus Depupana ammodax (NL. fem. n. *ammodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001004085*. The type genome for the species is the GenBank assembly GCA_001004085.1. The GC content of the type genome is 50.82 % and the genome length is 0.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Depupana gen. nov.

Candidatus Depupana (NL. fem. n. *Depupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5004*. The type species for the genus is *Candidatus* Depupana ammodax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Depupana democicula sp. nov.

Candidatus Depupana democicula (NL. fem. n. *democicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001824255*. The type genome for the species is the GenBank assembly GCA_001824255.1. The GC content of the type genome is 51.52 % and the genome length is 0.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Depupana derunibra sp. nov.

Candidatus Depupana derunibra (NL. fem. n. *derunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001824005*. The type genome for the species is the GenBank assembly GCA_001824005.1. The GC content of the type genome is 47.8 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Depupana detosifica sp. nov.

Candidatus Depupana detosifica (NL. fem. n. *detosifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001825155*. The type genome for the species is the GenBank assembly GCA_001824055.1. The GC content of the type genome is 47.62 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Depupana nitelastra sp. nov.

Candidatus Depupana nitelastra (NL. fem. n. *nitelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001824135*. The type genome for the species is the GenBank assembly GCA_001824135.1. The GC content of the type genome is 38.93 % and the genome length is 0.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Depupana pedifilenta sp. nov.

Candidatus Depupana pedifilenta (NL. fem. n. *pedifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001825475*. The type genome for the species is the GenBank assembly GCA_001825475.1. The GC content of the type genome is 42.77 % and the genome length is 0.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Depupana sanabitrix sp. nov.

Candidatus Depupana sanabitrix (NL. fem. n. *sanabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp001825315*. The type genome for the species is the

GenBank assembly GCA_001823715.1. The GC content of the type genome is 42.86 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Depupana vinacitio sp. nov.

Candidatus Depupana vinacitio (NL. fem. n. *vinacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp009691335*. The type genome for the species is the GenBank assembly GCA_009691335.1. The GC content of the type genome is 43.85 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Depupana volubibra sp. nov.

Candidatus Depupana volubibra (NL. fem. n. *volubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5004 sp002787855*. The type genome for the species is the GenBank assembly GCA_002787855.1. The GC content of the type genome is 42.15 % and the genome length is 0.44 Mbp.

Description of *Candidatus* Depuparia inmodibula sp. nov.

Candidatus Depuparia inmodibula (NL. fem. n. *inmodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-336 sp003566375*. The type genome for the species is the GenBank assembly GCA_003566375.1. The GC content of the type genome is 60.64 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Depuparia gen. nov.

Candidatus Depuparia (NL. fem. n. *Depuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-336*. The type species for the genus is *Candidatus* Depuparia inmodibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

T3Sed10-336. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupariaceae.

Description of *Candidatus* Depupariaceae fam. nov.

Candidatus Depupariaceae (NL. fem. n. *Depupariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T3Sed10-336.* The type genus for the taxon is *Candidatus* Depuparia .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Depupella nefanimonia sp. nov.

Candidatus Depupella nefanimonia (NL. fem. n. *nefanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8416 sp002428045*. The type genome for the species is the GenBank assembly GCA_002428045.1. The GC content of the type genome is 58.25 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Depupella gen. nov.

Candidatus Depupella (NL. fem. n. *Depupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8416*. The type species for the genus is *Candidatus* Depupella nefanimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupellaceae.

Description of *Candidatus* Depupellaceae fam. nov.

Candidatus Depupellaceae (NL. fem. n. *Depupellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8416.* The type genus for the taxon is *Candidatus* Depupella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Depupellales.

Description of *Candidatus* Depupellales ord. nov.

Candidatus Depupellales (NL. fem. n. *Depupellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8416.* The type genus for the taxon is *Candidatus* Depupella .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Depupia petulicella sp. nov.

Candidatus Depupia petulicella (NL. fem. n. *petulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-64-22 sp001803795*. The type genome for the species is the GenBank assembly GCA_001803795.1. The GC content of the type genome is 64.57 % and the genome length is 2.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Depupia gen. nov.

Candidatus Depupia (NL. fem. n. *Depupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-64-22*. The type species for the genus is *Candidatus* Depupia petulicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depupiaceae.

Description of *Candidatus* Depupiaceae fam. nov.

Candidatus Depupiaceae (NL. fem. n. *Depupiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-22.* The type genus for the taxon is *Candidatus* Depupia .

According to the original version of GTDB R06-RS202, this family belongs to the order

RBG-16-64-22. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupiales.

Description of *Candidatus* Depupiales ord. nov.

Candidatus Depupiales (NL. fem. n. *Depupiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-22.* The type genus for the taxon is *Candidatus* Depupia .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-16-64-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Depupiae.

Description of *Candidatus* Depupiae class. nov.

Candidatus Depupiae (NL. fem. n. *c__Depupiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-64-22.* The type genus for the taxon is *Candidatus* Depupia .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospirota*.

Description of *Candidatus* Depupida octipilenta sp. nov.

Candidatus Depupida octipilenta (NL. fem. n. *octipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEC01 sp013287265*. The type genome for the species is the GenBank assembly GCA_013287265.1. The GC content of the type genome is 28.47 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Depupida gen. nov.

Candidatus Depupida (NL. fem. n. *Depupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEC01*. The type species for the genus is *Candidatus* Depupida octipilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDEC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Depupidaceae.

Description of *Candidatus* Depupidaceae fam. nov.

Candidatus Depupidaceae (NL. fem. n. *Depupidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDEC01.* The type genus for the taxon is *Candidatus* Depupida .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Depuposa adlacibra sp. nov.

Candidatus Depuposa adlacibra (NL. fem. n. *adlacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6915 sp002450975*. The type genome for the species is the GenBank assembly GCA_002450975.1. The GC content of the type genome is 53.32 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Depuposa gen. nov.

Candidatus Depuposa (NL. fem. n. *Depuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6915*. The type species for the genus is *Candidatus* Depuposa adlacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6915*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depuposaceae.

Description of *Candidatus* Depuposaceae fam. nov.

Candidatus Depuposaceae (NL. fem. n. *Depuposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6915.* The type genus for the taxon is *Candidatus* Depuposa .

According to GTDB R06-RS202, this family belongs to the order *Thiohalomonadales_A*.

Description of *Candidatus* Depupula perabifica sp. nov.

Candidatus Depupula perabifica (NL. fem. n. *perabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2121 sp002331385*. The type genome for the species is the GenBank assembly GCA_002331385.1. The GC content of the type genome is 61.95 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Depupula gen. nov.

Candidatus Depupula (NL. fem. n. *Depupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2121*. The type species for the genus is *Candidatus* Depupula perabifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Derecana adsusitio sp. nov.

Candidatus Derecana adsusitio (NL. fem. n. *adsusitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp001603425*. The type genome for the species is the GenBank assembly GCA_001603425.1. The GC content of the type genome is 33.62 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Derecana gen. nov.

Candidatus Derecana (NL. fem. n. *Derecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bact-08*. The type species for the genus is *Candidatus* Derecana adsusitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Derecana arcubastra sp. nov.

Candidatus Derecana arcubastra (NL. fem. n. *arcubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002425935*. The type genome for the species is the GenBank assembly GCA_002425935.1. The GC content of the type genome is 41.95 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Derecana culigessa sp. nov.

Candidatus Derecana culigessa (NL. fem. n. *culigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp003520315*. The type genome for the species is the GenBank assembly GCA_003520315.1. The GC content of the type genome is 37.97 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Derecana delacessa sp. nov.

Candidatus Derecana delacessa (NL. fem. n. *delacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp003542575*. The type genome for the species is the GenBank assembly GCA_003542255.1. The GC content of the type genome is 39.67 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Derecana delecisca sp. nov.

Candidatus Derecana delecisca (NL. fem. n. *delecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp001897515*. The type genome for the species is the GenBank assembly GCA_001897515.1. The GC content of the type genome is 41.11 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Derecana delucedo sp. nov.

Candidatus Derecana delucedo (NL. fem. n. *delucedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002842695*. The type genome for the species is the GenBank assembly GCA_002842695.1. The GC content of the type genome is 42.34 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Derecana dicabigena sp. nov.

Candidatus Derecana dicabigena (NL. fem. n. *dicabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002842655*. The type genome for the species is the GenBank assembly GCA_002842655.1. The GC content of the type genome is 43.31 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Derecana exadvicula sp. nov.

Candidatus Derecana exadvicula (NL. fem. n. *exadvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp001769195*. The type genome for the species is the GenBank assembly GCA_001769195.1. The GC content of the type genome is 39.81 % and the genome length is 3.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Derecana faticastra sp. nov.

Candidatus Derecana faticastra (NL. fem. n. *faticastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp003513895*. The type genome for the species is the GenBank assembly GCA_003513895.1. The GC content of the type genome is 39.88 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Derecana incivicella sp. nov.

Candidatus Derecana incivicella (NL. fem. n. *incivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002842465*. The type genome for the species is the GenBank assembly GCA_002842465.1. The GC content of the type genome is 39.62 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Derecana inordugo sp. nov.

Candidatus Derecana inordugo (NL. fem. n. *inordugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp000473305*. The type genome for the species is the GenBank assembly RS_GCF_000473305.1. The GC content of the type genome is 41.49 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Derecana menapitia sp. nov.

Candidatus Derecana menapitia (NL. fem. n. *menapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002842515*. The type genome for the species is the GenBank assembly GCA_001769545.1. The GC content of the type genome is 41.01 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Derecana recocibra sp. nov.

Candidatus Derecana recocibra (NL. fem. n. *recocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp002428635*. The type genome for the species is the GenBank assembly GCA_002428635.1. The GC content of the type genome is 41.36 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Derecana saburentia sp. nov.

Candidatus Derecana saburentia (NL. fem. n. *saburentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bact-08 sp002840895*. The type genome for the species is the GenBank assembly GCA_002840895.1. The GC content of the type genome is 40.39 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Derecana telegatio sp. nov.

Candidatus Derecana telegatio (NL. fem. n. *telegatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp009929175*. The type genome for the species is the GenBank assembly GCA_009929175.1. The GC content of the type genome is 44.67 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Derecana thapsifica sp. nov.

Candidatus Derecana thapsifica (NL. fem. n. *thapsifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-08 sp013335275*. The type genome for the species is the GenBank assembly GCA_013335275.1. The GC content of the type genome is 41.04 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Derecella delacimonas sp. nov.

Candidatus Derecella delacimonas (NL. fem. n. *delacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *79-D21 sp002436015*. The type genome for the species is the GenBank assembly GCA_002436015.1. The GC content of the type genome is 58.66 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Derecella gen. nov.

Candidatus Derecella (NL. fem. n. *Derecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *79-D21*. The type species for the genus is *Candidatus* Derecella delacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *79-D21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Derecellaceae.

Description of *Candidatus* Derecellaceae fam. nov.

Candidatus Derecellaceae (NL. fem. n. *Derecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *79-D21.* The type genus for the taxon is *Candidatus* Derecella .

According to GTDB R06-RS202, this family belongs to the order *Synergistales*.

Description of *Candidatus* Derecella dimacilega sp. nov.

Candidatus Derecella dimacilega (NL. fem. n. *dimacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *79-D21 sp000402835*. The type genome for the species is the GenBank assembly GCA_012517495.1. The GC content of the type genome is 60.38 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Derecella extoritio sp. nov.

Candidatus Derecella extoritio (NL. fem. n. *extoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *79-D21 sp012517195*. The type genome for the species is the GenBank assembly GCA_012517195.1. The GC content of the type genome is 59.02 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Derecella vinacitas sp. nov.

Candidatus Derecella vinacitas (NL. fem. n. *vinacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *79-D21 sp002432945*. The type genome for the species is the GenBank assembly GCA_002432705.1. The GC content of the type genome is 56.05 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Derecia delacitia sp. nov.

Candidatus Derecia delacitia (NL. fem. n. *delacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-36-11 sp002781265*. The type genome for the species is the GenBank assembly GCA_002790115.1. The GC content of the type genome is 35.98 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Derecia gen. nov.

Candidatus Derecia (NL. fem. n. *Derecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-36-11*. The type species for the genus is *Candidatus* Derecia delacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-36-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dereciaceae.

Description of *Candidatus* Dereciaceae fam. nov.

Candidatus Dereciaceae (NL. fem. n. *Dereciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-36-11*. The type genus for the taxon is *Candidatus* Derecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Derecida adnaribula sp. nov.

Candidatus Derecida adnaribula (NL. fem. n. *adnaribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp009699565*. The type genome for the species is the GenBank assembly GCA_009699565.1. The GC content of the type genome is 64.83 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Derecida gen. nov.

Candidatus Derecida (NL. fem. n. *Derecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-60-MAGs163*. The type species for the genus is *Candidatus* Derecida adnaribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Derecida alsulitudo sp. nov.

Candidatus Derecida alsulitudo (NL. fem. n. *alsulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp009699615*. The type genome for the species is the GenBank assembly GCA_009699615.1. The GC content of the type genome is 63.97 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Derecida dimaditas sp. nov.

Candidatus Derecida dimaditas (NL. fem. n. *dimaditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp005798685*. The type genome for the species is the GenBank assembly GCA_005772845.1. The GC content of the type genome is 64.11 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Derecida fidenisca sp. nov.

Candidatus Derecida fidenisca (NL. fem. n. *fidenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp009699915*. The type genome for the species is the GenBank assembly GCA_009699915.1. The GC content of the type genome is 69.7 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Derecida manomitica sp. nov.

Candidatus Derecida manomitica (NL. fem. n. *manomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp903959665*. The type genome for the species is the GenBank assembly GCA_903934105.1. The GC content of the type genome is 64.8 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Derecida nivomax sp. nov.

Candidatus Derecida nivomax (NL. fem. n. *nivomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp009699245*. The type genome for the species is the GenBank assembly GCA_009699245.1. The GC content of the type genome is 71.1 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Derecida peradivita sp. nov.

Candidatus Derecida peradivita (NL. fem. n. *peradivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp903953065*. The type genome for the species is the GenBank assembly GCA_903953065.1. The GC content of the type genome is 64.43 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Derecida vinacitica sp. nov.

Candidatus Derecida vinacitica (NL. fem. n. *vinacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-60-MAGs163 sp903821395*. The type genome for the species is the GenBank assembly GCA_903842875.1. The GC content of the type genome is 62.88 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Derecida xeramitrix sp. nov.

Candidatus Derecida xeramitrix (NL. fem. n. *xeramitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F1-60-MAGs163 sp903830015*. The type genome for the species is the GenBank assembly GCA_903912375.1. The GC content of the type genome is 70.96 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Derecosa imbecax sp. nov.

Candidatus Derecosa imbecax (NL. fem. n. *imbecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTDR01 sp011363735*. The type genome for the species is the GenBank assembly GCA_011363735.1. The GC content of the type genome is 31.86 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Derecosa gen. nov.

Candidatus Derecosa (NL. fem. n. *Derecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTDR01*. The type species for the genus is *Candidatus* Derecosa imbecax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTDR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derecosaceae.

Description of *Candidatus* Derecosaceae fam. nov.

Candidatus Derecosaceae (NL. fem. n. *Derecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTDR01*. The type genus for the taxon is *Candidatus* Derecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homulosales.

Description of *Candidatus* Derecula indipimonas sp. nov.

Candidatus Derecula indipimonas (NL. fem. n. *indipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5609 sp002067975*. The type genome for the species is the GenBank assembly GCA_002067975.1. The GC content of the type genome is 51.11 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Derecula gen. nov.

Candidatus Derecula (NL. fem. n. *Derecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5609*. The type species for the genus is *Candidatus* Derecula indipimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Derecula octobilenta sp. nov.

Candidatus Derecula octobilenta (NL. fem. n. *octobilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5609 sp002478225*. The type genome for the species is the GenBank assembly GCA_002478225.1. The GC content of the type genome is 50.29 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Derecula paropatio sp. nov.

Candidatus Derecula paropatio (NL. fem. n. *paropatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5609 sp002428485*. The type genome for the species is the GenBank assembly GCA_002428485.1. The GC content of the type genome is 50.21 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Derecula semunitas sp. nov.

Candidatus Derecula semunitas (NL. fem. n. *semunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5609 sp002418945*. The type genome for the species is the GenBank assembly GCA_002418945.1. The GC content of the type genome is 51.55 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Derelana adnecastra sp. nov.

Candidatus Derelana adnecastra (NL. fem. n. *adnecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1724 sp002315885*. The type genome for the species is the GenBank assembly GCA_002315885.1. The GC content of the type genome is 55.43 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Derelana gen. nov.

Candidatus Derelana (NL. fem. n. *Derelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1724*. The type species for the genus is *Candidatus* Derelana adnecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Derelana alsisastra sp. nov.

Candidatus Derelana alsisastra (NL. fem. n. *alsisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1724 sp900771165*. The type genome for the species is the GenBank assembly RS_GCF_900771165.1. The GC content of the type genome is 62.56 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Derelana cacomago sp. nov.

Candidatus Derelana cacomago (NL. fem. n. *cacomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1724 sp900548225*. The type genome for the species is the GenBank assembly GCA_004557165.1. The GC content of the type genome is 59.21 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Derelaria recorentia sp. nov.

Candidatus Derelaria recorentia (NL. fem. n. *recorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cfx3-03 sp013390605*. The type genome for the species is the GenBank assembly GCA_013390605.1. The GC content of the type genome is 36.77 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Derelaria gen. nov.

Candidatus Derelaria (NL. fem. n. *Derelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cfx3-03*. The type species for the genus is *Candidatus* Derelaria recorentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Cfx3-03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derelariaceae.

Description of *Candidatus* Derelariaceae fam. nov.

Candidatus Derelariaceae (NL. fem. n. *Derelariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Cfx3-03.* The type genus for the taxon is *Candidatus* Derelaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Derelella brabribula sp. nov.

Candidatus Derelella brabribula (NL. fem. n. *brabribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTD01 sp902805775*. The type genome for the species is the GenBank assembly GCA_902805775.1. The GC content of the type genome is 74.68 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Derelella gen. nov.

Candidatus Derelella (NL. fem. n. *Derelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTD01*. The type species for the genus is *Candidatus* Derelella brabribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCTD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derelellaceae.

Description of *Candidatus* Derelellaceae fam. nov.

Candidatus Derelellaceae (NL. fem. n. *Derelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCTD01.* The type genus for the taxon is *Candidatus* Derelella .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Derelella scombigena sp. nov.

Candidatus Derelella scombigena (NL. fem. n. *scombigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTD01 sp902805805*. The type genome for the species is the GenBank assembly GCA_902805805.1. The GC content of the type genome is 74.49 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Derelella semiditoga sp. nov.

Candidatus Derelella semiditoga (NL. fem. n. *semiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTD01 sp004299215*. The type genome for the species is the GenBank assembly GCA_004299215.1. The GC content of the type genome is 73.45 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Derelia futatibula sp. nov.

Candidatus Derelia futatibula (NL. fem. n. *futatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6595 sp002433595*. The type genome for the species is the GenBank assembly GCA_002433595.1. The GC content of the type genome is 44.9 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Derelia gen. nov.

Candidatus Derelia (NL. fem. n. *Derelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6595*. The type species for the genus is *Candidatus* Derelia futatibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dereliaceae.

Description of *Candidatus* Dereliaceae fam. nov.

Candidatus Dereliaceae (NL. fem. n. *Dereliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6595.* The type genus for the taxon is *Candidatus* Derelia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dereliales.

Description of *Candidatus* Dereliales ord. nov.

Candidatus Dereliales (NL. fem. n. *Dereliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6595.* The type genus for the taxon is *Candidatus* Derelia .

According to the GTDB R06-RS202, this order belongs to the class *Marinamargulisbacteria*.

Description of *Candidatus* Derelida biverugo sp. nov.

Candidatus Derelida biverugo (NL. fem. n. *biverugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp009885205*. The type genome for the species is the GenBank assembly GCA_009885205.1. The GC content of the type genome is 35.58 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Derelida gen. nov.

Candidatus Derelida (NL. fem. n. *Derelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12158*. The type species for the genus is *Candidatus* Derelida biverugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Derelida casabifica sp. nov.

Candidatus Derelida casabifica (NL. fem. n. *casabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp001873665*. The type genome for the species is the GenBank assembly GCA_002791175.1. The GC content of the type genome is 35.38 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Derelida cisalentia sp. nov.

Candidatus Derelida cisalentia (NL. fem. n. *cisalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp000989305*. The type genome for the species is the GenBank assembly GCA_000992285.1. The GC content of the type genome is 37.9 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Derelida dilemitura sp. nov.

Candidatus Derelida dilemitura (NL. fem. n. *dilemitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp002780135*. The type genome for the species is the GenBank assembly GCA_002792215.1. The GC content of the type genome is 40.04 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Derelida eclecitica sp. nov.

Candidatus Derelida eclecitica (NL. fem. n. *eclecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp002304845*. The type genome for the species is the GenBank assembly GCA_002304845.1. The GC content of the type genome is 38.44 % and the genome length is 0.51 Mbp.

Description of *Candidatus* Derelida pavimitica sp. nov.

Candidatus Derelida pavimitica (NL. fem. n. *pavimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12158 sp002402535*. The type genome for the species is the GenBank assembly GCA_002402535.1. The GC content of the type genome is 36.81 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Derelosa penicifica sp. nov.

Candidatus Derelosa penicifica (NL. fem. n. *penicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10003 sp003514455*. The type genome for the species is the GenBank assembly GCA_000996735.1. The GC content of the type genome is 41.5 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Derelosa gen. nov.

Candidatus Derelosa (NL. fem. n. *Derelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10003*. The type species for the genus is *Candidatus* Derelosa penicifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10003*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derelosaceae.

Description of *Candidatus* Derelosaceae fam. nov.

Candidatus Derelosaceae (NL. fem. n. *Derelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10003.* The type genus for the taxon is *Candidatus* Derelosa .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Derelula cobaledo sp. nov.

Candidatus Derelula cobaledo (NL. fem. n. *cobaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2231 sp003500765*. The type genome for the species is the GenBank assembly GCA_003500765.1. The GC content of the type genome is 62.95 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Derelula gen. nov.

Candidatus Derelula (NL. fem. n. *Derelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2231*. The type species for the genus is *Candidatus* Derelula cobaledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Derelula dilecessa sp. nov.

Candidatus Derelula dilecessa (NL. fem. n. *dilecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2231 sp009773155*. The type genome for the species is the

GenBank assembly GCA_009773155.1. The GC content of the type genome is 62.86 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Derunana culigivita sp. nov.

Candidatus Derunana culigivita (NL. fem. n. *culigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8898 sp002402755*. The type genome for the species is the GenBank assembly GCA_003452155.1. The GC content of the type genome is 69.69 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Derunana gen. nov.

Candidatus Derunana (NL. fem. n. *Derunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8898*. The type species for the genus is *Candidatus* Derunana culigivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8898*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunanaceae.

Description of *Candidatus* Derunanaceae fam. nov.

Candidatus Derunanaceae (NL. fem. n. *Derunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8898.* The type genus for the taxon is *Candidatus* Derunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8890*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sacopariales.

Description of *Candidatus* Derunana licenugo sp. nov.

Candidatus Derunana licenugo (NL. fem. n. *licenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8898 sp002070955*. The type genome for the species is the

GenBank assembly GCA_002070955.1. The GC content of the type genome is 69.29 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Derunaria lupanatica sp. nov.

Candidatus Derunaria lupanatica (NL. fem. n. *lupanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-60 sp001304365*. The type genome for the species is the GenBank assembly GCA_001304365.1. The GC content of the type genome is 39.12 % and the genome length is 1.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Derunaria gen. nov.

Candidatus Derunaria (NL. fem. n. *Derunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-60*. The type species for the genus is *Candidatus* Derunaria lupanatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DG-60*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunariaceae.

Description of *Candidatus* Derunariaceae fam. nov.

Candidatus Derunariaceae (NL. fem. n. *Derunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-60.* The type genus for the taxon is *Candidatus* Derunaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfofervidales*.

Description of *Candidatus* Derunella tirocitoga sp. nov.

Candidatus Derunella tirocitoga (NL. fem. n. *tirocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-39-15 sp002784465*. The type genome for the species is the GenBank assembly GCA_002784465.1. The GC content of the type genome is 39.15

% and the genome length is 0.82 Mbp.

Description of *Candidatus* Derunella gen. nov.

Candidatus Derunella (NL. fem. n. *Derunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-39-15*. The type species for the genus is *Candidatus* Derunella tirocitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-39-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunellaceae.

Description of *Candidatus* Derunellaceae fam. nov.

Candidatus Derunellaceae (NL. fem. n. *Derunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-39-15.* The type genus for the taxon is *Candidatus* Derunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-39-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Derunellales.

Description of *Candidatus* Derunellales ord. nov.

Candidatus Derunellales (NL. fem. n. *Derunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-39-15.* The type genus for the taxon is *Candidatus* Derunella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Derunia turilisca sp. nov.

Candidatus Derunia turilisca (NL. fem. n. *turilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-40-17 sp001783145*. The type genome for the species is the

GenBank assembly GCA_001783145.1. The GC content of the type genome is 39.43 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Derunia gen. nov.

Candidatus Derunia (NL. fem. n. *Derunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-40-17*. The type species for the genus is *Candidatus* Derunia turilisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10003*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derelosaceae.

Description of *Candidatus* Derunida urbicitas sp. nov.

Candidatus Derunida urbicitas (NL. fem. n. *urbicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXN01 sp013177995*. The type genome for the species is the GenBank assembly GCA_013177995.1. The GC content of the type genome is 45.4 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Derunida gen. nov.

Candidatus Derunida (NL. fem. n. *Derunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXN01*. The type species for the genus is *Candidatus* Derunida urbicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABLXN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunidaceae.

Description of *Candidatus* Derunidaceae fam. nov.

Candidatus Derunidaceae (NL. fem. n. *Derunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABLXN01.* The type genus for the taxon is *Candidatus* Derunida .

According to GTDB R06-RS202, this family belongs to the order *Brevinematales*.

Description of *Candidatus* Derunosa exhonimonia sp. nov.

Candidatus Derunosa exhonimonia (NL. fem. n. *exhonimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UCB3 sp003576755*. The type genome for the species is the GenBank assembly GCA_003576755.1. The GC content of the type genome is 73.19 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Derunosa gen. nov.

Candidatus Derunosa (NL. fem. n. *Derunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UCB3*. The type species for the genus is *Candidatus* Derunosa exhonimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UCB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Derunosaceae.

Description of *Candidatus* Derunosaceae fam. nov.

Candidatus Derunosaceae (NL. fem. n. *Derunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UCB3.* The type genus for the taxon is *Candidatus* Derunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UCB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Derunosales.

Description of *Candidatus* Derunosales ord. nov.

Candidatus Derunosales (NL. fem. n. *Derunosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UCB3*. The type genus for the taxon is *Candidatus* Derunosa .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Derunula adpacicula sp. nov.

Candidatus Derunula adpacicula (NL. fem. n. *adpacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU013 sp012519745*. The type genome for the species is the GenBank assembly GCA_012519745.1. The GC content of the type genome is 46.66 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Derunula gen. nov.

Candidatus Derunula (NL. fem. n. *Derunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU013*. The type species for the genus is *Candidatus* Derunula adpacicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Derunula decitilenta sp. nov.

Candidatus Derunula decitilenta (NL. fem. n. *decitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU013 sp012799845*. The type genome for the species is the GenBank assembly GCA_012799845.1. The GC content of the type genome is 49.43 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Derunula desupilenta sp. nov.

Candidatus Derunula desupilenta (NL. fem. n. *desupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU013 sp002386045*. The type genome for the species is the GenBank assembly GCA_012516635.1. The GC content of the type genome is 52.49 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Derunula pepenatica sp. nov.

Candidatus Derunula pepenatica (NL. fem. n. *pepenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU013 sp002385815*. The type genome for the species is the GenBank assembly GCA_001512425.1. The GC content of the type genome is 47.65 % and the genome length is 2.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Desacana deparousia sp. nov.

Candidatus Desacana deparousia (NL. fem. n. *deparousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU029 sp001512435*. The type genome for the species is the GenBank assembly GCA_001512435.1. The GC content of the type genome is 40.24 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Desacana gen. nov.

Candidatus Desacana (NL. fem. n. *Desacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU029*. The type species for the genus is *Candidatus* Desacana deparousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desacanaceae.

Description of *Candidatus* Desacanaceae fam. nov.

Candidatus Desacanaceae (NL. fem. n. *Desacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DTU029*. The type genus for the taxon is *Candidatus* Desacana .

According to GTDB R06-RS202, this family belongs to the order *Halanaerobiales*.

Description of *Candidatus* Desacana octodax sp. nov.

Candidatus Desacana octodax (NL. fem. n. *octodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU029 sp012518635*. The type genome for the species is the GenBank assembly GCA_012518635.1. The GC content of the type genome is 42.43 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Desacaria ficediforma sp. nov.

Candidatus Desacaria ficediforma (NL. fem. n. *ficediforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXOY01 sp009839835*. The type genome for the species is the GenBank assembly GCA_009839835.1. The GC content of the type genome is 42.89 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Desacaria gen. nov.

Candidatus Desacaria (NL. fem. n. *Desacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXOY01*. The type species for the genus is *Candidatus* Desacaria ficediforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-38-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifulaceae.

Description of *Candidatus* Desacella detumibra sp. nov.

Candidatus Desacella detumibra (NL. fem. n. *detumibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA919 sp002344425*. The type genome for the species is the

GenBank assembly GCA_002343995.1. The GC content of the type genome is 43.92 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Desacella gen. nov.

Candidatus Desacella (NL. fem. n. *Desacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA919*. The type species for the genus is *Candidatus* Desacella detumibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuriaceae.

Description of *Candidatus* Desacia buxanisca sp. nov.

Candidatus Desacia buxanisca (NL. fem. n. *buxanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7430 sp002478765*. The type genome for the species is the GenBank assembly GCA_002478765.1. The GC content of the type genome is 38.81 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Desacia gen. nov.

Candidatus Desacia (NL. fem. n. *Desacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7430*. The type species for the genus is *Candidatus* Desacia buxanisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7430*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desaciaceae.

Description of *Candidatus* Desaciaceae fam. nov.

Candidatus Desaciaceae (NL. fem. n. *Desaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7430.* The type genus for the taxon is *Candidatus* Desacia .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Desacida detunastra sp. nov.

Candidatus Desacida detunastra (NL. fem. n. *detunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-44-35 sp001822695*. The type genome for the species is the GenBank assembly GCA_001820965.1. The GC content of the type genome is 44.39 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Desacida gen. nov.

Candidatus Desacida (NL. fem. n. *Desacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-44-35*. The type species for the genus is *Candidatus* Desacida detunastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Desacida effosedo sp. nov.

Candidatus Desacida effosedo (NL. fem. n. *effosedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-44-35 sp000999175*. The type genome for the species is the GenBank assembly GCA_000999175.1. The GC content of the type genome is 43.53 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Desacosa adsulentia sp. nov.

Candidatus Desacosa adsulentia (NL. fem. n. *adsulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902761365*. The type genome for the species is the GenBank assembly GCA_902761365.1. The GC content of the type genome is 61.06 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Desacosa gen. nov.

Candidatus Desacosa (NL. fem. n. *Desacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG472*. The type species for the genus is *Candidatus* Desacosa adsulentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Desacosa ammulilenta sp. nov.

Candidatus Desacosa ammulilenta (NL. fem. n. *ammulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902802575*. The type genome for the species is the GenBank assembly GCA_902802575.1. The GC content of the type genome is 60.12 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Desacosa attelibula sp. nov.

Candidatus Desacosa attelibula (NL. fem. n. *attelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902786465*. The type genome for the species is the GenBank assembly GCA_902786465.1. The GC content of the type genome is 61.62 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Desacosa cohonicula sp. nov.

Candidatus Desacosa cohonicula (NL. fem. n. *cohonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG472 sp902768995*. The type genome for the species is the GenBank assembly GCA_902768015.1. The GC content of the type genome is 62.52 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Desacosa cunabicula sp. nov.

Candidatus Desacosa cunabicula (NL. fem. n. *cunabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902801845*. The type genome for the species is the GenBank assembly GCA_902801845.1. The GC content of the type genome is 60.13 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Desacosa decitigena sp. nov.

Candidatus Desacosa decitigena (NL. fem. n. *decitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp900545265*. The type genome for the species is the GenBank assembly RS_GCF_900759255.1. The GC content of the type genome is 54.2 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Desacosa defulivita sp. nov.

Candidatus Desacosa defulivita (NL. fem. n. *defulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp900319345*. The type genome for the species is the GenBank assembly GCA_002350935.1. The GC content of the type genome is 60.86 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Desacosa indupitrix sp. nov.

Candidatus Desacosa indupitrix (NL. fem. n. *indupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902802805*. The type genome for the species is the GenBank assembly GCA_902802805.1. The GC content of the type genome is 61.15 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Desacosa necopatio sp. nov.

Candidatus Desacosa necopatio (NL. fem. n. *necopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902798825*. The type genome for the species is the GenBank assembly GCA_902798825.1. The GC content of the type genome is 60.96 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Desacosa rutabax sp. nov.

Candidatus Desacosa rutabax (NL. fem. n. *rutabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG472 sp902765005*. The type genome for the species is the GenBank assembly GCA_902765005.1. The GC content of the type genome is 60.9 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Desacula abhinitas sp. nov.

Candidatus Desacula abhinitas (NL. fem. n. *abhinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001783355*. The type genome for the species is the GenBank assembly GCA_001783355.1. The GC content of the type genome is 53.94 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula gen. nov.

Candidatus Desacula (NL. fem. n. *Desacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10103*. The type species for the genus is *Candidatus* Desacula abhinitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Desacula adtubedo sp. nov.

Candidatus Desacula adtubedo (NL. fem. n. *adtubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp003164215*. The type genome for the species is the GenBank assembly GCA_003164215.1. The GC content of the type genome is 53.45 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Desacula anagnimonas sp. nov.

Candidatus Desacula anagnimonas (NL. fem. n. *anagnimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp002773285*. The type genome for the species is the GenBank assembly GCA_002773285.1. The GC content of the type genome is 58.55 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Desacula annifetta sp. nov.

Candidatus Desacula annifetta (NL. fem. n. *annifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp009924895*. The type genome for the species is the GenBank assembly GCA_009924895.1. The GC content of the type genome is 47.16 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Desacula arcebessa sp. nov.

Candidatus Desacula arcebessa (NL. fem. n. *arcebessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781275*. The type genome for the species is the GenBank assembly GCA_001781275.1. The GC content of the type genome is 53.99 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Desacula benevugo sp. nov.

Candidatus Desacula benevugo (NL. fem. n. *benevugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781335*. The type genome for the species is the GenBank assembly GCA_001781335.1. The GC content of the type genome is 55.18 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Desacula bovicitoga sp. nov.

Candidatus Desacula bovicitoga (NL. fem. n. *bovicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp903858755*. The type genome for the species is the GenBank assembly GCA_903858755.1. The GC content of the type genome is 56.99 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Desacula cepuritica sp. nov.

Candidatus Desacula cepuritica (NL. fem. n. *cepuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp903881205*. The type genome for the species is the GenBank assembly GCA_903881205.1. The GC content of the type genome is 53.95 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Desacula cocibitrix sp. nov.

Candidatus Desacula cocibitrix (NL. fem. n. *cocibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781465*. The type genome for the species is the GenBank assembly GCA_001781465.1. The GC content of the type genome is 48.45 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Desacula cohuritoga sp. nov.

Candidatus Desacula cohuritoga (NL. fem. n. *cohuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp007375785*. The type genome for the species is the GenBank assembly GCA_007375785.1. The GC content of the type genome is 54.2 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Desacula curotetta sp. nov.

Candidatus Desacula curotetta (NL. fem. n. *curotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp007376385*. The type genome for the species is the GenBank assembly GCA_007376385.1. The GC content of the type genome is 49.96 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Desacula daducibula sp. nov.

Candidatus Desacula daducibula (NL. fem. n. *daducibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp003545515*. The type genome for the species is the GenBank assembly GCA_001003805.1. The GC content of the type genome is 50.14 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Desacula demagicula sp. nov.

Candidatus Desacula demagicula (NL. fem. n. *demagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781685*. The type genome for the species is the GenBank assembly GCA_001781685.1. The GC content of the type genome is 53.95 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula demigiforma sp. nov.

Candidatus Desacula demigiforma (NL. fem. n. *demigiforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781555*. The type genome for the species is the GenBank assembly GCA_001781555.1. The GC content of the type genome is 52.62 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Desacula desurilega sp. nov.

Candidatus Desacula desurilega (NL. fem. n. *desurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781445*. The type genome for the species is the GenBank assembly GCA_001781795.1. The GC content of the type genome is 58.48 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Desacula faticedo sp. nov.

Candidatus Desacula faticedo (NL. fem. n. *faticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp003599295*. The type genome for the species is the GenBank assembly GCA_003599295.1. The GC content of the type genome is 54.22 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Desacula grallilega sp. nov.

Candidatus Desacula grallilega (NL. fem. n. *grallilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001004345*. The type genome for the species is the GenBank assembly GCA_001004345.1. The GC content of the type genome is 51.99 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Desacula incocivita sp. nov.

Candidatus Desacula incocivita (NL. fem. n. *incocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp903854215*. The type genome for the species is the GenBank assembly GCA_903854215.1. The GC content of the type genome is 50.98 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Desacula insubibula sp. nov.

Candidatus Desacula insubibula (NL. fem. n. *insubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001004265*. The type genome for the species is the GenBank assembly GCA_001004265.1. The GC content of the type genome is 51.56 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Desacula intecago sp. nov.

Candidatus Desacula intecago (NL. fem. n. *intecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781125*. The type genome for the species is the GenBank assembly GCA_001781125.1. The GC content of the type genome is 53.47 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula manubimonas sp. nov.

Candidatus Desacula manubimonas (NL. fem. n. *manubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781175*. The type genome for the species is the GenBank assembly GCA_001781175.1. The GC content of the type genome is 54.9 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula meridifica sp. nov.

Candidatus Desacula meridifica (NL. fem. n. *meridifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001781105*. The type genome for the species is the GenBank assembly GCA_001781105.1. The GC content of the type genome is 53.81 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula oblocentia sp. nov.

Candidatus Desacula oblocentia (NL. fem. n. *oblocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp003599175*. The type genome for the species is the GenBank assembly GCA_003599175.1. The GC content of the type genome is 52.46 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Desacula refacedo sp. nov.

Candidatus Desacula refacedo (NL. fem. n. *refacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp001783335*. The type genome for the species is the GenBank assembly GCA_001783335.1. The GC content of the type genome is 50.42 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desacula timefugo sp. nov.

Candidatus Desacula timefugo (NL. fem. n. *timefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10103 sp903824595*. The type genome for the species is the GenBank assembly GCA_903832655.1. The GC content of the type genome is 51.22 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Desepana dicabimonas sp. nov.

Candidatus Desepana dicabimonas (NL. fem. n. *dicabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5239 sp002408885*. The type genome for the species is the GenBank assembly GCA_002408885.1. The GC content of the type genome is 55.59 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Desepana gen. nov.

Candidatus Desepana (NL. fem. n. *Desepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5239*. The type species for the genus is *Candidatus* Desepana dicabimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desepella depopisca sp. nov.

Candidatus Desepella depopisca (NL. fem. n. *depopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUNB01 sp003552565*. The type genome for the species is the GenBank assembly GCA_003552565.1. The GC content of the type genome is 52.2 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Desepella gen. nov.

Candidatus Desepella (NL. fem. n. *Desepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUNB01*. The type species for the genus is *Candidatus* Desepella depopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUNB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepellaceae.

Description of *Candidatus* Desepellaceae fam. nov.

Candidatus Desepellaceae (NL. fem. n. *Desepellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUNB01.* The type genus for the taxon is *Candidatus* Desepella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Desepia rudecigena sp. nov.

Candidatus Desepia rudecigena (NL. fem. n. *rudecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J057 sp003696835*. The type genome for the species is the GenBank assembly GCA_003696835.1. The GC content of the type genome is 53.47 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Desepia gen. nov.

Candidatus Desepia (NL. fem. n. *Desepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J057*. The type species for the genus is *Candidatus* Desepia rudecigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J057*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepiaceae.

Description of *Candidatus* Desepiaceae fam. nov.

Candidatus Desepiaceae (NL. fem. n. *Desepiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J057.* The type genus for the taxon is *Candidatus* Desepia .

According to the original version of GTDB R06-RS202, this family belongs to the order *J057*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desepiales.

Description of *Candidatus* Desepiales ord. nov.

Candidatus Desepiales (NL. fem. n. *Desepiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J057.* The type genus for the taxon is *Candidatus* Desepia .

According to the GTDB R06-RS202, this order belongs to the class *Bacteroidia*.

Description of *Candidatus* Desepida colipax sp. nov.

Candidatus Desepida colipax (NL. fem. n. *colipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGQ01 sp007117515*. The type genome for the species is the GenBank assembly GCA_007117515.1. The GC content of the type genome is 62.95 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Desepida gen. nov.

Candidatus Desepida (NL. fem. n. *Desepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKGQ01*. The type species for the genus is *Candidatus* Desepida colipax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desepida panopitoga sp. nov.

Candidatus Desepida panopitoga (NL. fem. n. *panopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGQ01 sp003565775*. The type genome for the species is the GenBank assembly GCA_007129115.1. The GC content of the type genome is 64.42 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Deseposa fefelago sp. nov.

Candidatus Deseposa fefelago (NL. fem. n. *fefelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6176 sp903925515*. The type genome for the species is the GenBank assembly GCA_903861805.1. The GC content of the type genome is 67.76 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Deseposa gen. nov.

Candidatus Deseposa (NL. fem. n. *Deseposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6176*. The type species for the genus is *Candidatus* Deseposa fefelago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Deseposa ossicibula sp. nov.

Candidatus Deseposa ossicibula (NL. fem. n. *ossicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6176 sp008933025*. The type genome for the species is the GenBank assembly GCA_008933025.1. The GC content of the type genome is 67.77 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Deseposa sepositio sp. nov.

Candidatus Deseposa sepositio (NL. fem. n. *sepositio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6176 sp002422905*. The type genome for the species is the GenBank assembly GCA_002422905.1. The GC content of the type genome is 63.13 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Deseposa vitupax sp. nov.

Candidatus Deseposa vitupax (NL. fem. n. *vitupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6176 sp903880005*. The type genome for the species is the GenBank assembly GCA_903838715.1. The GC content of the type genome is 67.27 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Deseposa vocamousia sp. nov.

Candidatus Deseposa vocamousia (NL. fem. n. *vocamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6176 sp903842505*. The type genome for the species is the GenBank assembly GCA_903842505.1. The GC content of the type genome is 64.66 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Desepula tegimitrix sp. nov.

Candidatus Desepula tegimitrix (NL. fem. n. *tegimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11792 sp902772645*. The type genome for the species is the GenBank assembly GCA_902772645.1. The GC content of the type genome is 26.37 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Desepula gen. nov.

Candidatus Desepula (NL. fem. n. *Desepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11792*. The type species for the genus is *Candidatus* Desepula tegimitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG11792*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepulaceae.

Description of *Candidatus* Desepulaceae fam. nov.

Candidatus Desepulaceae (NL. fem. n. *Desepulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG11792.* The type genus for the taxon is *Candidatus* Desepula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RUG11792*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desepulales.

Description of *Candidatus* Desepulales ord. nov.

Candidatus Desepulales (NL. fem. n. *Desepulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG11792.* The type genus for the taxon is *Candidatus* Desepula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Desertiactinospora adfunimonas sp. nov.

Candidatus Desertiactinospora adfunimonas (NL. fem. n. *adfunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desertiactinospora sp003315795*. The type genome for the species is the GenBank assembly RS_GCF_003315795.1. The GC content of the type genome is 70.85 % and the genome length is 9.81 Mbp.

Description of *Candidatus* Desertifilum assucatio sp. nov.

Candidatus Desertifilum assucatio (NL. fem. n. *assucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desertifilum sp001746915*. The type genome for the species is the GenBank assembly RS_GCF_001746915.1. The GC content of the type genome is 48.68 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Desomana desupitudo sp. nov.

Candidatus Desomana desupitudo (NL. fem. n. *desupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11717 sp003509895*. The type genome for the species is the GenBank assembly GCA_003509895.1. The GC content of the type genome is 48.74 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Desomana gen. nov.

Candidatus Desomana (NL. fem. n. *Desomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11717*. The type species for the genus is *Candidatus* Desomana desupitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11717*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomanaceae.

Description of *Candidatus* Desomanaceae fam. nov.

Candidatus Desomanaceae (NL. fem. n. *Desomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11717*. The type genus for the taxon is *Candidatus* Desomana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Desomana inexpifica sp. nov.

Candidatus Desomana inexpifica (NL. fem. n. *inexpifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11717 sp002774875*. The type genome for the species is the GenBank assembly GCA_002774875.1. The GC content of the type genome is 49.51 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Desomaria apercibula sp. nov.

Candidatus Desomaria apercibula (NL. fem. n. *apercibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002720895 sp002711715*. The type genome for the species is the GenBank assembly GCA_002711715.1. The GC content of the type genome is 26.43 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Desomaria gen. nov.

Candidatus Desomaria (NL. fem. n. *Desomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002720895*. The type species for the genus is *Candidatus* Desomaria apercibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002720895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomariaceae.

Description of *Candidatus* Desomariaceae fam. nov.

Candidatus Desomariaceae (NL. fem. n. *Desomariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002720895.* The type genus for the taxon is *Candidatus* Desomaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-002720895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desomariales.

Description of *Candidatus* Desomariales ord. nov.

Candidatus Desomariales (NL. fem. n. *Desomariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002720895.* The type genus for the taxon is *Candidatus* Desomaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Desomaria bicoditura sp. nov.

Candidatus Desomaria bicoditura (NL. fem. n. *bicoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002720895 sp002717245*. The type genome for the species is the GenBank assembly GCA_002937755.1. The GC content of the type genome is 25.74 %

and the genome length is 0.92 Mbp.

Description of *Candidatus* Desomaria hibisitura sp. nov.

Candidatus Desomaria hibisitura (NL. fem. n. *hibisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002720895 sp002937775*. The type genome for the species is the GenBank assembly GCA_002937795.1. The GC content of the type genome is 26.65 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Desomaria indifago sp. nov.

Candidatus Desomaria indifago (NL. fem. n. *indifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002720895 sp902607475*. The type genome for the species is the GenBank assembly GCA_902607475.1. The GC content of the type genome is 26.78 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Desomaria lutulax sp. nov.

Candidatus Desomaria lutulax (NL. fem. n. *lutulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002720895 sp002720895*. The type genome for the species is the GenBank assembly GCA_002720895.1. The GC content of the type genome is 26.48 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Desomella pepenicella sp. nov.

Candidatus Desomella pepenicella (NL. fem. n. *pepenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEYW01 sp002774225*. The type genome for the species is the GenBank assembly GCA_002774225.1. The GC content of the type genome is 42.71 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Desomella gen. nov.

Candidatus Desomella (NL. fem. n. *Desomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PEYW01*. The type species for the genus is *Candidatus* Desomella pepenicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PEYW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomellaceae.

Description of *Candidatus* Desomellaceae fam. nov.

Candidatus Desomellaceae (NL. fem. n. *Desomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PEYW01.* The type genus for the taxon is *Candidatus* Desomella .

According to the original version of GTDB R06-RS202, this family belongs to the order *PEYW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desomellales.

Description of *Candidatus* Desomellales ord. nov.

Candidatus Desomellales (NL. fem. n. *Desomellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PEYW01.* The type genus for the taxon is *Candidatus* Desomella .

According to the original version of GTDB R06-RS202, this family belongs to the class *WWE3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Veridulae.

Description of *Candidatus* Desomia invetitas sp. nov.

Candidatus Desomia invetitas (NL. fem. n. *invetitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTZQ01 sp012961305*. The type genome for the species is the GenBank assembly GCA_012961305.1. The GC content of the type genome is 60.37 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Desomia gen. nov.

Candidatus Desomia (NL. fem. n. *Desomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTZQ01*. The type species for the genus is *Candidatus* Desomia invetitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTZQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desomiaceae.

Description of *Candidatus* Desomiaceae fam. nov.

Candidatus Desomiaceae (NL. fem. n. *Desomiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTZQ01.* The type genus for the taxon is *Candidatus* Desomia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resalulales.

Description of *Candidatus* Desomida binocicella sp. nov.

Candidatus Desomida binocicella (NL. fem. n. *binocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCQA01 sp004298725*. The type genome for the species is the GenBank assembly GCA_004298725.1. The GC content of the type genome is 48.87 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Desomida gen. nov.

Candidatus Desomida (NL. fem. n. *Desomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCQA01*. The type species for the genus is *Candidatus* Desomida binocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCQA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Desomidaceae.

Description of *Candidatus* Desomidaceae fam. nov.

Candidatus Desomidaceae (NL. fem. n. *Desomidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCQA01*. The type genus for the taxon is *Candidatus* Desomida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Desomosa accucitas sp. nov.

Candidatus Desomosa accucitas (NL. fem. n. *accucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp001603505*. The type genome for the species is the GenBank assembly GCA_001603505.1. The GC content of the type genome is 57.96 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Desomosa gen. nov.

Candidatus Desomosa (NL. fem. n. *Desomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bact-11*. The type species for the genus is *Candidatus* Desomosa accucitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Desomosa adalgitio sp. nov.

Candidatus Desomosa adalgitio (NL. fem. n. *adalgitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp012798805*. The type genome for the species is the GenBank assembly GCA_012798805.1. The GC content of the type genome is 44.29 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Desomosa ambecilega sp. nov.

Candidatus Desomosa ambecilega (NL. fem. n. *ambecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp012511975*. The type genome for the species is the GenBank assembly GCA_012511975.1. The GC content of the type genome is 44.58 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Desomosa aprugiforma sp. nov.

Candidatus Desomosa aprugiforma (NL. fem. n. *aprugiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp002376715*. The type genome for the species is the GenBank assembly GCA_002376715.1. The GC content of the type genome is 45.05 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Desomosa apsorilega sp. nov.

Candidatus Desomosa apsorilega (NL. fem. n. *apsorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp902784965*. The type genome for the species is the GenBank assembly GCA_902784965.1. The GC content of the type genome is 58.36 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Desomosa atricilenta sp. nov.

Candidatus Desomosa atricilenta (NL. fem. n. *atricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp002305275*. The type genome for the species is the GenBank assembly GCA_002305275.1. The GC content of the type genome is 44.28 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Desomosa cerarifica sp. nov.

Candidatus Desomosa cerarifica (NL. fem. n. *cerarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp002309795*. The type genome for the species is the GenBank assembly GCA_002309795.1. The GC content of the type genome is 58.35 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Desomosa curotimonia sp. nov.

Candidatus Desomosa curotimonia (NL. fem. n. *curotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp012728975*. The type genome for the species is the GenBank assembly GCA_012728975.1. The GC content of the type genome is 44.12 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Desomosa dilemitio sp. nov.

Candidatus Desomosa dilemitio (NL. fem. n. *dilemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp902778855*. The type genome for the species is the GenBank assembly GCA_902761005.1. The GC content of the type genome is 60.21 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Desomosa emancifica sp. nov.

Candidatus Desomosa emancifica (NL. fem. n. *emancifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp002314725*. The type genome for the species is the GenBank assembly GCA_002314725.1. The GC content of the type genome is 40.2 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Desomosa maxilitoga sp. nov.

Candidatus Desomosa maxilitoga (NL. fem. n. *maxilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp902773925*. The type genome for the species is the GenBank assembly GCA_902773925.1. The GC content of the type genome is 55.05 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Desomosa minuratio sp. nov.

Candidatus Desomosa minuratio (NL. fem. n. *minuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp902789445*. The type genome for the species is the GenBank assembly GCA_902789445.1. The GC content of the type genome is 58.63 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Desomosa vinoliforma sp. nov.

Candidatus Desomosa vinoliforma (NL. fem. n. *vinoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp002361615*. The type genome for the species is the GenBank assembly GCA_902799595.1. The GC content of the type genome is 57.56 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Desomosa volunedo sp. nov.

Candidatus Desomosa volunedo (NL. fem. n. *volunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-11 sp001602845*. The type genome for the species is the GenBank assembly GCA_001602845.1. The GC content of the type genome is 58.58 % and the genome length is 2.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Desomula semunetta sp. nov.

Candidatus Desomula semunetta (NL. fem. n. *semunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin01 sp011682695*. The type genome for the species is the GenBank assembly GCA_011682695.1. The GC content of the type genome is 63.25 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Desomula gen. nov.

Candidatus Desomula (NL. fem. n. *Desomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Bbin01*. The type species for the genus is *Candidatus* Desomula semunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4744*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rinoculaceae.

Description of *Candidatus* Desomula tenemitio sp. nov.

Candidatus Desomula tenemitio (NL. fem. n. *tenemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin01 sp013152275*. The type genome for the species is the GenBank assembly GCA_013152275.1. The GC content of the type genome is 63.81 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Desomula vinacitudo sp. nov.

Candidatus Desomula vinacitudo (NL. fem. n. *vinacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin01 sp002897675*. The type genome for the species is the GenBank assembly GCA_002897675.1. The GC content of the type genome is 63.95 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Desonana benepibra sp. nov.

Candidatus Desonana benepibra (NL. fem. n. *benepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQIA01 sp903871775*. The type genome for the species is the GenBank assembly GCA_903834295.1. The GC content of the type genome is 69.61 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Desonana gen. nov.

Candidatus Desonana (NL. fem. n. *Desonana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQIA01*. The type species for the genus is *Candidatus* Desonana benepibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desonaria denecessa sp. nov.

Candidatus Desonaria denecessa (NL. fem. n. *denecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp005880425*. The type genome for the species is the GenBank assembly GCA_005880425.1. The GC content of the type genome is 52.15 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Desonaria gen. nov.

Candidatus Desonaria (NL. fem. n. *Desonaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11361*. The type species for the genus is *Candidatus* Desonaria denecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desonaria dereliforma sp. nov.

Candidatus Desonaria dereliforma (NL. fem. n. *dereliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp005881495*. The type genome for the species is the GenBank assembly GCA_005881495.1. The GC content of the type genome is 53.29 %

and the genome length is 6.58 Mbp.

Description of *Candidatus* Desonaria mavoratio sp. nov.

Candidatus Desonaria mavoratio (NL. fem. n. *mavoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp001920235*. The type genome for the species is the GenBank assembly GCA_001920235.1. The GC content of the type genome is 53.73 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 6 days after first rain event (27mm)".

Description of *Candidatus* Desonaria semibicella sp. nov.

Candidatus Desonaria semibicella (NL. fem. n. *semibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp001919995*. The type genome for the species is the GenBank assembly GCA_001919995.1. The GC content of the type genome is 53.47 % and the genome length is 2.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Desonaria tolutax sp. nov.

Candidatus Desonaria tolutax (NL. fem. n. *tolutax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp005880595*. The type genome for the species is the GenBank assembly GCA_005880595.1. The GC content of the type genome is 52.55 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Desonaria vehemastra sp. nov.

Candidatus Desonaria vehemastra (NL. fem. n. *vehemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11361 sp005881295*. The type genome for the species is the GenBank assembly GCA_005881515.1. The GC content of the type genome is 52.94 %

and the genome length is 4.21 Mbp.

Description of *Candidatus* Desonella ambecitoga sp. nov.

Candidatus Desonella ambecitoga (NL. fem. n. *ambecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AABM5-125-24 sp002127415*. The type genome for the species is the GenBank assembly GCA_002127415.1. The GC content of the type genome is 55.8 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Desonella gen. nov.

Candidatus Desonella (NL. fem. n. *Desonella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AABM5-125-24*. The type species for the genus is *Candidatus* Desonella ambecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desonellaceae.

Description of *Candidatus* Desonellaceae fam. nov.

Candidatus Desonellaceae (NL. fem. n. *Desonellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AABM5-125-24.* The type genus for the taxon is *Candidatus* Desonella .

According to the original version of GTDB R06-RS202, this family belongs to the order *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desonellales.

Description of *Candidatus* Desonellales ord. nov.

Candidatus Desonellales (NL. fem. n. *Desonellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AABM5-125-24.* The type genus for the taxon is *Candidatus* Desonella .

According to the original version of GTDB R06-RS202, this family belongs to the class

AABM5-125-24. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Desonellae.

Description of *Candidatus* Desonellae class. nov.

Candidatus Desonellae (NL. fem. n. *c__Desonellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AABM5-125-24.* The type genus for the taxon is *Candidatus* Desonella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Desonellota.

Description of *Candidatus* Desonellota phyl. nov.

Candidatus Desonellota (NL. fem. n. *Desonellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AABM5-125-24.* The type genus for the taxon is *Candidatus* Desonella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Desonia detenitio sp. nov.

Candidatus Desonia detenitio (NL. fem. n. *detenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-671 sp003166025*. The type genome for the species is the GenBank assembly GCA_003158015.1. The GC content of the type genome is 67.34 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Desonia gen. nov.

Candidatus Desonia (NL. fem. n. *Desonia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-671*. The type species for the genus is *Candidatus* Desonia detenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-688*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Attubulaceae.

Description of *Candidatus* Desonia locupitoga sp. nov.

Candidatus Desonia locupitoga (NL. fem. n. *locupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-671 sp003158835*. The type genome for the species is the GenBank assembly GCA_003158835.1. The GC content of the type genome is 67.86 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Desonida favilousia sp. nov.

Candidatus Desonida favilousia (NL. fem. n. *favilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CR02bin9 sp004356555*. The type genome for the species is the GenBank assembly GCA_004356535.1. The GC content of the type genome is 40.37 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Desonida gen. nov.

Candidatus Desonida (NL. fem. n. *Desonida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CR02bin9*. The type species for the genus is *Candidatus* Desonida favilousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siligiaceae.

Description of *Candidatus* Desonida inpinicula sp. nov.

Candidatus Desonida inpinicula (NL. fem. n. *inpinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CR02bin9 sp004525335*. The type genome for the species is the GenBank assembly GCA_004525335.1. The GC content of the type genome is 39.9 %

and the genome length is 2.29 Mbp.

Description of *Candidatus* Desonosa adsudimonia sp. nov.

Candidatus Desonosa adsudimonia (NL. fem. n. *adsudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-14 sp005888325*. The type genome for the species is the GenBank assembly GCA_005888325.1. The GC content of the type genome is 70.28 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Desonosa gen. nov.

Candidatus Desonosa (NL. fem. n. *Desonosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-14*. The type species for the genus is *Candidatus* Desonosa adsudimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desonosaceae.

Description of *Candidatus* Desonosaceae fam. nov.

Candidatus Desonosaceae (NL. fem. n. *Desonosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AC-14.* The type genus for the taxon is *Candidatus* Desonosa .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Desonula camilibula sp. nov.

Candidatus Desonula camilibula (NL. fem. n. *camilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6985 sp002450035*. The type genome for the species is the GenBank assembly GCA_002450035.1. The GC content of the type genome is 28.33 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Desonula gen. nov.

Candidatus Desonula (NL. fem. n. *Desonula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6985*. The type species for the genus is *Candidatus* Desonula camilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Desonula petulibra sp. nov.

Candidatus Desonula petulibra (NL. fem. n. *petulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6985 sp900314465*. The type genome for the species is the GenBank assembly GCA_902803955.1. The GC content of the type genome is 24.96 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Desoraria apporivita sp. nov.

Candidatus Desoraria apporivita (NL. fem. n. *apporivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1018 sp002291495*. The type genome for the species is the GenBank assembly GCA_002291495.1. The GC content of the type genome is 45.97 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Desoraria gen. nov.

Candidatus Desoraria (NL. fem. n. *Desoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1018*. The type species for the genus is *Candidatus* Desoraria apporivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Desorariaceae fam. nov.

Candidatus Desorariaceae (NL. fem. n. *Desorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1018.* The type genus for the taxon is *Candidatus* Desoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desorariales.

Description of *Candidatus* Desorariales ord. nov.

Candidatus Desorariales (NL. fem. n. *Desorariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1018.* The type genus for the taxon is *Candidatus* Desoraria .

According to the GTDB R06-RS202, this order belongs to the class *Bdellovibrionia_A*.

Description of *Candidatus* Desoraria manibibra sp. nov.

Candidatus Desoraria manibibra (NL. fem. n. *manibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1018 sp014378465*. The type genome for the species is the GenBank assembly GCA_014378465.1. The GC content of the type genome is 54.74 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Desorida biverago sp. nov.

Candidatus Desorida biverago (NL. fem. n. *biverago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10170 sp001798165*. The type genome for the species is the GenBank assembly GCA_001797355.1. The GC content of the type genome is 42.64 % and the genome length is 2.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Desorida gen. nov.

Candidatus Desorida (NL. fem. n. *Desorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10170*. The type species for the genus is *Candidatus* Desorida biverago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9637*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarulaceae.

Description of *Candidatus* Desorosa colopisca sp. nov.

Candidatus Desorosa colopisca (NL. fem. n. *colopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1362 sp003170415*. The type genome for the species is the GenBank assembly GCA_003170415.1. The GC content of the type genome is 49.79 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Desorosa gen. nov.

Candidatus Desorosa (NL. fem. n. *Desorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1362*. The type species for the genus is *Candidatus* Desorosa colopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Desorosa infabifica sp. nov.

Candidatus Desorosa infabifica (NL. fem. n. *infabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1362 sp003141275*. The type genome for the species is the GenBank assembly GCA_003141275.1. The GC content of the type genome is 49.22 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Desorosa letifica sp. nov.

Candidatus Desorosa letifica (NL. fem. n. *letifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1362 sp903857265*. The type genome for the species is the GenBank assembly GCA_903945645.1. The GC content of the type genome is 49.22 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Desorula exsufatica sp. nov.

Candidatus Desorula exsufatica (NL. fem. n. *exsufatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIX01 sp012800515*. The type genome for the species is the GenBank assembly GCA_012800515.1. The GC content of the type genome is 54.44 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Desorula gen. nov.

Candidatus Desorula (NL. fem. n. *Desorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIX01*. The type species for the genus is *Candidatus* Desorula exsufatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desorula turilimonas sp. nov.

Candidatus Desorula turilimonas (NL. fem. n. *turilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIX01 sp012800655*. The type genome for the species is the GenBank assembly GCA_012800655.1. The GC content of the type genome is 53.27 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Desucana vehemitio sp. nov.

Candidatus Desucana vehemitio (NL. fem. n. *vehemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1254 sp003162695*. The type genome for the species is the GenBank assembly GCA_003136015.1. The GC content of the type genome is 46.18 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Desucana gen. nov.

Candidatus Desucana (NL. fem. n. *Desucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1254*. The type species for the genus is *Candidatus* Desucana vehemitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Desucaria appacibra sp. nov.

Candidatus Desucaria appacibra (NL. fem. n. *appacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp011331705*. The type genome for the species is the GenBank assembly GCA_011331705.1. The GC content of the type genome is 41.71 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Desucaria gen. nov.

Candidatus Desucaria (NL. fem. n. *Desucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JJ008*. The type species for the genus is *Candidatus* Desucaria appacibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desucaria bicubitura sp. nov.

Candidatus Desucaria bicubitura (NL. fem. n. *bicubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp005791465*. The type genome for the species is the GenBank assembly GCA_005799805.1. The GC content of the type genome is 41.77 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Desucaria culibitia sp. nov.

Candidatus Desucaria culibitia (NL. fem. n. *culibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002342205*. The type genome for the species is the GenBank assembly GCA_003452805.1. The GC content of the type genome is 40.37 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Desucaria depocitica sp. nov.

Candidatus Desucaria depocitica (NL. fem. n. *depocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002352145*. The type genome for the species is the GenBank assembly GCA_002352145.1. The GC content of the type genome is 41.71 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Desucaria derelibra sp. nov.

Candidatus Desucaria derelibra (NL. fem. n. *derelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002378975*. The type genome for the species is the GenBank assembly GCA_002378975.1. The GC content of the type genome is 49.62 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Desucaria diponigena sp. nov.

Candidatus Desucaria diponigena (NL. fem. n. *diponigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp001464625*. The type genome for the species is the GenBank assembly GCA_001464625.1. The GC content of the type genome is 38.06 % and the

genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Desucaria exurrimonas sp. nov.

Candidatus Desucaria exurrimonas (NL. fem. n. *exurrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002400415*. The type genome for the species is the GenBank assembly GCA_002400415.1. The GC content of the type genome is 43.29 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Desucaria homilitio sp. nov.

Candidatus Desucaria homilitio (NL. fem. n. *homilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp903879995*. The type genome for the species is the GenBank assembly GCA_903879995.1. The GC content of the type genome is 41.7 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Desucaria inoccatio sp. nov.

Candidatus Desucaria inoccatio (NL. fem. n. *inoccatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002069045*. The type genome for the species is the GenBank assembly GCA_002069045.1. The GC content of the type genome is 38.39 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Desucaria lanigitia sp. nov.

Candidatus Desucaria lanigitia (NL. fem. n. *lanigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp005789565*. The type genome for the species is the GenBank assembly GCA_005789565.1. The GC content of the type genome is 52.41 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Desucaria lugubigena sp. nov.

Candidatus Desucaria lugubigena (NL. fem. n. *lugubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp902826165*. The type genome for the species is the GenBank assembly GCA_902826165.1. The GC content of the type genome is 43.12 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Desucaria panopetta sp. nov.

Candidatus Desucaria panopetta (NL. fem. n. *panopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp013140985*. The type genome for the species is the GenBank assembly GCA_013140985.1. The GC content of the type genome is 40.52 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Desucaria parocivita sp. nov.

Candidatus Desucaria parocivita (NL. fem. n. *parocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp003489485*. The type genome for the species is the GenBank assembly GCA_003489485.1. The GC content of the type genome is 48.44 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Desucaria podagitia sp. nov.

Candidatus Desucaria podagitia (NL. fem. n. *podagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp014190475*. The type genome for the species is the GenBank assembly GCA_014190475.1. The GC content of the type genome is 42.0 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Desucaria tirunastra sp. nov.

Candidatus Desucaria tirunastra (NL. fem. n. *tirunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JJ008 sp002127295*. The type genome for the species is the GenBank assembly RS_GCF_002127295.1. The GC content of the type genome is 38.36 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Desucella badititoga sp. nov.

Candidatus Desucella badititoga (NL. fem. n. *badititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1234 sp900753135*. The type genome for the species is the GenBank assembly RS_GCF_900753135.1. The GC content of the type genome is 30.88 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Desucella gen. nov.

Candidatus Desucella (NL. fem. n. *Desucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1234*. The type species for the genus is *Candidatus* Desucella badititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1234*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desucellaceae.

Description of *Candidatus* Desucellaceae fam. nov.

Candidatus Desucellaceae (NL. fem. n. *Desucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1234.* The type genus for the taxon is *Candidatus* Desucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *TANB77*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dupuniales.

Description of *Candidatus* Desucella excoratica sp. nov.

Candidatus Desucella excoratica (NL. fem. n. *excoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1234 sp002308995*. The type genome for the species is the GenBank assembly GCA_002308995.1. The GC content of the type genome is 35.51 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Desucella lucelitia sp. nov.

Candidatus Desucella lucelitia (NL. fem. n. *lucelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1234 sp002404755*. The type genome for the species is the GenBank assembly GCA_002404755.1. The GC content of the type genome is 31.22 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Desucella tolutibula sp. nov.

Candidatus Desucella tolutibula (NL. fem. n. *tolutibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1234 sp900765095*. The type genome for the species is the GenBank assembly RS_GCF_900765095.1. The GC content of the type genome is 31.68 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Desucia metabigena sp. nov.

Candidatus Desucia metabigena (NL. fem. n. *metabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-49-12 sp001873675*. The type genome for the species is the GenBank assembly GCA_002788015.1. The GC content of the type genome is 48.65 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Desucia gen. nov.

Candidatus Desucia (NL. fem. n. *Desucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-49-12*. The type species for the genus is *Candidatus* Desucia

metabigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-49-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuciaceae.

Description of *Candidatus* Desuciaceae fam. nov.

Candidatus Desuciaceae (NL. fem. n. *Desuciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-49-12.* The type genus for the taxon is *Candidatus* Desucia .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Desucida carecago sp. nov.

Candidatus Desucida carecago (NL. fem. n. *carecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LSCE01 sp007125985*. The type genome for the species is the GenBank assembly GCA_007132275.1. The GC content of the type genome is 63.31 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Desucida gen. nov.

Candidatus Desucida (NL. fem. n. *Desucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LSCE01*. The type species for the genus is *Candidatus* Desucida carecago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desucosa alceditica sp. nov.

Candidatus Desucosa alceditica (NL. fem. n. *alceditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQP01 sp012837735*. The type genome for the species is the GenBank assembly GCA_012837735.1. The GC content of the type genome is 55.64 %

and the genome length is 1.55 Mbp.

Description of *Candidatus* Desucosa gen. nov.

Candidatus Desucosa (NL. fem. n. *Desucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUQP01*. The type species for the genus is *Candidatus* Desucosa alceditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUQP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desucosaceae.

Description of *Candidatus* Desucosaceae fam. nov.

Candidatus Desucosaceae (NL. fem. n. *Desucosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUQP01.* The type genus for the taxon is *Candidatus* Desucosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vinolariales.

Description of *Candidatus* Desucula adpecitrix sp. nov.

Candidatus Desucula adpecitrix (NL. fem. n. *adpecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F2B08 sp009184895*. The type genome for the species is the GenBank assembly RS_GCF_009184895.1. The GC content of the type genome is 69.93 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Desucula gen. nov.

Candidatus Desucula (NL. fem. n. *Desucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F2B08*. The type species for the genus is *Candidatus* Desucula adpecitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desucula adpecousia sp. nov.

Candidatus Desucula adpecousia (NL. fem. n. *adpecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F2B08 sp012518475*. The type genome for the species is the GenBank assembly GCA_012518475.1. The GC content of the type genome is 69.18 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Desucula nefanitica sp. nov.

Candidatus Desucula nefanitica (NL. fem. n. *nefanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F2B08 sp012729695*. The type genome for the species is the GenBank assembly GCA_014360485.1. The GC content of the type genome is 69.72 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Desucula omnigatio sp. nov.

Candidatus Desucula omnigatio (NL. fem. n. *omnigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F2B08 sp012838445*. The type genome for the species is the GenBank assembly GCA_012838445.1. The GC content of the type genome is 69.55 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Desulana deparicella sp. nov.

Candidatus Desulana deparicella (NL. fem. n. *deparicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QPJE01 sp003337245*. The type genome for the species is the GenBank assembly RS_GCF_003338615.1. The GC content of the type genome is 33.75 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Desulana gen. nov.

Candidatus Desulana (NL. fem. n. *Desulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QPJE01*. The type species for the genus is *Candidatus* Desulana deparicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desularia canacilenta sp. nov.

Candidatus Desularia canacilenta (NL. fem. n. *canacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILZL01 sp903838705*. The type genome for the species is the GenBank assembly GCA_903838705.1. The GC content of the type genome is 53.17 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Desularia gen. nov.

Candidatus Desularia (NL. fem. n. *Desularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILZL01*. The type species for the genus is *Candidatus* Desularia canacilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desulella malagitica sp. nov.

Candidatus Desulella malagitica (NL. fem. n. *malagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWXH01 sp903916565*. The type genome for the species is the GenBank assembly GCA_903868955.1. The GC content of the type genome is 64.8 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Desulella gen. nov.

Candidatus Desulella (NL. fem. n. *Desulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWXH01*. The type species for the genus is *Candidatus* Desulella malagitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desulfacinum ambifastra sp. nov.

Candidatus Desulfacinum ambifastra (NL. fem. n. *ambifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfacinum sp014359885*. The type genome for the species is the GenBank assembly GCA_014359885.1. The GC content of the type genome is 62.62 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Desulfatiglans menapitio sp. nov.

Candidatus Desulfatiglans menapitio (NL. fem. n. *menapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfatiglans sp900498135*. The type genome for the species is the GenBank assembly GCA_900498135.1. The GC content of the type genome is 58.62 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Desulfatitalea culibatica sp. nov.

Candidatus Desulfatitalea culibatica (NL. fem. n. *culibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfatitalea sp000961655*. The type genome for the species is the GenBank assembly GCA_000961655.1. The GC content of the type genome is 55.05 % and the genome length is 6.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulfatitalea eccisessa sp. nov.

Candidatus Desulfatitalea eccisessa (NL. fem. n. *eccisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfatitalea sp003599575*. The type genome for the species is the GenBank assembly GCA_003599575.1. The GC content of the type genome is 55.75 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Desulfatitalea protratica sp. nov.

Candidatus Desulfatitalea protratica (NL. fem. n. *protratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfatitalea sp002402905*. The type genome for the species is the GenBank assembly GCA_002402905.1. The GC content of the type genome is 58.25 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Desulfatitalea utrinastra sp. nov.

Candidatus Desulfatitalea utrinastra (NL. fem. n. *utrinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfatitalea sp013041835*. The type genome for the species is the GenBank assembly GCA_013041835.1. The GC content of the type genome is 54.39 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Desulfitibacter inexcatio sp. nov.

Candidatus Desulfitibacter inexcatio (NL. fem. n. *inexcatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfitibacter sp001515945*. The type genome for the species is the GenBank assembly GCA_001515945.1. The GC content of the type genome is 36.12 % and the genome length is 3.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulfitobacterium adordibra sp. nov.

Candidatus Desulfitobacterium adordibra (NL. fem. n. *adordibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Desulfitobacterium sp012799495*. The type genome for the species is the GenBank assembly GCA_012799495.1. The GC content of the type genome is 39.65 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Desulfobacca conopatio sp. nov.

Candidatus Desulfobacca conopatio (NL. fem. n. *conopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacca_B sp002049795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003643895.1. The GC content of the type genome is 53.39 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Desulfobacter socagatica sp. nov.

Candidatus Desulfobacter socagatica (NL. fem. n. *socagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacter sp003538835*. The type genome for the species is the GenBank assembly GCA_003538835.1. The GC content of the type genome is 53.41 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Desulfobacula adambitica sp. nov.

Candidatus Desulfobacula adambitica (NL. fem. n. *adambitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp011390435*. The type genome for the species is the GenBank assembly GCA_011390435.1. The GC content of the type genome is 49.09 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Desulfobacula conibedo sp. nov.

Candidatus Desulfobacula conibedo (NL. fem. n. *conibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp011390085*. The type genome for the species is the GenBank assembly GCA_011390085.1. The GC content of the type genome is 48.33 %

and the genome length is 2.47 Mbp.

Description of *Candidatus* Desulfobacula culigitia sp. nov.

Candidatus Desulfobacula culigitia (NL. fem. n. *culigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp013151635*. The type genome for the species is the GenBank assembly GCA_013151635.1. The GC content of the type genome is 41.43 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Desulfobacula favonitrix sp. nov.

Candidatus Desulfobacula favonitrix (NL. fem. n. *favonitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp001799395*. The type genome for the species is the GenBank assembly GCA_001799405.1. The GC content of the type genome is 45.32 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Desulfobacula inexpitas sp. nov.

Candidatus Desulfobacula inexpitas (NL. fem. n. *inexpitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp012031875*. The type genome for the species is the GenBank assembly GCA_012031875.1. The GC content of the type genome is 51.08 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Desulfobacula octupentia sp. nov.

Candidatus Desulfobacula octupentia (NL. fem. n. *octupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp003647385*. The type genome for the species is the GenBank assembly GCA_003647385.1. The GC content of the type genome is 41.15 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Desulfobacula turicetta sp. nov.

Candidatus Desulfobacula turicetta (NL. fem. n. *turicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp014383445*. The type genome for the species is the GenBank assembly GCA_014383445.1. The GC content of the type genome is 40.94 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Desulfobacula viginibula sp. nov.

Candidatus Desulfobacula viginibula (NL. fem. n. *viginibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobacula sp014237455*. The type genome for the species is the GenBank assembly GCA_014237455.1. The GC content of the type genome is 41.2 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Desulfobulbus accogitas sp. nov.

Candidatus Desulfobulbus accogitas (NL. fem. n. *accogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp013201405*. The type genome for the species is the GenBank assembly GCA_013201405.1. The GC content of the type genome is 54.32 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Desulfobulbus advorax sp. nov.

Candidatus Desulfobulbus advorax (NL. fem. n. *advorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp903896915*. The type genome for the species is the GenBank assembly GCA_903896915.1. The GC content of the type genome is 51.79 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Desulfobulbus depicitia sp. nov.

Candidatus Desulfobulbus depicitia (NL. fem. n. *depicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp009778235*. The type genome for the species is the GenBank assembly GCA_009778235.1. The GC content of the type genome is 58.92 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Desulfobulbus fameletta sp. nov.

Candidatus Desulfobulbus fameletta (NL. fem. n. *fameletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp007121995*. The type genome for the species is the GenBank assembly GCA_007121995.1. The GC content of the type genome is 54.16 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Desulfobulbus fetulastra sp. nov.

Candidatus Desulfobulbus fetulastra (NL. fem. n. *fetulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp903842475*. The type genome for the species is the GenBank assembly GCA_903842475.1. The GC content of the type genome is 56.52 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Desulfobulbus hexamax sp. nov.

Candidatus Desulfobulbus hexamax (NL. fem. n. *hexamax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp009782165*. The type genome for the species is the GenBank assembly GCA_009782165.1. The GC content of the type genome is 62.32 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Desulfobulbus insorimonia sp. nov.

Candidatus Desulfobulbus insorimonia (NL. fem. n. *insorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Desulfobulbus sp012744275*. The type genome for the species is the GenBank assembly GCA_012744275.1. The GC content of the type genome is 53.68 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Desulfobulbus lupaniforma sp. nov.

Candidatus Desulfobulbus lupaniforma (NL. fem. n. *lupaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp009780825*. The type genome for the species is the GenBank assembly GCA_009780825.1. The GC content of the type genome is 57.37 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Desulfobulbus vanidentia sp. nov.

Candidatus Desulfobulbus vanidentia (NL. fem. n. *vanidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp009778955*. The type genome for the species is the GenBank assembly GCA_009778955.1. The GC content of the type genome is 58.87 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Desulfobulbus vitigicula sp. nov.

Candidatus Desulfobulbus vitigicula (NL. fem. n. *vitigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus sp012729435*. The type genome for the species is the GenBank assembly GCA_012729435.1. The GC content of the type genome is 52.45 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Desulfobulbus minagentia sp. nov.

Candidatus Desulfobulbus minagentia (NL. fem. n. *minagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfobulbus_C sp003978695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003978855.1. The GC

content of the type genome is 47.61 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Desulfocucumis inguretta sp. nov.

Candidatus Desulfocucumis inguretta (NL. fem. n. *inguretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfocucumis sp000961595*. The type genome for the species is the GenBank assembly GCA_000961595.1. The GC content of the type genome is 47.61 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulfohalovibrio ineffedo sp. nov.

Candidatus Desulfohalovibrio ineffedo (NL. fem. n. *ineffedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfohalovibrio sp000422205*. The type genome for the species is the GenBank assembly RS_GCF_000422205.1. The GC content of the type genome is 67.99 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chesapeake Bay bottom sediments".

Description of *Candidatus* Desulfoluna exaspitio sp. nov.

Candidatus Desulfoluna exaspitio (NL. fem. n. *exaspitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfoluna sp013619155*. The type genome for the species is the GenBank assembly GCA_013619155.1. The GC content of the type genome is 53.67 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Desulfomicrobium agripatio sp. nov.

Candidatus Desulfomicrobium agripatio (NL. fem. n. *agripatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp009930495*. The type genome for the species is the GenBank assembly GCA_009930495.1. The GC content of the type genome is 60.52

% and the genome length is 3.2 Mbp.

Description of *Candidatus* Desulfomicrobium appicitura sp. nov.

Candidatus Desulfomicrobium appicitura (NL. fem. n. *appicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp002412965*. The type genome for the species is the GenBank assembly GCA_002412965.1. The GC content of the type genome is 58.67 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Desulfomicrobium attesitudo sp. nov.

Candidatus Desulfomicrobium attesitudo (NL. fem. n. *attesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp002841885*. The type genome for the species is the GenBank assembly GCA_002841885.1. The GC content of the type genome is 58.55 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Desulfomicrobium cilicax sp. nov.

Candidatus Desulfomicrobium cilicax (NL. fem. n. *cilicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp012727715*. The type genome for the species is the GenBank assembly GCA_012727715.1. The GC content of the type genome is 46.32 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Desulfomicrobium inlacitudo sp. nov.

Candidatus Desulfomicrobium inlacitudo (NL. fem. n. *inlacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp012727515*. The type genome for the species is the GenBank assembly GCA_012727515.1. The GC content of the type genome is 51.7 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Desulfomicrobium manibetta sp. nov.

Candidatus Desulfomicrobium manibetta (NL. fem. n. *manibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp003542385*. The type genome for the species is the GenBank assembly GCA_003542385.1. The GC content of the type genome is 63.78 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Desulfomicrobium venefibula sp. nov.

Candidatus Desulfomicrobium venefibula (NL. fem. n. *venefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfomicrobium sp012729655*. The type genome for the species is the GenBank assembly GCA_012729655.1. The GC content of the type genome is 60.17 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Desulfonatronospira carucessa sp. nov.

Candidatus Desulfonatronospira carucessa (NL. fem. n. *carucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp003554505*. The type genome for the species is the GenBank assembly GCA_003554505.1. The GC content of the type genome is 52.86 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Desulfonatronospira grallugo sp. nov.

Candidatus Desulfonatronospira grallugo (NL. fem. n. *grallugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp007127015*. The type genome for the species is the GenBank assembly GCA_007127015.1. The GC content of the type genome is 49.04 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Desulfonatronospira intabitas sp. nov.

Candidatus Desulfonatronospira intabitas (NL. fem. n. *intabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp003551145*. The type genome for the species is the GenBank assembly GCA_003551145.1. The GC content of the type genome is 52.74 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Desulfonatronospira lametugo sp. nov.

Candidatus Desulfonatronospira lametugo (NL. fem. n. *lametugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp003563255*. The type genome for the species is the GenBank assembly GCA_003563255.1. The GC content of the type genome is 50.96 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Desulfonatronospira lanigicula sp. nov.

Candidatus Desulfonatronospira lanigicula (NL. fem. n. *lanigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp003551155*. The type genome for the species is the GenBank assembly GCA_003551155.1. The GC content of the type genome is 51.87 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Desulfonatronospira pacifentia sp. nov.

Candidatus Desulfonatronospira pacifentia (NL. fem. n. *pacifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp003553695*. The type genome for the species is the GenBank assembly GCA_003550685.1. The GC content of the type genome is 53.37 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Desulfonatronospira turicibra sp. nov.

Candidatus Desulfonatronospira turicibra (NL. fem. n. *turicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronospira sp007125075*. The type genome for the species is the GenBank assembly GCA_003561395.1. The GC content of the type genome is 49.33

% and the genome length is 2.93 Mbp.

Description of *Candidatus* Desulfonatronovibrio aplesatio sp. nov.

Candidatus Desulfonatronovibrio aplesatio (NL. fem. n. *aplesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronovibrio sp003558575*. The type genome for the species is the GenBank assembly GCA_003558575.1. The GC content of the type genome is 43.61 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Desulfonatronovibrio dimaditrix sp. nov.

Candidatus Desulfonatronovibrio dimaditrix (NL. fem. n. *dimaditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronovibrio sp003557865*. The type genome for the species is the GenBank assembly GCA_007133425.1. The GC content of the type genome is 50.84 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Desulfonatronovibrio exoscitoga sp. nov.

Candidatus Desulfonatronovibrio exoscitoga (NL. fem. n. *exoscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronovibrio sp003566455*. The type genome for the species is the GenBank assembly GCA_003566455.1. The GC content of the type genome is 47.23 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Desulfonatronovibrio pepenitia sp. nov.

Candidatus Desulfonatronovibrio pepenitia (NL. fem. n. *pepenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronovibrio sp007121655*. The type genome for the species is the GenBank assembly GCA_007121655.1. The GC content of the type genome is 47.63 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Desulfonatronum invoritrix sp. nov.

Candidatus Desulfonatronum invoritrix (NL. fem. n. *invoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronum sp002299865*. The type genome for the species is the GenBank assembly GCA_002299865.1. The GC content of the type genome is 58.58 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Desulfonatronum lenunimonia sp. nov.

Candidatus Desulfonatronum lenunimonia (NL. fem. n. *lenunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronum sp011049455*. The type genome for the species is the GenBank assembly GCA_011049455.1. The GC content of the type genome is 57.06 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Desulfonatronum monumitio sp. nov.

Candidatus Desulfonatronum monumitio (NL. fem. n. *monumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronum sp003046795*. The type genome for the species is the GenBank assembly RS_GCF_003046795.1. The GC content of the type genome is 58.63 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Desulfonatronum nehalilenta sp. nov.

Candidatus Desulfonatronum nehalilenta (NL. fem. n. *nehalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronum sp007693505*. The type genome for the species is the GenBank assembly GCA_007693505.1. The GC content of the type genome is 57.6 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Desulfonatronum pudibitudo sp. nov.

Candidatus Desulfonatronum pudibitudo (NL. fem. n. *pudibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonatronum sp007127655*. The type genome for the species is the GenBank assembly GCA_007127655.1. The GC content of the type genome is 59.4 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Desulfonauticus fusifitura sp. nov.

Candidatus Desulfonauticus fusifitura (NL. fem. n. *fusifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfonauticus sp001507915*. The type genome for the species is the GenBank assembly GCA_001507915.1. The GC content of the type genome is 38.21 % and the genome length is 2.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample I2".

Description of *Candidatus* Desulfopertinax venunago sp. nov.

Candidatus Desulfopertinax venunago (NL. fem. n. *venunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfopertinax sp002375985*. The type genome for the species is the GenBank assembly GCA_002375985.1. The GC content of the type genome is 59.38 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Desulfopila inheratica sp. nov.

Candidatus Desulfopila inheratica (NL. fem. n. *inheratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfopila sp005116675*. The type genome for the species is the GenBank assembly RS_GCF_005116675.2. The GC content of the type genome is 48.43 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Desulfopila lacinax sp. nov.

Candidatus Desulfopila lacinax (NL. fem. n. *lacinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfopila sp010646885*. The type genome for the species is the

GenBank assembly RS_GCF_010646885.1. The GC content of the type genome is 47.15 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Desulfopila saxifibra sp. nov.

Candidatus Desulfopila saxifibra (NL. fem. n. *saxifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfopila sp005116655*. The type genome for the species is the GenBank assembly RS_GCF_005116655.2. The GC content of the type genome is 44.3 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Desulfoprunum appicetta sp. nov.

Candidatus Desulfoprunum appicetta (NL. fem. n. *appicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfoprunum sp008933635*. The type genome for the species is the GenBank assembly GCA_008933635.1. The GC content of the type genome is 58.36 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Desulfoprunum devecigena sp. nov.

Candidatus Desulfoprunum devecigena (NL. fem. n. *devecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfoprunum sp000769715*. The type genome for the species is the GenBank assembly GCA_000769715.1. The GC content of the type genome is 59.29 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "obtained by stable isotope probing of toluene degrading sulfate-reducing culture enriched from oil sands tailings of Alberta; Canada".

Description of *Candidatus* Desulforhabdus ambusitio sp. nov.

Candidatus Desulforhabdus ambusitio (NL. fem. n. *ambusitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhabdus sp007244385*. The type genome for the species is the GenBank assembly GCA_007244385.1. The GC content of the type genome is 54.39 %

and the genome length is 5.2 Mbp.

Description of *Candidatus* Desulforhopalus acceribra sp. nov.

Candidatus Desulforhopalus acceribra (NL. fem. n. *acceribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp001799365*. The type genome for the species is the GenBank assembly GCA_001799365.1. The GC content of the type genome is 55.56 % and the genome length is 4.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Desulforhopalus bicubicella sp. nov.

Candidatus Desulforhopalus bicubicella (NL. fem. n. *bicubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp005116645*. The type genome for the species is the GenBank assembly RS_GCF_005116645.1. The GC content of the type genome is 49.74 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Desulforhopalus ecfacisca sp. nov.

Candidatus Desulforhopalus ecfacisca (NL. fem. n. *ecfacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp000961725*. The type genome for the species is the GenBank assembly GCA_000961725.1. The GC content of the type genome is 51.68 % and the genome length is 6.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulforhopalus expasisca sp. nov.

Candidatus Desulforhopalus expasisca (NL. fem. n. *expasisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp013139415*. The type genome for the species is the GenBank assembly GCA_013139415.1. The GC content of the type genome is 45.93 %

and the genome length is 4.5 Mbp.

Description of *Candidatus* Desulforhopalus grallousia sp. nov.

Candidatus Desulforhopalus grallousia (NL. fem. n. *grallousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp011390165*. The type genome for the species is the GenBank assembly GCA_011390165.1. The GC content of the type genome is 60.73 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Desulforhopalus ignositudo sp. nov.

Candidatus Desulforhopalus ignositudo (NL. fem. n. *ignositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp005116575*. The type genome for the species is the GenBank assembly RS_GCF_005116575.1. The GC content of the type genome is 45.99 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Desulforhopalus inlibisca sp. nov.

Candidatus Desulforhopalus inlibisca (NL. fem. n. *inlibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp011391225*. The type genome for the species is the GenBank assembly GCA_011391225.1. The GC content of the type genome is 50.34 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Desulforhopalus letifessa sp. nov.

Candidatus Desulforhopalus letifessa (NL. fem. n. *letifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp903875445*. The type genome for the species is the GenBank assembly GCA_903921845.1. The GC content of the type genome is 51.92 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Desulforhopalus rumifilega sp. nov.

Candidatus Desulforhopalus rumifilega (NL. fem. n. *rumifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp002747825*. The type genome for the species is the GenBank assembly GCA_002747825.1. The GC content of the type genome is 49.48 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Desulforhopalus thapsimonas sp. nov.

Candidatus Desulforhopalus thapsimonas (NL. fem. n. *thapsimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforhopalus sp002733995*. The type genome for the species is the GenBank assembly GCA_002733995.1. The GC content of the type genome is 44.41 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Desulforudis inlapessa sp. nov.

Candidatus Desulforudis inlapessa (NL. fem. n. *inlapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulforudis sp002294005*. The type genome for the species is the GenBank assembly GCA_002294005.1. The GC content of the type genome is 62.84 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Desulfosalsimonas detepimonas sp. nov.

Candidatus Desulfosalsimonas detepimonas (NL. fem. n. *detepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosalsimonas sp011389605*. The type genome for the species is the GenBank assembly GCA_011389605.1. The GC content of the type genome is 50.48 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Desulfosarcina adambitrix sp. nov.

Candidatus Desulfosarcina adambitrix (NL. fem. n. *adambitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosarcina sp002747175*. The type genome for the species is the GenBank assembly GCA_002747175.1. The GC content of the type genome is 53.53 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Desulfosarcina aphoricella sp. nov.

Candidatus Desulfosarcina aphoricella (NL. fem. n. *aphoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosarcina sp002747365*. The type genome for the species is the GenBank assembly GCA_002747365.1. The GC content of the type genome is 54.73 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Desulfosarcina effaretta sp. nov.

Candidatus Desulfosarcina effaretta (NL. fem. n. *effaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosarcina sp002352605*. The type genome for the species is the GenBank assembly GCA_002352605.1. The GC content of the type genome is 54.14 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Desulfosarcina fetutousia sp. nov.

Candidatus Desulfosarcina fetutousia (NL. fem. n. *fetutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosarcina sp014237405*. The type genome for the species is the GenBank assembly GCA_014237405.1. The GC content of the type genome is 53.62 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Desulfosporosinus adpelentia sp. nov.

Candidatus Desulfosporosinus adpelentia (NL. fem. n. *adpelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp000960765*. The type genome for the species is the GenBank assembly RS_GCF_000960765.1. The GC content of the type genome is

42.4 % and the genome length is 5.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Desulfosporosinus cicilentia sp. nov.

Candidatus Desulfosporosinus cicilentia (NL. fem. n. *cicilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp000770645*. The type genome for the species is the GenBank assembly GCA_002347555.1. The GC content of the type genome is 44.22 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Desulfosporosinus detorago sp. nov.

Candidatus Desulfosporosinus detorago (NL. fem. n. *detorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp001936615*. The type genome for the species is the GenBank assembly RS_GCF_001936615.1. The GC content of the type genome is 43.62 % and the genome length is 5.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Desulfosporosinus dilibitoga sp. nov.

Candidatus Desulfosporosinus dilibitoga (NL. fem. n. *dilibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp001707885*. The type genome for the species is the GenBank assembly RS_GCF_001707885.1. The GC content of the type genome is 42.4 % and the genome length is 4.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mining waste".

Description of *Candidatus* Desulfosporosinus disiditudo sp. nov.

Candidatus Desulfosporosinus disiditudo (NL. fem. n. *disiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp000961805*. The type genome for the species is the GenBank assembly GCA_000961805.1. The GC content of the type genome is 42.71 % and the genome length is 6.03 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulfosporosinus effinugo sp. nov.

Candidatus Desulfosporosinus effinugo (NL. fem. n. *effinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp002404215*. The type genome for the species is the GenBank assembly GCA_002404215.1. The GC content of the type genome is 42.72 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Desulfosporosinus inlocetta sp. nov.

Candidatus Desulfosporosinus inlocetta (NL. fem. n. *inlocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp002196705*. The type genome for the species is the GenBank assembly RS_GCF_002196705.1. The GC content of the type genome is 41.75 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Desulfosporosinus irrelibra sp. nov.

Candidatus Desulfosporosinus irrelibra (NL. fem. n. *irrelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp000765145*. The type genome for the species is the GenBank assembly RS_GCF_000765145.1. The GC content of the type genome is 41.25 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lab enrichment culture in anaerobic medium".

Description of *Candidatus* Desulfosporosinus octinetta sp. nov.

Candidatus Desulfosporosinus octinetta (NL. fem. n. *octinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp004766055*. The type genome for the species is the GenBank assembly RS_GCF_004766055.1. The GC content of the type genome is 42.54 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Desulfosporosinus pedepivita sp. nov.

Candidatus Desulfosporosinus pedepivita (NL. fem. n. *pedepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp003132105*. The type genome for the species is the GenBank assembly GCA_003132105.1. The GC content of the type genome is 43.51 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Desulfosporosinus podagigena sp. nov.

Candidatus Desulfosporosinus podagigena (NL. fem. n. *podagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp001516045*. The type genome for the species is the GenBank assembly GCA_001516045.1. The GC content of the type genome is 41.96 % and the genome length is 6.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Desulfosporosinus reduvedo sp. nov.

Candidatus Desulfosporosinus reduvedo (NL. fem. n. *reduvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp000224515*. The type genome for the species is the GenBank assembly RS_GCF_000224515.1. The GC content of the type genome is 42.06 % and the genome length is 5.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "isolated from the sediment in the Norilsk hydrometallurgy tailings dam".

Description of *Candidatus* Desulfosporosinus relapibula sp. nov.

Candidatus Desulfosporosinus relapibula (NL. fem. n. *relapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp003513495*. The type genome for the species is the GenBank assembly GCA_014237315.1. The GC content of the type genome is 42.61 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Desulfosporosinus subadibra sp. nov.

Candidatus Desulfosporosinus subadibra (NL. fem. n. *subadibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosporosinus sp002413075*. The type genome for the species is the GenBank assembly GCA_002403815.1. The GC content of the type genome is 43.07 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Desulfosudis baditedo sp. nov.

Candidatus Desulfosudis baditedo (NL. fem. n. *baditedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfosudis sp002085115*. The type genome for the species is the GenBank assembly GCA_002085115.1. The GC content of the type genome is 50.57 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Desulfotignum albogugo sp. nov.

Candidatus Desulfotignum albogugo (NL. fem. n. *albogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011390695*. The type genome for the species is the GenBank assembly GCA_011390695.1. The GC content of the type genome is 49.98 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Desulfotignum apraritio sp. nov.

Candidatus Desulfotignum apraritio (NL. fem. n. *apraritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011390615*. The type genome for the species is the GenBank assembly GCA_011390615.1. The GC content of the type genome is 51.2 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Desulfotignum capudimonia sp. nov.

Candidatus Desulfotignum capudimonia (NL. fem. n. *capudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011389835*. The type genome for the species is the GenBank assembly GCA_011389835.1. The GC content of the type genome is 54.24 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Desulfotignum culilatica sp. nov.

Candidatus Desulfotignum culilatica (NL. fem. n. *culilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011390235*. The type genome for the species is the GenBank assembly GCA_011390235.1. The GC content of the type genome is 50.13 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Desulfotignum exoscastra sp. nov.

Candidatus Desulfotignum exoscastra (NL. fem. n. *exoscastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011389555*. The type genome for the species is the GenBank assembly GCA_011389555.1. The GC content of the type genome is 53.43 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Desulfotignum hirunivita sp. nov.

Candidatus Desulfotignum hirunivita (NL. fem. n. *hirunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011390335*. The type genome for the species is the GenBank assembly GCA_011390335.1. The GC content of the type genome is 51.07 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Desulfotignum tomogicella sp. nov.

Candidatus Desulfotignum tomogicella (NL. fem. n. *tomogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Desulfotignum sp011389715*. The type genome for the species is the GenBank assembly GCA_011389715.1. The GC content of the type genome is 50.36 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Desulfotignum vilipicella sp. nov.

Candidatus Desulfotignum vilipicella (NL. fem. n. *vilipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011390635*. The type genome for the species is the GenBank assembly GCA_011390635.1. The GC content of the type genome is 50.76 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Desulfotignum vitupousia sp. nov.

Candidatus Desulfotignum vitupousia (NL. fem. n. *vitupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfotignum sp011389575*. The type genome for the species is the GenBank assembly GCA_011389575.1. The GC content of the type genome is 50.52 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Desulfovibrio arvecitia sp. nov.

Candidatus Desulfovibrio arvecitia (NL. fem. n. *arvecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900547595*. The type genome for the species is the GenBank assembly GCA_900547595.1. The GC content of the type genome is 65.11 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Desulfovibrio bimetitura sp. nov.

Candidatus Desulfovibrio bimetitura (NL. fem. n. *bimetitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp011039085*. The type genome for the species is the GenBank assembly RS_GCF_011039095.1. The GC content of the type genome is 59.69 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Desulfovibrio canacax sp. nov.

Candidatus Desulfovibrio canacax (NL. fem. n. *canacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900540515*. The type genome for the species is the GenBank assembly RS_GCF_009696265.1. The GC content of the type genome is 61.56 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Desulfovibrio chancivita sp. nov.

Candidatus Desulfovibrio chancivita (NL. fem. n. *chancivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp002237645*. The type genome for the species is the GenBank assembly GCA_002237645.1. The GC content of the type genome is 57.79 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Desulfovibrio cicilitudo sp. nov.

Candidatus Desulfovibrio cicilitudo (NL. fem. n. *cicilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900546145*. The type genome for the species is the GenBank assembly RS_GCF_900753965.1. The GC content of the type genome is 58.61 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Desulfovibrio colimetta sp. nov.

Candidatus Desulfovibrio colimetta (NL. fem. n. *colimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp002369295*. The type genome for the species is the GenBank assembly GCA_002369295.1. The GC content of the type genome is 65.33 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Desulfovibrio defalatica sp. nov.

Candidatus Desulfovibrio defalatica (NL. fem. n. *defalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp003860215*. The type genome for the species is the GenBank assembly RS_GCF_003860215.1. The GC content of the type genome is 58.65 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Desulfovibrio dilacimonas sp. nov.

Candidatus Desulfovibrio dilacimonas (NL. fem. n. *dilacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp002159665*. The type genome for the species is the GenBank assembly RS_GCF_002159665.1. The GC content of the type genome is 55.44 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Desulfovibrio embamastra sp. nov.

Candidatus Desulfovibrio embamastra (NL. fem. n. *embamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp009712225*. The type genome for the species is the GenBank assembly GCA_009712225.1. The GC content of the type genome is 57.14 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Desulfovibrio encenatio sp. nov.

Candidatus Desulfovibrio encenatio (NL. fem. n. *encenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp009929215*. The type genome for the species is the GenBank assembly GCA_009929215.1. The GC content of the type genome is 57.35 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Desulfovibrio homogilega sp. nov.

Candidatus Desulfovibrio homogilega (NL. fem. n. *homogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Desulfovibrio sp011039135*. The type genome for the species is the GenBank assembly RS_GCF_011039155.1. The GC content of the type genome is 65.38 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Desulfovibrio indupitas sp. nov.

Candidatus Desulfovibrio indupitas (NL. fem. n. *indupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp000403945*. The type genome for the species is the GenBank assembly GCA_000403945.1. The GC content of the type genome is 59.92 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Desulfovibrio mimogimonia sp. nov.

Candidatus Desulfovibrio mimogimonia (NL. fem. n. *mimogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900319575*. The type genome for the species is the GenBank assembly GCA_902785865.1. The GC content of the type genome is 58.64 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Desulfovibrio nivomigena sp. nov.

Candidatus Desulfovibrio nivomigena (NL. fem. n. *nivomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900556755*. The type genome for the species is the GenBank assembly GCA_900556755.1. The GC content of the type genome is 62.94 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Desulfovibrio nubigilega sp. nov.

Candidatus Desulfovibrio nubigilega (NL. fem. n. *nubigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp900095395*. The type genome for the species is the GenBank assembly GCA_900095395.1. The GC content of the type genome is 58.1 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Desulfovibrio subaditura sp. nov.

Candidatus Desulfovibrio subaditura (NL. fem. n. *subaditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfovibrio sp009773975*. The type genome for the species is the GenBank assembly GCA_013316485.1. The GC content of the type genome is 53.66 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Desulfurivibrio resalitoga sp. nov.

Candidatus Desulfurivibrio resalitoga (NL. fem. n. *resalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfurivibrio sp004332195*. The type genome for the species is the GenBank assembly GCA_004332195.1. The GC content of the type genome is 54.26 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Desulfurivibrio sonabitas sp. nov.

Candidatus Desulfurivibrio sonabitas (NL. fem. n. *sonabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfurivibrio sp003557565*. The type genome for the species is the GenBank assembly GCA_007133805.1. The GC content of the type genome is 60.2 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Desulfurobacterium expecastra sp. nov.

Candidatus Desulfurobacterium expecastra (NL. fem. n. *expecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfurobacterium_A sp000421485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000421485.1. The GC content of the type genome is 39.83 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Desulfuromonas catociforma sp. nov.

Candidatus Desulfuromonas catociforma (NL. fem. n. *catociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfuromonas sp002869685*. The type genome for the species is the GenBank assembly GCA_002869685.1. The GC content of the type genome is 52.53 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Desulfuromonas detotigena sp. nov.

Candidatus Desulfuromonas detotigena (NL. fem. n. *detotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfuromonas sp002084665*. The type genome for the species is the GenBank assembly GCA_002084665.1. The GC content of the type genome is 46.14 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Desulfuromonas inretatio sp. nov.

Candidatus Desulfuromonas inretatio (NL. fem. n. *inretatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfuromonas sp002084705*. The type genome for the species is the GenBank assembly GCA_002084705.1. The GC content of the type genome is 45.64 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Desulfuromonas letifatica sp. nov.

Candidatus Desulfuromonas letifatica (NL. fem. n. *letifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfuromonas sp001751155*. The type genome for the species is the GenBank assembly GCA_001751155.1. The GC content of the type genome is 46.28 % and the genome length is 2.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "combined push core samples #3730; #5133; and #5579 collected at Hydrate Ridge".

Description of *Candidatus* Desulfuromusa levidastra sp. nov.

Candidatus Desulfuromusa levidastra (NL. fem. n. *levidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Desulfuromusa sp002049545*. The type genome for the species is the GenBank assembly GCA_002049545.1. The GC content of the type genome is 48.34 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Desulia caselicella sp. nov.

Candidatus Desulia caselicella (NL. fem. n. *caselicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5422 sp002409405*. The type genome for the species is the GenBank assembly GCA_002409405.1. The GC content of the type genome is 40.28 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Desulia gen. nov.

Candidatus Desulia (NL. fem. n. *Desulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5422*. The type species for the genus is *Candidatus* Desulia caselicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desulia sotulimonia sp. nov.

Candidatus Desulia sotulimonia (NL. fem. n. *sotulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5422 sp011030385*. The type genome for the species is the GenBank assembly GCA_014518315.1. The GC content of the type genome is 41.52 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Desulida denomitura sp. nov.

Candidatus Desulida denomitura (NL. fem. n. *denomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JdFR-97 sp002010915*. The type genome for the species is the GenBank assembly GCA_002010915.1. The GC content of the type genome is 57.59 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Desulida gen. nov.

Candidatus Desulida (NL. fem. n. *Desulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-97*. The type species for the genus is *Candidatus* Desulida denomitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-97*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desulidaceae.

Description of *Candidatus* Desulidaceae fam. nov.

Candidatus Desulidaceae (NL. fem. n. *Desulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-97.* The type genus for the taxon is *Candidatus* Desulida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-97*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desulidales.

Description of *Candidatus* Desulidales ord. nov.

Candidatus Desulidales (NL. fem. n. *Desulidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-97.* The type genus for the taxon is *Candidatus* Desulida .

According to the original version of GTDB R06-RS202, this family belongs to the class *JdFR-97*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Desulidae.

Description of *Candidatus* Desulidae class. nov.

Candidatus Desulidae (NL. fem. n. *c__Desulidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *JdFR-97*. The type genus for the taxon is *Candidatus* Desulida .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota*.

Description of *Candidatus* Desulosa colepago sp. nov.

Candidatus Desulosa colepago (NL. fem. n. *colepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-49-16 sp002772605*. The type genome for the species is the GenBank assembly GCA_002772605.1. The GC content of the type genome is 49.3 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Desulosa gen. nov.

Candidatus Desulosa (NL. fem. n. *Desulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-49-16*. The type species for the genus is *Candidatus* Desulosa colepago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desulosa hexagax sp. nov.

Candidatus Desulosa hexagax (NL. fem. n. *hexagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-49-16 sp001788955*. The type genome for the species is the GenBank assembly GCA_001787485.1. The GC content of the type genome is 47.72 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desulula dupunastra sp. nov.

Candidatus Desulula dupunastra (NL. fem. n. *dupunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FJAT-46582 sp002797355*. The type genome for the species is the

GenBank assembly RS_GCF_002797355.1. The GC content of the type genome is 44.21 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Desulula gen. nov.

Candidatus Desulula (NL. fem. n. *Desulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FJAT-46582*. The type species for the genus is *Candidatus* Desulula dupunastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desulula modifatica sp. nov.

Candidatus Desulula modifatica (NL. fem. n. *modifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FJAT-46582 sp002261155*. The type genome for the species is the GenBank assembly RS_GCF_002261155.1. The GC content of the type genome is 39.71 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Desulula nitelilega sp. nov.

Candidatus Desulula nitelilega (NL. fem. n. *nitelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FJAT-46582 sp002797375*. The type genome for the species is the GenBank assembly RS_GCF_002283755.1. The GC content of the type genome is 39.92 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Desupana ammulifica sp. nov.

Candidatus Desupana ammulifica (NL. fem. n. *ammulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMM01 sp900762715*. The type genome for the species is the GenBank assembly RS_GCF_900762715.1. The GC content of the type genome is 49.77 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Desupana gen. nov.

Candidatus Desupana (NL. fem. n. *Desupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAMM01*. The type species for the genus is *Candidatus* Desupana ammulifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desupana defaressa sp. nov.

Candidatus Desupana defaressa (NL. fem. n. *defaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMM01 sp003150405*. The type genome for the species is the GenBank assembly GCA_003150405.1. The GC content of the type genome is 50.85 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Desupana ridibatica sp. nov.

Candidatus Desupana ridibatica (NL. fem. n. *ridibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMM01 sp900552945*. The type genome for the species is the GenBank assembly GCA_900552945.1. The GC content of the type genome is 50.48 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Desuparia dibapitoga sp. nov.

Candidatus Desuparia dibapitoga (NL. fem. n. *dibapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HR10 sp002898775*. The type genome for the species is the GenBank assembly GCA_002898775.1. The GC content of the type genome is 63.7 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Desuparia gen. nov.

Candidatus Desuparia (NL. fem. n. *Desuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HR10*. The type species for the genus is *Candidatus* Desuparia dibapitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HR10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desupariaceae.

Description of *Candidatus* Desupariaceae fam. nov.

Candidatus Desupariaceae (NL. fem. n. *Desupariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HR10.* The type genus for the taxon is *Candidatus* Desuparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *HR10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desupariales.

Description of *Candidatus* Desupariales ord. nov.

Candidatus Desupariales (NL. fem. n. *Desupariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HR10.* The type genus for the taxon is *Candidatus* Desuparia .

According to the GTDB R06-RS202, this order belongs to the class *Blastocatellia*.

Description of *Candidatus* Desuparia ecfunilenta sp. nov.

Candidatus Desuparia ecfunilenta (NL. fem. n. *ecfunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HR10 sp011056055*. The type genome for the species is the GenBank assembly GCA_011056055.1. The GC content of the type genome is 62.79 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Desuparia endivivita sp. nov.

Candidatus Desuparia endivivita (NL. fem. n. *endivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HR10 sp002923315*. The type genome for the species is the GenBank assembly GCA_002923315.1. The GC content of the type genome is 63.75 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Desuparia sacomivita sp. nov.

Candidatus Desuparia sacomivita (NL. fem. n. *sacomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HR10 sp011053445*. The type genome for the species is the GenBank assembly GCA_011053445.1. The GC content of the type genome is 63.06 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Desuparia tirocitrix sp. nov.

Candidatus Desuparia tirocitrix (NL. fem. n. *tirocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HR10 sp011058595*. The type genome for the species is the GenBank assembly GCA_011058595.1. The GC content of the type genome is 63.98 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Desupella illepivita sp. nov.

Candidatus Desupella illepivita (NL. fem. n. *illepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHST01 sp009379825*. The type genome for the species is the GenBank assembly GCA_009379825.1. The GC content of the type genome is 70.34 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Desupella gen. nov.

Candidatus Desupella (NL. fem. n. *Desupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHST01*. The type species for the genus is *Candidatus* Desupella illepivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHST01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desupellaceae.

Description of *Candidatus* Desupellaceae fam. nov.

Candidatus Desupellaceae (NL. fem. n. *Desupellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHST01*. The type genus for the taxon is *Candidatus* Desupella .

According to GTDB R06-RS202, this family belongs to the order *Streptosporangiales*.

Description of *Candidatus* Desupella refinibula sp. nov.

Candidatus Desupella refinibula (NL. fem. n. *refinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHST01 sp009379955*. The type genome for the species is the GenBank assembly GCA_009379955.1. The GC content of the type genome is 70.83 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Desupia arcubiforma sp. nov.

Candidatus Desupia arcubiforma (NL. fem. n. *arcubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724215 sp007571365*. The type genome for the species is the GenBank assembly GCA_007571365.1. The GC content of the type genome is 59.33 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Desupia gen. nov.

Candidatus Desupia (NL. fem. n. *Desupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2724215*. The type species for the genus is *Candidatus* Desupia arcubiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Desupia dececitica sp. nov.

Candidatus Desupia dececitica (NL. fem. n. *dececitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724215 sp009841115*. The type genome for the species is the GenBank assembly GCA_009836325.1. The GC content of the type genome is 59.43 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Desupia effunivita sp. nov.

Candidatus Desupia effunivita (NL. fem. n. *effunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724215 sp002724215*. The type genome for the species is the GenBank assembly GCA_002724215.1. The GC content of the type genome is 62.44 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Desupia nutamousia sp. nov.

Candidatus Desupia nutamousia (NL. fem. n. *nutamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724215 sp009845645*. The type genome for the species is the GenBank assembly GCA_009845645.1. The GC content of the type genome is 59.18 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Desupia senacitio sp. nov.

Candidatus Desupia senacitio (NL. fem. n. *senacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2724215 sp009840005*. The type genome for the species is the GenBank assembly GCA_009835785.1. The GC content of the type genome is 59.08 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Desupida haricicella sp. nov.

Candidatus Desupida haricicella (NL. fem. n. *haricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKYG01 sp007128045*. The type genome for the species is the GenBank assembly GCA_007117045.1. The GC content of the type genome is 43.22 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Desupida gen. nov.

Candidatus Desupida (NL. fem. n. *Desupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKYG01*. The type species for the genus is *Candidatus* Desupida haricicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Desuposa alticibula sp. nov.

Candidatus Desuposa alticibula (NL. fem. n. *alticibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686955 sp002686955*. The type genome for the species is the GenBank assembly GCA_002686955.1. The GC content of the type genome is 63.44 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Desuposa gen. nov.

Candidatus Desuposa (NL. fem. n. *Desuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686955*. The type species for the genus is *Candidatus* Desuposa alticibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2686955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuposaceae.

Description of *Candidatus* Desuposaceae fam. nov.

Candidatus Desuposaceae (NL. fem. n. *Desuposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2686955.* The type genus for the taxon is *Candidatus* Desuposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2686955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desuposales.

Description of *Candidatus* Desuposales ord. nov.

Candidatus Desuposales (NL. fem. n. *Desuposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2686955.* The type genus for the taxon is *Candidatus* Desuposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *GCA-2686955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Desuposae.

Description of *Candidatus* Desuposae class. nov.

Candidatus Desuposae (NL. fem. n. *c__Desuposae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2686955.* The type genus for the taxon is *Candidatus* Desuposa .

According to GTDB R06-RS202, this class belongs to the phylum *Gemmatimonadota_A*.

Description of *Candidatus* Desupula hemidastra sp. nov.

Candidatus Desupula hemidastra (NL. fem. n. *hemidastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6263 sp002441085*. The type genome for the species is the GenBank assembly GCA_002441085.1. The GC content of the type genome is 29.1 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Desupula gen. nov.

Candidatus Desupula (NL. fem. n. *Desupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6263*. The type species for the genus is *Candidatus* Desupula hemidastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Desupula recorugo sp. nov.

Candidatus Desupula recorugo (NL. fem. n. *recorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6263 sp903943625*. The type genome for the species is the GenBank assembly GCA_903959875.1. The GC content of the type genome is 31.44 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Desurana meridisca sp. nov.

Candidatus Desurana meridisca (NL. fem. n. *meridisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12091 sp001799485*. The type genome for the species is the GenBank assembly GCA_001799535.1. The GC content of the type genome is 61.24 % and the genome length is 2.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.2 filter".

Description of *Candidatus* Desurana gen. nov.

Candidatus Desurana (NL. fem. n. *Desurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12091*. The type species for the genus is *Candidatus* Desurana meridisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Desuraria delacastra sp. nov.

Candidatus Desuraria delacastra (NL. fem. n. *delacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-9b sp903893485*. The type genome for the species is the GenBank assembly GCA_903826655.1. The GC content of the type genome is 46.14 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Desuraria gen. nov.

Candidatus Desuraria (NL. fem. n. *Desuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-50-9b*. The type species for the genus is *Candidatus* Desuraria delacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-50-9b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurariaceae.

Description of *Candidatus* Desurariaceae fam. nov.

Candidatus Desurariaceae (NL. fem. n. *Desurariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-50-9b.* The type genus for the taxon is *Candidatus* Desuraria .

According to GTDB R06-RS202, this family belongs to the order *Magasanikbacterales*.

Description of *Candidatus* Desuraria xenopimonia sp. nov.

Candidatus Desuraria xenopimonia (NL. fem. n. *xenopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-50-9b sp001782975*. The type genome for the species is the GenBank assembly GCA_001782815.1. The GC content of the type genome is 50.02 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Desurella melopitoga sp. nov.

Candidatus Desurella melopitoga (NL. fem. n. *melopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12405 sp003542615*. The type genome for the species is the GenBank assembly GCA_000993215.1. The GC content of the type genome is 38.15 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Desurella gen. nov.

Candidatus Desurella (NL. fem. n. *Desurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12405*. The type species for the genus is *Candidatus* Desurella melopitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desurellaceae.

Description of *Candidatus* Desurellaceae fam. nov.

Candidatus Desurellaceae (NL. fem. n. *Desurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12405.* The type genus for the taxon is *Candidatus* Desurella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA12405*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desurellales.

Description of *Candidatus* Desurellales ord. nov.

Candidatus Desurellales (NL. fem. n. *Desurellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12405.* The type genus for the taxon is *Candidatus* Desurella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Desuria denomimonia sp. nov.

Candidatus Desuria denomimonia (NL. fem. n. *denomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA917 sp002293855*. The type genome for the species is the GenBank assembly GCA_002293855.1. The GC content of the type genome is 42.66 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Desuria gen. nov.

Candidatus Desuria (NL. fem. n. *Desuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA917*. The type species for the genus is *Candidatus* Desuria denomimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuriaceae.

Description of *Candidatus* Desuriaceae fam. nov.

Candidatus Desuriaceae (NL. fem. n. *Desuriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA917*. The type genus for the taxon is *Candidatus* Desuria .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Desurida repudiforma sp. nov.

Candidatus Desurida repudiforma (NL. fem. n. *repudiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-47-37 sp002772455*. The type genome for the species is the GenBank assembly GCA_002771645.1. The GC content of the type genome is 46.75 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Desurida gen. nov.

Candidatus Desurida (NL. fem. n. *Desurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-47-37*. The type species for the genus is *Candidatus* Desurida repudiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-47-37*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desuridaceae.

Description of *Candidatus* Desuridaceae fam. nov.

Candidatus Desuridaceae (NL. fem. n. *Desuridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-47-37.* The type genus for the taxon is *Candidatus* Desurida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Desurula unetvisca sp. nov.

Candidatus Desurula unetvisca (NL. fem. n. *unetvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUZI01 sp013349595*. The type genome for the species is the GenBank assembly GCA_013349595.1. The GC content of the type genome is 35.33 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Desurula gen. nov.

Candidatus Desurula (NL. fem. n. *Desurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUZI01*. The type species for the genus is *Candidatus* Desurula unetvisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUZI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Desurulaceae.

Description of *Candidatus* Desurulaceae fam. nov.

Candidatus Desurulaceae (NL. fem. n. *Desurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUZI01.* The type genus for the taxon is *Candidatus* Desurula .

According to GTDB R06-RS202, this family belongs to the order *Thermodesulfovibrionales*.

Description of *Candidatus* Detecana benepugo sp. nov.

Candidatus Detecana benepugo (NL. fem. n. *benepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120531 sp000173115*. The type genome for the species is the GenBank assembly GCA_002390585.1. The GC content of the type genome is 38.57 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Detecana gen. nov.

Candidatus Detecana (NL. fem. n. *Detecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MAG-120531*. The type species for the genus is *Candidatus* Detecana benepugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detecana rorifimonia sp. nov.

Candidatus Detecana rorifimonia (NL. fem. n. *rorifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120531 sp002378585*. The type genome for the species is the GenBank assembly GCA_002378585.1. The GC content of the type genome is 44.17 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Detecana volunitura sp. nov.

Candidatus Detecana volunitura (NL. fem. n. *volunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MAG-120531 sp013373635*. The type genome for the species is the GenBank assembly GCA_013373635.1. The GC content of the type genome is 38.47 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Detecaria inperibra sp. nov.

Candidatus Detecaria inperibra (NL. fem. n. *inperibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WPAF01 sp009772965*. The type genome for the species is the GenBank assembly GCA_009772965.1. The GC content of the type genome is 39.99 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Detecaria gen. nov.

Candidatus Detecaria (NL. fem. n. *Detecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WPAF01*. The type species for the genus is *Candidatus* Detecaria inperibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WPAF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detecariaceae.

Description of *Candidatus* Detecariaceae fam. nov.

Candidatus Detecariaceae (NL. fem. n. *Detecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WPAF01.* The type genus for the taxon is *Candidatus* Detecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYC2-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domipidales.

Description of *Candidatus* Detecella citivifica sp. nov.

Candidatus Detecella citivifica (NL. fem. n. *citivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-89 sp003166865*. The type genome for the species is the GenBank assembly GCA_003167175.1. The GC content of the type genome is 59.66 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Detecella gen. nov.

Candidatus Detecella (NL. fem. n. *Detecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-89*. The type species for the genus is *Candidatus* Detecella citivifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detecella documisca sp. nov.

Candidatus Detecella documisca (NL. fem. n. *documisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-89 sp003132905*. The type genome for the species is the GenBank assembly GCA_003132905.1. The GC content of the type genome is 57.68 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Detecella relecitoga sp. nov.

Candidatus Detecella relecitoga (NL. fem. n. *relecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-89 sp003166875*. The type genome for the species is the GenBank assembly GCA_003133465.1. The GC content of the type genome is 58.36 % and the genome length is 7.51 Mbp.

Description of *Candidatus* Detecella siticilega sp. nov.

Candidatus Detecella siticilega (NL. fem. n. *siticilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-89 sp003162425*. The type genome for the species is the GenBank assembly GCA_003162425.1. The GC content of the type genome is 58.21 % and the genome length is 8.72 Mbp.

Description of *Candidatus* Detecia delecitura sp. nov.

Candidatus Detecia delecitura (NL. fem. n. *delecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRFN01 sp903877885*. The type genome for the species is the GenBank assembly GCA_903852855.1. The GC content of the type genome is 38.21 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Detecia gen. nov.

Candidatus Detecia (NL. fem. n. *Detecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRFN01*. The type species for the genus is *Candidatus* Detecia delecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12157*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledosaceae.

Description of *Candidatus* Detecida decenifica sp. nov.

Candidatus Detecida decenifica (NL. fem. n. *decenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-306 sp000980375*. The type genome for the species is the GenBank assembly GCA_002103135.1. The GC content of the type genome is 36.89 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Detecida gen. nov.

Candidatus Detecida (NL. fem. n. *Detecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-306*. The type species for the genus is *Candidatus* Detecida decenifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detecosa delacitoga sp. nov.

Candidatus Detecosa delacitoga (NL. fem. n. *delacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED660 sp002691205*. The type genome for the species is the GenBank assembly GCA_002691205.1. The GC content of the type genome is 54.19 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Detecosa gen. nov.

Candidatus Detecosa (NL. fem. n. *Detecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED660*. The type species for the genus is *Candidatus* Detecosa delacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4427*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapiaceae.

Description of *Candidatus* Detecosa docibimonia sp. nov.

Candidatus Detecosa docibimonia (NL. fem. n. *docibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED660 sp002691025*. The type genome for the species is the GenBank assembly GCA_002170485.2. The GC content of the type genome is 59.98 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Detecula maleditica sp. nov.

Candidatus Detecula maleditica (NL. fem. n. *maleditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4839 sp002400085*. The type genome for the species is the GenBank assembly GCA_002397015.1. The GC content of the type genome is 32.45 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Detecula gen. nov.

Candidatus Detecula (NL. fem. n. *Detecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4839*. The type species for the genus is *Candidatus* Detecula maleditica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detenana conamitrix sp. nov.

Candidatus Detenana conamitrix (NL. fem. n. *conamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002793235 sp002402165*. The type genome for the species is the GenBank assembly GCA_002402165.1. The GC content of the type genome is 32.04 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Detenana gen. nov.

Candidatus Detenana (NL. fem. n. *Detenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002793235*. The type species for the genus is *Candidatus* Detenana conamitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detenana pabilicella sp. nov.

Candidatus Detenana pabilicella (NL. fem. n. *pabilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002793235 sp002790175*. The type genome for the species is the GenBank assembly GCA_002793235.1. The GC content of the type genome is 32.07 %

and the genome length is 2.18 Mbp.

Description of *Candidatus* Detenana rubicedo sp. nov.

Candidatus Detenana rubicedo (NL. fem. n. *rubicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002793235 sp002401955*. The type genome for the species is the GenBank assembly GCA_002401955.1. The GC content of the type genome is 32.48 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Detenella irregitia sp. nov.

Candidatus Detenella irregitia (NL. fem. n. *irregitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2770 sp002352565*. The type genome for the species is the GenBank assembly GCA_002352565.1. The GC content of the type genome is 50.22 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Detenella gen. nov.

Candidatus Detenella (NL. fem. n. *Detenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2770*. The type species for the genus is *Candidatus* Detenella irregitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2770*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detenellaceae.

Description of *Candidatus* Detenellaceae fam. nov.

Candidatus Detenellaceae (NL. fem. n. *Detenellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2770.* The type genus for the taxon is *Candidatus* Detenella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2770*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detenellales.

Description of *Candidatus* Detenellales ord. nov.

Candidatus Detenellales (NL. fem. n. *Detenellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2770.* The type genus for the taxon is *Candidatus* Detenella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Detenia turibisca sp. nov.

Candidatus Detenia turibisca (NL. fem. n. *turibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MVZH01 sp002068325*. The type genome for the species is the GenBank assembly GCA_002068325.1. The GC content of the type genome is 69.46 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Detenia gen. nov.

Candidatus Detenia (NL. fem. n. *Detenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MVZH01*. The type species for the genus is *Candidatus* Detenia turibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MVZH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deteniaceae.

Description of *Candidatus* Deteniaceae fam. nov.

Candidatus Deteniaceae (NL. fem. n. *Deteniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MVZH01.* The type genus for the taxon is *Candidatus* Detenia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Detenosa categibula sp. nov.

Candidatus Detenosa categibula (NL. fem. n. *categibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL24 sp003503355*. The type genome for the species is the GenBank assembly GCA_003503355.1. The GC content of the type genome is 54.96 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Detenosa gen. nov.

Candidatus Detenosa (NL. fem. n. *Detenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BACL24*. The type species for the genus is *Candidatus* Detenosa categibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Detenosa cocoledo sp. nov.

Candidatus Detenosa cocoledo (NL. fem. n. *cocoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL24 sp002430605*. The type genome for the species is the GenBank assembly GCA_001439535.1. The GC content of the type genome is 53.07 % and the genome length is 2.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water; brackish water collected from the surface of the Baltic Sea".

Description of *Candidatus* Detenosa inbecitio sp. nov.

Candidatus Detenosa inbecitio (NL. fem. n. *inbecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL24 sp003485085*. The type genome for the species is the GenBank assembly GCA_003485085.1. The GC content of the type genome is 49.13 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Detenosa melililenta sp. nov.

Candidatus Detenosa melililenta (NL. fem. n. *melililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL24 sp002292345*. The type genome for the species is the GenBank assembly GCA_002470805.1. The GC content of the type genome is 51.75 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Detenosa taxilitia sp. nov.

Candidatus Detenosa taxilitia (NL. fem. n. *taxilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL24 sp902728235*. The type genome for the species is the GenBank assembly RS_GCF_902728255.1. The GC content of the type genome is 51.6 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Detenula pabilastra sp. nov.

Candidatus Detenula pabilastra (NL. fem. n. *pabilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVB01 sp003562365*. The type genome for the species is the GenBank assembly GCA_007133285.1. The GC content of the type genome is 60.35 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Detenula gen. nov.

Candidatus Detenula (NL. fem. n. *Detenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWVB01*. The type species for the genus is *Candidatus* Detenula pabilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Detenula timefitoga sp. nov.

Candidatus Detenula timefitoga (NL. fem. n. *timefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWVB01 sp007125545*. The type genome for the species is the GenBank assembly GCA_007119465.1. The GC content of the type genome is 60.03 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Detepana abnoritrix sp. nov.

Candidatus Detepana abnoritrix (NL. fem. n. *abnoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA822 sp002712565*. The type genome for the species is the GenBank assembly GCA_002712565.1. The GC content of the type genome is 60.77 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Detepana gen. nov.

Candidatus Detepana (NL. fem. n. *Detepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA822*. The type species for the genus is *Candidatus* Detepana abnoritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Detepana buxifitia sp. nov.

Candidatus Detepana buxifitia (NL. fem. n. *buxifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA822 sp002731735*. The type genome for the species is the GenBank assembly GCA_002295725.1. The GC content of the type genome is 62.14 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Deteparia hemidatio sp. nov.

Candidatus Deteparia hemidatio (NL. fem. n. *hemidatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-63-19 sp001770425*. The type genome for the species is the GenBank assembly GCA_001772025.1. The GC content of the type genome is 64.55 % and the genome length is 2.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Deteparia gen. nov.

Candidatus Deteparia (NL. fem. n. *Deteparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-63-19*. The type species for the genus is *Candidatus* Deteparia hemidatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Deteparia taxililega sp. nov.

Candidatus Deteparia taxililega (NL. fem. n. *taxililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-63-19 sp001770415*. The type genome for the species is the GenBank assembly GCA_001770545.1. The GC content of the type genome is 62.39 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Detepella pabilitia sp. nov.

Candidatus Detepella pabilitia (NL. fem. n. *pabilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-69 sp005885325*. The type genome for the species is the GenBank assembly GCA_005885325.1. The GC content of the type genome is 69.18 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Detepella gen. nov.

Candidatus Detepella (NL. fem. n. *Detepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-69*. The type species for the genus is *Candidatus* Detepella pabilitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifellaceae.

Description of *Candidatus* Detepia metapisca sp. nov.

Candidatus Detepia metapisca (NL. fem. n. *metapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED11-315 sp003561715*. The type genome for the species is the GenBank assembly GCA_007120885.1. The GC content of the type genome is 51.04 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Detepia gen. nov.

Candidatus Detepia (NL. fem. n. *Detepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED11-315*. The type species for the genus is *Candidatus* Detepia metapisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Detepida lucelibula sp. nov.

Candidatus Detepida lucelibula (NL. fem. n. *lucelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10025 sp001003705*. The type genome for the species is the GenBank assembly GCA_003527115.1. The GC content of the type genome is 47.45 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Detepida gen. nov.

Candidatus Detepida (NL. fem. n. *Detepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10025*. The type species for the genus is *Candidatus* Detepida lucelibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detepidaceae.

Description of *Candidatus* Detepidaceae fam. nov.

Candidatus Detepidaceae (NL. fem. n. *Detepidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10025.* The type genus for the taxon is *Candidatus* Detepida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detepidales.

Description of *Candidatus* Detepidales ord. nov.

Candidatus Detepidales (NL. fem. n. *Detepidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10025.* The type genus for the taxon is *Candidatus* Detepida .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Deteposa inornisca sp. nov.

Candidatus Deteposa inornisca (NL. fem. n. *inornisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-2 sp001443445*. The type genome for the species is the GenBank assembly GCA_001443445.1. The GC content of the type genome is 40.27 %

and the genome length is 2.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Deteposa gen. nov.

Candidatus Deteposa (NL. fem. n. *Deteposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-2*. The type species for the genus is *Candidatus* Deteposa inornisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deteposaceae.

Description of *Candidatus* Deteposaceae fam. nov.

Candidatus Deteposaceae (NL. fem. n. *Deteposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSP1-2.* The type genus for the taxon is *Candidatus* Deteposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siligiales.

Description of *Candidatus* Detesaria ambecimonia sp. nov.

Candidatus Detesaria ambecimonia (NL. fem. n. *ambecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp012522155*. The type genome for the species is the GenBank assembly GCA_012522155.1. The GC content of the type genome is 44.61 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Detesaria gen. nov.

Candidatus Detesaria (NL. fem. n. *Detesaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LD21*. The type species for the genus is *Candidatus* Detesaria ambecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VadinHA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categariaceae.

Description of *Candidatus* Detesaria argititrix sp. nov.

Candidatus Detesaria argititrix (NL. fem. n. *argititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002319885*. The type genome for the species is the GenBank assembly GCA_002319885.1. The GC content of the type genome is 38.15 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Detesaria astipedo sp. nov.

Candidatus Detesaria astipedo (NL. fem. n. *astipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003501665*. The type genome for the species is the GenBank assembly GCA_003501665.1. The GC content of the type genome is 41.34 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Detesaria benevicula sp. nov.

Candidatus Detesaria benevicula (NL. fem. n. *benevicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp013314865*. The type genome for the species is the GenBank assembly GCA_013314865.1. The GC content of the type genome is 41.9 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Detesaria buxanimonia sp. nov.

Candidatus Detesaria buxanimonia (NL. fem. n. *buxanimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002328625*. The type genome for the species is the GenBank assembly GCA_002328625.1. The GC content of the type genome is 40.48 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Detesaria camilentia sp. nov.

Candidatus Detesaria camilentia (NL. fem. n. *camilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002428385*. The type genome for the species is the GenBank assembly GCA_002418645.1. The GC content of the type genome is 46.19 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Detesaria carecicula sp. nov.

Candidatus Detesaria carecicula (NL. fem. n. *carecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003142255*. The type genome for the species is the GenBank assembly GCA_003142255.1. The GC content of the type genome is 41.75 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Detesaria cinefatio sp. nov.

Candidatus Detesaria cinefatio (NL. fem. n. *cinefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003141415*. The type genome for the species is the GenBank assembly GCA_003141415.1. The GC content of the type genome is 37.46 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Detesaria conigimonas sp. nov.

Candidatus Detesaria conigimonas (NL. fem. n. *conigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp012519515*. The type genome for the species is the GenBank assembly GCA_012519515.1. The GC content of the type genome is 45.31 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Detesaria decomax sp. nov.

Candidatus Detesaria decomax (NL. fem. n. *decomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003520925*. The type genome for the species is the GenBank assembly GCA_003520925.1. The GC content of the type genome is 41.49 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Detesaria defosedo sp. nov.

Candidatus Detesaria defosedo (NL. fem. n. *defosedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003157015*. The type genome for the species is the GenBank assembly GCA_003157015.1. The GC content of the type genome is 37.81 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Detesaria diluditia sp. nov.

Candidatus Detesaria diluditia (NL. fem. n. *diluditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002070505*. The type genome for the species is the GenBank assembly GCA_002070505.1. The GC content of the type genome is 41.32 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Detesaria documifica sp. nov.

Candidatus Detesaria documifica (NL. fem. n. *documifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp012729475*. The type genome for the species is the GenBank assembly GCA_012729475.1. The GC content of the type genome is 39.16 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Detesaria effulimonia sp. nov.

Candidatus Detesaria effulimonia (NL. fem. n. *effulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *LD21 sp003141495*. The type genome for the species is the GenBank assembly GCA_003141495.1. The GC content of the type genome is 38.2 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Detesaria embamitura sp. nov.

Candidatus Detesaria embamitura (NL. fem. n. *embamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002319915*. The type genome for the species is the GenBank assembly GCA_002319915.1. The GC content of the type genome is 48.72 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Detesaria extunetta sp. nov.

Candidatus Detesaria extunetta (NL. fem. n. *extunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003157055*. The type genome for the species is the GenBank assembly GCA_003157055.1. The GC content of the type genome is 41.5 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Detesaria fefelicula sp. nov.

Candidatus Detesaria fefelicula (NL. fem. n. *fefelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003141895*. The type genome for the species is the GenBank assembly GCA_003141895.1. The GC content of the type genome is 38.01 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Detesaria haricibula sp. nov.

Candidatus Detesaria haricibula (NL. fem. n. *haricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003155705*. The type genome for the species is the GenBank assembly GCA_003155705.1. The GC content of the type genome is 38.44 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Detesaria imbecilega sp. nov.

Candidatus Detesaria imbecilega (NL. fem. n. *imbecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003162595*. The type genome for the species is the GenBank assembly GCA_003162595.1. The GC content of the type genome is 38.18 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Detesaria lenunessa sp. nov.

Candidatus Detesaria lenunessa (NL. fem. n. *lenunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003152835*. The type genome for the species is the GenBank assembly GCA_003152835.1. The GC content of the type genome is 41.63 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Detesaria malagicula sp. nov.

Candidatus Detesaria malagicula (NL. fem. n. *malagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp001768195*. The type genome for the species is the GenBank assembly GCA_003528105.1. The GC content of the type genome is 40.92 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Detesaria obfenicella sp. nov.

Candidatus Detesaria obfenicella (NL. fem. n. *obfenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp002424525*. The type genome for the species is the GenBank assembly GCA_002424525.1. The GC content of the type genome is 45.71 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Detesaria pepeniforma sp. nov.

Candidatus Detesaria pepeniforma (NL. fem. n. *pepeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003141715*. The type genome for the species is the GenBank assembly GCA_003141715.1. The GC content of the type genome is 38.16 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Detesaria ranunicula sp. nov.

Candidatus Detesaria ranunicula (NL. fem. n. *ranunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp012517605*. The type genome for the species is the GenBank assembly GCA_012517605.1. The GC content of the type genome is 43.18 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Detesaria resacitio sp. nov.

Candidatus Detesaria resacitio (NL. fem. n. *resacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp009877105*. The type genome for the species is the GenBank assembly GCA_009877105.1. The GC content of the type genome is 45.22 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Detesaria rudeciforma sp. nov.

Candidatus Detesaria rudeciforma (NL. fem. n. *rudeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp903844815*. The type genome for the species is the GenBank assembly GCA_903844815.1. The GC content of the type genome is 40.95 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Detesaria saxifisca sp. nov.

Candidatus Detesaria saxifisca (NL. fem. n. *saxifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *LD21 sp903824785*. The type genome for the species is the GenBank assembly GCA_903945345.1. The GC content of the type genome is 39.82 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Detesaria subacugo sp. nov.

Candidatus Detesaria subacugo (NL. fem. n. *subacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003157075*. The type genome for the species is the GenBank assembly GCA_003152935.1. The GC content of the type genome is 38.94 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Detesaria venabicella sp. nov.

Candidatus Detesaria venabicella (NL. fem. n. *venabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LD21 sp003141525*. The type genome for the species is the GenBank assembly GCA_003141525.1. The GC content of the type genome is 38.04 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Detesella derelitoga sp. nov.

Candidatus Detesella derelitoga (NL. fem. n. *derelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1217 sp900549625*. The type genome for the species is the GenBank assembly RS_GCF_900772455.1. The GC content of the type genome is 27.98 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Detesella gen. nov.

Candidatus Detesella (NL. fem. n. *Detesella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1217*. The type species for the genus is *Candidatus* Detesella derelitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Detesella prospimonia sp. nov.

Candidatus Detesella prospimonia (NL. fem. n. *prospimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1217 sp902766135*. The type genome for the species is the GenBank assembly GCA_902766135.1. The GC content of the type genome is 29.86 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Detesia cerevetta sp. nov.

Candidatus Detesia cerevetta (NL. fem. n. *cerevetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2903 sp002349565*. The type genome for the species is the GenBank assembly GCA_002349565.1. The GC content of the type genome is 52.36 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Detesia gen. nov.

Candidatus Detesia (NL. fem. n. *Detesia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2903*. The type species for the genus is *Candidatus* Detesia cerevetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-977*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemariaceae.

Description of *Candidatus* Detesia cocolitrix sp. nov.

Candidatus Detesia cocolitrix (NL. fem. n. *cocolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2903 sp002393065*. The type genome for the species is the GenBank assembly GCA_002393065.1. The GC content of the type genome is 53.86 %

and the genome length is 1.89 Mbp.

Description of *Candidatus* Detesia coticetta sp. nov.

Candidatus Detesia coticetta (NL. fem. n. *coticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2903 sp002438565*. The type genome for the species is the GenBank assembly GCA_003532815.1. The GC content of the type genome is 52.34 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Detesia depupitas sp. nov.

Candidatus Detesia depupitas (NL. fem. n. *depupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2903 sp900768875*. The type genome for the species is the GenBank assembly RS_GCF_900768875.1. The GC content of the type genome is 52.24 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Detesia inhabibra sp. nov.

Candidatus Detesia inhabibra (NL. fem. n. *inhabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2903 sp900768465*. The type genome for the species is the GenBank assembly RS_GCF_900768465.1. The GC content of the type genome is 52.3 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Detesida artufitica sp. nov.

Candidatus Detesida artufitica (NL. fem. n. *artufitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp004298915*. The type genome for the species is the GenBank assembly GCA_004298915.1. The GC content of the type genome is 69.39 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Detesida gen. nov.

Candidatus Detesida (NL. fem. n. *Detesida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5189*. The type species for the genus is *Candidatus* Detesida artufitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Detesida coninago sp. nov.

Candidatus Detesida coninago (NL. fem. n. *coninago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp003250155*. The type genome for the species is the GenBank assembly GCA_003250155.1. The GC content of the type genome is 71.71 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Detesida decupilenta sp. nov.

Candidatus Detesida decupilenta (NL. fem. n. *decupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp012026785*. The type genome for the species is the GenBank assembly GCA_012026785.1. The GC content of the type genome is 70.66 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Detesida echidilega sp. nov.

Candidatus Detesida echidilega (NL. fem. n. *echidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp005889475*. The type genome for the species is the GenBank assembly GCA_005889475.1. The GC content of the type genome is 70.45 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Detesida linigugo sp. nov.

Candidatus Detesida linigugo (NL. fem. n. *linigugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp004297395*. The type genome for the species is the GenBank assembly GCA_004297395.1. The GC content of the type genome is 71.6 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Detesida modificella sp. nov.

Candidatus Detesida modificella (NL. fem. n. *modificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp002413045*. The type genome for the species is the GenBank assembly GCA_002413045.1. The GC content of the type genome is 69.86 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Detesida necubiforma sp. nov.

Candidatus Detesida necubiforma (NL. fem. n. *necubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp001795245*. The type genome for the species is the GenBank assembly GCA_001795245.1. The GC content of the type genome is 71.69 % and the genome length is 2.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Detesida omninago sp. nov.

Candidatus Detesida omninago (NL. fem. n. *omninago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5189 sp013822395*. The type genome for the species is the GenBank assembly GCA_013822395.1. The GC content of the type genome is 70.62 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Detesosa anapledo sp. nov.

Candidatus Detesosa anapledo (NL. fem. n. *anapledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp003053925*. The type genome for the species is the GenBank assembly RS_GCF_003053925.1. The GC content of the type genome is 60.78 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Detesosa gen. nov.

Candidatus Detesosa (NL. fem. n. *Detesosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWH-TA3*. The type species for the genus is *Candidatus* Detesosa anapledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detesosa cuferilega sp. nov.

Candidatus Detesosa cuferilega (NL. fem. n. *cuferilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp903940225*. The type genome for the species is the GenBank assembly GCA_903937105.1. The GC content of the type genome is 60.11 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Detesosa excucicula sp. nov.

Candidatus Detesosa excucicula (NL. fem. n. *excucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp009704225*. The type genome for the species is the GenBank assembly GCA_009704225.1. The GC content of the type genome is 58.64 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Detesosa favonicula sp. nov.

Candidatus Detesosa favonicula (NL. fem. n. *favonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp009704155*. The type genome for the species is the

GenBank assembly GCA_009704155.1. The GC content of the type genome is 58.63 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Detesosa octipibra sp. nov.

Candidatus Detesosa octipibra (NL. fem. n. *octipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp903882245*. The type genome for the species is the GenBank assembly GCA_903882245.1. The GC content of the type genome is 58.75 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Detesosa vitigimonas sp. nov.

Candidatus Detesosa vitigimonas (NL. fem. n. *vitigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWH-TA3 sp009703545*. The type genome for the species is the GenBank assembly GCA_009703545.1. The GC content of the type genome is 58.21 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Detesula acculedo sp. nov.

Candidatus Detesula acculedo (NL. fem. n. *acculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CT4 sp014193895*. The type genome for the species is the GenBank assembly RS_GCF_014193895.1. The GC content of the type genome is 31.3 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Detesula gen. nov.

Candidatus Detesula (NL. fem. n. *Detesula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CT4*. The type species for the genus is *Candidatus* Detesula acculedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detesula adsifilenta sp. nov.

Candidatus Detesula adsifilenta (NL. fem. n. *adsifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CT4 sp009928445*. The type genome for the species is the GenBank assembly RS_GCF_009928445.1. The GC content of the type genome is 31.6 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Detesula resalessa sp. nov.

Candidatus Detesula resalessa (NL. fem. n. *resalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CT4 sp004015185*. The type genome for the species is the GenBank assembly RS_GCF_004015185.1. The GC content of the type genome is 31.98 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Detorana apperago sp. nov.

Candidatus Detorana apperago (NL. fem. n. *apperago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC9063 sp008638025*. The type genome for the species is the GenBank assembly GCA_008638025.1. The GC content of the type genome is 30.18 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Detorana gen. nov.

Candidatus Detorana (NL. fem. n. *Detorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC9063*. The type species for the genus is *Candidatus* Detorana apperago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detorana bovicimonas sp. nov.

Candidatus Detorana bovicimonas (NL. fem. n. *bovicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC9063 sp008638205*. The type genome for the species is the GenBank assembly GCA_008638205.1. The GC content of the type genome is 31.99 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Detorana homilitrix sp. nov.

Candidatus Detorana homilitrix (NL. fem. n. *homilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC9063 sp000750175*. The type genome for the species is the GenBank assembly GCA_000750175.1. The GC content of the type genome is 31.39 % and the genome length is 0.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "a planktonic sample of freshwater lake at 1m depth".

Description of *Candidatus* Detorana ludimetta sp. nov.

Candidatus Detorana ludimetta (NL. fem. n. *ludimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC9063 sp008638015*. The type genome for the species is the GenBank assembly GCA_008638245.1. The GC content of the type genome is 30.92 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Detorana parocatica sp. nov.

Candidatus Detorana parocatica (NL. fem. n. *parocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC9063 sp000195085*. The type genome for the species is the GenBank assembly RS_GCF_000195085.1. The GC content of the type genome is 31.67 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Detorana selecitas sp. nov.

Candidatus Detorana selecitas (NL. fem. n. *selecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *IMCC9063 sp008638225*. The type genome for the species is the GenBank assembly GCA_008638225.1. The GC content of the type genome is 31.05 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Detoraria tiguritura sp. nov.

Candidatus Detoraria tiguritura (NL. fem. n. *tiguritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J040 sp003696505*. The type genome for the species is the GenBank assembly GCA_003696505.1. The GC content of the type genome is 57.7 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Detoraria gen. nov.

Candidatus Detoraria (NL. fem. n. *Detoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J040*. The type species for the genus is *Candidatus* Detoraria tiguritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J040*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detorariaceae.

Description of *Candidatus* Detorariaceae fam. nov.

Candidatus Detorariaceae (NL. fem. n. *Detorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J040.* The type genus for the taxon is *Candidatus* Detoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *J040*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detorariales.

Description of *Candidatus* Detorariales ord. nov.

Candidatus Detorariales (NL. fem. n. *Detorariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J040.* The type genus for the taxon is *Candidatus* Detoraria .

According to the original version of GTDB R06-RS202, this family belongs to the class *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bipenulae.

Description of *Candidatus* Detorella deceniforma sp. nov.

Candidatus Detorella deceniforma (NL. fem. n. *deceniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs055 sp005772765*. The type genome for the species is the GenBank assembly GCA_005772765.1. The GC content of the type genome is 66.28 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Detorella gen. nov.

Candidatus Detorella (NL. fem. n. *Detorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-120-MAGs055*. The type species for the genus is *Candidatus* Detorella deceniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-610*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpellaceae.

Description of *Candidatus* Detorella nocumedo sp. nov.

Candidatus Detorella nocumedo (NL. fem. n. *nocumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-120-MAGs055 sp005779395*. The type genome for the species is the GenBank assembly GCA_005779395.1. The GC content of the type genome is 57.01 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Detoria cacomicula sp. nov.

Candidatus Detoria cacomicula (NL. fem. n. *cacomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CSP1-8 sp003513855*. The type genome for the species is the GenBank assembly GCA_003513855.1. The GC content of the type genome is 64.22 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Detoria gen. nov.

Candidatus Detoria (NL. fem. n. *Detoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSP1-8*. The type species for the genus is *Candidatus* Detoria cacomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Detoria insuritrix sp. nov.

Candidatus Detoria insuritrix (NL. fem. n. *insuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSP1-8 sp001443455*. The type genome for the species is the GenBank assembly GCA_001443455.1. The GC content of the type genome is 63.49 % and the genome length is 2.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment at 5m depth".

Description of *Candidatus* Detorida dibapitas sp. nov.

Candidatus Detorida dibapitas (NL. fem. n. *dibapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDET01 sp013286945*. The type genome for the species is the GenBank assembly GCA_013286945.1. The GC content of the type genome is 48.24 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Detorida gen. nov.

Candidatus Detorida (NL. fem. n. *Detorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDET01*. The type species for the genus is *Candidatus* Detorida

dibapitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detoridaceae.

Description of *Candidatus* Detoridaceae fam. nov.

Candidatus Detoridaceae (NL. fem. n. *Detoridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDET01.* The type genus for the taxon is *Candidatus* Detorida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detoridales.

Description of *Candidatus* Detoridales ord. nov.

Candidatus Detoridales (NL. fem. n. *Detoridales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDET01.* The type genus for the taxon is *Candidatus* Detorida .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABDET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Detoridae.

Description of *Candidatus* Detoridae class. nov.

Candidatus Detoridae (NL. fem. n. *c__Detoridae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDET01.* The type genus for the taxon is *Candidatus* Detorida .

According to GTDB R06-RS202, this class belongs to the phylum *Eremiobacterota*.

Description of *Candidatus* Detorosa vitupilega sp. nov.

Candidatus Detorosa vitupilega (NL. fem. n. *vitupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1260 sp003162635*. The type genome for the species is the GenBank assembly GCA_003157155.1. The GC content of the type genome is 58.18 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Detorosa gen. nov.

Candidatus Detorosa (NL. fem. n. *Detorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1260*. The type species for the genus is *Candidatus* Detorosa vitupilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Detorula murelifica sp. nov.

Candidatus Detorula murelifica (NL. fem. n. *murelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2353 sp002344005*. The type genome for the species is the GenBank assembly GCA_002343575.1. The GC content of the type genome is 38.78 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Detorula gen. nov.

Candidatus Detorula (NL. fem. n. *Detorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2353*. The type species for the genus is *Candidatus* Detorula murelifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA961*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipellaceae.

Description of *Candidatus* Detosana dececedo sp. nov.

Candidatus Detosana dececedo (NL. fem. n. *dececedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2922 sp900313925*. The type genome for the species is the GenBank assembly GCA_002350875.1. The GC content of the type genome is 53.05 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Detosana gen. nov.

Candidatus Detosana (NL. fem. n. *Detosana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2922*. The type species for the genus is *Candidatus* Detosana dececedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detosaria capabicella sp. nov.

Candidatus Detosaria capabicella (NL. fem. n. *capabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVT01 sp009694125*. The type genome for the species is the GenBank assembly GCA_009694125.1. The GC content of the type genome is 63.99 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Detosaria gen. nov.

Candidatus Detosaria (NL. fem. n. *Detosaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVT01*. The type species for the genus is *Candidatus* Detosaria capabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detosariaceae.

Description of *Candidatus* Detosariaceae fam. nov.

Candidatus Detosariaceae (NL. fem. n. *Detosariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SHVT01*. The type genus for the taxon is *Candidatus* Detosaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHVT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detosariales.

Description of *Candidatus* Detosariales ord. nov.

Candidatus Detosariales (NL. fem. n. *Detosariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVT01*. The type genus for the taxon is *Candidatus* Detosaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Detosia resurigena sp. nov.

Candidatus Detosia resurigena (NL. fem. n. *resurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7018 sp002448305*. The type genome for the species is the GenBank assembly GCA_002448305.1. The GC content of the type genome is 45.2 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Detosia gen. nov.

Candidatus Detosia (NL. fem. n. *Detosia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7018*. The type species for the genus is *Candidatus* Detosia resurigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detosida indecitura sp. nov.

Candidatus Detosida indecitura (NL. fem. n. *indecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8153 sp003449495*. The type genome for the species is the GenBank assembly GCA_003449495.1. The GC content of the type genome is 65.23 %

and the genome length is 1.93 Mbp.

Description of *Candidatus* Detosida gen. nov.

Candidatus Detosida (NL. fem. n. *Detosida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8153*. The type species for the genus is *Candidatus* Detosida indecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8153*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detosidaceae.

Description of *Candidatus* Detosidaceae fam. nov.

Candidatus Detosidaceae (NL. fem. n. *Detosidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8153.* The type genus for the taxon is *Candidatus* Detosida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8153*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detosidales.

Description of *Candidatus* Detosidales ord. nov.

Candidatus Detosidales (NL. fem. n. *Detosidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8153.* The type genus for the taxon is *Candidatus* Detosida .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Detososa butubilenta sp. nov.

Candidatus Detososa butubilenta (NL. fem. n. *butubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGY01 sp007378955*. The type genome for the species is the

GenBank assembly GCA_007376655.1. The GC content of the type genome is 35.14 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Detososa gen. nov.

Candidatus Detososa (NL. fem. n. *Detososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGY01*. The type species for the genus is *Candidatus* Detososa butubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMGY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detososaceae.

Description of *Candidatus* Detososaceae fam. nov.

Candidatus Detososaceae (NL. fem. n. *Detososaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMGY01.* The type genus for the taxon is *Candidatus* Detososa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2591*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peribosales.

Description of *Candidatus* Detosula carucibula sp. nov.

Candidatus Detosula carucibula (NL. fem. n. *carucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LGRT01 sp001642945*. The type genome for the species is the GenBank assembly GCA_009887035.1. The GC content of the type genome is 51.27 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Detosula gen. nov.

Candidatus Detosula (NL. fem. n. *Detosula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LGRT01*. The type species for the genus is *Candidatus* Detosula carucibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detosula casabitio sp. nov.

Candidatus Detosula casabitio (NL. fem. n. *casabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LGRT01 sp902542575*. The type genome for the species is the GenBank assembly GCA_902542575.1. The GC content of the type genome is 48.81 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Detosula irreviforma sp. nov.

Candidatus Detosula irreviforma (NL. fem. n. *irreviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LGRT01 sp902539465*. The type genome for the species is the GenBank assembly GCA_902539465.1. The GC content of the type genome is 48.88 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Detosula ornitentia sp. nov.

Candidatus Detosula ornitentia (NL. fem. n. *ornitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LGRT01 sp902592485*. The type genome for the species is the GenBank assembly GCA_902592485.1. The GC content of the type genome is 49.15 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Detotana bipinitica sp. nov.

Candidatus Detotana bipinitica (NL. fem. n. *bipinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFT01 sp007118765*. The type genome for the species is the GenBank assembly GCA_007118765.1. The GC content of the type genome is 56.25 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Detotana gen. nov.

Candidatus Detotana (NL. fem. n. *Detotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLFT01*. The type species for the genus is *Candidatus* Detotana bipinitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Detotana licenicella sp. nov.

Candidatus Detotana licenicella (NL. fem. n. *licenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFT01 sp011046175*. The type genome for the species is the GenBank assembly GCA_011046175.1. The GC content of the type genome is 56.19 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Detotana refinastra sp. nov.

Candidatus Detotana refinastra (NL. fem. n. *refinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLFT01 sp007124105*. The type genome for the species is the GenBank assembly GCA_007130975.1. The GC content of the type genome is 56.05 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Detotaria adcumax sp. nov.

Candidatus Detotaria adcumax (NL. fem. n. *adcumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp900769885*. The type genome for the species is the GenBank assembly RS_GCF_900769885.1. The GC content of the type genome is 40.61 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Detotaria gen. nov.

Candidatus Detotaria (NL. fem. n. *Detotaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-831*. The type species for the genus is *Candidatus* Detotaria adcumax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Detotaria adobrisca sp. nov.

Candidatus Detotaria adobrisca (NL. fem. n. *adobrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp002317435*. The type genome for the species is the GenBank assembly GCA_002317435.1. The GC content of the type genome is 51.44 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Detotaria annubimonia sp. nov.

Candidatus Detotaria annubimonia (NL. fem. n. *annubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp900771335*. The type genome for the species is the GenBank assembly RS_GCF_900771335.1. The GC content of the type genome is 45.01 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Detotaria defulitia sp. nov.

Candidatus Detotaria defulitia (NL. fem. n. *defulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp900550465*. The type genome for the species is the GenBank assembly GCA_900550465.1. The GC content of the type genome is 55.28 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Detotaria dibapiforma sp. nov.

Candidatus Detotaria dibapiforma (NL. fem. n. *dibapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp000432775*. The type genome for the species is the GenBank assembly GCA_900542585.1. The GC content of the type genome is 53.73 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Detotaria didacilenta sp. nov.

Candidatus Detotaria didacilenta (NL. fem. n. *didacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp900544175*. The type genome for the species is the GenBank assembly GCA_900544175.1. The GC content of the type genome is 51.26 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Detotaria tabitax sp. nov.

Candidatus Detotaria tabitax (NL. fem. n. *tabitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-831 sp902388455*. The type genome for the species is the GenBank assembly GCA_902388455.1. The GC content of the type genome is 53.71 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Detotella funebetta sp. nov.

Candidatus Detotella funebetta (NL. fem. n. *funebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABBTK01 sp011389885*. The type genome for the species is the GenBank assembly GCA_011389885.1. The GC content of the type genome is 63.84 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Detotella gen. nov.

Candidatus Detotella (NL. fem. n. *Detotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABBTK01*. The type species for the genus is *Candidatus* Detotella

funebetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detotia decapitio sp. nov.

Candidatus Detotia decapitio (NL. fem. n. *decapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8444 sp003454845*. The type genome for the species is the GenBank assembly GCA_003454845.1. The GC content of the type genome is 35.49 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Detotia gen. nov.

Candidatus Detotia (NL. fem. n. *Detotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8444*. The type species for the genus is *Candidatus* Detotia decapitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalellaceae.

Description of *Candidatus* Detotia nubecilenta sp. nov.

Candidatus Detotia nubecilenta (NL. fem. n. *nubecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8444 sp002714805*. The type genome for the species is the GenBank assembly GCA_002714805.1. The GC content of the type genome is 31.65 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Detotida acrufitas sp. nov.

Candidatus Detotida acrufitas (NL. fem. n. *acrufitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXV01 sp009693105*. The type genome for the species is the

GenBank assembly GCA_009693105.1. The GC content of the type genome is 66.85 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Detotida gen. nov.

Candidatus Detotida (NL. fem. n. *Detotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHXV01*. The type species for the genus is *Candidatus* Detotida acrufitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotidaceae.

Description of *Candidatus* Detotidaceae fam. nov.

Candidatus Detotidaceae (NL. fem. n. *Detotidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHXV01*. The type genus for the taxon is *Candidatus* Detotida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detotidales.

Description of *Candidatus* Detotidales ord. nov.

Candidatus Detotidales (NL. fem. n. *Detotidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHXV01*. The type genus for the taxon is *Candidatus* Detotida .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Detotosa benemimonas sp. nov.

Candidatus Detotosa benemimonas (NL. fem. n. *benemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7960 sp003451785*. The type genome for the species is the GenBank assembly GCA_003451785.1. The GC content of the type genome is 41.85 %

and the genome length is 2.41 Mbp.

Description of *Candidatus* Detotosa gen. nov.

Candidatus Detotosa (NL. fem. n. *Detotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7960*. The type species for the genus is *Candidatus* Detotosa benemimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Detotosaceae fam. nov.

Candidatus Detotosaceae (NL. fem. n. *Detotosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7960.* The type genus for the taxon is *Candidatus* Detotosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Detotosa funivatio sp. nov.

Candidatus Detotosa funivatio (NL. fem. n. *funivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7960 sp002402465*. The type genome for the species is the GenBank assembly GCA_002402465.1. The GC content of the type genome is 47.7 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Detotosa obtorigena sp. nov.

Candidatus Detotosa obtorigena (NL. fem. n. *obtorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7960 sp012521995*. The type genome for the species is the GenBank assembly GCA_012521995.1. The GC content of the type genome is 49.48 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Detotula dimacatio sp. nov.

Candidatus Detotula dimacatio (NL. fem. n. *dimacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQD01 sp007280345*. The type genome for the species is the GenBank assembly GCA_007280345.1. The GC content of the type genome is 50.5 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Detotula gen. nov.

Candidatus Detotula (NL. fem. n. *Detotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYQD01*. The type species for the genus is *Candidatus* Detotula dimacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QYQD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotulaceae.

Description of *Candidatus* Detotulaceae fam. nov.

Candidatus Detotulaceae (NL. fem. n. *Detotulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QYQD01.* The type genus for the taxon is *Candidatus* Detotula .

According to the original version of GTDB R06-RS202, this family belongs to the order *QYQD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Detotulales.

Description of *Candidatus* Detotulales ord. nov.

Candidatus Detotulales (NL. fem. n. *Detotulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QYQD01.* The type genus for the taxon is *Candidatus* Detotula .

According to the original version of GTDB R06-RS202, this family belongs to the class *QYQD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Detotulae.

Description of *Candidatus* Detotulae class. nov.

Candidatus Detotulae (NL. fem. n. *c__Detotulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QYQD01.* The type genus for the taxon is *Candidatus* Detotula .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota*.

Description of *Candidatus* Detotula hirunatio sp. nov.

Candidatus Detotula hirunatio (NL. fem. n. *hirunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQD01 sp011046395*. The type genome for the species is the GenBank assembly GCA_011046395.1. The GC content of the type genome is 48.67 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Detumana adlocicella sp. nov.

Candidatus Detumana adlocicella (NL. fem. n. *adlocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWXJ01 sp003561965*. The type genome for the species is the GenBank assembly GCA_003561965.1. The GC content of the type genome is 64.22 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Detumana gen. nov.

Candidatus Detumana (NL. fem. n. *Detumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWXJ01*. The type species for the genus is *Candidatus* Detumana adlocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumanaceae.

Description of *Candidatus* Detumanaceae fam. nov.

Candidatus Detumanaceae (NL. fem. n. *Detumanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWXJ01*. The type genus for the taxon is *Candidatus* Detumana .

According to the original version of GTDB R06-RS202, this family belongs to the order *PUNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sanabidales.

Description of *Candidatus* Detumaria nimirilega sp. nov.

Candidatus Detumaria nimirilega (NL. fem. n. *nimirilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAALLB01 sp011087745*. The type genome for the species is the GenBank assembly GCA_011087745.1. The GC content of the type genome is 44.93 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Detumaria gen. nov.

Candidatus Detumaria (NL. fem. n. *Detumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAALLB01*. The type species for the genus is *Candidatus* Detumaria nimirilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detumella excorago sp. nov.

Candidatus Detumella excorago (NL. fem. n. *excorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJZX01 sp903825245*. The type genome for the species is the GenBank assembly GCA_903825245.1. The GC content of the type genome is 49.26 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Detumella gen. nov.

Candidatus Detumella (NL. fem. n. *Detumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJZX01*. The type species for the genus is *Candidatus* Detumella excorago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJZX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumellaceae.

Description of *Candidatus* Detumellaceae fam. nov.

Candidatus Detumellaceae (NL. fem. n. *Detumellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJZX01.* The type genus for the taxon is *Candidatus* Detumella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pinacellales.

Description of *Candidatus* Detumia antecibula sp. nov.

Candidatus Detumia antecibula (NL. fem. n. *antecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002689665*. The type genome for the species is the GenBank assembly GCA_002689665.1. The GC content of the type genome is 42.5 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Detumia gen. nov.

Candidatus Detumia (NL. fem. n. *Detumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MB11C04*. The type species for the genus is *Candidatus* Detumia antecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MB11C04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumiaceae.

Description of *Candidatus* Detumiaceae fam. nov.

Candidatus Detumiaceae (NL. fem. n. *Detumiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MB11C04.* The type genus for the taxon is *Candidatus* Detumia .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Detumia appagitoga sp. nov.

Candidatus Detumia appagitoga (NL. fem. n. *appagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp902612125*. The type genome for the species is the GenBank assembly GCA_902612125.1. The GC content of the type genome is 43.68 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Detumia apsoritrix sp. nov.

Candidatus Detumia apsoritrix (NL. fem. n. *apsoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp902615835*. The type genome for the species is the GenBank assembly GCA_902615835.1. The GC content of the type genome is 43.95 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Detumia arilledo sp. nov.

Candidatus Detumia arilledo (NL. fem. n. *arilledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002167265*. The type genome for the species is the GenBank assembly GCA_002167265.1. The GC content of the type genome is 41.09 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Detumia arnogitas sp. nov.

Candidatus Detumia arnogitas (NL. fem. n. *arnogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp900299365*. The type genome for the species is the GenBank assembly GCA_900299365.1. The GC content of the type genome is 43.37 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Detumia ascalitas sp. nov.

Candidatus Detumia ascalitas (NL. fem. n. *ascalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002713685*. The type genome for the species is the GenBank assembly GCA_002713685.1. The GC content of the type genome is 42.7 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Detumia bifarisca sp. nov.

Candidatus Detumia bifarisca (NL. fem. n. *bifarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002692535*. The type genome for the species is the GenBank assembly GCA_002692535.1. The GC content of the type genome is 42.43 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Detumia cohurimonas sp. nov.

Candidatus Detumia cohurimonas (NL. fem. n. *cohurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002171765*. The type genome for the species is the GenBank assembly GCA_002308735.1. The GC content of the type genome is 43.75 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Detumia conipetta sp. nov.

Candidatus Detumia conipetta (NL. fem. n. *conipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002500665*. The type genome for the species is the GenBank assembly GCA_002480625.1. The GC content of the type genome is 55.81 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Detumia defalastra sp. nov.

Candidatus Detumia defalastra (NL. fem. n. *defalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002686835*. The type genome for the species is the GenBank assembly GCA_002686835.1. The GC content of the type genome is 45.22 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Detumia defalatio sp. nov.

Candidatus Detumia defalatio (NL. fem. n. *defalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002726435*. The type genome for the species is the GenBank assembly GCA_002726435.1. The GC content of the type genome is 43.94 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Detumia fatifitio sp. nov.

Candidatus Detumia fatifitio (NL. fem. n. *fatifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp902580225*. The type genome for the species is the GenBank assembly GCA_902580225.1. The GC content of the type genome is 40.64 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Detumia lametiforma sp. nov.

Candidatus Detumia lametiforma (NL. fem. n. *lametiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002722545*. The type genome for the species is the GenBank assembly GCA_002722545.1. The GC content of the type genome is 49.87 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Detumia maxilitas sp. nov.

Candidatus Detumia maxilitas (NL. fem. n. *maxilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp003448565*. The type genome for the species is the GenBank assembly GCA_003448565.1. The GC content of the type genome is 43.17 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Detumia papavitoga sp. nov.

Candidatus Detumia papavitoga (NL. fem. n. *papavitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp902569115*. The type genome for the species is the GenBank assembly GCA_902569115.1. The GC content of the type genome is 43.11 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Detumia recorilenta sp. nov.

Candidatus Detumia recorilenta (NL. fem. n. *recorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002168015*. The type genome for the species is the GenBank assembly GCA_002168015.1. The GC content of the type genome is 42.05 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Detumia refacitia sp. nov.

Candidatus Detumia refacitia (NL. fem. n. *refacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002692605*. The type genome for the species is the GenBank assembly GCA_003486585.1. The GC content of the type genome is 50.48 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Detumia refacitica sp. nov.

Candidatus Detumia refacitica (NL. fem. n. *refacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MB11C04 sp002167605*. The type genome for the species is the GenBank assembly GCA_002450215.1. The GC content of the type genome is 47.68 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Detumia ridibugo sp. nov.

Candidatus Detumia ridibugo (NL. fem. n. *ridibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002477515*. The type genome for the species is the GenBank assembly GCA_002477515.1. The GC content of the type genome is 42.42 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Detumia secunitia sp. nov.

Candidatus Detumia secunitia (NL. fem. n. *secunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp902618175*. The type genome for the species is the GenBank assembly GCA_902618175.1. The GC content of the type genome is 44.01 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Detumia sotulifica sp. nov.

Candidatus Detumia sotulifica (NL. fem. n. *sotulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002694035*. The type genome for the species is the GenBank assembly GCA_002694035.1. The GC content of the type genome is 38.64 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Detumia subinivita sp. nov.

Candidatus Detumia subinivita (NL. fem. n. *subinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MB11C04 sp002364975*. The type genome for the species is the GenBank assembly GCA_002722335.1. The GC content of the type genome is 42.96 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Detumida fiducago sp. nov.

Candidatus Detumida fiducago (NL. fem. n. *fiducago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-36-13 sp002787405*. The type genome for the species is the GenBank assembly GCA_002787405.1. The GC content of the type genome is 35.51 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Detumida gen. nov.

Candidatus Detumida (NL. fem. n. *Detumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-36-13*. The type species for the genus is *Candidatus* Detumida fiducago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Detumosa bicipugo sp. nov.

Candidatus Detumosa bicipugo (NL. fem. n. *bicipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBP01 sp013288565*. The type genome for the species is the GenBank assembly GCA_013288565.1. The GC content of the type genome is 48.56 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Detumosa gen. nov.

Candidatus Detumosa (NL. fem. n. *Detumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBP01*. The type species for the genus is *Candidatus* Detumosa bicipugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDBP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detumosaceae.

Description of *Candidatus* Detumosaceae fam. nov.

Candidatus Detumosaceae (NL. fem. n. *Detumosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDBP01.* The type genus for the taxon is *Candidatus* Detumosa .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Detumula conigitio sp. nov.

Candidatus Detumula conigitio (NL. fem. n. *conigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-61 sp003433845*. The type genome for the species is the GenBank assembly RS_GCF_003434225.1. The GC content of the type genome is 35.07 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Detumula gen. nov.

Candidatus Detumula (NL. fem. n. *Detumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-61*. The type species for the genus is *Candidatus* Detumula conigitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detunana adpagiforma sp. nov.

Candidatus Detunana adpagiforma (NL. fem. n. *adpagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYEO01 sp903925195*. The type genome for the species is the GenBank assembly GCA_903925195.1. The GC content of the type genome is 36.35 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Detunana gen. nov.

Candidatus Detunana (NL. fem. n. *Detunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYEO01*. The type species for the genus is *Candidatus* Detunana adpagiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4665*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Merididaceae.

Description of *Candidatus* Detunana conamitio sp. nov.

Candidatus Detunana conamitio (NL. fem. n. *conamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYEO01 sp903839515*. The type genome for the species is the GenBank assembly GCA_903881855.1. The GC content of the type genome is 36.7 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Detunana lubenago sp. nov.

Candidatus Detunana lubenago (NL. fem. n. *lubenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYEO01 sp903840315*. The type genome for the species is the GenBank assembly GCA_903894915.1. The GC content of the type genome is 36.75 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Detunana peradibula sp. nov.

Candidatus Detunana peradibula (NL. fem. n. *peradibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYEO01 sp903891235*. The type genome for the species is the GenBank assembly GCA_903891235.1. The GC content of the type genome is 34.3 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Detunana solipitia sp. nov.

Candidatus Detunana solipitia (NL. fem. n. *solipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYEO01 sp903900685*. The type genome for the species is the GenBank assembly GCA_903837565.1. The GC content of the type genome is 35.18 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Detunaria arrugax sp. nov.

Candidatus Detunaria arrugax (NL. fem. n. *arrugax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-187 sp902826605*. The type genome for the species is the GenBank assembly GCA_902826605.1. The GC content of the type genome is 58.17 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Detunaria gen. nov.

Candidatus Detunaria (NL. fem. n. *Detunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-187*. The type species for the genus is *Candidatus* Detunaria arrugax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detunaria ceromibra sp. nov.

Candidatus Detunaria ceromibra (NL. fem. n. *ceromibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-187 sp903892565*. The type genome for the species is the GenBank assembly GCA_903892565.1. The GC content of the type genome is 58.47 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Detunaria enigmigena sp. nov.

Candidatus Detunaria enigmigena (NL. fem. n. *enigmigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-187 sp009697505*. The type genome for the species is the

GenBank assembly GCA_009697505.1. The GC content of the type genome is 61.16 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Detunaria fecunugo sp. nov.

Candidatus Detunaria fecunugo (NL. fem. n. *fecunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-187 sp003170295*. The type genome for the species is the GenBank assembly GCA_003170295.1. The GC content of the type genome is 58.53 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Detunella aneclitas sp. nov.

Candidatus Detunella aneclitas (NL. fem. n. *aneclitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4719 sp002404345*. The type genome for the species is the GenBank assembly GCA_002404345.1. The GC content of the type genome is 66.74 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Detunella gen. nov.

Candidatus Detunella (NL. fem. n. *Detunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4719*. The type species for the genus is *Candidatus* Detunella aneclitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detunella depupitio sp. nov.

Candidatus Detunella depupitio (NL. fem. n. *depupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4719 sp003132125*. The type genome for the species is the GenBank assembly GCA_003132125.1. The GC content of the type genome is 66.42 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Detunella exheritura sp. nov.

Candidatus Detunella exheritura (NL. fem. n. *exheritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4719 sp003157445*. The type genome for the species is the GenBank assembly GCA_003157445.1. The GC content of the type genome is 64.89 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Detunella exsolessa sp. nov.

Candidatus Detunella exsolessa (NL. fem. n. *exsolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4719 sp014377705*. The type genome for the species is the GenBank assembly GCA_014377705.1. The GC content of the type genome is 67.52 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Detunella letifivita sp. nov.

Candidatus Detunella letifivita (NL. fem. n. *letifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4719 sp012927555*. The type genome for the species is the GenBank assembly GCA_012927555.1. The GC content of the type genome is 66.63 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Detunia affamiforma sp. nov.

Candidatus Detunia affamiforma (NL. fem. n. *affamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABUFB01 sp013314775*. The type genome for the species is the GenBank assembly GCA_013314775.1. The GC content of the type genome is 63.63 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Detunia gen. nov.

Candidatus Detunia (NL. fem. n. *Detunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABUFB01*. The type species for the genus is *Candidatus* Detunia affamiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABUFB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detuniaceae.

Description of *Candidatus* Detuniaceae fam. nov.

Candidatus Detuniaceae (NL. fem. n. *Detuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABUFB01.* The type genus for the taxon is *Candidatus* Detunia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Detunida favonimonia sp. nov.

Candidatus Detunida favonimonia (NL. fem. n. *favonimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGU01 sp009787015*. The type genome for the species is the GenBank assembly GCA_009787245.1. The GC content of the type genome is 47.45 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Detunida gen. nov.

Candidatus Detunida (NL. fem. n. *Detunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGU01*. The type species for the genus is *Candidatus* Detunida favonimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detunosa celamigena sp. nov.

Candidatus Detunosa celamigena (NL. fem. n. *celamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen731 sp003155275*. The type genome for the species is the GenBank assembly GCA_003154475.1. The GC content of the type genome is 38.16 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Detunosa gen. nov.

Candidatus Detunosa (NL. fem. n. *Detunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen731*. The type species for the genus is *Candidatus* Detunosa celamigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefulaceae.

Description of *Candidatus* Detunosa galacitoga sp. nov.

Candidatus Detunosa galacitoga (NL. fem. n. *galacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen731 sp002068775*. The type genome for the species is the GenBank assembly GCA_002068775.1. The GC content of the type genome is 38.91 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Detunula adtesax sp. nov.

Candidatus Detunula adtesax (NL. fem. n. *adtesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp003246335*. The type genome for the species is the GenBank assembly GCA_003246335.1. The GC content of the type genome is 57.82 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Detunula gen. nov.

Candidatus Detunula (NL. fem. n. *Detunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Spiro-10*. The type species for the genus is *Candidatus* Detunula adtesax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Detunula cerofimonas sp. nov.

Candidatus Detunula cerofimonas (NL. fem. n. *cerofimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp003246765*. The type genome for the species is the GenBank assembly GCA_003246765.1. The GC content of the type genome is 60.39 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Detunula effinetta sp. nov.

Candidatus Detunula effinetta (NL. fem. n. *effinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp001604385*. The type genome for the species is the GenBank assembly GCA_001604385.1. The GC content of the type genome is 51.0 % and the genome length is 2.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Detunula impacentia sp. nov.

Candidatus Detunula impacentia (NL. fem. n. *impacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp003252395*. The type genome for the species is the GenBank assembly GCA_003252395.1. The GC content of the type genome is 59.09 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Detunula inexpatica sp. nov.

Candidatus Detunula inexpatica (NL. fem. n. *inexpatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp003245785*. The type genome for the species is the GenBank assembly GCA_003245785.1. The GC content of the type genome is 62.51 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Detunula oblaniforma sp. nov.

Candidatus Detunula oblaniforma (NL. fem. n. *oblaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp001604405*. The type genome for the species is the GenBank assembly GCA_001604405.1. The GC content of the type genome is 61.81 % and the genome length is 2.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Detunula vilitetta sp. nov.

Candidatus Detunula vilitetta (NL. fem. n. *vilitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Spiro-10 sp004294945*. The type genome for the species is the GenBank assembly GCA_004294945.1. The GC content of the type genome is 53.2 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Devecana abverimonas sp. nov.

Candidatus Devecana abverimonas (NL. fem. n. *abverimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp009936695*. The type genome for the species is the GenBank assembly GCA_009936695.1. The GC content of the type genome is 66.56 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Devecana gen. nov.

Candidatus Devecana (NL. fem. n. *Devecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12014*. The type species for the genus is *Candidatus* Devecana abverimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Devecana adcelax sp. nov.

Candidatus Devecana adcelax (NL. fem. n. *adcelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp014237965*. The type genome for the species is the GenBank assembly GCA_014237965.1. The GC content of the type genome is 63.29 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Devecana attorifica sp. nov.

Candidatus Devecana attorifica (NL. fem. n. *attorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp002684855*. The type genome for the species is the GenBank assembly GCA_002684855.1. The GC content of the type genome is 63.37 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Devecana dilemitia sp. nov.

Candidatus Devecana dilemitia (NL. fem. n. *dilemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp002683215*. The type genome for the species is the GenBank assembly GCA_002683215.1. The GC content of the type genome is 66.16 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Devecana excogatio sp. nov.

Candidatus Devecana excogatio (NL. fem. n. *excogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp002684755*. The type genome for the species is the GenBank assembly GCA_002684755.1. The GC content of the type genome is 66.73 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Devecana monumitica sp. nov.

Candidatus Devecana monumitica (NL. fem. n. *monumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp002167845*. The type genome for the species is the GenBank assembly GCA_002167845.2. The GC content of the type genome is 63.21 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Devecana nehalastra sp. nov.

Candidatus Devecana nehalastra (NL. fem. n. *nehalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12014 sp002690755*. The type genome for the species is the GenBank assembly GCA_002169045.1. The GC content of the type genome is 66.03 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Devecaria ratifimonia sp. nov.

Candidatus Devecaria ratifimonia (NL. fem. n. *ratifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITNQ01 sp903893785*. The type genome for the species is the GenBank assembly GCA_903878335.1. The GC content of the type genome is 68.68 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Devecaria gen. nov.

Candidatus Devecaria (NL. fem. n. *Devecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITNQ01*. The type species for the genus is *Candidatus* Devecaria ratifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Devecella culilimonas sp. nov.

Candidatus Devecella culilimonas (NL. fem. n. *culilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp903891045*. The type genome for the species is the GenBank assembly GCA_903822535.1. The GC content of the type genome is 51.61 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Devecella gen. nov.

Candidatus Devecella (NL. fem. n. *Devecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2270*. The type species for the genus is *Candidatus* Devecella culilimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Devecella decunitica sp. nov.

Candidatus Devecella decunitica (NL. fem. n. *decunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp002347745*. The type genome for the species is the GenBank assembly GCA_002347745.1. The GC content of the type genome is 48.8 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Devecella defaritudo sp. nov.

Candidatus Devecella defaritudo (NL. fem. n. *defaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp903887485*. The type genome for the species is the GenBank assembly GCA_903887485.1. The GC content of the type genome is 51.29 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Devecella giganibula sp. nov.

Candidatus Devecella giganibula (NL. fem. n. *giganibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp002424635*. The type genome for the species is the GenBank assembly GCA_002424635.1. The GC content of the type genome is 50.29 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Devecella inrecitia sp. nov.

Candidatus Devecella inrecitia (NL. fem. n. *inrecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp002347085*. The type genome for the species is the GenBank assembly GCA_002347085.1. The GC content of the type genome is 51.37 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Devecella ossarisca sp. nov.

Candidatus Devecella ossarisca (NL. fem. n. *ossarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp009773475*. The type genome for the species is the GenBank assembly GCA_009773475.1. The GC content of the type genome is 51.39 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Devecella suboditica sp. nov.

Candidatus Devecella suboditica (NL. fem. n. *suboditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp002327225*. The type genome for the species is the GenBank assembly GCA_002327225.1. The GC content of the type genome is 51.85 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Devecella turicugo sp. nov.

Candidatus Devecella turicugo (NL. fem. n. *turicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2270 sp013426795*. The type genome for the species is the GenBank assembly GCA_013426795.1. The GC content of the type genome is 54.1 %

and the genome length is 3.28 Mbp.

Description of *Candidatus* Devecia loripifica sp. nov.

Candidatus Devecia loripifica (NL. fem. n. *loripifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7702 sp002482535*. The type genome for the species is the GenBank assembly GCA_002482535.1. The GC content of the type genome is 49.47 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Devecia gen. nov.

Candidatus Devecia (NL. fem. n. *Devecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7702*. The type species for the genus is *Candidatus* Devecia loripifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7702*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deveciaceae.

Description of *Candidatus* Deveciaceae fam. nov.

Candidatus Deveciaceae (NL. fem. n. *Deveciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7702.* The type genus for the taxon is *Candidatus* Devecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7702*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deveciales.

Description of *Candidatus* Deveciales ord. nov.

Candidatus Deveciales (NL. fem. n. *Deveciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7702.* The type genus for the taxon is *Candidatus* Devecia .

According to the GTDB R06-RS202, this order belongs to the class *Dehalobacteriia*.

Description of *Candidatus* Devecia lutulilega sp. nov.

Candidatus Devecia lutulilega (NL. fem. n. *lutulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7702 sp902796855*. The type genome for the species is the GenBank assembly GCA_902796855.1. The GC content of the type genome is 57.41 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Devecia oblonibula sp. nov.

Candidatus Devecia oblonibula (NL. fem. n. *oblonibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7702 sp902766525*. The type genome for the species is the GenBank assembly GCA_902766525.1. The GC content of the type genome is 49.98 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Devecida irrotiforma sp. nov.

Candidatus Devecida irrotiforma (NL. fem. n. *irrotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWN01 sp902806415*. The type genome for the species is the GenBank assembly GCA_902806415.1. The GC content of the type genome is 68.63 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Devecida gen. nov.

Candidatus Devecida (NL. fem. n. *Devecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWN01*. The type species for the genus is *Candidatus* Devecida irrotiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADCWN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Devecidaceae.

Description of *Candidatus* Devecidaceae fam. nov.

Candidatus Devecidaceae (NL. fem. n. *Devecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADCWN01.* The type genus for the taxon is *Candidatus* Devecida .

According to GTDB R06-RS202, this family belongs to the order *Thermomicrobiales*.

Description of *Candidatus* Devecosa adoscitrix sp. nov.

Candidatus Devecosa adoscitrix (NL. fem. n. *adoscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp002360495*. The type genome for the species is the GenBank assembly GCA_002360495.1. The GC content of the type genome is 59.59 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Devecosa gen. nov.

Candidatus Devecosa (NL. fem. n. *Devecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHOS-HE28*. The type species for the genus is *Candidatus* Devecosa adoscitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHOS-HE28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Devecosaceae.

Description of *Candidatus* Devecosaceae fam. nov.

Candidatus Devecosaceae (NL. fem. n. *Devecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHOS-HE28.* The type genus for the taxon is *Candidatus* Devecosa .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Devecosa defacousia sp. nov.

Candidatus Devecosa defacousia (NL. fem. n. *defacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp014584605*. The type genome for the species is the GenBank assembly GCA_014584605.1. The GC content of the type genome is 66.14 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Devecosa desucimonia sp. nov.

Candidatus Devecosa desucimonia (NL. fem. n. *desucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp902826215*. The type genome for the species is the GenBank assembly GCA_902826215.1. The GC content of the type genome is 57.52 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Devecosa dilacitica sp. nov.

Candidatus Devecosa dilacitica (NL. fem. n. *dilacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp002396605*. The type genome for the species is the GenBank assembly GCA_002426905.1. The GC content of the type genome is 59.51 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Devecosa forabibra sp. nov.

Candidatus Devecosa forabibra (NL. fem. n. *forabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp902825795*. The type genome for the species is the GenBank assembly GCA_902825795.1. The GC content of the type genome is 58.34 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Devecosa luceratica sp. nov.

Candidatus Devecosa luceratica (NL. fem. n. *luceratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp002342985*. The type genome for the species is the GenBank assembly GCA_002342985.1. The GC content of the type genome is 65.32 %

and the genome length is 3.64 Mbp.

Description of *Candidatus* Devecosa luculimonia sp. nov.

Candidatus Devecosa luculimonia (NL. fem. n. *luculimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp013360395*. The type genome for the species is the GenBank assembly GCA_013360395.1. The GC content of the type genome is 66.67 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Devecosa necopousia sp. nov.

Candidatus Devecosa necopousia (NL. fem. n. *necopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp008016945*. The type genome for the species is the GenBank assembly GCA_008016945.1. The GC content of the type genome is 61.92 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Devecosa obnoxitas sp. nov.

Candidatus Devecosa obnoxitas (NL. fem. n. *obnoxitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHOS-HE28 sp002482775*. The type genome for the species is the GenBank assembly GCA_002482775.1. The GC content of the type genome is 58.63 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Devecula dehinatio sp. nov.

Candidatus Devecula dehinatio (NL. fem. n. *dehinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA17 sp002919105*. The type genome for the species is the GenBank assembly GCA_002919105.1. The GC content of the type genome is 71.28 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Devecula gen. nov.

Candidatus Devecula (NL. fem. n. *Devecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA17*. The type species for the genus is *Candidatus* Devecula dehinatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deveculaceae.

Description of *Candidatus* Deveculaceae fam. nov.

Candidatus Deveculaceae (NL. fem. n. *Deveculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RSA17.* The type genus for the taxon is *Candidatus* Devecula .

According to GTDB R06-RS202, this family belongs to the order *Thermaerobacterales*.

Description of *Candidatus* Devosia ascaletta sp. nov.

Candidatus Devosia ascaletta (NL. fem. n. *ascaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp003056355*. The type genome for the species is the GenBank assembly RS_GCF_003056355.1. The GC content of the type genome is 61.38 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Devosia defunitas sp. nov.

Candidatus Devosia defunitas (NL. fem. n. *defunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp001899045*. The type genome for the species is the GenBank assembly RS_GCF_900631955.1. The GC content of the type genome is 62.66 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Devosia depupastra sp. nov.

Candidatus Devosia depupastra (NL. fem. n. *depupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp001426345*. The type genome for the species is the GenBank assembly RS_GCF_001426345.1. The GC content of the type genome is 63.82 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Devosia dinupilenta sp. nov.

Candidatus Devosia dinupilenta (NL. fem. n. *dinupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp900470445*. The type genome for the species is the GenBank assembly GCA_902168155.1. The GC content of the type genome is 62.55 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Devosia ecfacitoga sp. nov.

Candidatus Devosia ecfacitoga (NL. fem. n. *ecfacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp011058215*. The type genome for the species is the GenBank assembly RS_GCF_011058215.1. The GC content of the type genome is 61.97 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Devosia egregifica sp. nov.

Candidatus Devosia egregifica (NL. fem. n. *egregifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp001427875*. The type genome for the species is the GenBank assembly RS_GCF_001427875.1. The GC content of the type genome is 61.54 % and the genome length is 4.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Devosia favilitio sp. nov.

Candidatus Devosia favilitio (NL. fem. n. *favilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp012799265*. The type genome for the species is the GenBank assembly GCA_012799265.1. The GC content of the type genome is 61.25 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Devosia fecunilega sp. nov.

Candidatus Devosia fecunilega (NL. fem. n. *fecunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp014127105*. The type genome for the species is the GenBank assembly RS_GCF_012847305.1. The GC content of the type genome is 57.57 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Devosia ficedisca sp. nov.

Candidatus Devosia ficedisca (NL. fem. n. *ficedisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp005222805*. The type genome for the species is the GenBank assembly RS_GCF_005222805.1. The GC content of the type genome is 64.31 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Devosia genufousia sp. nov.

Candidatus Devosia genufousia (NL. fem. n. *genufousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp001425445*. The type genome for the species is the GenBank assembly RS_GCF_001425445.1. The GC content of the type genome is 60.67 % and the genome length is 4.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Devosia occumilega sp. nov.

Candidatus Devosia occumilega (NL. fem. n. *occumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp000735585*. The type genome for the species is the

GenBank assembly RS_GCF_000735585.1. The GC content of the type genome is 62.25 % and the genome length is 4.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cave surface layer".

Description of *Candidatus* Devosia panopilega sp. nov.

Candidatus Devosia panopilega (NL. fem. n. *panopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp001427605*. The type genome for the species is the GenBank assembly RS_GCF_001427605.1. The GC content of the type genome is 64.1 % and the genome length is 3.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Devosia pomififorma sp. nov.

Candidatus Devosia pomififorma (NL. fem. n. *pomififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp004005995*. The type genome for the species is the GenBank assembly RS_GCF_013185955.1. The GC content of the type genome is 62.62 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Devosia tomogastra sp. nov.

Candidatus Devosia tomogastra (NL. fem. n. *tomogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia sp900110945*. The type genome for the species is the GenBank assembly RS_GCF_900110945.1. The GC content of the type genome is 62.52 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Devosia defasitas sp. nov.

Candidatus Devosia defasitas (NL. fem. n. *defasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp001899065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_001899065.1. The GC content of the type genome is 65.91 % and the genome length is 4.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Devosia delacitudo sp. nov.

Candidatus Devosia delacitudo (NL. fem. n. *delacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp001402915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001402915.1. The GC content of the type genome is 65.78 % and the genome length is 5.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Wheat field".

Description of *Candidatus* Devosia genufitudo sp. nov.

Candidatus Devosia genufitudo (NL. fem. n. *genufitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp001425235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001425235.1. The GC content of the type genome is 65.38 % and the genome length is 5.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Devosia innasitas sp. nov.

Candidatus Devosia innasitas (NL. fem. n. *innasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp903842455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903842455.1. The GC content of the type genome is 65.39 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Devosia parocilenta sp. nov.

Candidatus Devosia parocilenta (NL. fem. n. *parocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp001899085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001899085.1. The GC content of the type genome is 65.73 % and the genome length is 5.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Devosia pinifax sp. nov.

Candidatus Devosia pinifax (NL. fem. n. *pinifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp001899075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001899075.1. The GC content of the type genome is 67.1 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Devosia rubigousia sp. nov.

Candidatus Devosia rubigousia (NL. fem. n. *rubigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp903828145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903959205.1. The GC content of the type genome is 63.26 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Devosia tegumitica sp. nov.

Candidatus Devosia tegumitica (NL. fem. n. *tegumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Devosia_A sp004144345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004144345.1. The GC content of the type genome is 65.07 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Dialister advecitas sp. nov.

Candidatus Dialister advecitas (NL. fem. n. *advecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900543455*. The type genome for the species is the GenBank assembly GCA_900543455.1. The GC content of the type genome is 52.27 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Dialister bifisitrix sp. nov.

Candidatus Dialister bifisitrix (NL. fem. n. *bifisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900759415*. The type genome for the species is the GenBank assembly GCA_900759415.1. The GC content of the type genome is 46.04 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Dialister cibicitica sp. nov.

Candidatus Dialister cibicitica (NL. fem. n. *cibicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900543165*. The type genome for the species is the GenBank assembly GCA_900762505.1. The GC content of the type genome is 51.98 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Dialister depubetta sp. nov.

Candidatus Dialister depubetta (NL. fem. n. *depubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Dialister sp002320515*. The type genome for the species is the GenBank assembly GCA_002320515.1. The GC content of the type genome is 52.25 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Dialister desucigena sp. nov.

Candidatus Dialister desucigena (NL. fem. n. *desucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900314595*. The type genome for the species is the GenBank assembly GCA_900314595.1. The GC content of the type genome is 47.7 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Dialister dimadax sp. nov.

Candidatus Dialister dimadax (NL. fem. n. *dimadax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp002297935*. The type genome for the species is the GenBank assembly GCA_002297935.1. The GC content of the type genome is 46.43 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Dialister direpousia sp. nov.

Candidatus Dialister direpousia (NL. fem. n. *direpousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900545785*. The type genome for the species is the GenBank assembly GCA_900545785.1. The GC content of the type genome is 42.94 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Dialister diritago sp. nov.

Candidatus Dialister diritago (NL. fem. n. *diritago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900557365*. The type genome for the species is the GenBank assembly GCA_900557365.1. The GC content of the type genome is 51.14 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Dialister hemiditica sp. nov.

Candidatus Dialister hemiditica (NL. fem. n. *hemiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp002471975*. The type genome for the species is the GenBank assembly GCA_002481125.1. The GC content of the type genome is 49.98 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Dialister homulitura sp. nov.

Candidatus Dialister homulitura (NL. fem. n. *homulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900547785*. The type genome for the species is the GenBank assembly GCA_900547785.1. The GC content of the type genome is 43.34 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Dialister levidentia sp. nov.

Candidatus Dialister levidentia (NL. fem. n. *levidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900555245*. The type genome for the species is the GenBank assembly GCA_900555245.1. The GC content of the type genome is 41.37 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Dialister nucifugo sp. nov.

Candidatus Dialister nucifugo (NL. fem. n. *nucifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900541485*. The type genome for the species is the GenBank assembly GCA_900756205.1. The GC content of the type genome is 40.7 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Dialister obsecugo sp. nov.

Candidatus Dialister obsecugo (NL. fem. n. *obsecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp001553355*. The type genome for the species is the GenBank assembly RS_GCF_001553355.1. The GC content of the type genome is 39.28 % and the genome length is 1.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vagina".

Description of *Candidatus* Dialister pimenitica sp. nov.

Candidatus Dialister pimenitica (NL. fem. n. *pimenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900765565*. The type genome for the species is the GenBank assembly GCA_900765565.1. The GC content of the type genome is 52.17 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Dialister recogilenta sp. nov.

Candidatus Dialister recogilenta (NL. fem. n. *recogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900541605*. The type genome for the species is the GenBank assembly GCA_900541605.1. The GC content of the type genome is 51.91 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Dialister rosacimonia sp. nov.

Candidatus Dialister rosacimonia (NL. fem. n. *rosacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp900538805*. The type genome for the species is the GenBank assembly GCA_900538805.1. The GC content of the type genome is 52.61 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Dialister verifivita sp. nov.

Candidatus Dialister verifivita (NL. fem. n. *verifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp002439665*. The type genome for the species is the GenBank assembly GCA_002439665.1. The GC content of the type genome is 41.51 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Dialister videlax sp. nov.

Candidatus Dialister videlax (NL. fem. n. *videlax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dialister sp000434475*. The type genome for the species is the GenBank assembly GCA_900540225.1. The GC content of the type genome is 51.91 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Diaphorobacter accucigena sp. nov.

Candidatus Diaphorobacter accucigena (NL. fem. n. *accucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Diaphorobacter_A sp011305535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011305535.1. The GC content of the type genome is 61.15 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Diaphorobacter cerucimonia sp. nov.

Candidatus Diaphorobacter cerucimonia (NL. fem. n. *cerucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Diaphorobacter_A sp011305995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011305995.1. The GC content of the type genome is 61.35 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Dibapana elastugo sp. nov.

Candidatus Dibapana elastugo (NL. fem. n. *elastugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKJO01 sp007121975*. The type genome for the species is the GenBank assembly GCA_007121975.1. The GC content of the type genome is 72.59 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Dibapana gen. nov.

Candidatus Dibapana (NL. fem. n. *Dibapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKJO01*. The type species for the genus is *Candidatus* Dibapana elastugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dibapana morigisca sp. nov.

Candidatus Dibapana morigisca (NL. fem. n. *morigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKJO01 sp007134165*. The type genome for the species is the GenBank assembly GCA_007134165.1. The GC content of the type genome is 71.7 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Dibaparia socagax sp. nov.

Candidatus Dibaparia socagax (NL. fem. n. *socagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3824 sp002393195*. The type genome for the species is the GenBank assembly GCA_002393195.1. The GC content of the type genome is 46.21 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Dibaparia gen. nov.

Candidatus Dibaparia (NL. fem. n. *Dibaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3824*. The type species for the genus is *Candidatus* Dibaparia

socagax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3824*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapariaceae.

Description of *Candidatus* Dibapariaceae fam. nov.

Candidatus Dibapariaceae (NL. fem. n. *Dibapariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3824.* The type genus for the taxon is *Candidatus* Dibaparia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Dibapella venefilenta sp. nov.

Candidatus Dibapella venefilenta (NL. fem. n. *venefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-47-15 sp002771515*. The type genome for the species is the GenBank assembly GCA_002771515.1. The GC content of the type genome is 46.68 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Dibapella gen. nov.

Candidatus Dibapella (NL. fem. n. *Dibapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-47-15*. The type species for the genus is *Candidatus* Dibapella venefilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-all-47-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapellaceae.

Description of *Candidatus* Dibapellaceae fam. nov.

Candidatus Dibapellaceae (NL. fem. n. *Dibapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-14-all-47-15.* The type genus for the taxon is *Candidatus* Dibapella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Dibapia doxolibra sp. nov.

Candidatus Dibapia doxolibra (NL. fem. n. *doxolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-33 sp002773855*. The type genome for the species is the GenBank assembly GCA_002773855.1. The GC content of the type genome is 33.06 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Dibapia gen. nov.

Candidatus Dibapia (NL. fem. n. *Dibapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-33*. The type species for the genus is *Candidatus* Dibapia doxolibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapiaceae.

Description of *Candidatus* Dibapiaceae fam. nov.

Candidatus Dibapiaceae (NL. fem. n. *Dibapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-39-33.* The type genus for the taxon is *Candidatus* Dibapia .

According to GTDB R06-RS202, this family belongs to the order *Buchananbacterales*.

Description of *Candidatus* Dibapia vitupugo sp. nov.

Candidatus Dibapia vitupugo (NL. fem. n. *vitupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-33 sp001817505*. The type genome for the species is

the GenBank assembly GCA_001817455.1. The GC content of the type genome is 39.55 % and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Dibapida annicitrix sp. nov.

Candidatus Dibapida annicitrix (NL. fem. n. *annicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp903831155*. The type genome for the species is the GenBank assembly GCA_903831155.1. The GC content of the type genome is 69.83 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Dibapida gen. nov.

Candidatus Dibapida (NL. fem. n. *Dibapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QWPN01*. The type species for the genus is *Candidatus* Dibapida annicitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Dibapida immuribula sp. nov.

Candidatus Dibapida immuribula (NL. fem. n. *immuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp003671185*. The type genome for the species is the GenBank assembly GCA_003671185.1. The GC content of the type genome is 69.57 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Dibapida mahelimonia sp. nov.

Candidatus Dibapida mahelimonia (NL. fem. n. *mahelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QWPN01 sp003669255*. The type genome for the species is the GenBank assembly GCA_003669255.1. The GC content of the type genome is 66.97 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Dibapida maxumitica sp. nov.

Candidatus Dibapida maxumitica (NL. fem. n. *maxumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp005789975*. The type genome for the species is the GenBank assembly GCA_005773625.1. The GC content of the type genome is 69.04 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Dibapida novilicula sp. nov.

Candidatus Dibapida novilicula (NL. fem. n. *novilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp903917235*. The type genome for the species is the GenBank assembly GCA_903862635.1. The GC content of the type genome is 70.21 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Dibapida purulicella sp. nov.

Candidatus Dibapida purulicella (NL. fem. n. *purulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp003670825*. The type genome for the species is the GenBank assembly GCA_003670825.1. The GC content of the type genome is 67.66 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Dibapida repuretta sp. nov.

Candidatus Dibapida repuretta (NL. fem. n. *repuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp903958265*. The type genome for the species is the GenBank assembly GCA_903958265.1. The GC content of the type genome is 68.23 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Dibapida sonivibra sp. nov.

Candidatus Dibapida sonivibra (NL. fem. n. *sonivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp903919035*. The type genome for the species is the GenBank assembly GCA_903919035.1. The GC content of the type genome is 69.61 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Dibapida vehicitica sp. nov.

Candidatus Dibapida vehicitica (NL. fem. n. *vehicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPN01 sp014192425*. The type genome for the species is the GenBank assembly GCA_014192425.1. The GC content of the type genome is 69.72 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Dibaposa ciminatio sp. nov.

Candidatus Dibaposa ciminatio (NL. fem. n. *ciminatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-307 sp900547045*. The type genome for the species is the GenBank assembly GCA_900547045.1. The GC content of the type genome is 32.95 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Dibaposa gen. nov.

Candidatus Dibaposa (NL. fem. n. *Dibaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-307*. The type species for the genus is *Candidatus* Dibaposa ciminatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dibaposa tomacimonia sp. nov.

Candidatus Dibaposa tomacimonia (NL. fem. n. *tomacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-307 sp001916215*. The type genome for the species is the GenBank assembly GCA_003524985.1. The GC content of the type genome is 29.8 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Dibapula abagmiforma sp. nov.

Candidatus Dibapula abagmiforma (NL. fem. n. *abagmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11657 sp002346435*. The type genome for the species is the GenBank assembly GCA_002346435.1. The GC content of the type genome is 40.9 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Dibapula gen. nov.

Candidatus Dibapula (NL. fem. n. *Dibapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11657*. The type species for the genus is *Candidatus* Dibapula abagmiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11657*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dibapulaceae.

Description of *Candidatus* Dibapulaceae fam. nov.

Candidatus Dibapulaceae (NL. fem. n. *Dibapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11657.* The type genus for the taxon is *Candidatus* Dibapula .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Dibapula denorisca sp. nov.

Candidatus Dibapula denorisca (NL. fem. n. *denorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11657 sp002377585*. The type genome for the species is the GenBank assembly GCA_003540985.1. The GC content of the type genome is 40.86 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Dibapula gabinatica sp. nov.

Candidatus Dibapula gabinatica (NL. fem. n. *gabinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11657 sp002296125*. The type genome for the species is the GenBank assembly GCA_003449775.1. The GC content of the type genome is 35.7 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Dibapula impiricula sp. nov.

Candidatus Dibapula impiricula (NL. fem. n. *impiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11657 sp002311455*. The type genome for the species is the GenBank assembly GCA_002311455.1. The GC content of the type genome is 42.36 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dibucana anarricella sp. nov.

Candidatus Dibucana anarricella (NL. fem. n. *anarricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1241 sp900550525*. The type genome for the species is the GenBank assembly GCA_900550525.1. The GC content of the type genome is 67.14 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Dibucana gen. nov.

Candidatus Dibucana (NL. fem. n. *Dibucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1241*. The type species for the genus is *Candidatus* Dibucana anarricella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Dibucana exorcetta sp. nov.

Candidatus Dibucana exorcetta (NL. fem. n. *exorcetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1241 sp900549955*. The type genome for the species is the GenBank assembly GCA_900549955.1. The GC content of the type genome is 62.89 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Dibucana refacilega sp. nov.

Candidatus Dibucana refacilega (NL. fem. n. *refacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1241 sp900540495*. The type genome for the species is the GenBank assembly GCA_900540495.1. The GC content of the type genome is 63.16 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Dibucaria ammurifica sp. nov.

Candidatus Dibucaria ammurifica (NL. fem. n. *ammurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1081 sp900321595*. The type genome for the species is the GenBank assembly GCA_900321595.1. The GC content of the type genome is 61.05 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Dibucaria gen. nov.

Candidatus Dibucaria (NL. fem. n. *Dibucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1081*. The type species for the genus is *Candidatus* Dibucaria ammurifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dibucaria bicaledo sp. nov.

Candidatus Dibucaria bicaledo (NL. fem. n. *bicaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1081 sp900543395*. The type genome for the species is the GenBank assembly GCA_900543395.1. The GC content of the type genome is 44.89 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Dibucaria linigitoga sp. nov.

Candidatus Dibucaria linigitoga (NL. fem. n. *linigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1081 sp900314355*. The type genome for the species is the GenBank assembly GCA_900314355.1. The GC content of the type genome is 42.38 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Dibucaria rudecitica sp. nov.

Candidatus Dibucaria rudecitica (NL. fem. n. *rudecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1081 sp002431305*. The type genome for the species is the GenBank assembly GCA_002313815.1. The GC content of the type genome is 45.28 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Dibucella relenugo sp. nov.

Candidatus Dibucella relenugo (NL. fem. n. *relenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12396 sp001791615*. The type genome for the species is the GenBank assembly GCA_000994725.1. The GC content of the type genome is 40.22 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Dibucella gen. nov.

Candidatus Dibucella (NL. fem. n. *Dibucella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12396*. The type species for the genus is *Candidatus* Dibucella relenugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Dibucia bifaritas sp. nov.

Candidatus Dibucia bifaritas (NL. fem. n. *bifaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002331495*. The type genome for the species is the GenBank assembly GCA_002707825.1. The GC content of the type genome is 47.9 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Dibucia gen. nov.

Candidatus Dibucia (NL. fem. n. *Dibucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2100*. The type species for the genus is *Candidatus* Dibucia bifaritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Dibucia deparago sp. nov.

Candidatus Dibucia deparago (NL. fem. n. *deparago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002331185*. The type genome for the species is the GenBank assembly GCA_002692235.1. The GC content of the type genome is 41.39 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Dibucia docibifica sp. nov.

Candidatus Dibucia docibifica (NL. fem. n. *docibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002401925*. The type genome for the species is the GenBank assembly GCA_002401925.1. The GC content of the type genome is 41.39 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Dibucia echogitia sp. nov.

Candidatus Dibucia echogitia (NL. fem. n. *echogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002376945*. The type genome for the species is the GenBank assembly GCA_002376945.1. The GC content of the type genome is 44.88 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Dibucia insibastra sp. nov.

Candidatus Dibucia insibastra (NL. fem. n. *insibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002401495*. The type genome for the species is the GenBank assembly GCA_002401495.1. The GC content of the type genome is 42.03 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Dibucia plascitas sp. nov.

Candidatus Dibucia plascitas (NL. fem. n. *plascitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2100 sp002378745*. The type genome for the species is the GenBank assembly GCA_002378745.1. The GC content of the type genome is 47.61 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Dibucida defesousia sp. nov.

Candidatus Dibucida defesousia (NL. fem. n. *defesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5261 sp011174675*. The type genome for the species is the GenBank assembly RS_GCF_011174675.1. The GC content of the type genome is 43.48 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Dibucida gen. nov.

Candidatus Dibucida (NL. fem. n. *Dibucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5261*. The type species for the genus is *Candidatus* Dibucida defesousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BBW3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peribiaceae.

Description of *Candidatus* Dibucida divulifica sp. nov.

Candidatus Dibucida divulifica (NL. fem. n. *divulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5261 sp002410065*. The type genome for the species is the GenBank assembly GCA_002408645.1. The GC content of the type genome is 38.83 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Dibucida tribredo sp. nov.

Candidatus Dibucida tribredo (NL. fem. n. *tribredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5261 sp002345825*. The type genome for the species is the GenBank assembly GCA_002345825.1. The GC content of the type genome is 41.94 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Dibucosa delapifica sp. nov.

Candidatus Dibucosa delapifica (NL. fem. n. *delapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZQW01 sp903935195*. The type genome for the species is the GenBank assembly GCA_903917135.1. The GC content of the type genome is 53.14 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Dibucosa gen. nov.

Candidatus Dibucosa (NL. fem. n. *Dibucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZQW01*. The type species for the genus is *Candidatus* Dibucosa delapifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Dibucula minagisca sp. nov.

Candidatus Dibucula minagisca (NL. fem. n. *minagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2679 sp002354735*. The type genome for the species is the GenBank assembly GCA_002738205.1. The GC content of the type genome is 55.75 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Dibucula gen. nov.

Candidatus Dibucula (NL. fem. n. *Dibucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2679*. The type species for the genus is *Candidatus* Dibucula minagisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicabana revulax sp. nov.

Candidatus Dicabana revulax (NL. fem. n. *revulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA8524 sp003531115*. The type genome for the species is the GenBank assembly GCA_003531115.1. The GC content of the type genome is 45.06 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Dicabana gen. nov.

Candidatus Dicabana (NL. fem. n. *Dicabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8524*. The type species for the genus is *Candidatus* Dicabana revulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8524*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabanaceae.

Description of *Candidatus* Dicabanaceae fam. nov.

Candidatus Dicabanaceae (NL. fem. n. *Dicabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8524.* The type genus for the taxon is *Candidatus* Dicabana .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Dicabaria culibessa sp. nov.

Candidatus Dicabaria culibessa (NL. fem. n. *culibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA830 sp002937455*. The type genome for the species is the GenBank assembly GCA_002348275.1. The GC content of the type genome is 50.42 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Dicabaria gen. nov.

Candidatus Dicabaria (NL. fem. n. *Dicabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA830*. The type species for the genus is *Candidatus* Dicabaria

culibessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MPNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Meridellaceae.

Description of *Candidatus* Dicabaria pericentia sp. nov.

Candidatus Dicabaria pericentia (NL. fem. n. *pericentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA830 sp002471575*. The type genome for the species is the GenBank assembly GCA_002306775.1. The GC content of the type genome is 58.0 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Dicabia relapastra sp. nov.

Candidatus Dicabia relapastra (NL. fem. n. *relapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717285 sp002717285*. The type genome for the species is the GenBank assembly GCA_002717285.1. The GC content of the type genome is 40.59 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Dicabia gen. nov.

Candidatus Dicabia (NL. fem. n. *Dicabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717285*. The type species for the genus is *Candidatus* Dicabia relapastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-58-16_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bulapanaceae.

Description of *Candidatus* Dicabida acrocibra sp. nov.

Candidatus Dicabida acrocibra (NL. fem. n. *acrocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-4 sp005223045*. The type genome for the species is the GenBank assembly GCA_005223045.1. The GC content of the type genome is 52.93 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Dicabida gen. nov.

Candidatus Dicabida (NL. fem. n. *Dicabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-4*. The type species for the genus is *Candidatus* Dicabida acrocibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Dicabidaceae fam. nov.

Candidatus Dicabidaceae (NL. fem. n. *Dicabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-4*. The type genus for the taxon is *Candidatus* Dicabida .

According to GTDB R06-RS202, this family belongs to the order *Sedimentisphaerales*.

Description of *Candidatus* Dicabida oblanitrix sp. nov.

Candidatus Dicabida oblanitrix (NL. fem. n. *oblanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-4 sp001303465*. The type genome for the species is the GenBank assembly GCA_001303465.1. The GC content of the type genome is 54.85 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Dicabosa exorcitas sp. nov.

Candidatus Dicabosa exorcitas (NL. fem. n. *exorcitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SICP01 sp009691415*. The type genome for the species is the GenBank assembly GCA_009691415.1. The GC content of the type genome is 41.79 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Dicabosa gen. nov.

Candidatus Dicabosa (NL. fem. n. *Dicabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICP01*. The type species for the genus is *Candidatus* Dicabosa exorcitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SICP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabosaceae.

Description of *Candidatus* Dicabosaceae fam. nov.

Candidatus Dicabosaceae (NL. fem. n. *Dicabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SICP01.* The type genus for the taxon is *Candidatus* Dicabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SXXA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cisalanales.

Description of *Candidatus* Dicabula divolimonas sp. nov.

Candidatus Dicabula divolimonas (NL. fem. n. *divolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KLE1615 sp900066985*. The type genome for the species is the GenBank assembly RS_GCF_001641065.1. The GC content of the type genome is 41.22 % and the genome length is 3.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stool".

Description of *Candidatus* Dicabula gen. nov.

Candidatus Dicabula (NL. fem. n. *Dicabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *KLE1615*. The type species for the genus is *Candidatus* Dicabula divolimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicanana inordivita sp. nov.

Candidatus Dicanana inordivita (NL. fem. n. *inordivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-429 sp011052015*. The type genome for the species is the GenBank assembly GCA_011052015.1. The GC content of the type genome is 51.78 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Dicanana gen. nov.

Candidatus Dicanana (NL. fem. n. *Dicanana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-429*. The type species for the genus is *Candidatus* Dicanana inordivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HyVt-429*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicananaceae.

Description of *Candidatus* Dicananaceae fam. nov.

Candidatus Dicananaceae (NL. fem. n. *Dicananaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HyVt-429.* The type genus for the taxon is *Candidatus* Dicanana .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Dicanana lenocimonia sp. nov.

Candidatus Dicanana lenocimonia (NL. fem. n. *lenocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-429 sp013152415*. The type genome for the species is the

GenBank assembly GCA_013152415.1. The GC content of the type genome is 51.37 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Dicanaria sugilibra sp. nov.

Candidatus Dicanaria sugilibra (NL. fem. n. *sugilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2037 sp900557385*. The type genome for the species is the GenBank assembly GCA_900557385.1. The GC content of the type genome is 45.49 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Dicanaria gen. nov.

Candidatus Dicanaria (NL. fem. n. *Dicanaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2037*. The type species for the genus is *Candidatus* Dicanaria sugilibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicanella cibicatio sp. nov.

Candidatus Dicanella cibicatio (NL. fem. n. *cibicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8687 sp002697825*. The type genome for the species is the GenBank assembly GCA_002697825.1. The GC content of the type genome is 37.06 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Dicanella gen. nov.

Candidatus Dicanella (NL. fem. n. *Dicanella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8687*. The type species for the genus is *Candidatus* Dicanella cibicatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicanella corocitudo sp. nov.

Candidatus Dicanella corocitudo (NL. fem. n. *corocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8687 sp013349585*. The type genome for the species is the GenBank assembly GCA_013349585.1. The GC content of the type genome is 42.63 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dicanella innabitrix sp. nov.

Candidatus Dicanella innabitrix (NL. fem. n. *innabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8687 sp002721515*. The type genome for the species is the GenBank assembly GCA_002721515.1. The GC content of the type genome is 36.86 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Dicanella volubilega sp. nov.

Candidatus Dicanella volubilega (NL. fem. n. *volubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8687 sp009873655*. The type genome for the species is the GenBank assembly GCA_009874385.1. The GC content of the type genome is 44.06 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Dicania aglasitas sp. nov.

Candidatus Dicania aglasitas (NL. fem. n. *aglasitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900756715*. The type genome for the species is the GenBank assembly GCA_900756715.1. The GC content of the type genome is 57.39 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Dicania gen. nov.

Candidatus Dicania (NL. fem. n. *Dicania* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-83*. The type species for the genus is *Candidatus* Dicania aglasitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicania bicubitica sp. nov.

Candidatus Dicania bicubitica (NL. fem. n. *bicubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp002392625*. The type genome for the species is the GenBank assembly GCA_002361515.1. The GC content of the type genome is 61.66 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Dicania bipenitrix sp. nov.

Candidatus Dicania bipenitrix (NL. fem. n. *bipenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900549395*. The type genome for the species is the GenBank assembly GCA_900549395.1. The GC content of the type genome is 58.18 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Dicania canacifica sp. nov.

Candidatus Dicania canacifica (NL. fem. n. *canacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900552475*. The type genome for the species is the GenBank assembly GCA_900552475.1. The GC content of the type genome is 62.2 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Dicania carunatio sp. nov.

Candidatus Dicania carunatio (NL. fem. n. *carunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-83 sp900547745*. The type genome for the species is the GenBank assembly GCA_900547745.1. The GC content of the type genome is 61.83 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Dicania casigitio sp. nov.

Candidatus Dicania casigitio (NL. fem. n. *casigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp001916855*. The type genome for the species is the GenBank assembly GCA_001916855.1. The GC content of the type genome is 62.17 % and the genome length is 1.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Dicania cetariforma sp. nov.

Candidatus Dicania cetariforma (NL. fem. n. *cetariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900555735*. The type genome for the species is the GenBank assembly GCA_900753835.1. The GC content of the type genome is 59.58 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Dicania decucedo sp. nov.

Candidatus Dicania decucedo (NL. fem. n. *decucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900551995*. The type genome for the species is the GenBank assembly GCA_900762925.1. The GC content of the type genome is 61.37 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Dicania dedigigena sp. nov.

Candidatus Dicania dedigigena (NL. fem. n. *dedigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp902388735*. The type genome for the species is the GenBank assembly GCA_902388735.1. The GC content of the type genome is 59.49 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Dicania depeliforma sp. nov.

Candidatus Dicania depeliforma (NL. fem. n. *depeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp000435555*. The type genome for the species is the GenBank assembly GCA_008673135.1. The GC content of the type genome is 60.92 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Dicania dilecilega sp. nov.

Candidatus Dicania dilecilega (NL. fem. n. *dilecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp004555205*. The type genome for the species is the GenBank assembly GCA_004555205.1. The GC content of the type genome is 55.07 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Dicania expisax sp. nov.

Candidatus Dicania expisax (NL. fem. n. *expisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp012719745*. The type genome for the species is the GenBank assembly GCA_012719745.1. The GC content of the type genome is 53.73 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Dicania famelago sp. nov.

Candidatus Dicania famelago (NL. fem. n. *famelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900545585*. The type genome for the species is the GenBank assembly GCA_900756505.1. The GC content of the type genome is 61.24 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Dicania fuligago sp. nov.

Candidatus Dicania fuligago (NL. fem. n. *fuligago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900551355*. The type genome for the species is the GenBank assembly GCA_900551355.1. The GC content of the type genome is 63.03 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Dicania intamousia sp. nov.

Candidatus Dicania intamousia (NL. fem. n. *intamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900757415*. The type genome for the species is the GenBank assembly GCA_900757415.1. The GC content of the type genome is 58.22 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Dicania lapicicella sp. nov.

Candidatus Dicania lapicicella (NL. fem. n. *lapicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900550585*. The type genome for the species is the GenBank assembly GCA_900550585.1. The GC content of the type genome is 62.25 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Dicania letifilenta sp. nov.

Candidatus Dicania letifilenta (NL. fem. n. *letifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp002309395*. The type genome for the species is the GenBank assembly GCA_002309395.1. The GC content of the type genome is 59.04 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Dicania manibitas sp. nov.

Candidatus Dicania manibitas (NL. fem. n. *manibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-83 sp900313295*. The type genome for the species is the GenBank assembly GCA_004553935.1. The GC content of the type genome is 58.09 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Dicania miracivita sp. nov.

Candidatus Dicania miracivita (NL. fem. n. *miracivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900556015*. The type genome for the species is the GenBank assembly GCA_900556015.1. The GC content of the type genome is 63.23 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Dicania necopax sp. nov.

Candidatus Dicania necopax (NL. fem. n. *necopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900545495*. The type genome for the species is the GenBank assembly GCA_900763535.1. The GC content of the type genome is 60.94 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Dicania nimiribula sp. nov.

Candidatus Dicania nimiribula (NL. fem. n. *nimiribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900552725*. The type genome for the species is the GenBank assembly GCA_900552725.1. The GC content of the type genome is 61.03 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Dicania nubecatio sp. nov.

Candidatus Dicania nubecatio (NL. fem. n. *nubecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900548615*. The type genome for the species is the GenBank assembly GCA_900548615.1. The GC content of the type genome is 59.64 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Dicania nutabitrix sp. nov.

Candidatus Dicania nutabitrix (NL. fem. n. *nutabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900317425*. The type genome for the species is the GenBank assembly GCA_900317425.1. The GC content of the type genome is 61.02 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Dicania nutabugo sp. nov.

Candidatus Dicania nutabugo (NL. fem. n. *nutabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp002438575*. The type genome for the species is the GenBank assembly GCA_002438575.1. The GC content of the type genome is 62.1 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Dicania oratrigena sp. nov.

Candidatus Dicania oratrigena (NL. fem. n. *oratrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900550615*. The type genome for the species is the GenBank assembly GCA_900550615.1. The GC content of the type genome is 59.16 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Dicania pacifitoga sp. nov.

Candidatus Dicania pacifitoga (NL. fem. n. *pacifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp004557655*. The type genome for the species is the GenBank assembly GCA_004557655.1. The GC content of the type genome is 55.77 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Dicania rorarifica sp. nov.

Candidatus Dicania rorarifica (NL. fem. n. *rorarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp003539495*. The type genome for the species is the GenBank assembly GCA_003526115.1. The GC content of the type genome is 57.6 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Dicania tirocibra sp. nov.

Candidatus Dicania tirocibra (NL. fem. n. *tirocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp000435975*. The type genome for the species is the GenBank assembly GCA_000435975.1. The GC content of the type genome is 60.59 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Dicania vecoressa sp. nov.

Candidatus Dicania vecoressa (NL. fem. n. *vecoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp900554275*. The type genome for the species is the GenBank assembly GCA_900554275.1. The GC content of the type genome is 61.42 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Dicania vocamitudo sp. nov.

Candidatus Dicania vocamitudo (NL. fem. n. *vocamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp003487665*. The type genome for the species is the GenBank assembly GCA_003487665.1. The GC content of the type genome is 61.49 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Dicania vocificella sp. nov.

Candidatus Dicania vocificella (NL. fem. n. *vocificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-83 sp000431575*. The type genome for the species is the GenBank assembly GCA_900545235.1. The GC content of the type genome is 60.71 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Dicanida deculitura sp. nov.

Candidatus Dicanida deculitura (NL. fem. n. *deculitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPNP01 sp002239085*. The type genome for the species is the GenBank assembly GCA_002239085.1. The GC content of the type genome is 41.99 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Dicanida gen. nov.

Candidatus Dicanida (NL. fem. n. *Dicanida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MPNP01*. The type species for the genus is *Candidatus* Dicanida deculitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicanida hibisastra sp. nov.

Candidatus Dicanida hibisastra (NL. fem. n. *hibisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPNP01 sp011523445*. The type genome for the species is the GenBank assembly GCA_009842555.1. The GC content of the type genome is 44.66 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Dicanida lutulitica sp. nov.

Candidatus Dicanida lutulitica (NL. fem. n. *lutulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MPNP01 sp009842205*. The type genome for the species is the GenBank assembly GCA_009845745.1. The GC content of the type genome is 44.52 %

and the genome length is 2.26 Mbp.

Description of *Candidatus* Dicanosa citivitas sp. nov.

Candidatus Dicanosa citivitas (NL. fem. n. *citivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12471 sp001768735*. The type genome for the species is the GenBank assembly GCA_003485165.1. The GC content of the type genome is 56.7 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Dicanosa gen. nov.

Candidatus Dicanosa (NL. fem. n. *Dicanosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12471*. The type species for the genus is *Candidatus* Dicanosa citivitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1247*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimotiaceae.

Description of *Candidatus* Dicanula antevatio sp. nov.

Candidatus Dicanula antevatio (NL. fem. n. *antevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718035 sp002718035*. The type genome for the species is the GenBank assembly GCA_002718035.1. The GC content of the type genome is 27.99 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Dicanula gen. nov.

Candidatus Dicanula (NL. fem. n. *Dicanula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718035*. The type species for the genus is *Candidatus* Dicanula antevatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Dicanula monopimonia sp. nov.

Candidatus Dicanula monopimonia (NL. fem. n. *monopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718035 sp902520385*. The type genome for the species is the GenBank assembly GCA_902520385.1. The GC content of the type genome is 29.45 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Dicanula pulegilenta sp. nov.

Candidatus Dicanula pulegilenta (NL. fem. n. *pulegilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718035 sp902533035*. The type genome for the species is the GenBank assembly GCA_902533035.1. The GC content of the type genome is 28.61 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Dichloromethanomonas supeliforma sp. nov.

Candidatus Dichloromethanomonas supeliforma (NL. fem. n. *supeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dichloromethanomonas sp012517475*. The type genome for the species is the GenBank assembly GCA_012517475.1. The GC content of the type genome is 42.66 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Dicibana cilibiforma sp. nov.

Candidatus Dicibana cilibiforma (NL. fem. n. *cilibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2136 sp002689455*. The type genome for the species is the GenBank assembly GCA_002689455.1. The GC content of the type genome is 38.87 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Dicibana gen. nov.

Candidatus Dicibana (NL. fem. n. *Dicibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2136*. The type species for the genus is *Candidatus* Dicibana cilibiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2136*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibanaceae.

Description of *Candidatus* Dicibanaceae fam. nov.

Candidatus Dicibanaceae (NL. fem. n. *Dicibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2136.* The type genus for the taxon is *Candidatus* Dicibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1280*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacariales.

Description of *Candidatus* Dicibana disidax sp. nov.

Candidatus Dicibana disidax (NL. fem. n. *disidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2136 sp002328405*. The type genome for the species is the GenBank assembly GCA_002328405.1. The GC content of the type genome is 44.38 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Dicibaria prognitio sp. nov.

Candidatus Dicibaria prognitio (NL. fem. n. *prognitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZP01 sp903862805*. The type genome for the species is the GenBank assembly GCA_903862805.1. The GC content of the type genome is 49.67 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Dicibaria gen. nov.

Candidatus Dicibaria (NL. fem. n. *Dicibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOZP01*. The type species for the genus is *Candidatus* Dicibaria prognitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIOZP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibariaceae.

Description of *Candidatus* Dicibariaceae fam. nov.

Candidatus Dicibariaceae (NL. fem. n. *Dicibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIOZP01.* The type genus for the taxon is *Candidatus* Dicibaria .

According to GTDB R06-RS202, this family belongs to the order *Chitinivibrionales*.

Description of *Candidatus* Dicibella decomicula sp. nov.

Candidatus Dicibella decomicula (NL. fem. n. *decomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10009 sp001001205*. The type genome for the species is the GenBank assembly GCA_001818475.1. The GC content of the type genome is 45.21 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Dicibella gen. nov.

Candidatus Dicibella (NL. fem. n. *Dicibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10009*. The type species for the genus is *Candidatus* Dicibella decomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10009*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibellaceae.

Description of *Candidatus* Dicibellaceae fam. nov.

Candidatus Dicibellaceae (NL. fem. n. *Dicibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10009.* The type genus for the taxon is *Candidatus* Dicibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1558*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nugivellales.

Description of *Candidatus* Dicibia adceliforma sp. nov.

Candidatus Dicibia adceliforma (NL. fem. n. *adceliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1390 sp002305315*. The type genome for the species is the GenBank assembly GCA_002305315.1. The GC content of the type genome is 49.51 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Dicibia gen. nov.

Candidatus Dicibia (NL. fem. n. *Dicibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1390*. The type species for the genus is *Candidatus* Dicibia adceliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1390*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibiaceae.

Description of *Candidatus* Dicibiaceae fam. nov.

Candidatus Dicibiaceae (NL. fem. n. *Dicibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1390.* The type genus for the taxon is *Candidatus* Dicibia .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Dicibia octusicella sp. nov.

Candidatus Dicibia octusicella (NL. fem. n. *octusicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1390 sp900764045*. The type genome for the species is the GenBank assembly RS_GCF_900764045.1. The GC content of the type genome is 50.77 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Dicibida direcetta sp. nov.

Candidatus Dicibida direcetta (NL. fem. n. *direcetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYGI01 sp903925685*. The type genome for the species is the GenBank assembly GCA_903883095.1. The GC content of the type genome is 62.68 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dicibida gen. nov.

Candidatus Dicibida (NL. fem. n. *Dicibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYGI01*. The type species for the genus is *Candidatus* Dicibida direcetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYGI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibidaceae.

Description of *Candidatus* Dicibidaceae fam. nov.

Candidatus Dicibidaceae (NL. fem. n. *Dicibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYGI01*. The type genus for the taxon is *Candidatus* Dicibida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIKKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defacanales.

Description of *Candidatus* Dicibosa semunilenta sp. nov.

Candidatus Dicibosa semunilenta (NL. fem. n. *semunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRJ01 sp011390985*. The type genome for the species is the GenBank assembly GCA_011390985.1. The GC content of the type genome is 62.3 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Dicibosa gen. nov.

Candidatus Dicibosa (NL. fem. n. *Dicibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRJ01*. The type species for the genus is *Candidatus* Dicibosa semunilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABRJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibosaceae.

Description of *Candidatus* Dicibosaceae fam. nov.

Candidatus Dicibosaceae (NL. fem. n. *Dicibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABRJ01*. The type genus for the taxon is *Candidatus* Dicibosa .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Dicibula tirunitoga sp. nov.

Candidatus Dicibula tirunitoga (NL. fem. n. *tirunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMYD01 sp004356015*. The type genome for the species is the GenBank assembly GCA_004356015.1. The GC content of the type genome is 63.89 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Dicibula gen. nov.

Candidatus Dicibula (NL. fem. n. *Dicibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMYD01*. The type species for the genus is *Candidatus* Dicibula tirunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibulaceae.

Description of *Candidatus* Dicibulaceae fam. nov.

Candidatus Dicibulaceae (NL. fem. n. *Dicibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMYD01.* The type genus for the taxon is *Candidatus* Dicibula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SMYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dicibulales.

Description of *Candidatus* Dicibulales ord. nov.

Candidatus Dicibulales (NL. fem. n. *Dicibulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMYD01.* The type genus for the taxon is *Candidatus* Dicibula .

According to the original version of GTDB R06-RS202, this family belongs to the class *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceracosae.

Description of *Candidatus* Dicimana abambastra sp. nov.

Candidatus Dicimana abambastra (NL. fem. n. *abambastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3478 sp011525015*. The type genome for the species is the GenBank assembly GCA_011525015.1. The GC content of the type genome is 39.05 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Dicimana gen. nov.

Candidatus Dicimana (NL. fem. n. *Dicimana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3478*. The type species for the genus is *Candidatus* Dicimana abambastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dicimana absegilenta sp. nov.

Candidatus Dicimana absegilenta (NL. fem. n. *absegilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3478 sp002691645*. The type genome for the species is the GenBank assembly GCA_002691645.1. The GC content of the type genome is 38.15 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Dicimana bucolatica sp. nov.

Candidatus Dicimana bucolatica (NL. fem. n. *bucolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3478 sp003045935*. The type genome for the species is the GenBank assembly GCA_003045935.1. The GC content of the type genome is 39.95 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Dicimana depubifica sp. nov.

Candidatus Dicimana depubifica (NL. fem. n. *depubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3478 sp002691685*. The type genome for the species is the GenBank assembly GCA_002691685.1. The GC content of the type genome is 36.94 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Dicimana mirifimonas sp. nov.

Candidatus Dicimana mirifimonas (NL. fem. n. *mirifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3478 sp002381155*. The type genome for the species is the GenBank assembly GCA_002381155.1. The GC content of the type genome is 40.41 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Dicimaria dilemedo sp. nov.

Candidatus Dicimaria dilemedo (NL. fem. n. *dilemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2687025 sp002687025*. The type genome for the species is the GenBank assembly GCA_002687025.1. The GC content of the type genome is 66.58 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Dicimaria gen. nov.

Candidatus Dicimaria (NL. fem. n. *Dicimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2687025*. The type species for the genus is *Candidatus* Dicimaria dilemedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2687025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimariaceae.

Description of *Candidatus* Dicimariaceae fam. nov.

Candidatus Dicimariaceae (NL. fem. n. *Dicimariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2687025.* The type genus for the taxon is *Candidatus* Dicimaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2687025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dicimariales.

Description of *Candidatus* Dicimariales ord. nov.

Candidatus Dicimariales (NL. fem. n. *Dicimariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GCA-2687025.* The type genus for the taxon is *Candidatus* Dicimaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *WGA-4E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Demociae.

Description of *Candidatus* Dicimella cetarilega sp. nov.

Candidatus Dicimella cetarilega (NL. fem. n. *cetarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHJ01 sp009838765*. The type genome for the species is the GenBank assembly GCA_009845855.1. The GC content of the type genome is 68.84 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Dicimella gen. nov.

Candidatus Dicimella (NL. fem. n. *Dicimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXHJ01*. The type species for the genus is *Candidatus* Dicimella cetarilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDQB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomosaceae.

Description of *Candidatus* Dicimella cuticisca sp. nov.

Candidatus Dicimella cuticisca (NL. fem. n. *cuticisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHJ01 sp012270965*. The type genome for the species is the GenBank assembly GCA_012270965.1. The GC content of the type genome is 68.96 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Dicimella macilitio sp. nov.

Candidatus Dicimella macilitio (NL. fem. n. *macilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHJ01 sp009840115*. The type genome for the species is the GenBank assembly GCA_009840115.1. The GC content of the type genome is 69.49 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Dicimella nugigimonia sp. nov.

Candidatus Dicimella nugigimonia (NL. fem. n. *nugigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHJ01 sp009841005*. The type genome for the species is the GenBank assembly GCA_009846385.1. The GC content of the type genome is 68.98 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Dicimella semodilega sp. nov.

Candidatus Dicimella semodilega (NL. fem. n. *semodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXHJ01 sp009841015*. The type genome for the species is the GenBank assembly GCA_009841015.1. The GC content of the type genome is 69.11 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Dicimia arrabitas sp. nov.

Candidatus Dicimia arrabitas (NL. fem. n. *arrabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKB01 sp011333655*. The type genome for the species is the GenBank assembly GCA_011333655.1. The GC content of the type genome is 36.78 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Dicimia gen. nov.

Candidatus Dicimia (NL. fem. n. *Dicimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKB01*. The type species for the genus is *Candidatus* Dicimia arrabitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

DTKB01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimiaceae.

Description of *Candidatus* Dicimiaceae fam. nov.

Candidatus Dicimiaceae (NL. fem. n. *Dicimiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKB01.* The type genus for the taxon is *Candidatus* Dicimia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTKB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dicimiales.

Description of *Candidatus* Dicimiales ord. nov.

Candidatus Dicimiales (NL. fem. n. *Dicimiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKB01.* The type genus for the taxon is *Candidatus* Dicimia .

According to the GTDB R06-RS202, this order belongs to the class *Aminicenantia*.

Description of *Candidatus* Dicimida accomifica sp. nov.

Candidatus Dicimida accomifica (NL. fem. n. *accomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1402 sp012511135*. The type genome for the species is the GenBank assembly GCA_012511135.1. The GC content of the type genome is 45.48 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Dicimida gen. nov.

Candidatus Dicimida (NL. fem. n. *Dicimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1402*. The type species for the genus is *Candidatus* Dicimida accomifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1402*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Dicimidaceae.

Description of *Candidatus* Dicimidaceae fam. nov.

Candidatus Dicimidaceae (NL. fem. n. *Dicimidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1402.* The type genus for the taxon is *Candidatus* Dicimida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Dicimida saburitoga sp. nov.

Candidatus Dicimida saburitoga (NL. fem. n. *saburitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1402 sp002305085*. The type genome for the species is the GenBank assembly GCA_002379805.1. The GC content of the type genome is 46.13 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Dicimosa filifibra sp. nov.

Candidatus Dicimosa filifibra (NL. fem. n. *filifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILMK01 sp903829945*. The type genome for the species is the GenBank assembly GCA_903832045.1. The GC content of the type genome is 35.7 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Dicimosa gen. nov.

Candidatus Dicimosa (NL. fem. n. *Dicimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILMK01*. The type species for the genus is *Candidatus* Dicimosa filifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimosaceae.

Description of *Candidatus* Dicimosaceae fam. nov.

Candidatus Dicimosaceae (NL. fem. n. *Dicimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILMK01.* The type genus for the taxon is *Candidatus* Dicimosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAILMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dicimosales.

Description of *Candidatus* Dicimosales ord. nov.

Candidatus Dicimosales (NL. fem. n. *Dicimosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAILMK01.* The type genus for the taxon is *Candidatus* Dicimosa .

According to the GTDB R06-RS202, this order belongs to the class *Bacteroidia*.

Description of *Candidatus* Dicimosa ludibatica sp. nov.

Candidatus Dicimosa ludibatica (NL. fem. n. *ludibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILMK01 sp903835275*. The type genome for the species is the GenBank assembly GCA_903835275.1. The GC content of the type genome is 40.26 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Dicimula antacugo sp. nov.

Candidatus Dicimula antacugo (NL. fem. n. *antacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp902608415*. The type genome for the species is the GenBank assembly GCA_902608415.1. The GC content of the type genome is 31.76 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Dicimula gen. nov.

Candidatus Dicimula (NL. fem. n. *Dicimula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-430-B22*. The type species for the genus is *Candidatus* Dicimula antacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED25*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipiaceae.

Description of *Candidatus* Dicimula decomatio sp. nov.

Candidatus Dicimula decomatio (NL. fem. n. *decomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp002726005*. The type genome for the species is the GenBank assembly GCA_002726005.1. The GC content of the type genome is 32.11 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Dicimula forabatica sp. nov.

Candidatus Dicimula forabatica (NL. fem. n. *forabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp003212795*. The type genome for the species is the GenBank assembly GCA_003212795.1. The GC content of the type genome is 32.11 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Dicimula meridibula sp. nov.

Candidatus Dicimula meridibula (NL. fem. n. *meridibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp003209955*. The type genome for the species is the GenBank assembly GCA_003209955.1. The GC content of the type genome is 31.93 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Dicimula plascilega sp. nov.

Candidatus Dicimula plascilega (NL. fem. n. *plascilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp902609025*. The type genome for the species is the GenBank assembly GCA_902609025.1. The GC content of the type genome is 31.91 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Dicimula retecatica sp. nov.

Candidatus Dicimula retecatica (NL. fem. n. *retecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp002728335*. The type genome for the species is the GenBank assembly GCA_902577045.1. The GC content of the type genome is 32.27 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Dicimula taraxessa sp. nov.

Candidatus Dicimula taraxessa (NL. fem. n. *taraxessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-430-B22 sp902533755*. The type genome for the species is the GenBank assembly GCA_902530585.1. The GC content of the type genome is 31.97 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Dictyobacter penicitudo sp. nov.

Candidatus Dictyobacter penicitudo (NL. fem. n. *penicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dictyobacter sp008326305*. The type genome for the species is the GenBank assembly RS_GCF_008326305.1. The GC content of the type genome is 49.65 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Didacana adfunibra sp. nov.

Candidatus Didacana adfunibra (NL. fem. n. *adfunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DRMV01 sp013154225*. The type genome for the species is the GenBank assembly GCA_013154225.1. The GC content of the type genome is 59.28 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Didacana gen. nov.

Candidatus Didacana (NL. fem. n. *Didacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRMV01*. The type species for the genus is *Candidatus* Didacana adfunibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacanaceae.

Description of *Candidatus* Didacanaceae fam. nov.

Candidatus Didacanaceae (NL. fem. n. *Didacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRMV01.* The type genus for the taxon is *Candidatus* Didacana .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Didacana domipetta sp. nov.

Candidatus Didacana domipetta (NL. fem. n. *domipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRMV01 sp011322445*. The type genome for the species is the GenBank assembly GCA_011322445.1. The GC content of the type genome is 62.06 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Didacaria favonitica sp. nov.

Candidatus Didacaria favonitica (NL. fem. n. *favonitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1173 sp003158755*. The type genome for the species is the GenBank assembly GCA_003158755.1. The GC content of the type genome is 61.15 %

and the genome length is 2.65 Mbp.

Description of *Candidatus* Didacaria gen. nov.

Candidatus Didacaria (NL. fem. n. *Didacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1173*. The type species for the genus is *Candidatus* Didacaria favonitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-1173*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacariaceae.

Description of *Candidatus* Didacariaceae fam. nov.

Candidatus Didacariaceae (NL. fem. n. *Didacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FEN-1173.* The type genus for the taxon is *Candidatus* Didacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *F11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodosales.

Description of *Candidatus* Didacella adhosilega sp. nov.

Candidatus Didacella adhosilega (NL. fem. n. *adhosilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1135 sp002311925*. The type genome for the species is the GenBank assembly GCA_002311925.1. The GC content of the type genome is 62.14 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Didacella gen. nov.

Candidatus Didacella (NL. fem. n. *Didacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1135*. The type species for the genus is *Candidatus* Didacella adhosilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacellaceae.

Description of *Candidatus* Didacellaceae fam. nov.

Candidatus Didacellaceae (NL. fem. n. *Didacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1135.* The type genus for the taxon is *Candidatus* Didacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Didacellales.

Description of *Candidatus* Didacellales ord. nov.

Candidatus Didacellales (NL. fem. n. *Didacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1135.* The type genus for the taxon is *Candidatus* Didacella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Didacellae.

Description of *Candidatus* Didacellae class. nov.

Candidatus Didacellae (NL. fem. n. *c__Didacellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1135.* The type genus for the taxon is *Candidatus* Didacella .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Didacella thapsitura sp. nov.

Candidatus Didacella thapsitura (NL. fem. n. *thapsitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1135 sp003501525*. The type genome for the species is the

GenBank assembly GCA_003501525.1. The GC content of the type genome is 51.82 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Didacia turilifica sp. nov.

Candidatus Didacia turilifica (NL. fem. n. *turilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8919 sp002402375*. The type genome for the species is the GenBank assembly GCA_002402375.1. The GC content of the type genome is 39.18 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Didacia gen. nov.

Candidatus Didacia (NL. fem. n. *Didacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8919*. The type species for the genus is *Candidatus* Didacia turilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didaciaceae.

Description of *Candidatus* Didaciaceae fam. nov.

Candidatus Didaciaceae (NL. fem. n. *Didaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8919.* The type genus for the taxon is *Candidatus* Didacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Didaciales.

Description of *Candidatus* Didaciales ord. nov.

Candidatus Didaciales (NL. fem. n. *Didaciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8919.* The type genus for the taxon is *Candidatus* Didacia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Didaciae.

Description of *Candidatus* Didaciae class. nov.

Candidatus Didaciae (NL. fem. n. *c__Didaciae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8919.* The type genus for the taxon is *Candidatus* Didacia .

According to GTDB R06-RS202, this class belongs to the phylum *Elusimicrobiota*.

Description of *Candidatus* Didacia vavasastra sp. nov.

Candidatus Didacia vavasastra (NL. fem. n. *vavasastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8919 sp002780205*. The type genome for the species is the GenBank assembly GCA_002780205.1. The GC content of the type genome is 38.4 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Didacida semimicella sp. nov.

Candidatus Didacida semimicella (NL. fem. n. *semimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHCE01 sp003243955*. The type genome for the species is the GenBank assembly GCA_003243955.1. The GC content of the type genome is 59.63 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Didacida gen. nov.

Candidatus Didacida (NL. fem. n. *Didacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHCE01*. The type species for the genus is *Candidatus* Didacida semimicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Didacidaceae.

Description of *Candidatus* Didacidaceae fam. nov.

Candidatus Didacidaceae (NL. fem. n. *Didacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHCE01.* The type genus for the taxon is *Candidatus* Didacida .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Didacosa indevitia sp. nov.

Candidatus Didacosa indevitia (NL. fem. n. *indevitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPRZ01 sp903867585*. The type genome for the species is the GenBank assembly GCA_903867585.1. The GC content of the type genome is 36.77 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Didacosa gen. nov.

Candidatus Didacosa (NL. fem. n. *Didacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPRZ01*. The type species for the genus is *Candidatus* Didacosa indevitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIPRZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Didacosaceae.

Description of *Candidatus* Didacosaceae fam. nov.

Candidatus Didacosaceae (NL. fem. n. *Didacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIPRZ01.* The type genus for the taxon is *Candidatus* Didacosa .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Didacula calipedo sp. nov.

Candidatus Didacula calipedo (NL. fem. n. *calipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003220155*. The type genome for the species is the GenBank assembly GCA_003220035.1. The GC content of the type genome is 55.25 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Didacula gen. nov.

Candidatus Didacula (NL. fem. n. *Didacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV69*. The type species for the genus is *Candidatus* Didacula calipedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Didacula coturitudo sp. nov.

Candidatus Didacula coturitudo (NL. fem. n. *coturitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003219125*. The type genome for the species is the GenBank assembly GCA_003219555.1. The GC content of the type genome is 55.01 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Didacula invecetta sp. nov.

Candidatus Didacula invecetta (NL. fem. n. *invecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003220075*. The type genome for the species is the GenBank assembly GCA_003220075.1. The GC content of the type genome is 55.18 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Didacula invigatica sp. nov.

Candidatus Didacula invigatica (NL. fem. n. *invigatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003219925*. The type genome for the species is the GenBank assembly GCA_003219925.1. The GC content of the type genome is 55.26 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Didacula murilessa sp. nov.

Candidatus Didacula murilessa (NL. fem. n. *murilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003217965*. The type genome for the species is the GenBank assembly GCA_003217965.1. The GC content of the type genome is 55.16 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Didacula nugivatio sp. nov.

Candidatus Didacula nugivatio (NL. fem. n. *nugivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003221405*. The type genome for the species is the GenBank assembly GCA_003221405.1. The GC content of the type genome is 55.42 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Didacula panopicula sp. nov.

Candidatus Didacula panopicula (NL. fem. n. *panopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003244125*. The type genome for the species is the GenBank assembly GCA_003244125.1. The GC content of the type genome is 58.67 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Didacula parocago sp. nov.

Candidatus Didacula parocago (NL. fem. n. *parocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003218525*. The type genome for the species is the GenBank assembly GCA_003218525.1. The GC content of the type genome is 55.3 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Didacula pinifimonas sp. nov.

Candidatus Didacula pinifimonas (NL. fem. n. *pinifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003219115*. The type genome for the species is the GenBank assembly GCA_003219115.1. The GC content of the type genome is 55.32 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Didacula regifitia sp. nov.

Candidatus Didacula regifitia (NL. fem. n. *regifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003219095*. The type genome for the species is the GenBank assembly GCA_003219095.1. The GC content of the type genome is 55.05 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Didacula semapibula sp. nov.

Candidatus Didacula semapibula (NL. fem. n. *semapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003221295*. The type genome for the species is the GenBank assembly GCA_003221295.1. The GC content of the type genome is 55.27 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Didacula tegimilenta sp. nov.

Candidatus Didacula tegimilenta (NL. fem. n. *tegimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV69 sp003219175*. The type genome for the species is the GenBank assembly GCA_003221175.1. The GC content of the type genome is 54.94 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Didemnitutus arunditura sp. nov.

Candidatus Didemnitutus arunditura (NL. fem. n. *arunditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Didemnitutus sp013821985*. The type genome for the species is the GenBank assembly GCA_013821985.1. The GC content of the type genome is 64.76 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Didemnitutus buxifago sp. nov.

Candidatus Didemnitutus buxifago (NL. fem. n. *buxifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Didemnitutus sp903885525*. The type genome for the species is the GenBank assembly GCA_903885525.1. The GC content of the type genome is 66.76 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Didemnitutus vitifentia sp. nov.

Candidatus Didemnitutus vitifentia (NL. fem. n. *vitifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Didemnitutus sp013822585*. The type genome for the species is the GenBank assembly GCA_013822585.1. The GC content of the type genome is 68.25 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Dielma direpimonas sp. nov.

Candidatus Dielma direpimonas (NL. fem. n. *direpimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dielma sp001305055*. The type genome for the species is the GenBank assembly RS_GCF_000508965.1. The GC content of the type genome is 40.49 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Dietzia adnulimonas sp. nov.

Candidatus Dietzia adnulimonas (NL. fem. n. *adnulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dietzia sp008369165*. The type genome for the species is the GenBank assembly RS_GCF_008369165.1. The GC content of the type genome is 68.23 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Dietzia bucolitica sp. nov.

Candidatus Dietzia bucolitica (NL. fem. n. *bucolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dietzia sp003052165*. The type genome for the species is the GenBank assembly RS_GCF_003052165.1. The GC content of the type genome is 70.24 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Dietzia dicimetta sp. nov.

Candidatus Dietzia dicimetta (NL. fem. n. *dicimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dietzia sp002415925*. The type genome for the species is the GenBank assembly GCA_002415925.1. The GC content of the type genome is 71.87 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Dietzia exadvessa sp. nov.

Candidatus Dietzia exadvessa (NL. fem. n. *exadvessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dietzia sp012841845*. The type genome for the species is the GenBank assembly GCA_012841845.1. The GC content of the type genome is 72.73 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Dietzia visifago sp. nov.

Candidatus Dietzia visifago (NL. fem. n. *visifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Dietzia sp014145095*. The type genome for the species is the GenBank assembly RS_GCF_014145095.1. The GC content of the type genome is 69.15 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Dilacana rutabicula sp. nov.

Candidatus Dilacana rutabicula (NL. fem. n. *rutabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACKPV01 sp902602185*. The type genome for the species is the GenBank assembly GCA_902621585.1. The GC content of the type genome is 34.76 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Dilacana gen. nov.

Candidatus Dilacana (NL. fem. n. *Dilacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACKPV01*. The type species for the genus is *Candidatus* Dilacana rutabicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Dilacaria adfamimonia sp. nov.

Candidatus Dilacaria adfamimonia (NL. fem. n. *adfamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp002160135*. The type genome for the species is the GenBank assembly RS_GCF_002160135.1. The GC content of the type genome is 50.05 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Dilacaria gen. nov.

Candidatus Dilacaria (NL. fem. n. *Dilacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7182*. The type species for the genus is *Candidatus* Dilacaria adfamimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilacaria ambacitica sp. nov.

Candidatus Dilacaria ambacitica (NL. fem. n. *ambacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp009774155*. The type genome for the species is the GenBank assembly GCA_009774155.1. The GC content of the type genome is 47.54 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Dilacaria biveratica sp. nov.

Candidatus Dilacaria biveratica (NL. fem. n. *biveratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp002491115*. The type genome for the species is the GenBank assembly GCA_002490395.1. The GC content of the type genome is 47.77 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Dilacaria cuticousia sp. nov.

Candidatus Dilacaria cuticousia (NL. fem. n. *cuticousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp003480725*. The type genome for the species is the GenBank assembly RS_GCF_003478475.1. The GC content of the type genome is 45.22 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Dilacaria detoritoga sp. nov.

Candidatus Dilacaria detoritoga (NL. fem. n. *detoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp003481535*. The type genome for the species is the GenBank assembly GCA_900556125.1. The GC content of the type genome is 46.93 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Dilacaria holisimonas sp. nov.

Candidatus Dilacaria holisimonas (NL. fem. n. *holisimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp001941045*. The type genome for the species is the GenBank assembly GCA_001941045.1. The GC content of the type genome is 52.86 % and the genome length is 3.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Zagget the koala".

Description of *Candidatus* Dilacaria immededo sp. nov.

Candidatus Dilacaria immededo (NL. fem. n. *immededo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp009774135*. The type genome for the species is the GenBank assembly GCA_009774135.1. The GC content of the type genome is 51.95 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Dilacaria lapilousia sp. nov.

Candidatus Dilacaria lapilousia (NL. fem. n. *lapilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7182 sp009774145*. The type genome for the species is the GenBank assembly GCA_009774145.1. The GC content of the type genome is 48.45 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Dilacella expisatio sp. nov.

Candidatus Dilacella expisatio (NL. fem. n. *expisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-68-15 sp001917585*. The type genome for the species is the GenBank assembly GCA_001917585.1. The GC content of the type genome is 68.4 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; pre rain".

Description of *Candidatus* Dilacella gen. nov.

Candidatus Dilacella (NL. fem. n. *Dilacella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-68-15*. The type species for the genus is *Candidatus* Dilacella expisatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Dilacella volunitas sp. nov.

Candidatus Dilacella volunitas (NL. fem. n. *volunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-68-15 sp003220615*. The type genome for the species is the GenBank assembly GCA_001919805.1. The GC content of the type genome is 68.34 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Dilacia colepitia sp. nov.

Candidatus Dilacia colepitia (NL. fem. n. *colepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-34-14 sp001802795*. The type genome for the species is the GenBank assembly GCA_001802205.1. The GC content of the type genome is 35.67 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Dilacia gen. nov.

Candidatus Dilacia (NL. fem. n. *Dilacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-34-14*. The type species for the genus is *Candidatus* Dilacia colepitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilacia effinitica sp. nov.

Candidatus Dilacia effinitica (NL. fem. n. *effinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-34-14 sp001802865*. The type genome for the species is the GenBank assembly GCA_001802865.1. The GC content of the type genome is 33.75 % and the genome length is 2.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Dilacida cohonisca sp. nov.

Candidatus Dilacida cohonisca (NL. fem. n. *cohonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705445 sp002705445*. The type genome for the species is the GenBank assembly GCA_902613735.1. The GC content of the type genome is 30.29 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Dilacida gen. nov.

Candidatus Dilacida (NL. fem. n. *Dilacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2705445*. The type species for the genus is *Candidatus* Dilacida cohonisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002705445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifanaceae.

Description of *Candidatus* Dilacida episcessa sp. nov.

Candidatus Dilacida episcessa (NL. fem. n. *episcessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705445 sp902595225*. The type genome for the species is the GenBank assembly GCA_902595225.1. The GC content of the type genome is 31.48 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Dilacida lavabago sp. nov.

Candidatus Dilacida lavabago (NL. fem. n. *lavabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705445 sp902559815*. The type genome for the species is the GenBank assembly GCA_902559815.1. The GC content of the type genome is 29.59 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Dilacida stercax sp. nov.

Candidatus Dilacida stercax (NL. fem. n. *stercax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2705445 sp902624655*. The type genome for the species is the GenBank assembly GCA_902624655.1. The GC content of the type genome is 31.46 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Dilacosa rubecatica sp. nov.

Candidatus Dilacosa rubecatica (NL. fem. n. *rubecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-39-10b sp001792215*. The type genome for the species is the GenBank assembly GCA_001792215.1. The GC content of the type genome is 37.73 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Dilacosa gen. nov.

Candidatus Dilacosa (NL. fem. n. *Dilacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-39-10b*. The type species for the genus is *Candidatus* Dilacosa rubecatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Dilacula occumedo sp. nov.

Candidatus Dilacula occumedo (NL. fem. n. *occumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7683 sp002482925*. The type genome for the species is the GenBank assembly GCA_002482925.1. The GC content of the type genome is 41.66 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Dilacula gen. nov.

Candidatus Dilacula (NL. fem. n. *Dilacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7683*. The type species for the genus is *Candidatus* Dilacula occumedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7683*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilaculaceae.

Description of *Candidatus* Dilaculaceae fam. nov.

Candidatus Dilaculaceae (NL. fem. n. *Dilaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7683.* The type genus for the taxon is *Candidatus* Dilacula .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Dilecaria delucigena sp. nov.

Candidatus Dilecaria delucigena (NL. fem. n. *delucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-41-16 sp001828645*. The type genome for the species is the GenBank assembly GCA_001828645.1. The GC content of the type genome is 41.1 % and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Dilecaria gen. nov.

Candidatus Dilecaria (NL. fem. n. *Dilecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD2-FULL-41-16*. The type species for the genus is *Candidatus* Dilecaria delucigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilecella ciminatica sp. nov.

Candidatus Dilecella ciminatica (NL. fem. n. *ciminatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OM05-12 sp900760755*. The type genome for the species is the GenBank assembly RS_GCF_900760755.1. The GC content of the type genome is 41.32 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Dilecella gen. nov.

Candidatus Dilecella (NL. fem. n. *Dilecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OM05-12*. The type species for the genus is *Candidatus* Dilecella ciminatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilecella genocilega sp. nov.

Candidatus Dilecella genocilega (NL. fem. n. *genocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OM05-12 sp003438995*. The type genome for the species is the GenBank assembly RS_GCF_003479375.1. The GC content of the type genome is 40.05 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Dilecia videlastra sp. nov.

Candidatus Dilecia videlastra (NL. fem. n. *videlastra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWDD01 sp002070375*. The type genome for the species is the GenBank assembly GCA_002070375.1. The GC content of the type genome is 40.3 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Dilecia gen. nov.

Candidatus Dilecia (NL. fem. n. *Dilecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWDD01*. The type species for the genus is *Candidatus* Dilecia videlastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilecida bipinicula sp. nov.

Candidatus Dilecida bipinicula (NL. fem. n. *bipinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWLR01 sp003558435*. The type genome for the species is the GenBank assembly GCA_003558435.1. The GC content of the type genome is 69.93 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Dilecida gen. nov.

Candidatus Dilecida (NL. fem. n. *Dilecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWLR01*. The type species for the genus is *Candidatus* Dilecida bipinicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilecula lorarigena sp. nov.

Candidatus Dilecula lorarigena (NL. fem. n. *lorarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDDW01 sp013287405*. The type genome for the species is the GenBank assembly GCA_013287405.1. The GC content of the type genome is 43.98 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Dilecula gen. nov.

Candidatus Dilecula (NL. fem. n. *Dilecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDDW01*. The type species for the genus is *Candidatus* Dilecula lorarigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDDW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dileculaceae.

Description of *Candidatus* Dileculaceae fam. nov.

Candidatus Dileculaceae (NL. fem. n. *Dileculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDDW01.* The type genus for the taxon is *Candidatus* Dilecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDDW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dileculales.

Description of *Candidatus* Dileculales ord. nov.

Candidatus Dileculales (NL. fem. n. *Dileculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDDW01.* The type genus for the taxon is *Candidatus* Dilecula .

According to the GTDB R06-RS202, this order belongs to the class *Bdellovibrionia*.

Description of *Candidatus* Dilemana xenopitura sp. nov.

Candidatus Dilemana xenopitura (NL. fem. n. *xenopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BHER01 sp003864555*. The type genome for the species is the GenBank assembly GCA_003864555.1. The GC content of the type genome is 36.22 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Dilemana gen. nov.

Candidatus Dilemana (NL. fem. n. *Dilemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BHER01*. The type species for the genus is *Candidatus* Dilemana xenopitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BHER01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemanaceae.

Description of *Candidatus* Dilemanaceae fam. nov.

Candidatus Dilemanaceae (NL. fem. n. *Dilemanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BHER01.* The type genus for the taxon is *Candidatus* Dilemana .

According to the original version of GTDB R06-RS202, this family belongs to the order *ZOR0006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalulales.

Description of *Candidatus* Dilemaria cerifitia sp. nov.

Candidatus Dilemaria cerifitia (NL. fem. n. *cerifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin34 sp002238555*. The type genome for the species is the GenBank assembly GCA_002238555.1. The GC content of the type genome is 63.15 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Dilemaria gen. nov.

Candidatus Dilemaria (NL. fem. n. *Dilemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Bin34*. The type species for the genus is *Candidatus* Dilemaria cerifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin34*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemariaceae.

Description of *Candidatus* Dilemariaceae fam. nov.

Candidatus Dilemariaceae (NL. fem. n. *Dilemariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin34.* The type genus for the taxon is *Candidatus* Dilemaria .

According to GTDB R06-RS202, this family belongs to the order *Caldilineales*.

Description of *Candidatus* Dilemaria delapousia sp. nov.

Candidatus Dilemaria delapousia (NL. fem. n. *delapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin34 sp009841145*. The type genome for the species is the GenBank assembly GCA_009837875.1. The GC content of the type genome is 61.95 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Dilemaria inlibugo sp. nov.

Candidatus Dilemaria inlibugo (NL. fem. n. *inlibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin34 sp012271135*. The type genome for the species is the GenBank assembly GCA_012271135.1. The GC content of the type genome is 62.38 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Dilemella volucitio sp. nov.

Candidatus Dilemella volucitio (NL. fem. n. *volucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYCZ01 sp903924805*. The type genome for the species is the GenBank assembly GCA_903924805.1. The GC content of the type genome is 48.26 %

and the genome length is 2.99 Mbp.

Description of *Candidatus* Dilemella gen. nov.

Candidatus Dilemella (NL. fem. n. *Dilemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYCZ01*. The type species for the genus is *Candidatus* Dilemella volucitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYCZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemellaceae.

Description of *Candidatus* Dilemellaceae fam. nov.

Candidatus Dilemellaceae (NL. fem. n. *Dilemellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYCZ01.* The type genus for the taxon is *Candidatus* Dilemella .

According to the original version of GTDB R06-RS202, this family belongs to the order *WTBG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depasidales.

Description of *Candidatus* Dilemia absurimonas sp. nov.

Candidatus Dilemia absurimonas (NL. fem. n. *absurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GM7GCV1 sp014323765*. The type genome for the species is the GenBank assembly GCA_014323765.1. The GC content of the type genome is 59.56 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Dilemia gen. nov.

Candidatus Dilemia (NL. fem. n. *Dilemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GM7GCV1*. The type species for the genus is *Candidatus* Dilemia absurimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GM7GCV1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemiaceae.

Description of *Candidatus* Dilemiaceae fam. nov.

Candidatus Dilemiaceae (NL. fem. n. *Dilemiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GM7GCV1.* The type genus for the taxon is *Candidatus* Dilemia .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Dilemosa ininnilenta sp. nov.

Candidatus Dilemosa ininnilenta (NL. fem. n. *ininnilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMXR01 sp004356215*. The type genome for the species is the GenBank assembly GCA_004356215.1. The GC content of the type genome is 51.92 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Dilemosa gen. nov.

Candidatus Dilemosa (NL. fem. n. *Dilemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMXR01*. The type species for the genus is *Candidatus* Dilemosa ininnilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMXR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilemosaceae.

Description of *Candidatus* Dilemosaceae fam. nov.

Candidatus Dilemosaceae (NL. fem. n. *Dilemosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMXR01.* The type genus for the taxon is *Candidatus* Dilemosa .

According to GTDB R06-RS202, this family belongs to the order *Sphingomonadales*.

Description of *Candidatus* Dilemula bicalisca sp. nov.

Candidatus Dilemula bicalisca (NL. fem. n. *bicalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2330 sp002344965*. The type genome for the species is the GenBank assembly GCA_002344965.1. The GC content of the type genome is 35.83 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Dilemula gen. nov.

Candidatus Dilemula (NL. fem. n. *Dilemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2330*. The type species for the genus is *Candidatus* Dilemula bicalisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Dilibana ducilitudo sp. nov.

Candidatus Dilibana ducilitudo (NL. fem. n. *ducilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-78 sp002010665*. The type genome for the species is the GenBank assembly GCA_002010665.1. The GC content of the type genome is 32.6 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Dilibana gen. nov.

Candidatus Dilibana (NL. fem. n. *Dilibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-78*. The type species for the genus is *Candidatus* Dilibana ducilitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilibanaceae.

Description of *Candidatus* Dilibanaceae fam. nov.

Candidatus Dilibanaceae (NL. fem. n. *Dilibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-78.* The type genus for the taxon is *Candidatus* Dilibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilibanales.

Description of *Candidatus* Dilibanales ord. nov.

Candidatus Dilibanales (NL. fem. n. *Dilibanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-78.* The type genus for the taxon is *Candidatus* Dilibana .

According to the GTDB R06-RS202, this order belongs to the class *Aminicenantia*.

Description of *Candidatus* Dilibaria rudicilega sp. nov.

Candidatus Dilibaria rudicilega (NL. fem. n. *rudicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDA01 sp009783675*. The type genome for the species is the GenBank assembly GCA_009783675.1. The GC content of the type genome is 50.57 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Dilibaria gen. nov.

Candidatus Dilibaria (NL. fem. n. *Dilibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDA01*. The type species for the genus is *Candidatus* Dilibaria rudicilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRDA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilibariaceae.

Description of *Candidatus* Dilibariaceae fam. nov.

Candidatus Dilibariaceae (NL. fem. n. *Dilibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRDA01.* The type genus for the taxon is *Candidatus* Dilibaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYKD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dimacariales.

Description of *Candidatus* Dilibella annifibra sp. nov.

Candidatus Dilibella annifibra (NL. fem. n. *annifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBLF01 sp903904545*. The type genome for the species is the GenBank assembly GCA_903904545.1. The GC content of the type genome is 35.55 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Dilibella gen. nov.

Candidatus Dilibella (NL. fem. n. *Dilibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBLF01*. The type species for the genus is *Candidatus* Dilibella annifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Dilibella conigitudo sp. nov.

Candidatus Dilibella conigitudo (NL. fem. n. *conigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBLF01 sp903953935*. The type genome for the species is the GenBank assembly GCA_903837375.1. The GC content of the type genome is 33.21 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Dilibella devecitudo sp. nov.

Candidatus Dilibella devecitudo (NL. fem. n. *devecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBLF01 sp903904875*. The type genome for the species is the GenBank assembly GCA_903835395.1. The GC content of the type genome is 37.51 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Dilibella horomax sp. nov.

Candidatus Dilibella horomax (NL. fem. n. *horomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBLF01 sp903918675*. The type genome for the species is the GenBank assembly GCA_903918675.1. The GC content of the type genome is 38.46 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Dilibia adsibigena sp. nov.

Candidatus Dilibia adsibigena (NL. fem. n. *adsibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp902772705*. The type genome for the species is the GenBank assembly GCA_902772705.1. The GC content of the type genome is 54.74 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Dilibia gen. nov.

Candidatus Dilibia (NL. fem. n. *Dilibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG369*. The type species for the genus is *Candidatus* Dilibia adsibigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilibia bicapilenta sp. nov.

Candidatus Dilibia bicapilenta (NL. fem. n. *bicapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp900318195*. The type genome for the species is the GenBank assembly GCA_900318195.1. The GC content of the type genome is 54.02 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Dilibia bigaritoga sp. nov.

Candidatus Dilibia bigaritoga (NL. fem. n. *bigaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp900317365*. The type genome for the species is the GenBank assembly GCA_902760095.1. The GC content of the type genome is 55.01 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Dilibia malifilega sp. nov.

Candidatus Dilibia malifilega (NL. fem. n. *malifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp902803085*. The type genome for the species is the GenBank assembly GCA_902803085.1. The GC content of the type genome is 55.9 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Dilibia necubitudo sp. nov.

Candidatus Dilibia necubitudo (NL. fem. n. *necubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp902786505*. The type genome for the species is the GenBank assembly GCA_902801085.1. The GC content of the type genome is 55.47 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Dilibia totidibra sp. nov.

Candidatus Dilibia totidibra (NL. fem. n. *totidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG369 sp004556055*. The type genome for the species is the GenBank assembly GCA_004556055.1. The GC content of the type genome is 54.16 %

and the genome length is 2.33 Mbp.

Description of *Candidatus* Dilibida carunentia sp. nov.

Candidatus Dilibida carunentia (NL. fem. n. *carunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-14 sp001767855*. The type genome for the species is the GenBank assembly GCA_001767775.1. The GC content of the type genome is 44.67 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.1 filter".

Description of *Candidatus* Dilibida gen. nov.

Candidatus Dilibida (NL. fem. n. *Dilibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-14*. The type species for the genus is *Candidatus* Dilibida carunentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5542*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favilidaceae.

Description of *Candidatus* Dilibula decitousia sp. nov.

Candidatus Dilibula decitousia (NL. fem. n. *decitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-41-35 sp002791275*. The type genome for the species is the GenBank assembly GCA_002791275.1. The GC content of the type genome is 41.11 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Dilibula gen. nov.

Candidatus Dilibula (NL. fem. n. *Dilibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-41-35*. The type species for the genus is *Candidatus* Dilibula decitousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9934*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivanaceae.

Description of *Candidatus* Dilicana cacalousia sp. nov.

Candidatus Dilicana cacalousia (NL. fem. n. *cacalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLO01 sp007123195*. The type genome for the species is the GenBank assembly GCA_007123195.1. The GC content of the type genome is 67.41 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Dilicana gen. nov.

Candidatus Dilicana (NL. fem. n. *Dilicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLO01*. The type species for the genus is *Candidatus* Dilicana cacalousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKLO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicanaceae.

Description of *Candidatus* Dilicanaceae fam. nov.

Candidatus Dilicanaceae (NL. fem. n. *Dilicanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKLO01*. The type genus for the taxon is *Candidatus* Dilicana .

According to GTDB R06-RS202, this family belongs to the order *Verrucomicrobiales*.

Description of *Candidatus* Dilicella accenivita sp. nov.

Candidatus Dilicella accenivita (NL. fem. n. *accenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224075*. The type genome for the species is the

GenBank assembly GCA_003224075.1. The GC content of the type genome is 58.37 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Dilicella gen. nov.

Candidatus Dilicella (NL. fem. n. *Dilicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7541*. The type species for the genus is *Candidatus* Dilicella accenivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Dilicellaceae fam. nov.

Candidatus Dilicellaceae (NL. fem. n. *Dilicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7541.* The type genus for the taxon is *Candidatus* Dilicella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilicellales.

Description of *Candidatus* Dilicellales ord. nov.

Candidatus Dilicellales (NL. fem. n. *Dilicellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7541.* The type genus for the taxon is *Candidatus* Dilicella .

According to the GTDB R06-RS202, this order belongs to the class *Acidobacteriae*.

Description of *Candidatus* Dilicella adremitas sp. nov.

Candidatus Dilicella adremitas (NL. fem. n. *adremitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp001914785*. The type genome for the species is the GenBank assembly GCA_001914785.1. The GC content of the type genome is 57.08 %

and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 6 days after first rain event (27mm)".

Description of *Candidatus* Dilicella adtemilega sp. nov.

Candidatus Dilicella adtemilega (NL. fem. n. *adtemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224525*. The type genome for the species is the GenBank assembly GCA_003224525.1. The GC content of the type genome is 57.47 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Dilicella antomastra sp. nov.

Candidatus Dilicella antomastra (NL. fem. n. *antomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224105*. The type genome for the species is the GenBank assembly GCA_003224105.1. The GC content of the type genome is 57.28 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Dilicella apsocibra sp. nov.

Candidatus Dilicella apsocibra (NL. fem. n. *apsocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289855*. The type genome for the species is the GenBank assembly GCA_013289855.1. The GC content of the type genome is 57.9 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Dilicella aseptibula sp. nov.

Candidatus Dilicella aseptibula (NL. fem. n. *aseptibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003223245*. The type genome for the species is the GenBank assembly GCA_003223245.1. The GC content of the type genome is 57.51 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Dilicella benepetta sp. nov.

Candidatus Dilicella benepetta (NL. fem. n. *benepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003225295*. The type genome for the species is the GenBank assembly GCA_003225255.1. The GC content of the type genome is 57.61 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Dilicella bifisessa sp. nov.

Candidatus Dilicella bifisessa (NL. fem. n. *bifisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp001917435*. The type genome for the species is the GenBank assembly GCA_003223195.1. The GC content of the type genome is 57.24 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Dilicella cerevigena sp. nov.

Candidatus Dilicella cerevigena (NL. fem. n. *cerevigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289665*. The type genome for the species is the GenBank assembly GCA_013289665.1. The GC content of the type genome is 58.43 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Dilicella detunitoga sp. nov.

Candidatus Dilicella detunitoga (NL. fem. n. *detunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224135*. The type genome for the species is the GenBank assembly GCA_003224135.1. The GC content of the type genome is 56.21 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Dilicella energetta sp. nov.

Candidatus Dilicella energetta (NL. fem. n. *energetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003161195*. The type genome for the species is the GenBank assembly GCA_003161195.1. The GC content of the type genome is 59.95 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Dilicella essonitura sp. nov.

Candidatus Dilicella essonitura (NL. fem. n. *essonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289825*. The type genome for the species is the GenBank assembly GCA_013289825.1. The GC content of the type genome is 58.21 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Dilicella exturugo sp. nov.

Candidatus Dilicella exturugo (NL. fem. n. *exturugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003223295*. The type genome for the species is the GenBank assembly GCA_003223295.1. The GC content of the type genome is 57.14 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Dilicella filifilenta sp. nov.

Candidatus Dilicella filifilenta (NL. fem. n. *filifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003223215*. The type genome for the species is the GenBank assembly GCA_003223215.1. The GC content of the type genome is 57.75 % and the genome length is 8.8 Mbp.

Description of *Candidatus* Dilicella gabinitas sp. nov.

Candidatus Dilicella gabinitas (NL. fem. n. *gabinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7541 sp003154775*. The type genome for the species is the GenBank assembly GCA_003142415.1. The GC content of the type genome is 58.46 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Dilicella inconicella sp. nov.

Candidatus Dilicella inconicella (NL. fem. n. *inconicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224055*. The type genome for the species is the GenBank assembly GCA_003224055.1. The GC content of the type genome is 58.02 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Dilicella infelax sp. nov.

Candidatus Dilicella infelax (NL. fem. n. *infelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224145*. The type genome for the species is the GenBank assembly GCA_003224145.1. The GC content of the type genome is 57.67 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Dilicella insalitrix sp. nov.

Candidatus Dilicella insalitrix (NL. fem. n. *insalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003225315*. The type genome for the species is the GenBank assembly GCA_003225315.1. The GC content of the type genome is 57.07 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Dilicella mahelicella sp. nov.

Candidatus Dilicella mahelicella (NL. fem. n. *mahelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003223255*. The type genome for the species is the GenBank assembly GCA_003223255.1. The GC content of the type genome is 57.45 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Dilicella nocenimonas sp. nov.

Candidatus Dilicella nocenimonas (NL. fem. n. *nocenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp003224085*. The type genome for the species is the GenBank assembly GCA_003224085.1. The GC content of the type genome is 57.44 % and the genome length is 6.8 Mbp.

Description of *Candidatus* Dilicella obfenugo sp. nov.

Candidatus Dilicella obfenugo (NL. fem. n. *obfenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289585*. The type genome for the species is the GenBank assembly GCA_013289585.1. The GC content of the type genome is 57.54 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Dilicella omnipibula sp. nov.

Candidatus Dilicella omnipibula (NL. fem. n. *omnipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp002478115*. The type genome for the species is the GenBank assembly GCA_002478115.1. The GC content of the type genome is 57.99 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Dilicella oratricella sp. nov.

Candidatus Dilicella oratricella (NL. fem. n. *oratricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp001919715*. The type genome for the species is the GenBank assembly GCA_001919715.1. The GC content of the type genome is 57.92 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; pre rain".

Description of *Candidatus* Dilicella redunigena sp. nov.

Candidatus Dilicella redunigena (NL. fem. n. *redunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289835*. The type genome for the species is the GenBank assembly GCA_013289835.1. The GC content of the type genome is 57.91 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Dilicella tibicitoga sp. nov.

Candidatus Dilicella tibicitoga (NL. fem. n. *tibicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp903970165*. The type genome for the species is the GenBank assembly GCA_903970165.1. The GC content of the type genome is 56.96 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Dilicella vitigugo sp. nov.

Candidatus Dilicella vitigugo (NL. fem. n. *vitigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7541 sp013289955*. The type genome for the species is the GenBank assembly GCA_013289955.1. The GC content of the type genome is 57.99 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Dilicia fusifedo sp. nov.

Candidatus Dilicia fusifedo (NL. fem. n. *fusifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYX01 sp903930535*. The type genome for the species is the GenBank assembly GCA_903930535.1. The GC content of the type genome is 60.47 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Dilicia gen. nov.

Candidatus Dilicia (NL. fem. n. *Dilicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYYX01*. The type species for the genus is *Candidatus* Dilicia fusifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilicia senacousia sp. nov.

Candidatus Dilicia senacousia (NL. fem. n. *senacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYX01 sp903832735*. The type genome for the species is the GenBank assembly GCA_903841365.1. The GC content of the type genome is 61.94 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Dilicia subofessa sp. nov.

Candidatus Dilicia subofessa (NL. fem. n. *subofessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYX01 sp903904605*. The type genome for the species is the GenBank assembly GCA_903904605.1. The GC content of the type genome is 63.38 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Dilicida calipicula sp. nov.

Candidatus Dilicida calipicula (NL. fem. n. *calipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAA01 sp003564775*. The type genome for the species is the GenBank assembly GCA_003564775.1. The GC content of the type genome is 55.03 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Dilicida gen. nov.

Candidatus Dilicida (NL. fem. n. *Dilicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAA01*. The type species for the genus is *Candidatus* Dilicida calipicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicidaceae.

Description of *Candidatus* Dilicidaceae fam. nov.

Candidatus Dilicidaceae (NL. fem. n. *Dilicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLAA01.* The type genus for the taxon is *Candidatus* Dilicida .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_C*.

Description of *Candidatus* Dilicida epogdessa sp. nov.

Candidatus Dilicida epogdessa (NL. fem. n. *epogdessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAA01 sp007695055*. The type genome for the species is the GenBank assembly GCA_007695055.1. The GC content of the type genome is 54.79 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Dilicida humecimonas sp. nov.

Candidatus Dilicida humecimonas (NL. fem. n. *humecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAA01 sp007127105*. The type genome for the species is the GenBank assembly GCA_007127105.1. The GC content of the type genome is 55.37 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Dilicosa daducivita sp. nov.

Candidatus Dilicosa daducivita (NL. fem. n. *daducivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12037 sp003245635*. The type genome for the species is the GenBank assembly GCA_003245635.1. The GC content of the type genome is 62.94 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Dilicosa gen. nov.

Candidatus Dilicosa (NL. fem. n. *Dilicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12037*. The type species for the genus is *Candidatus* Dilicosa daducivita .

According to GTDB R06-RS202, this genus belongs to the family _B.

Description of *Candidatus* Dilicosa rurigitio sp. nov.

Candidatus Dilicosa rurigitio (NL. fem. n. *rurigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12037 sp003527485*. The type genome for the species is the GenBank assembly GCA_001831045.1. The GC content of the type genome is 61.24 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.1 filter".

Description of *Candidatus* Dilicula nucifitura sp. nov.

Candidatus Dilicula nucifitura (NL. fem. n. *nucifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-0-20-35-9 sp004376325*. The type genome for the species is the GenBank assembly GCA_009619015.1. The GC content of the type genome is 34.39 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Dilicula gen. nov.

Candidatus Dilicula (NL. fem. n. *Dilicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20-14-0-20-35-9*. The type species for the genus is *Candidatus* Dilicula nucifitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefulaceae.

Description of *Candidatus* Dilicula reduvibula sp. nov.

Candidatus Dilicula reduvibula (NL. fem. n. *reduvibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-0-20-35-9 sp013202875*. The type genome for the species is the GenBank assembly GCA_013202875.1. The GC content of the type genome is 34.09 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Dilicula salubax sp. nov.

Candidatus Dilicula salubax (NL. fem. n. *salubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-0-20-35-9 sp002779205*. The type genome for the species is the GenBank assembly GCA_002779205.1. The GC content of the type genome is 35.1 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Dilogana decenetta sp. nov.

Candidatus Dilogana decenetta (NL. fem. n. *decenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHXW01 sp009693115*. The type genome for the species is the GenBank assembly GCA_009693115.1. The GC content of the type genome is 62.13 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dilogana gen. nov.

Candidatus Dilogana (NL. fem. n. *Dilogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHXW01*. The type species for the genus is *Candidatus* Dilogana decenetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHXW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diloganaceae.

Description of *Candidatus* Diloganaceae fam. nov.

Candidatus Diloganaceae (NL. fem. n. *Diloganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHXW01*. The type genus for the taxon is *Candidatus* Dilogana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Carucellales.

Description of *Candidatus* Dilogaria subinitrix sp. nov.

Candidatus Dilogaria subinitrix (NL. fem. n. *subinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862715 sp002862715*. The type genome for the species is the GenBank assembly GCA_902576535.1. The GC content of the type genome is 30.87 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Dilogaria gen. nov.

Candidatus Dilogaria (NL. fem. n. *Dilogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2862715*. The type species for the genus is *Candidatus* Dilogaria subinitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dilogella bicubibra sp. nov.

Candidatus Dilogella bicubibra (NL. fem. n. *bicubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRME01 sp011375175*. The type genome for the species is the GenBank assembly GCA_011375175.1. The GC content of the type genome is 64.47 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Dilogella gen. nov.

Candidatus Dilogella (NL. fem. n. *Dilogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRME01*. The type species for the genus is *Candidatus* Dilogella bicubibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRME01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogellaceae.

Description of *Candidatus* Dilogellaceae fam. nov.

Candidatus Dilogellaceae (NL. fem. n. *Dilogellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRME01.* The type genus for the taxon is *Candidatus* Dilogella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Dilogida advinifica sp. nov.

Candidatus Dilogida advinifica (NL. fem. n. *advinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXV01 sp013696835*. The type genome for the species is the GenBank assembly GCA_013696835.1. The GC content of the type genome is 69.84 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Dilogida gen. nov.

Candidatus Dilogida (NL. fem. n. *Dilogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXV01*. The type species for the genus is *Candidatus* Dilogida advinifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogidaceae.

Description of *Candidatus* Dilogidaceae fam. nov.

Candidatus Dilogidaceae (NL. fem. n. *Dilogidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCXV01.* The type genus for the taxon is *Candidatus* Dilogida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACCXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilogidales.

Description of *Candidatus* Dilogidales ord. nov.

Candidatus Dilogidales (NL. fem. n. *Dilogidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCXV01.* The type genus for the taxon is *Candidatus* Dilogida .

According to the GTDB R06-RS202, this order belongs to the class *Gemmatimonadetes*.

Description of *Candidatus* Dilogosa minuribula sp. nov.

Candidatus Dilogosa minuribula (NL. fem. n. *minuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9629 sp001818235*. The type genome for the species is the GenBank assembly GCA_001818185.1. The GC content of the type genome is 43.27 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Dilogosa gen. nov.

Candidatus Dilogosa (NL. fem. n. *Dilogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9629*. The type species for the genus is *Candidatus* Dilogosa minuribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogosaceae.

Description of *Candidatus* Dilogosaceae fam. nov.

Candidatus Dilogosaceae (NL. fem. n. *Dilogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9629.* The type genus for the taxon is *Candidatus* Dilogosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilogosales.

Description of *Candidatus* Dilogosales ord. nov.

Candidatus Dilogosales (NL. fem. n. *Dilogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9629.* The type genus for the taxon is *Candidatus* Dilogosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Dilogula bicubicula sp. nov.

Candidatus Dilogula bicubicula (NL. fem. n. *bicubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin125 sp009838735*. The type genome for the species is the GenBank assembly GCA_009835345.1. The GC content of the type genome is 64.2 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Dilogula gen. nov.

Candidatus Dilogula (NL. fem. n. *Dilogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin125*. The type species for the genus is *Candidatus* Dilogula bicubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin125*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilogulaceae.

Description of *Candidatus* Dilogulaceae fam. nov.

Candidatus Dilogulaceae (NL. fem. n. *Dilogulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin125.* The type genus for the taxon is *Candidatus* Dilogula .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin125*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dilogulales.

Description of *Candidatus* Dilogulales ord. nov.

Candidatus Dilogulales (NL. fem. n. *Dilogulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin125.* The type genus for the taxon is *Candidatus* Dilogula .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Dilogula calipitia sp. nov.

Candidatus Dilogula calipitia (NL. fem. n. *calipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin125 sp007571275*. The type genome for the species is the GenBank assembly GCA_007571275.1. The GC content of the type genome is 63.14 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Dilogula desepicula sp. nov.

Candidatus Dilogula desepicula (NL. fem. n. *desepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin125 sp009838915*. The type genome for the species is the GenBank assembly GCA_009842405.1. The GC content of the type genome is 65.37 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Dilogula favilivita sp. nov.

Candidatus Dilogula favilivita (NL. fem. n. *favilivita* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin125 sp002239025*. The type genome for the species is the GenBank assembly GCA_002239025.1. The GC content of the type genome is 62.27 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Diludana carecimonia sp. nov.

Candidatus Diludana carecimonia (NL. fem. n. *carecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-41 sp001303585*. The type genome for the species is the GenBank assembly GCA_001303585.1. The GC content of the type genome is 62.91 % and the genome length is 3.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Diludana gen. nov.

Candidatus Diludana (NL. fem. n. *Diludana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-41*. The type species for the genus is *Candidatus* Diludana carecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Diludanaceae fam. nov.

Candidatus Diludanaceae (NL. fem. n. *Diludanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-41*. The type genus for the taxon is *Candidatus* Diludana .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Diludana inlapicula sp. nov.

Candidatus Diludana inlapicula (NL. fem. n. *inlapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-41 sp011330925*. The type genome for the species is the GenBank assembly GCA_011330925.1. The GC content of the type genome is 67.35 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Diludana smegmicella sp. nov.

Candidatus Diludana smegmicella (NL. fem. n. *smegmicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-41 sp001771935*. The type genome for the species is the GenBank assembly GCA_001771935.1. The GC content of the type genome is 66.61 % and the genome length is 3.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Diludaria cosidousia sp. nov.

Candidatus Diludaria cosidousia (NL. fem. n. *cosidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-49-12 sp001796315*. The type genome for the species is the GenBank assembly GCA_001796065.1. The GC content of the type genome is 49.34 % and the genome length is 1.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Diludaria gen. nov.

Candidatus Diludaria (NL. fem. n. *Diludaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-49-12*. The type species for the genus is *Candidatus* Diludaria cosidousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diludella paracibula sp. nov.

Candidatus Diludella paracibula (NL. fem. n. *paracibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZJ304 sp011039075*. The type genome for the species is the GenBank assembly RS_GCF_011039055.1. The GC content of the type genome is 46.55 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Diludella gen. nov.

Candidatus Diludella (NL. fem. n. *Diludella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZJ304*. The type species for the genus is *Candidatus* Diludella paracibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diludida edissilenta sp. nov.

Candidatus Diludida edissilenta (NL. fem. n. *edissilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYP01 sp009781185*. The type genome for the species is the GenBank assembly GCA_009781185.1. The GC content of the type genome is 56.95 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Diludida gen. nov.

Candidatus Diludida (NL. fem. n. *Diludida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQYP01*. The type species for the genus is *Candidatus* Diludida edissilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludidaceae.

Description of *Candidatus* Diludidaceae fam. nov.

Candidatus Diludidaceae (NL. fem. n. *Diludidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WQYP01*. The type genus for the taxon is *Candidatus* Diludida .

According to the original version of GTDB R06-RS202, this family belongs to the order *WQYP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Diludidales.

Description of *Candidatus* Diludidales ord. nov.

Candidatus Diludidales (NL. fem. n. *Diludidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WQYP01*. The type genus for the taxon is *Candidatus* Diludida .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Diludida repepigena sp. nov.

Candidatus Diludida repepigena (NL. fem. n. *repepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQYP01 sp903868035*. The type genome for the species is the GenBank assembly GCA_903868035.1. The GC content of the type genome is 62.89 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Diludosa repuritio sp. nov.

Candidatus Diludosa repuritio (NL. fem. n. *repuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-45-44 sp001824555*. The type genome for the species is the GenBank assembly GCA_001824555.1. The GC content of the type genome is 44.92 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Diludosa gen. nov.

Candidatus Diludosa (NL. fem. n. *Diludosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-45-44*. The type species for the genus is *Candidatus* Diludosa repuritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12454*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucellaceae.

Description of *Candidatus* Diludula recomifica sp. nov.

Candidatus Diludula recomifica (NL. fem. n. *recomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVWW01 sp011773795*. The type genome for the species is the GenBank assembly GCA_011771415.1. The GC content of the type genome is 66.49 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Diludula gen. nov.

Candidatus Diludula (NL. fem. n. *Diludula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVWW01*. The type species for the genus is *Candidatus* Diludula recomifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ceracosaceae.

Description of *Candidatus* Diluvana alticitura sp. nov.

Candidatus Diluvana alticitura (NL. fem. n. *alticitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903859795*. The type genome for the species is the GenBank assembly GCA_903859795.1. The GC content of the type genome is 40.61 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Diluvana gen. nov.

Candidatus Diluvana (NL. fem. n. *Diluvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFHB01*. The type species for the genus is *Candidatus* Diluvana alticitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diluvana argitifica sp. nov.

Candidatus Diluvana argitifica (NL. fem. n. *argitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903927965*. The type genome for the species is the GenBank assembly GCA_903927965.1. The GC content of the type genome is 41.19 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Diluvana artocago sp. nov.

Candidatus Diluvana artocago (NL. fem. n. *artocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903904515*. The type genome for the species is the GenBank assembly GCA_903904515.1. The GC content of the type genome is 41.87 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Diluvana capabigena sp. nov.

Candidatus Diluvana capabigena (NL. fem. n. *capabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903897145*. The type genome for the species is the GenBank assembly GCA_903918685.1. The GC content of the type genome is 39.77 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Diluvana detepugo sp. nov.

Candidatus Diluvana detepugo (NL. fem. n. *detepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAFHB01 sp903923905*. The type genome for the species is the GenBank assembly GCA_903913395.1. The GC content of the type genome is 41.2 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Diluvana obvalibra sp. nov.

Candidatus Diluvana obvalibra (NL. fem. n. *obvalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903918045*. The type genome for the species is the GenBank assembly GCA_903918045.1. The GC content of the type genome is 41.16 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Diluvana pavimitudo sp. nov.

Candidatus Diluvana pavimitudo (NL. fem. n. *pavimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903907075*. The type genome for the species is the GenBank assembly GCA_903907075.1. The GC content of the type genome is 39.89 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Diluvana repecousia sp. nov.

Candidatus Diluvana repecousia (NL. fem. n. *repecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903850335*. The type genome for the species is the GenBank assembly GCA_903850335.1. The GC content of the type genome is 39.76 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Diluvana sicaritrix sp. nov.

Candidatus Diluvana sicaritrix (NL. fem. n. *sicaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903905505*. The type genome for the species is the GenBank assembly GCA_903945255.1. The GC content of the type genome is 40.28 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Diluvana tibiciforma sp. nov.

Candidatus Diluvana tibiciforma (NL. fem. n. *tibiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp903834845*. The type genome for the species is the GenBank assembly GCA_903880335.1. The GC content of the type genome is 37.85 % and the genome length is 7.99 Mbp.

Description of *Candidatus* Diluvana vivifousia sp. nov.

Candidatus Diluvana vivifousia (NL. fem. n. *vivifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFHB01 sp010906965*. The type genome for the species is the GenBank assembly GCA_010906965.1. The GC content of the type genome is 40.24 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Diluvaria assubigena sp. nov.

Candidatus Diluvaria assubigena (NL. fem. n. *assubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900759825*. The type genome for the species is the GenBank assembly GCA_900759825.1. The GC content of the type genome is 60.09 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Diluvaria gen. nov.

Candidatus Diluvaria (NL. fem. n. *Diluvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-873*. The type species for the genus is *Candidatus* Diluvaria assubigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diluvaria binocibra sp. nov.

Candidatus Diluvaria binocibra (NL. fem. n. *binocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900550395*. The type genome for the species is the GenBank assembly GCA_900550395.1. The GC content of the type genome is 57.2 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Diluvaria bonifivita sp. nov.

Candidatus Diluvaria bonifivita (NL. fem. n. *bonifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp002490635*. The type genome for the species is the GenBank assembly GCA_002361255.1. The GC content of the type genome is 55.74 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Diluvaria cepurifica sp. nov.

Candidatus Diluvaria cepurifica (NL. fem. n. *cepurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900755985*. The type genome for the species is the GenBank assembly RS_GCF_900755985.1. The GC content of the type genome is 51.75 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Diluvaria ciminifica sp. nov.

Candidatus Diluvaria ciminifica (NL. fem. n. *ciminifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900548975*. The type genome for the species is the GenBank assembly RS_GCF_900753465.1. The GC content of the type genome is 53.98 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Diluvaria cocolugo sp. nov.

Candidatus Diluvaria cocolugo (NL. fem. n. *cocolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-873 sp900759845*. The type genome for the species is the GenBank assembly GCA_900759845.1. The GC content of the type genome is 52.94 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Diluvaria cohoriforma sp. nov.

Candidatus Diluvaria cohoriforma (NL. fem. n. *cohoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp001701165*. The type genome for the species is the GenBank assembly GCA_004553385.1. The GC content of the type genome is 52.41 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Diluvaria defunigena sp. nov.

Candidatus Diluvaria defunigena (NL. fem. n. *defunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775535*. The type genome for the species is the GenBank assembly GCA_009775535.1. The GC content of the type genome is 48.84 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Diluvaria denixitia sp. nov.

Candidatus Diluvaria denixitia (NL. fem. n. *denixitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775275*. The type genome for the species is the GenBank assembly GCA_013316725.1. The GC content of the type genome is 53.89 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Diluvaria dimidivita sp. nov.

Candidatus Diluvaria dimidivita (NL. fem. n. *dimidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp011959565*. The type genome for the species is the GenBank assembly RS_GCF_011959565.1. The GC content of the type genome is 52.14 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Diluvaria furibigena sp. nov.

Candidatus Diluvaria furibigena (NL. fem. n. *furibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775195*. The type genome for the species is the GenBank assembly GCA_009775195.1. The GC content of the type genome is 53.4 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Diluvaria gabinilenta sp. nov.

Candidatus Diluvaria gabinilenta (NL. fem. n. *gabinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900554265*. The type genome for the species is the GenBank assembly GCA_900554265.1. The GC content of the type genome is 59.31 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Diluvaria hemitentia sp. nov.

Candidatus Diluvaria hemitentia (NL. fem. n. *hemitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp001689665*. The type genome for the species is the GenBank assembly GCA_009775125.1. The GC content of the type genome is 53.27 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Diluvaria inlecitica sp. nov.

Candidatus Diluvaria inlecitica (NL. fem. n. *inlecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp001689415*. The type genome for the species is the GenBank assembly GCA_001689415.1. The GC content of the type genome is 49.19 % and the genome length is 3.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Diluvaria navifatica sp. nov.

Candidatus Diluvaria navifatica (NL. fem. n. *navifatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900555715*. The type genome for the species is the GenBank assembly GCA_900555715.1. The GC content of the type genome is 52.38 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Diluvaria nugivitudo sp. nov.

Candidatus Diluvaria nugivitudo (NL. fem. n. *nugivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp002493945*. The type genome for the species is the GenBank assembly GCA_002491835.1. The GC content of the type genome is 58.03 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Diluvaria onocritas sp. nov.

Candidatus Diluvaria onocritas (NL. fem. n. *onocritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900541865*. The type genome for the species is the GenBank assembly GCA_900541865.1. The GC content of the type genome is 57.93 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Diluvaria palifilenta sp. nov.

Candidatus Diluvaria palifilenta (NL. fem. n. *palifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp004552485*. The type genome for the species is the GenBank assembly GCA_004562995.1. The GC content of the type genome is 59.58 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Diluvaria peraditas sp. nov.

Candidatus Diluvaria peraditas (NL. fem. n. *peraditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp002478045*. The type genome for the species is the GenBank assembly GCA_002297345.1. The GC content of the type genome is 52.18 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Diluvaria pomifatio sp. nov.

Candidatus Diluvaria pomifatio (NL. fem. n. *pomifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp004553485*. The type genome for the species is the GenBank assembly GCA_004561505.1. The GC content of the type genome is 59.17 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Diluvaria rarefilenta sp. nov.

Candidatus Diluvaria rarefilenta (NL. fem. n. *rarefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp003979155*. The type genome for the species is the GenBank assembly GCA_013316815.1. The GC content of the type genome is 51.5 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Diluvaria rurigisca sp. nov.

Candidatus Diluvaria rurigisca (NL. fem. n. *rurigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp002633115*. The type genome for the species is the GenBank assembly GCA_001689645.1. The GC content of the type genome is 51.41 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Diluvaria satacatica sp. nov.

Candidatus Diluvaria satacatica (NL. fem. n. *satacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp002491245*. The type genome for the species is the GenBank assembly GCA_002361195.1. The GC content of the type genome is 52.11 %

and the genome length is 2.0 Mbp.

Description of *Candidatus* Diluvaria seposibula sp. nov.

Candidatus Diluvaria seposibula (NL. fem. n. *seposibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900540625*. The type genome for the species is the GenBank assembly RS_GCF_900771835.1. The GC content of the type genome is 52.46 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Diluvaria sepositoga sp. nov.

Candidatus Diluvaria sepositoga (NL. fem. n. *sepositoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775225*. The type genome for the species is the GenBank assembly GCA_009775225.1. The GC content of the type genome is 54.5 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Diluvaria tibicimonas sp. nov.

Candidatus Diluvaria tibicimonas (NL. fem. n. *tibicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775135*. The type genome for the species is the GenBank assembly GCA_009775135.1. The GC content of the type genome is 52.17 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Diluvaria turifitas sp. nov.

Candidatus Diluvaria turifitas (NL. fem. n. *turifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp900554715*. The type genome for the species is the GenBank assembly GCA_900554715.1. The GC content of the type genome is 54.14 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Diluvaria vavasifica sp. nov.

Candidatus Diluvaria vavasifica (NL. fem. n. *vavasifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp004552725*. The type genome for the species is the GenBank assembly GCA_004552725.1. The GC content of the type genome is 52.07 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Diluvaria vitabedo sp. nov.

Candidatus Diluvaria vitabedo (NL. fem. n. *vitabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp009775265*. The type genome for the species is the GenBank assembly GCA_009775265.1. The GC content of the type genome is 54.62 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Diluvaria vitupitoga sp. nov.

Candidatus Diluvaria vitupitoga (NL. fem. n. *vitupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-873 sp004554255*. The type genome for the species is the GenBank assembly GCA_004554255.1. The GC content of the type genome is 53.75 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Diluvella detesitia sp. nov.

Candidatus Diluvella detesitia (NL. fem. n. *detesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG756 sp902803675*. The type genome for the species is the GenBank assembly GCA_902782865.1. The GC content of the type genome is 61.3 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Diluvella gen. nov.

Candidatus Diluvella (NL. fem. n. *Diluvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG756*. The type species for the genus is *Candidatus* Diluvella detesitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Diluvella inregatica sp. nov.

Candidatus Diluvella inregatica (NL. fem. n. *inregatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG756 sp902796115*. The type genome for the species is the GenBank assembly GCA_902796115.1. The GC content of the type genome is 58.15 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Diluvella subodimonia sp. nov.

Candidatus Diluvella subodimonia (NL. fem. n. *subodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG756 sp900322115*. The type genome for the species is the GenBank assembly GCA_900322115.1. The GC content of the type genome is 59.62 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Diluvida ludimibra sp. nov.

Candidatus Diluvida ludimibra (NL. fem. n. *ludimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J042 sp003696445*. The type genome for the species is the GenBank assembly GCA_003696445.1. The GC content of the type genome is 56.03 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Diluvida gen. nov.

Candidatus Diluvida (NL. fem. n. *Diluvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *J042*. The type species for the genus is *Candidatus* Diluvida ludimibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diluvidaceae.

Description of *Candidatus* Diluvidaceae fam. nov.

Candidatus Diluvidaceae (NL. fem. n. *Diluvidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J042.* The type genus for the taxon is *Candidatus* Diluvida .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-13-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demogiales.

Description of *Candidatus* Diluvosa coticimonia sp. nov.

Candidatus Diluvosa coticimonia (NL. fem. n. *coticimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3442 sp002378565*. The type genome for the species is the GenBank assembly GCA_009936935.1. The GC content of the type genome is 49.55 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Diluvosa gen. nov.

Candidatus Diluvosa (NL. fem. n. *Diluvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3442*. The type species for the genus is *Candidatus* Diluvosa coticimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diluvula caravugo sp. nov.

Candidatus Diluvula caravugo (NL. fem. n. *caravugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *TMED126 sp002701605*. The type genome for the species is the GenBank assembly GCA_002172385.3. The GC content of the type genome is 30.43 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Diluvula gen. nov.

Candidatus Diluvula (NL. fem. n. *Diluvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED126*. The type species for the genus is *Candidatus* Diluvula caravugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Dimacana lanugigena sp. nov.

Candidatus Dimacana lanugigena (NL. fem. n. *lanugigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9673 sp003530255*. The type genome for the species is the GenBank assembly GCA_003530255.1. The GC content of the type genome is 68.97 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Dimacana gen. nov.

Candidatus Dimacana (NL. fem. n. *Dimacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9673*. The type species for the genus is *Candidatus* Dimacana lanugigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9673*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacanaceae.

Description of *Candidatus* Dimacanaceae fam. nov.

Candidatus Dimacanaceae (NL. fem. n. *Dimacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA9673*. The type genus for the taxon is *Candidatus* Dimacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9673*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dimacanales.

Description of *Candidatus* Dimacanales ord. nov.

Candidatus Dimacanales (NL. fem. n. *Dimacanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9673*. The type genus for the taxon is *Candidatus* Dimacana .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Dimacana loraritia sp. nov.

Candidatus Dimacana loraritia (NL. fem. n. *loraritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9673 sp003541445*. The type genome for the species is the GenBank assembly GCA_003541445.1. The GC content of the type genome is 68.9 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Dimacaria rubecicula sp. nov.

Candidatus Dimacaria rubecicula (NL. fem. n. *rubecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYKD01 sp012522585*. The type genome for the species is the GenBank assembly GCA_012522585.1. The GC content of the type genome is 42.17 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Dimacaria gen. nov.

Candidatus Dimacaria (NL. fem. n. *Dimacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYKD01*. The type species for the genus is *Candidatus* Dimacaria

rubecicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYKD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacariaceae.

Description of *Candidatus* Dimacariaceae fam. nov.

Candidatus Dimacariaceae (NL. fem. n. *Dimacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYKD01.* The type genus for the taxon is *Candidatus* Dimacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYKD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dimacariales.

Description of *Candidatus* Dimacariales ord. nov.

Candidatus Dimacariales (NL. fem. n. *Dimacariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYKD01.* The type genus for the taxon is *Candidatus* Dimacaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Dehonellae.

Description of *Candidatus* Dimacella cuticibula sp. nov.

Candidatus Dimacella cuticibula (NL. fem. n. *cuticibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-38 sp003599335*. The type genome for the species is the GenBank assembly GCA_003599335.1. The GC content of the type genome is 40.84 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Dimacella gen. nov.

Candidatus Dimacella (NL. fem. n. *Dimacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SURF-38*. The type species for the genus is *Candidatus* Dimacella cuticibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacellaceae.

Description of *Candidatus* Dimacellaceae fam. nov.

Candidatus Dimacellaceae (NL. fem. n. *Dimacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-38.* The type genus for the taxon is *Candidatus* Dimacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dimacellales.

Description of *Candidatus* Dimacellales ord. nov.

Candidatus Dimacellales (NL. fem. n. *Dimacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-38.* The type genus for the taxon is *Candidatus* Dimacella .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Dimacia insibatica sp. nov.

Candidatus Dimacia insibatica (NL. fem. n. *insibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWB01 sp011368175*. The type genome for the species is the GenBank assembly GCA_011368175.1. The GC content of the type genome is 61.27 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Dimacia gen. nov.

Candidatus Dimacia (NL. fem. n. *Dimacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWB01*. The type species for the genus is *Candidatus* Dimacia

insibatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSWB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimaciaceae.

Description of *Candidatus* Dimaciaceae fam. nov.

Candidatus Dimaciaceae (NL. fem. n. *Dimaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWB01*. The type genus for the taxon is *Candidatus* Dimacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6099*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hirudulales.

Description of *Candidatus* Dimacida estovago sp. nov.

Candidatus Dimacida estovago (NL. fem. n. *estovago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2711565 sp002711565*. The type genome for the species is the GenBank assembly GCA_002711565.1. The GC content of the type genome is 36.02 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Dimacida gen. nov.

Candidatus Dimacida (NL. fem. n. *Dimacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2711565*. The type species for the genus is *Candidatus* Dimacida estovago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2711565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacidaceae.

Description of *Candidatus* Dimacidaceae fam. nov.

Candidatus Dimacidaceae (NL. fem. n. *Dimacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2711565.* The type genus for the taxon is *Candidatus* Dimacida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Dimacosa lanigago sp. nov.

Candidatus Dimacosa lanigago (NL. fem. n. *lanigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKOZ01 sp007119795*. The type genome for the species is the GenBank assembly GCA_007126245.1. The GC content of the type genome is 68.22 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Dimacosa gen. nov.

Candidatus Dimacosa (NL. fem. n. *Dimacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKOZ01*. The type species for the genus is *Candidatus* Dimacosa lanigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficariaceae.

Description of *Candidatus* Dimacula advinentia sp. nov.

Candidatus Dimacula advinentia (NL. fem. n. *advinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-72 sp005883405*. The type genome for the species is the GenBank assembly GCA_005883405.1. The GC content of the type genome is 66.1 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Dimacula gen. nov.

Candidatus Dimacula (NL. fem. n. *Dimacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-72*. The type species for the genus is *Candidatus* Dimacula

advinentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimaculaceae.

Description of *Candidatus* Dimaculaceae fam. nov.

Candidatus Dimaculaceae (NL. fem. n. *Dimaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CF-72*. The type genus for the taxon is *Candidatus* Dimacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Doxolariales.

Description of *Candidatus* Dimadana remulentia sp. nov.

Candidatus Dimadana remulentia (NL. fem. n. *remulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-917 sp000437555*. The type genome for the species is the GenBank assembly GCA_900551475.1. The GC content of the type genome is 42.38 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Dimadana gen. nov.

Candidatus Dimadana (NL. fem. n. *Dimadana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-917*. The type species for the genus is *Candidatus* Dimadana remulentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Dimadanaceae fam. nov.

Candidatus Dimadanaceae (NL. fem. n. *Dimadanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-917.* The type genus for the taxon is *Candidatus* Dimadana .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Dimadaria exorciforma sp. nov.

Candidatus Dimadaria exorciforma (NL. fem. n. *exorciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNBC01 sp003641665*. The type genome for the species is the GenBank assembly GCA_003641665.1. The GC content of the type genome is 36.33 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Dimadaria gen. nov.

Candidatus Dimadaria (NL. fem. n. *Dimadaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNBC01*. The type species for the genus is *Candidatus* Dimadaria exorciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNBC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadariaceae.

Description of *Candidatus* Dimadariaceae fam. nov.

Candidatus Dimadariaceae (NL. fem. n. *Dimadariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNBC01.* The type genus for the taxon is *Candidatus* Dimadaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNBC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dimadariales.

Description of *Candidatus* Dimadariales ord. nov.

Candidatus Dimadariales (NL. fem. n. *Dimadariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *QNBC01*. The type genus for the taxon is *Candidatus* Dimadaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *32-111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Gasifiae.

Description of *Candidatus* Dimadaria sitelitas sp. nov.

Candidatus Dimadaria sitelitas (NL. fem. n. *sitelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNBC01 sp011682715*. The type genome for the species is the GenBank assembly GCA_011682715.1. The GC content of the type genome is 37.54 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Dimadella bicubimonas sp. nov.

Candidatus Dimadella bicubimonas (NL. fem. n. *bicubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN24 sp011380505*. The type genome for the species is the GenBank assembly GCA_011055145.1. The GC content of the type genome is 68.57 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Dimadella gen. nov.

Candidatus Dimadella (NL. fem. n. *Dimadella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN24*. The type species for the genus is *Candidatus* Dimadella bicubimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRbin24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadellaceae.

Description of *Candidatus* Dimadellaceae fam. nov.

Candidatus Dimadellaceae (NL. fem. n. *Dimadellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *HRbin24*. The type genus for the taxon is *Candidatus* Dimadella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-28-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Hecatosales.

Description of *Candidatus* Dimadella lupanedo sp. nov.

Candidatus Dimadella lupanedo (NL. fem. n. *lupanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN24 sp002898715*. The type genome for the species is the GenBank assembly GCA_002898715.1. The GC content of the type genome is 69.26 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Dimadella manubilega sp. nov.

Candidatus Dimadella manubilega (NL. fem. n. *manubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN24 sp011047455*. The type genome for the species is the GenBank assembly GCA_011047455.1. The GC content of the type genome is 70.85 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Dimadia lapiligena sp. nov.

Candidatus Dimadia lapiligena (NL. fem. n. *lapiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-48-11 sp001003475*. The type genome for the species is the GenBank assembly GCA_001004035.1. The GC content of the type genome is 49.16 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Dimadia gen. nov.

Candidatus Dimadia (NL. fem. n. *Dimadia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-48-11*. The type species for the genus is *Candidatus* Dimadia

lapiligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Dimadida feficilega sp. nov.

Candidatus Dimadida feficilega (NL. fem. n. *feficilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMT01 sp008015835*. The type genome for the species is the GenBank assembly GCA_008015835.1. The GC content of the type genome is 65.72 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Dimadida gen. nov.

Candidatus Dimadida (NL. fem. n. *Dimadida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCMT01*. The type species for the genus is *Candidatus* Dimadida feficilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dimadida immodastra sp. nov.

Candidatus Dimadida immodastra (NL. fem. n. *immodastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMT01 sp008015095*. The type genome for the species is the GenBank assembly GCA_008015095.1. The GC content of the type genome is 63.25 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Dimadida malogitia sp. nov.

Candidatus Dimadida malogitia (NL. fem. n. *malogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMT01 sp011526085*. The type genome for the species is the

GenBank assembly GCA_011526085.1. The GC content of the type genome is 67.92 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Dimadida navicisca sp. nov.

Candidatus Dimadida navicisca (NL. fem. n. *navicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMT01 sp013141175*. The type genome for the species is the GenBank assembly GCA_013141175.1. The GC content of the type genome is 64.81 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Dimadida nugivastra sp. nov.

Candidatus Dimadida nugivastra (NL. fem. n. *nugivastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCMT01 sp005502915*. The type genome for the species is the GenBank assembly RS_GCF_005503645.1. The GC content of the type genome is 67.97 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Dimadosa everbiforma sp. nov.

Candidatus Dimadosa everbiforma (NL. fem. n. *everbiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6767 sp900095305*. The type genome for the species is the GenBank assembly RS_GCF_900095305.1. The GC content of the type genome is 32.44 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biogas sludge".

Description of *Candidatus* Dimadosa gen. nov.

Candidatus Dimadosa (NL. fem. n. *Dimadosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6767*. The type species for the genus is *Candidatus* Dimadosa everbiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dimadosa vatilax sp. nov.

Candidatus Dimadosa vatilax (NL. fem. n. *vatilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6767 sp002376545*. The type genome for the species is the GenBank assembly GCA_002376545.1. The GC content of the type genome is 33.36 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Dimadula denupax sp. nov.

Candidatus Dimadula denupax (NL. fem. n. *denupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWX01 sp012103375*. The type genome for the species is the GenBank assembly GCA_011088055.1. The GC content of the type genome is 61.56 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Dimadula gen. nov.

Candidatus Dimadula (NL. fem. n. *Dimadula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWX01*. The type species for the genus is *Candidatus* Dimadula denupax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dimidana offiressa sp. nov.

Candidatus Dimidana offiressa (NL. fem. n. *offiressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PEYH01 sp002774465*. The type genome for the species is the GenBank assembly GCA_002774465.1. The GC content of the type genome is 43.3 % and the genome length is 0.46 Mbp.

Description of *Candidatus* Dimidana gen. nov.

Candidatus Dimidana (NL. fem. n. *Dimidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PEYH01*. The type species for the genus is *Candidatus* Dimidana offiressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PEYH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimidanaceae.

Description of *Candidatus* Dimidanaceae fam. nov.

Candidatus Dimidanaceae (NL. fem. n. *Dimidanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PEYH01*. The type genus for the taxon is *Candidatus* Dimidana .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Dimidaria repurimonia sp. nov.

Candidatus Dimidaria repurimonia (NL. fem. n. *repurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-69-37 sp001790955*. The type genome for the species is the GenBank assembly GCA_001790955.1. The GC content of the type genome is 69.49 % and the genome length is 3.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Dimidaria gen. nov.

Candidatus Dimidaria (NL. fem. n. *Dimidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-69-37*. The type species for the genus is *Candidatus* Dimidaria repurimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turifosaceae.

Description of *Candidatus* Dimidella adinvilenta sp. nov.

Candidatus Dimidella adinvilenta (NL. fem. n. *adinvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2962 sp002699485*. The type genome for the species is the GenBank assembly GCA_002699485.1. The GC content of the type genome is 38.81 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Dimidella gen. nov.

Candidatus Dimidella (NL. fem. n. *Dimidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2962*. The type species for the genus is *Candidatus* Dimidella adinvilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2962*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimidellaceae.

Description of *Candidatus* Dimidellaceae fam. nov.

Candidatus Dimidellaceae (NL. fem. n. *Dimidellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2962.* The type genus for the taxon is *Candidatus* Dimidella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Dimidella disiditio sp. nov.

Candidatus Dimidella disiditio (NL. fem. n. *disiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2962 sp002728115*. The type genome for the species is the GenBank assembly GCA_002348445.1. The GC content of the type genome is 39.12 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Dimidella obsecivita sp. nov.

Candidatus Dimidella obsecivita (NL. fem. n. *obsecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2962 sp003228095*. The type genome for the species is the GenBank assembly GCA_003228095.2. The GC content of the type genome is 38.65 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Dimidella propritura sp. nov.

Candidatus Dimidella propritura (NL. fem. n. *propritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2962 sp002311285*. The type genome for the species is the GenBank assembly GCA_002311285.1. The GC content of the type genome is 39.82 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Dimidida adsusigena sp. nov.

Candidatus Dimidida adsusigena (NL. fem. n. *adsusigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716345 sp902533655*. The type genome for the species is the GenBank assembly GCA_902533655.1. The GC content of the type genome is 30.08 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Dimidida gen. nov.

Candidatus Dimidida (NL. fem. n. *Dimidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716345*. The type species for the genus is *Candidatus* Dimidida adsusigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Dimidida letifitoga sp. nov.

Candidatus Dimidida letifitoga (NL. fem. n. *letifitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716345 sp002716345*. The type genome for the species is the GenBank assembly GCA_002716345.1. The GC content of the type genome is 29.75 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Dimidida munifax sp. nov.

Candidatus Dimidida munifax (NL. fem. n. *munifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716345 sp902597195*. The type genome for the species is the GenBank assembly GCA_902597195.1. The GC content of the type genome is 30.74 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Dimidida nocenentia sp. nov.

Candidatus Dimidida nocenentia (NL. fem. n. *nocenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716345 sp902587125*. The type genome for the species is the GenBank assembly GCA_902546675.1. The GC content of the type genome is 30.33 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Dimidosa venucitura sp. nov.

Candidatus Dimidosa venucitura (NL. fem. n. *venucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-193 sp007117035*. The type genome for the species is the GenBank assembly GCA_007117035.1. The GC content of the type genome is 40.89 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Dimidosa gen. nov.

Candidatus Dimidosa (NL. fem. n. *Dimidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CSBR16-193*. The type species for the genus is *Candidatus* Dimidosa venucitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSBR16-193*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimidosaceae.

Description of *Candidatus* Dimidosaceae fam. nov.

Candidatus Dimidosaceae (NL. fem. n. *Dimidosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSBR16-193.* The type genus for the taxon is *Candidatus* Dimidosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Dimidula medimitas sp. nov.

Candidatus Dimidula medimitas (NL. fem. n. *medimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722175 sp002722175*. The type genome for the species is the GenBank assembly GCA_002722175.1. The GC content of the type genome is 43.26 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Dimidula gen. nov.

Candidatus Dimidula (NL. fem. n. *Dimidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722175*. The type species for the genus is *Candidatus* Dimidula medimitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Diminana inmobessa sp. nov.

Candidatus Diminana inmobessa (NL. fem. n. *inmobessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFF01 sp013153035*. The type genome for the species is the GenBank assembly GCA_013153035.1. The GC content of the type genome is 41.03 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Diminana gen. nov.

Candidatus Diminana (NL. fem. n. *Diminana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFF01*. The type species for the genus is *Candidatus* Diminana inmobessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADFF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diminanaceae.

Description of *Candidatus* Diminanaceae fam. nov.

Candidatus Diminanaceae (NL. fem. n. *Diminanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFF01.* The type genus for the taxon is *Candidatus* Diminana .

According to GTDB R06-RS202, this family belongs to the order *Coprothermobacterales*.

Description of *Candidatus* Diminaria refacatica sp. nov.

Candidatus Diminaria refacatica (NL. fem. n. *refacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITIS01 sp903892515*. The type genome for the species is the GenBank assembly GCA_903914155.1. The GC content of the type genome is 63.15 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Diminaria gen. nov.

Candidatus Diminaria (NL. fem. n. *Diminaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITIS01*. The type species for the genus is *Candidatus* Diminaria refacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Diminella ammixilega sp. nov.

Candidatus Diminella ammixilega (NL. fem. n. *ammixilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp002308755*. The type genome for the species is the GenBank assembly GCA_002308755.1. The GC content of the type genome is 46.38 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Diminella gen. nov.

Candidatus Diminella (NL. fem. n. *Diminella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1259*. The type species for the genus is *Candidatus* Diminella ammixilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diminella apsenatica sp. nov.

Candidatus Diminella apsenatica (NL. fem. n. *apsenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp900770685*. The type genome for the species is the GenBank assembly RS_GCF_900770685.1. The GC content of the type genome is 37.28 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Diminella encenitura sp. nov.

Candidatus Diminella encenitura (NL. fem. n. *encenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp900771345*. The type genome for the species is the GenBank assembly RS_GCF_900771345.1. The GC content of the type genome is 36.53 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Diminella fibicax sp. nov.

Candidatus Diminella fibicax (NL. fem. n. *fibicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp900760875*. The type genome for the species is the GenBank assembly RS_GCF_900760875.1. The GC content of the type genome is 46.91 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Diminella homagisca sp. nov.

Candidatus Diminella homagisca (NL. fem. n. *homagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp900769565*. The type genome for the species is the GenBank assembly RS_GCF_900769565.1. The GC content of the type genome is 38.31 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Diminella induvetta sp. nov.

Candidatus Diminella induvetta (NL. fem. n. *induvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp003523255*. The type genome for the species is the GenBank assembly GCA_003523255.1. The GC content of the type genome is 44.68 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Diminella maledibra sp. nov.

Candidatus Diminella maledibra (NL. fem. n. *maledibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp900320065*. The type genome for the species is the GenBank assembly GCA_900320065.1. The GC content of the type genome is 44.21 %

and the genome length is 1.34 Mbp.

Description of *Candidatus* Diminella mutabitica sp. nov.

Candidatus Diminella mutabitica (NL. fem. n. *mutabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1259 sp902767225*. The type genome for the species is the GenBank assembly GCA_902767225.1. The GC content of the type genome is 41.09 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Diminia cocodilenta sp. nov.

Candidatus Diminia cocodilenta (NL. fem. n. *cocodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1663 sp900553405*. The type genome for the species is the GenBank assembly GCA_900553405.1. The GC content of the type genome is 27.01 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Diminia gen. nov.

Candidatus Diminia (NL. fem. n. *Diminia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1663*. The type species for the genus is *Candidatus* Diminia cocodilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Diminia invicisca sp. nov.

Candidatus Diminia invicisca (NL. fem. n. *invicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1663 sp012513065*. The type genome for the species is the GenBank assembly GCA_012513065.1. The GC content of the type genome is 25.85 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Diminia redunilega sp. nov.

Candidatus Diminia redunilega (NL. fem. n. *redunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1663 sp900553865*. The type genome for the species is the GenBank assembly GCA_900553865.1. The GC content of the type genome is 28.33 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Diminia saxopatio sp. nov.

Candidatus Diminia saxopatio (NL. fem. n. *saxopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1663 sp900753245*. The type genome for the species is the GenBank assembly RS_GCF_900753245.1. The GC content of the type genome is 27.01 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Diminida verecatio sp. nov.

Candidatus Diminida verecatio (NL. fem. n. *verecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5214 sp002412545*. The type genome for the species is the GenBank assembly GCA_002400355.1. The GC content of the type genome is 37.24 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Diminida gen. nov.

Candidatus Diminida (NL. fem. n. *Diminida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5214*. The type species for the genus is *Candidatus* Diminida verecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diminidaceae.

Description of *Candidatus* Diminidaceae fam. nov.

Candidatus Diminidaceae (NL. fem. n. *Diminidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5214.* The type genus for the taxon is *Candidatus* Diminida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Diminidales.

Description of *Candidatus* Diminidales ord. nov.

Candidatus Diminidales (NL. fem. n. *Diminidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5214.* The type genus for the taxon is *Candidatus* Diminida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Diminidae.

Description of *Candidatus* Diminidae class. nov.

Candidatus Diminidae (NL. fem. n. *c__Diminidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5214.* The type genus for the taxon is *Candidatus* Diminida .

According to GTDB R06-RS202, this class belongs to the phylum *Elusimicrobiota*.

Description of *Candidatus* Diminosa tegimousia sp. nov.

Candidatus Diminosa tegimousia (NL. fem. n. *tegimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSJA01 sp011054185*. The type genome for the species is the GenBank assembly GCA_011054895.1. The GC content of the type genome is 74.42 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Diminosa gen. nov.

Candidatus Diminosa (NL. fem. n. *Diminosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSJA01*. The type species for the genus is *Candidatus* Diminosa tegimousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifellaceae.

Description of *Candidatus* Diminula benifax sp. nov.

Candidatus Diminula benifax (NL. fem. n. *benifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WH-5701 sp002252625*. The type genome for the species is the GenBank assembly RS_GCF_002252625.1. The GC content of the type genome is 64.56 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Diminula gen. nov.

Candidatus Diminula (NL. fem. n. *Diminula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WH-5701*. The type species for the genus is *Candidatus* Diminula benifax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diminula cocoditica sp. nov.

Candidatus Diminula cocoditica (NL. fem. n. *cocoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WH-5701 sp000153045*. The type genome for the species is the GenBank assembly RS_GCF_000153045.1. The GC content of the type genome is 65.39 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Diminula habacivita sp. nov.

Candidatus Diminula habacivita (NL. fem. n. *habacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WH-5701 sp014224355*. The type genome for the species is the GenBank assembly RS_GCF_014224335.1. The GC content of the type genome is 65.76 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Dinghuibacter cerimatica sp. nov.

Candidatus Dinghuibacter cerimatica (NL. fem. n. *cerimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dinghuibacter sp903970475*. The type genome for the species is the GenBank assembly GCA_903970475.1. The GC content of the type genome is 47.81 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Dinoroseobacter diminentia sp. nov.

Candidatus Dinoroseobacter diminentia (NL. fem. n. *diminentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dinoroseobacter sp013215265*. The type genome for the species is the GenBank assembly GCA_013215265.1. The GC content of the type genome is 55.56 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Dinoroseobacter ellebousia sp. nov.

Candidatus Dinoroseobacter ellebousia (NL. fem. n. *ellebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dinoroseobacter sp006844665*. The type genome for the species is the GenBank assembly GCA_006844665.1. The GC content of the type genome is 57.68 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Dinupana necopimonia sp. nov.

Candidatus Dinupana necopimonia (NL. fem. n. *necopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAND01 sp003150225*. The type genome for the species is the GenBank assembly GCA_003150225.1. The GC content of the type genome is 56.01 %

and the genome length is 1.47 Mbp.

Description of *Candidatus* Dinupana gen. nov.

Candidatus Dinupana (NL. fem. n. *Dinupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAND01*. The type species for the genus is *Candidatus* Dinupana necopimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinupanaceae.

Description of *Candidatus* Dinupanaceae fam. nov.

Candidatus Dinupanaceae (NL. fem. n. *Dinupanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QAND01.* The type genus for the taxon is *Candidatus* Dinupana .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Dinuparia denupitas sp. nov.

Candidatus Dinuparia denupitas (NL. fem. n. *denupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2334 sp903928495*. The type genome for the species is the GenBank assembly GCA_903900205.1. The GC content of the type genome is 62.43 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Dinuparia gen. nov.

Candidatus Dinuparia (NL. fem. n. *Dinuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2334*. The type species for the genus is *Candidatus* Dinuparia denupitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dinuparia edulcetta sp. nov.

Candidatus Dinuparia edulcetta (NL. fem. n. *edulcetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2334 sp002479815*. The type genome for the species is the GenBank assembly GCA_002479815.1. The GC content of the type genome is 56.87 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Dinuparia inmacibra sp. nov.

Candidatus Dinuparia inmacibra (NL. fem. n. *inmacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2334 sp013823635*. The type genome for the species is the GenBank assembly GCA_013823635.1. The GC content of the type genome is 65.13 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Dinuparia redacitica sp. nov.

Candidatus Dinuparia redacitica (NL. fem. n. *redacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2334 sp002344885*. The type genome for the species is the GenBank assembly GCA_002344885.1. The GC content of the type genome is 62.16 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Dinupella malagibula sp. nov.

Candidatus Dinupella malagibula (NL. fem. n. *malagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUL01 sp012841575*. The type genome for the species is the GenBank assembly GCA_012841575.1. The GC content of the type genome is 38.79 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Dinupella gen. nov.

Candidatus Dinupella (NL. fem. n. *Dinupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUL01*. The type species for the genus is *Candidatus* Dinupella malagibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUUL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinupellaceae.

Description of *Candidatus* Dinupellaceae fam. nov.

Candidatus Dinupellaceae (NL. fem. n. *Dinupellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUUL01.* The type genus for the taxon is *Candidatus* Dinupella .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Dinupida attesatio sp. nov.

Candidatus Dinupida attesatio (NL. fem. n. *attesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp902793845*. The type genome for the species is the GenBank assembly GCA_902793845.1. The GC content of the type genome is 42.45 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Dinupida gen. nov.

Candidatus Dinupida (NL. fem. n. *Dinupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NK4A136*. The type species for the genus is *Candidatus* Dinupida attesatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dinupida avoncax sp. nov.

Candidatus Dinupida avoncax (NL. fem. n. *avoncax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp902787595*. The type genome for the species is the GenBank assembly GCA_902787595.1. The GC content of the type genome is 47.13 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Dinupida bicalimonia sp. nov.

Candidatus Dinupida bicalimonia (NL. fem. n. *bicalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp000621425*. The type genome for the species is the GenBank assembly RS_GCF_000621425.1. The GC content of the type genome is 43.61 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Dinupida decomifica sp. nov.

Candidatus Dinupida decomifica (NL. fem. n. *decomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp000421045*. The type genome for the species is the GenBank assembly GCA_900321615.1. The GC content of the type genome is 44.07 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Dinupida holisitoga sp. nov.

Candidatus Dinupida holisitoga (NL. fem. n. *holisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp000687675*. The type genome for the species is the GenBank assembly RS_GCF_000420925.1. The GC content of the type genome is 36.91 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Dinupida homogilenta sp. nov.

Candidatus Dinupida homogilenta (NL. fem. n. *homogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp002478505*. The type genome for the species is the GenBank assembly GCA_002414075.1. The GC content of the type genome is 43.19 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Dinupida monumatica sp. nov.

Candidatus Dinupida monumatica (NL. fem. n. *monumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp002479655*. The type genome for the species is the GenBank assembly GCA_002479655.1. The GC content of the type genome is 44.54 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Dinupida noninimonas sp. nov.

Candidatus Dinupida noninimonas (NL. fem. n. *noninimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp002314855*. The type genome for the species is the GenBank assembly GCA_002314855.1. The GC content of the type genome is 37.43 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Dinupida ontolicula sp. nov.

Candidatus Dinupida ontolicula (NL. fem. n. *ontolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp900102065*. The type genome for the species is the GenBank assembly RS_GCF_900102065.1. The GC content of the type genome is 43.34 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Dinupida patibivita sp. nov.

Candidatus Dinupida patibivita (NL. fem. n. *patibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp002373855*. The type genome for the species is the GenBank assembly GCA_002373855.1. The GC content of the type genome is 42.47 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Dinupida renavousia sp. nov.

Candidatus Dinupida renavousia (NL. fem. n. *renavousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp002393955*. The type genome for the species is the GenBank assembly GCA_002392885.1. The GC content of the type genome is 44.5 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Dinupida rorulisca sp. nov.

Candidatus Dinupida rorulisca (NL. fem. n. *rorulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NK4A136 sp902779395*. The type genome for the species is the GenBank assembly GCA_902779395.1. The GC content of the type genome is 45.17 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Dinuposa refocessa sp. nov.

Candidatus Dinuposa refocessa (NL. fem. n. *refocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2966 sp002348365*. The type genome for the species is the GenBank assembly GCA_002377535.1. The GC content of the type genome is 58.49 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Dinuposa gen. nov.

Candidatus Dinuposa (NL. fem. n. *Dinuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2966*. The type species for the genus is *Candidatus* Dinuposa refocessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2966*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinuposaceae.

Description of *Candidatus* Dinuposaceae fam. nov.

Candidatus Dinuposaceae (NL. fem. n. *Dinuposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2966.* The type genus for the taxon is *Candidatus* Dinuposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2966*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dinuposales.

Description of *Candidatus* Dinuposales ord. nov.

Candidatus Dinuposales (NL. fem. n. *Dinuposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2966.* The type genus for the taxon is *Candidatus* Dinuposa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Dinupula subabitrix sp. nov.

Candidatus Dinupula subabitrix (NL. fem. n. *subabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12508 sp001831095*. The type genome for the species is the GenBank assembly GCA_001831095.1. The GC content of the type genome is 50.56 % and the genome length is 1.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Dinupula gen. nov.

Candidatus Dinupula (NL. fem. n. *Dinupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12508*. The type species for the genus is *Candidatus* Dinupula subabitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dinupulaceae.

Description of *Candidatus* Dinupulaceae fam. nov.

Candidatus Dinupulaceae (NL. fem. n. *Dinupulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12508.* The type genus for the taxon is *Candidatus* Dinupula .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Diponana attesigena sp. nov.

Candidatus Diponana attesigena (NL. fem. n. *attesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-965 sp003153435*. The type genome for the species is the GenBank assembly GCA_003153435.1. The GC content of the type genome is 43.25 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Diponana gen. nov.

Candidatus Diponana (NL. fem. n. *Diponana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-965*. The type species for the genus is *Candidatus* Diponana attesigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-965*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponanaceae.

Description of *Candidatus* Diponanaceae fam. nov.

Candidatus Diponanaceae (NL. fem. n. *Diponanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-965.* The type genus for the taxon is *Candidatus* Diponana .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Diponana attubedo sp. nov.

Candidatus Diponana attubedo (NL. fem. n. *attubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-965 sp013289095*. The type genome for the species is the GenBank assembly GCA_013289095.1. The GC content of the type genome is 46.99 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Diponana scombugo sp. nov.

Candidatus Diponana scombugo (NL. fem. n. *scombugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-965 sp003151415*. The type genome for the species is the GenBank assembly GCA_003151415.1. The GC content of the type genome is 45.52 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Diponana utrarigena sp. nov.

Candidatus Diponana utrarigena (NL. fem. n. *utrarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-965 sp013288325*. The type genome for the species is the GenBank assembly GCA_013288325.1. The GC content of the type genome is 43.19 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Diponaria giganiforma sp. nov.

Candidatus Diponaria giganiforma (NL. fem. n. *giganiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJARJ01 sp903944345*. The type genome for the species is the GenBank assembly GCA_903933965.1. The GC content of the type genome is 49.59 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Diponaria gen. nov.

Candidatus Diponaria (NL. fem. n. *Diponaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJARJ01*. The type species for the genus is *Candidatus* Diponaria giganiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002753745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosaculaceae.

Description of *Candidatus* Diponaria subadicella sp. nov.

Candidatus Diponaria subadicella (NL. fem. n. *subadicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJARJ01 sp013335325*. The type genome for the species is the GenBank assembly GCA_013335325.1. The GC content of the type genome is 54.14 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Diponella adpacentia sp. nov.

Candidatus Diponella adpacentia (NL. fem. n. *adpacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UKL13-2 sp014378085*. The type genome for the species is the GenBank assembly GCA_014378085.1. The GC content of the type genome is 55.45 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Diponella gen. nov.

Candidatus Diponella (NL. fem. n. *Diponella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UKL13-2*. The type species for the genus is *Candidatus* Diponella adpacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponellaceae.

Description of *Candidatus* Diponellaceae fam. nov.

Candidatus Diponellaceae (NL. fem. n. *Diponellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UKL13-2.* The type genus for the taxon is *Candidatus* Diponella .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Diponella revecicella sp. nov.

Candidatus Diponella revecicella (NL. fem. n. *revecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UKL13-2 sp001602455*. The type genome for the species is the GenBank assembly GCA_003522245.1. The GC content of the type genome is 54.86 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Diponia adsenousia sp. nov.

Candidatus Diponia adsenousia (NL. fem. n. *adsenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQR01 sp013202335*. The type genome for the species is the GenBank assembly GCA_013202335.1. The GC content of the type genome is 40.57 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Diponia gen. nov.

Candidatus Diponia (NL. fem. n. *Diponia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQR01*. The type species for the genus is *Candidatus* Diponia adsenousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMQR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponiaceae.

Description of *Candidatus* Diponiaceae fam. nov.

Candidatus Diponiaceae (NL. fem. n. *Diponiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQR01.* The type genus for the taxon is *Candidatus* Diponia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMQR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Diponiales.

Description of *Candidatus* Diponiales ord. nov.

Candidatus Diponiales (NL. fem. n. *Diponiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMQR01.* The type genus for the taxon is *Candidatus* Diponia .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Diponida cohonitoga sp. nov.

Candidatus Diponida cohonitoga (NL. fem. n. *cohonitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1163 sp002327985*. The type genome for the species is the GenBank assembly GCA_002327985.1. The GC content of the type genome is 45.72 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Diponida gen. nov.

Candidatus Diponida (NL. fem. n. *Diponida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1163*. The type species for the genus is *Candidatus* Diponida cohonitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponidaceae.

Description of *Candidatus* Diponidaceae fam. nov.

Candidatus Diponidaceae (NL. fem. n. *Diponidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1163.* The type genus for the taxon is *Candidatus* Diponida .

According to the original version of GTDB R06-RS202, this family belongs to the order *BSN033*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Debucellales.

Description of *Candidatus* Diponida defanitas sp. nov.

Candidatus Diponida defanitas (NL. fem. n. *defanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1163 sp002780715*. The type genome for the species is the GenBank assembly GCA_002783725.1. The GC content of the type genome is 45.34 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Diponida desuredo sp. nov.

Candidatus Diponida desuredo (NL. fem. n. *desuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1163 sp002327885*. The type genome for the species is the GenBank assembly GCA_002327885.1. The GC content of the type genome is 46.13 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Diponida sarabitudo sp. nov.

Candidatus Diponida sarabitudo (NL. fem. n. *sarabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1163 sp002311635*. The type genome for the species is the GenBank assembly GCA_002311635.1. The GC content of the type genome is 48.44 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Diponida vocamatio sp. nov.

Candidatus Diponida vocamatio (NL. fem. n. *vocamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1163 sp013388645*. The type genome for the species is the GenBank assembly GCA_013388645.1. The GC content of the type genome is 44.92 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Diponosa ranunastra sp. nov.

Candidatus Diponosa ranunastra (NL. fem. n. *ranunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOLM01 sp903859205*. The type genome for the species is the GenBank assembly GCA_903859205.1. The GC content of the type genome is 59.93 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Diponosa gen. nov.

Candidatus Diponosa (NL. fem. n. *Diponosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOLM01*. The type species for the genus is *Candidatus* Diponosa ranunastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diponula aterribra sp. nov.

Candidatus Diponula aterribra (NL. fem. n. *aterribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2728255 sp902562525*. The type genome for the species is the GenBank assembly GCA_902562525.1. The GC content of the type genome is 47.16 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Diponula gen. nov.

Candidatus Diponula (NL. fem. n. *Diponula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2728255*. The type species for the genus is *Candidatus* Diponula aterribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulariaceae.

Description of *Candidatus* Diponula milifastra sp. nov.

Candidatus Diponula milifastra (NL. fem. n. *milifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2728255 sp002728255*. The type genome for the species is the GenBank assembly GCA_002377485.1. The GC content of the type genome is 46.89 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Direcana ascalilenta sp. nov.

Candidatus Direcana ascalilenta (NL. fem. n. *ascalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp900551855*. The type genome for the species is the GenBank assembly GCA_900551855.1. The GC content of the type genome is 32.76 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Direcana gen. nov.

Candidatus Direcana (NL. fem. n. *Direcana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11517*. The type species for the genus is *Candidatus* Direcana ascalilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Direcana carecetta sp. nov.

Candidatus Direcana carecetta (NL. fem. n. *carecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp900555365*. The type genome for the species is the GenBank assembly GCA_900555365.1. The GC content of the type genome is 34.62 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Direcana cepuratica sp. nov.

Candidatus Direcana cepuratica (NL. fem. n. *cepuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp902796285*. The type genome for the species is the GenBank assembly GCA_902796285.1. The GC content of the type genome is 33.83 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Direcana immigedo sp. nov.

Candidatus Direcana immigedo (NL. fem. n. *immigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp900753315*. The type genome for the species is the GenBank assembly RS_GCF_900753315.1. The GC content of the type genome is 33.82 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Direcana indubentia sp. nov.

Candidatus Direcana indubentia (NL. fem. n. *indubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp900557645*. The type genome for the species is the GenBank assembly GCA_900557645.1. The GC content of the type genome is 28.13 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Direcana malifivita sp. nov.

Candidatus Direcana malifivita (NL. fem. n. *malifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp900768545*. The type genome for the species is the GenBank assembly RS_GCF_900768545.1. The GC content of the type genome is 35.84 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Direcana paracitica sp. nov.

Candidatus Direcana paracitica (NL. fem. n. *paracitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11517 sp003522085*. The type genome for the species is the GenBank assembly GCA_003522085.1. The GC content of the type genome is 37.83 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Direcaria cohonedo sp. nov.

Candidatus Direcaria cohonedo (NL. fem. n. *cohonedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-3-53-8 sp001920415*. The type genome for the species is the GenBank assembly GCA_001920415.1. The GC content of the type genome is 52.89 % and the genome length is 6.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 6 days after first rain event (27mm)".

Description of *Candidatus* Direcaria gen. nov.

Candidatus Direcaria (NL. fem. n. *Direcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *3-1-20CM-3-53-8*. The type species for the genus is *Candidatus* Direcaria cohonedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Direcella cerebilenta sp. nov.

Candidatus Direcella cerebilenta (NL. fem. n. *cerebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-7 sp007131525*. The type genome for the species is the GenBank assembly GCA_003552015.1. The GC content of the type genome is 72.23 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Direcella gen. nov.

Candidatus Direcella (NL. fem. n. *Direcella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1Sed10-7*. The type species for the genus is *Candidatus* Direcella cerebilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Direcella cerimilega sp. nov.

Candidatus Direcella cerimilega (NL. fem. n. *cerimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-7 sp003565155*. The type genome for the species is the GenBank assembly GCA_003565155.1. The GC content of the type genome is 72.06 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Direcella dicabiforma sp. nov.

Candidatus Direcella dicabiforma (NL. fem. n. *dicabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-7 sp003561535*. The type genome for the species is the GenBank assembly GCA_003550915.1. The GC content of the type genome is 71.15 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Direcella fatifessa sp. nov.

Candidatus Direcella fatifessa (NL. fem. n. *fatifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-7 sp003554005*. The type genome for the species is the GenBank assembly GCA_003553145.1. The GC content of the type genome is 71.34 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Direcella pinacibula sp. nov.

Candidatus Direcella pinacibula (NL. fem. n. *pinacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-7 sp007117945*. The type genome for the species is the GenBank assembly GCA_007117945.1. The GC content of the type genome is 72.74 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Direcia decenitudo sp. nov.

Candidatus Direcia decenitudo (NL. fem. n. *decenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2070 sp900557655*. The type genome for the species is the GenBank assembly RS_GCF_900767635.1. The GC content of the type genome is 41.94 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Direcia gen. nov.

Candidatus Direcia (NL. fem. n. *Direcia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2070*. The type species for the genus is *Candidatus* Direcia decenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Direcida fetutifica sp. nov.

Candidatus Direcida fetutifica (NL. fem. n. *fetutifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2593 sp002340085*. The type genome for the species is the GenBank assembly GCA_002340085.1. The GC content of the type genome is 35.42 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Direcida gen. nov.

Candidatus Direcida (NL. fem. n. *Direcida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2593*. The type species for the genus is *Candidatus* Direcida fetutifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2593*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direcidaceae.

Description of *Candidatus* Direcidaceae fam. nov.

Candidatus Direcidaceae (NL. fem. n. *Direcidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2593.* The type genus for the taxon is *Candidatus* Direcida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GIF10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decamellales.

Description of *Candidatus* Direcosa monogisca sp. nov.

Candidatus Direcosa monogisca (NL. fem. n. *monogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2011-GWC2-44-17 sp001790515*. The type genome for the species is the GenBank assembly GCA_001790435.1. The GC content of the type genome is 45.41 % and the genome length is 1.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Direcosa gen. nov.

Candidatus Direcosa (NL. fem. n. *Direcosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2011-GWC2-44-17*. The type species for the genus is *Candidatus* Direcosa monogisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Direcosa necubitas sp. nov.

Candidatus Direcosa necubitas (NL. fem. n. *necubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2011-GWC2-44-17 sp004145215*. The type genome for the species is the GenBank assembly GCA_004145215.1. The GC content of the type genome is 46.33 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Direcosa repepax sp. nov.

Candidatus Direcosa repepax (NL. fem. n. *repepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2011-GWC2-44-17 sp001029695*. The type genome for the species is the GenBank assembly GCA_001790385.1. The GC content of the type genome is 45.84 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Direcula catecitura sp. nov.

Candidatus Direcula catecitura (NL. fem. n. *catecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J045 sp003696075*. The type genome for the species is the GenBank assembly GCA_003696075.1. The GC content of the type genome is 71.87 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Direcula gen. nov.

Candidatus Direcula (NL. fem. n. *Direcula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J045*. The type species for the genus is *Candidatus* Direcula catecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direculaceae.

Description of *Candidatus* Direculaceae fam. nov.

Candidatus Direculaceae (NL. fem. n. *Direculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J045.* The type genus for the taxon is *Candidatus* Direcula .

According to the original version of GTDB R06-RS202, this family belongs to the order *J045*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Direculales.

Description of *Candidatus* Direculales ord. nov.

Candidatus Direculales (NL. fem. n. *Direculales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J045*. The type genus for the taxon is *Candidatus* Direcula .

According to the original version of GTDB R06-RS202, this family belongs to the class *Mor1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceracosae.

Description of *Candidatus* Direparia verecitio sp. nov.

Candidatus Direparia verecitio (NL. fem. n. *verecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWCD01 sp903911145*. The type genome for the species is the GenBank assembly GCA_903864035.1. The GC content of the type genome is 65.74 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Direparia gen. nov.

Candidatus Direparia (NL. fem. n. *Direparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWCD01*. The type species for the genus is *Candidatus* Direparia verecitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *40CM-4-68-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venucellaceae.

Description of *Candidatus* Direpella ridibago sp. nov.

Candidatus Direpella ridibago (NL. fem. n. *ridibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-610 sp003134555*. The type genome for the species is the GenBank assembly GCA_003134555.1. The GC content of the type genome is 67.43 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Direpella gen. nov.

Candidatus Direpella (NL. fem. n. *Direpella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-610*. The type species for the genus is *Candidatus* Direpella ridibago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-610*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpellaceae.

Description of *Candidatus* Direpellaceae fam. nov.

Candidatus Direpellaceae (NL. fem. n. *Direpellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-610.* The type genus for the taxon is *Candidatus* Direpella .

According to the original version of GTDB R06-RS202, this family belongs to the order *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosarellales.

Description of *Candidatus* Direpia abagmifica sp. nov.

Candidatus Direpia abagmifica (NL. fem. n. *abagmifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003557505*. The type genome for the species is the GenBank assembly GCA_003557505.1. The GC content of the type genome is 38.27 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Direpia gen. nov.

Candidatus Direpia (NL. fem. n. *Direpia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-225*. The type species for the genus is *Candidatus* Direpia abagmifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Direpia attesitas sp. nov.

Candidatus Direpia attesitas (NL. fem. n. *attesitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003558105*. The type genome for the species is the GenBank assembly GCA_003558105.1. The GC content of the type genome is 40.69 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Direpia cicaricella sp. nov.

Candidatus Direpia cicaricella (NL. fem. n. *cicaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp007135105*. The type genome for the species is the GenBank assembly GCA_007135105.1. The GC content of the type genome is 47.05 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Direpia citivilenta sp. nov.

Candidatus Direpia citivilenta (NL. fem. n. *citivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003559585*. The type genome for the species is the GenBank assembly GCA_003559585.1. The GC content of the type genome is 39.65 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Direpia enunticella sp. nov.

Candidatus Direpia enunticella (NL. fem. n. *enunticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003554735*. The type genome for the species is the GenBank assembly GCA_003554735.1. The GC content of the type genome is 48.99 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Direpia homicatica sp. nov.

Candidatus Direpia homicatica (NL. fem. n. *homicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003555335*. The type genome for the species is the GenBank assembly GCA_003555335.1. The GC content of the type genome is 49.59 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Direpia robigiforma sp. nov.

Candidatus Direpia robigiforma (NL. fem. n. *robigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-225 sp003551405*. The type genome for the species is the GenBank assembly GCA_003551405.1. The GC content of the type genome is 44.1 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Direpida lutulitas sp. nov.

Candidatus Direpida lutulitas (NL. fem. n. *lutulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3940 sp002385675*. The type genome for the species is the GenBank assembly GCA_002385675.1. The GC content of the type genome is 65.02 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Direpida gen. nov.

Candidatus Direpida (NL. fem. n. *Direpida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3940*. The type species for the genus is *Candidatus* Direpida lutulitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3940*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpidaceae.

Description of *Candidatus* Direpidaceae fam. nov.

Candidatus Direpidaceae (NL. fem. n. *Direpidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3940.* The type genus for the taxon is *Candidatus* Direpida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBR1031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumellales.

Description of *Candidatus* Direposa categessa sp. nov.

Candidatus Direposa categessa (NL. fem. n. *categessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXH01 sp013178155*. The type genome for the species is the GenBank assembly GCA_013178155.1. The GC content of the type genome is 65.78 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Direposa gen. nov.

Candidatus Direposa (NL. fem. n. *Direposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXH01*. The type species for the genus is *Candidatus* Direposa categessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABLXH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direposaceae.

Description of *Candidatus* Direposaceae fam. nov.

Candidatus Direposaceae (NL. fem. n. *Direposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABLXH01.* The type genus for the taxon is *Candidatus* Direposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Direpula semidimonia sp. nov.

Candidatus Direpula semidimonia (NL. fem. n. *semidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC2047 sp001593685*. The type genome for the species is the GenBank assembly GCA_001593685.1. The GC content of the type genome is 48.47 % and the genome length is 2.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine bulk water (WCO station L4)".

Description of *Candidatus* Direpula gen. nov.

Candidatus Direpula (NL. fem. n. *Direpula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC2047*. The type species for the genus is *Candidatus* Direpula semidimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IMCC2047*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpulaceae.

Description of *Candidatus* Direpulaceae fam. nov.

Candidatus Direpulaceae (NL. fem. n. *Direpulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *IMCC2047.* The type genus for the taxon is *Candidatus* Direpula .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Diritana pimenilega sp. nov.

Candidatus Diritana pimenilega (NL. fem. n. *pimenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOZ01 sp011358055*. The type genome for the species is the GenBank assembly GCA_011358055.1. The GC content of the type genome is 38.81 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Diritana gen. nov.

Candidatus Diritana (NL. fem. n. *Diritana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOZ01*. The type species for the genus is *Candidatus* Diritana

pimenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Diritana semunimonas sp. nov.

Candidatus Diritana semunimonas (NL. fem. n. *semunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOZ01 sp011051315*. The type genome for the species is the GenBank assembly GCA_011051315.1. The GC content of the type genome is 38.1 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Diritaria cohonitas sp. nov.

Candidatus Diritaria cohonitas (NL. fem. n. *cohonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYLR01 sp012521815*. The type genome for the species is the GenBank assembly GCA_002071135.1. The GC content of the type genome is 72.28 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Diritaria gen. nov.

Candidatus Diritaria (NL. fem. n. *Diritaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYLR01*. The type species for the genus is *Candidatus* Diritaria cohonitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5704*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holovidaceae.

Description of *Candidatus* Diritella enharago sp. nov.

Candidatus Diritella enharago (NL. fem. n. *enharago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOQ01 sp011053305*. The type genome for the species is the GenBank assembly GCA_011053305.1. The GC content of the type genome is 67.01 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Diritella gen. nov.

Candidatus Diritella (NL. fem. n. *Diritella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOQ01*. The type species for the genus is *Candidatus* Diritella enharago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSOQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritellaceae.

Description of *Candidatus* Diritellaceae fam. nov.

Candidatus Diritellaceae (NL. fem. n. *Diritellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSOQ01.* The type genus for the taxon is *Candidatus* Diritella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomariales.

Description of *Candidatus* Diritia dehinitas sp. nov.

Candidatus Diritia dehinitas (NL. fem. n. *dehinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-617 sp900553285*. The type genome for the species is the GenBank assembly GCA_900553285.1. The GC content of the type genome is 54.42 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Diritia gen. nov.

Candidatus Diritia (NL. fem. n. *Diritia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAG-617*. The type species for the genus is *Candidatus* Diritia dehinitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Diritia melopousia sp. nov.

Candidatus Diritia melopousia (NL. fem. n. *melopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-617 sp000438115*. The type genome for the species is the GenBank assembly GCA_000438115.1. The GC content of the type genome is 49.18 % and the genome length is 2.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Diritia vanitivita sp. nov.

Candidatus Diritia vanitivita (NL. fem. n. *vanitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-617 sp000431275*. The type genome for the species is the GenBank assembly GCA_900551725.1. The GC content of the type genome is 55.03 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Diritida adcelentia sp. nov.

Candidatus Diritida adcelentia (NL. fem. n. *adcelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBF01 sp009784685*. The type genome for the species is the GenBank assembly GCA_009784685.1. The GC content of the type genome is 38.71 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Diritida gen. nov.

Candidatus Diritida (NL. fem. n. *Diritida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBF01*. The type species for the genus is *Candidatus* Diritida adcelentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Diritidaceae fam. nov.

Candidatus Diritidaceae (NL. fem. n. *Diritidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRBF01.* The type genus for the taxon is *Candidatus* Diritida .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Diritosa homagago sp. nov.

Candidatus Diritosa homagago (NL. fem. n. *homagago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12170 sp003445975*. The type genome for the species is the GenBank assembly GCA_003445975.1. The GC content of the type genome is 38.24 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Diritosa gen. nov.

Candidatus Diritosa (NL. fem. n. *Diritosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12170*. The type species for the genus is *Candidatus* Diritosa homagago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12170*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritosaceae.

Description of *Candidatus* Diritosaceae fam. nov.

Candidatus Diritosaceae (NL. fem. n. *Diritosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12170.* The type genus for the taxon is *Candidatus* Diritosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Diritosa repudigena sp. nov.

Candidatus Diritosa repudigena (NL. fem. n. *repudigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12170 sp013166655*. The type genome for the species is the GenBank assembly RS_GCF_013166655.1. The GC content of the type genome is 35.03 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Diritula denavitudo sp. nov.

Candidatus Diritula denavitudo (NL. fem. n. *denavitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla111 sp007753455*. The type genome for the species is the GenBank assembly RS_GCF_007753265.1. The GC content of the type genome is 64.08 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Diritula gen. nov.

Candidatus Diritula (NL. fem. n. *Diritula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pla111*. The type species for the genus is *Candidatus* Diritula denavitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelariaceae.

Description of *Candidatus* Diritula exheditio sp. nov.

Candidatus Diritula exheditio (NL. fem. n. *exheditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla111 sp007859955*. The type genome for the species is the GenBank assembly RS_GCF_007859955.1. The GC content of the type genome is 65.42 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Diritula inresicula sp. nov.

Candidatus Diritula inresicula (NL. fem. n. *inresicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla111 sp007859815*. The type genome for the species is the GenBank assembly RS_GCF_007859815.1. The GC content of the type genome is 63.12 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Diritula rubicimonia sp. nov.

Candidatus Diritula rubicimonia (NL. fem. n. *rubicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla111 sp007745835*. The type genome for the species is the GenBank assembly RS_GCF_007745835.1. The GC content of the type genome is 66.31 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Diritula semivitio sp. nov.

Candidatus Diritula semivitio (NL. fem. n. *semivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla111 sp007859945*. The type genome for the species is the GenBank assembly RS_GCF_007859945.1. The GC content of the type genome is 66.15 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Disidana accumifica sp. nov.

Candidatus Disidana accumifica (NL. fem. n. *accumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLTJ01 sp004347685*. The type genome for the species is the GenBank assembly GCA_004347685.1. The GC content of the type genome is 59.32 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Disidana gen. nov.

Candidatus Disidana (NL. fem. n. *Disidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLTJ01*. The type species for the genus is *Candidatus* Disidana accumifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLTJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidanaceae.

Description of *Candidatus* Disidanaceae fam. nov.

Candidatus Disidanaceae (NL. fem. n. *Disidanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLTJ01.* The type genus for the taxon is *Candidatus* Disidana .

According to GTDB R06-RS202, this family belongs to the order *Moorellales*.

Description of *Candidatus* Disidaria ridibiforma sp. nov.

Candidatus Disidaria ridibiforma (NL. fem. n. *ridibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1551 sp001871075*. The type genome for the species is the GenBank assembly GCA_002790035.1. The GC content of the type genome is 49.58 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Disidaria gen. nov.

Candidatus Disidaria (NL. fem. n. *Disidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1551*. The type species for the genus is *Candidatus* Disidaria ridibiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1551*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidariaceae.

Description of *Candidatus* Disidariaceae fam. nov.

Candidatus Disidariaceae (NL. fem. n. *Disidariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1551.* The type genus for the taxon is *Candidatus* Disidaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1551*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Disidariales.

Description of *Candidatus* Disidariales ord. nov.

Candidatus Disidariales (NL. fem. n. *Disidariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1551.* The type genus for the taxon is *Candidatus* Disidaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1551*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Disidariae.

Description of *Candidatus* Disidariae class. nov.

Candidatus Disidariae (NL. fem. n. *c__Disidariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1551.* The type genus for the taxon is *Candidatus* Disidaria .

According to GTDB R06-RS202, this class belongs to the phylum *Desantisbacteria*.

Description of *Candidatus* Disidella dedigedo sp. nov.

Candidatus Disidella dedigedo (NL. fem. n. *dedigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-FULL-46-19 sp001824825*. The type genome for the species is the GenBank assembly GCA_001824825.1. The GC content of the type genome is 45.21 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Disidella gen. nov.

Candidatus Disidella (NL. fem. n. *Disidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-FULL-46-19*. The type species for the genus is *Candidatus* Disidella dedigedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Disidellaceae fam. nov.

Candidatus Disidellaceae (NL. fem. n. *Disidellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYD1-FULL-46-19.* The type genus for the taxon is *Candidatus* Disidella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Disidia actarugo sp. nov.

Candidatus Disidia actarugo (NL. fem. n. *actarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp000384935*. The type genome for the species is the GenBank assembly GCA_000384935.1. The GC content of the type genome is 34.18 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Disidia gen. nov.

Candidatus Disidia (NL. fem. n. *Disidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AAA076-P13*. The type species for the genus is *Candidatus* Disidia actarugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Disidia catilitoga sp. nov.

Candidatus Disidia catilitoga (NL. fem. n. *catilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902558395*. The type genome for the species is the GenBank assembly GCA_902558395.1. The GC content of the type genome is 33.0 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Disidia cicilitrix sp. nov.

Candidatus Disidia cicilitrix (NL. fem. n. *cicilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp000385055*. The type genome for the species is the GenBank assembly GCA_000384955.1. The GC content of the type genome is 33.1 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Disidia conibigena sp. nov.

Candidatus Disidia conibigena (NL. fem. n. *conibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp010024215*. The type genome for the species is the GenBank assembly GCA_010021965.1. The GC content of the type genome is 33.05 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Disidia duponigena sp. nov.

Candidatus Disidia duponigena (NL. fem. n. *duponigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902591665*. The type genome for the species is the GenBank assembly GCA_902635115.1. The GC content of the type genome is 33.09 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Disidia exsupimonas sp. nov.

Candidatus Disidia exsupimonas (NL. fem. n. *exsupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902610905*. The type genome for the species is the GenBank assembly GCA_902610905.1. The GC content of the type genome is 32.59 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Disidia illapitica sp. nov.

Candidatus Disidia illapitica (NL. fem. n. *illapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902515155*. The type genome for the species is the GenBank assembly GCA_902515155.1. The GC content of the type genome is 32.67 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Disidia masocitia sp. nov.

Candidatus Disidia masocitia (NL. fem. n. *masocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902557705*. The type genome for the species is the GenBank assembly GCA_902557705.1. The GC content of the type genome is 33.04 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Disidia milifugo sp. nov.

Candidatus Disidia milifugo (NL. fem. n. *milifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902591565*. The type genome for the species is the GenBank assembly GCA_902591565.1. The GC content of the type genome is 32.43 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Disidia octodibula sp. nov.

Candidatus Disidia octodibula (NL. fem. n. *octodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902558375*. The type genome for the species is the GenBank assembly GCA_902558375.1. The GC content of the type genome is 32.93

% and the genome length is 1.01 Mbp.

Description of *Candidatus* Disidia pinacitica sp. nov.

Candidatus Disidia pinacitica (NL. fem. n. *pinacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902635645*. The type genome for the species is the GenBank assembly GCA_010023405.1. The GC content of the type genome is 33.09 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Disidia tabitisca sp. nov.

Candidatus Disidia tabitisca (NL. fem. n. *tabitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA076-P13 sp902556355*. The type genome for the species is the GenBank assembly GCA_902556355.1. The GC content of the type genome is 32.86 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Disidida amfitigena sp. nov.

Candidatus Disidida amfitigena (NL. fem. n. *amfitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp002171155*. The type genome for the species is the GenBank assembly GCA_002171155.1. The GC content of the type genome is 34.93 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Disidida gen. nov.

Candidatus Disidida (NL. fem. n. *Disidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7377*. The type species for the genus is *Candidatus* Disidida amfitigena .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Disidida bifarago sp. nov.

Candidatus Disidida bifarago (NL. fem. n. *bifarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp002170395*. The type genome for the species is the GenBank assembly GCA_002470265.1. The GC content of the type genome is 37.53 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Disidida nocenousia sp. nov.

Candidatus Disidida nocenousia (NL. fem. n. *nocenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp002170285*. The type genome for the species is the GenBank assembly GCA_002170285.1. The GC content of the type genome is 34.16 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Disidida occucitas sp. nov.

Candidatus Disidida occucitas (NL. fem. n. *occucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp902625535*. The type genome for the species is the GenBank assembly GCA_902625535.1. The GC content of the type genome is 38.95 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Disidida ossucitura sp. nov.

Candidatus Disidida ossucitura (NL. fem. n. *ossucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp002684875*. The type genome for the species is the GenBank assembly GCA_002684875.1. The GC content of the type genome is 38.11 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Disidida pavicivita sp. nov.

Candidatus Disidida pavicivita (NL. fem. n. *pavicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp002167365*. The type genome for the species is the GenBank assembly GCA_002167365.1. The GC content of the type genome is 35.83 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Disidida prospilega sp. nov.

Candidatus Disidida prospilega (NL. fem. n. *prospilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp004214155*. The type genome for the species is the GenBank assembly GCA_004214155.1. The GC content of the type genome is 38.23 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Disidida visifedo sp. nov.

Candidatus Disidida visifedo (NL. fem. n. *visifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7377 sp902586195*. The type genome for the species is the GenBank assembly GCA_902586195.1. The GC content of the type genome is 37.96 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Disidosa arrabimonia sp. nov.

Candidatus Disidosa arrabimonia (NL. fem. n. *arrabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN35 sp002898235*. The type genome for the species is the GenBank assembly GCA_002898235.1. The GC content of the type genome is 28.52 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Disidosa gen. nov.

Candidatus Disidosa (NL. fem. n. *Disidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN35*. The type species for the genus is *Candidatus* Disidosa arrabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HR35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanosaceae.

Description of *Candidatus* Disidosa depubastra sp. nov.

Candidatus Disidosa depubastra (NL. fem. n. *depubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN35 sp011055845*. The type genome for the species is the GenBank assembly GCA_011053585.1. The GC content of the type genome is 27.29 % and the genome length is 0.5 Mbp.

Description of *Candidatus* Disidula apsimatica sp. nov.

Candidatus Disidula apsimatica (NL. fem. n. *apsimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTG01 sp007122985*. The type genome for the species is the GenBank assembly GCA_007122985.1. The GC content of the type genome is 71.65 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Disidula gen. nov.

Candidatus Disidula (NL. fem. n. *Disidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKTG01*. The type species for the genus is *Candidatus* Disidula apsimatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Disidula defetago sp. nov.

Candidatus Disidula defetago (NL. fem. n. *defetago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTG01 sp007118045*. The type genome for the species is the GenBank assembly GCA_007118045.1. The GC content of the type genome is 71.68 %

and the genome length is 3.84 Mbp.

Description of *Candidatus* Disidula manupousia sp. nov.

Candidatus Disidula manupousia (NL. fem. n. *manupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTG01 sp007120485*. The type genome for the species is the GenBank assembly GCA_003558755.1. The GC content of the type genome is 70.11 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Disidula patibibra sp. nov.

Candidatus Disidula patibibra (NL. fem. n. *patibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKTG01 sp007121785*. The type genome for the species is the GenBank assembly GCA_007121785.1. The GC content of the type genome is 71.23 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Divolana ciminessa sp. nov.

Candidatus Divolana ciminessa (NL. fem. n. *ciminessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mxb001 sp004379115*. The type genome for the species is the GenBank assembly GCA_004379115.1. The GC content of the type genome is 64.75 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Divolana gen. nov.

Candidatus Divolana (NL. fem. n. *Divolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Mxb001*. The type species for the genus is *Candidatus* Divolana ciminessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Divolana coticicella sp. nov.

Candidatus Divolana coticicella (NL. fem. n. *coticicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mxb001 sp903954205*. The type genome for the species is the GenBank assembly GCA_903960885.1. The GC content of the type genome is 67.66 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Divolana denunitio sp. nov.

Candidatus Divolana denunitio (NL. fem. n. *denunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mxb001 sp903909555*. The type genome for the species is the GenBank assembly GCA_903888695.1. The GC content of the type genome is 70.3 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Divolana recumitrix sp. nov.

Candidatus Divolana recumitrix (NL. fem. n. *recumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mxb001 sp903848435*. The type genome for the species is the GenBank assembly GCA_903848435.1. The GC content of the type genome is 68.14 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Divolaria acrufitica sp. nov.

Candidatus Divolaria acrufitica (NL. fem. n. *acrufitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JA-3-3Ab sp000013225*. The type genome for the species is the GenBank assembly RS_GCF_000013225.1. The GC content of the type genome is 58.45 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Divolaria gen. nov.

Candidatus Divolaria (NL. fem. n. *Divolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JA-3-3Ab*. The type species for the genus is *Candidatus* Divolaria acrufitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JA-3-3Ab*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolariaceae.

Description of *Candidatus* Divolariaceae fam. nov.

Candidatus Divolariaceae (NL. fem. n. *Divolariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JA-3-3Ab.* The type genus for the taxon is *Candidatus* Divolaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *PCC-7336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peradellales.

Description of *Candidatus* Divolaria capucitoga sp. nov.

Candidatus Divolaria capucitoga (NL. fem. n. *capucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JA-3-3Ab sp011055065*. The type genome for the species is the GenBank assembly GCA_011047875.1. The GC content of the type genome is 58.12 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Divolaria documibula sp. nov.

Candidatus Divolaria documibula (NL. fem. n. *documibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JA-3-3Ab sp000013205*. The type genome for the species is the GenBank assembly RS_GCF_002760375.1. The GC content of the type genome is 60.36 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Divolella adgesiforma sp. nov.

Candidatus Divolella adgesiforma (NL. fem. n. *adgesiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5177 sp002413265*. The type genome for the species is the GenBank assembly GCA_002413265.1. The GC content of the type genome is 61.09 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Divolella gen. nov.

Candidatus Divolella (NL. fem. n. *Divolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5177*. The type species for the genus is *Candidatus* Divolella adgesiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolellaceae.

Description of *Candidatus* Divolellaceae fam. nov.

Candidatus Divolellaceae (NL. fem. n. *Divolellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5177.* The type genus for the taxon is *Candidatus* Divolella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Divolellales.

Description of *Candidatus* Divolellales ord. nov.

Candidatus Divolellales (NL. fem. n. *Divolellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5177.* The type genus for the taxon is *Candidatus* Divolella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Divolellae.

Description of *Candidatus* Divolellae class. nov.

Candidatus Divolellae (NL. fem. n. *c__Divolellae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5177*. The type genus for the taxon is *Candidatus* Divolella .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Divolia cetarax sp. nov.

Candidatus Divolia cetarax (NL. fem. n. *cetarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR19 sp003220595*. The type genome for the species is the GenBank assembly GCA_003220275.1. The GC content of the type genome is 70.74 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Divolia gen. nov.

Candidatus Divolia (NL. fem. n. *Divolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR19*. The type species for the genus is *Candidatus* Divolia cetarax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Divolida inreviforma sp. nov.

Candidatus Divolida inreviforma (NL. fem. n. *inreviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTEH01 sp011369555*. The type genome for the species is the GenBank assembly GCA_011369555.1. The GC content of the type genome is 29.1 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Divolida gen. nov.

Candidatus Divolida (NL. fem. n. *Divolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTEH01*. The type species for the genus is *Candidatus* Divolida inreviforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTEH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolidaceae.

Description of *Candidatus* Divolidaceae fam. nov.

Candidatus Divolidaceae (NL. fem. n. *Divolidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTEH01*. The type genus for the taxon is *Candidatus* Divolida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTEH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Divolidales.

Description of *Candidatus* Divolidales ord. nov.

Candidatus Divolidales (NL. fem. n. *Divolidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTEH01*. The type genus for the taxon is *Candidatus* Divolida .

According to the GTDB R06-RS202, this order belongs to the class *Endomicrobia*.

Description of *Candidatus* Divolida subinetta sp. nov.

Candidatus Divolida subinetta (NL. fem. n. *subinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTEH01 sp011329045*. The type genome for the species is the GenBank assembly GCA_011329045.1. The GC content of the type genome is 29.62 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Divolosa vatilitio sp. nov.

Candidatus Divolosa vatilitio (NL. fem. n. *vatilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAV01 sp003972845*. The type genome for the species is the GenBank assembly GCA_003972845.1. The GC content of the type genome is 56.97 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Divolosa gen. nov.

Candidatus Divolosa (NL. fem. n. *Divolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QOAV01*. The type species for the genus is *Candidatus* Divolosa vatilitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QOAV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divolosaceae.

Description of *Candidatus* Divolosaceae fam. nov.

Candidatus Divolosaceae (NL. fem. n. *Divolosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QOAV01.* The type genus for the taxon is *Candidatus* Divolosa .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Divolula adporicella sp. nov.

Candidatus Divolula adporicella (NL. fem. n. *adporicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS995 sp902784095*. The type genome for the species is the GenBank assembly GCA_902784095.1. The GC content of the type genome is 26.26 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Divolula gen. nov.

Candidatus Divolula (NL. fem. n. *Divolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS995*. The type species for the genus is *Candidatus* Divolula adporicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Divolula bifisitoga sp. nov.

Candidatus Divolula bifisitoga (NL. fem. n. *bifisitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS995 sp900547465*. The type genome for the species is the GenBank assembly GCA_900547465.1. The GC content of the type genome is 27.55 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Divolula pecunitio sp. nov.

Candidatus Divolula pecunitio (NL. fem. n. *pecunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS995 sp900769695*. The type genome for the species is the GenBank assembly RS_GCF_900769695.1. The GC content of the type genome is 27.01 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Divorana necubibula sp. nov.

Candidatus Divorana necubibula (NL. fem. n. *necubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUSP01 sp903901855*. The type genome for the species is the GenBank assembly GCA_903885625.1. The GC content of the type genome is 63.9 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Divorana gen. nov.

Candidatus Divorana (NL. fem. n. *Divorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUSP01*. The type species for the genus is *Candidatus* Divorana necubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

70-9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Divoraria patibessa sp. nov.

Candidatus Divoraria patibessa (NL. fem. n. *patibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An172 sp002160515*. The type genome for the species is the GenBank assembly GCA_900546975.1. The GC content of the type genome is 40.38 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Divoraria gen. nov.

Candidatus Divoraria (NL. fem. n. *Divoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An172*. The type species for the genus is *Candidatus* Divoraria patibessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Divorella dibucago sp. nov.

Candidatus Divorella dibucago (NL. fem. n. *dibucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-181 sp003170135*. The type genome for the species is the GenBank assembly GCA_003170135.1. The GC content of the type genome is 67.53 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Divorella gen. nov.

Candidatus Divorella (NL. fem. n. *Divorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-181*. The type species for the genus is *Candidatus* Divorella dibucago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-181*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Divorellaceae.

Description of *Candidatus* Divorellaceae fam. nov.

Candidatus Divorellaceae (NL. fem. n. *Divorellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-181*. The type genus for the taxon is *Candidatus* Divorella .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Divoria admoritrix sp. nov.

Candidatus Divoria admoritrix (NL. fem. n. *admoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp003612585*. The type genome for the species is the GenBank assembly RS_GCF_003612585.1. The GC content of the type genome is 45.59 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Divoria gen. nov.

Candidatus Divoria (NL. fem. n. *Divoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7160*. The type species for the genus is *Candidatus* Divoria admoritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Divoria catilivita sp. nov.

Candidatus Divoria catilivita (NL. fem. n. *catilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp002491565*. The type genome for the species is the GenBank assembly GCA_002491565.1. The GC content of the type genome is 51.48 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Divoria conaritoga sp. nov.

Candidatus Divoria conaritoga (NL. fem. n. *conaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp902363665*. The type genome for the species is the GenBank assembly RS_GCF_902363665.1. The GC content of the type genome is 47.03 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Divoria diluditudo sp. nov.

Candidatus Divoria diluditudo (NL. fem. n. *diluditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp900757145*. The type genome for the species is the GenBank assembly RS_GCF_900757145.1. The GC content of the type genome is 46.52 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Divoria diluvetta sp. nov.

Candidatus Divoria diluvetta (NL. fem. n. *diluvetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp902363135*. The type genome for the species is the GenBank assembly RS_GCF_900758105.1. The GC content of the type genome is 50.4 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Divoria horomitio sp. nov.

Candidatus Divoria horomitio (NL. fem. n. *horomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp902783665*. The type genome for the species is the GenBank assembly GCA_902783665.1. The GC content of the type genome is 53.07 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Divoria inardatica sp. nov.

Candidatus Divoria inardatica (NL. fem. n. *inardatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7160 sp004557975*. The type genome for the species is the GenBank assembly GCA_004557975.1. The GC content of the type genome is 48.75 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Divorida peradigena sp. nov.

Candidatus Divorida peradigena (NL. fem. n. *peradigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTF01 sp902805655*. The type genome for the species is the GenBank assembly GCA_902805655.1. The GC content of the type genome is 70.71 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Divorida gen. nov.

Candidatus Divorida (NL. fem. n. *Divorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTF01*. The type species for the genus is *Candidatus* Divorida peradigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADCTF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divoridaceae.

Description of *Candidatus* Divoridaceae fam. nov.

Candidatus Divoridaceae (NL. fem. n. *Divoridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADCTF01.* The type genus for the taxon is *Candidatus* Divorida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Divorosa capucatica sp. nov.

Candidatus Divorosa capucatica (NL. fem. n. *capucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10348 sp002469915*. The type genome for the species is the GenBank assembly GCA_002469915.1. The GC content of the type genome is 49.31 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Divorosa gen. nov.

Candidatus Divorosa (NL. fem. n. *Divorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10348*. The type species for the genus is *Candidatus* Divorosa capucatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Divorosaceae fam. nov.

Candidatus Divorosaceae (NL. fem. n. *Divorosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10348.* The type genus for the taxon is *Candidatus* Divorosa .

According to GTDB R06-RS202, this family belongs to the order *Rhodothermales*.

Description of *Candidatus* Divorosa decenisca sp. nov.

Candidatus Divorosa decenisca (NL. fem. n. *decenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10348 sp013204185*. The type genome for the species is the GenBank assembly GCA_013204185.1. The GC content of the type genome is 49.73 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Divorula tigurilenta sp. nov.

Candidatus Divorula tigurilenta (NL. fem. n. *tigurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWFF01 sp002071485*. The type genome for the species is the GenBank assembly GCA_002071485.1. The GC content of the type genome is 63.22 %

and the genome length is 4.8 Mbp.

Description of *Candidatus* Divorula gen. nov.

Candidatus Divorula (NL. fem. n. *Divorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWFF01*. The type species for the genus is *Candidatus* Divorula tigurilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J093*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelosaceae.

Description of *Candidatus* Divulana bifaritrix sp. nov.

Candidatus Divulana bifaritrix (NL. fem. n. *bifaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDY01 sp005882775*. The type genome for the species is the GenBank assembly GCA_005881675.1. The GC content of the type genome is 65.74 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Divulana gen. nov.

Candidatus Divulana (NL. fem. n. *Divulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBDY01*. The type species for the genus is *Candidatus* Divulana bifaritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-121*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haluculaceae.

Description of *Candidatus* Divularia adlubitio sp. nov.

Candidatus Divularia adlubitio (NL. fem. n. *adlubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp902510755*. The type genome for the species is the

GenBank assembly GCA_902510755.1. The GC content of the type genome is 36.7 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Divularia gen. nov.

Candidatus Divularia (NL. fem. n. *Divularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SP4260*. The type species for the genus is *Candidatus* Divularia adlubitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Divularia anatrentia sp. nov.

Candidatus Divularia anatrentia (NL. fem. n. *anatrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp002728725*. The type genome for the species is the GenBank assembly GCA_002728725.1. The GC content of the type genome is 36.66 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Divularia citipivita sp. nov.

Candidatus Divularia citipivita (NL. fem. n. *citipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp003331585*. The type genome for the species is the GenBank assembly GCA_003331585.1. The GC content of the type genome is 35.4 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Divularia coticedo sp. nov.

Candidatus Divularia coticedo (NL. fem. n. *coticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp902517795*. The type genome for the species is the GenBank assembly GCA_902519395.1. The GC content of the type genome is 36.88 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Divularia cunabousia sp. nov.

Candidatus Divularia cunabousia (NL. fem. n. *cunabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp002715745*. The type genome for the species is the GenBank assembly GCA_002715745.1. The GC content of the type genome is 36.63 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Divularia innumibula sp. nov.

Candidatus Divularia innumibula (NL. fem. n. *innumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SP4260 sp902512585*. The type genome for the species is the GenBank assembly GCA_902512585.1. The GC content of the type genome is 36.37 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Divulella arnogilega sp. nov.

Candidatus Divulella arnogilega (NL. fem. n. *arnogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp009918005*. The type genome for the species is the GenBank assembly GCA_009918005.1. The GC content of the type genome is 47.78 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Divulella gen. nov.

Candidatus Divulella (NL. fem. n. *Divulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5976*. The type species for the genus is *Candidatus* Divulella arnogilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5976*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulellaceae.

Description of *Candidatus* Divulellaceae fam. nov.

Candidatus Divulellaceae (NL. fem. n. *Divulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5976.* The type genus for the taxon is *Candidatus* Divulella .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Divulella depecitas sp. nov.

Candidatus Divulella depecitas (NL. fem. n. *depecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp009923495*. The type genome for the species is the GenBank assembly GCA_009927365.1. The GC content of the type genome is 48.81 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Divulella encenitia sp. nov.

Candidatus Divulella encenitia (NL. fem. n. *encenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp903925705*. The type genome for the species is the GenBank assembly GCA_903925705.1. The GC content of the type genome is 47.95 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Divulella feditilenta sp. nov.

Candidatus Divulella feditilenta (NL. fem. n. *feditilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp903892635*. The type genome for the species is the GenBank assembly GCA_903846825.1. The GC content of the type genome is 50.44 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Divulella inaccilenta sp. nov.

Candidatus Divulella inaccilenta (NL. fem. n. *inaccilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp009885745*. The type genome for the species is the GenBank assembly GCA_009885745.1. The GC content of the type genome is 48.27 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Divulella invigatio sp. nov.

Candidatus Divulella invigatio (NL. fem. n. *invigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp009702945*. The type genome for the species is the GenBank assembly GCA_009702945.1. The GC content of the type genome is 48.2 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Divulella manubilenta sp. nov.

Candidatus Divulella manubilenta (NL. fem. n. *manubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp009698575*. The type genome for the species is the GenBank assembly GCA_009702125.1. The GC content of the type genome is 47.97 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Divulella momoritura sp. nov.

Candidatus Divulella momoritura (NL. fem. n. *momoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp903951185*. The type genome for the species is the GenBank assembly GCA_903919135.1. The GC content of the type genome is 44.1 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Divulella monodago sp. nov.

Candidatus Divulella monodago (NL. fem. n. *monodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp903907835*. The type genome for the species is the GenBank assembly GCA_903907835.1. The GC content of the type genome is 48.23 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Divulella rubigitica sp. nov.

Candidatus Divulella rubigitica (NL. fem. n. *rubigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5976 sp002430405*. The type genome for the species is the GenBank assembly GCA_002430405.1. The GC content of the type genome is 47.5 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Divulia futatugo sp. nov.

Candidatus Divulia futatugo (NL. fem. n. *futatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG131 sp900315885*. The type genome for the species is the GenBank assembly GCA_900315885.1. The GC content of the type genome is 31.09 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Divulia gen. nov.

Candidatus Divulia (NL. fem. n. *Divulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG131*. The type species for the genus is *Candidatus* Divulia futatugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Divulia tetenigena sp. nov.

Candidatus Divulia tetenigena (NL. fem. n. *tetenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG131 sp900549975*. The type genome for the species is the GenBank assembly GCA_900549975.1. The GC content of the type genome is 30.0 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Divulida pudibentia sp. nov.

Candidatus Divulida pudibentia (NL. fem. n. *pudibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKOX01 sp007119835*. The type genome for the species is the GenBank assembly GCA_007119835.1. The GC content of the type genome is 70.15 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Divulida gen. nov.

Candidatus Divulida (NL. fem. n. *Divulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKOX01*. The type species for the genus is *Candidatus* Divulida pudibentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Divulosa alembibula sp. nov.

Candidatus Divulosa alembibula (NL. fem. n. *alembibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4068 sp002419055*. The type genome for the species is the GenBank assembly GCA_002419055.1. The GC content of the type genome is 42.73 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Divulosa gen. nov.

Candidatus Divulosa (NL. fem. n. *Divulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4068*. The type species for the genus is *Candidatus* Divulosa alembibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divulosaceae.

Description of *Candidatus* Divulosaceae fam. nov.

Candidatus Divulosaceae (NL. fem. n. *Divulosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4068.* The type genus for the taxon is *Candidatus* Divulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Divulosales.

Description of *Candidatus* Divulosales ord. nov.

Candidatus Divulosales (NL. fem. n. *Divulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4068.* The type genus for the taxon is *Candidatus* Divulosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalobacteriia*.

Description of *Candidatus* Divulosa enucliforma sp. nov.

Candidatus Divulosa enucliforma (NL. fem. n. *enucliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4068 sp002382665*. The type genome for the species is the GenBank assembly GCA_002382665.1. The GC content of the type genome is 43.23 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Divulula affirivita sp. nov.

Candidatus Divulula affirivita (NL. fem. n. *affirivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5603 sp002839155*. The type genome for the species is the GenBank assembly GCA_002839155.1. The GC content of the type genome is 34.61 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Divulula gen. nov.

Candidatus Divulula (NL. fem. n. *Divulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5603*. The type species for the genus is *Candidatus* Divulula affirivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5603*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divululaceae.

Description of *Candidatus* Divululaceae fam. nov.

Candidatus Divululaceae (NL. fem. n. *Divululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5603.* The type genus for the taxon is *Candidatus* Divulula .

According to GTDB R06-RS202, this family belongs to the order *Izemoplasmatales*.

Description of *Candidatus* Divulula exsurimonas sp. nov.

Candidatus Divulula exsurimonas (NL. fem. n. *exsurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5603 sp002421405*. The type genome for the species is the GenBank assembly GCA_002421405.1. The GC content of the type genome is 36.66 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Divulula fuligousia sp. nov.

Candidatus Divulula fuligousia (NL. fem. n. *fuligousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5603 sp002424815*. The type genome for the species is the GenBank assembly GCA_002424815.1. The GC content of the type genome is 35.64 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Docibana cacomivita sp. nov.

Candidatus Docibana cacomivita (NL. fem. n. *cacomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2245 sp002347265*. The type genome for the species is the GenBank assembly GCA_002382005.1. The GC content of the type genome is 53.93 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Docibana gen. nov.

Candidatus Docibana (NL. fem. n. *Docibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2245*. The type species for the genus is *Candidatus* Docibana cacomivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2245*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibanaceae.

Description of *Candidatus* Docibanaceae fam. nov.

Candidatus Docibanaceae (NL. fem. n. *Docibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2245.* The type genus for the taxon is *Candidatus* Docibana .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Docibaria casigitas sp. nov.

Candidatus Docibaria casigitas (NL. fem. n. *casigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1342 sp003162245*. The type genome for the species is the GenBank assembly GCA_003162245.1. The GC content of the type genome is 67.14 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Docibaria gen. nov.

Candidatus Docibaria (NL. fem. n. *Docibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1342*. The type species for the genus is *Candidatus* Docibaria casigitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibariaceae.

Description of *Candidatus* Docibariaceae fam. nov.

Candidatus Docibariaceae (NL. fem. n. *Docibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1342*. The type genus for the taxon is *Candidatus* Docibaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cacomariales.

Description of *Candidatus* Docibaria tabifentia sp. nov.

Candidatus Docibaria tabifentia (NL. fem. n. *tabifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1342 sp903914415*. The type genome for the species is the GenBank assembly GCA_903835475.1. The GC content of the type genome is 67.43 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Docibella accorago sp. nov.

Candidatus Docibella accorago (NL. fem. n. *accorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2192 sp012728915*. The type genome for the species is the GenBank assembly GCA_012728915.1. The GC content of the type genome is 63.81 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Docibella gen. nov.

Candidatus Docibella (NL. fem. n. *Docibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2192*. The type species for the genus is *Candidatus* Docibella accorago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4778*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biverosaceae.

Description of *Candidatus* Docibella defanitia sp. nov.

Candidatus Docibella defanitia (NL. fem. n. *defanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2192 sp002419215*. The type genome for the species is the GenBank assembly GCA_002419215.1. The GC content of the type genome is 60.36 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Docibella ectenicula sp. nov.

Candidatus Docibella ectenicula (NL. fem. n. *ectenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2192 sp002067855*. The type genome for the species is the GenBank assembly GCA_002067855.1. The GC content of the type genome is 64.54 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Docibella incomousia sp. nov.

Candidatus Docibella incomousia (NL. fem. n. *incomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2192 sp013177795*. The type genome for the species is the GenBank assembly GCA_013177795.1. The GC content of the type genome is 64.37 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Docibella volubisca sp. nov.

Candidatus Docibella volubisca (NL. fem. n. *volubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2192 sp002327315*. The type genome for the species is the GenBank assembly GCA_002327315.1. The GC content of the type genome is 59.42 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Docibia cerevicula sp. nov.

Candidatus Docibia cerevicula (NL. fem. n. *cerevicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4293 sp900316585*. The type genome for the species is the GenBank assembly GCA_900316585.1. The GC content of the type genome is 42.17 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Docibia gen. nov.

Candidatus Docibia (NL. fem. n. *Docibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4293*. The type species for the genus is *Candidatus* Docibia cerevicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Docibia ficuledo sp. nov.

Candidatus Docibia ficuledo (NL. fem. n. *ficuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4293 sp002395835*. The type genome for the species is the GenBank assembly GCA_002353875.1. The GC content of the type genome is 42.17 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Docibida pavicilega sp. nov.

Candidatus Docibida pavicilega (NL. fem. n. *pavicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2059 sp002332615*. The type genome for the species is the GenBank assembly GCA_002423725.1. The GC content of the type genome is 43.36 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Docibida gen. nov.

Candidatus Docibida (NL. fem. n. *Docibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2059*. The type species for the genus is *Candidatus* Docibida pavicilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Docibosa vinacifica sp. nov.

Candidatus Docibosa vinacifica (NL. fem. n. *vinacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-42-23 sp002796345*. The type genome for the species is the GenBank assembly GCA_002796345.1. The GC content of the type genome is 42.21 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Docibosa gen. nov.

Candidatus Docibosa (NL. fem. n. *Docibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-42-23*. The type species for the genus is *Candidatus* Docibosa vinacifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-44-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponariaceae.

Description of *Candidatus* Docibula demagousia sp. nov.

Candidatus Docibula demagousia (NL. fem. n. *demagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-152 sp003229995*. The type genome for the species is the GenBank assembly GCA_003229995.1. The GC content of the type genome is 48.75 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Docibula gen. nov.

Candidatus Docibula (NL. fem. n. *Docibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-152*. The type species for the genus is *Candidatus* Docibula demagousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-152*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibulaceae.

Description of *Candidatus* Docibulaceae fam. nov.

Candidatus Docibulaceae (NL. fem. n. *Docibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-152.* The type genus for the taxon is *Candidatus* Docibula .

According to GTDB R06-RS202, this family belongs to the order *Thiohalomonadales_A*.

Description of *Candidatus* Docibula edissitudo sp. nov.

Candidatus Docibula edissitudo (NL. fem. n. *edissitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-152 sp011321815*. The type genome for the species is the GenBank assembly GCA_011321815.1. The GC content of the type genome is 50.47 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Docibula indupilenta sp. nov.

Candidatus Docibula indupilenta (NL. fem. n. *indupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-152 sp013151355*. The type genome for the species is the GenBank assembly GCA_013151355.1. The GC content of the type genome is 49.34 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Docibula invetousia sp. nov.

Candidatus Docibula invetousia (NL. fem. n. *invetousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-152 sp011051685*. The type genome for the species is the GenBank assembly GCA_011051685.1. The GC content of the type genome is 57.29 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Documana atropibra sp. nov.

Candidatus Documana atropibra (NL. fem. n. *atropibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8337 sp009920875*. The type genome for the species is the GenBank assembly GCA_009920875.1. The GC content of the type genome is 54.25 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Documana gen. nov.

Candidatus Documana (NL. fem. n. *Documana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8337*. The type species for the genus is *Candidatus* Documana atropibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RS24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venuciaceae.

Description of *Candidatus* Documana capudiforma sp. nov.

Candidatus Documana capudiforma (NL. fem. n. *capudiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8337 sp002721725*. The type genome for the species is the GenBank assembly GCA_002721725.1. The GC content of the type genome is 52.86 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Documana resupitio sp. nov.

Candidatus Documana resupitio (NL. fem. n. *resupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8337 sp900197605*. The type genome for the species is the

GenBank assembly GCA_002170955.2. The GC content of the type genome is 54.53 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Documaria nutamitura sp. nov.

Candidatus Documaria nutamitura (NL. fem. n. *nutamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVXT01 sp011773355*. The type genome for the species is the GenBank assembly GCA_011771205.1. The GC content of the type genome is 43.06 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Documaria gen. nov.

Candidatus Documaria (NL. fem. n. *Documaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVXT01*. The type species for the genus is *Candidatus* Documaria nutamitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WVXT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Documariaceae.

Description of *Candidatus* Documariaceae fam. nov.

Candidatus Documariaceae (NL. fem. n. *Documariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVXT01.* The type genus for the taxon is *Candidatus* Documaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *WVXT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Documariales.

Description of *Candidatus* Documariales ord. nov.

Candidatus Documariales (NL. fem. n. *Documariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVXT01.* The type genus for the taxon is *Candidatus* Documaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semunulae.

Description of *Candidatus* Documaria obnunatica sp. nov.

Candidatus Documaria obnunatica (NL. fem. n. *obnunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVXT01 sp009619095*. The type genome for the species is the GenBank assembly GCA_009619095.1. The GC content of the type genome is 41.15 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Documella adpecilega sp. nov.

Candidatus Documella adpecilega (NL. fem. n. *adpecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2376 sp002344285*. The type genome for the species is the GenBank assembly GCA_002344285.1. The GC content of the type genome is 72.01 % and the genome length is 8.69 Mbp.

Description of *Candidatus* Documella gen. nov.

Candidatus Documella (NL. fem. n. *Documella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2376*. The type species for the genus is *Candidatus* Documella adpecilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Documella redacedo sp. nov.

Candidatus Documella redacedo (NL. fem. n. *redacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2376 sp005779305*. The type genome for the species is the GenBank assembly GCA_005779305.1. The GC content of the type genome is 71.29 %

and the genome length is 8.08 Mbp.

Description of *Candidatus* Documella reforitura sp. nov.

Candidatus Documella reforitura (NL. fem. n. *reforitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2376 sp900696455*. The type genome for the species is the GenBank assembly GCA_014584455.1. The GC content of the type genome is 75.07 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Documia catecetta sp. nov.

Candidatus Documia catecetta (NL. fem. n. *catecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp003149875*. The type genome for the species is the GenBank assembly GCA_900547215.1. The GC content of the type genome is 38.79 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Documia gen. nov.

Candidatus Documia (NL. fem. n. *Documia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TF01-11*. The type species for the genus is *Candidatus* Documia catecetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Documia cenacedo sp. nov.

Candidatus Documia cenacedo (NL. fem. n. *cenacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp001414325*. The type genome for the species is the GenBank assembly GCA_000433155.1. The GC content of the type genome is 36.6 % and the genome length is 3.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Documia citiviforma sp. nov.

Candidatus Documia citiviforma (NL. fem. n. *citiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp000436755*. The type genome for the species is the GenBank assembly GCA_000436755.1. The GC content of the type genome is 35.91 % and the genome length is 2.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Documia colubatica sp. nov.

Candidatus Documia colubatica (NL. fem. n. *colubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp902788645*. The type genome for the species is the GenBank assembly GCA_902788645.1. The GC content of the type genome is 45.63 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Documia decacigena sp. nov.

Candidatus Documia decacigena (NL. fem. n. *decacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp001916135*. The type genome for the species is the GenBank assembly RS_GCF_902385585.1. The GC content of the type genome is 43.74 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Documia dedigax sp. nov.

Candidatus Documia dedigax (NL. fem. n. *dedigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp003611745*. The type genome for the species is the GenBank assembly RS_GCF_003612355.1. The GC content of the type genome is 42.67 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Documia delacicella sp. nov.

Candidatus Documia delacicella (NL. fem. n. *delacicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp900759665*. The type genome for the species is the GenBank assembly RS_GCF_900759665.1. The GC content of the type genome is 44.74 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Documia depelatio sp. nov.

Candidatus Documia depelatio (NL. fem. n. *depelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp002361175*. The type genome for the species is the GenBank assembly GCA_002493555.1. The GC content of the type genome is 34.49 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Documia dimidimonas sp. nov.

Candidatus Documia dimidimonas (NL. fem. n. *dimidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp003612285*. The type genome for the species is the GenBank assembly RS_GCF_003612285.1. The GC content of the type genome is 41.46 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Documia fecunitas sp. nov.

Candidatus Documia fecunitas (NL. fem. n. *fecunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp003529475*. The type genome for the species is the GenBank assembly GCA_003529475.1. The GC content of the type genome is 42.27 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Documia genufigena sp. nov.

Candidatus Documia genufigena (NL. fem. n. *genufigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp003524945*. The type genome for the species is the GenBank assembly GCA_003524945.1. The GC content of the type genome is 46.46 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Documia irrelousia sp. nov.

Candidatus Documia irrelousia (NL. fem. n. *irrelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp902795775*. The type genome for the species is the GenBank assembly GCA_902795775.1. The GC content of the type genome is 42.59 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Documia luculifica sp. nov.

Candidatus Documia luculifica (NL. fem. n. *luculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp902795705*. The type genome for the species is the GenBank assembly GCA_902795705.1. The GC content of the type genome is 41.78 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Documia nicomitica sp. nov.

Candidatus Documia nicomitica (NL. fem. n. *nicomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp009774235*. The type genome for the species is the GenBank assembly GCA_009774235.1. The GC content of the type genome is 35.55 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Documia noninitura sp. nov.

Candidatus Documia noninitura (NL. fem. n. *noninitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp002499945*. The type genome for the species is the GenBank assembly GCA_002499945.1. The GC content of the type genome is 37.47 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Documia vilitibula sp. nov.

Candidatus Documia vilitibula (NL. fem. n. *vilitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TF01-11 sp002493085*. The type genome for the species is the GenBank assembly GCA_002493085.1. The GC content of the type genome is 36.9 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Documida cobalimonas sp. nov.

Candidatus Documida cobalimonas (NL. fem. n. *cobalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU068 sp001513545*. The type genome for the species is the GenBank assembly GCA_001513545.1. The GC content of the type genome is 45.67 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Documida gen. nov.

Candidatus Documida (NL. fem. n. *Documida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU068*. The type species for the genus is *Candidatus* Documida cobalimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Documida loripago sp. nov.

Candidatus Documida loripago (NL. fem. n. *loripago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU068 sp012516535*. The type genome for the species is the GenBank assembly GCA_012516535.1. The GC content of the type genome is 45.65 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Documida virecousia sp. nov.

Candidatus Documida virecousia (NL. fem. n. *virecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU068 sp012842275*. The type genome for the species is the GenBank assembly GCA_012842275.1. The GC content of the type genome is 45.99 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Documida visibigena sp. nov.

Candidatus Documida visibigena (NL. fem. n. *visibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU068 sp012840405*. The type genome for the species is the GenBank assembly GCA_012840405.1. The GC content of the type genome is 45.16 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Documosa nicotilega sp. nov.

Candidatus Documosa nicotilega (NL. fem. n. *nicotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-191 sp003230535*. The type genome for the species is the GenBank assembly GCA_003230535.1. The GC content of the type genome is 46.94 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Documosa gen. nov.

Candidatus Documosa (NL. fem. n. *Documosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-191*. The type species for the genus is *Candidatus* Documosa nicotilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-191*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Documosaceae.

Description of *Candidatus* Documosaceae fam. nov.

Candidatus Documosaceae (NL. fem. n. *Documosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-191.* The type genus for the taxon is *Candidatus* Documosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rinocanales.

Description of *Candidatus* Documula adfamugo sp. nov.

Candidatus Documula adfamugo (NL. fem. n. *adfamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp902573725*. The type genome for the species is the GenBank assembly GCA_902573725.1. The GC content of the type genome is 37.31 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Documula gen. nov.

Candidatus Documula (NL. fem. n. *Documula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5951*. The type species for the genus is *Candidatus* Documula adfamugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Documula adrotitio sp. nov.

Candidatus Documula adrotitio (NL. fem. n. *adrotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp902516825*. The type genome for the species is the GenBank assembly GCA_902516825.1. The GC content of the type genome is 39.34 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Documula apsocimonia sp. nov.

Candidatus Documula apsocimonia (NL. fem. n. *apsocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp003332015*. The type genome for the species is the GenBank assembly GCA_003332015.1. The GC content of the type genome is 41.44 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Documula arrugicella sp. nov.

Candidatus Documula arrugicella (NL. fem. n. *arrugicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp902632595*. The type genome for the species is the GenBank assembly GCA_902632595.1. The GC content of the type genome is 37.87 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Documula lavacilega sp. nov.

Candidatus Documula lavacilega (NL. fem. n. *lavacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp002430515*. The type genome for the species is the GenBank assembly GCA_002430425.1. The GC content of the type genome is 40.98 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Documula modififorma sp. nov.

Candidatus Documula modififorma (NL. fem. n. *modififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp012269555*. The type genome for the species is the GenBank assembly GCA_012269555.1. The GC content of the type genome is 37.26 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Documula monocilega sp. nov.

Candidatus Documula monocilega (NL. fem. n. *monocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5951 sp902520885*. The type genome for the species is the GenBank assembly GCA_902520885.1. The GC content of the type genome is 37.1 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Documula nitelifica sp. nov.

Candidatus Documula nitelifica (NL. fem. n. *nitelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp902622515*. The type genome for the species is the GenBank assembly GCA_902622515.1. The GC content of the type genome is 37.1 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Documula peracitrix sp. nov.

Candidatus Documula peracitrix (NL. fem. n. *peracitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp009936885*. The type genome for the species is the GenBank assembly GCA_009936885.1. The GC content of the type genome is 41.1 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Documula rubecicella sp. nov.

Candidatus Documula rubecicella (NL. fem. n. *rubecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5951 sp902625725*. The type genome for the species is the GenBank assembly GCA_902625725.1. The GC content of the type genome is 37.65 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Dokdonella capabax sp. nov.

Candidatus Dokdonella capabax (NL. fem. n. *capabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella sp004295005*. The type genome for the species is the GenBank assembly GCA_004295005.1. The GC content of the type genome is 61.83 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Dokdonella cotenibula sp. nov.

Candidatus Dokdonella cotenibula (NL. fem. n. *cotenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella sp001899855*. The type genome for the species is the GenBank assembly GCA_001899855.1. The GC content of the type genome is 63.38 % and the genome length is 3.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Dokdonella inretilenta sp. nov.

Candidatus Dokdonella inretilenta (NL. fem. n. *inretilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella sp002483055*. The type genome for the species is the GenBank assembly GCA_002483055.1. The GC content of the type genome is 70.04 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Dokdonella allacentia sp. nov.

Candidatus Dokdonella allacentia (NL. fem. n. *allacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella_A sp004143945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004143945.1. The GC content of the type genome is 69.41 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Dokdonella cotenilenta sp. nov.

Candidatus Dokdonella cotenilenta (NL. fem. n. *cotenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella_A sp002297645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002298205.1. The GC

content of the type genome is 68.52 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Dokdonella decucitica sp. nov.

Candidatus Dokdonella decucitica (NL. fem. n. *decucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella_A sp002632325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002632325.1. The GC content of the type genome is 65.02 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Dokdonella homunax sp. nov.

Candidatus Dokdonella homunax (NL. fem. n. *homunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella_A sp014338185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014338185.1. The GC content of the type genome is 69.53 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Dokdonella menapatica sp. nov.

Candidatus Dokdonella menapatica (NL. fem. n. *menapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonella_A sp003142815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003159285.1. The GC content of the type genome is 64.09 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Dokdonella penecitas sp. nov.

Candidatus Dokdonella penecitas (NL. fem. n. *penecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Dokdonella_A sp009996615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009996615.1. The GC content of the type genome is 69.95 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Dokdonia dimacilenta sp. nov.

Candidatus Dokdonia dimacilenta (NL. fem. n. *dimacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonia sp002712765*. The type genome for the species is the GenBank assembly GCA_002337205.1. The GC content of the type genome is 40.75 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Dokdonia exaspicula sp. nov.

Candidatus Dokdonia exaspicula (NL. fem. n. *exaspicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonia sp000355805*. The type genome for the species is the GenBank assembly RS_GCF_000355805.1. The GC content of the type genome is 37.4 % and the genome length is 3.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater 60 km offshore".

Description of *Candidatus* Dokdonia ignicessa sp. nov.

Candidatus Dokdonia ignicessa (NL. fem. n. *ignicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonia sp003095655*. The type genome for the species is the GenBank assembly RS_GCF_003095655.1. The GC content of the type genome is 37.16 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Dokdonia minagatica sp. nov.

Candidatus Dokdonia minagatica (NL. fem. n. *minagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonia sp000212355*. The type genome for the species is the

GenBank assembly RS_GCF_000212355.1. The GC content of the type genome is 37.29 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Dokdonia ruricastra sp. nov.

Candidatus Dokdonia ruricastra (NL. fem. n. *ruricastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dokdonia sp007827465*. The type genome for the species is the GenBank assembly RS_GCF_007827465.1. The GC content of the type genome is 35.77 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Dolichospermum ambaciforma sp. nov.

Candidatus Dolichospermum ambaciforma (NL. fem. n. *ambaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp903848645*. The type genome for the species is the GenBank assembly GCA_903848645.1. The GC content of the type genome is 37.84 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Dolichospermum cisorilega sp. nov.

Candidatus Dolichospermum cisorilega (NL. fem. n. *cisorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp009712035*. The type genome for the species is the GenBank assembly RS_GCF_009712035.1. The GC content of the type genome is 38.17 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Dolichospermum conaritas sp. nov.

Candidatus Dolichospermum conaritas (NL. fem. n. *conaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp009711975*. The type genome for the species is the GenBank assembly RS_GCF_009711975.1. The GC content of the type genome is 37.57 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Dolichospermum homicitoga sp. nov.

Candidatus Dolichospermum homicitoga (NL. fem. n. *homicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp000312705*. The type genome for the species is the GenBank assembly RS_GCF_009711925.1. The GC content of the type genome is 38.01 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Dolichospermum risibisca sp. nov.

Candidatus Dolichospermum risibisca (NL. fem. n. *risibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp009711935*. The type genome for the species is the GenBank assembly RS_GCF_009711935.1. The GC content of the type genome is 38.0 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Dolichospermum roraricula sp. nov.

Candidatus Dolichospermum roraricula (NL. fem. n. *roraricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp001277295*. The type genome for the species is the GenBank assembly RS_GCF_000789435.1. The GC content of the type genome is 38.22 % and the genome length is 5.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lagoon".

Description of *Candidatus* Dolichospermum sotuledo sp. nov.

Candidatus Dolichospermum sotuledo (NL. fem. n. *sotuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dolichospermum sp900299285*. The type genome for the species is the GenBank assembly GCA_900299285.1. The GC content of the type genome is 37.07 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Domabaria semunicella sp. nov.

Candidatus Domabaria semunicella (NL. fem. n. *semunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBH01 sp009695285*. The type genome for the species is the GenBank assembly GCA_009695285.1. The GC content of the type genome is 62.99 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Domabaria gen. nov.

Candidatus Domabaria (NL. fem. n. *Domabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBH01*. The type species for the genus is *Candidatus* Domabaria semunicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SIBH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabariaceae.

Description of *Candidatus* Domabariaceae fam. nov.

Candidatus Domabariaceae (NL. fem. n. *Domabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SIBH01*. The type genus for the taxon is *Candidatus* Domabaria .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Domabella desonilega sp. nov.

Candidatus Domabella desonilega (NL. fem. n. *desonilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2144 sp002328295*. The type genome for the species is the GenBank assembly GCA_002434705.1. The GC content of the type genome is 42.73 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Domabella gen. nov.

Candidatus Domabella (NL. fem. n. *Domabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2144*. The type species for the genus is *Candidatus* Domabella

desonilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domabia haricitudo sp. nov.

Candidatus Domabia haricitudo (NL. fem. n. *haricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXPS01 sp903921365*. The type genome for the species is the GenBank assembly GCA_903898895.1. The GC content of the type genome is 57.88 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Domabia gen. nov.

Candidatus Domabia (NL. fem. n. *Domabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXPS01*. The type species for the genus is *Candidatus* Domabia haricitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J036*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depetanaceae.

Description of *Candidatus* Domabia malifisca sp. nov.

Candidatus Domabia malifisca (NL. fem. n. *malifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXPS01 sp903873965*. The type genome for the species is the GenBank assembly GCA_903873965.1. The GC content of the type genome is 55.73 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Domabida recorousia sp. nov.

Candidatus Domabida recorousia (NL. fem. n. *recorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYYI01 sp903930345*. The type genome for the species is the

GenBank assembly GCA_903930345.1. The GC content of the type genome is 61.64 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Domabida gen. nov.

Candidatus Domabida (NL. fem. n. *Domabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYYI01*. The type species for the genus is *Candidatus* Domabida recorousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYYI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabidaceae.

Description of *Candidatus* Domabidaceae fam. nov.

Candidatus Domabidaceae (NL. fem. n. *Domabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYYI01*. The type genus for the taxon is *Candidatus* Domabida .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Domicana faticatica sp. nov.

Candidatus Domicana faticatica (NL. fem. n. *faticatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTN01 sp903881515*. The type genome for the species is the GenBank assembly GCA_903929285.1. The GC content of the type genome is 66.61 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Domicana gen. nov.

Candidatus Domicana (NL. fem. n. *Domicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRTN01*. The type species for the genus is *Candidatus* Domicana faticatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domicaria catocimonas sp. nov.

Candidatus Domicaria catocimonas (NL. fem. n. *catocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKY01 sp007123515*. The type genome for the species is the GenBank assembly GCA_007123515.1. The GC content of the type genome is 39.88 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Domicaria gen. nov.

Candidatus Domicaria (NL. fem. n. *Domicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKKY01*. The type species for the genus is *Candidatus* Domicaria catocimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKKY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domicariaceae.

Description of *Candidatus* Domicariaceae fam. nov.

Candidatus Domicariaceae (NL. fem. n. *Domicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKKY01.* The type genus for the taxon is *Candidatus* Domicaria .

According to GTDB R06-RS202, this family belongs to the order *Peptococcales*.

Description of *Candidatus* Domicaria epigribra sp. nov.

Candidatus Domicaria epigribra (NL. fem. n. *epigribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKKY01 sp009930175*. The type genome for the species is the GenBank assembly GCA_009930175.1. The GC content of the type genome is 33.59 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Domicia cicatibula sp. nov.

Candidatus Domicia cicatibula (NL. fem. n. *cicatibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBG01 sp013360575*. The type genome for the species is the GenBank assembly GCA_013360575.1. The GC content of the type genome is 64.31 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Domicia gen. nov.

Candidatus Domicia (NL. fem. n. *Domicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBG01*. The type species for the genus is *Candidatus* Domicia cicatibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J102*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deparosaceae.

Description of *Candidatus* Domicida accogibula sp. nov.

Candidatus Domicida accogibula (NL. fem. n. *accogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp902790115*. The type genome for the species is the GenBank assembly GCA_902790115.1. The GC content of the type genome is 57.23 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Domicida gen. nov.

Candidatus Domicida (NL. fem. n. *Domicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3792*. The type species for the genus is *Candidatus* Domicida accogibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Domicida denunimonia sp. nov.

Candidatus Domicida denunimonia (NL. fem. n. *denunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp902768795*. The type genome for the species is the GenBank assembly GCA_902768795.1. The GC content of the type genome is 56.72 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Domicida furibitura sp. nov.

Candidatus Domicida furibitura (NL. fem. n. *furibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp900318765*. The type genome for the species is the GenBank assembly GCA_900318765.1. The GC content of the type genome is 55.42 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Domicida infanax sp. nov.

Candidatus Domicida infanax (NL. fem. n. *infanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp902789675*. The type genome for the species is the GenBank assembly GCA_902789675.1. The GC content of the type genome is 57.4 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Domicida panifitudo sp. nov.

Candidatus Domicida panifitudo (NL. fem. n. *panifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp902792295*. The type genome for the species is the GenBank assembly GCA_902792295.1. The GC content of the type genome is 58.08 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Domicida subofentia sp. nov.

Candidatus Domicida subofentia (NL. fem. n. *subofentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp002369195*. The type genome for the species is the GenBank assembly GCA_002369195.1. The GC content of the type genome is 59.55 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Domicida voragimonas sp. nov.

Candidatus Domicida voragimonas (NL. fem. n. *voragimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3792 sp900318745*. The type genome for the species is the GenBank assembly GCA_900318745.1. The GC content of the type genome is 57.13 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Domicosa astapugo sp. nov.

Candidatus Domicosa astapugo (NL. fem. n. *astapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10183 sp001871815*. The type genome for the species is the GenBank assembly GCA_001871815.1. The GC content of the type genome is 39.65 % and the genome length is 1.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Domicosa gen. nov.

Candidatus Domicosa (NL. fem. n. *Domicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10183*. The type species for the genus is *Candidatus* Domicosa astapugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10183*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domicosaceae.

Description of *Candidatus* Domicosaceae fam. nov.

Candidatus Domicosaceae (NL. fem. n. *Domicosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10183.* The type genus for the taxon is *Candidatus* Domicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10183*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domicosales.

Description of *Candidatus* Domicosales ord. nov.

Candidatus Domicosales (NL. fem. n. *Domicosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10183.* The type genus for the taxon is *Candidatus* Domicosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Domicosa favonentia sp. nov.

Candidatus Domicosa favonentia (NL. fem. n. *favonentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10183 sp002780805*. The type genome for the species is the GenBank assembly GCA_002780805.1. The GC content of the type genome is 42.03 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Domicosa nugacessa sp. nov.

Candidatus Domicosa nugacessa (NL. fem. n. *nugacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10183 sp002771475*. The type genome for the species is the GenBank assembly GCA_002771475.1. The GC content of the type genome is 42.82 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Domicosa rosarastra sp. nov.

Candidatus Domicosa rosarastra (NL. fem. n. *rosarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10183 sp003485765*. The type genome for the species is the GenBank assembly GCA_001803975.1. The GC content of the type genome is 39.42 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Domicula pragmicula sp. nov.

Candidatus Domicula pragmicula (NL. fem. n. *pragmicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-13 sp001772665*. The type genome for the species is the GenBank assembly GCA_001772665.1. The GC content of the type genome is 38.92 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Domicula gen. nov.

Candidatus Domicula (NL. fem. n. *Domicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-13*. The type species for the genus is *Candidatus* Domicula pragmicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domiculaceae.

Description of *Candidatus* Domiculaceae fam. nov.

Candidatus Domiculaceae (NL. fem. n. *Domiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-39-13.* The type genus for the taxon is *Candidatus* Domicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-01-FULL-39-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domiculales.

Description of *Candidatus* Domiculales ord. nov.

Candidatus Domiculales (NL. fem. n. *Domiculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-39-13.* The type genus for the taxon is *Candidatus* Domicula .

According to the original version of GTDB R06-RS202, this family belongs to the class *WWE3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Veridulae.

Description of *Candidatus* Domigana doxolitia sp. nov.

Candidatus Domigana doxolitia (NL. fem. n. *doxolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMSN01 sp903844135*. The type genome for the species is the GenBank assembly GCA_903922595.1. The GC content of the type genome is 69.26 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Domigana gen. nov.

Candidatus Domigana (NL. fem. n. *Domigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMSN01*. The type species for the genus is *Candidatus* Domigana doxolitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domigana hirudimonas sp. nov.

Candidatus Domigana hirudimonas (NL. fem. n. *hirudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMSN01 sp013201075*. The type genome for the species is the GenBank assembly RS_GCF_013166815.1. The GC content of the type genome is 64.65 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Domigaria colimigena sp. nov.

Candidatus Domigaria colimigena (NL. fem. n. *colimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS743 sp900545085*. The type genome for the species is the GenBank assembly GCA_900545085.1. The GC content of the type genome is 47.24 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Domigaria gen. nov.

Candidatus Domigaria (NL. fem. n. *Domigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS743*. The type species for the genus is *Candidatus* Domigaria colimigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domigella rorifugo sp. nov.

Candidatus Domigella rorifugo (NL. fem. n. *rorifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-46-9 sp001873005*. The type genome for the species is the GenBank assembly GCA_002779125.1. The GC content of the type genome is 45.46 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Domigella gen. nov.

Candidatus Domigella (NL. fem. n. *Domigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-46-9*. The type species for the genus is *Candidatus* Domigella rorifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Domigia genocitrix sp. nov.

Candidatus Domigia genocitrix (NL. fem. n. *genocitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-N16 sp003278305*. The type genome for the species is the GenBank assembly GCA_003278305.1. The GC content of the type genome is 35.67 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Domigia gen. nov.

Candidatus Domigia (NL. fem. n. *Domigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-N16*. The type species for the genus is *Candidatus* Domigia genocitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domigia nosocilenta sp. nov.

Candidatus Domigia nosocilenta (NL. fem. n. *nosocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-N16 sp902634515*. The type genome for the species is the GenBank assembly GCA_902634515.1. The GC content of the type genome is 35.57 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Domigia utricifica sp. nov.

Candidatus Domigia utricifica (NL. fem. n. *utricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-N16 sp003280135*. The type genome for the species is the GenBank assembly GCA_003280135.1. The GC content of the type genome is 35.36 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Domigida denoretta sp. nov.

Candidatus Domigida denoretta (NL. fem. n. *denoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-32-17 sp002771395*. The type genome for the species is the GenBank assembly GCA_002771395.1. The GC content of the type genome is 32.5 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Domigida gen. nov.

Candidatus Domigida (NL. fem. n. *Domigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-32-17*. The type species for the genus is *Candidatus* Domigida denoretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-32-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domigidaceae.

Description of *Candidatus* Domigidaceae fam. nov.

Candidatus Domigidaceae (NL. fem. n. *Domigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-32-17.* The type genus for the taxon is *Candidatus* Domigida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Domigida lapicatica sp. nov.

Candidatus Domigida lapicatica (NL. fem. n. *lapicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-32-17 sp903872185*. The type genome for the species is the GenBank assembly GCA_903913035.1. The GC content of the type genome is 31.09 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Domigida patibax sp. nov.

Candidatus Domigida patibax (NL. fem. n. *patibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-32-17 sp001769035*. The type genome for the species is the

GenBank assembly GCA_001769035.1. The GC content of the type genome is 30.96 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Domigida rorififorma sp. nov.

Candidatus Domigida rorififorma (NL. fem. n. *rorififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-32-17 sp903837285*. The type genome for the species is the GenBank assembly GCA_903940465.1. The GC content of the type genome is 31.41 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Domigosa recumitia sp. nov.

Candidatus Domigosa recumitia (NL. fem. n. *recumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10199 sp001797365*. The type genome for the species is the GenBank assembly GCA_001797365.1. The GC content of the type genome is 45.24 % and the genome length is 2.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Domigosa gen. nov.

Candidatus Domigosa (NL. fem. n. *Domigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10199*. The type species for the genus is *Candidatus* Domigosa recumitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domigosaceae.

Description of *Candidatus* Domigosaceae fam. nov.

Candidatus Domigosaceae (NL. fem. n. *Domigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10199.* The type genus for the taxon is *Candidatus* Domigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domigosales.

Description of *Candidatus* Domigosales ord. nov.

Candidatus Domigosales (NL. fem. n. *Domigosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10199.* The type genus for the taxon is *Candidatus* Domigosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Domigosae class. nov.

Candidatus Domigosae (NL. fem. n. *c__Domigosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10199.* The type genus for the taxon is *Candidatus* Domigosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Domigosota.

Description of *Candidatus* Domigosota phyl. nov.

Candidatus Domigosota (NL. fem. n. *Domigosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10199.* The type genus for the taxon is *Candidatus* Domigosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Domigula unetvicula sp. nov.

Candidatus Domigula unetvicula (NL. fem. n. *unetvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWR01 sp012103495*. The type genome for the species is the GenBank assembly GCA_012103495.1. The GC content of the type genome is 43.6 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Domigula gen. nov.

Candidatus Domigula (NL. fem. n. *Domigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWR01*. The type species for the genus is *Candidatus* Domigula unetvicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WLWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domigulaceae.

Description of *Candidatus* Domigulaceae fam. nov.

Candidatus Domigulaceae (NL. fem. n. *Domigulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WLWR01.* The type genus for the taxon is *Candidatus* Domigula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WLWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domigulales.

Description of *Candidatus* Domigulales ord. nov.

Candidatus Domigulales (NL. fem. n. *Domigulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WLWR01.* The type genus for the taxon is *Candidatus* Domigula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Domipana exsanifica sp. nov.

Candidatus Domipana exsanifica (NL. fem. n. *exsanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU049 sp001603615*. The type genome for the species is the GenBank assembly GCA_001603615.1. The GC content of the type genome is 29.11 % and the genome length is 1.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Domipana gen. nov.

Candidatus Domipana (NL. fem. n. *Domipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU049*. The type species for the genus is *Candidatus* Domipana exsanifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domipanaceae.

Description of *Candidatus* Domipanaceae fam. nov.

Candidatus Domipanaceae (NL. fem. n. *Domipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU049.* The type genus for the taxon is *Candidatus* Domipana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Domipana senipax sp. nov.

Candidatus Domipana senipax (NL. fem. n. *senipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU049 sp001513285*. The type genome for the species is the GenBank assembly GCA_012727615.1. The GC content of the type genome is 28.97 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Domipana viginastra sp. nov.

Candidatus Domipana viginastra (NL. fem. n. *viginastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU049 sp001512885*. The type genome for the species is the GenBank assembly GCA_012840645.1. The GC content of the type genome is 28.81 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Domiparia carunisca sp. nov.

Candidatus Domiparia carunisca (NL. fem. n. *carunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1563 sp001871325*. The type genome for the species is the GenBank assembly GCA_002322495.1. The GC content of the type genome is 37.36 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Domiparia gen. nov.

Candidatus Domiparia (NL. fem. n. *Domiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1563*. The type species for the genus is *Candidatus* Domiparia carunisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domipella peracimonas sp. nov.

Candidatus Domipella peracimonas (NL. fem. n. *peracimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Sam29DG08-bin30 sp003045995*. The type genome for the species is the GenBank assembly GCA_003045995.1. The GC content of the type genome is 50.25 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Domipella gen. nov.

Candidatus Domipella (NL. fem. n. *Domipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Sam29DG08-bin30*. The type species for the genus is *Candidatus* Domipella peracimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Domipia secunitoga sp. nov.

Candidatus Domipia secunitoga (NL. fem. n. *secunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJMU01 sp903821875*. The type genome for the species is the GenBank assembly GCA_903821875.1. The GC content of the type genome is 61.0 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Domipia gen. nov.

Candidatus Domipia (NL. fem. n. *Domipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJMU01*. The type species for the genus is *Candidatus* Domipia secunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponosaceae.

Description of *Candidatus* Domipida catapicella sp. nov.

Candidatus Domipida catapicella (NL. fem. n. *catapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-46-14 sp001771585*. The type genome for the species is the GenBank assembly GCA_001771585.1. The GC content of the type genome is 46.32 % and the genome length is 1.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Domipida gen. nov.

Candidatus Domipida (NL. fem. n. *Domipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-46-14*. The type species for the genus is *Candidatus*

Domipida catapicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domipidaceae.

Description of *Candidatus* Domipidaceae fam. nov.

Candidatus Domipidaceae (NL. fem. n. *Domipidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYC2-FULL-46-14.* The type genus for the taxon is *Candidatus* Domipida .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYC2-FULL-46-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domipidales.

Description of *Candidatus* Domipidales ord. nov.

Candidatus Domipidales (NL. fem. n. *Domipidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYC2-FULL-46-14.* The type genus for the taxon is *Candidatus* Domipida .

According to the original version of GTDB R06-RS202, this family belongs to the class *WOR-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Detesanae.

Description of *Candidatus* Domiposa armicago sp. nov.

Candidatus Domiposa armicago (NL. fem. n. *armicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-451 sp900758495*. The type genome for the species is the GenBank assembly RS_GCF_900758495.1. The GC content of the type genome is 28.01 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Domiposa gen. nov.

Candidatus Domiposa (NL. fem. n. *Domiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-451*. The type species for the genus is *Candidatus* Domiposa armicago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Domiposa detunentia sp. nov.

Candidatus Domiposa detunentia (NL. fem. n. *detunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-451 sp000438295*. The type genome for the species is the GenBank assembly GCA_000438295.1. The GC content of the type genome is 27.77 % and the genome length is 1.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Domiposa occucago sp. nov.

Candidatus Domiposa occucago (NL. fem. n. *occucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-451 sp900760545*. The type genome for the species is the GenBank assembly RS_GCF_900760545.1. The GC content of the type genome is 27.51 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Domipula dirititrix sp. nov.

Candidatus Domipula dirititrix (NL. fem. n. *dirititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS172 sp900539855*. The type genome for the species is the GenBank assembly RS_GCF_900763555.1. The GC content of the type genome is 48.23 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Domipula gen. nov.

Candidatus Domipula (NL. fem. n. *Domipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS172*. The type species for the genus is *Candidatus* Domipula dirititrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Donghicola pocilitio sp. nov.

Candidatus Donghicola pocilitio (NL. fem. n. *pocilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Donghicola sp013377555*. The type genome for the species is the GenBank assembly RS_GCF_013377535.1. The GC content of the type genome is 60.97 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Dongia illibitica sp. nov.

Candidatus Dongia illibitica (NL. fem. n. *illibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dongia sp000620685*. The type genome for the species is the GenBank assembly RS_GCF_000620685.1. The GC content of the type genome is 63.67 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Dorea excamentia sp. nov.

Candidatus Dorea excamentia (NL. fem. n. *excamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dorea_A sp900550865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900550865.1. The GC content of the type genome is 42.5 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Dormibacter astipitudo sp. nov.

Candidatus Dormibacter astipitudo (NL. fem. n. *astipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dormibacter sp003244185*. The type genome for the species is the GenBank assembly GCA_003244185.1. The GC content of the type genome is 66.67 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Doxolana detumitura sp. nov.

Candidatus Doxolana detumitura (NL. fem. n. *detumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B21-G16 sp003644825*. The type genome for the species is the GenBank assembly GCA_003644825.1. The GC content of the type genome is 33.68 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Doxolana gen. nov.

Candidatus Doxolana (NL. fem. n. *Doxolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B21-G16*. The type species for the genus is *Candidatus* Doxolana detumitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B21-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolanaceae.

Description of *Candidatus* Doxolanaceae fam. nov.

Candidatus Doxolanaceae (NL. fem. n. *Doxolanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G16.* The type genus for the taxon is *Candidatus* Doxolana .

According to the original version of GTDB R06-RS202, this family belongs to the order *B21-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Doxolanales.

Description of *Candidatus* Doxolanales ord. nov.

Candidatus Doxolanales (NL. fem. n. *Doxolanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G16.* The type genus for the taxon is *Candidatus* Doxolana .

According to the original version of GTDB R06-RS202, this family belongs to the class *SM23-31*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Feditulae.

Description of *Candidatus* Doxolaria taraximonas sp. nov.

Candidatus Doxolaria taraximonas (NL. fem. n. *taraximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6077 sp002436065*. The type genome for the species is the GenBank assembly GCA_002436065.1. The GC content of the type genome is 62.21 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Doxolaria gen. nov.

Candidatus Doxolaria (NL. fem. n. *Doxolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6077*. The type species for the genus is *Candidatus* Doxolaria taraximonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolariaceae.

Description of *Candidatus* Doxolariaceae fam. nov.

Candidatus Doxolariaceae (NL. fem. n. *Doxolariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6077.* The type genus for the taxon is *Candidatus* Doxolaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Doxolariales.

Description of *Candidatus* Doxolariales ord. nov.

Candidatus Doxolariales (NL. fem. n. *Doxolariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6077.* The type genus for the taxon is *Candidatus* Doxolaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Doxolariae.

Description of *Candidatus* Doxolariae class. nov.

Candidatus Doxolariae (NL. fem. n. *c__Doxolariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6077.* The type genus for the taxon is *Candidatus* Doxolaria .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Doxolella errabimonas sp. nov.

Candidatus Doxolella errabimonas (NL. fem. n. *errabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1908 sp002337525*. The type genome for the species is the GenBank assembly GCA_002337525.1. The GC content of the type genome is 41.03 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Doxolella gen. nov.

Candidatus Doxolella (NL. fem. n. *Doxolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1908*. The type species for the genus is *Candidatus* Doxolella errabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1908*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolellaceae.

Description of *Candidatus* Doxolellaceae fam. nov.

Candidatus Doxolellaceae (NL. fem. n. *Doxolellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1908.* The type genus for the taxon is *Candidatus* Doxolella .

According to GTDB R06-RS202, this family belongs to the order *Caedimonadales*.

Description of *Candidatus* Doxolida novilibula sp. nov.

Candidatus Doxolida novilibula (NL. fem. n. *novilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2128 sp002402135*. The type genome for the species is the GenBank assembly GCA_002402135.1. The GC content of the type genome is 45.07 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Doxolida gen. nov.

Candidatus Doxolida (NL. fem. n. *Doxolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2128*. The type species for the genus is *Candidatus* Doxolida novilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolidaceae.

Description of *Candidatus* Doxolidaceae fam. nov.

Candidatus Doxolidaceae (NL. fem. n. *Doxolidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2128.* The type genus for the taxon is *Candidatus* Doxolida .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Doxolida relecessa sp. nov.

Candidatus Doxolida relecessa (NL. fem. n. *relecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2128 sp002471865*. The type genome for the species is the

GenBank assembly GCA_002329065.1. The GC content of the type genome is 44.14 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Doxolosa dehisitas sp. nov.

Candidatus Doxolosa dehisitas (NL. fem. n. *dehisitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUUE01 sp012031635*. The type genome for the species is the GenBank assembly GCA_012031635.1. The GC content of the type genome is 45.31 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Doxolosa gen. nov.

Candidatus Doxolosa (NL. fem. n. *Doxolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUUE01*. The type species for the genus is *Candidatus* Doxolosa dehisitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAUUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolosaceae.

Description of *Candidatus* Doxolosaceae fam. nov.

Candidatus Doxolosaceae (NL. fem. n. *Doxolosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAUUE01.* The type genus for the taxon is *Candidatus* Doxolosa .

According to GTDB R06-RS202, this family belongs to the order *Cyanobacteriales*.

Description of *Candidatus* Draconibacterium diluvastra sp. nov.

Candidatus Draconibacterium diluvastra (NL. fem. n. *diluvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp013203755*. The type genome for the species is the GenBank assembly GCA_013203755.1. The GC content of the type genome is 36.33 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Draconibacterium domicitoga sp. nov.

Candidatus Draconibacterium domicitoga (NL. fem. n. *domicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp011620585*. The type genome for the species is the GenBank assembly GCA_011620585.1. The GC content of the type genome is 42.06 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Draconibacterium immatimonia sp. nov.

Candidatus Draconibacterium immatimonia (NL. fem. n. *immatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp003516705*. The type genome for the species is the GenBank assembly GCA_003516705.1. The GC content of the type genome is 40.71 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Draconibacterium immobitura sp. nov.

Candidatus Draconibacterium immobitura (NL. fem. n. *immobitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp009773765*. The type genome for the species is the GenBank assembly GCA_009773765.1. The GC content of the type genome is 39.75 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Draconibacterium maxumessa sp. nov.

Candidatus Draconibacterium maxumessa (NL. fem. n. *maxumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp011799805*. The type genome for the species is the GenBank assembly RS_GCF_011799805.1. The GC content of the type genome is 42.02 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Draconibacterium musulicula sp. nov.

Candidatus Draconibacterium musulicula (NL. fem. n. *musulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp010586825*. The type genome for the species is the GenBank assembly RS_GCF_010586825.1. The GC content of the type genome is 40.83 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Draconibacterium semigedo sp. nov.

Candidatus Draconibacterium semigedo (NL. fem. n. *semigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Draconibacterium sp010448835*. The type genome for the species is the GenBank assembly RS_GCF_010448835.1. The GC content of the type genome is 39.98 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Dubosiella depasicella sp. nov.

Candidatus Dubosiella depasicella (NL. fem. n. *depasicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dubosiella sp004793885*. The type genome for the species is the GenBank assembly RS_GCF_004793885.1. The GC content of the type genome is 50.62 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Dubosiella docibibra sp. nov.

Candidatus Dubosiella docibibra (NL. fem. n. *docibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dubosiella sp000403415*. The type genome for the species is the GenBank assembly RS_GCF_000403415.2. The GC content of the type genome is 40.49 % and the genome length is 2.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Ducilana inhonatica sp. nov.

Candidatus Ducilana inhonatica (NL. fem. n. *inhonatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-38-11 sp001790645*. The type genome for the species is the GenBank assembly GCA_001790645.1. The GC content of the type genome is 38.29 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Ducilana gen. nov.

Candidatus Ducilana (NL. fem. n. *Ducilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-38-11*. The type species for the genus is *Candidatus* Ducilana inhonatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilanaceae.

Description of *Candidatus* Ducilanaceae fam. nov.

Candidatus Ducilanaceae (NL. fem. n. *Ducilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-11.* The type genus for the taxon is *Candidatus* Ducilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-38-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilanales.

Description of *Candidatus* Ducilanales ord. nov.

Candidatus Ducilanales (NL. fem. n. *Ducilanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-11.* The type genus for the taxon is *Candidatus* Ducilana .

According to the original version of GTDB R06-RS202, this family belongs to the class *GWA2-38-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ducilanae.

Description of *Candidatus* Ducilanae class. nov.

Candidatus Ducilanae (NL. fem. n. *c__Ducilanae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-11.* The type genus for the taxon is *Candidatus* Ducilana .

According to GTDB R06-RS202, this class belongs to the phylum *Schekmanbacteria*.

Description of *Candidatus* Ducilana ininnastra sp. nov.

Candidatus Ducilana ininnastra (NL. fem. n. *ininnastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-38-11 sp001790715*. The type genome for the species is the GenBank assembly GCA_001790715.1. The GC content of the type genome is 38.79 % and the genome length is 2.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Ducilaria biparetta sp. nov.

Candidatus Ducilaria biparetta (NL. fem. n. *biparetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLN01 sp004283105*. The type genome for the species is the GenBank assembly GCA_013043015.1. The GC content of the type genome is 65.13 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Ducilaria gen. nov.

Candidatus Ducilaria (NL. fem. n. *Ducilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHLN01*. The type species for the genus is *Candidatus* Ducilaria biparetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHLN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilariaceae.

Description of *Candidatus* Ducilariaceae fam. nov.

Candidatus Ducilariaceae (NL. fem. n. *Ducilariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHLN01*. The type genus for the taxon is *Candidatus* Ducilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Ducilaria figiletta sp. nov.

Candidatus Ducilaria figiletta (NL. fem. n. *figiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHLN01 sp013002865*. The type genome for the species is the GenBank assembly GCA_013043405.1. The GC content of the type genome is 66.27 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Ducilella decitax sp. nov.

Candidatus Ducilella decitax (NL. fem. n. *decitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPV01 sp003558125*. The type genome for the species is the GenBank assembly GCA_007134575.1. The GC content of the type genome is 61.43 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Ducilella gen. nov.

Candidatus Ducilella (NL. fem. n. *Ducilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLPV01*. The type species for the genus is *Candidatus* Ducilella decitax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefosaceae.

Description of *Candidatus* Ducilella semificella sp. nov.

Candidatus Ducilella semificella (NL. fem. n. *semificella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPV01 sp007131825*. The type genome for the species is the GenBank assembly GCA_007131825.1. The GC content of the type genome is 62.81 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Ducilia trocligena sp. nov.

Candidatus Ducilia trocligena (NL. fem. n. *trocligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-66-17 sp001803875*. The type genome for the species is the GenBank assembly GCA_001803875.1. The GC content of the type genome is 66.28 % and the genome length is 1.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Ducilia gen. nov.

Candidatus Ducilia (NL. fem. n. *Ducilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-66-17*. The type species for the genus is *Candidatus* Ducilia trocligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-66-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duciliaceae.

Description of *Candidatus* Duciliaceae fam. nov.

Candidatus Duciliaceae (NL. fem. n. *Duciliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-66-17.* The type genus for the taxon is *Candidatus* Ducilia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceraridales.

Description of *Candidatus* Ducilida adsudax sp. nov.

Candidatus Ducilida adsudax (NL. fem. n. *adsudax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU010 sp012521335*. The type genome for the species is the GenBank assembly GCA_012521335.1. The GC content of the type genome is 57.36 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Ducilida gen. nov.

Candidatus Ducilida (NL. fem. n. *Ducilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU010*. The type species for the genus is *Candidatus* Ducilida adsudax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Ducilidaceae fam. nov.

Candidatus Ducilidaceae (NL. fem. n. *Ducilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU010.* The type genus for the taxon is *Candidatus* Ducilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ducilidales.

Description of *Candidatus* Ducilidales ord. nov.

Candidatus Ducilidales (NL. fem. n. *Ducilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU010.* The type genus for the taxon is *Candidatus* Ducilida .

According to the GTDB R06-RS202, this order belongs to the class *Limnochordia*.

Description of *Candidatus* Ducilida delacifica sp. nov.

Candidatus Ducilida delacifica (NL. fem. n. *delacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU010 sp002391385*. The type genome for the species is the GenBank assembly GCA_001512825.1. The GC content of the type genome is 59.27 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Ducilida inconitoga sp. nov.

Candidatus Ducilida inconitoga (NL. fem. n. *inconitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU010 sp012837385*. The type genome for the species is the GenBank assembly GCA_012837385.1. The GC content of the type genome is 53.92 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Ducilida repuditia sp. nov.

Candidatus Ducilida repuditia (NL. fem. n. *repuditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU010 sp900018335*. The type genome for the species is the GenBank assembly GCA_900018335.1. The GC content of the type genome is 57.0 % and the genome length is 1.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "anaerobic digester metagenome".

Description of *Candidatus* Ducilida sonabessa sp. nov.

Candidatus Ducilida sonabessa (NL. fem. n. *sonabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU010 sp012840725*. The type genome for the species is the GenBank assembly GCA_012840725.1. The GC content of the type genome is 58.11 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Ducilosa aprugatica sp. nov.

Candidatus Ducilosa aprugatica (NL. fem. n. *aprugatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902761025*. The type genome for the species is the GenBank assembly GCA_902761025.1. The GC content of the type genome is 39.64 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Ducilosa gen. nov.

Candidatus Ducilosa (NL. fem. n. *Ducilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG592*. The type species for the genus is *Candidatus* Ducilosa aprugatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ducilosa chernicella sp. nov.

Candidatus Ducilosa chernicella (NL. fem. n. *chernicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902761345*. The type genome for the species is the GenBank assembly GCA_902761345.1. The GC content of the type genome is 40.63 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Ducilosa cicilicella sp. nov.

Candidatus Ducilosa cicilicella (NL. fem. n. *cicilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902763835*. The type genome for the species is the GenBank assembly GCA_902763835.1. The GC content of the type genome is 39.62 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Ducilosa cohurax sp. nov.

Candidatus Ducilosa cohurax (NL. fem. n. *cohurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900313125*. The type genome for the species is the GenBank assembly GCA_900313125.1. The GC content of the type genome is 51.68 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Ducilosa conarax sp. nov.

Candidatus Ducilosa conarax (NL. fem. n. *conarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900317815*. The type genome for the species is the GenBank assembly GCA_902759635.1. The GC content of the type genome is 47.9 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Ducilosa conipousia sp. nov.

Candidatus Ducilosa conipousia (NL. fem. n. *conipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902779615*. The type genome for the species is the GenBank assembly GCA_902779615.1. The GC content of the type genome is 46.43 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Ducilosa derelimonia sp. nov.

Candidatus Ducilosa derelimonia (NL. fem. n. *derelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902767285*. The type genome for the species is the GenBank assembly GCA_902767285.1. The GC content of the type genome is 39.61 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Ducilosa docibicula sp. nov.

Candidatus Ducilosa docibicula (NL. fem. n. *docibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900317025*. The type genome for the species is the GenBank assembly GCA_902795375.1. The GC content of the type genome is 51.92 %

and the genome length is 1.96 Mbp.

Description of *Candidatus* Ducilosa docibitas sp. nov.

Candidatus Ducilosa docibitas (NL. fem. n. *docibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900320535*. The type genome for the species is the GenBank assembly GCA_902773385.1. The GC content of the type genome is 39.71 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Ducilosa echogibra sp. nov.

Candidatus Ducilosa echogibra (NL. fem. n. *echogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902797065*. The type genome for the species is the GenBank assembly GCA_902797065.1. The GC content of the type genome is 44.98 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ducilosa gemebilega sp. nov.

Candidatus Ducilosa gemebilega (NL. fem. n. *gemebilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900315715*. The type genome for the species is the GenBank assembly GCA_900315715.1. The GC content of the type genome is 38.83 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Ducilosa infirentia sp. nov.

Candidatus Ducilosa infirentia (NL. fem. n. *infirentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902773395*. The type genome for the species is the GenBank assembly GCA_902773395.1. The GC content of the type genome is 39.71 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Ducilosa lenocitia sp. nov.

Candidatus Ducilosa lenocitia (NL. fem. n. *lenocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp900315255*. The type genome for the species is the GenBank assembly GCA_902790555.1. The GC content of the type genome is 44.56 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Ducilosa notacigena sp. nov.

Candidatus Ducilosa notacigena (NL. fem. n. *notacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902801245*. The type genome for the species is the GenBank assembly GCA_902801245.1. The GC content of the type genome is 39.91 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Ducilosa obtenicula sp. nov.

Candidatus Ducilosa obtenicula (NL. fem. n. *obtenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902773045*. The type genome for the species is the GenBank assembly GCA_902773045.1. The GC content of the type genome is 43.07 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Ducilosa omnipousia sp. nov.

Candidatus Ducilosa omnipousia (NL. fem. n. *omnipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902802975*. The type genome for the species is the GenBank assembly GCA_902802975.1. The GC content of the type genome is 43.27 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Ducilosa repepatica sp. nov.

Candidatus Ducilosa repepatica (NL. fem. n. *repepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902792115*. The type genome for the species is the GenBank assembly GCA_902792115.1. The GC content of the type genome is 53.45 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Ducilosa semivitudo sp. nov.

Candidatus Ducilosa semivitudo (NL. fem. n. *semivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902773165*. The type genome for the species is the GenBank assembly GCA_902773165.1. The GC content of the type genome is 45.47 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Ducilosa sicinisca sp. nov.

Candidatus Ducilosa sicinisca (NL. fem. n. *sicinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902785425*. The type genome for the species is the GenBank assembly GCA_902785425.1. The GC content of the type genome is 46.28 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Ducilosa sugilicella sp. nov.

Candidatus Ducilosa sugilicella (NL. fem. n. *sugilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG592 sp902773245*. The type genome for the species is the GenBank assembly GCA_902773245.1. The GC content of the type genome is 42.39 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Ducilula ambidiforma sp. nov.

Candidatus Ducilula ambidiforma (NL. fem. n. *ambidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp002314565*. The type genome for the species is the GenBank assembly GCA_002314565.1. The GC content of the type genome is 47.76 %

and the genome length is 2.38 Mbp.

Description of *Candidatus* Ducilula gen. nov.

Candidatus Ducilula (NL. fem. n. *Ducilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-390*. The type species for the genus is *Candidatus* Ducilula ambidiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Ducilula malagiforma sp. nov.

Candidatus Ducilula malagiforma (NL. fem. n. *malagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp900753295*. The type genome for the species is the GenBank assembly RS_GCF_900753295.1. The GC content of the type genome is 53.89 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Ducilula malagitia sp. nov.

Candidatus Ducilula malagitia (NL. fem. n. *malagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp000437015*. The type genome for the species is the GenBank assembly GCA_000437015.1. The GC content of the type genome is 54.08 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ducilula metapimonas sp. nov.

Candidatus Ducilula metapimonas (NL. fem. n. *metapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp003523225*. The type genome for the species is the GenBank assembly GCA_003523225.1. The GC content of the type genome is 52.26 %

and the genome length is 2.0 Mbp.

Description of *Candidatus* Ducilula mutabago sp. nov.

Candidatus Ducilula mutabago (NL. fem. n. *mutabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp902803255*. The type genome for the species is the GenBank assembly GCA_902803255.1. The GC content of the type genome is 60.07 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Ducilula solacibra sp. nov.

Candidatus Ducilula solacibra (NL. fem. n. *solacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp900321265*. The type genome for the species is the GenBank assembly GCA_900321265.1. The GC content of the type genome is 57.04 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Ducilula tigurivita sp. nov.

Candidatus Ducilula tigurivita (NL. fem. n. *tigurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-390 sp902783905*. The type genome for the species is the GenBank assembly GCA_902783905.1. The GC content of the type genome is 55.58 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Duganella ambusitudo sp. nov.

Candidatus Duganella ambusitudo (NL. fem. n. *ambusitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009857445*. The type genome for the species is the GenBank assembly RS_GCF_009857445.1. The GC content of the type genome is 60.75 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Duganella ancepetta sp. nov.

Candidatus Duganella ancepetta (NL. fem. n. *ancepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009380215*. The type genome for the species is the GenBank assembly RS_GCF_009380215.1. The GC content of the type genome is 63.78 % and the genome length is 7.23 Mbp.

Description of *Candidatus* Duganella antepugo sp. nov.

Candidatus Duganella antepugo (NL. fem. n. *antepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp004614165*. The type genome for the species is the GenBank assembly RS_GCF_004614165.1. The GC content of the type genome is 64.42 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Duganella cacopatio sp. nov.

Candidatus Duganella cacopatio (NL. fem. n. *cacopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp013408245*. The type genome for the species is the GenBank assembly RS_GCF_013408245.1. The GC content of the type genome is 65.41 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Duganella carucifica sp. nov.

Candidatus Duganella carucifica (NL. fem. n. *carucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp003416895*. The type genome for the species is the GenBank assembly RS_GCF_003416945.1. The GC content of the type genome is 63.92 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Duganella catagiforma sp. nov.

Candidatus Duganella catagiforma (NL. fem. n. *catagiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp013376005*. The type genome for the species is the GenBank assembly RS_GCF_013376005.1. The GC content of the type genome is 64.65 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Duganella curacibra sp. nov.

Candidatus Duganella curacibra (NL. fem. n. *curacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp003416985*. The type genome for the species is the GenBank assembly RS_GCF_009857645.1. The GC content of the type genome is 65.23 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Duganella curoticula sp. nov.

Candidatus Duganella curoticula (NL. fem. n. *curoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009857495*. The type genome for the species is the GenBank assembly RS_GCF_009857495.1. The GC content of the type genome is 63.75 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Duganella ducilisca sp. nov.

Candidatus Duganella ducilisca (NL. fem. n. *ducilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp013375995*. The type genome for the species is the GenBank assembly RS_GCF_013375995.1. The GC content of the type genome is 64.48 % and the genome length is 7.01 Mbp.

Description of *Candidatus* Duganella ephipastra sp. nov.

Candidatus Duganella ephipastra (NL. fem. n. *ephipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009857435*. The type genome for the species is the GenBank assembly RS_GCF_009857435.1. The GC content of the type genome is 61.72

% and the genome length is 6.15 Mbp.

Description of *Candidatus* Duganella homagivita sp. nov.

Candidatus Duganella homagivita (NL. fem. n. *homagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp003217375*. The type genome for the species is the GenBank assembly RS_GCF_003385995.1. The GC content of the type genome is 62.67 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Duganella homunicula sp. nov.

Candidatus Duganella homunicula (NL. fem. n. *homunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009674535*. The type genome for the species is the GenBank assembly RS_GCF_009674535.1. The GC content of the type genome is 62.43 % and the genome length is 7.55 Mbp.

Description of *Candidatus* Duganella inpudigena sp. nov.

Candidatus Duganella inpudigena (NL. fem. n. *inpudigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp011090165*. The type genome for the species is the GenBank assembly RS_GCF_011090165.1. The GC content of the type genome is 64.85 % and the genome length is 6.9 Mbp.

Description of *Candidatus* Duganella rubefisca sp. nov.

Candidatus Duganella rubefisca (NL. fem. n. *rubefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp009857915*. The type genome for the species is the GenBank assembly RS_GCF_009857915.1. The GC content of the type genome is 60.62 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Duganella selibicella sp. nov.

Candidatus Duganella selibicella (NL. fem. n. *selibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp001423125*. The type genome for the species is the GenBank assembly RS_GCF_001423125.1. The GC content of the type genome is 65.11 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Duganella semivigena sp. nov.

Candidatus Duganella semivigena (NL. fem. n. *semivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp000381565*. The type genome for the species is the GenBank assembly RS_GCF_000381565.1. The GC content of the type genome is 64.47 % and the genome length is 7.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment".

Description of *Candidatus* Duganella subacax sp. nov.

Candidatus Duganella subacax (NL. fem. n. *subacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp900109645*. The type genome for the species is the GenBank assembly RS_GCF_900109645.1. The GC content of the type genome is 62.93 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Duganella thessibula sp. nov.

Candidatus Duganella thessibula (NL. fem. n. *thessibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp900110275*. The type genome for the species is the GenBank assembly RS_GCF_900110275.1. The GC content of the type genome is 65.13 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Duganella velifousia sp. nov.

Candidatus Duganella velifousia (NL. fem. n. *velifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp900100205*. The type genome for the species is the GenBank assembly RS_GCF_900100675.1. The GC content of the type genome is 62.24 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Duganella viburigena sp. nov.

Candidatus Duganella viburigena (NL. fem. n. *viburigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duganella sp000335815*. The type genome for the species is the GenBank assembly RS_GCF_001758545.1. The GC content of the type genome is 64.08 % and the genome length is 7.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water rainwater-tap Botanic Garden Hamburg".

Description of *Candidatus* Duncaniella abrepastra sp. nov.

Candidatus Duncaniella abrepastra (NL. fem. n. *abrepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp001689495*. The type genome for the species is the GenBank assembly GCA_001689495.1. The GC content of the type genome is 55.95 % and the genome length is 3.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Feces".

Description of *Candidatus* Duncaniella cicilousia sp. nov.

Candidatus Duncaniella cicilousia (NL. fem. n. *cicilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp002494015*. The type genome for the species is the GenBank assembly GCA_002492245.1. The GC content of the type genome is 52.69 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Duncaniella diludastra sp. nov.

Candidatus Duncaniella diludastra (NL. fem. n. *diludastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp001689575*. The type genome for the species is the GenBank assembly GCA_003979465.1. The GC content of the type genome is 54.14 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Duncaniella insalessa sp. nov.

Candidatus Duncaniella insalessa (NL. fem. n. *insalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp900544535*. The type genome for the species is the GenBank assembly GCA_900544535.1. The GC content of the type genome is 52.61 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Duncaniella monocentia sp. nov.

Candidatus Duncaniella monocentia (NL. fem. n. *monocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp001701225*. The type genome for the species is the GenBank assembly GCA_900552025.1. The GC content of the type genome is 57.68 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Duncaniella obsuricula sp. nov.

Candidatus Duncaniella obsuricula (NL. fem. n. *obsuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp900762315*. The type genome for the species is the GenBank assembly RS_GCF_900762315.1. The GC content of the type genome is 51.23 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Duncaniella vinacugo sp. nov.

Candidatus Duncaniella vinacugo (NL. fem. n. *vinacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duncaniella sp900549445*. The type genome for the species is the GenBank assembly RS_GCF_900764265.1. The GC content of the type genome is 53.21

% and the genome length is 2.63 Mbp.

Description of *Candidatus* Duodenibacillus corocitio sp. nov.

Candidatus Duodenibacillus corocitio (NL. fem. n. *corocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900544255*. The type genome for the species is the GenBank assembly GCA_900762965.1. The GC content of the type genome is 57.2 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Duodenibacillus decitisca sp. nov.

Candidatus Duodenibacillus decitisca (NL. fem. n. *decitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp003472385*. The type genome for the species is the GenBank assembly RS_GCF_003472385.1. The GC content of the type genome is 55.62 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Duodenibacillus exurrilega sp. nov.

Candidatus Duodenibacillus exurrilega (NL. fem. n. *exurrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900767875*. The type genome for the species is the GenBank assembly GCA_900767875.1. The GC content of the type genome is 62.06 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Duodenibacillus facunicella sp. nov.

Candidatus Duodenibacillus facunicella (NL. fem. n. *facunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900552915*. The type genome for the species is the GenBank assembly GCA_900552915.1. The GC content of the type genome is 56.71 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Duodenibacillus gasomago sp. nov.

Candidatus Duodenibacillus gasomago (NL. fem. n. *gasomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900542805*. The type genome for the species is the GenBank assembly GCA_900542805.1. The GC content of the type genome is 52.55 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Duodenibacillus legifitas sp. nov.

Candidatus Duodenibacillus legifitas (NL. fem. n. *legifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900538905*. The type genome for the species is the GenBank assembly GCA_900765885.1. The GC content of the type genome is 54.54 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Duodenibacillus monopivita sp. nov.

Candidatus Duodenibacillus monopivita (NL. fem. n. *monopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900552545*. The type genome for the species is the GenBank assembly GCA_900552545.1. The GC content of the type genome is 61.23 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Duodenibacillus navicago sp. nov.

Candidatus Duodenibacillus navicago (NL. fem. n. *navicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900315045*. The type genome for the species is the GenBank assembly GCA_902784795.1. The GC content of the type genome is 60.39 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Duodenibacillus papilimonia sp. nov.

Candidatus Duodenibacillus papilimonia (NL. fem. n. *papilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp002404465*. The type genome for the species is the GenBank assembly GCA_002404465.1. The GC content of the type genome is 51.32 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Duodenibacillus scombitas sp. nov.

Candidatus Duodenibacillus scombitas (NL. fem. n. *scombitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900762555*. The type genome for the species is the GenBank assembly GCA_900762555.1. The GC content of the type genome is 61.8 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Duodenibacillus stercicula sp. nov.

Candidatus Duodenibacillus stercicula (NL. fem. n. *stercicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp003488465*. The type genome for the species is the GenBank assembly GCA_003488465.1. The GC content of the type genome is 60.47 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Duodenibacillus vagabifica sp. nov.

Candidatus Duodenibacillus vagabifica (NL. fem. n. *vagabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Duodenibacillus sp900544335*. The type genome for the species is the GenBank assembly GCA_900768985.1. The GC content of the type genome is 52.81 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Duponana nucifitica sp. nov.

Candidatus Duponana nucifitica (NL. fem. n. *nucifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12480 sp003477045*. The type genome for the species is the GenBank assembly GCA_003477045.1. The GC content of the type genome is 39.44 %

and the genome length is 2.74 Mbp.

Description of *Candidatus* Duponana gen. nov.

Candidatus Duponana (NL. fem. n. *Duponana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12480*. The type species for the genus is *Candidatus* Duponana nucifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecariaceae.

Description of *Candidatus* Duponaria recomilenta sp. nov.

Candidatus Duponaria recomilenta (NL. fem. n. *recomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-44-16 sp001798185*. The type genome for the species is the GenBank assembly GCA_001799065.1. The GC content of the type genome is 44.13 % and the genome length is 2.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Duponaria gen. nov.

Candidatus Duponaria (NL. fem. n. *Duponaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-44-16*. The type species for the genus is *Candidatus* Duponaria recomilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-44-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponariaceae.

Description of *Candidatus* Duponariaceae fam. nov.

Candidatus Duponariaceae (NL. fem. n. *Duponariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *2-02-FULL-44-16.* The type genus for the taxon is *Candidatus* Duponaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-44-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Duponariales.

Description of *Candidatus* Duponariales ord. nov.

Candidatus Duponariales (NL. fem. n. *Duponariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-44-16.* The type genus for the taxon is *Candidatus* Duponaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Duponella adobrivita sp. nov.

Candidatus Duponella adobrivita (NL. fem. n. *adobrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU089 sp002069015*. The type genome for the species is the GenBank assembly GCA_002069015.1. The GC content of the type genome is 42.86 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Duponella gen. nov.

Candidatus Duponella (NL. fem. n. *Duponella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU089*. The type species for the genus is *Candidatus* Duponella adobrivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Duponella conigax sp. nov.

Candidatus Duponella conigax (NL. fem. n. *conigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU089 sp002440045*. The type genome for the species is the GenBank assembly GCA_900546015.1. The GC content of the type genome is 45.19 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Duponella effemousia sp. nov.

Candidatus Duponella effemousia (NL. fem. n. *effemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU089 sp012511005*. The type genome for the species is the GenBank assembly GCA_012511005.1. The GC content of the type genome is 39.94 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Duponella mahelago sp. nov.

Candidatus Duponella mahelago (NL. fem. n. *mahelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU089 sp001513045*. The type genome for the species is the GenBank assembly GCA_001513045.1. The GC content of the type genome is 48.63 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Duponia masociforma sp. nov.

Candidatus Duponia masociforma (NL. fem. n. *masociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG38 sp003242505*. The type genome for the species is the GenBank assembly GCA_003242505.1. The GC content of the type genome is 70.97 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Duponia gen. nov.

Candidatus Duponia (NL. fem. n. *Duponia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *ZC4RG38*. The type species for the genus is *Candidatus* Duponia masociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponiaceae.

Description of *Candidatus* Duponiaceae fam. nov.

Candidatus Duponiaceae (NL. fem. n. *Duponiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ZC4RG38.* The type genus for the taxon is *Candidatus* Duponia .

According to GTDB R06-RS202, this family belongs to the order *Symbiobacteriales*.

Description of *Candidatus* Duponida infesilenta sp. nov.

Candidatus Duponida infesilenta (NL. fem. n. *infesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-95 sp002085375*. The type genome for the species is the GenBank assembly GCA_002085375.1. The GC content of the type genome is 40.9 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Duponida gen. nov.

Candidatus Duponida (NL. fem. n. *Duponida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-95*. The type species for the genus is *Candidatus* Duponida infesilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-95*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponidaceae.

Description of *Candidatus* Duponidaceae fam. nov.

Candidatus Duponidaceae (NL. fem. n. *Duponidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *4484-95*. The type genus for the taxon is *Candidatus* Duponida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10806*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosarariales.

Description of *Candidatus* Duponula resupitica sp. nov.

Candidatus Duponula resupitica (NL. fem. n. *resupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN25 sp002898615*. The type genome for the species is the GenBank assembly GCA_011054135.1. The GC content of the type genome is 68.96 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Duponula gen. nov.

Candidatus Duponula (NL. fem. n. *Duponula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN25*. The type species for the genus is *Candidatus* Duponula resupitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRbin24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadellaceae.

Description of *Candidatus* Dupunana inpasilenta sp. nov.

Candidatus Dupunana inpasilenta (NL. fem. n. *inpasilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699445 sp002699445*. The type genome for the species is the GenBank assembly GCA_002699445.1. The GC content of the type genome is 56.88 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Dupunana gen. nov.

Candidatus Dupunana (NL. fem. n. *Dupunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2699445*. The type species for the genus is *Candidatus* Dupunana inpasilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2699445*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunanaceae.

Description of *Candidatus* Dupunanaceae fam. nov.

Candidatus Dupunanaceae (NL. fem. n. *Dupunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2699445.* The type genus for the taxon is *Candidatus* Dupunana .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Dupunaria ratifessa sp. nov.

Candidatus Dupunaria ratifessa (NL. fem. n. *ratifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *59-46-T64 sp003205515*. The type genome for the species is the GenBank assembly RS_GCF_003205515.1. The GC content of the type genome is 58.69 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Dupunaria gen. nov.

Candidatus Dupunaria (NL. fem. n. *Dupunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *59-46-T64*. The type species for the genus is *Candidatus* Dupunaria ratifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Dupunella tiguritudo sp. nov.

Candidatus Dupunella tiguritudo (NL. fem. n. *tiguritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4821 sp002402315*. The type genome for the species is the

GenBank assembly GCA_002402315.1. The GC content of the type genome is 37.13 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Dupunella gen. nov.

Candidatus Dupunella (NL. fem. n. *Dupunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4821*. The type species for the genus is *Candidatus* Dupunella tiguritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4821*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunellaceae.

Description of *Candidatus* Dupunellaceae fam. nov.

Candidatus Dupunellaceae (NL. fem. n. *Dupunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4821.* The type genus for the taxon is *Candidatus* Dupunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4821*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dupunellales.

Description of *Candidatus* Dupunellales ord. nov.

Candidatus Dupunellales (NL. fem. n. *Dupunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4821.* The type genus for the taxon is *Candidatus* Dupunella .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Dupunida milipitas sp. nov.

Candidatus Dupunida milipitas (NL. fem. n. *milipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFP01 sp013152825*. The type genome for the species is the GenBank assembly GCA_013152825.1. The GC content of the type genome is 44.3 %

and the genome length is 1.54 Mbp.

Description of *Candidatus* Dupunida gen. nov.

Candidatus Dupunida (NL. fem. n. *Dupunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFP01*. The type species for the genus is *Candidatus* Dupunida milipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADFP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunidaceae.

Description of *Candidatus* Dupunidaceae fam. nov.

Candidatus Dupunidaceae (NL. fem. n. *Dupunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFP01.* The type genus for the taxon is *Candidatus* Dupunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIJMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deforanales.

Description of *Candidatus* Dupunosa siminedo sp. nov.

Candidatus Dupunosa siminedo (NL. fem. n. *siminedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITUY01 sp903895695*. The type genome for the species is the GenBank assembly GCA_903895695.1. The GC content of the type genome is 63.57 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Dupunosa gen. nov.

Candidatus Dupunosa (NL. fem. n. *Dupunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITUY01*. The type species for the genus is *Candidatus* Dupunosa siminedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITUY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunosaceae.

Description of *Candidatus* Dupunosaceae fam. nov.

Candidatus Dupunosaceae (NL. fem. n. *Dupunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAITUY01.* The type genus for the taxon is *Candidatus* Dupunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIKKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defacanales.

Description of *Candidatus* Dupunula buxifimonas sp. nov.

Candidatus Dupunula buxifimonas (NL. fem. n. *buxifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp903856525*. The type genome for the species is the GenBank assembly GCA_903929745.1. The GC content of the type genome is 69.03 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Dupunula gen. nov.

Candidatus Dupunula (NL. fem. n. *Dupunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QWPT01*. The type species for the genus is *Candidatus* Dupunula buxifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Dupunula dimidatio sp. nov.

Candidatus Dupunula dimidatio (NL. fem. n. *dimidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp003671075*. The type genome for the species is the GenBank assembly GCA_903865135.1. The GC content of the type genome is 63.05 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Dupunula dupunicula sp. nov.

Candidatus Dupunula dupunicula (NL. fem. n. *dupunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp003671025*. The type genome for the species is the GenBank assembly GCA_003671025.1. The GC content of the type genome is 60.29 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Dupunula inlacitica sp. nov.

Candidatus Dupunula inlacitica (NL. fem. n. *inlacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp903918555*. The type genome for the species is the GenBank assembly GCA_903918555.1. The GC content of the type genome is 68.79 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Dupunula nugigago sp. nov.

Candidatus Dupunula nugigago (NL. fem. n. *nugigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp903891095*. The type genome for the species is the GenBank assembly GCA_903930825.1. The GC content of the type genome is 67.98 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Dupunula perexitudo sp. nov.

Candidatus Dupunula perexitudo (NL. fem. n. *perexitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp003671065*. The type genome for the species is the GenBank assembly GCA_003671065.1. The GC content of the type genome is 58.5 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Dupunula procribula sp. nov.

Candidatus Dupunula procribula (NL. fem. n. *procribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWPT01 sp903911205*. The type genome for the species is the GenBank assembly GCA_903911205.1. The GC content of the type genome is 61.78 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Duricana inpeliforma sp. nov.

Candidatus Duricana inpeliforma (NL. fem. n. *inpeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1206 sp902772845*. The type genome for the species is the GenBank assembly GCA_902772845.1. The GC content of the type genome is 52.68 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Duricana gen. nov.

Candidatus Duricana (NL. fem. n. *Duricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1206*. The type species for the genus is *Candidatus* Duricana inpeliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Duricana monogedo sp. nov.

Candidatus Duricana monogedo (NL. fem. n. *monogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1206 sp000433115*. The type genome for the species is the GenBank assembly GCA_000433115.1. The GC content of the type genome is 49.61 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Duricana nocenedo sp. nov.

Candidatus Duricana nocenedo (NL. fem. n. *nocenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1206 sp002310055*. The type genome for the species is the GenBank assembly GCA_002310055.1. The GC content of the type genome is 53.93 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Duricana volubifica sp. nov.

Candidatus Duricana volubifica (NL. fem. n. *volubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1206 sp002305335*. The type genome for the species is the GenBank assembly GCA_002305335.1. The GC content of the type genome is 47.25 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Duricella acratitica sp. nov.

Candidatus Duricella acratitica (NL. fem. n. *acratitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701885 sp002701885*. The type genome for the species is the GenBank assembly GCA_002701885.1. The GC content of the type genome is 31.95 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Duricella gen. nov.

Candidatus Duricella (NL. fem. n. *Duricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2701885*. The type species for the genus is *Candidatus* Duricella acratitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2701885*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricellaceae.

Description of *Candidatus* Duricellaceae fam. nov.

Candidatus Duricellaceae (NL. fem. n. *Duricellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2701885.* The type genus for the taxon is *Candidatus* Duricella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2701885*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Duricellales.

Description of *Candidatus* Duricellales ord. nov.

Candidatus Duricellales (NL. fem. n. *Duricellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2701885.* The type genus for the taxon is *Candidatus* Duricella .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Duricella adsibicella sp. nov.

Candidatus Duricella adsibicella (NL. fem. n. *adsibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701885 sp002938125*. The type genome for the species is the GenBank assembly GCA_002938125.1. The GC content of the type genome is 31.16 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Duricella obtesibra sp. nov.

Candidatus Duricella obtesibra (NL. fem. n. *obtesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2701885 sp002722055*. The type genome for the species is the GenBank assembly GCA_002722055.1. The GC content of the type genome is 31.03 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Duricia cituvitudo sp. nov.

Candidatus Duricia cituvitudo (NL. fem. n. *cituvitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002713455 sp002701875*. The type genome for the species is the GenBank assembly GCA_002703325.1. The GC content of the type genome is 34.14 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Duricia gen. nov.

Candidatus Duricia (NL. fem. n. *Duricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002713455*. The type species for the genus is *Candidatus* Duricia cituvitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Duricia dilibimonia sp. nov.

Candidatus Duricia dilibimonia (NL. fem. n. *dilibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002713455 sp902581045*. The type genome for the species is the GenBank assembly GCA_902581045.1. The GC content of the type genome is 32.88 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Duricia peropiforma sp. nov.

Candidatus Duricia peropiforma (NL. fem. n. *peropiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002713455 sp002713455*. The type genome for the species is the GenBank assembly GCA_002713455.1. The GC content of the type genome is 32.55 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Duricida canacitas sp. nov.

Candidatus Duricida canacitas (NL. fem. n. *canacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL11 sp002730985*. The type genome for the species is the GenBank assembly GCA_002730985.1. The GC content of the type genome is 32.93 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Duricida gen. nov.

Candidatus Duricida (NL. fem. n. *Duricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BACL11*. The type species for the genus is *Candidatus* Duricida canacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Duricidaceae fam. nov.

Candidatus Duricidaceae (NL. fem. n. *Duricidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BACL11.* The type genus for the taxon is *Candidatus* Duricida .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Duricida locupugo sp. nov.

Candidatus Duricida locupugo (NL. fem. n. *locupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BACL11 sp002693745*. The type genome for the species is the GenBank assembly GCA_002700335.1. The GC content of the type genome is 30.39 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Duricula adhosibra sp. nov.

Candidatus Duricula adhosibra (NL. fem. n. *adhosibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp900760475*. The type genome for the species is the

GenBank assembly RS_GCF_900760475.1. The GC content of the type genome is 48.99 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Duricula gen. nov.

Candidatus Duricula (NL. fem. n. *Duricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10677*. The type species for the genus is *Candidatus* Duricula adhosibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Duricula ceromibula sp. nov.

Candidatus Duricula ceromibula (NL. fem. n. *ceromibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp003533505*. The type genome for the species is the GenBank assembly GCA_003533505.1. The GC content of the type genome is 54.13 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Duricula decuniforma sp. nov.

Candidatus Duricula decuniforma (NL. fem. n. *decuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp900553005*. The type genome for the species is the GenBank assembly RS_GCF_900762735.1. The GC content of the type genome is 47.79 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Duricula lavabousia sp. nov.

Candidatus Duricula lavabousia (NL. fem. n. *lavabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp900543755*. The type genome for the species is the GenBank assembly GCA_900543755.1. The GC content of the type genome is 46.91 %

and the genome length is 1.88 Mbp.

Description of *Candidatus* Duricula nucifibra sp. nov.

Candidatus Duricula nucifibra (NL. fem. n. *nucifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp900762945*. The type genome for the species is the GenBank assembly RS_GCF_900762945.1. The GC content of the type genome is 53.3 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Duricula obvalitudo sp. nov.

Candidatus Duricula obvalitudo (NL. fem. n. *obvalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10677 sp900767465*. The type genome for the species is the GenBank assembly RS_GCF_900767465.1. The GC content of the type genome is 51.51 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Dwaynesavagella adsulago sp. nov.

Candidatus Dwaynesavagella adsulago (NL. fem. n. *adsulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dwaynesavagella sp001655775*. The type genome for the species is the GenBank assembly RS_GCF_001655775.1. The GC content of the type genome is 26.14 % and the genome length is 1.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "commercial turkey ileum".

Description of *Candidatus* Dwaynesavagella deculilenta sp. nov.

Candidatus Dwaynesavagella deculilenta (NL. fem. n. *deculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dwaynesavagella sp000270205*. The type genome for the species is the GenBank assembly GCA_000252665.2. The GC content of the type genome is 28.04 % and the genome length is 1.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Dwaynesavagella supelitura sp. nov.

Candidatus Dwaynesavagella supelitura (NL. fem. n. *supelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dwaynesavagella sp000283555*. The type genome for the species is the GenBank assembly RS_GCF_000283555.1. The GC content of the type genome is 27.98 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Dyadobacter benifitas sp. nov.

Candidatus Dyadobacter benifitas (NL. fem. n. *benifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyadobacter sp001898145*. The type genome for the species is the GenBank assembly GCA_002482895.1. The GC content of the type genome is 50.58 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Dyadobacter diludedo sp. nov.

Candidatus Dyadobacter diludedo (NL. fem. n. *diludedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyadobacter sp009801115*. The type genome for the species is the GenBank assembly RS_GCF_009801115.1. The GC content of the type genome is 39.73 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Dyadobacter fecunicula sp. nov.

Candidatus Dyadobacter fecunicula (NL. fem. n. *fecunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyadobacter sp900109045*. The type genome for the species is the GenBank assembly RS_GCF_900109045.1. The GC content of the type genome is 50.23 % and the genome length is 8.48 Mbp.

Description of *Candidatus* Dyadobacter labecago sp. nov.

Candidatus Dyadobacter labecago (NL. fem. n. *labecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyadobacter sp001424405*. The type genome for the species is the GenBank assembly RS_GCF_001424405.1. The GC content of the type genome is 47.0 % and the genome length is 6.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Dyadobacter mutabatica sp. nov.

Candidatus Dyadobacter mutabatica (NL. fem. n. *mutabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyadobacter sp008369915*. The type genome for the species is the GenBank assembly RS_GCF_008369915.1. The GC content of the type genome is 46.5 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Dyella admoricella sp. nov.

Candidatus Dyella admoricella (NL. fem. n. *admoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003332825*. The type genome for the species is the GenBank assembly RS_GCF_003332825.1. The GC content of the type genome is 65.96 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Dyella alsulentia sp. nov.

Candidatus Dyella alsulentia (NL. fem. n. *alsulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003977665*. The type genome for the species is the GenBank assembly RS_GCF_003977665.1. The GC content of the type genome is 61.7 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Dyella appacigena sp. nov.

Candidatus Dyella appacigena (NL. fem. n. *appacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp004114615*. The type genome for the species is the GenBank assembly RS_GCF_004114615.1. The GC content of the type genome is 59.08 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Dyella apsimetta sp. nov.

Candidatus Dyella apsimetta (NL. fem. n. *apsimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003363155*. The type genome for the species is the GenBank assembly RS_GCF_003363155.1. The GC content of the type genome is 60.43 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Dyella arcipilega sp. nov.

Candidatus Dyella arcipilega (NL. fem. n. *arcipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003363265*. The type genome for the species is the GenBank assembly RS_GCF_003363265.1. The GC content of the type genome is 61.28 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Dyella bugilicella sp. nov.

Candidatus Dyella bugilicella (NL. fem. n. *bugilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003350925*. The type genome for the species is the GenBank assembly RS_GCF_003350925.1. The GC content of the type genome is 60.47 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Dyella calipitica sp. nov.

Candidatus Dyella calipitica (NL. fem. n. *calipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp900114495*. The type genome for the species is the GenBank assembly RS_GCF_900114495.1. The GC content of the type genome is 63.03 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Dyella cerevedo sp. nov.

Candidatus Dyella cerevedo (NL. fem. n. *cerevedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003121485*. The type genome for the species is the GenBank assembly RS_GCF_003121485.1. The GC content of the type genome is 63.28 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Dyella cnestibula sp. nov.

Candidatus Dyella cnestibula (NL. fem. n. *cnestibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003977615*. The type genome for the species is the GenBank assembly RS_GCF_003977615.1. The GC content of the type genome is 59.09 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Dyella effosousia sp. nov.

Candidatus Dyella effosousia (NL. fem. n. *effosousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp903970555*. The type genome for the species is the GenBank assembly GCA_903970555.1. The GC content of the type genome is 59.63 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Dyella fatilitura sp. nov.

Candidatus Dyella fatilitura (NL. fem. n. *fatilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp003688835*. The type genome for the species is the GenBank assembly RS_GCF_003688835.1. The GC content of the type genome is 63.96 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Dyella funebatio sp. nov.

Candidatus Dyella funebatio (NL. fem. n. *funebatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp004296575*. The type genome for the species is the GenBank assembly RS_GCF_004296575.1. The GC content of the type genome is 64.56 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Dyella immodimonas sp. nov.

Candidatus Dyella immodimonas (NL. fem. n. *immodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp014297575*. The type genome for the species is the GenBank assembly RS_GCF_014297575.1. The GC content of the type genome is 64.67 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Dyella maligitura sp. nov.

Candidatus Dyella maligitura (NL. fem. n. *maligitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp012275375*. The type genome for the species is the GenBank assembly RS_GCF_012275375.1. The GC content of the type genome is 67.44 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Dyella recomitudo sp. nov.

Candidatus Dyella recomitudo (NL. fem. n. *recomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella sp002878475*. The type genome for the species is the GenBank assembly RS_GCF_002878475.1. The GC content of the type genome is 62.49 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Dyella visifibra sp. nov.

Candidatus Dyella visifibra (NL. fem. n. *visifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Dyella sp003351225*. The type genome for the species is the GenBank assembly RS_GCF_003351225.1. The GC content of the type genome is 65.36 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Dyella bicalitio sp. nov.

Candidatus Dyella bicalitio (NL. fem. n. *bicalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dyella_A sp002279065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002279065.1. The GC content of the type genome is 68.27 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Dysgonomonas acrocitica sp. nov.

Candidatus Dysgonomonas acrocitica (NL. fem. n. *acrocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp900079725*. The type genome for the species is the GenBank assembly GCA_900079725.1. The GC content of the type genome is 39.38 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Dysgonomonas adpugessa sp. nov.

Candidatus Dysgonomonas adpugessa (NL. fem. n. *adpugessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp900343125*. The type genome for the species is the GenBank assembly RS_GCF_900343125.1. The GC content of the type genome is 36.55 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Dysgonomonas conifastra sp. nov.

Candidatus Dysgonomonas conifastra (NL. fem. n. *conifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp900079735*. The type genome for the species is the GenBank assembly GCA_002482615.1. The GC content of the type genome is 37.55 %

and the genome length is 4.44 Mbp.

Description of *Candidatus* Dysgonomonas feditedo sp. nov.

Candidatus Dysgonomonas feditedo (NL. fem. n. *feditedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp001261735*. The type genome for the species is the GenBank assembly RS_GCF_001261735.1. The GC content of the type genome is 37.12 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Reticulitermes flavipes hindgut".

Description of *Candidatus* Dysgonomonas filificella sp. nov.

Candidatus Dysgonomonas filificella (NL. fem. n. *filificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp002409595*. The type genome for the species is the GenBank assembly GCA_002409595.1. The GC content of the type genome is 36.72 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Dysgonomonas homicastra sp. nov.

Candidatus Dysgonomonas homicastra (NL. fem. n. *homicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp002482385*. The type genome for the species is the GenBank assembly GCA_002482385.1. The GC content of the type genome is 40.16 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Dysgonomonas inbecibula sp. nov.

Candidatus Dysgonomonas inbecibula (NL. fem. n. *inbecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp900556485*. The type genome for the species is the GenBank assembly GCA_900556485.1. The GC content of the type genome is 36.21 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Dysgonomonas inlocitica sp. nov.

Candidatus Dysgonomonas inlocitica (NL. fem. n. *inlocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp000711235*. The type genome for the species is the GenBank assembly RS_GCF_000711235.1. The GC content of the type genome is 39.38 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Dysgonomonas locupimonas sp. nov.

Candidatus Dysgonomonas locupimonas (NL. fem. n. *locupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp010501095*. The type genome for the species is the GenBank assembly RS_GCF_010501095.1. The GC content of the type genome is 38.91 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Dysgonomonas malagitrix sp. nov.

Candidatus Dysgonomonas malagitrix (NL. fem. n. *malagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp011039205*. The type genome for the species is the GenBank assembly RS_GCF_011039205.1. The GC content of the type genome is 37.09 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Dysgonomonas malogimonia sp. nov.

Candidatus Dysgonomonas malogimonia (NL. fem. n. *malogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp010501065*. The type genome for the species is the GenBank assembly RS_GCF_010501065.1. The GC content of the type genome is 37.37 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Dysgonomonas nitelitrix sp. nov.

Candidatus Dysgonomonas nitelitrix (NL. fem. n. *nitelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp011299555*. The type genome for the species is the GenBank assembly RS_GCF_011299335.1. The GC content of the type genome is 36.52 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Dysgonomonas nocumitia sp. nov.

Candidatus Dysgonomonas nocumitia (NL. fem. n. *nocumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp003523545*. The type genome for the species is the GenBank assembly GCA_003523545.1. The GC content of the type genome is 39.2 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Dysgonomonas relecitudo sp. nov.

Candidatus Dysgonomonas relecitudo (NL. fem. n. *relecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp010501075*. The type genome for the species is the GenBank assembly RS_GCF_010501075.1. The GC content of the type genome is 42.54 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Dysgonomonas rutabicella sp. nov.

Candidatus Dysgonomonas rutabicella (NL. fem. n. *rutabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp010501055*. The type genome for the species is the GenBank assembly RS_GCF_010501055.1. The GC content of the type genome is 40.76 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Dysgonomonas tenebiforma sp. nov.

Candidatus Dysgonomonas tenebiforma (NL. fem. n. *tenebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp010501105*. The type genome for the species is the GenBank assembly RS_GCF_010501105.1. The GC content of the type genome is 41.69

% and the genome length is 3.75 Mbp.

Description of *Candidatus* Dysgonomonas vanidax sp. nov.

Candidatus Dysgonomonas vanidax (NL. fem. n. *vanidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysgonomonas sp001261715*. The type genome for the species is the GenBank assembly RS_GCF_001261715.1. The GC content of the type genome is 35.92 % and the genome length is 4.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Reticulitermes flavipes hindgut".

Description of *Candidatus* Dysosmobacter aggesatio sp. nov.

Candidatus Dysosmobacter aggesatio (NL. fem. n. *aggesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900544955*. The type genome for the species is the GenBank assembly GCA_900544955.1. The GC content of the type genome is 64.86 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Dysosmobacter aggubentia sp. nov.

Candidatus Dysosmobacter aggubentia (NL. fem. n. *aggubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp004553545*. The type genome for the species is the GenBank assembly GCA_004553545.1. The GC content of the type genome is 64.32 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Dysosmobacter allubastra sp. nov.

Candidatus Dysosmobacter allubastra (NL. fem. n. *allubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900556925*. The type genome for the species is the GenBank assembly GCA_900556925.1. The GC content of the type genome is 63.65 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Dysosmobacter antecimonas sp. nov.

Candidatus Dysosmobacter antecimonas (NL. fem. n. *antecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900548505*. The type genome for the species is the GenBank assembly GCA_900548505.1. The GC content of the type genome is 60.63 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Dysosmobacter cilibitura sp. nov.

Candidatus Dysosmobacter cilibitura (NL. fem. n. *cilibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp014297375*. The type genome for the species is the GenBank assembly GCA_900763345.1. The GC content of the type genome is 55.94 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Dysosmobacter curabiforma sp. nov.

Candidatus Dysosmobacter curabiforma (NL. fem. n. *curabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900770295*. The type genome for the species is the GenBank assembly GCA_900770295.1. The GC content of the type genome is 59.81 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Dysosmobacter ducilastra sp. nov.

Candidatus Dysosmobacter ducilastra (NL. fem. n. *ducilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900752075*. The type genome for the species is the GenBank assembly GCA_900752075.1. The GC content of the type genome is 58.49 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Dysosmobacter dupunitica sp. nov.

Candidatus Dysosmobacter dupunitica (NL. fem. n. *dupunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900544105*. The type genome for the species is the GenBank assembly GCA_900544105.1. The GC content of the type genome is 57.37 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Dysosmobacter fameligena sp. nov.

Candidatus Dysosmobacter fameligena (NL. fem. n. *fameligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900544615*. The type genome for the species is the GenBank assembly GCA_900544615.1. The GC content of the type genome is 57.49 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Dysosmobacter hemiditura sp. nov.

Candidatus Dysosmobacter hemiditura (NL. fem. n. *hemiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900554425*. The type genome for the species is the GenBank assembly GCA_900554425.1. The GC content of the type genome is 61.29 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Dysosmobacter hibisilega sp. nov.

Candidatus Dysosmobacter hibisilega (NL. fem. n. *hibisilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp009773995*. The type genome for the species is the GenBank assembly GCA_009773995.1. The GC content of the type genome is 62.37 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Dysosmobacter illepousia sp. nov.

Candidatus Dysosmobacter illepousia (NL. fem. n. *illepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900115635*. The type genome for the species is the GenBank assembly RS_GCF_900115635.1. The GC content of the type genome is 54.56

% and the genome length is 2.79 Mbp.

Description of *Candidatus* Dysosmobacter inmitatica sp. nov.

Candidatus Dysosmobacter inmitatica (NL. fem. n. *inmitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900550685*. The type genome for the species is the GenBank assembly GCA_900550685.1. The GC content of the type genome is 59.67 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Dysosmobacter megalibula sp. nov.

Candidatus Dysosmobacter megalibula (NL. fem. n. *megalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp001916835*. The type genome for the species is the GenBank assembly GCA_001916835.1. The GC content of the type genome is 58.25 % and the genome length is 1.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Dysosmobacter munimitica sp. nov.

Candidatus Dysosmobacter munimitica (NL. fem. n. *munimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900551885*. The type genome for the species is the GenBank assembly GCA_900551885.1. The GC content of the type genome is 60.67 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Dysosmobacter obsuretta sp. nov.

Candidatus Dysosmobacter obsuretta (NL. fem. n. *obsuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp009774015*. The type genome for the species is the GenBank assembly GCA_009774015.1. The GC content of the type genome is 60.86 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Dysosmobacter pedifibra sp. nov.

Candidatus Dysosmobacter pedifibra (NL. fem. n. *pedifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900546705*. The type genome for the species is the GenBank assembly GCA_900546705.1. The GC content of the type genome is 61.41 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Dysosmobacter rorifivita sp. nov.

Candidatus Dysosmobacter rorifivita (NL. fem. n. *rorifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp000403435*. The type genome for the species is the GenBank assembly RS_GCF_000403435.2. The GC content of the type genome is 58.36 % and the genome length is 4.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Dysosmobacter solipessa sp. nov.

Candidatus Dysosmobacter solipessa (NL. fem. n. *solipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900542115*. The type genome for the species is the GenBank assembly GCA_900542115.1. The GC content of the type genome is 58.01 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Dysosmobacter sotulatica sp. nov.

Candidatus Dysosmobacter sotulatica (NL. fem. n. *sotulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp000436875*. The type genome for the species is the GenBank assembly GCA_000436875.1. The GC content of the type genome is 59.35 % and the genome length is 2.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Dysosmobacter visocilega sp. nov.

Candidatus Dysosmobacter visocilega (NL. fem. n. *visocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp900763685*. The type genome for the species is the GenBank assembly GCA_900763685.1. The GC content of the type genome is 65.24 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Dysosmobacter vivifivita sp. nov.

Candidatus Dysosmobacter vivifivita (NL. fem. n. *vivifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Dysosmobacter sp004558115*. The type genome for the species is the GenBank assembly GCA_004558115.1. The GC content of the type genome is 61.71 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Ecastana demigitura sp. nov.

Candidatus Ecastana demigitura (NL. fem. n. *demigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6159 sp002422345*. The type genome for the species is the GenBank assembly GCA_002422345.1. The GC content of the type genome is 66.49 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Ecastana gen. nov.

Candidatus Ecastana (NL. fem. n. *Ecastana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6159*. The type species for the genus is *Candidatus* Ecastana demigitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecastaria maxumax sp. nov.

Candidatus Ecastaria maxumax (NL. fem. n. *maxumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *N074bin45 sp004357415*. The type genome for the species is the GenBank assembly GCA_004357415.1. The GC content of the type genome is 65.04 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Ecastaria gen. nov.

Candidatus Ecastaria (NL. fem. n. *Ecastaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *N074bin45*. The type species for the genus is *Candidatus* Ecastaria maxumax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Ecastella annecatio sp. nov.

Candidatus Ecastella annecatio (NL. fem. n. *annecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-53 sp003232915*. The type genome for the species is the GenBank assembly GCA_003232915.1. The GC content of the type genome is 36.7 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Ecastella gen. nov.

Candidatus Ecastella (NL. fem. n. *Ecastella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-53*. The type species for the genus is *Candidatus* Ecastella annecatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Ecastia nutabicula sp. nov.

Candidatus Ecastia nutabicula (NL. fem. n. *nutabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1851 sp900555605*. The type genome for the species is the GenBank assembly GCA_900555605.1. The GC content of the type genome is 48.26 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Ecastia gen. nov.

Candidatus Ecastia (NL. fem. n. *Ecastia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1851*. The type species for the genus is *Candidatus* Ecastia nutabicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1255*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Butubariaceae.

Description of *Candidatus* Ecastosa gen. nov.

Candidatus Ecastosa (NL. fem. n. *Ecastosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFXW01*. The type species for the genus is *Candidatus* Ecastosa lacus_A .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecastula unetvedo sp. nov.

Candidatus Ecastula unetvedo (NL. fem. n. *unetvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINFA01 sp903847955*. The type genome for the species is the GenBank assembly GCA_903847955.1. The GC content of the type genome is 67.03 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Ecastula gen. nov.

Candidatus Ecastula (NL. fem. n. *Ecastula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINFA01*. The type species for the genus is *Candidatus* Ecastula

unetvedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Eccilana masocifica sp. nov.

Candidatus Eccilana masocifica (NL. fem. n. *masocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCVT01 sp902806215*. The type genome for the species is the GenBank assembly GCA_902806215.1. The GC content of the type genome is 72.24 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Eccilana gen. nov.

Candidatus Eccilana (NL. fem. n. *Eccilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCVT01*. The type species for the genus is *Candidatus* Eccilana masocifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccilaria nubecastra sp. nov.

Candidatus Eccilaria nubecastra (NL. fem. n. *nubecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WX04 sp007995215*. The type genome for the species is the GenBank assembly RS_GCF_007995215.1. The GC content of the type genome is 58.78 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Eccilaria gen. nov.

Candidatus Eccilaria (NL. fem. n. *Eccilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WX04*. The type species for the genus is *Candidatus* Eccilaria nubecastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccilella citivitoga sp. nov.

Candidatus Eccilella citivitoga (NL. fem. n. *citivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJC01 sp013003395*. The type genome for the species is the GenBank assembly GCA_013003395.1. The GC content of the type genome is 62.24 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Eccilella gen. nov.

Candidatus Eccilella (NL. fem. n. *Eccilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJC01*. The type species for the genus is *Candidatus* Eccilella citivitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Eccilida ignicedo sp. nov.

Candidatus Eccilida ignicedo (NL. fem. n. *ignicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXC01 sp014360685*. The type genome for the species is the GenBank assembly GCA_014360685.1. The GC content of the type genome is 63.88 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Eccilida gen. nov.

Candidatus Eccilida (NL. fem. n. *Eccilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIXC01*. The type species for the genus is *Candidatus* Eccilida ignicedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

RBG-13-55-18. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubiaceae.

Description of *Candidatus* Eccilida lanifivita sp. nov.

Candidatus Eccilida lanifivita (NL. fem. n. *lanifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXC01 sp011337865*. The type genome for the species is the GenBank assembly GCA_011337865.1. The GC content of the type genome is 64.4 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Eccilida obfirisca sp. nov.

Candidatus Eccilida obfirisca (NL. fem. n. *obfirisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXC01 sp014360655*. The type genome for the species is the GenBank assembly GCA_014360655.1. The GC content of the type genome is 64.64 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Eccilosa recogatica sp. nov.

Candidatus Eccilosa recogatica (NL. fem. n. *recogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDK01 sp013817025*. The type genome for the species is the GenBank assembly GCA_013817025.1. The GC content of the type genome is 63.24 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Eccilosa gen. nov.

Candidatus Eccilosa (NL. fem. n. *Eccilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDDK01*. The type species for the genus is *Candidatus* Eccilosa recogatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccilula tetenitura sp. nov.

Candidatus Eccilula tetenitura (NL. fem. n. *tetenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIQ01 sp012800795*. The type genome for the species is the GenBank assembly GCA_012800795.1. The GC content of the type genome is 42.61 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Eccilula gen. nov.

Candidatus Eccilula (NL. fem. n. *Eccilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZIQ01*. The type species for the genus is *Candidatus* Eccilula tetenitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccilula turibentia sp. nov.

Candidatus Eccilula turibentia (NL. fem. n. *turibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZIQ01 sp012800215*. The type genome for the species is the GenBank assembly GCA_012800215.1. The GC content of the type genome is 41.88 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Eccisana eviscessa sp. nov.

Candidatus Eccisana eviscessa (NL. fem. n. *eviscessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPRC01 sp009668975*. The type genome for the species is the GenBank assembly GCA_009668975.1. The GC content of the type genome is 53.02 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Eccisana gen. nov.

Candidatus Eccisana (NL. fem. n. *Eccisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPRC01*. The type species for the genus is *Candidatus* Eccisana eviscessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccisana lucubastra sp. nov.

Candidatus Eccisana lucubastra (NL. fem. n. *lucubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPRC01 sp003857395*. The type genome for the species is the GenBank assembly GCA_003857395.1. The GC content of the type genome is 51.31 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Eccisia bonifitica sp. nov.

Candidatus Eccisia bonifitica (NL. fem. n. *bonifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5157 sp002415335*. The type genome for the species is the GenBank assembly GCA_002415335.1. The GC content of the type genome is 59.15 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Eccisia gen. nov.

Candidatus Eccisia (NL. fem. n. *Eccisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5157*. The type species for the genus is *Candidatus* Eccisia bonifitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccisida vitabiforma sp. nov.

Candidatus Eccisida vitabiforma (NL. fem. n. *vitabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RBG-16-52-11 sp001779095*. The type genome for the species is the GenBank assembly GCA_001779095.1. The GC content of the type genome is 51.58 % and the genome length is 1.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Eccisida gen. nov.

Candidatus Eccisida (NL. fem. n. *Eccisida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-52-11*. The type species for the genus is *Candidatus* Eccisida vitabiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Eccisosa admulicella sp. nov.

Candidatus Eccisosa admulicella (NL. fem. n. *admulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HUN007 sp000712055*. The type genome for the species is the GenBank assembly RS_GCF_000712055.1. The GC content of the type genome is 42.01 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Eccisosa gen. nov.

Candidatus Eccisosa (NL. fem. n. *Eccisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HUN007*. The type species for the genus is *Candidatus* Eccisosa admulicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eccisosa advinisca sp. nov.

Candidatus Eccisosa advinisca (NL. fem. n. *advinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HUN007 sp002315235*. The type genome for the species is the GenBank assembly GCA_002315235.1. The GC content of the type genome is 42.04 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Eccisosa noninisca sp. nov.

Candidatus Eccisosa noninisca (NL. fem. n. *noninisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HUN007 sp902789705*. The type genome for the species is the GenBank assembly GCA_902789705.1. The GC content of the type genome is 43.25 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Eccisula artolisca sp. nov.

Candidatus Eccisula artolisca (NL. fem. n. *artolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUGE01 sp903898645*. The type genome for the species is the GenBank assembly GCA_903898645.1. The GC content of the type genome is 46.09 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Eccisula gen. nov.

Candidatus Eccisula (NL. fem. n. *Eccisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUGE01*. The type species for the genus is *Candidatus* Eccisula artolisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Ecfacaria tabitago sp. nov.

Candidatus Ecfacaria tabitago (NL. fem. n. *tabitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *VMFU01 sp007376205*. The type genome for the species is the GenBank assembly GCA_007376205.1. The GC content of the type genome is 61.74 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Ecfacaria gen. nov.

Candidatus Ecfacaria (NL. fem. n. *Ecfacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFU01*. The type species for the genus is *Candidatus* Ecfacaria tabitago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecfacia indivibra sp. nov.

Candidatus Ecfacia indivibra (NL. fem. n. *indivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEY01 sp013388605*. The type genome for the species is the GenBank assembly GCA_013388605.1. The GC content of the type genome is 36.7 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ecfacia gen. nov.

Candidatus Ecfacia (NL. fem. n. *Ecfacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEY01*. The type species for the genus is *Candidatus* Ecfacia indivibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridulaceae.

Description of *Candidatus* Ecfacosa agricibula sp. nov.

Candidatus Ecfacosa agricibula (NL. fem. n. *agricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7640 sp012519765*. The type genome for the species is the

GenBank assembly GCA_012519765.1. The GC content of the type genome is 45.58 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Ecfacosa gen. nov.

Candidatus Ecfacosa (NL. fem. n. *Ecfacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7640*. The type species for the genus is *Candidatus* Ecfacosa agricibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecfacosa verecetta sp. nov.

Candidatus Ecfacosa verecetta (NL. fem. n. *verecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7640 sp002483765*. The type genome for the species is the GenBank assembly GCA_002483765.1. The GC content of the type genome is 41.99 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Ecfunana exadvifica sp. nov.

Candidatus Ecfunana exadvifica (NL. fem. n. *exadvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDGJ01 sp013286075*. The type genome for the species is the GenBank assembly GCA_013286075.1. The GC content of the type genome is 38.6 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Ecfunana gen. nov.

Candidatus Ecfunana (NL. fem. n. *Ecfunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDGJ01*. The type species for the genus is *Candidatus* Ecfunana exadvifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecfunaria istinibra sp. nov.

Candidatus Ecfunaria istinibra (NL. fem. n. *istinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RH1A sp012221805*. The type genome for the species is the GenBank assembly RS_GCF_012221805.1. The GC content of the type genome is 47.92 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Ecfunaria gen. nov.

Candidatus Ecfunaria (NL. fem. n. *Ecfunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RH1A*. The type species for the genus is *Candidatus* Ecfunaria istinibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecfunella deteniforma sp. nov.

Candidatus Ecfunella deteniforma (NL. fem. n. *deteniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYA01 sp009693055*. The type genome for the species is the GenBank assembly GCA_009693055.1. The GC content of the type genome is 65.5 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Ecfunella gen. nov.

Candidatus Ecfunella (NL. fem. n. *Ecfunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYA01*. The type species for the genus is *Candidatus* Ecfunella deteniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deniculaceae.

Description of *Candidatus* Ecfunia decenitica sp. nov.

Candidatus Ecfunia decenitica (NL. fem. n. *decenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LJ137 sp003730295*. The type genome for the species is the GenBank assembly RS_GCF_003730295.1. The GC content of the type genome is 39.35 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Ecfunia gen. nov.

Candidatus Ecfunia (NL. fem. n. *Ecfunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LJ137*. The type species for the genus is *Candidatus* Ecfunia decenitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecfunida loraritura sp. nov.

Candidatus Ecfunida loraritura (NL. fem. n. *loraritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSGW-16 sp004769085*. The type genome for the species is the GenBank assembly GCA_004769085.1. The GC content of the type genome is 34.45 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Ecfunida gen. nov.

Candidatus Ecfunida (NL. fem. n. *Ecfunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSGW-16*. The type species for the genus is *Candidatus* Ecfunida loraritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-35-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colopariaceae.

Description of *Candidatus* Ecfunosa sanabedo sp. nov.

Candidatus Ecfunosa sanabedo (NL. fem. n. *sanabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZGC01 sp012511425*. The type genome for the species is the GenBank assembly GCA_012511425.1. The GC content of the type genome is 50.17 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Ecfunosa gen. nov.

Candidatus Ecfunosa (NL. fem. n. *Ecfunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZGC01*. The type species for the genus is *Candidatus* Ecfunosa sanabedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Ecfunosa saxifitas sp. nov.

Candidatus Ecfunosa saxifitas (NL. fem. n. *saxifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZGC01 sp012841635*. The type genome for the species is the GenBank assembly GCA_012841635.1. The GC content of the type genome is 51.34 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Ecfunosa tenilitia sp. nov.

Candidatus Ecfunosa tenilitia (NL. fem. n. *tenilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZGC01 sp012800735*. The type genome for the species is the GenBank assembly GCA_012800735.1. The GC content of the type genome is 48.26 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ecfunula delecitoga sp. nov.

Candidatus Ecfunula delecitoga (NL. fem. n. *delecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGY01 sp011338165*. The type genome for the species is the GenBank assembly GCA_011338165.1. The GC content of the type genome is 49.39 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ecfunula gen. nov.

Candidatus Ecfunula (NL. fem. n. *Ecfunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGY01*. The type species for the genus is *Candidatus* Ecfunula delecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRTM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagulaceae.

Description of *Candidatus* Echidana turilitrix sp. nov.

Candidatus Echidana turilitrix (NL. fem. n. *turilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4626 sp002406115*. The type genome for the species is the GenBank assembly GCA_002406115.1. The GC content of the type genome is 36.33 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Echidana gen. nov.

Candidatus Echidana (NL. fem. n. *Echidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4626*. The type species for the genus is *Candidatus* Echidana turilitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Echidia demogousia sp. nov.

Candidatus Echidia demogousia (NL. fem. n. *demogousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12817 sp902782895*. The type genome for the species is the GenBank assembly GCA_902782895.1. The GC content of the type genome is 54.18 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Echidia gen. nov.

Candidatus Echidia (NL. fem. n. *Echidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12817*. The type species for the genus is *Candidatus* Echidia demogousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1390*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibiaceae.

Description of *Candidatus* Echidosa adnaricula sp. nov.

Candidatus Echidosa adnaricula (NL. fem. n. *adnaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWND01 sp003557965*. The type genome for the species is the GenBank assembly GCA_003557965.1. The GC content of the type genome is 35.43 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Echidosa gen. nov.

Candidatus Echidosa (NL. fem. n. *Echidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWND01*. The type species for the genus is *Candidatus* Echidosa adnaricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Echidula assibitio sp. nov.

Candidatus Echidula assibitio (NL. fem. n. *assibitio* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SDU3-3 sp009268125*. The type genome for the species is the GenBank assembly RS_GCF_009268125.1. The GC content of the type genome is 65.77 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Echidula gen. nov.

Candidatus Echidula (NL. fem. n. *Echidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SDU3-3*. The type species for the genus is *Candidatus* Echidula assibitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Echinicola cerucitica sp. nov.

Candidatus Echinicola cerucitica (NL. fem. n. *cerucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Echinicola sp006575665*. The type genome for the species is the GenBank assembly RS_GCF_006575665.1. The GC content of the type genome is 43.97 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Echinicola invoricula sp. nov.

Candidatus Echinicola invoricula (NL. fem. n. *invoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Echinicola sp014280965*. The type genome for the species is the GenBank assembly RS_GCF_014280965.1. The GC content of the type genome is 38.93 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Echogana insibitrix sp. nov.

Candidatus Echogana insibitrix (NL. fem. n. *insibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATBO01 sp000472285*. The type genome for the species is the GenBank assembly RS_GCF_000472285.1. The GC content of the type genome is 58.66 % and the genome length is 4.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tidal flat".

Description of *Candidatus* Echogana gen. nov.

Candidatus Echogana (NL. fem. n. *Echogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATBO01*. The type species for the genus is *Candidatus* Echogana insibitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Echogaria carecitura sp. nov.

Candidatus Echogaria carecitura (NL. fem. n. *carecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-63-12 sp002789955*. The type genome for the species is the GenBank assembly GCA_002789955.1. The GC content of the type genome is 63.28 % and the genome length is 8.3 Mbp.

Description of *Candidatus* Echogaria gen. nov.

Candidatus Echogaria (NL. fem. n. *Echogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-63-12*. The type species for the genus is *Candidatus* Echogaria carecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarulaceae.

Description of *Candidatus* Echogia buxifitio sp. nov.

Candidatus Echogia buxifitio (NL. fem. n. *buxifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWO01 sp902806435*. The type genome for the species is the GenBank assembly GCA_902806435.1. The GC content of the type genome is 49.4 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Echogia gen. nov.

Candidatus Echogia (NL. fem. n. *Echogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWO01*. The type species for the genus is *Candidatus* Echogia buxifitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Echogida adrotimonas sp. nov.

Candidatus Echogida adrotimonas (NL. fem. n. *adrotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACHHO01 sp902579545*. The type genome for the species is the GenBank assembly RS_GCF_902579545.1. The GC content of the type genome is 28.63 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Echogida gen. nov.

Candidatus Echogida (NL. fem. n. *Echogida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACHHO01*. The type species for the genus is *Candidatus* Echogida adrotimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED131*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citoculaceae.

Description of *Candidatus* Echogula oppugetta sp. nov.

Candidatus Echogula oppugetta (NL. fem. n. *oppugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAZNF01 sp012798435*. The type genome for the species is the GenBank assembly GCA_012798435.1. The GC content of the type genome is 68.12 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Echogula gen. nov.

Candidatus Echogula (NL. fem. n. *Echogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNF01*. The type species for the genus is *Candidatus* Echogula oppugetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B64-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifanaceae.

Description of *Candidatus* Echogula sicubitoga sp. nov.

Candidatus Echogula sicubitoga (NL. fem. n. *sicubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNF01 sp011368045*. The type genome for the species is the GenBank assembly GCA_011368045.1. The GC content of the type genome is 67.59 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Eclecana plostilega sp. nov.

Candidatus Eclecana plostilega (NL. fem. n. *plostilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-30-66 sp000989195*. The type genome for the species is the GenBank assembly GCA_000989195.1. The GC content of the type genome is 30.51 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Eclecana gen. nov.

Candidatus Eclecana (NL. fem. n. *Eclecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-30-66*. The type species for the genus is *Candidatus* Eclecana

plostilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclecaria conibimonas sp. nov.

Candidatus Eclecaria conibimonas (NL. fem. n. *conibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC2150 sp000169395*. The type genome for the species is the GenBank assembly RS_GCF_000169395.1. The GC content of the type genome is 49.05 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Eclecaria gen. nov.

Candidatus Eclecaria (NL. fem. n. *Eclecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HTCC2150*. The type species for the genus is *Candidatus* Eclecaria conibimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclecella cuticedo sp. nov.

Candidatus Eclecella cuticedo (NL. fem. n. *cuticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS-49 sp002049495*. The type genome for the species is the GenBank assembly GCA_002049495.1. The GC content of the type genome is 49.78 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Eclecella gen. nov.

Candidatus Eclecella (NL. fem. n. *Eclecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TCS-49*. The type species for the genus is *Candidatus* Eclecella cuticedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclecia pragmisca sp. nov.

Candidatus Eclecia pragmisca (NL. fem. n. *pragmisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HMF7410 sp009754915*. The type genome for the species is the GenBank assembly RS_GCF_009754915.1. The GC content of the type genome is 38.39 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Eclecia gen. nov.

Candidatus Eclecia (NL. fem. n. *Eclecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HMF7410*. The type species for the genus is *Candidatus* Eclecia pragmisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclecia timefilega sp. nov.

Candidatus Eclecia timefilega (NL. fem. n. *timefilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HMF7410 sp903642215*. The type genome for the species is the GenBank assembly RS_GCF_903642215.1. The GC content of the type genome is 39.23 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Eclecida adsucax sp. nov.

Candidatus Eclecida adsucax (NL. fem. n. *adsucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZW01 sp903862855*. The type genome for the species is the GenBank assembly GCA_903862855.1. The GC content of the type genome is 56.74 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Eclecida gen. nov.

Candidatus Eclecida (NL. fem. n. *Eclecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOZW01*. The type species for the genus is *Candidatus* Eclecida adsucax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBC074*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirunanaceae.

Description of *Candidatus* Eclecida cocolibra sp. nov.

Candidatus Eclecida cocolibra (NL. fem. n. *cocolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOZW01 sp903828635*. The type genome for the species is the GenBank assembly GCA_903828635.1. The GC content of the type genome is 58.56 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Eclecula vagabax sp. nov.

Candidatus Eclecula vagabax (NL. fem. n. *vagabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMIM01 sp014381165*. The type genome for the species is the GenBank assembly GCA_014381165.1. The GC content of the type genome is 61.04 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Eclecula gen. nov.

Candidatus Eclecula (NL. fem. n. *Eclecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMIM01*. The type species for the genus is *Candidatus* Eclecula vagabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecligana furibitrix sp. nov.

Candidatus Ecligana furibitrix (NL. fem. n. *furibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTX01 sp009377505*. The type genome for the species is the GenBank assembly GCA_009377505.1. The GC content of the type genome is 72.91 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Ecligana gen. nov.

Candidatus Ecligana (NL. fem. n. *Ecligana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTX01*. The type species for the genus is *Candidatus* Ecligana furibitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXPF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicubariaceae.

Description of *Candidatus* Ecligaria inbeciforma sp. nov.

Candidatus Ecligaria inbeciforma (NL. fem. n. *inbeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUNJ01 sp003551705*. The type genome for the species is the GenBank assembly GCA_003551705.1. The GC content of the type genome is 55.63 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Ecligaria gen. nov.

Candidatus Ecligaria (NL. fem. n. *Ecligaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUNJ01*. The type species for the genus is *Candidatus* Ecligaria inbeciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-53-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforidaceae.

Description of *Candidatus* Ecligella cerarivita sp. nov.

Candidatus Ecligella cerarivita (NL. fem. n. *cerarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYEB01 sp012728995*. The type genome for the species is the GenBank assembly GCA_012728995.1. The GC content of the type genome is 37.81 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Ecligella gen. nov.

Candidatus Ecligella (NL. fem. n. *Ecligella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYEB01*. The type species for the genus is *Candidatus* Ecligella cerarivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecligia secunitica sp. nov.

Candidatus Ecligia secunitica (NL. fem. n. *secunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACGMS01 sp902574205*. The type genome for the species is the GenBank assembly GCA_902574205.1. The GC content of the type genome is 54.02 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Ecligia gen. nov.

Candidatus Ecligia (NL. fem. n. *Ecligia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACGMS01*. The type species for the genus is *Candidatus* Ecligia secunitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexaposaceae.

Description of *Candidatus* Ecligosa clancicula sp. nov.

Candidatus Ecligosa clancicula (NL. fem. n. *clancicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-all-45-10 sp002772325*. The type genome for the species is the GenBank assembly GCA_002772325.1. The GC content of the type genome is 45.37 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Ecligosa gen. nov.

Candidatus Ecligosa (NL. fem. n. *Ecligosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20-14-all-45-10*. The type species for the genus is *Candidatus* Ecligosa clancicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Ecligosa nutametta sp. nov.

Candidatus Ecligosa nutametta (NL. fem. n. *nutametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-all-45-10 sp009619075*. The type genome for the species is the GenBank assembly GCA_009619075.1. The GC content of the type genome is 45.3 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Ecligula allubatio sp. nov.

Candidatus Ecligula allubatio (NL. fem. n. *allubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MUGG01 sp002148405*. The type genome for the species is the GenBank assembly GCA_002148405.1. The GC content of the type genome is 49.68 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Ecligula gen. nov.

Candidatus Ecligula (NL. fem. n. *Ecligula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *MUGG01*. The type species for the genus is *Candidatus* Ecligula allubatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclipella embamilega sp. nov.

Candidatus Eclipella embamilega (NL. fem. n. *embamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSH01 sp007130555*. The type genome for the species is the GenBank assembly GCA_007130555.1. The GC content of the type genome is 33.76 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Eclipella gen. nov.

Candidatus Eclipella (NL. fem. n. *Eclipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSH01*. The type species for the genus is *Candidatus* Eclipella embamilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ML635J-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carucariaceae.

Description of *Candidatus* Eclipia decenilega sp. nov.

Candidatus Eclipia decenilega (NL. fem. n. *decenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTME01 sp011389155*. The type genome for the species is the GenBank assembly GCA_011389155.1. The GC content of the type genome is 36.64 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Eclipia gen. nov.

Candidatus Eclipia (NL. fem. n. *Eclipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTME01*. The type species for the genus is *Candidatus* Eclipia

decenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Ecliposa agratitia sp. nov.

Candidatus Ecliposa agratitia (NL. fem. n. *agratitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BGMRC-2031 sp010131535*. The type genome for the species is the GenBank assembly RS_GCF_010131535.1. The GC content of the type genome is 57.04 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Ecliposa gen. nov.

Candidatus Ecliposa (NL. fem. n. *Ecliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BGMRC-2031*. The type species for the genus is *Candidatus* Ecliposa agratitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecliposa solipimonas sp. nov.

Candidatus Ecliposa solipimonas (NL. fem. n. *solipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BGMRC-2031 sp005217455*. The type genome for the species is the GenBank assembly RS_GCF_005217455.1. The GC content of the type genome is 55.44 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Ecliposa virecedo sp. nov.

Candidatus Ecliposa virecedo (NL. fem. n. *virecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BGMRC-2031 sp004346745*. The type genome for the species is the

GenBank assembly RS_GCF_004346745.1. The GC content of the type genome is 54.98 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Eclipula accenatio sp. nov.

Candidatus Eclipula accenatio (NL. fem. n. *accenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQB01 sp013203525*. The type genome for the species is the GenBank assembly GCA_013203525.1. The GC content of the type genome is 34.78 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Eclipula gen. nov.

Candidatus Eclipula (NL. fem. n. *Eclipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMQB01*. The type species for the genus is *Candidatus* Eclipula accenatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Eclipula penecicella sp. nov.

Candidatus Eclipula penecicella (NL. fem. n. *penecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMQB01 sp013152355*. The type genome for the species is the GenBank assembly GCA_013152355.1. The GC content of the type genome is 40.77 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Ecnepana adlubibra sp. nov.

Candidatus Ecnepana adlubibra (NL. fem. n. *adlubibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-415 sp003245815*. The type genome for the species is the GenBank assembly GCA_003245815.1. The GC content of the type genome is 60.16 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Ecnepana gen. nov.

Candidatus Ecnepana (NL. fem. n. *Ecnepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-415*. The type species for the genus is *Candidatus* Ecnepana adlubibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ecnepella aruspitas sp. nov.

Candidatus Ecnepella aruspitas (NL. fem. n. *aruspitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-10-A sp001782515*. The type genome for the species is the GenBank assembly GCA_001782515.1. The GC content of the type genome is 37.8 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Ecnepella gen. nov.

Candidatus Ecnepella (NL. fem. n. *Ecnepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-10-A*. The type species for the genus is *Candidatus* Ecnepella aruspitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Ecnepia desomifica sp. nov.

Candidatus Ecnepia desomifica (NL. fem. n. *desomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFQ01 sp007376125*. The type genome for the species is the GenBank assembly GCA_007376125.1. The GC content of the type genome is 45.82 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Ecnepia gen. nov.

Candidatus Ecnepia (NL. fem. n. *Ecnepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFQ01*. The type species for the genus is *Candidatus* Ecnepia desomifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-52-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitellaceae.

Description of *Candidatus* Ecnepida dicabibra sp. nov.

Candidatus Ecnepida dicabibra (NL. fem. n. *dicabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1153 sp003153195*. The type genome for the species is the GenBank assembly GCA_003153195.1. The GC content of the type genome is 60.72 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Ecnepida gen. nov.

Candidatus Ecnepida (NL. fem. n. *Ecnepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1153*. The type species for the genus is *Candidatus* Ecnepida dicabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Effigidaceae.

Description of *Candidatus* Ecneposa colopitica sp. nov.

Candidatus Ecneposa colopitica (NL. fem. n. *colopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMX01 sp012798565*. The type genome for the species is the GenBank assembly GCA_012798565.1. The GC content of the type genome is 42.3 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Ecneposa gen. nov.

Candidatus Ecneposa (NL. fem. n. *Ecneposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMX01*. The type species for the genus is *Candidatus* Ecneposa colopitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodidaceae.

Description of *Candidatus* Ecneposa taxililenta sp. nov.

Candidatus Ecneposa taxililenta (NL. fem. n. *taxililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMX01 sp012797775*. The type genome for the species is the GenBank assembly GCA_012797775.1. The GC content of the type genome is 40.7 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Ectenana edulcicella sp. nov.

Candidatus Ectenana edulcicella (NL. fem. n. *edulcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXDR01 sp003566335*. The type genome for the species is the GenBank assembly GCA_003566335.1. The GC content of the type genome is 56.63 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Ectenana gen. nov.

Candidatus Ectenana (NL. fem. n. *Ectenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXDR01*. The type species for the genus is *Candidatus* Ectenana edulcicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ectenaria inpurago sp. nov.

Candidatus Ectenaria inpurago (NL. fem. n. *inpurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UDEA-SF1 sp002995625*. The type genome for the species is the GenBank assembly GCA_002995625.1. The GC content of the type genome is 71.41 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Ectenaria gen. nov.

Candidatus Ectenaria (NL. fem. n. *Ectenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UDEA-SF1*. The type species for the genus is *Candidatus* Ectenaria inpurago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ectenosa abrelatio sp. nov.

Candidatus Ectenosa abrelatio (NL. fem. n. *abrelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M1806 sp006226545*. The type genome for the species is the GenBank assembly GCA_006226545.1. The GC content of the type genome is 44.37 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Ectenosa gen. nov.

Candidatus Ectenosa (NL. fem. n. *Ectenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M1806*. The type species for the genus is *Candidatus* Ectenosa abrelatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8524*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabanaceae.

Description of *Candidatus* Ectenula irrevitudo sp. nov.

Candidatus Ectenula irrevitudo (NL. fem. n. *irrevitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002724395 sp002715005*. The type genome for the species is the GenBank assembly GCA_002715005.1. The GC content of the type genome is 47.9 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Ectenula gen. nov.

Candidatus Ectenula (NL. fem. n. *Ectenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002724395*. The type species for the genus is *Candidatus* Ectenula irrevitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8366*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decenellaceae.

Description of *Candidatus* Ectenula volubedo sp. nov.

Candidatus Ectenula volubedo (NL. fem. n. *volubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002724395 sp002724395*. The type genome for the species is the GenBank assembly GCA_002724395.1. The GC content of the type genome is 48.33 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Ectothiorhodospira exsisago sp. nov.

Candidatus Ectothiorhodospira exsisago (NL. fem. n. *exsisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ectothiorhodospira sp000225005*. The type genome for the species is the GenBank assembly RS_GCF_000225005.1. The GC content of the type genome is 63.73 % and the genome length is 2.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hot spring microbial mat on Paoha Island in Mono Lake; CA".

Description of *Candidatus* Ectothiorhodospira retecentia sp. nov.

Candidatus Ectothiorhodospira retecentia (NL. fem. n. *retecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ectothiorhodospira sp001632845*. The type genome for the species is the GenBank assembly RS_GCF_001632845.1. The GC content of the type genome is 62.95 % and the genome length is 3.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Big Soda Lake; Nevada".

Description of *Candidatus* Edaphobacter actutitio sp. nov.

Candidatus Edaphobacter actutitio (NL. fem. n. *actutitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp000688615*. The type genome for the species is the GenBank assembly RS_GCF_000688615.1. The GC content of the type genome is 56.74 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Edaphobacter advigicella sp. nov.

Candidatus Edaphobacter advigicella (NL. fem. n. *advigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp001897435*. The type genome for the species is the GenBank assembly GCA_001897435.1. The GC content of the type genome is 58.9 % and the genome length is 4.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Edaphobacter atropisca sp. nov.

Candidatus Edaphobacter atropisca (NL. fem. n. *atropisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp003751275*. The type genome for the species is the GenBank assembly RS_GCF_003751275.1. The GC content of the type genome is 57.95 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Edaphobacter cerebigena sp. nov.

Candidatus Edaphobacter cerebigena (NL. fem. n. *cerebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp014274685*. The type genome for the species is the GenBank assembly RS_GCF_014274685.1. The GC content of the type genome is 55.03 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Edaphobacter decacousia sp. nov.

Candidatus Edaphobacter decacousia (NL. fem. n. *decacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp010093025*. The type genome for the species is the GenBank assembly RS_GCF_010093025.1. The GC content of the type genome is 57.96 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Edaphobacter decenitura sp. nov.

Candidatus Edaphobacter decenitura (NL. fem. n. *decenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp002197545*. The type genome for the species is the GenBank assembly GCA_002197545.1. The GC content of the type genome is 57.64 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Edaphobacter dehisitio sp. nov.

Candidatus Edaphobacter dehisitio (NL. fem. n. *dehisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp009765835*. The type genome for the species is the GenBank assembly RS_GCF_009765835.1. The GC content of the type genome is 57.23 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Edaphobacter irrecastra sp. nov.

Candidatus Edaphobacter irrecastra (NL. fem. n. *irrecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Edaphobacter sp009781125*. The type genome for the species is the GenBank assembly GCA_009781125.1. The GC content of the type genome is 58.32 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Edaphobacter menapago sp. nov.

Candidatus Edaphobacter menapago (NL. fem. n. *menapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp009765825*. The type genome for the species is the GenBank assembly RS_GCF_009765825.1. The GC content of the type genome is 57.54 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Edaphobacter utrinax sp. nov.

Candidatus Edaphobacter utrinax (NL. fem. n. *utrinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp000421065*. The type genome for the species is the GenBank assembly RS_GCF_000421065.1. The GC content of the type genome is 58.83 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Edaphobacter vaciletta sp. nov.

Candidatus Edaphobacter vaciletta (NL. fem. n. *vaciletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp009766095*. The type genome for the species is the GenBank assembly RS_GCF_009766095.1. The GC content of the type genome is 57.21 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Edaphobacter viburibula sp. nov.

Candidatus Edaphobacter viburibula (NL. fem. n. *viburibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphobacter sp000381605*. The type genome for the species is the GenBank assembly RS_GCF_000381605.1. The GC content of the type genome is 57.55 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Edaphocola apposimonia sp. nov.

Candidatus Edaphocola apposimonia (NL. fem. n. *apposimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphocola sp003852495*. The type genome for the species is the GenBank assembly RS_GCF_003852495.1. The GC content of the type genome is 41.72 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Edaphocola bigemastra sp. nov.

Candidatus Edaphocola bigemastra (NL. fem. n. *bigemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphocola sp001897155*. The type genome for the species is the GenBank assembly GCA_001897155.1. The GC content of the type genome is 47.18 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Edaphocola exsufimonia sp. nov.

Candidatus Edaphocola exsufimonia (NL. fem. n. *exsufimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphocola sp003545695*. The type genome for the species is the GenBank assembly RS_GCF_003545695.1. The GC content of the type genome is 51.33 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Edaphocola inlacisca sp. nov.

Candidatus Edaphocola inlacisca (NL. fem. n. *inlacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphocola sp008629695*. The type genome for the species is the GenBank assembly RS_GCF_008629695.1. The GC content of the type genome is 38.92 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Edaphocola insicitudo sp. nov.

Candidatus Edaphocola insicitudo (NL. fem. n. *insicitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Edaphocola sp001897525*. The type genome for the species is the GenBank assembly GCA_001897525.1. The GC content of the type genome is 43.04 % and the genome length is 4.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Edissana homicimonas sp. nov.

Candidatus Edissana homicimonas (NL. fem. n. *homicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABUEY01 sp013314815*. The type genome for the species is the GenBank assembly GCA_013314815.1. The GC content of the type genome is 56.92 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Edissana gen. nov.

Candidatus Edissana (NL. fem. n. *Edissana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABUEY01*. The type species for the genus is *Candidatus* Edissana homicimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edissaria anxifatica sp. nov.

Candidatus Edissaria anxifatica (NL. fem. n. *anxifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-35 sp003962875*. The type genome for the species is the GenBank assembly GCA_003962875.1. The GC content of the type genome is 70.85 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Edissaria gen. nov.

Candidatus Edissaria (NL. fem. n. *Edissaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-35*. The type species for the genus is *Candidatus* Edissaria anxifatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edissella ciminimonia sp. nov.

Candidatus Edissella ciminimonia (NL. fem. n. *ciminimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NBLI01 sp002084535*. The type genome for the species is the GenBank assembly GCA_002084535.1. The GC content of the type genome is 38.48 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Edissella gen. nov.

Candidatus Edissella (NL. fem. n. *Edissella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NBLI01*. The type species for the genus is *Candidatus* Edissella ciminimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AABM5-25-91*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Filifidaceae.

Description of *Candidatus* Edissia metucago sp. nov.

Candidatus Edissia metucago (NL. fem. n. *metucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNV01 sp012728375*. The type genome for the species is the GenBank assembly GCA_012728375.1. The GC content of the type genome is 45.82 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Edissia gen. nov.

Candidatus Edissia (NL. fem. n. *Edissia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DUNV01*. The type species for the genus is *Candidatus* Edissia metucago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Edissia relapicula sp. nov.

Candidatus Edissia relapicula (NL. fem. n. *relapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNV01 sp012839215*. The type genome for the species is the GenBank assembly GCA_012839215.1. The GC content of the type genome is 47.34 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Edissida socagedo sp. nov.

Candidatus Edissida socagedo (NL. fem. n. *socagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J085 sp003695085*. The type genome for the species is the GenBank assembly GCA_003695085.1. The GC content of the type genome is 59.58 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Edissida gen. nov.

Candidatus Edissida (NL. fem. n. *Edissida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J085*. The type species for the genus is *Candidatus* Edissida socagedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edissosa vitupatio sp. nov.

Candidatus Edissosa vitupatio (NL. fem. n. *vitupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDF01 sp012512905*. The type genome for the species is the

GenBank assembly GCA_012512905.1. The GC content of the type genome is 30.16 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Edissosa gen. nov.

Candidatus Edissosa (NL. fem. n. *Edissosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDF01*. The type species for the genus is *Candidatus* Edissosa vitupatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edulcana momoricella sp. nov.

Candidatus Edulcana momoricella (NL. fem. n. *momoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IPMB12 sp011745665*. The type genome for the species is the GenBank assembly RS_GCF_011745665.1. The GC content of the type genome is 39.26 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Edulcana gen. nov.

Candidatus Edulcana (NL. fem. n. *Edulcana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IPMB12*. The type species for the genus is *Candidatus* Edulcana momoricella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edulcaria depacitrix sp. nov.

Candidatus Edulcaria depacitrix (NL. fem. n. *depacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-88 sp007116145*. The type genome for the species is the GenBank assembly GCA_007116145.1. The GC content of the type genome is 42.9 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Edulcaria gen. nov.

Candidatus Edulcaria (NL. fem. n. *Edulcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-88*. The type species for the genus is *Candidatus* Edulcaria depacitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU012*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homolellaceae.

Description of *Candidatus* Edulcella abnepitura sp. nov.

Candidatus Edulcella abnepitura (NL. fem. n. *abnepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVR01 sp011333855*. The type genome for the species is the GenBank assembly GCA_011333855.1. The GC content of the type genome is 56.87 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Edulcella gen. nov.

Candidatus Edulcella (NL. fem. n. *Edulcella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYVR01*. The type species for the genus is *Candidatus* Edulcella abnepitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J093*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nitelosaceae.

Description of *Candidatus* Edulcella feculitura sp. nov.

Candidatus Edulcella feculitura (NL. fem. n. *feculitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYVR01 sp012517065*. The type genome for the species is the GenBank assembly GCA_012517065.1. The GC content of the type genome is 57.11 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Edulcia semidibra sp. nov.

Candidatus Edulcia semidibra (NL. fem. n. *semidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRLB01 sp009777815*. The type genome for the species is the GenBank assembly GCA_009777815.1. The GC content of the type genome is 31.01 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Edulcia gen. nov.

Candidatus Edulcia (NL. fem. n. *Edulcia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRLB01*. The type species for the genus is *Candidatus* Edulcia semidibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Edulcida lutulivita sp. nov.

Candidatus Edulcida lutulivita (NL. fem. n. *lutulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS822 sp900545825*. The type genome for the species is the GenBank assembly GCA_900545825.1. The GC content of the type genome is 67.21 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Edulcida gen. nov.

Candidatus Edulcida (NL. fem. n. *Edulcida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS822*. The type species for the genus is *Candidatus* Edulcida lutulivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Edulcosa sicubessa sp. nov.

Candidatus Edulcosa sicubessa (NL. fem. n. *sicubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YIM-98839 sp010993955*. The type genome for the species is the GenBank assembly RS_GCF_010993955.1. The GC content of the type genome is 37.01 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Edulcosa gen. nov.

Candidatus Edulcosa (NL. fem. n. *Edulcosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YIM-98839*. The type species for the genus is *Candidatus* Edulcosa sicubessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effacana acustitia sp. nov.

Candidatus Effacana acustitia (NL. fem. n. *acustitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM506 sp002868945*. The type genome for the species is the GenBank assembly GCA_002868945.1. The GC content of the type genome is 56.29 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Effacana gen. nov.

Candidatus Effacana (NL. fem. n. *Effacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM506*. The type species for the genus is *Candidatus* Effacana acustitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effacaria abantitica sp. nov.

Candidatus Effacaria abantitica (NL. fem. n. *abantitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFT01 sp009776385*. The type genome for the species is the GenBank assembly GCA_009776385.1. The GC content of the type genome is 51.56 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Effacaria gen. nov.

Candidatus Effacaria (NL. fem. n. *Effacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFT01*. The type species for the genus is *Candidatus* Effacaria abantitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Effacia artopastra sp. nov.

Candidatus Effacia artopastra (NL. fem. n. *artopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GP183 sp900104695*. The type genome for the species is the GenBank assembly RS_GCF_900104695.1. The GC content of the type genome is 45.3 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Effacia gen. nov.

Candidatus Effacia (NL. fem. n. *Effacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GP183*. The type species for the genus is *Candidatus* Effacia artopastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effacida desonitrix sp. nov.

Candidatus Effacida desonitrix (NL. fem. n. *desonitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAABSX01 sp011390205*. The type genome for the species is the GenBank assembly GCA_011390205.1. The GC content of the type genome is 40.34 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Effacida gen. nov.

Candidatus Effacida (NL. fem. n. *Effacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABSX01*. The type species for the genus is *Candidatus* Effacida desonitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effacula ingigatio sp. nov.

Candidatus Effacula ingigatio (NL. fem. n. *ingigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPG01 sp013203855*. The type genome for the species is the GenBank assembly GCA_013203855.1. The GC content of the type genome is 60.28 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Effacula gen. nov.

Candidatus Effacula (NL. fem. n. *Effacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPG01*. The type species for the genus is *Candidatus* Effacula ingigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8349*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilariaceae.

Description of *Candidatus* Effarana inobsessa sp. nov.

Candidatus Effarana inobsessa (NL. fem. n. *inobsessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHQ01 sp013820975*. The type genome for the species is the

GenBank assembly GCA_013820975.1. The GC content of the type genome is 68.66 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Effarana gen. nov.

Candidatus Effarana (NL. fem. n. *Effarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHQ01*. The type species for the genus is *Candidatus* Effarana inobsessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effararia decunicula sp. nov.

Candidatus Effararia decunicula (NL. fem. n. *decunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVVS01 sp903909415*. The type genome for the species is the GenBank assembly GCA_903909415.1. The GC content of the type genome is 69.45 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Effararia gen. nov.

Candidatus Effararia (NL. fem. n. *Effararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVVS01*. The type species for the genus is *Candidatus* Effararia decunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Effarella inorniforma sp. nov.

Candidatus Effarella inorniforma (NL. fem. n. *inorniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUVT01 sp012840905*. The type genome for the species is the GenBank assembly GCA_012840905.1. The GC content of the type genome is 29.75 %

and the genome length is 1.25 Mbp.

Description of *Candidatus* Effarella gen. nov.

Candidatus Effarella (NL. fem. n. *Effarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUVT01*. The type species for the genus is *Candidatus* Effarella inorniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Effaria exsisousia sp. nov.

Candidatus Effaria exsisousia (NL. fem. n. *exsisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNXT01 sp003973505*. The type genome for the species is the GenBank assembly GCA_003973505.1. The GC content of the type genome is 36.17 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Effaria gen. nov.

Candidatus Effaria (NL. fem. n. *Effaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNXT01*. The type species for the genus is *Candidatus* Effaria exsisousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1556*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depopellaceae.

Description of *Candidatus* Effarida necopifica sp. nov.

Candidatus Effarida necopifica (NL. fem. n. *necopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUK01 sp008501655*. The type genome for the species is the

GenBank assembly GCA_008501655.1. The GC content of the type genome is 39.55 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Effarida gen. nov.

Candidatus Effarida (NL. fem. n. *Effarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQUK01*. The type species for the genus is *Candidatus* Effarida necopifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Effarosa rudicitoga sp. nov.

Candidatus Effarosa rudicitoga (NL. fem. n. *rudicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSRF01 sp013215275*. The type genome for the species is the GenBank assembly GCA_013215275.1. The GC content of the type genome is 42.45 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Effarosa gen. nov.

Candidatus Effarosa (NL. fem. n. *Effarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSRF01*. The type species for the genus is *Candidatus* Effarosa rudicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-1112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Adsusariaceae.

Description of *Candidatus* Effarula venunentia sp. nov.

Candidatus Effarula venunentia (NL. fem. n. *venunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACCYP01 sp013696425*. The type genome for the species is the GenBank assembly GCA_013696425.1. The GC content of the type genome is 70.12 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Effarula gen. nov.

Candidatus Effarula (NL. fem. n. *Effarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYP01*. The type species for the genus is *Candidatus* Effarula venunentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effemana nugivimonas sp. nov.

Candidatus Effemana nugivimonas (NL. fem. n. *nugivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCWK01 sp902806375*. The type genome for the species is the GenBank assembly GCA_902806375.1. The GC content of the type genome is 69.09 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Effemana gen. nov.

Candidatus Effemana (NL. fem. n. *Effemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCWK01*. The type species for the genus is *Candidatus* Effemana nugivimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Effemaria penuribula sp. nov.

Candidatus Effemaria penuribula (NL. fem. n. *penuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOZ01 sp012838555*. The type genome for the species is the

GenBank assembly GCA_012838555.1. The GC content of the type genome is 29.31 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Effemaria gen. nov.

Candidatus Effemaria (NL. fem. n. *Effemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOZ01*. The type species for the genus is *Candidatus* Effemaria penuribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1709*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bonifanaceae.

Description of *Candidatus* Effemella occalitura sp. nov.

Candidatus Effemella occalitura (NL. fem. n. *occalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JB111 sp900163555*. The type genome for the species is the GenBank assembly RS_GCF_900163555.1. The GC content of the type genome is 72.16 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Effemella gen. nov.

Candidatus Effemella (NL. fem. n. *Effemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JB111*. The type species for the genus is *Candidatus* Effemella occalitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effemia atricifica sp. nov.

Candidatus Effemia atricifica (NL. fem. n. *atricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733185 sp002713705*. The type genome for the species is the GenBank assembly GCA_002713705.1. The GC content of the type genome is 31.28 %

and the genome length is 2.55 Mbp.

Description of *Candidatus* Effemia gen. nov.

Candidatus Effemia (NL. fem. n. *Effemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002733185*. The type species for the genus is *Candidatus* Effemia atricifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effemia impugivita sp. nov.

Candidatus Effemia impugivita (NL. fem. n. *impugivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733185 sp004213605*. The type genome for the species is the GenBank assembly GCA_004213605.1. The GC content of the type genome is 32.85 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Effemia luxurastra sp. nov.

Candidatus Effemia luxurastra (NL. fem. n. *luxurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733185 sp004214175*. The type genome for the species is the GenBank assembly GCA_004214175.1. The GC content of the type genome is 31.12 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Effemia sicubentia sp. nov.

Candidatus Effemia sicubentia (NL. fem. n. *sicubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733185 sp002733185*. The type genome for the species is the GenBank assembly GCA_002733185.1. The GC content of the type genome is 32.27 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Effemula dehinitio sp. nov.

Candidatus Effemula dehinitio (NL. fem. n. *dehinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3081 sp012800885*. The type genome for the species is the GenBank assembly GCA_012800885.1. The GC content of the type genome is 34.0 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Effemula gen. nov.

Candidatus Effemula (NL. fem. n. *Effemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3081*. The type species for the genus is *Candidatus* Effemula dehinitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Effemula duponentia sp. nov.

Candidatus Effemula duponentia (NL. fem. n. *duponentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3081 sp002366615*. The type genome for the species is the GenBank assembly GCA_002366615.1. The GC content of the type genome is 33.67 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Effigaria betacifica sp. nov.

Candidatus Effigaria betacifica (NL. fem. n. *betacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-68 sp013215685*. The type genome for the species is the GenBank assembly GCA_013215685.1. The GC content of the type genome is 26.98 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Effigaria gen. nov.

Candidatus Effigaria (NL. fem. n. *Effigaria* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-68*. The type species for the genus is *Candidatus* Effigaria betacifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effigella manupibra sp. nov.

Candidatus Effigella manupibra (NL. fem. n. *manupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZX01 sp012514635*. The type genome for the species is the GenBank assembly GCA_012514635.1. The GC content of the type genome is 59.29 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Effigella gen. nov.

Candidatus Effigella (NL. fem. n. *Effigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZX01*. The type species for the genus is *Candidatus* Effigella manupibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demululaceae.

Description of *Candidatus* Effigida avuncitura sp. nov.

Candidatus Effigida avuncitura (NL. fem. n. *avuncitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1104 sp003170275*. The type genome for the species is the GenBank assembly GCA_003170275.1. The GC content of the type genome is 68.37 % and the genome length is 8.17 Mbp.

Description of *Candidatus* Effigida gen. nov.

Candidatus Effigida (NL. fem. n. *Effigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1104*. The type species for the genus is *Candidatus* Effigida avuncitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Effigidaceae.

Description of *Candidatus* Effigidaceae fam. nov.

Candidatus Effigidaceae (NL. fem. n. *Effigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1104.* The type genus for the taxon is *Candidatus* Effigida .

According to the original version of GTDB R06-RS202, this family belongs to the order *Palsa-1104*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Effigidales.

Description of *Candidatus* Effigidales ord. nov.

Candidatus Effigidales (NL. fem. n. *Effigidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1104.* The type genus for the taxon is *Candidatus* Effigida .

According to the GTDB R06-RS202, this order belongs to the class *Polyangia*.

Description of *Candidatus* Effigosa crusmifica sp. nov.

Candidatus Effigosa crusmifica (NL. fem. n. *crusmifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCWD01 sp013697825*. The type genome for the species is the GenBank assembly GCA_013697825.1. The GC content of the type genome is 62.71 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Effigosa gen. nov.

Candidatus Effigosa (NL. fem. n. *Effigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCWD01*. The type species for the genus is *Candidatus* Effigosa crusmifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effigosa inornastra sp. nov.

Candidatus Effigosa inornastra (NL. fem. n. *inornastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCWD01 sp013695475*. The type genome for the species is the GenBank assembly GCA_013695475.1. The GC content of the type genome is 62.01 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Effigula inmenax sp. nov.

Candidatus Effigula inmenax (NL. fem. n. *inmenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUUM01 sp012841565*. The type genome for the species is the GenBank assembly GCA_012841565.1. The GC content of the type genome is 35.32 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Effigula gen. nov.

Candidatus Effigula (NL. fem. n. *Effigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUUM01*. The type species for the genus is *Candidatus* Effigula inmenax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effinaria attegibula sp. nov.

Candidatus Effinaria attegibula (NL. fem. n. *attegibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHO01 sp009992505*. The type genome for the species is the

GenBank assembly GCA_009992505.1. The GC content of the type genome is 69.37 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Effinaria gen. nov.

Candidatus Effinaria (NL. fem. n. *Effinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHO01*. The type species for the genus is *Candidatus* Effinaria attegibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Effinaria luxurigena sp. nov.

Candidatus Effinaria luxurigena (NL. fem. n. *luxurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHO01 sp013151775*. The type genome for the species is the GenBank assembly GCA_013151775.1. The GC content of the type genome is 68.26 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Effinella hirudivita sp. nov.

Candidatus Effinella hirudivita (NL. fem. n. *hirudivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5532 sp002426885*. The type genome for the species is the GenBank assembly GCA_002426885.1. The GC content of the type genome is 43.49 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Effinella gen. nov.

Candidatus Effinella (NL. fem. n. *Effinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5532*. The type species for the genus is *Candidatus* Effinella hirudivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA2023. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Effinia ininnibra sp. nov.

Candidatus Effinia ininnibra (NL. fem. n. *ininnibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2687015 sp002687015*. The type genome for the species is the GenBank assembly GCA_002687015.1. The GC content of the type genome is 69.77 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Effinia gen. nov.

Candidatus Effinia (NL. fem. n. *Effinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2687015*. The type species for the genus is *Candidatus* Effinia ininnibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6930*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homiculaceae.

Description of *Candidatus* Effinida defaratica sp. nov.

Candidatus Effinida defaratica (NL. fem. n. *defaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLZORAL124-38-8 sp002747745*. The type genome for the species is the GenBank assembly GCA_002747745.1. The GC content of the type genome is 37.88 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Effinida gen. nov.

Candidatus Effinida (NL. fem. n. *Effinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLZORAL124-38-8*. The type species for the genus is *Candidatus* Effinida defaratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depocosaceae.

Description of *Candidatus* Effinosa prognitoga sp. nov.

Candidatus Effinosa prognitoga (NL. fem. n. *prognitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BGMRC6574 sp006516965*. The type genome for the species is the GenBank assembly RS_GCF_006516965.1. The GC content of the type genome is 64.67 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Effinosa gen. nov.

Candidatus Effinosa (NL. fem. n. *Effinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BGMRC6574*. The type species for the genus is *Candidatus* Effinosa prognitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effosana adpacilenta sp. nov.

Candidatus Effosana adpacilenta (NL. fem. n. *adpacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU36 sp014382535*. The type genome for the species is the GenBank assembly GCA_014382535.1. The GC content of the type genome is 47.91 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Effosana gen. nov.

Candidatus Effosana (NL. fem. n. *Effosana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU36*. The type species for the genus is *Candidatus* Effosana adpacilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

EnvOPS12. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Effosana hibisitio sp. nov.

Candidatus Effosana hibisitio (NL. fem. n. *hibisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU36 sp013152325*. The type genome for the species is the GenBank assembly GCA_013152325.1. The GC content of the type genome is 59.33 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Effosaria armipicella sp. nov.

Candidatus Effosaria armipicella (NL. fem. n. *armipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW021-bin31 sp004299085*. The type genome for the species is the GenBank assembly GCA_004299085.1. The GC content of the type genome is 40.28 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Effosaria gen. nov.

Candidatus Effosaria (NL. fem. n. *Effosaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW021-bin31*. The type species for the genus is *Candidatus* Effosaria armipicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effosaria bucolousia sp. nov.

Candidatus Effosaria bucolousia (NL. fem. n. *bucolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW021-bin31 sp004322015*. The type genome for the species is the GenBank assembly GCA_004322015.1. The GC content of the type genome is 41.92 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Effosella adrotago sp. nov.

Candidatus Effosella adrotago (NL. fem. n. *adrotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GLO-3 sp003354135*. The type genome for the species is the GenBank assembly GCA_003354135.1. The GC content of the type genome is 58.77 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Effosella gen. nov.

Candidatus Effosella (NL. fem. n. *Effosella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GLO-3*. The type species for the genus is *Candidatus* Effosella adrotago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effososa ascenilenta sp. nov.

Candidatus Effososa ascenilenta (NL. fem. n. *ascenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-33 sp003597945*. The type genome for the species is the GenBank assembly GCA_003597945.1. The GC content of the type genome is 52.78 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Effososa gen. nov.

Candidatus Effososa (NL. fem. n. *Effososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-33*. The type species for the genus is *Candidatus* Effososa ascenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cetarulaceae.

Description of *Candidatus* Effosula abinvimonas sp. nov.

Candidatus Effosula abinvimonas (NL. fem. n. *abinvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULK01 sp902812385*. The type genome for the species is the GenBank assembly RS_GCF_902812385.1. The GC content of the type genome is 53.9 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Effosula gen. nov.

Candidatus Effosula (NL. fem. n. *Effosula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULK01*. The type species for the genus is *Candidatus* Effosula abinvimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effosula adgenigena sp. nov.

Candidatus Effosula adgenigena (NL. fem. n. *adgenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULK01 sp902812435*. The type genome for the species is the GenBank assembly RS_GCF_902812435.1. The GC content of the type genome is 53.54 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Effosula adsenentia sp. nov.

Candidatus Effosula adsenentia (NL. fem. n. *adsenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULK01 sp012840385*. The type genome for the species is the GenBank assembly GCA_012840385.1. The GC content of the type genome is 53.27 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Effularia invesibula sp. nov.

Candidatus Effularia invesibula (NL. fem. n. *invesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUE01 sp008501545*. The type genome for the species is the GenBank assembly GCA_008501545.1. The GC content of the type genome is 44.02 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Effularia gen. nov.

Candidatus Effularia (NL. fem. n. *Effularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQUE01*. The type species for the genus is *Candidatus* Effularia invesibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRLW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Forinellaceae.

Description of *Candidatus* Effularia negidax sp. nov.

Candidatus Effularia negidax (NL. fem. n. *negidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUE01 sp008501765*. The type genome for the species is the GenBank assembly GCA_008501765.1. The GC content of the type genome is 43.05 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Effulella vehemifica sp. nov.

Candidatus Effulella vehemifica (NL. fem. n. *vehemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYAK01 sp005788935*. The type genome for the species is the GenBank assembly GCA_005788935.1. The GC content of the type genome is 71.19 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Effulella gen. nov.

Candidatus Effulella (NL. fem. n. *Effulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SYAK01*. The type species for the genus is *Candidatus* Effulella vehemifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepariaceae.

Description of *Candidatus* Effulia forabilega sp. nov.

Candidatus Effulia forabilega (NL. fem. n. *forabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRJ01 sp013141255*. The type genome for the species is the GenBank assembly GCA_013141255.1. The GC content of the type genome is 56.54 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Effulia gen. nov.

Candidatus Effulia (NL. fem. n. *Effulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRJ01*. The type species for the genus is *Candidatus* Effulia forabilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effulida ellipitio sp. nov.

Candidatus Effulida ellipitio (NL. fem. n. *ellipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSI01 sp007570905*. The type genome for the species is the GenBank assembly GCA_007570905.1. The GC content of the type genome is 65.28 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Effulida gen. nov.

Candidatus Effulida (NL. fem. n. *Effulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKSI01*. The type species for the genus is *Candidatus* Effulida ellipitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SP5GCR1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paropidaceae.

Description of *Candidatus* Effulosa istinisca sp. nov.

Candidatus Effulosa istinisca (NL. fem. n. *istinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2747325 sp002747325*. The type genome for the species is the GenBank assembly GCA_002747325.1. The GC content of the type genome is 62.18 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Effulosa gen. nov.

Candidatus Effulosa (NL. fem. n. *Effulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2747325*. The type species for the genus is *Candidatus* Effulosa istinisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effulula adaggatio sp. nov.

Candidatus Effulula adaggatio (NL. fem. n. *adaggatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704665 sp002704665*. The type genome for the species is the GenBank assembly GCA_002704665.1. The GC content of the type genome is 40.17 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Effulula gen. nov.

Candidatus Effulula (NL. fem. n. *Effulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2704665*. The type species for the genus is *Candidatus* Effulula adaggatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA3031. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabellaceae.

Description of *Candidatus* Effulula inergiforma sp. nov.

Candidatus Effulula inergiforma (NL. fem. n. *inergiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704665 sp902601765*. The type genome for the species is the GenBank assembly RS_GCF_902601765.1. The GC content of the type genome is 39.49 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Effulula pepenitica sp. nov.

Candidatus Effulula pepenitica (NL. fem. n. *pepenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704665 sp902627495*. The type genome for the species is the GenBank assembly RS_GCF_902627495.1. The GC content of the type genome is 40.58 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Effunana impiletta sp. nov.

Candidatus Effunana impiletta (NL. fem. n. *impiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWAH01 sp903910585*. The type genome for the species is the GenBank assembly GCA_903910585.1. The GC content of the type genome is 65.62 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Effunana gen. nov.

Candidatus Effunana (NL. fem. n. *Effunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWAH01*. The type species for the genus is *Candidatus* Effunana impiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Effunana metapilega sp. nov.

Candidatus Effunana metapilega (NL. fem. n. *metapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWAH01 sp903821635*. The type genome for the species is the GenBank assembly GCA_903821635.1. The GC content of the type genome is 63.27 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Effunaria palifatica sp. nov.

Candidatus Effunaria palifatica (NL. fem. n. *palifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2230 sp002348005*. The type genome for the species is the GenBank assembly GCA_002348005.1. The GC content of the type genome is 58.4 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Effunaria gen. nov.

Candidatus Effunaria (NL. fem. n. *Effunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2230*. The type species for the genus is *Candidatus* Effunaria palifatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effunella adsulimonia sp. nov.

Candidatus Effunella adsulimonia (NL. fem. n. *adsulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp002842435*. The type genome for the species is the GenBank assembly GCA_002842435.1. The GC content of the type genome is 54.84 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Effunella gen. nov.

Candidatus Effunella (NL. fem. n. *Effunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6140*. The type species for the genus is *Candidatus* Effunella adsulimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effunella depasessa sp. nov.

Candidatus Effunella depasessa (NL. fem. n. *depasessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp002842255*. The type genome for the species is the GenBank assembly GCA_002842255.1. The GC content of the type genome is 54.92 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Effunella encepitura sp. nov.

Candidatus Effunella encepitura (NL. fem. n. *encepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp001704575*. The type genome for the species is the GenBank assembly RS_GCF_001704575.1. The GC content of the type genome is 55.19 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coastal water".

Description of *Candidatus* Effunella fecunitura sp. nov.

Candidatus Effunella fecunitura (NL. fem. n. *fecunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp002423265*. The type genome for the species is the GenBank assembly GCA_002423265.1. The GC content of the type genome is 56.26 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Effunella hirunilega sp. nov.

Candidatus Effunella hirunilega (NL. fem. n. *hirunilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp002842135*. The type genome for the species is the GenBank assembly GCA_002842135.1. The GC content of the type genome is 53.6 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Effunella octoditas sp. nov.

Candidatus Effunella octoditas (NL. fem. n. *octoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6140 sp002479405*. The type genome for the species is the GenBank assembly GCA_002479405.1. The GC content of the type genome is 55.23 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Effunia laxitousia sp. nov.

Candidatus Effunia laxitousia (NL. fem. n. *laxitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSCCF101 sp008807075*. The type genome for the species is the GenBank assembly RS_GCF_008807075.1. The GC content of the type genome is 67.98 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Effunia gen. nov.

Candidatus Effunia (NL. fem. n. *Effunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSCCF101*. The type species for the genus is *Candidatus* Effunia laxitousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effunida armipimonas sp. nov.

Candidatus Effunida armipimonas (NL. fem. n. *armipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2697505 sp002728175*. The type genome for the species is the GenBank assembly GCA_002728175.1. The GC content of the type genome is 28.84 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Effunida gen. nov.

Candidatus Effunida (NL. fem. n. *Effunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2697505*. The type species for the genus is *Candidatus* Effunida armipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Effunida impiretta sp. nov.

Candidatus Effunida impiretta (NL. fem. n. *impiretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2697505 sp002697505*. The type genome for the species is the GenBank assembly GCA_002697505.1. The GC content of the type genome is 30.18 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Effunosa errabatica sp. nov.

Candidatus Effunosa errabatica (NL. fem. n. *errabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J048 sp003695825*. The type genome for the species is the GenBank assembly GCA_003695825.1. The GC content of the type genome is 69.15 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Effunosa gen. nov.

Candidatus Effunosa (NL. fem. n. *Effunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J048*. The type species for the genus is *Candidatus* Effunosa errabatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Effunula arbavitura sp. nov.

Candidatus Effunula arbavitura (NL. fem. n. *arbavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-40-15 sp001821555*. The type genome for the species is the GenBank assembly GCA_001821555.1. The GC content of the type genome is 39.67 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Effunula gen. nov.

Candidatus Effunula (NL. fem. n. *Effunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-FULL-40-15*. The type species for the genus is *Candidatus* Effunula arbavitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiviaceae.

Description of *Candidatus* Eggerthella renavibula sp. nov.

Candidatus Eggerthella renavibula (NL. fem. n. *renavibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eggerthella sp014287365*. The type genome for the species is the GenBank assembly RS_GCF_014287365.1. The GC content of the type genome is 66.22 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Egregana assefibula sp. nov.

Candidatus Egregana assefibula (NL. fem. n. *assefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA11940 sp003979335*. The type genome for the species is the GenBank assembly GCA_003979335.1. The GC content of the type genome is 43.79 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Egregana gen. nov.

Candidatus Egregana (NL. fem. n. *Egregana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11940*. The type species for the genus is *Candidatus* Egregana assefibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Egregana dibucibra sp. nov.

Candidatus Egregana dibucibra (NL. fem. n. *dibucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11940 sp900549005*. The type genome for the species is the GenBank assembly GCA_900549005.1. The GC content of the type genome is 51.52 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Egregana infesilega sp. nov.

Candidatus Egregana infesilega (NL. fem. n. *infesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11940 sp003503945*. The type genome for the species is the GenBank assembly GCA_003503945.1. The GC content of the type genome is 48.27 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Egregana intolivita sp. nov.

Candidatus Egregana intolivita (NL. fem. n. *intolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11940 sp013316055*. The type genome for the species is the GenBank assembly GCA_013316055.1. The GC content of the type genome is 48.78 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Egregaria penecimonas sp. nov.

Candidatus Egregaria penecimonas (NL. fem. n. *penecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-001939115 sp001939115*. The type genome for the species is the GenBank assembly RS_GCF_001939115.1. The GC content of the type genome is 52.32 % and the genome length is 5.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pinnacle phototroph mat".

Description of *Candidatus* Egregaria gen. nov.

Candidatus Egregaria (NL. fem. n. *Egregaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-001939115*. The type species for the genus is *Candidatus* Egregaria penecimonas .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Egregella nubigitudo sp. nov.

Candidatus Egregella nubigitudo (NL. fem. n. *nubigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2706205 sp002706205*. The type genome for the species is the GenBank assembly GCA_002706205.1. The GC content of the type genome is 34.05 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Egregella gen. nov.

Candidatus Egregella (NL. fem. n. *Egregella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2706205*. The type species for the genus is *Candidatus* Egregella nubigitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Egregida adnicivita sp. nov.

Candidatus Egregida adnicivita (NL. fem. n. *adnicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11377 sp900755035*. The type genome for the species is the GenBank assembly RS_GCF_900755035.1. The GC content of the type genome is 37.74 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Egregida gen. nov.

Candidatus Egregida (NL. fem. n. *Egregida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11377*. The type species for the genus is *Candidatus* Egregida adnicivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Egregosa pepenisca sp. nov.

Candidatus Egregosa pepenisca (NL. fem. n. *pepenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRIY01 sp009782515*. The type genome for the species is the GenBank assembly GCA_009782515.1. The GC content of the type genome is 46.27 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Egregosa gen. nov.

Candidatus Egregosa (NL. fem. n. *Egregosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRIY01*. The type species for the genus is *Candidatus* Egregosa pepenisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Egritana exsisastra sp. nov.

Candidatus Egritana exsisastra (NL. fem. n. *exsisastra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMS01 sp012521295*. The type genome for the species is the GenBank assembly GCA_012521295.1. The GC content of the type genome is 50.76 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Egritana gen. nov.

Candidatus Egritana (NL. fem. n. *Egritana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYMS01*. The type species for the genus is *Candidatus* Egritana exsisastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Egritaria adremastra sp. nov.

Candidatus Egritaria adremastra (NL. fem. n. *adremastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0058 sp000163695*. The type genome for the species is the GenBank assembly RS_GCF_000163695.1. The GC content of the type genome is 43.05 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Egritaria gen. nov.

Candidatus Egritaria (NL. fem. n. *Egritaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F0058*. The type species for the genus is *Candidatus* Egritaria adremastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Egritaria agricax sp. nov.

Candidatus Egritaria agricax (NL. fem. n. *agricax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0058 sp000768855*. The type genome for the species is the GenBank assembly RS_GCF_000768855.1. The GC content of the type genome is 37.62 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dog mouth".

Description of *Candidatus* Egritella scorbitoga sp. nov.

Candidatus Egritella scorbitoga (NL. fem. n. *scorbitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCRW01 sp013813345*. The type genome for the species is the GenBank assembly GCA_013813345.1. The GC content of the type genome is 69.84 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Egritella gen. nov.

Candidatus Egritella (NL. fem. n. *Egritella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCRW01*. The type species for the genus is *Candidatus* Egritella scorbitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Egritosa bimetitoga sp. nov.

Candidatus Egritosa bimetitoga (NL. fem. n. *bimetitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHTF01 sp009379725*. The type genome for the species is the GenBank assembly GCA_009379725.1. The GC content of the type genome is 54.19 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Egritosa gen. nov.

Candidatus Egritosa (NL. fem. n. *Egritosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHTF01*. The type species for the genus is *Candidatus* Egritosa bimetitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Egritula anancibula sp. nov.

Candidatus Egritula anancibula (NL. fem. n. *anancibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-20-51-18 sp002774685*. The type genome for the species is the GenBank assembly GCA_002774685.1. The GC content of the type genome is 51.33 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Egritula gen. nov.

Candidatus Egritula (NL. fem. n. *Egritula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-20-51-18*. The type species for the genus is *Candidatus* Egritula anancibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Ehrlichia exsorax sp. nov.

Candidatus Ehrlichia exsorax (NL. fem. n. *exsorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ehrlichia sp000632845*. The type genome for the species is the GenBank assembly RS_GCF_000632845.1. The GC content of the type genome is 29.65 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Eisenbergiella adcogastra sp. nov.

Candidatus Eisenbergiella adcogastra (NL. fem. n. *adcogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp900544445*. The type genome for the species is the GenBank assembly GCA_900544445.1. The GC content of the type genome is 52.37 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Eisenbergiella adpecedo sp. nov.

Candidatus Eisenbergiella adpecedo (NL. fem. n. *adpecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp002361095*. The type genome for the species is the GenBank assembly GCA_002361095.1. The GC content of the type genome is 51.37 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Eisenbergiella aglasivita sp. nov.

Candidatus Eisenbergiella aglasivita (NL. fem. n. *aglasivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp003343625*. The type genome for the species is the GenBank assembly GCA_003343625.1. The GC content of the type genome is 53.51 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Eisenbergiella cenobifica sp. nov.

Candidatus Eisenbergiella cenobifica (NL. fem. n. *cenobifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp900555195*. The type genome for the species is the GenBank assembly GCA_900555195.1. The GC content of the type genome is 51.08 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Eisenbergiella genufimonia sp. nov.

Candidatus Eisenbergiella genufimonia (NL. fem. n. *genufimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Eisenbergiella sp900539715*. The type genome for the species is the GenBank assembly GCA_900539715.1. The GC content of the type genome is 48.19 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Eisenbergiella pedepitoga sp. nov.

Candidatus Eisenbergiella pedepitoga (NL. fem. n. *pedepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp003478085*. The type genome for the species is the GenBank assembly GCA_900548555.1. The GC content of the type genome is 48.21 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Eisenbergiella risibicella sp. nov.

Candidatus Eisenbergiella risibicella (NL. fem. n. *risibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp900066775*. The type genome for the species is the GenBank assembly RS_GCF_003477655.1. The GC content of the type genome is 48.2 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Eisenbergiella siticedo sp. nov.

Candidatus Eisenbergiella siticedo (NL. fem. n. *siticedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp900550285*. The type genome for the species is the GenBank assembly GCA_900550285.1. The GC content of the type genome is 52.66 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Eisenbergiella venucastra sp. nov.

Candidatus Eisenbergiella venucastra (NL. fem. n. *venucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eisenbergiella sp900548905*. The type genome for the species is the GenBank assembly GCA_900548905.1. The GC content of the type genome is 48.26 % and the genome length is 6.99 Mbp.

Description of *Candidatus* Ekhidna baditicula sp. nov.

Candidatus Ekhidna baditicula (NL. fem. n. *baditicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ekhidna sp006969745*. The type genome for the species is the GenBank assembly GCA_006969745.1. The GC content of the type genome is 40.12 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Ekhidna cunabastra sp. nov.

Candidatus Ekhidna cunabastra (NL. fem. n. *cunabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ekhidna sp014323825*. The type genome for the species is the GenBank assembly GCA_014323985.1. The GC content of the type genome is 39.63 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Ekhidna desomessa sp. nov.

Candidatus Ekhidna desomessa (NL. fem. n. *desomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ekhidna sp013214445*. The type genome for the species is the GenBank assembly GCA_013214445.1. The GC content of the type genome is 40.72 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Elainella detotimonia sp. nov.

Candidatus Elainella detotimonia (NL. fem. n. *detotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elainella sp000733415*. The type genome for the species is the GenBank assembly GCA_003724315.1. The GC content of the type genome is 50.83 % and the genome length is 8.17 Mbp.

Description of *Candidatus* Elainella viragibra sp. nov.

Candidatus Elainella viragibra (NL. fem. n. *viragibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elainella sp012033495*. The type genome for the species is the GenBank assembly GCA_012033495.1. The GC content of the type genome is 49.82 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Elastana inpelitia sp. nov.

Candidatus Elastana inpelitia (NL. fem. n. *inpelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCS01 sp013288005*. The type genome for the species is the GenBank assembly GCA_013288005.1. The GC content of the type genome is 41.86 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Elastana gen. nov.

Candidatus Elastana (NL. fem. n. *Elastana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCS01*. The type species for the genus is *Candidatus* Elastana inpelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Elastaria adrenitoga sp. nov.

Candidatus Elastaria adrenitoga (NL. fem. n. *adrenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMG01 sp009777435*. The type genome for the species is the GenBank assembly GCA_009777435.1. The GC content of the type genome is 58.42 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Elastaria gen. nov.

Candidatus Elastaria (NL. fem. n. *Elastaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMG01*. The type species for the genus is *Candidatus* Elastaria

adrenitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Elastaria errabitio sp. nov.

Candidatus Elastaria errabitio (NL. fem. n. *errabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMG01 sp009777255*. The type genome for the species is the GenBank assembly GCA_009777255.1. The GC content of the type genome is 57.08 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Elastaria impacax sp. nov.

Candidatus Elastaria impacax (NL. fem. n. *impacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMG01 sp009782385*. The type genome for the species is the GenBank assembly GCA_009782385.1. The GC content of the type genome is 48.6 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Elastella abrepugo sp. nov.

Candidatus Elastella abrepugo (NL. fem. n. *abrepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJM01 sp013002475*. The type genome for the species is the GenBank assembly GCA_013002475.1. The GC content of the type genome is 43.38 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Elastella gen. nov.

Candidatus Elastella (NL. fem. n. *Elastella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJM01*. The type species for the genus is *Candidatus* Elastella abrepugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Elastia ignosimonas sp. nov.

Candidatus Elastia ignosimonas (NL. fem. n. *ignosimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *A373 sp011176685*. The type genome for the species is the GenBank assembly GCA_011176685.1. The GC content of the type genome is 42.02 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Elastia gen. nov.

Candidatus Elastia (NL. fem. n. *Elastia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *A373*. The type species for the genus is *Candidatus* Elastia ignosimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Elastida semidicella sp. nov.

Candidatus Elastida semidicella (NL. fem. n. *semidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFRY01 sp013140955*. The type genome for the species is the GenBank assembly GCA_013140955.1. The GC content of the type genome is 69.69 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Elastida gen. nov.

Candidatus Elastida (NL. fem. n. *Elastida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFRY01*. The type species for the genus is *Candidatus* Elastida semidicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Elastosa subinicula sp. nov.

Candidatus Elastosa subinicula (NL. fem. n. *subinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUH01 sp012517755*. The type genome for the species is the GenBank assembly GCA_012517755.1. The GC content of the type genome is 27.88 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Elastosa gen. nov.

Candidatus Elastosa (NL. fem. n. *Elastosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUH01*. The type species for the genus is *Candidatus* Elastosa subinicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B22-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repuriaceae.

Description of *Candidatus* Elastula abnocisca sp. nov.

Candidatus Elastula abnocisca (NL. fem. n. *abnocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNRH01 sp902622825*. The type genome for the species is the GenBank assembly GCA_902622825.1. The GC content of the type genome is 30.66 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Elastula gen. nov.

Candidatus Elastula (NL. fem. n. *Elastula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACNRH01*. The type species for the genus is *Candidatus* Elastula abnocisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Elastula ambacentia sp. nov.

Candidatus Elastula ambacentia (NL. fem. n. *ambacentia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNRH01 sp002692325*. The type genome for the species is the GenBank assembly GCA_002692325.1. The GC content of the type genome is 29.63 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Elastula arcitilenta sp. nov.

Candidatus Elastula arcitilenta (NL. fem. n. *arcitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNRH01 sp902573865*. The type genome for the species is the GenBank assembly GCA_902573865.1. The GC content of the type genome is 29.71 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Elastula indubicella sp. nov.

Candidatus Elastula indubicella (NL. fem. n. *indubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNRH01 sp902563575*. The type genome for the species is the GenBank assembly GCA_902563575.1. The GC content of the type genome is 30.27 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Elastula vinulago sp. nov.

Candidatus Elastula vinulago (NL. fem. n. *vinulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACNRH01 sp902584365*. The type genome for the species is the GenBank assembly GCA_902584365.1. The GC content of the type genome is 29.58 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Electronema legifigena sp. nov.

Candidatus Electronema legifigena (NL. fem. n. *legifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Electronema sp002413355*. The type genome for the species is the GenBank assembly GCA_002413355.1. The GC content of the type genome is 55.35 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Electronema mirifago sp. nov.

Candidatus Electronema mirifago (NL. fem. n. *mirifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Electronema sp011391865*. The type genome for the species is the GenBank assembly GCA_011391865.1. The GC content of the type genome is 57.29 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Electronema octodentia sp. nov.

Candidatus Electronema octodentia (NL. fem. n. *octodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Electronema sp004284765*. The type genome for the species is the GenBank assembly GCA_004284765.1. The GC content of the type genome is 51.86 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Electrothrix habacimonas sp. nov.

Candidatus Electrothrix habacimonas (NL. fem. n. *habacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Electrothrix sp011389815*. The type genome for the species is the GenBank assembly GCA_011389815.1. The GC content of the type genome is 47.27 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Elioraea locelitia sp. nov.

Candidatus Elioraea locelitia (NL. fem. n. *locelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elioraea sp006704265*. The type genome for the species is the GenBank assembly RS_GCF_006704265.1. The GC content of the type genome is 72.44 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Elizabethkingia capudessa sp. nov.

Candidatus Elizabethkingia capudessa (NL. fem. n. *capudessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elizabethkingia sp003058195*. The type genome for the species is the GenBank assembly RS_GCF_003058195.1. The GC content of the type genome is 35.61 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Elizabethkingia errabitura sp. nov.

Candidatus Elizabethkingia errabitura (NL. fem. n. *errabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elizabethkingia sp003852805*. The type genome for the species is the GenBank assembly GCA_003852805.1. The GC content of the type genome is 47.27 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Elizabethkingia maxilivita sp. nov.

Candidatus Elizabethkingia maxilivita (NL. fem. n. *maxilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elizabethkingia sp006088815*. The type genome for the species is the GenBank assembly RS_GCF_006088815.1. The GC content of the type genome is 35.19 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Ellagibacter relenitudo sp. nov.

Candidatus Ellagibacter relenitudo (NL. fem. n. *relenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ellagibacter sp900554945*. The type genome for the species is the GenBank assembly GCA_900554945.1. The GC content of the type genome is 61.87 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Ellebana bovicitica sp. nov.

Candidatus Ellebana bovicitica (NL. fem. n. *bovicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZMU01 sp012798645*. The type genome for the species is the GenBank assembly GCA_012798645.1. The GC content of the type genome is 32.41 % and the genome length is 0.5 Mbp.

Description of *Candidatus* Ellebana gen. nov.

Candidatus Ellebana (NL. fem. n. *Ellebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZMU01*. The type species for the genus is *Candidatus* Ellebana bovicitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Ellebaria algebivita sp. nov.

Candidatus Ellebaria algebivita (NL. fem. n. *algebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *X156 sp004006015*. The type genome for the species is the GenBank assembly RS_GCF_004006015.1. The GC content of the type genome is 72.19 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Ellebaria gen. nov.

Candidatus Ellebaria (NL. fem. n. *Ellebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *X156*. The type species for the genus is *Candidatus* Ellebaria algebivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ellebella canacimonas sp. nov.

Candidatus Ellebella canacimonas (NL. fem. n. *canacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUR01 sp012517645*. The type genome for the species is the GenBank assembly GCA_012517645.1. The GC content of the type genome is 65.35 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Ellebella gen. nov.

Candidatus Ellebella (NL. fem. n. *Ellebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUR01*. The type species for the genus is *Candidatus* Ellebella canacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12059*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubicanaceae.

Description of *Candidatus* Ellebosa inobsatica sp. nov.

Candidatus Ellebosa inobsatica (NL. fem. n. *inobsatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPBW01 sp004525685*. The type genome for the species is the GenBank assembly GCA_004525685.1. The GC content of the type genome is 56.04 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Ellebosa gen. nov.

Candidatus Ellebosa (NL. fem. n. *Ellebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPBW01*. The type species for the genus is *Candidatus* Ellebosa inobsatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodosaceae.

Description of *Candidatus* Ellebula detunatica sp. nov.

Candidatus Ellebula detunatica (NL. fem. n. *detunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQE01 sp012519455*. The type genome for the species is the GenBank assembly GCA_012519455.1. The GC content of the type genome is 44.49 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Ellebula gen. nov.

Candidatus Ellebula (NL. fem. n. *Ellebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQE01*. The type species for the genus is *Candidatus* Ellebula detunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosiganaceae.

Description of *Candidatus* Ellipana caselilega sp. nov.

Candidatus Ellipana caselilega (NL. fem. n. *caselilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J119 sp003694545*. The type genome for the species is the GenBank assembly GCA_003694545.1. The GC content of the type genome is 55.17 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Ellipana gen. nov.

Candidatus Ellipana (NL. fem. n. *Ellipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J119*. The type species for the genus is *Candidatus* Ellipana caselilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Ellipia fatifitudo sp. nov.

Candidatus Ellipia fatifitudo (NL. fem. n. *fatifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2402105 sp002402105*. The type genome for the species is the GenBank assembly GCA_002402105.1. The GC content of the type genome is 29.92 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Ellipia gen. nov.

Candidatus Ellipia (NL. fem. n. *Ellipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2402105*. The type species for the genus is *Candidatus* Ellipia fatifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6191*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubefellaceae.

Description of *Candidatus* Ellipida paracitura sp. nov.

Candidatus Ellipida paracitura (NL. fem. n. *paracitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZCI01 sp012513365*. The type genome for the species is the GenBank assembly GCA_012513365.1. The GC content of the type genome is 45.21 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Ellipida gen. nov.

Candidatus Ellipida (NL. fem. n. *Ellipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZCI01*. The type species for the genus is *Candidatus* Ellipida paracitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ellipula vacilitura sp. nov.

Candidatus Ellipula vacilitura (NL. fem. n. *vacilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSQW01 sp013215605*. The type genome for the species is the GenBank assembly GCA_013215605.1. The GC content of the type genome is 66.55 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Ellipula gen. nov.

Candidatus Ellipula (NL. fem. n. *Ellipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSQW01*. The type species for the genus is *Candidatus* Ellipula vacilitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMWR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Penicellaceae.

Description of *Candidatus* Elstera adfanastra sp. nov.

Candidatus Elstera adfanastra (NL. fem. n. *adfanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elstera sp013298565*. The type genome for the species is the GenBank assembly GCA_013298565.1. The GC content of the type genome is 59.28 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Elusimicrobium aggenentia sp. nov.

Candidatus Elusimicrobium aggenentia (NL. fem. n. *aggenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Elusimicrobium sp009778915*. The type genome for the species is the GenBank assembly GCA_009778915.1. The GC content of the type genome is 47.43 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Emancana omnifilenta sp. nov.

Candidatus Emancana omnifilenta (NL. fem. n. *omnifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFKX01 sp009885285*. The type genome for the species is the GenBank assembly GCA_009885285.1. The GC content of the type genome is 42.48 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Emancana gen. nov.

Candidatus Emancana (NL. fem. n. *Emancana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFKX01*. The type species for the genus is *Candidatus* Emancana omnifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Emancaria obfusentia sp. nov.

Candidatus Emancaria obfusentia (NL. fem. n. *obfusentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14186 sp902796565*. The type genome for the species is the GenBank assembly GCA_902796565.1. The GC content of the type genome is 54.6 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Emancaria gen. nov.

Candidatus Emancaria (NL. fem. n. *Emancaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14186*. The type species for the genus is *Candidatus* Emancaria obfusentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emancia adlubiforma sp. nov.

Candidatus Emancia adlubiforma (NL. fem. n. *adlubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JAAZBA01 sp012514045*. The type genome for the species is the GenBank assembly GCA_012514045.1. The GC content of the type genome is 47.35 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Emancia gen. nov.

Candidatus Emancia (NL. fem. n. *Emancia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBA01*. The type species for the genus is *Candidatus* Emancia adlubiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emancida blactimonia sp. nov.

Candidatus Emancida blactimonia (NL. fem. n. *blactimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1799 sp002319815*. The type genome for the species is the GenBank assembly GCA_002319815.1. The GC content of the type genome is 49.62 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Emancida gen. nov.

Candidatus Emancida (NL. fem. n. *Emancida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1799*. The type species for the genus is *Candidatus* Emancida blactimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emancosa cocolitura sp. nov.

Candidatus Emancosa cocolitura (NL. fem. n. *cocolitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTOV01 sp011388995*. The type genome for the species is the GenBank assembly GCA_011388995.1. The GC content of the type genome is 36.89 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Emancosa gen. nov.

Candidatus Emancosa (NL. fem. n. *Emancosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTOV01*. The type species for the genus is *Candidatus* Emancosa cocolitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emancula obtemigena sp. nov.

Candidatus Emancula obtemigena (NL. fem. n. *obtemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAO01 sp012719335*. The type genome for the species is the GenBank assembly GCA_012719335.1. The GC content of the type genome is 68.85 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Emancula gen. nov.

Candidatus Emancula (NL. fem. n. *Emancula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAO01*. The type species for the genus is *Candidatus* Emancula obtemigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Embamana accapatio sp. nov.

Candidatus Embamana accapatio (NL. fem. n. *accapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-762 sp000432575*. The type genome for the species is the GenBank assembly GCA_000432575.1. The GC content of the type genome is 27.46 % and the genome length is 1.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Embamana gen. nov.

Candidatus Embamana (NL. fem. n. *Embamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-762*. The type species for the genus is *Candidatus* Embamana accapatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Embamana inpuribra sp. nov.

Candidatus Embamana inpuribra (NL. fem. n. *inpuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-762 sp900551315*. The type genome for the species is the GenBank assembly GCA_900551315.1. The GC content of the type genome is 27.35 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Embamella cosigitio sp. nov.

Candidatus Embamella cosigitio (NL. fem. n. *cosigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSGK01 sp008015855*. The type genome for the species is the GenBank assembly GCA_008015855.1. The GC content of the type genome is 37.69 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Embamella gen. nov.

Candidatus Embamella (NL. fem. n. *Embamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSGK01*. The type species for the genus is *Candidatus* Embamella cosigitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Embamia adcogitudo sp. nov.

Candidatus Embamia adcogitudo (NL. fem. n. *adcogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp013815575*. The type genome for the species is the GenBank assembly GCA_013815575.1. The GC content of the type genome is 66.51 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Embamia gen. nov.

Candidatus Embamia (NL. fem. n. *Embamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCSIO-52909*. The type species for the genus is *Candidatus* Embamia adcogitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Embamia appecedo sp. nov.

Candidatus Embamia appecedo (NL. fem. n. *appecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902805985*. The type genome for the species is the GenBank assembly GCA_902805985.1. The GC content of the type genome is 67.43 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Embamia attegentia sp. nov.

Candidatus Embamia attegentia (NL. fem. n. *attegentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902812425*. The type genome for the species is the GenBank assembly RS_GCF_902812425.1. The GC content of the type genome is 63.53 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Embamia ciciliforma sp. nov.

Candidatus Embamia ciciliforma (NL. fem. n. *ciciliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp013696435*. The type genome for the species is the GenBank assembly GCA_013696435.1. The GC content of the type genome is 66.52 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Embamia colepitio sp. nov.

Candidatus Embamia colepitio (NL. fem. n. *colepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902805975*. The type genome for the species is the GenBank assembly GCA_902805975.1. The GC content of the type genome is 67.55 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Embamia defanetta sp. nov.

Candidatus Embamia defanetta (NL. fem. n. *defanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902806015*. The type genome for the species is the GenBank assembly GCA_902806015.1. The GC content of the type genome is 67.27 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Embamia depopifica sp. nov.

Candidatus Embamia depopifica (NL. fem. n. *depopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp013698525*. The type genome for the species is the GenBank assembly GCA_013698525.1. The GC content of the type genome is 63.32 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Embamia tametitudo sp. nov.

Candidatus Embamia tametitudo (NL. fem. n. *tametitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SCSIO-52909 sp011492945*. The type genome for the species is the GenBank assembly RS_GCF_011492945.1. The GC content of the type genome is 66.95 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Embamia taxilicula sp. nov.

Candidatus Embamia taxilicula (NL. fem. n. *taxilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902806085*. The type genome for the species is the GenBank assembly GCA_902806085.1. The GC content of the type genome is 68.2 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Embamia tetenilega sp. nov.

Candidatus Embamia tetenilega (NL. fem. n. *tetenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCSIO-52909 sp902806095*. The type genome for the species is the GenBank assembly GCA_902806095.1. The GC content of the type genome is 63.15 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Embamida adsibitura sp. nov.

Candidatus Embamida adsibitura (NL. fem. n. *adsibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYJ01 sp013696015*. The type genome for the species is the GenBank assembly GCA_013696015.1. The GC content of the type genome is 69.39 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Embamida gen. nov.

Candidatus Embamida (NL. fem. n. *Embamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYJ01*. The type species for the genus is *Candidatus* Embamida adsibitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Embamida milifisca sp. nov.

Candidatus Embamida milifisca (NL. fem. n. *milifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYJ01 sp013696555*. The type genome for the species is the GenBank assembly GCA_013696555.1. The GC content of the type genome is 67.53 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Embamosa rubicivita sp. nov.

Candidatus Embamosa rubicivita (NL. fem. n. *rubicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40-19 sp001898075*. The type genome for the species is the GenBank assembly GCA_001898075.1. The GC content of the type genome is 39.82 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Embamosa gen. nov.

Candidatus Embamosa (NL. fem. n. *Embamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40-19*. The type species for the genus is *Candidatus* Embamosa rubicivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emcibacter siligigena sp. nov.

Candidatus Emcibacter siligigena (NL. fem. n. *siligigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter sp002380195*. The type genome for the species is the GenBank assembly RS_GCF_005849285.1. The GC content of the type genome is 54.65 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Emcibacter aminnitio sp. nov.

Candidatus Emcibacter aminnitio (NL. fem. n. *aminnitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp002401455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002401455.1. The GC content of the type genome is 52.08 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Emcibacter antefigena sp. nov.

Candidatus Emcibacter antefigena (NL. fem. n. *antefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp013152755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013152755.1. The GC content of the type genome is 50.7 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Emcibacter appicicula sp. nov.

Candidatus Emcibacter appicicula (NL. fem. n. *appicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp002749135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002749135.1. The GC content of the type genome is 50.36 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Emcibacter defosisca sp. nov.

Candidatus Emcibacter defosisca (NL. fem. n. *defosisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp011051815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011051815.1. The GC

content of the type genome is 51.56 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Emcibacter defulimonia sp. nov.

Candidatus Emcibacter defulimonia (NL. fem. n. *defulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp002402225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002402225.1. The GC content of the type genome is 47.23 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Emcibacter demociforma sp. nov.

Candidatus Emcibacter demociforma (NL. fem. n. *demociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp002401545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002401545.1. The GC content of the type genome is 49.38 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Emcibacter invecifica sp. nov.

Candidatus Emcibacter invecifica (NL. fem. n. *invecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emcibacter_A sp013152615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013152615.1. The GC content of the type genome is 52.69 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Emergencia accomitas sp. nov.

Candidatus Emergencia accomitas (NL. fem. n. *accomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Emergencia sp009935805*. The type genome for the species is the GenBank assembly RS_GCF_009935805.1. The GC content of the type genome is 45.1 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Emergencia decenibra sp. nov.

Candidatus Emergencia decenibra (NL. fem. n. *decenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emergencia sp900551775*. The type genome for the species is the GenBank assembly GCA_900551775.1. The GC content of the type genome is 46.24 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Emergencia horomicella sp. nov.

Candidatus Emergencia horomicella (NL. fem. n. *horomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emergencia sp009936045*. The type genome for the species is the GenBank assembly RS_GCF_009910895.1. The GC content of the type genome is 43.87 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Emergencia metapimonia sp. nov.

Candidatus Emergencia metapimonia (NL. fem. n. *metapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emergencia sp900066695*. The type genome for the species is the GenBank assembly GCA_900066695.1. The GC content of the type genome is 45.12 % and the genome length is 4.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Emortana forinimonas sp. nov.

Candidatus Emortana forinimonas (NL. fem. n. *forinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA700 sp002298885*. The type genome for the species is the GenBank assembly GCA_002298885.1. The GC content of the type genome is 59.24 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Emortana gen. nov.

Candidatus Emortana (NL. fem. n. *Emortana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA700*. The type species for the genus is *Candidatus* Emortana forinimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emortaria bicubisca sp. nov.

Candidatus Emortaria bicubisca (NL. fem. n. *bicubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIB01 sp005798965*. The type genome for the species is the GenBank assembly GCA_005798965.1. The GC content of the type genome is 67.02 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Emortaria gen. nov.

Candidatus Emortaria (NL. fem. n. *Emortaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYIB01*. The type species for the genus is *Candidatus* Emortaria bicubisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Emortaria perabentia sp. nov.

Candidatus Emortaria perabentia (NL. fem. n. *perabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYIB01 sp903927725*. The type genome for the species is the GenBank assembly GCA_903927725.1. The GC content of the type genome is 67.72 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Emortella adaggibula sp. nov.

Candidatus Emortella adaggibula (NL. fem. n. *adaggibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SB10 sp008933835*. The type genome for the species is the GenBank assembly GCA_008933835.1. The GC content of the type genome is 62.99 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Emortella gen. nov.

Candidatus Emortella (NL. fem. n. *Emortella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SB10*. The type species for the genus is *Candidatus* Emortella adaggibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigellaceae.

Description of *Candidatus* Emortia exurrimonia sp. nov.

Candidatus Emortia exurrimonia (NL. fem. n. *exurrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6688 sp002454845*. The type genome for the species is the GenBank assembly GCA_002454845.1. The GC content of the type genome is 55.19 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Emortia gen. nov.

Candidatus Emortia (NL. fem. n. *Emortia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6688*. The type species for the genus is *Candidatus* Emortia exurrimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Emortida sicaredo sp. nov.

Candidatus Emortida sicaredo (NL. fem. n. *sicaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-28 sp005881825*. The type genome for the species is the GenBank assembly GCA_005881825.1. The GC content of the type genome is 69.55 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Emortida gen. nov.

Candidatus Emortida (NL. fem. n. *Emortida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-28*. The type species for the genus is *Candidatus* Emortida sicaredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Emortosa ludimivita sp. nov.

Candidatus Emortosa ludimivita (NL. fem. n. *ludimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B22-G1 sp003641405*. The type genome for the species is the GenBank assembly GCA_003641405.1. The GC content of the type genome is 51.36 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Emortosa gen. nov.

Candidatus Emortosa (NL. fem. n. *Emortosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B22-G1*. The type species for the genus is *Candidatus* Emortosa ludimivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEB-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugulaceae.

Description of *Candidatus* Emortula exindifica sp. nov.

Candidatus Emortula exindifica (NL. fem. n. *exindifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFSN01 sp013140575*. The type genome for the species is the GenBank assembly GCA_013140575.1. The GC content of the type genome is 63.37 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Emortula gen. nov.

Candidatus Emortula (NL. fem. n. *Emortula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFSN01*. The type species for the genus is *Candidatus* Emortula exindifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Empedobacter nutamicula sp. nov.

Candidatus Empedobacter nutamicula (NL. fem. n. *nutamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Empedobacter sp002378465*. The type genome for the species is the GenBank assembly RS_GCF_900447295.1. The GC content of the type genome is 31.76 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Emticicia baditago sp. nov.

Candidatus Emticicia baditago (NL. fem. n. *baditago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emticicia sp002855535*. The type genome for the species is the GenBank assembly RS_GCF_002855535.1. The GC content of the type genome is 41.73 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Emticicia infatibra sp. nov.

Candidatus Emticicia infatibra (NL. fem. n. *infatibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emticicia sp003418935*. The type genome for the species is the GenBank assembly RS_GCF_003418935.1. The GC content of the type genome is 38.11 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Emticicia infiretta sp. nov.

Candidatus Emticicia infiretta (NL. fem. n. *infiretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emticicia sp013912375*. The type genome for the species is the GenBank assembly RS_GCF_013912375.1. The GC content of the type genome is 37.74 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Emticicia irreditica sp. nov.

Candidatus Emticicia irreditica (NL. fem. n. *irreditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Emticicia sp004168285*. The type genome for the species is the GenBank assembly RS_GCF_004168285.1. The GC content of the type genome is 38.56 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Encenana intoliforma sp. nov.

Candidatus Encenana intoliforma (NL. fem. n. *intoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDRL01 sp013041765*. The type genome for the species is the GenBank assembly GCA_013041765.1. The GC content of the type genome is 69.28 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Encenana gen. nov.

Candidatus Encenana (NL. fem. n. *Encenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABDRL01*. The type species for the genus is *Candidatus* Encenana intoliforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encenella adpericella sp. nov.

Candidatus Encenella adpericella (NL. fem. n. *adpericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXA01 sp009786195*. The type genome for the species is the GenBank assembly GCA_009786195.1. The GC content of the type genome is 44.17 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Encenella gen. nov.

Candidatus Encenella (NL. fem. n. *Encenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQXA01*. The type species for the genus is *Candidatus* Encenella adpericella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encenella duricibra sp. nov.

Candidatus Encenella duricibra (NL. fem. n. *duricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXA01 sp009776375*. The type genome for the species is the GenBank assembly GCA_009776375.1. The GC content of the type genome is 47.9 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Encenella figilago sp. nov.

Candidatus Encenella figilago (NL. fem. n. *figilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQXA01 sp009785095*. The type genome for the species is the GenBank assembly GCA_009785095.1. The GC content of the type genome is 50.81 %

and the genome length is 0.78 Mbp.

Description of *Candidatus* Encenida fetulousia sp. nov.

Candidatus Encenida fetulousia (NL. fem. n. *fetulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XY-R5 sp001660395*. The type genome for the species is the GenBank assembly RS_GCF_001660395.1. The GC content of the type genome is 47.22 % and the genome length is 5.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Kandelia candel root sediment".

Description of *Candidatus* Encenida gen. nov.

Candidatus Encenida (NL. fem. n. *Encenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XY-R5*. The type species for the genus is *Candidatus* Encenida fetulousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encenosa inoffilega sp. nov.

Candidatus Encenosa inoffilega (NL. fem. n. *inoffilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLGQ01 sp007136595*. The type genome for the species is the GenBank assembly GCA_007136595.1. The GC content of the type genome is 38.66 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Encenosa gen. nov.

Candidatus Encenosa (NL. fem. n. *Encenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLGQ01*. The type species for the genus is *Candidatus* Encenosa inoffilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caselidaceae.

Description of *Candidatus* Encenosa irrotitoga sp. nov.

Candidatus Encenosa irrotitoga (NL. fem. n. *irrotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLGQ01 sp007132725*. The type genome for the species is the GenBank assembly GCA_007132725.1. The GC content of the type genome is 38.55 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Encenula annifessa sp. nov.

Candidatus Encenula annifessa (NL. fem. n. *annifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHY01 sp013151585*. The type genome for the species is the GenBank assembly GCA_013151585.1. The GC content of the type genome is 61.08 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Encenula gen. nov.

Candidatus Encenula (NL. fem. n. *Encenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHY01*. The type species for the genus is *Candidatus* Encenula annifessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encepana cenodentia sp. nov.

Candidatus Encepana cenodentia (NL. fem. n. *cenodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYPD01 sp007279775*. The type genome for the species is the GenBank assembly GCA_007279775.1. The GC content of the type genome is 39.99 % and the genome length is 0.43 Mbp.

Description of *Candidatus* Encepana gen. nov.

Candidatus Encepana (NL. fem. n. *Encepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYPD01*. The type species for the genus is *Candidatus* Encepana cenodentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Enceparia adaggifica sp. nov.

Candidatus Enceparia adaggifica (NL. fem. n. *adaggifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZJG01 sp902512685*. The type genome for the species is the GenBank assembly RS_GCF_902512685.1. The GC content of the type genome is 49.22 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Enceparia gen. nov.

Candidatus Enceparia (NL. fem. n. *Enceparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABZJG01*. The type species for the genus is *Candidatus* Enceparia adaggifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enceparia apograx sp. nov.

Candidatus Enceparia apograx (NL. fem. n. *apograx* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZJG01 sp902525995*. The type genome for the species is the GenBank assembly RS_GCF_902525995.1. The GC content of the type genome is 50.53 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Enceparia diminitrix sp. nov.

Candidatus Enceparia diminitrix (NL. fem. n. *diminitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZJG01 sp002726375*. The type genome for the species is the GenBank assembly GCA_002726375.1. The GC content of the type genome is 51.01 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Enceparia indipax sp. nov.

Candidatus Enceparia indipax (NL. fem. n. *indipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZJG01 sp004213125*. The type genome for the species is the GenBank assembly GCA_004213125.1. The GC content of the type genome is 50.2 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Enceparia tomogax sp. nov.

Candidatus Enceparia tomogax (NL. fem. n. *tomogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABZJG01 sp002684715*. The type genome for the species is the GenBank assembly GCA_002684715.1. The GC content of the type genome is 49.87 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Encepella abrepetta sp. nov.

Candidatus Encepella abrepetta (NL. fem. n. *abrepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WSTA01 sp009789225*. The type genome for the species is the GenBank assembly RS_GCF_009789225.1. The GC content of the type genome is 72.07 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Encepella gen. nov.

Candidatus Encepella (NL. fem. n. *Encepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WSTA01*. The type species for the genus is *Candidatus* Encepella abrepetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encepia arcubibula sp. nov.

Candidatus Encepia arcubibula (NL. fem. n. *arcubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYRO01 sp012518735*. The type genome for the species is the GenBank assembly GCA_012518735.1. The GC content of the type genome is 44.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Encepia gen. nov.

Candidatus Encepia (NL. fem. n. *Encepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYRO01*. The type species for the genus is *Candidatus* Encepia arcubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Encepida affunibula sp. nov.

Candidatus Encepida affunibula (NL. fem. n. *affunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730795 sp002730795*. The type genome for the species is the GenBank assembly GCA_002730795.1. The GC content of the type genome is 38.53 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Encepida gen. nov.

Candidatus Encepida (NL. fem. n. *Encepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2730795*. The type species for the genus is *Candidatus* Encepida affunibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

Bin127. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Enceposa adfanentia sp. nov.

Candidatus Enceposa adfanentia (NL. fem. n. *adfanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKV01 sp009785505*. The type genome for the species is the GenBank assembly GCA_009785505.1. The GC content of the type genome is 41.24 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Enceposa gen. nov.

Candidatus Enceposa (NL. fem. n. *Enceposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKV01*. The type species for the genus is *Candidatus* Enceposa adfanentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Enceposa celumitudo sp. nov.

Candidatus Enceposa celumitudo (NL. fem. n. *celumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKV01 sp009785425*. The type genome for the species is the GenBank assembly GCA_009785425.1. The GC content of the type genome is 41.04 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Enceposa exaggifica sp. nov.

Candidatus Enceposa exaggifica (NL. fem. n. *exaggifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKV01 sp009783885*. The type genome for the species is the

GenBank assembly GCA_009783885.1. The GC content of the type genome is 39.41 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Enceposa resulifica sp. nov.

Candidatus Enceposa resulifica (NL. fem. n. *resulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKV01 sp009777915*. The type genome for the species is the GenBank assembly GCA_009777915.1. The GC content of the type genome is 42.0 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Encepula adseliforma sp. nov.

Candidatus Encepula adseliforma (NL. fem. n. *adseliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXIE01 sp005772945*. The type genome for the species is the GenBank assembly GCA_005772945.1. The GC content of the type genome is 70.32 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Encepula gen. nov.

Candidatus Encepula (NL. fem. n. *Encepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXIE01*. The type species for the genus is *Candidatus* Encepula adseliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHBI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colepariaceae.

Description of *Candidatus* Encolana adfunastra sp. nov.

Candidatus Encolana adfunastra (NL. fem. n. *adfunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEI01 sp013287145*. The type genome for the species is the GenBank assembly GCA_013287145.1. The GC content of the type genome is 40.92 %

and the genome length is 2.17 Mbp.

Description of *Candidatus* Encolana gen. nov.

Candidatus Encolana (NL. fem. n. *Encolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEI01*. The type species for the genus is *Candidatus* Encolana adfunastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encolaria adcumilenta sp. nov.

Candidatus Encolaria adcumilenta (NL. fem. n. *adcumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRIG01 sp011052815*. The type genome for the species is the GenBank assembly GCA_011052815.1. The GC content of the type genome is 44.27 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Encolaria gen. nov.

Candidatus Encolaria (NL. fem. n. *Encolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRIG01*. The type species for the genus is *Candidatus* Encolaria adcumilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-42*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Labeciaceae.

Description of *Candidatus* Encolida favonisca sp. nov.

Candidatus Encolida favonisca (NL. fem. n. *favonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-13 sp001603035*. The type genome for the species is the GenBank assembly GCA_001603035.1. The GC content of the type genome is 51.63 % and the genome length is 1.68 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Encolida gen. nov.

Candidatus Encolida (NL. fem. n. *Encolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-13*. The type species for the genus is *Candidatus* Encolida favonisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encolida ingigago sp. nov.

Candidatus Encolida ingigago (NL. fem. n. *ingigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-13 sp002418705*. The type genome for the species is the GenBank assembly GCA_002418705.1. The GC content of the type genome is 46.1 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Encolosa inturitura sp. nov.

Candidatus Encolosa inturitura (NL. fem. n. *inturitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLC01 sp011333365*. The type genome for the species is the GenBank assembly GCA_011333365.1. The GC content of the type genome is 54.84 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Encolosa gen. nov.

Candidatus Encolosa (NL. fem. n. *Encolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLC01*. The type species for the genus is *Candidatus* Encolosa inturitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTNQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bimetulaceae.

Description of *Candidatus* Encomella hiruditoga sp. nov.

Candidatus Encomella hiruditoga (NL. fem. n. *hiruditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6049 sp002429085*. The type genome for the species is the GenBank assembly GCA_002429085.1. The GC content of the type genome is 37.7 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Encomella gen. nov.

Candidatus Encomella (NL. fem. n. *Encomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6049*. The type species for the genus is *Candidatus* Encomella hiruditoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Encomida gasomitia sp. nov.

Candidatus Encomida gasomitia (NL. fem. n. *gasomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA925 sp002293705*. The type genome for the species is the GenBank assembly GCA_002293705.1. The GC content of the type genome is 40.96 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Encomida gen. nov.

Candidatus Encomida (NL. fem. n. *Encomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA925*. The type species for the genus is *Candidatus* Encomida gasomitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Endivaria absoressa sp. nov.

Candidatus Endivaria absoressa (NL. fem. n. *absoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABLXZ01 sp013177935*. The type genome for the species is the GenBank assembly GCA_013177935.1. The GC content of the type genome is 50.92 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Endivaria gen. nov.

Candidatus Endivaria (NL. fem. n. *Endivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABLXZ01*. The type species for the genus is *Candidatus* Endivaria absoressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homulosaceae.

Description of *Candidatus* Endivella infesibula sp. nov.

Candidatus Endivella infesibula (NL. fem. n. *infesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12270 sp003485185*. The type genome for the species is the GenBank assembly GCA_003485185.1. The GC content of the type genome is 65.79 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Endivella gen. nov.

Candidatus Endivella (NL. fem. n. *Endivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12270*. The type species for the genus is *Candidatus* Endivella infesibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Endivosa dapififorma sp. nov.

Candidatus Endivosa dapififorma (NL. fem. n. *dapififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-409-P01 sp003215335*. The type genome for the species is the GenBank assembly GCA_003215335.1. The GC content of the type genome is 41.89 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Endivosa gen. nov.

Candidatus Endivosa (NL. fem. n. *Endivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-409-P01*. The type species for the genus is *Candidatus* Endivosa dapififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Endivula bicinatica sp. nov.

Candidatus Endivula bicinatica (NL. fem. n. *bicinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDCY01 sp013817305*. The type genome for the species is the GenBank assembly GCA_013817305.1. The GC content of the type genome is 64.67 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Endivula gen. nov.

Candidatus Endivula (NL. fem. n. *Endivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDCY01*. The type species for the genus is *Candidatus* Endivula bicinatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Endobugula redacicula sp. nov.

Candidatus Endobugula redacicula (NL. fem. n. *redacicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endobugula sp000209515*. The type genome for the species is the GenBank assembly RS_GCF_000209515.1. The GC content of the type genome is 42.06 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Endomicrobium daducilenta sp. nov.

Candidatus Endomicrobium daducilenta (NL. fem. n. *daducilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endomicrobium sp009778965*. The type genome for the species is the GenBank assembly GCA_009779605.1. The GC content of the type genome is 38.25 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Endomicrobium ephipatio sp. nov.

Candidatus Endomicrobium ephipatio (NL. fem. n. *ephipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endomicrobium sp009782015*. The type genome for the species is the GenBank assembly GCA_009782015.1. The GC content of the type genome is 44.47 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Endomicrobium inhabitrix sp. nov.

Candidatus Endomicrobium inhabitrix (NL. fem. n. *inhabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endomicrobium sp009778325*. The type genome for the species is the GenBank assembly GCA_009778325.1. The GC content of the type genome is 39.7 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Endomicrobium pavicisca sp. nov.

Candidatus Endomicrobium pavicisca (NL. fem. n. *pavicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endomicrobium sp009781315*. The type genome for the species is the GenBank assembly GCA_009781315.1. The GC content of the type genome is 39.56 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Endomicrobium semapatica sp. nov.

Candidatus Endomicrobium semapatica (NL. fem. n. *semapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endomicrobium sp009776745*. The type genome for the species is the GenBank assembly GCA_009776745.1. The GC content of the type genome is 40.33 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Endozoicomonas adpicifica sp. nov.

Candidatus Endozoicomonas adpicifica (NL. fem. n. *adpicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endozoicomonas sp900299555*. The type genome for the species is the GenBank assembly GCA_900299555.1. The GC content of the type genome is 46.8 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Endozoicomonas delubicella sp. nov.

Candidatus Endozoicomonas delubicella (NL. fem. n. *delubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endozoicomonas sp004762125*. The type genome for the species is the GenBank assembly RS_GCF_004762125.1. The GC content of the type genome is 44.9 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Endozoicomonas semibilega sp. nov.

Candidatus Endozoicomonas semibilega (NL. fem. n. *semibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Endozoicomonas sp009653635*. The type genome for the species is the GenBank assembly RS_GCF_009653635.1. The GC content of the type genome is 46.84 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Energana effunibra sp. nov.

Candidatus Energana effunibra (NL. fem. n. *effunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAALKW01 sp009995425*. The type genome for the species is the GenBank assembly GCA_009995425.1. The GC content of the type genome is 42.87 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Energana gen. nov.

Candidatus Energana (NL. fem. n. *Energana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAALKW01*. The type species for the genus is *Candidatus* Energana effunibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Energana hexamilenta sp. nov.

Candidatus Energana hexamilenta (NL. fem. n. *hexamilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAALKW01 sp011087865*. The type genome for the species is the GenBank assembly GCA_011087865.1. The GC content of the type genome is 40.83 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Energaria desoritica sp. nov.

Candidatus Energaria desoritica (NL. fem. n. *desoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULV01 sp012840505*. The type genome for the species is the GenBank assembly GCA_012840505.1. The GC content of the type genome is 53.87 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Energaria gen. nov.

Candidatus Energaria (NL. fem. n. *Energaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULV01*. The type species for the genus is *Candidatus* Energaria desoritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatosaceae.

Description of *Candidatus* Energella ammodifica sp. nov.

Candidatus Energella ammodifica (NL. fem. n. *ammodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAM01 sp012719355*. The type genome for the species is the GenBank assembly GCA_012719355.1. The GC content of the type genome is 56.41 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Energella gen. nov.

Candidatus Energella (NL. fem. n. *Energella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAM01*. The type species for the genus is *Candidatus* Energella ammodifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6911*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decomulaceae.

Description of *Candidatus* Energida homilugo sp. nov.

Candidatus Energida homilugo (NL. fem. n. *homilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVY01 sp011368205*. The type genome for the species is the GenBank assembly GCA_011368205.1. The GC content of the type genome is 43.33 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Energida gen. nov.

Candidatus Energida (NL. fem. n. *Energida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVY01*. The type species for the genus is *Candidatus* Energida homilugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunidaceae.

Description of *Candidatus* Energosa attegitoga sp. nov.

Candidatus Energosa attegitoga (NL. fem. n. *attegitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDL01 sp009781565*. The type genome for the species is the GenBank assembly GCA_009781565.1. The GC content of the type genome is 55.39 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Energosa gen. nov.

Candidatus Energosa (NL. fem. n. *Energosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDL01*. The type species for the genus is *Candidatus* Energosa attegitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRKU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubellaceae.

Description of *Candidatus* Energosa emortifica sp. nov.

Candidatus Energosa emortifica (NL. fem. n. *emortifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDL01 sp009784095*. The type genome for the species is the GenBank assembly GCA_009784095.1. The GC content of the type genome is 54.98 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Energula decenessa sp. nov.

Candidatus Energula decenessa (NL. fem. n. *decenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSSZ01 sp009469675*. The type genome for the species is the GenBank assembly GCA_009469675.1. The GC content of the type genome is 66.23 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Energula gen. nov.

Candidatus Energula (NL. fem. n. *Energula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSSZ01*. The type species for the genus is *Candidatus* Energula decenessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Energula defosifica sp. nov.

Candidatus Energula defosifica (NL. fem. n. *defosifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSSZ01 sp009469685*. The type genome for the species is the GenBank assembly GCA_009469685.1. The GC content of the type genome is 63.68 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Energula effaritia sp. nov.

Candidatus Energula effaritia (NL. fem. n. *effaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSSZ01 sp009469665*. The type genome for the species is the GenBank assembly GCA_009469665.1. The GC content of the type genome is 64.12 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Enhararia chancitas sp. nov.

Candidatus Enhararia chancitas (NL. fem. n. *chancitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-41-14 sp001784435*. The type genome for the species is the GenBank assembly GCA_001784435.1. The GC content of the type genome is 41.87 % and the genome length is 1.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Enhararia gen. nov.

Candidatus Enhararia (NL. fem. n. *Enhararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD2-FULL-41-14*. The type species for the genus is *Candidatus* Enhararia chancitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Enhararia illuvousia sp. nov.

Candidatus Enhararia illuvousia (NL. fem. n. *illuvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-41-14 sp001784475*. The type genome for the species is the GenBank assembly GCA_001784475.1. The GC content of the type genome is 40.66 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Enharia octopisca sp. nov.

Candidatus Enharia octopisca (NL. fem. n. *octopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNP01 sp012798235*. The type genome for the species is the GenBank assembly GCA_012798235.1. The GC content of the type genome is 32.93 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Enharia gen. nov.

Candidatus Enharia (NL. fem. n. *Enharia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNP01*. The type species for the genus is *Candidatus* Enharia octopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denomulaceae.

Description of *Candidatus* Enharida expecago sp. nov.

Candidatus Enharida expecago (NL. fem. n. *expecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2068 sp900769635*. The type genome for the species is the GenBank assembly RS_GCF_900769635.1. The GC content of the type genome is 31.09 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Enharida gen. nov.

Candidatus Enharida (NL. fem. n. *Enharida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2068*. The type species for the genus is *Candidatus* Enharida expecago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Enharida inconastra sp. nov.

Candidatus Enharida inconastra (NL. fem. n. *inconastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2068 sp900557675*. The type genome for the species is the GenBank assembly GCA_900557675.1. The GC content of the type genome is 31.88 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Enharosa aggubicula sp. nov.

Candidatus Enharosa aggubicula (NL. fem. n. *aggubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOI01 sp012520435*. The type genome for the species is the GenBank assembly GCA_012520435.1. The GC content of the type genome is 25.97 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Enharosa gen. nov.

Candidatus Enharosa (NL. fem. n. *Enharosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYOI01*. The type species for the genus is *Candidatus* Enharosa aggubicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Enharula pulegitia sp. nov.

Candidatus Enharula pulegitia (NL. fem. n. *pulegitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQR01 sp012519205*. The type genome for the species is the GenBank assembly GCA_012519205.1. The GC content of the type genome is 34.51 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Enharula gen. nov.

Candidatus Enharula (NL. fem. n. *Enharula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQR01*. The type species for the genus is *Candidatus* Enharula pulegitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enigmia accenilega sp. nov.

Candidatus Enigmia accenilega (NL. fem. n. *accenilega* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEVI01 sp013044085*. The type genome for the species is the GenBank assembly GCA_013044085.1. The GC content of the type genome is 65.7 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Enigmia gen. nov.

Candidatus Enigmia (NL. fem. n. *Enigmia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEVI01*. The type species for the genus is *Candidatus* Enigmia accenilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enigmida astipimonas sp. nov.

Candidatus Enigmida astipimonas (NL. fem. n. *astipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KK5 sp001984095*. The type genome for the species is the GenBank assembly RS_GCF_001984095.1. The GC content of the type genome is 69.02 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Enigmida gen. nov.

Candidatus Enigmida (NL. fem. n. *Enigmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KK5*. The type species for the genus is *Candidatus* Enigmida astipimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enigmosa selibax sp. nov.

Candidatus Enigmosa selibax (NL. fem. n. *selibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-39-12b sp001780955*. The type genome for the species is the GenBank assembly GCA_001780955.1. The GC content of the type genome is 37.86 % and the genome length is 1.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Enigmosa gen. nov.

Candidatus Enigmosa (NL. fem. n. *Enigmosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-39-12b*. The type species for the genus is *Candidatus* Enigmosa selibax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Enigmula exsuritrix sp. nov.

Candidatus Enigmula exsuritrix (NL. fem. n. *exsuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1279 sp003158365*. The type genome for the species is the GenBank assembly GCA_003158365.1. The GC content of the type genome is 35.52 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Enigmula gen. nov.

Candidatus Enigmula (NL. fem. n. *Enigmula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1279*. The type species for the genus is *Candidatus* Enigmula exsuritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Enimvana satacitica sp. nov.

Candidatus Enimvana satacitica (NL. fem. n. *satacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSPQ01 sp011046615*. The type genome for the species is the GenBank assembly GCA_011046615.1. The GC content of the type genome is 70.05 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Enimvana gen. nov.

Candidatus Enimvana (NL. fem. n. *Enimvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSPQ01*. The type species for the genus is *Candidatus* Enimvana satacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Binocidaceae.

Description of *Candidatus* Enimvaria adcesibra sp. nov.

Candidatus Enimvaria adcesibra (NL. fem. n. *adcesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABHON01 sp902168255*. The type genome for the species is the GenBank assembly GCA_902168255.1. The GC content of the type genome is 37.18 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Enimvaria gen. nov.

Candidatus Enimvaria (NL. fem. n. *Enimvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABHON01*. The type species for the genus is *Candidatus* Enimvaria adcesibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enimvida abantigena sp. nov.

Candidatus Enimvida abantigena (NL. fem. n. *abantigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXSP01 sp005792225*. The type genome for the species is the GenBank assembly GCA_005792225.1. The GC content of the type genome is 55.02 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Enimvida gen. nov.

Candidatus Enimvida (NL. fem. n. *Enimvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXSP01*. The type species for the genus is *Candidatus* Enimvida abantigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enimvula panopisca sp. nov.

Candidatus Enimvula panopisca (NL. fem. n. *panopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSDT01 sp011048615*. The type genome for the species is the GenBank assembly GCA_011048615.1. The GC content of the type genome is 62.32 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Enimvula gen. nov.

Candidatus Enimvula (NL. fem. n. *Enimvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSDT01*. The type species for the genus is *Candidatus* Enimvula panopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B4-G1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubulaceae.

Description of *Candidatus* Enorma locelessa sp. nov.

Candidatus Enorma locelessa (NL. fem. n. *locelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enorma sp900751795*. The type genome for the species is the GenBank assembly GCA_900751795.1. The GC content of the type genome is 62.4 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Enorma nivometta sp. nov.

Candidatus Enorma nivometta (NL. fem. n. *nivometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enorma sp900538305*. The type genome for the species is the GenBank assembly GCA_900538305.1. The GC content of the type genome is 62.27 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ensicida penurimonia sp. nov.

Candidatus Ensicida penurimonia (NL. fem. n. *penurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNLN01 sp014381485*. The type genome for the species is the GenBank assembly GCA_014381485.1. The GC content of the type genome is 40.32 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Ensicida gen. nov.

Candidatus Ensicida (NL. fem. n. *Ensicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNLN01*. The type species for the genus is *Candidatus* Ensicida penurimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCKK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigariaceae.

Description of *Candidatus* Ensifana apsolitudo sp. nov.

Candidatus Ensifana apsolitudo (NL. fem. n. *apsolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3291 sp002361595*. The type genome for the species is the GenBank assembly GCA_002361595.1. The GC content of the type genome is 29.97 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Ensifana gen. nov.

Candidatus Ensifana (NL. fem. n. *Ensifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3291*. The type species for the genus is *Candidatus* Ensifana apsolitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Ensifaria anaclentia sp. nov.

Candidatus Ensifaria anaclentia (NL. fem. n. *anaclentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYOL01 sp903927855*. The type genome for the species is the GenBank assembly GCA_903927855.1. The GC content of the type genome is 47.61 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Ensifaria gen. nov.

Candidatus Ensifaria (NL. fem. n. *Ensifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYOL01*. The type species for the genus is *Candidatus* Ensifaria anaclentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabidaceae.

Description of *Candidatus* Ensifella smegmedo sp. nov.

Candidatus Ensifella smegmedo (NL. fem. n. *smegmedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSY01 sp012518235*. The type genome for the species is the GenBank assembly GCA_012518235.1. The GC content of the type genome is 33.68 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Ensifella gen. nov.

Candidatus Ensifella (NL. fem. n. *Ensifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSY01*. The type species for the genus is *Candidatus* Ensifella smegmedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ensifer caravigena sp. nov.

Candidatus Ensifer caravigena (NL. fem. n. *caravigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp900469595*. The type genome for the species is the GenBank assembly RS_GCF_900469595.1. The GC content of the type genome is 62.23 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Ensifer demagatica sp. nov.

Candidatus Ensifer demagatica (NL. fem. n. *demagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp002002725*. The type genome for the species is the GenBank assembly RS_GCF_002002725.1. The GC content of the type genome is 61.77 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Ensifer mirifilenta sp. nov.

Candidatus Ensifer mirifilenta (NL. fem. n. *mirifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Ensifer sp001429285*. The type genome for the species is the GenBank assembly RS_GCF_001429285.1. The GC content of the type genome is 62.06 % and the genome length is 7.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Ensifer musulago sp. nov.

Candidatus Ensifer musulago (NL. fem. n. *musulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp900469625*. The type genome for the species is the GenBank assembly RS_GCF_900472085.1. The GC content of the type genome is 62.64 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Ensifer recomicella sp. nov.

Candidatus Ensifer recomicella (NL. fem. n. *recomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp001695855*. The type genome for the species is the GenBank assembly RS_GCF_001695855.1. The GC content of the type genome is 62.0 % and the genome length is 6.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cave".

Description of *Candidatus* Ensifer recoritrix sp. nov.

Candidatus Ensifer recoritrix (NL. fem. n. *recoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp001695835*. The type genome for the species is the GenBank assembly RS_GCF_001695895.1. The GC content of the type genome is 62.22 % and the genome length is 6.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cave".

Description of *Candidatus* Ensifer saxifousia sp. nov.

Candidatus Ensifer saxifousia (NL. fem. n. *saxifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp000799055*. The type genome for the species is the GenBank

assembly RS_GCF_000799055.1. The GC content of the type genome is 62.77 % and the genome length is 6.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "organic material".

Description of *Candidatus* Ensifer subofago sp. nov.

Candidatus Ensifer subofago (NL. fem. n. *subofago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer sp013371465*. The type genome for the species is the GenBank assembly RS_GCF_013371465.1. The GC content of the type genome is 61.7 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Ensifer tomacivita sp. nov.

Candidatus Ensifer tomacivita (NL. fem. n. *tomacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer_A sp900466575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900465985.1. The GC content of the type genome is 61.08 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Ensifer viripedo sp. nov.

Candidatus Ensifer viripedo (NL. fem. n. *viripedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ensifer_A sp900467685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900465635.1. The GC content of the type genome is 61.31 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Ensifia omnifimonas sp. nov.

Candidatus Ensifia omnifimonas (NL. fem. n. *omnifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2686265 sp002686265*. The type genome for the species is the GenBank assembly GCA_002686265.1. The GC content of the type genome is 68.35 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Ensifia gen. nov.

Candidatus Ensifia (NL. fem. n. *Ensifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686265*. The type species for the genus is *Candidatus* Ensifia omnifimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Ensifida perexentia sp. nov.

Candidatus Ensifida perexentia (NL. fem. n. *perexentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-46-23 sp002771135*. The type genome for the species is the GenBank assembly GCA_002771135.1. The GC content of the type genome is 45.86 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Ensifida gen. nov.

Candidatus Ensifida (NL. fem. n. *Ensifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-46-23*. The type species for the genus is *Candidatus* Ensifida perexentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IGHO2-12-FULL-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricariaceae.

Description of *Candidatus* Ensifosa infunax sp. nov.

Candidatus Ensifosa infunax (NL. fem. n. *infunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRW01 sp014534235*. The type genome for the species is the GenBank assembly GCA_014534235.1. The GC content of the type genome is 71.22 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Ensifosa gen. nov.

Candidatus Ensifosa (NL. fem. n. *Ensifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACVRW01*. The type species for the genus is *Candidatus* Ensifosa infunax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ensifosa paralastra sp. nov.

Candidatus Ensifosa paralastra (NL. fem. n. *paralastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACVRW01 sp013813135*. The type genome for the species is the GenBank assembly GCA_013813135.1. The GC content of the type genome is 70.69 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Ensifula cerebitica sp. nov.

Candidatus Ensifula cerebitica (NL. fem. n. *cerebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NP136 sp002730475*. The type genome for the species is the GenBank assembly GCA_002730475.1. The GC content of the type genome is 35.35 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Ensifula gen. nov.

Candidatus Ensifula (NL. fem. n. *Ensifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NP136*. The type species for the genus is *Candidatus* Ensifula cerebitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA1144. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conifellaceae.

Description of *Candidatus* Ensigana egrititas sp. nov.

Candidatus Ensigana egrititas (NL. fem. n. *egrititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMH01 sp903850745*. The type genome for the species is the GenBank assembly GCA_903850745.1. The GC content of the type genome is 59.69 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Ensigana gen. nov.

Candidatus Ensigana (NL. fem. n. *Ensigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINMH01*. The type species for the genus is *Candidatus* Ensigana egrititas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Ensigana essonitica sp. nov.

Candidatus Ensigana essonitica (NL. fem. n. *essonitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINMH01 sp009699315*. The type genome for the species is the GenBank assembly GCA_009699315.1. The GC content of the type genome is 59.94 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Ensigaria nugacetta sp. nov.

Candidatus Ensigaria nugacetta (NL. fem. n. *nugacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-49-15 sp001797695*. The type genome for the species is the

GenBank assembly GCA_001797695.1. The GC content of the type genome is 49.16 % and the genome length is 2.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Ensigaria gen. nov.

Candidatus Ensigaria (NL. fem. n. *Ensigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-49-15*. The type species for the genus is *Candidatus* Ensigaria nugacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2156*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coniganaceae.

Description of *Candidatus* Ensigella odontedo sp. nov.

Candidatus Ensigella odontedo (NL. fem. n. *odontedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PTLJ01 sp002938045*. The type genome for the species is the GenBank assembly GCA_002938045.1. The GC content of the type genome is 58.33 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Ensigella gen. nov.

Candidatus Ensigella (NL. fem. n. *Ensigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PTLJ01*. The type species for the genus is *Candidatus* Ensigella odontedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Ensigia fetutilega sp. nov.

Candidatus Ensigia fetutilega (NL. fem. n. *fetutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715305 sp002706585*. The type genome for the species is the GenBank assembly GCA_002706585.1. The GC content of the type genome is 29.09 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Ensigia gen. nov.

Candidatus Ensigia (NL. fem. n. *Ensigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715305*. The type species for the genus is *Candidatus* Ensigia fetutilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Ensigia irradibra sp. nov.

Candidatus Ensigia irradibra (NL. fem. n. *irradibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715305 sp002715305*. The type genome for the species is the GenBank assembly GCA_002715305.1. The GC content of the type genome is 29.44 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Ensigida alsulitas sp. nov.

Candidatus Ensigida alsulitas (NL. fem. n. *alsulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4116 sp002381645*. The type genome for the species is the GenBank assembly GCA_002381645.1. The GC content of the type genome is 39.91 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Ensigida gen. nov.

Candidatus Ensigida (NL. fem. n. *Ensigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA4116*. The type species for the genus is *Candidatus* Ensigida alsulitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ensigosa resuledo sp. nov.

Candidatus Ensigosa resuledo (NL. fem. n. *resuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7177 sp002491225*. The type genome for the species is the GenBank assembly GCA_002491225.1. The GC content of the type genome is 64.63 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Ensigosa gen. nov.

Candidatus Ensigosa (NL. fem. n. *Ensigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7177*. The type species for the genus is *Candidatus* Ensigosa resuledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ensigula annifitudo sp. nov.

Candidatus Ensigula annifitudo (NL. fem. n. *annifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFY01 sp013152625*. The type genome for the species is the GenBank assembly GCA_013152625.1. The GC content of the type genome is 59.17 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Ensigula gen. nov.

Candidatus Ensigula (NL. fem. n. *Ensigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFY01*. The type species for the genus is *Candidatus* Ensigula annifitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enterobacter defaritia sp. nov.

Candidatus Enterobacter defaritia (NL. fem. n. *defaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter sp000568095*. The type genome for the species is the GenBank assembly RS_GCF_000568095.1. The GC content of the type genome is 55.58 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Enterobacter peracitia sp. nov.

Candidatus Enterobacter peracitia (NL. fem. n. *peracitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter sp000762975*. The type genome for the species is the GenBank assembly RS_GCF_000762975.1. The GC content of the type genome is 55.76 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Enterobacter rutabitoga sp. nov.

Candidatus Enterobacter rutabitoga (NL. fem. n. *rutabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter sp000493015*. The type genome for the species is the GenBank assembly RS_GCF_000733275.2. The GC content of the type genome is 55.66 % and the genome length is 4.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Loktak Lake".

Description of *Candidatus* Enterobacter semilatio sp. nov.

Candidatus Enterobacter semilatio (NL. fem. n. *semilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter sp003057745*. The type genome for the species is the GenBank assembly RS_GCF_003057745.1. The GC content of the type genome is 56.98 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Enterobacter utpotitura sp. nov.

Candidatus Enterobacter utpotitura (NL. fem. n. *utpotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter sp013927005*. The type genome for the species is the GenBank assembly RS_GCF_013927005.1. The GC content of the type genome is 53.14 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Enterobacter dimaditia sp. nov.

Candidatus Enterobacter dimaditia (NL. fem. n. *dimaditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter_D sp001888805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001888805.2. The GC content of the type genome is 56.02 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "roots of desert plants".

Description of *Candidatus* Enterobacter subodilega sp. nov.

Candidatus Enterobacter subodilega (NL. fem. n. *subodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterobacter_D sp900116015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002429775.1. The GC content of the type genome is 54.96 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Enterocloster ammatigena sp. nov.

Candidatus Enterocloster ammatigena (NL. fem. n. *ammatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900555045*. The type genome for the species is the

GenBank assembly GCA_900555045.1. The GC content of the type genome is 57.65 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Enterocloster assucivita sp. nov.

Candidatus Enterocloster assucivita (NL. fem. n. *assucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900770345*. The type genome for the species is the GenBank assembly RS_GCF_900770345.1. The GC content of the type genome is 48.37 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Enterocloster benemiforma sp. nov.

Candidatus Enterocloster benemiforma (NL. fem. n. *benemiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900547035*. The type genome for the species is the GenBank assembly RS_GCF_900759635.1. The GC content of the type genome is 50.93 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Enterocloster bicinentia sp. nov.

Candidatus Enterocloster bicinentia (NL. fem. n. *bicinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp000155435*. The type genome for the species is the GenBank assembly RS_GCF_003603825.1. The GC content of the type genome is 50.04 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Enterocloster bonifigena sp. nov.

Candidatus Enterocloster bonifigena (NL. fem. n. *bonifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900759225*. The type genome for the species is the GenBank assembly RS_GCF_900759225.1. The GC content of the type genome is 47.86 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Enterocloster casabibra sp. nov.

Candidatus Enterocloster casabibra (NL. fem. n. *casabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900540675*. The type genome for the species is the GenBank assembly RS_GCF_900764065.1. The GC content of the type genome is 47.12 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Enterocloster dimidentia sp. nov.

Candidatus Enterocloster dimidentia (NL. fem. n. *dimidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp005845215*. The type genome for the species is the GenBank assembly RS_GCF_900753375.1. The GC content of the type genome is 50.17 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Enterocloster filificula sp. nov.

Candidatus Enterocloster filificula (NL. fem. n. *filificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp001304855*. The type genome for the species is the GenBank assembly GCA_001304855.1. The GC content of the type genome is 49.29 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Enterocloster ludimedo sp. nov.

Candidatus Enterocloster ludimedo (NL. fem. n. *ludimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp000431375*. The type genome for the species is the GenBank assembly RS_GCF_003480345.1. The GC content of the type genome is 43.87 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Enterocloster monimitoga sp. nov.

Candidatus Enterocloster monimitoga (NL. fem. n. *monimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900555905*. The type genome for the species is the GenBank assembly GCA_900555905.1. The GC content of the type genome is 58.03 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Enterocloster negotigena sp. nov.

Candidatus Enterocloster negotigena (NL. fem. n. *negotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900551225*. The type genome for the species is the GenBank assembly GCA_900551225.1. The GC content of the type genome is 53.43 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Enterocloster pecunentia sp. nov.

Candidatus Enterocloster pecunentia (NL. fem. n. *pecunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900753815*. The type genome for the species is the GenBank assembly RS_GCF_900753815.1. The GC content of the type genome is 50.36 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Enterocloster pedifousia sp. nov.

Candidatus Enterocloster pedifousia (NL. fem. n. *pedifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900543885*. The type genome for the species is the GenBank assembly GCA_900543885.1. The GC content of the type genome is 43.24 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Enterocloster refocastra sp. nov.

Candidatus Enterocloster refocastra (NL. fem. n. *refocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp001517625*. The type genome for the species is the GenBank assembly GCA_008679565.1. The GC content of the type genome is 46.7 %

and the genome length is 3.4 Mbp.

Description of *Candidatus* Enterocloster saxifificа sp. nov.

Candidatus Enterocloster saxifificа (NL. fem. n. *saxifificа* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900549235*. The type genome for the species is the GenBank assembly GCA_900766175.1. The GC content of the type genome is 50.05 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Enterocloster semivetta sp. nov.

Candidatus Enterocloster semivetta (NL. fem. n. *semivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900538485*. The type genome for the species is the GenBank assembly GCA_900538485.1. The GC content of the type genome is 48.96 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Enterocloster vicecitio sp. nov.

Candidatus Enterocloster vicecitio (NL. fem. n. *vicecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterocloster sp900541315*. The type genome for the species is the GenBank assembly GCA_900541315.1. The GC content of the type genome is 43.08 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Enterococcus desacetta sp. nov.

Candidatus Enterococcus desacetta (NL. fem. n. *desacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus sp002140975*. The type genome for the species is the GenBank assembly RS_GCF_002140975.1. The GC content of the type genome is 39.85 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Enterococcus macilitas sp. nov.

Candidatus Enterococcus macilitas (NL. fem. n. *macilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus sp002148425*. The type genome for the species is the GenBank assembly RS_GCF_002140835.1. The GC content of the type genome is 36.25 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Enterococcus momorifica sp. nov.

Candidatus Enterococcus momorifica (NL. fem. n. *momorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus sp002140715*. The type genome for the species is the GenBank assembly RS_GCF_002140715.1. The GC content of the type genome is 35.58 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Enterococcus subucicella sp. nov.

Candidatus Enterococcus subucicella (NL. fem. n. *subucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus sp002141365*. The type genome for the species is the GenBank assembly RS_GCF_002141365.1. The GC content of the type genome is 36.09 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Enterococcus vitigibula sp. nov.

Candidatus Enterococcus vitigibula (NL. fem. n. *vitigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus sp002174455*. The type genome for the species is the GenBank assembly RS_GCF_002174455.1. The GC content of the type genome is 37.72 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Enterococcus agravitura sp. nov.

Candidatus Enterococcus agravitura (NL. fem. n. *agravitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_A sp005405225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005405225.1. The GC content of the type genome is 37.82 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Enterococcus inrepibula sp. nov.

Candidatus Enterococcus inrepibula (NL. fem. n. *inrepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_A sp902706605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902706605.1. The GC content of the type genome is 41.9 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Enterococcus peripatio sp. nov.

Candidatus Enterococcus peripatio (NL. fem. n. *peripatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_A sp005405205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005405205.1. The GC content of the type genome is 40.09 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Enterococcus vinulicula sp. nov.

Candidatus Enterococcus vinulicula (NL. fem. n. *vinulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_A sp002140655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005405485.1. The GC content of the type genome is 40.33 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Enterococcus laxititica sp. nov.

Candidatus Enterococcus laxititica (NL. fem. n. *laxititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_B sp002140175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002140175.1. The GC content of the type genome is 36.79 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Enterococcus lucubedo sp. nov.

Candidatus Enterococcus lucubedo (NL. fem. n. *lucubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_B sp011038845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011038855.1. The GC content of the type genome is 40.66 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Enterococcus occenisca sp. nov.

Candidatus Enterococcus occenisca (NL. fem. n. *occenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_B sp009933175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009933175.1. The GC content of the type genome is 38.56 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Enterococcus saxopifica sp. nov.

Candidatus Enterococcus saxopifica (NL. fem. n. *saxopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_C sp009933135*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009933135.1. The GC content of the type genome is 43.77 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Enterococcus adbelitas sp. nov.

Candidatus Enterococcus adbelitas (NL. fem. n. *adbelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_D sp002140915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002140915.1. The GC content of the type genome is 41.48 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Enterococcus remulastra sp. nov.

Candidatus Enterococcus remulastra (NL. fem. n. *remulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_D sp002850555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002140695.1. The GC content of the type genome is 42.02 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Enterococcus subucatio sp. nov.

Candidatus Enterococcus subucatio (NL. fem. n. *subucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_D sp001297065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002337935.1. The GC content of the type genome is 41.71 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Enterococcus adtagitura sp. nov.

Candidatus Enterococcus adtagitura (NL. fem. n. *adtagitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_F sp009933335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009933335.1. The GC content of the type genome is 36.57 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Enterococcus deparatio sp. nov.

Candidatus Enterococcus deparatio (NL. fem. n. *deparatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_I sp012521695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012521695.1. The GC content of the type genome is 36.69 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Enterococcus exorbilega sp. nov.

Candidatus Enterococcus exorbilega (NL. fem. n. *exorbilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterococcus_J sp005405245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005405245.1. The GC content of the type genome is 41.41 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Enteroscipio mureligena sp. nov.

Candidatus Enteroscipio mureligena (NL. fem. n. *mureligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enteroscipio sp000270285*. The type genome for the species is the GenBank assembly RS_GCF_000270285.1. The GC content of the type genome is 56.2 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Adult Human Intestine".

Description of *Candidatus* Enterovibrio adporitia sp. nov.

Candidatus Enterovibrio adporitia (NL. fem. n. *adporitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterovibrio sp011045095*. The type genome for the species is the GenBank assembly RS_GCF_011045095.1. The GC content of the type genome is 48.85 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Enterovibrio aggubimonas sp. nov.

Candidatus Enterovibrio aggubimonas (NL. fem. n. *aggubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterovibrio sp001310415*. The type genome for the species is the GenBank assembly GCA_001310415.1. The GC content of the type genome is 50.79 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Enterovibrio lucifibra sp. nov.

Candidatus Enterovibrio lucifibra (NL. fem. n. *lucifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterovibrio sp004116385*. The type genome for the species is the GenBank assembly RS_GCF_004116385.1. The GC content of the type genome is 45.95 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Enterovirga immobitia sp. nov.

Candidatus Enterovirga immobitia (NL. fem. n. *immobitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterovirga sp013044135*. The type genome for the species is the GenBank assembly RS_GCF_013044135.1. The GC content of the type genome is 68.78 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Enterovirga nosocatio sp. nov.

Candidatus Enterovirga nosocatio (NL. fem. n. *nosocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Enterovirga sp903644085*. The type genome for the species is the GenBank assembly RS_GCF_903644085.1. The GC content of the type genome is 68.92 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Entomana pedifatio sp. nov.

Candidatus Entomana pedifatio (NL. fem. n. *pedifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFFI01 sp004556925*. The type genome for the species is the GenBank assembly GCA_004556925.1. The GC content of the type genome is 50.14 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Entomana gen. nov.

Candidatus Entomana (NL. fem. n. *Entomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFFI01*. The type species for the genus is *Candidatus* Entomana pedifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Entomida assudimonia sp. nov.

Candidatus Entomida assudimonia (NL. fem. n. *assudimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWRV01 sp000504185*. The type genome for the species is the GenBank assembly RS_GCF_000504185.2. The GC content of the type genome is 65.96 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Entomida gen. nov.

Candidatus Entomida (NL. fem. n. *Entomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWRV01*. The type species for the genus is *Candidatus* Entomida assudimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Entomosa incomax sp. nov.

Candidatus Entomosa incomax (NL. fem. n. *incomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOP01 sp011055735*. The type genome for the species is the GenBank assembly GCA_011055735.1. The GC content of the type genome is 75.39 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Entomosa gen. nov.

Candidatus Entomosa (NL. fem. n. *Entomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOP01*. The type species for the genus is *Candidatus* Entomosa incomax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6930*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Homiculaceae.

Description of *Candidatus* Entomula abrumago sp. nov.

Candidatus Entomula abrumago (NL. fem. n. *abrumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686945 sp002686945*. The type genome for the species is the GenBank assembly GCA_002686945.1. The GC content of the type genome is 60.86 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Entomula gen. nov.

Candidatus Entomula (NL. fem. n. *Entomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2686945*. The type species for the genus is *Candidatus* Entomula abrumago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Entomula extinicula sp. nov.

Candidatus Entomula extinicula (NL. fem. n. *extinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686945 sp011524785*. The type genome for the species is the GenBank assembly GCA_011524785.1. The GC content of the type genome is 72.44 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Entomula inargugo sp. nov.

Candidatus Entomula inargugo (NL. fem. n. *inargugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686945 sp014238415*. The type genome for the species is the GenBank assembly GCA_014238415.1. The GC content of the type genome is 60.24 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Entomula proclastra sp. nov.

Candidatus Entomula proclastra (NL. fem. n. *proclastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686945 sp012960475*. The type genome for the species is the GenBank assembly GCA_012960475.1. The GC content of the type genome is 60.86 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Enuclella adhinitica sp. nov.

Candidatus Enuclella adhinitica (NL. fem. n. *adhinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-002707245 sp002707245*. The type genome for the species is the GenBank assembly GCA_002707245.1. The GC content of the type genome is 30.91 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Enuclella gen. nov.

Candidatus Enuclella (NL. fem. n. *Enuclella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002707245*. The type species for the genus is *Candidatus* Enuclella adhinitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Enuclella cisoretta sp. nov.

Candidatus Enuclella cisoretta (NL. fem. n. *cisoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002707245 sp002698365*. The type genome for the species is the GenBank assembly GCA_002698365.1. The GC content of the type genome is 30.75 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Enuclida bifarugo sp. nov.

Candidatus Enuclida bifarugo (NL. fem. n. *bifarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHU01 sp013151645*. The type genome for the species is the GenBank assembly GCA_013151645.1. The GC content of the type genome is 55.73 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Enuclida gen. nov.

Candidatus Enuclida (NL. fem. n. *Enuclida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHU01*. The type species for the genus is *Candidatus* Enuclida bifarugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enuclosa saxopax sp. nov.

Candidatus Enuclosa saxopax (NL. fem. n. *saxopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-40-17 sp002790195*. The type genome for the species is the GenBank assembly GCA_002790195.1. The GC content of the type genome is 40.37 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Enuclosa gen. nov.

Candidatus Enuclosa (NL. fem. n. *Enuclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-40-17*. The type species for the genus is *Candidatus* Enuclosa saxopax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enuclosa subofugo sp. nov.

Candidatus Enuclosa subofugo (NL. fem. n. *subofugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-40-17 sp002841025*. The type genome for the species is the GenBank assembly GCA_002841025.1. The GC content of the type genome is 40.29 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Enuclula monodicella sp. nov.

Candidatus Enuclula monodicella (NL. fem. n. *monodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DURK01 sp012837325*. The type genome for the species is the GenBank assembly GCA_012837325.1. The GC content of the type genome is 45.5 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Enuclula gen. nov.

Candidatus Enuclula (NL. fem. n. *Enuclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DURK01*. The type species for the genus is *Candidatus* Enuclula monodicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Enuntana intacessa sp. nov.

Candidatus Enuntana intacessa (NL. fem. n. *intacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINWE01 sp903854365*. The type genome for the species is the GenBank assembly GCA_903854365.1. The GC content of the type genome is 49.02 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Enuntana gen. nov.

Candidatus Enuntana (NL. fem. n. *Enuntana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINWE01*. The type species for the genus is *Candidatus* Enuntana intacessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Enuntaria adrenedo sp. nov.

Candidatus Enuntaria adrenedo (NL. fem. n. *adrenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6118 sp002422525*. The type genome for the species is the GenBank assembly GCA_002422525.1. The GC content of the type genome is 67.12 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Enuntaria gen. nov.

Candidatus Enuntaria (NL. fem. n. *Enuntaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6118*. The type species for the genus is *Candidatus* Enuntaria adrenedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Enuntella xeramicula sp. nov.

Candidatus Enuntella xeramicula (NL. fem. n. *xeramicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1466 sp002325605*. The type genome for the species is the GenBank assembly GCA_002325605.1. The GC content of the type genome is 50.25 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Enuntella gen. nov.

Candidatus Enuntella (NL. fem. n. *Enuntella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1466*. The type species for the genus is *Candidatus* Enuntella xeramicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Enuntida sacopastra sp. nov.

Candidatus Enuntida sacopastra (NL. fem. n. *sacopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2725915 sp002725915*. The type genome for the species is the GenBank assembly GCA_002725915.1. The GC content of the type genome is 62.74 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Enuntida gen. nov.

Candidatus Enuntida (NL. fem. n. *Enuntida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2725915*. The type species for the genus is *Candidatus* Enuntida sacopastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Enuntula repuritura sp. nov.

Candidatus Enuntula repuritura (NL. fem. n. *repuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-02-FULL-57-9 sp001800015*. The type genome for the species is the GenBank assembly GCA_001800015.1. The GC content of the type genome is 57.39 % and the genome length is 2.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Enuntula gen. nov.

Candidatus Enuntula (NL. fem. n. *Enuntula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-02-FULL-57-9*. The type species for the genus is *Candidatus* Enuntula repuritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9628*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recorariaceae.

Description of *Candidatus* Eoetvoesia vanidousia sp. nov.

Candidatus Eoetvoesia vanidousia (NL. fem. n. *vanidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Eoetvoesia sp004322135*. The type genome for the species is the GenBank assembly GCA_004298105.1. The GC content of the type genome is 58.3 %

and the genome length is 3.05 Mbp.

Description of *Candidatus* Ephemana exculax sp. nov.

Candidatus Ephemana exculax (NL. fem. n. *exculax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1760 sp002314775*. The type genome for the species is the GenBank assembly GCA_002314775.1. The GC content of the type genome is 39.48 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Ephemana gen. nov.

Candidatus Ephemana (NL. fem. n. *Ephemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1760*. The type species for the genus is *Candidatus* Ephemana exculax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ephemaria encolitas sp. nov.

Candidatus Ephemaria encolitas (NL. fem. n. *encolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBO01 sp013694885*. The type genome for the species is the GenBank assembly GCA_013694885.1. The GC content of the type genome is 66.19 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Ephemaria gen. nov.

Candidatus Ephemaria (NL. fem. n. *Ephemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBO01*. The type species for the genus is *Candidatus* Ephemaria encolitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6265*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cibarosaceae.

Description of *Candidatus* Ephemella relapilenta sp. nov.

Candidatus Ephemella relapilenta (NL. fem. n. *relapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3103 sp002365855*. The type genome for the species is the GenBank assembly GCA_002365855.1. The GC content of the type genome is 47.53 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Ephemella gen. nov.

Candidatus Ephemella (NL. fem. n. *Ephemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3103*. The type species for the genus is *Candidatus* Ephemella relapilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ephemia expopax sp. nov.

Candidatus Ephemia expopax (NL. fem. n. *expopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDCI01 sp013288215*. The type genome for the species is the GenBank assembly GCA_013288215.1. The GC content of the type genome is 52.62 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Ephemia gen. nov.

Candidatus Ephemia (NL. fem. n. *Ephemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDCI01*. The type species for the genus is *Candidatus* Ephemia expopax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWAM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maledulaceae.

Description of *Candidatus* Ephemula laxitentia sp. nov.

Candidatus Ephemula laxitentia (NL. fem. n. *laxitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pan44 sp007745175*. The type genome for the species is the GenBank assembly RS_GCF_007745175.1. The GC content of the type genome is 63.21 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Ephemula gen. nov.

Candidatus Ephemula (NL. fem. n. *Ephemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pan44*. The type species for the genus is *Candidatus* Ephemula laxitentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ephipana adtumitura sp. nov.

Candidatus Ephipana adtumitura (NL. fem. n. *adtumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G138 sp004213565*. The type genome for the species is the GenBank assembly GCA_004213565.1. The GC content of the type genome is 71.87 % and the genome length is 9.12 Mbp.

Description of *Candidatus* Ephipana gen. nov.

Candidatus Ephipana (NL. fem. n. *Ephipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G138*. The type species for the genus is *Candidatus* Ephipana adtumitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ephiparia fefelisca sp. nov.

Candidatus Ephiparia fefelisca (NL. fem. n. *fefelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1189 sp002309805*. The type genome for the species is the GenBank assembly GCA_002309805.1. The GC content of the type genome is 53.23 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Ephiparia gen. nov.

Candidatus Ephiparia (NL. fem. n. *Ephiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1189*. The type species for the genus is *Candidatus* Ephiparia fefelisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ephipella defacimonas sp. nov.

Candidatus Ephipella defacimonas (NL. fem. n. *defacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHWB01 sp009691025*. The type genome for the species is the GenBank assembly GCA_009691025.1. The GC content of the type genome is 68.89 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Ephipella gen. nov.

Candidatus Ephipella (NL. fem. n. *Ephipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHWB01*. The type species for the genus is *Candidatus* Ephipella defacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6615*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fumifariaceae.

Description of *Candidatus* Ephipia relenitura sp. nov.

Candidatus Ephipia relenitura (NL. fem. n. *relenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1306 sp002307245*. The type genome for the species is the GenBank assembly GCA_002307245.1. The GC content of the type genome is 65.2 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Ephipia gen. nov.

Candidatus Ephipia (NL. fem. n. *Ephipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1306*. The type species for the genus is *Candidatus* Ephipia relenitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duponosaceae.

Description of *Candidatus* Ephipida appugitura sp. nov.

Candidatus Ephipida appugitura (NL. fem. n. *appugitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RHAI01 sp010028705*. The type genome for the species is the GenBank assembly GCA_010028705.1. The GC content of the type genome is 46.62 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Ephipida gen. nov.

Candidatus Ephipida (NL. fem. n. *Ephipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RHAI01*. The type species for the genus is *Candidatus* Ephipida appugitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SXXA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalanaceae.

Description of *Candidatus* Epibacterium accapitica sp. nov.

Candidatus Epibacterium accapitica (NL. fem. n. *accapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp009617595*. The type genome for the species is the GenBank assembly RS_GCF_009617595.1. The GC content of the type genome is 56.35 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Epibacterium affabastra sp. nov.

Candidatus Epibacterium affabastra (NL. fem. n. *affabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp006265095*. The type genome for the species is the GenBank assembly RS_GCF_006265095.1. The GC content of the type genome is 61.23 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Epibacterium anarratica sp. nov.

Candidatus Epibacterium anarratica (NL. fem. n. *anarratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp001874255*. The type genome for the species is the GenBank assembly GCA_001874255.1. The GC content of the type genome is 61.73 % and the genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Epibacterium curacessa sp. nov.

Candidatus Epibacterium curacessa (NL. fem. n. *curacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp004566265*. The type genome for the species is the GenBank assembly GCA_013215045.1. The GC content of the type genome is 56.29 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Epibacterium inrecivita sp. nov.

Candidatus Epibacterium inrecivita (NL. fem. n. *inrecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Epibacterium sp000014065*. The type genome for the species is the GenBank assembly RS_GCF_000014065.1. The GC content of the type genome is 60.06 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Epibacterium manomentia sp. nov.

Candidatus Epibacterium manomentia (NL. fem. n. *manomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp009496005*. The type genome for the species is the GenBank assembly RS_GCF_009496005.1. The GC content of the type genome is 57.53 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Epibacterium taxilitudo sp. nov.

Candidatus Epibacterium taxilitudo (NL. fem. n. *taxilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epibacterium sp011806385*. The type genome for the species is the GenBank assembly RS_GCF_011806385.1. The GC content of the type genome is 62.21 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Epiclana eccilimonia sp. nov.

Candidatus Epiclana eccilimonia (NL. fem. n. *eccilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECG01 sp007692425*. The type genome for the species is the GenBank assembly GCA_007692425.1. The GC content of the type genome is 49.47 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Epiclana gen. nov.

Candidatus Epiclana (NL. fem. n. *Epiclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECG01*. The type species for the genus is *Candidatus* Epiclana eccilimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epiclaria vavasugo sp. nov.

Candidatus Epiclaria vavasugo (NL. fem. n. *vavasugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2715465 sp002715465*. The type genome for the species is the GenBank assembly GCA_002715465.1. The GC content of the type genome is 34.19 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Epiclaria gen. nov.

Candidatus Epiclaria (NL. fem. n. *Epiclaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2715465*. The type species for the genus is *Candidatus* Epiclaria vavasugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S15-B10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagulaceae.

Description of *Candidatus* Epiclella dehisiforma sp. nov.

Candidatus Epiclella dehisiforma (NL. fem. n. *dehisiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-08 sp001604045*. The type genome for the species is the GenBank assembly GCA_001604045.1. The GC content of the type genome is 55.19 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Epiclella gen. nov.

Candidatus Epiclella (NL. fem. n. *Epiclella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-08*. The type species for the genus is *Candidatus* Epiclella dehisiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAKW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Milipariaceae.

Description of *Candidatus* Epiclida uxorcicella sp. nov.

Candidatus Epiclida uxorcicella (NL. fem. n. *uxorcicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJD01 sp007135295*. The type genome for the species is the GenBank assembly GCA_007135295.1. The GC content of the type genome is 64.09 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Epiclida gen. nov.

Candidatus Epiclida (NL. fem. n. *Epiclida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLJD01*. The type species for the genus is *Candidatus* Epiclida uxorcicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Epiclosa conopitica sp. nov.

Candidatus Epiclosa conopitica (NL. fem. n. *conopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4311 sp002394665*. The type genome for the species is the GenBank assembly GCA_002394665.1. The GC content of the type genome is 33.43 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Epiclosa gen. nov.

Candidatus Epiclosa (NL. fem. n. *Epiclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4311*. The type species for the genus is *Candidatus* Epiclosa conopitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epiclosa semipatio sp. nov.

Candidatus Epiclosa semipatio (NL. fem. n. *semipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4311 sp002395105*. The type genome for the species is the GenBank assembly GCA_002395105.1. The GC content of the type genome is 27.62 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Epiclula bipenibra sp. nov.

Candidatus Epiclula bipenibra (NL. fem. n. *bipenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-17 sp001794195*. The type genome for the species is the GenBank assembly GCA_001794195.1. The GC content of the type genome is 43.67 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Epiclula gen. nov.

Candidatus Epiclula (NL. fem. n. *Epiclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-44-17*. The type species for the genus is *Candidatus* Epiclula bipenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IGHO2-01-FULL-4-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisulaceae.

Description of *Candidatus* Epicraria abligitica sp. nov.

Candidatus Epicraria abligitica (NL. fem. n. *abligitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCVQ01 sp902806175*. The type genome for the species is the GenBank assembly GCA_902806175.1. The GC content of the type genome is 71.51 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Epicraria gen. nov.

Candidatus Epicraria (NL. fem. n. *Epicraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCVQ01*. The type species for the genus is *Candidatus* Epicraria abligitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epicraria apsolilenta sp. nov.

Candidatus Epicraria apsolilenta (NL. fem. n. *apsolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCVQ01 sp013813955*. The type genome for the species is the GenBank assembly GCA_013813955.1. The GC content of the type genome is 72.16 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Epicrida musulugo sp. nov.

Candidatus Epicrida musulugo (NL. fem. n. *musulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWUB01 sp003563755*. The type genome for the species is the GenBank assembly GCA_003563755.1. The GC content of the type genome is 61.53 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Epicrida gen. nov.

Candidatus Epicrida (NL. fem. n. *Epicrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWUB01*. The type species for the genus is *Candidatus* Epicrida musulugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforariaceae.

Description of *Candidatus* Epicrosa apporimonas sp. nov.

Candidatus Epicrosa apporimonas (NL. fem. n. *apporimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQIY01 sp903871975*. The type genome for the species is the GenBank assembly GCA_903871975.1. The GC content of the type genome is 67.13 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Epicrosa gen. nov.

Candidatus Epicrosa (NL. fem. n. *Epicrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQIY01*. The type species for the genus is *Candidatus* Epicrosa apporimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epigrana proslitia sp. nov.

Candidatus Epigrana proslitia (NL. fem. n. *proslitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *12-FULL-45-19b sp001794605*. The type genome for the species is the GenBank assembly GCA_001794605.1. The GC content of the type genome is 44.55 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Epigrana gen. nov.

Candidatus Epigrana (NL. fem. n. *Epigrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *12-FULL-45-19b*. The type species for the genus is *Candidatus* Epigrana proslitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IGHO2-12-FULL-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricariaceae.

Description of *Candidatus* Epigraria acculitoga sp. nov.

Candidatus Epigraria acculitoga (NL. fem. n. *acculitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACRUB01 sp014305015*. The type genome for the species is the GenBank assembly GCA_014305015.1. The GC content of the type genome is 58.11 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Epigraria gen. nov.

Candidatus Epigraria (NL. fem. n. *Epigraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACRUB01*. The type species for the genus is *Candidatus* Epigraria acculitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epigrella capudedo sp. nov.

Candidatus Epigrella capudedo (NL. fem. n. *capudedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch48 sp012512865*. The type genome for the species is the GenBank assembly GCA_012512865.1. The GC content of the type genome is 41.8 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Epigrella gen. nov.

Candidatus Epigrella (NL. fem. n. *Epigrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch48*. The type species for the genus is *Candidatus* Epigrella capudedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Notacidaceae.

Description of *Candidatus* Epigrella tigurimonas sp. nov.

Candidatus Epigrella tigurimonas (NL. fem. n. *tigurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch48 sp013314855*. The type genome for the species is the GenBank assembly GCA_013314855.1. The GC content of the type genome is 38.13 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Epigrida carunitura sp. nov.

Candidatus Epigrida carunitura (NL. fem. n. *carunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAADGV01 sp900696645*. The type genome for the species is the GenBank assembly GCA_900696645.1. The GC content of the type genome is 51.34 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Epigrida gen. nov.

Candidatus Epigrida (NL. fem. n. *Epigrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAADGV01*. The type species for the genus is *Candidatus* Epigrida carunitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Epigrosa antipimonas sp. nov.

Candidatus Epigrosa antipimonas (NL. fem. n. *antipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6230 sp002441565*. The type genome for the species is the GenBank assembly GCA_002441565.1. The GC content of the type genome is 40.55 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Epigrosa gen. nov.

Candidatus Epigrosa (NL. fem. n. *Epigrosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6230*. The type species for the genus is *Candidatus* Epigrosa antipimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epigrula apsenitrix sp. nov.

Candidatus Epigrula apsenitrix (NL. fem. n. *apsenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-50-9 sp001772255*. The type genome for the species is the GenBank assembly GCA_001772255.1. The GC content of the type genome is 50.83 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Epigrula gen. nov.

Candidatus Epigrula (NL. fem. n. *Epigrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-50-9*. The type species for the genus is *Candidatus* Epigrula apsenitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10110*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pacifosaceae.

Description of *Candidatus* Epilithonimonas accerigena sp. nov.

Candidatus Epilithonimonas accerigena (NL. fem. n. *accerigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp001898785*. The type genome for the species is the GenBank assembly GCA_001898785.1. The GC content of the type genome is 35.68 % and the genome length is 3.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Epilithonimonas appacastra sp. nov.

Candidatus Epilithonimonas appacastra (NL. fem. n. *appacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp002476905*. The type genome for the species is the GenBank assembly GCA_002476905.1. The GC content of the type genome is 35.64 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Epilithonimonas asporicella sp. nov.

Candidatus Epilithonimonas asporicella (NL. fem. n. *asporicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp003248755*. The type genome for the species is the GenBank assembly GCA_003248755.1. The GC content of the type genome is 35.01 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Epilithonimonas desupimonia sp. nov.

Candidatus Epilithonimonas desupimonia (NL. fem. n. *desupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp002345565*. The type genome for the species is the GenBank assembly GCA_002345565.1. The GC content of the type genome is 35.03 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Epilithonimonas dimiditia sp. nov.

Candidatus Epilithonimonas dimiditia (NL. fem. n. *dimiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp002391865*. The type genome for the species is the GenBank assembly GCA_002391865.1. The GC content of the type genome is 35.89 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Epilithonimonas enuntastra sp. nov.

Candidatus Epilithonimonas enuntastra (NL. fem. n. *enuntastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp003932955*. The type genome for the species is the GenBank assembly RS_GCF_003932955.1. The GC content of the type genome is 40.32 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Epilithonimonas estovitrix sp. nov.

Candidatus Epilithonimonas estovitrix (NL. fem. n. *estovitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp001643375*. The type genome for the species is the GenBank assembly RS_GCF_001643375.1. The GC content of the type genome is 37.06 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Epilithonimonas fecunifica sp. nov.

Candidatus Epilithonimonas fecunifica (NL. fem. n. *fecunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp002297505*. The type genome for the species is the GenBank assembly GCA_002297505.1. The GC content of the type genome is 40.37 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Epilithonimonas oblocifica sp. nov.

Candidatus Epilithonimonas oblocifica (NL. fem. n. *oblocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp000735135*. The type genome for the species is the GenBank assembly RS_GCF_000735135.1. The GC content of the type genome is 36.89 % and the genome length is 3.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater creek".

Description of *Candidatus* Epilithonimonas retunibula sp. nov.

Candidatus Epilithonimonas retunibula (NL. fem. n. *retunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epilithonimonas sp002383165*. The type genome for the species is the GenBank assembly GCA_002383165.1. The GC content of the type genome is 35.55 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Episcaria arcatitura sp. nov.

Candidatus Episcaria arcatitura (NL. fem. n. *arcatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch128a sp013348845*. The type genome for the species is the GenBank assembly GCA_013348845.1. The GC content of the type genome is 29.88 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Episcaria gen. nov.

Candidatus Episcaria (NL. fem. n. *Episcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch128a*. The type species for the genus is *Candidatus* Episcaria arcatitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Episcida adnunimonas sp. nov.

Candidatus Episcida adnunimonas (NL. fem. n. *adnunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin52 sp002238645*. The type genome for the species is the GenBank assembly GCA_002238645.1. The GC content of the type genome is 66.54 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Episcida gen. nov.

Candidatus Episcida (NL. fem. n. *Episcida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin52*. The type species for the genus is *Candidatus* Episcida

adnunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Episcosa defaritica sp. nov.

Candidatus Episcosa defaritica (NL. fem. n. *defaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSDE01 sp011049095*. The type genome for the species is the GenBank assembly GCA_011049095.1. The GC content of the type genome is 44.72 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Episcosa gen. nov.

Candidatus Episcosa (NL. fem. n. *Episcosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSDE01*. The type species for the genus is *Candidatus* Episcosa defaritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *46-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilariaceae.

Description of *Candidatus* Epistana ammurilenta sp. nov.

Candidatus Epistana ammurilenta (NL. fem. n. *ammurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCVG01 sp013698335*. The type genome for the species is the GenBank assembly GCA_013698335.1. The GC content of the type genome is 68.58 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Epistana gen. nov.

Candidatus Epistana (NL. fem. n. *Epistana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCVG01*. The type species for the genus is *Candidatus* Epistana ammurilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epistaria gen. nov.

Candidatus Epistaria (NL. fem. n. *Epistaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBV01*. The type species for the genus is *Candidatus* Epistaria thessalonicensis_A .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin65*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manubulaceae.

Description of *Candidatus* Epistia incunedo sp. nov.

Candidatus Epistia incunedo (NL. fem. n. *incunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717225 sp002717225*. The type genome for the species is the GenBank assembly GCA_002717225.1. The GC content of the type genome is 53.67 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Epistia gen. nov.

Candidatus Epistia (NL. fem. n. *Epistia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717225*. The type species for the genus is *Candidatus* Epistia incunedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA828*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hegumosaceae.

Description of *Candidatus* Epitrana cenacitrix sp. nov.

Candidatus Epitrana cenacitrix (NL. fem. n. *cenacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F1-80-MAGs030 sp005798285*. The type genome for the species is the GenBank assembly GCA_005798285.1. The GC content of the type genome is 64.46 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Epitrana gen. nov.

Candidatus Epitrana (NL. fem. n. *Epitrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-80-MAGs030*. The type species for the genus is *Candidatus* Epitrana cenacitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SYMT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenariaceae.

Description of *Candidatus* Epitraria exsatimonia sp. nov.

Candidatus Epitraria exsatimonia (NL. fem. n. *exsatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REBA01 sp013297765*. The type genome for the species is the GenBank assembly GCA_013297765.1. The GC content of the type genome is 36.96 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Epitraria gen. nov.

Candidatus Epitraria (NL. fem. n. *Epitraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REBA01*. The type species for the genus is *Candidatus* Epitraria exsatimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epitraria inrefentia sp. nov.

Candidatus Epitraria inrefentia (NL. fem. n. *inrefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REBA01 sp004294225*. The type genome for the species is the

GenBank assembly GCA_004294225.1. The GC content of the type genome is 33.03 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Epitria cohuritas sp. nov.

Candidatus Epitria cohuritas (NL. fem. n. *cohuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSFR01 sp903859135*. The type genome for the species is the GenBank assembly GCA_903859135.1. The GC content of the type genome is 38.99 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Epitria gen. nov.

Candidatus Epitria (NL. fem. n. *Epitria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SSFR01*. The type species for the genus is *Candidatus* Epitria cohuritas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epitria invesitio sp. nov.

Candidatus Epitria invesitio (NL. fem. n. *invesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SSFR01 sp008015505*. The type genome for the species is the GenBank assembly GCA_008015505.1. The GC content of the type genome is 38.97 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Epitrida nosocifica sp. nov.

Candidatus Epitrida nosocifica (NL. fem. n. *nosocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG12867 sp902783405*. The type genome for the species is the GenBank assembly GCA_902783405.1. The GC content of the type genome is 26.5 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Epitrida gen. nov.

Candidatus Epitrida (NL. fem. n. *Epitrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG12867*. The type species for the genus is *Candidatus* Epitrida nosocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Epitrosa crabritura sp. nov.

Candidatus Epitrosa crabritura (NL. fem. n. *crabritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-47-12 sp001790455*. The type genome for the species is the GenBank assembly GCA_001790455.1. The GC content of the type genome is 46.79 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Epitrosa gen. nov.

Candidatus Epitrosa (NL. fem. n. *Epitrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-47-12*. The type species for the genus is *Candidatus* Epitrosa crabritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Geruniaceae.

Description of *Candidatus* Epitrula totidicula sp. nov.

Candidatus Epitrula totidicula (NL. fem. n. *totidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLOG01 sp007132635*. The type genome for the species is the GenBank assembly GCA_007132635.1. The GC content of the type genome is 53.83 %

and the genome length is 2.72 Mbp.

Description of *Candidatus* Epitrula gen. nov.

Candidatus Epitrula (NL. fem. n. *Epitrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLOG01*. The type species for the genus is *Candidatus* Epitrula totidicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricosaceae.

Description of *Candidatus* Epogdaria infabedo sp. nov.

Candidatus Epogdaria infabedo (NL. fem. n. *infabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADCZ01 sp013154175*. The type genome for the species is the GenBank assembly GCA_013154175.1. The GC content of the type genome is 49.27 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Epogdaria gen. nov.

Candidatus Epogdaria (NL. fem. n. *Epogdaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADCZ01*. The type species for the genus is *Candidatus* Epogdaria infabedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QOAL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonipidaceae.

Description of *Candidatus* Epogdella indotisca sp. nov.

Candidatus Epogdella indotisca (NL. fem. n. *indotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFPW01 sp009922405*. The type genome for the species is the

GenBank assembly GCA_009922405.1. The GC content of the type genome is 58.54 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Epogdella gen. nov.

Candidatus Epogdella (NL. fem. n. *Epogdella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFPW01*. The type species for the genus is *Candidatus* Epogdella indotisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epogdella obvolilenta sp. nov.

Candidatus Epogdella obvolilenta (NL. fem. n. *obvolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFPW01 sp009925965*. The type genome for the species is the GenBank assembly GCA_009925965.1. The GC content of the type genome is 59.51 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Epogdella penuritura sp. nov.

Candidatus Epogdella penuritura (NL. fem. n. *penuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFPW01 sp903864485*. The type genome for the species is the GenBank assembly GCA_903864485.1. The GC content of the type genome is 59.32 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Epogdia bugilicula sp. nov.

Candidatus Epogdia bugilicula (NL. fem. n. *bugilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ALPHA2B sp003671765*. The type genome for the species is the GenBank assembly RS_GCF_003671765.1. The GC content of the type genome is 69.03 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Epogdia gen. nov.

Candidatus Epogdia (NL. fem. n. *Epogdia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ALPHA2B*. The type species for the genus is *Candidatus* Epogdia bugilicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Epogdia sicunedo sp. nov.

Candidatus Epogdia sicunedo (NL. fem. n. *sicunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ALPHA2B sp005503065*. The type genome for the species is the GenBank assembly RS_GCF_005503065.1. The GC content of the type genome is 68.72 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Epogdida artifilega sp. nov.

Candidatus Epogdida artifilega (NL. fem. n. *artifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXWF01 sp013335095*. The type genome for the species is the GenBank assembly GCA_013335095.1. The GC content of the type genome is 42.18 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Epogdida gen. nov.

Candidatus Epogdida (NL. fem. n. *Epogdida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXWF01*. The type species for the genus is *Candidatus* Epogdida artifilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002791395*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vecorosaceae.

Description of *Candidatus* Epogdula timefitio sp. nov.

Candidatus Epogdula timefitio (NL. fem. n. *timefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1238 sp002309015*. The type genome for the species is the GenBank assembly GCA_002309015.1. The GC content of the type genome is 55.98 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Epogdula gen. nov.

Candidatus Epogdula (NL. fem. n. *Epogdula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1238*. The type species for the genus is *Candidatus* Epogdula timefitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Democellaceae.

Description of *Candidatus* Epulopiscium benemugo sp. nov.

Candidatus Epulopiscium benemugo (NL. fem. n. *benemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_A sp001983455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001983535.1. The GC content of the type genome is 31.14 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Epulopiscium detepifica sp. nov.

Candidatus Epulopiscium detepifica (NL. fem. n. *detepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_A sp002007285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002007285.1. The GC content of the type genome is 29.34 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Epulopiscium nugacatio sp. nov.

Candidatus Epulopiscium nugacatio (NL. fem. n. *nugacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_A sp001983475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001983475.1. The GC content of the type genome is 30.0 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Epulopiscium cenodicella sp. nov.

Candidatus Epulopiscium cenodicella (NL. fem. n. *cenodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_B sp002007295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002007295.1. The GC content of the type genome is 33.94 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Epulopiscium imbelitas sp. nov.

Candidatus Epulopiscium imbelitas (NL. fem. n. *imbelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_B sp001995005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001995005.1. The GC content of the type genome is 32.46 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Epulopiscium obsecicella sp. nov.

Candidatus Epulopiscium obsecicella (NL. fem. n. *obsecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_B sp000171335*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000171335.1. The GC content of the type genome is 38.15 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Epulopiscium paropibra sp. nov.

Candidatus Epulopiscium paropibra (NL. fem. n. *paropibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_B sp001983555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001983555.1. The GC content of the type genome is 30.36 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Epulopiscium effulilega sp. nov.

Candidatus Epulopiscium effulilega (NL. fem. n. *effulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_C sp002007315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002007315.1. The GC content of the type genome is 34.52 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Epulopiscium resupiforma sp. nov.

Candidatus Epulopiscium resupiforma (NL. fem. n. *resupiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_C sp001994995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001994995.1. The GC content of the type genome is 34.48 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Epulopiscium adcogimonas sp. nov.

Candidatus Epulopiscium adcogimonas (NL. fem. n. *adcogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Epulopiscium_D sp002007365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002007365.1. The GC content of the type genome is 32.3 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Ereboglobus adperitica sp. nov.

Candidatus Ereboglobus adperitica (NL. fem. n. *adperitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ereboglobus sp001650175*. The type genome for the species is the GenBank assembly RS_GCF_001650175.1. The GC content of the type genome is 62.88 % and the genome length is 7.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Ermelana murelilenta sp. nov.

Candidatus Ermelana murelilenta (NL. fem. n. *murelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYXU01 sp012515725*. The type genome for the species is the GenBank assembly GCA_012515725.1. The GC content of the type genome is 60.65 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Ermelana gen. nov.

Candidatus Ermelana (NL. fem. n. *Ermelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYXU01*. The type species for the genus is *Candidatus* Ermelana murelilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Corocanaceae.

Description of *Candidatus* Ermelaria cnestastra sp. nov.

Candidatus Ermelaria cnestastra (NL. fem. n. *cnestastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSF01 sp011362645*. The type genome for the species is the GenBank assembly GCA_011362645.1. The GC content of the type genome is 58.26 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Ermelaria gen. nov.

Candidatus Ermelaria (NL. fem. n. *Ermelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSSF01*. The type species for the genus is *Candidatus* Ermelaria cnestastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ermelia cicariforma sp. nov.

Candidatus Ermelia cicariforma (NL. fem. n. *cicariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VLXZ01 sp007293315*. The type genome for the species is the GenBank assembly RS_GCF_007293315.1. The GC content of the type genome is 40.81 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Ermelia gen. nov.

Candidatus Ermelia (NL. fem. n. *Ermelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VLXZ01*. The type species for the genus is *Candidatus* Ermelia cicariforma .

According to GTDB R06-RS202, this genus belongs to the family _D.

Description of *Candidatus* Ermelida elastetta sp. nov.

Candidatus Ermelida elastetta (NL. fem. n. *elastetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYHF01 sp012727485*. The type genome for the species is the GenBank assembly GCA_012727485.1. The GC content of the type genome is 47.73 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ermelida gen. nov.

Candidatus Ermelida (NL. fem. n. *Ermelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYHF01*. The type species for the genus is *Candidatus* Ermelida elastetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ermelosa gasifitia sp. nov.

Candidatus Ermelosa gasifitia (NL. fem. n. *gasifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JL08 sp003352045*. The type genome for the species is the GenBank assembly RS_GCF_003352045.1. The GC content of the type genome is 57.52 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Ermelosa gen. nov.

Candidatus Ermelosa (NL. fem. n. *Ermelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JL08*. The type species for the genus is *Candidatus* Ermelosa gasifitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Errabaria armicax sp. nov.

Candidatus Errabaria armicax (NL. fem. n. *armicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PDOX01 sp002746475*. The type genome for the species is the GenBank assembly GCA_002746475.1. The GC content of the type genome is 32.02 %

and the genome length is 0.56 Mbp.

Description of *Candidatus* Errabaria gen. nov.

Candidatus Errabaria (NL. fem. n. *Errabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PDOX01*. The type species for the genus is *Candidatus* Errabaria armicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *X112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifariaceae.

Description of *Candidatus* Errabia inordatica sp. nov.

Candidatus Errabia inordatica (NL. fem. n. *inordatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-44-25 sp001816455*. The type genome for the species is the GenBank assembly GCA_001816455.1. The GC content of the type genome is 44.1 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Errabia gen. nov.

Candidatus Errabia (NL. fem. n. *Errabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-44-25*. The type species for the genus is *Candidatus* Errabia inordatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulanaceae.

Description of *Candidatus* Errabosa cadurentia sp. nov.

Candidatus Errabosa cadurentia (NL. fem. n. *cadurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUJ01 sp012517315*. The type genome for the species is the GenBank assembly GCA_012517315.1. The GC content of the type genome is 57.87 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Errabosa gen. nov.

Candidatus Errabosa (NL. fem. n. *Errabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUJ01*. The type species for the genus is *Candidatus* Errabosa cadurentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Errabosa nimiritia sp. nov.

Candidatus Errabosa nimiritia (NL. fem. n. *nimiritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUJ01 sp012517775*. The type genome for the species is the GenBank assembly GCA_012517775.1. The GC content of the type genome is 54.29 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Errabula alsisicula sp. nov.

Candidatus Errabula alsisicula (NL. fem. n. *alsisicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6492 sp002436485*. The type genome for the species is the GenBank assembly GCA_002436485.1. The GC content of the type genome is 48.86 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Errabula gen. nov.

Candidatus Errabula (NL. fem. n. *Errabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6492*. The type species for the genus is *Candidatus* Errabula alsisicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA6429. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubosaceae.

Description of *Candidatus* Erwinia bonifitudo sp. nov.

Candidatus Erwinia bonifitudo (NL. fem. n. *bonifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp003512805*. The type genome for the species is the GenBank assembly GCA_003512805.1. The GC content of the type genome is 54.67 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Erwinia catecilenta sp. nov.

Candidatus Erwinia catecilenta (NL. fem. n. *catecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp009738185*. The type genome for the species is the GenBank assembly RS_GCF_009707715.1. The GC content of the type genome is 53.15 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Erwinia cuticifica sp. nov.

Candidatus Erwinia cuticifica (NL. fem. n. *cuticifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp003751505*. The type genome for the species is the GenBank assembly RS_GCF_003751505.1. The GC content of the type genome is 56.52 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Erwinia genufatio sp. nov.

Candidatus Erwinia genufatio (NL. fem. n. *genufatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp001422605*. The type genome for the species is the GenBank assembly RS_GCF_002865965.1. The GC content of the type genome is 59.09 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Erwinia ignigitica sp. nov.

Candidatus Erwinia ignigitica (NL. fem. n. *ignigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp007981265*. The type genome for the species is the GenBank assembly RS_GCF_007981265.1. The GC content of the type genome is 52.8 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Erwinia imbelibra sp. nov.

Candidatus Erwinia imbelibra (NL. fem. n. *imbelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp900068895*. The type genome for the species is the GenBank assembly RS_GCF_900068895.1. The GC content of the type genome is 54.61 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Erwinia oppanitrix sp. nov.

Candidatus Erwinia oppanitrix (NL. fem. n. *oppanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp003937915*. The type genome for the species is the GenBank assembly RS_GCF_003937915.1. The GC content of the type genome is 55.6 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Erwinia pinigago sp. nov.

Candidatus Erwinia pinigago (NL. fem. n. *pinigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp009765445*. The type genome for the species is the GenBank assembly RS_GCF_009765445.1. The GC content of the type genome is 54.16 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Erwinia resupigena sp. nov.

Candidatus Erwinia resupigena (NL. fem. n. *resupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp000599885*. The type genome for the species is the GenBank assembly RS_GCF_000599885.1. The GC content of the type genome is 54.75 % and the genome length is 4.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Erwinia subabentia sp. nov.

Candidatus Erwinia subabentia (NL. fem. n. *subabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erwinia sp004022165*. The type genome for the species is the GenBank assembly RS_GCF_014155785.1. The GC content of the type genome is 50.11 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Erysipelatoclostridium citivitudo sp. nov.

Candidatus Erysipelatoclostridium citivitudo (NL. fem. n. *citivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelatoclostridium sp002160495*. The type genome for the species is the GenBank assembly RS_GCF_002160675.1. The GC content of the type genome is 30.2 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Erysipelatoclostridium irregitoga sp. nov.

Candidatus Erysipelatoclostridium irregitoga (NL. fem. n. *irregitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelatoclostridium sp000508865*. The type genome for the species is the GenBank assembly RS_GCF_000508865.1. The GC content of the type genome is 30.58 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Erysipelothrix catabitas sp. nov.

Candidatus Erysipelothrix catabitas (NL. fem. n. *catabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp011400295*. The type genome for the species is the GenBank assembly RS_GCF_011400295.1. The GC content of the type genome is 35.28 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Erysipelothrix ciminitio sp. nov.

Candidatus Erysipelothrix ciminitio (NL. fem. n. *ciminitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp009828835*. The type genome for the species is the GenBank assembly RS_GCF_009828835.1. The GC content of the type genome is 34.45 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Erysipelothrix hecatimonia sp. nov.

Candidatus Erysipelothrix hecatimonia (NL. fem. n. *hecatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp011301115*. The type genome for the species is the GenBank assembly RS_GCF_011301115.1. The GC content of the type genome is 38.18 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Erysipelothrix homolatica sp. nov.

Candidatus Erysipelothrix homolatica (NL. fem. n. *homolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp011299615*. The type genome for the species is the GenBank assembly RS_GCF_011299615.1. The GC content of the type genome is 39.44 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Erysipelothrix inforitas sp. nov.

Candidatus Erysipelothrix inforitas (NL. fem. n. *inforitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp012520695*. The type genome for the species is the GenBank assembly GCA_012520695.1. The GC content of the type genome is 38.72 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Erysipelothrix murilitica sp. nov.

Candidatus Erysipelothrix murilitica (NL. fem. n. *murilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp002359085*. The type genome for the species is the GenBank assembly GCA_002359085.1. The GC content of the type genome is 37.15 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Erysipelothrix occucastra sp. nov.

Candidatus Erysipelothrix occucastra (NL. fem. n. *occucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp012727815*. The type genome for the species is the GenBank assembly GCA_012727815.1. The GC content of the type genome is 33.04 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Erysipelothrix volunitio sp. nov.

Candidatus Erysipelothrix volunitio (NL. fem. n. *volunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp002358955*. The type genome for the species is the GenBank assembly GCA_002358955.1. The GC content of the type genome is 36.46 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Erysipelothrix xenopitio sp. nov.

Candidatus Erysipelothrix xenopitio (NL. fem. n. *xenopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erysipelothrix sp009828765*. The type genome for the species is the GenBank assembly RS_GCF_009828765.1. The GC content of the type genome is 38.16 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Erythrobacter acistitia sp. nov.

Candidatus Erythrobacter acistitia (NL. fem. n. *acistitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp002855495*. The type genome for the species is the GenBank assembly RS_GCF_002855495.1. The GC content of the type genome is 64.08 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Erythrobacter adnaricella sp. nov.

Candidatus Erythrobacter adnaricella (NL. fem. n. *adnaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp013214365*. The type genome for the species is the GenBank assembly GCA_013214365.1. The GC content of the type genome is 59.05 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Erythrobacter adrenago sp. nov.

Candidatus Erythrobacter adrenago (NL. fem. n. *adrenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp007004095*. The type genome for the species is the GenBank assembly RS_GCF_007004095.1. The GC content of the type genome is 57.0 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Erythrobacter adsigitrix sp. nov.

Candidatus Erythrobacter adsigitrix (NL. fem. n. *adsigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp006542605*. The type genome for the species is the GenBank assembly RS_GCF_006542605.1. The GC content of the type genome is 65.84 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Erythrobacter adsusilega sp. nov.

Candidatus Erythrobacter adsusilega (NL. fem. n. *adsusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Erythrobacter sp002706445*. The type genome for the species is the GenBank assembly GCA_002706445.1. The GC content of the type genome is 62.2 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Erythrobacter agrapiforma sp. nov.

Candidatus Erythrobacter agrapiforma (NL. fem. n. *agrapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp009363635*. The type genome for the species is the GenBank assembly RS_GCF_009363635.1. The GC content of the type genome is 61.16 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Erythrobacter apsoritas sp. nov.

Candidatus Erythrobacter apsoritas (NL. fem. n. *apsoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp001296025*. The type genome for the species is the GenBank assembly RS_GCF_001296025.1. The GC content of the type genome is 62.73 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Erythrobacter caduretta sp. nov.

Candidatus Erythrobacter caduretta (NL. fem. n. *caduretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp003724185*. The type genome for the species is the GenBank assembly GCA_003724185.1. The GC content of the type genome is 64.3 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Erythrobacter capilitia sp. nov.

Candidatus Erythrobacter capilitia (NL. fem. n. *capilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp000714765*. The type genome for the species is the GenBank assembly GCA_000714765.1. The GC content of the type genome is 61.77 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Erythrobacter ceracitoga sp. nov.

Candidatus Erythrobacter ceracitoga (NL. fem. n. *ceracitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Erythrobacter sp013911835*. The type genome for the species is the GenBank assembly GCA_013911835.1. The GC content of the type genome is 65.95 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Erythrobacter colopilega sp. nov.
